

3 1761 06732275 0

New Edition [1880], with a Supplement of upwards of 4600 New Words and Meanings.

WEBSTER'S DICTIONARY OF THE ENGLISH LANGUAGE.

NOTE.—*The only authorized Editions of this Dictionary are those here described: no others published in England contain the Derivations and Etymological Notes of Dr. Mahn, who devoted several years to this portion of the Work.*

See page 4.

WEBSTER'S GUINEA DICTIONARY

OF THE ENGLISH LANGUAGE. Thoroughly revised and improved by CHAUNCEY A. GOODRICH, D.D., LL.D., and NOAH PORTER, D.D., of Yale College.

The peculiar features of this volume, which render it perhaps the most useful Dictionary for general reference extant, as it is undoubtedly one of the cheapest books ever published, are as follows:—

1. **Completeness.**—It contains 114,000 words—more by 10,000 than any other Dictionary; and these are, for the most part, unusual or technical terms, for the explanation of which a Dictionary is most wanted.
2. **Accuracy of Definition.**—In this department the labours of Dr. Webster were most valuable, in correcting the faulty and redundant definitions of Dr. Johnson, which had previously been almost universally adopted. In the present edition all the definitions have been carefully and methodically analysed by W. G. Webster, Esq., the Rev. Chauncey Goodrich, Prof. Lyman, Prof. Whitney, and Prof. Gilman, with the assistance and under the superintendence of Prof. Goodrich.
3. **Scientific and Technical Terms.**—In order to secure the utmost completeness and accuracy of definition, this department has been subdivided among eminent Scholars and Experts, including Prof. Dana, Prof. Lyman, &c.
4. **Etymology.**—The eminent philologist, Dr. C. F. MAHN, has devoted five years to perfecting this department.
5. **The Orthography** is based as far as possible on Fixed Principles. *In all cases of doubt an alternative spelling is given.*
6. **Pronunciation.**—This has been entrusted to Mr. W. G. WEBSTER and Mr. WHEELER, assisted by other scholars. The pronunciation of each word is indicated by typographical signs, which are explained by reference to a **KEY printed at the bottom of each page.**
7. **The Illustrative Citations.**—No labour has been spared to embody such quotations from standard authors as may throw light on the definitions, or possess any special interest of thought or language.
8. **The Synonyms.**—These are subjoined to the words to which they belong, and are very complete.
9. **The Illustrations,** which exceed 3000, are inserted, not for the sake of ornament, but to elucidate the meaning of words which cannot be satisfactorily explained without pictorial aid.

The Volume contains 1628 pages, more than 3000 Illustrations, and is sold for One Guinea. It will be found, on comparison, to be one of the cheapest Volumes ever issued. Cloth, 21s.; half-bound in calf, 30s.; calf or half-russia, 31s. 6d.; russia, £2.

To be obtained through all Booksellers.

New Edition, with a New Biographical Supplement of upwards of 9700 Names.

WEBSTER'S COMPLETE DICTIONARY

OF THE ENGLISH LANGUAGE, AND GENERAL BOOK OF LITERARY REFERENCE. With 3000 Illustrations. Thoroughly revised and improved by CHAUNCEY A. GOODRICH, D.D., LL.D., and NOAH PORTER, D.D., of Yale College.

In One Volume, Quarto, strongly bound in cloth, 1919 pages, price £1 11s. 6d.; half-calf, £2; calf or half-russia, £2 2s.; russia, £2 10s.

Besides the matter comprised in the WEBSTER'S GUINEA DICTIONARY, this volume contains the following Appendices, which will show that no pains have been spared to make it a complete Literary Reference-book:—

A Brief History of the English Language. By Professor JAMES HADLEY. This Work shows the Philological Relations of the English Language, and traces the progress and influence of the causes which have brought it to its present condition.

Principles of Pronunciation. By Professor GOODRICH and W. A. WHEELER, M.A. Including a Synopsis of Words differently pronounced by different authorities.

A Short Treatise on Orthography. By ARTHUR W. WRIGHT. Including a Complete List of Words that are spelt in two or more ways.

An Explanatory and Pronouncing Vocabulary of the Names of Noted Fictitious Persons and Places, &c. By W. A. WHEELER, M.A. This Work includes not only persons and places noted in Fiction, whether narrative, poetical, or dramatic, but Mythological and Mythical names, names referring to the Angelology and Demonology of various races, and those found in the romance writers; Pseudonyms, Nick-names of eminent persons and parties, &c., &c. In fact, it is best described as explaining every name which is not strictly *historical*. A reference is given to the originator of each name, and where the origin is unknown a quotation is given to some well-known writer in which the word occurs.

This valuable Work may also be had separately, post 8vo., 5s.

A Pronouncing Vocabulary of Scripture Proper Names. By W. A. WHEELER, M.A. Including a List of the Variations that occur in the Douay version of the Bible.

"The cheapest Dictionary ever published, as it is confessedly one of the best. The introduction of small woodcut illustrations of technical and scientific terms adds greatly to the utility of the Dictionary."—*Churchman*.

A Pronouncing Vocabulary of Greek and Latin Proper Names. By Professor THACHER, of Yale College.

An Etymological Vocabulary of Modern Geographical Names. By the Rev. C. H. WHEELER. Containing:—I. A List of Prefixes, Terminations, and Formative Syllables in various Languages, with their meaning and derivation; II. A brief List of Geographical Names (not explained by the foregoing List), with their derivation and signification, all doubtful and obscure derivations being excluded.

Pronouncing Vocabulary of Modern Geographical and Biographical Names. By J. THOMAS, M.D.

A Pronouncing Vocabulary of Common English Christian Names, with their derivations, signification, and diminutives (or nick-names), and their equivalents in several other languages.

A Dictionary of Quotations. Selected and translated by WILLIAM G. WEBSTER. Containing all Words, Phrases, Proverbs, and Colloquial Expressions from the Greek, Latin, and Modern Foreign Languages, which are frequently met with in literature and conversation.

A New Biographical Dictionary of upwards 9700 Names of Noted Persons, Ancient and Modern, including many now living—giving the Name, Pronunciation, Nationality, Profession, and Date of Birth and Death.

A List of Abbreviations, Contractions, and Arbitrary Signs used in Writing and Printing.

A Classified Selection of Pictorial Illustrations (70 pages). With references to the text.

To be obtained through all Booksellers.

WEBSTER'S DICTIONARY.

From the QUARTERLY REVIEW, Oct. 1873.

"Seventy years passed before JOHNSON was followed by Webster, an American writer, who faced the task of the English Dictionary with a full appreciation of its requirements, leading to better practical results."

.....

"His laborious comparison of twenty languages, though never published, bore fruit in his own mind, and his training placed him both in knowledge and judgment far in advance of Johnson as a philologist. Webster's 'American Dictionary of the English Language' was published in 1828, and of course appeared at once in England, where successive re-editing *has as yet kept it in the highest place as a practical Dictionary.*"

"The acceptance of an American Dictionary in England has itself had immense effect in keeping up the community of speech, to break which would be a grievous harm, not to English-speaking nations alone, but to mankind. The result of this has been that the common Dictionary must suit both sides of the Atlantic."

"The good average business-like character of Webster's Dictionary, both in style and matter, made it as distinctly suited as Johnson's was distinctly unsuited to be expanded and re-edited by other hands. Professor Goodrich's edition of 1847 is not much more than enlarged and amended, but other revisions since have so much novelty of plan as to be described as distinct works."

"The American revised Webster's Dictionary of 1864, published in America and England, is of an altogether higher order than these last [The London Imperial and Student's]. It bears on its title-page the names of Drs. Goodrich and Porter, but inasmuch as its especial improvement is in the etymological department, the care of which was committed to Dr. MAHN, of Berlin, we prefer to describe it in short as the Webster-Mahn Dictionary. Many other literary men, among them Professors Whitney and Dana, aided in the task of compilation and revision. On consideration it seems that the editors and contributors have gone far toward improving Webster to the utmost that he will bear improvement. The *vocabulary has become almost complete*, as regards usual words, *while the definitions keep throughout to Webster's simple careful style*, and the derivations are assigned with the aid of good modern authorities."

"On the whole, the Webster-Mahn Dictionary as it stands, is most respectable, and **CERTAINLY THE BEST PRACTICAL ENGLISH DICTIONARY EXTANT.**"

LONDON: GEORGE BELL & SONS, YORK STREET, COVENT GARDEN.

SPECIAL DICTIONARIES AND WORKS
OF REFERENCE.

Dr. Richardson's Philological Dictionary of the ENGLISH LANGUAGE. Combining Explanation with Etymology, and copiously illustrated by Quotations from the Best Authorities. *New Edition*, with a Supplement containing additional Words and further Illustrations. In 2 vols. 4to. £4 14s. 6d. Half-bound in Russia, £5 15s. 6d. Russia, £6 12s.—The Supplement separately. 4to. 12s. An 8vo. edition, without the Quotations, 15s. Half-russia, 20s. Russia, 24s.

A Supplementary English Glossary. Containing 12,000 Words or Meanings occurring in English Literature not found in any other Dictionary. With Illustrative Quotations. By T. LEWIS O. DAVIES, M.A. Demy 8vo. 16s.

Folk-Etymology. A Dictionary of Corrupted Words which have been Perverted in Form or Meaning by False Derivation or Mistaken Analogy. By the Rev. A. S. PALMER, Author of "A Word-Hunter's Note-book." Demy 8vo. 21s.

"Most interesting, instructive, and valuable contribution to the study of language."—*Athenæum*.

Synonyms Discriminated. A Catalogue of Synonymous Words in the English Language, with their various Shades of Meaning, &c. Illustrated by Quotations from Standard Writers. By the late Ven. C. J. SMITH, M.A. Demy 8vo. *New Edition, revised and enlarged.* 14s.

A Dictionary of Quotations. From the English Poets.

By HENRY G. BOHN, F.R.A.S., F.L.S., &c. Large post 8vo. 10s. 6d.

"Mr. Bohn's volume has the rare recommendation of being entirely free from the rubbish which is commonly thrust into similar collections. His selections have been made from a long and extensive course of reading, and it everywhere bears evidence of a scholar's eye and taste. There must be, as we judge, nearly 8,000 quotations in the volume, ranging from Chaucer to Tennyson."—*Times*.

A Biographical Dictionary. By THOMPSON COOPER, F.S.A., Editor of "Men of the Time," and Joint Editor of "Athenæ Cantabrigienses." 1 vol. 8vo. With Supplement to 1883. 15s. Supplement separate, 3s. 6d.

This volume is not a mere repetition of the contents of previous works, but embodies the results of many years' laborious research in rare publications and unpublished documents. Any note of omission which may be sent to the Publishers will be duly considered.

"It is an important original contribution to the literature of its class by a painstaking scholar. . . . It seems in every way admirable, and fully to justify the claims on its behalf put forth by its editor."—*British Quarterly Review*.

Bryan's Biographical and Critical Dictionary of Painters and Engravers. With a List of Ciphers, Monograms, and Marks. *Enlarged Edition, thoroughly revised* by R. E. GRAVES, British Museum. In monthly parts, 5s. each. Parts 1-4 ready.

The Cottage Gardener's Dictionary. With a Supplement, containing all the new plants and varieties to the year 1869. Edited by GEORGE W. JOHNSON. Post 8vo. Cloth. 6s. 6d.

LONDON: GEORGE BELL & SONS, YORK STREET, COVENT GARDEN.

LONDON: GEORGE BELL & SONS, YORK STREET, COVENT GARDEN.

THE ALDINE EDITION OF THE BRITISH POETS.

SUPPLEMENTARY SERIES.

THE fifty-two volumes which have hitherto formed the well-known Aldine Series, embody the works of nearly all the more popular English poetical writers, whether lyric, epic, or satiric, up to the end of the eighteenth century. But since that time the wonderful fertility of English literature has produced many writers equal, and in some cases far superior, to the majority of their predecessors; and the widely augmented roll of acknowledged English poets now contains many names not represented in the series of "Aldine Poets."

With a view of providing for this want, and of making a series which has long held a high place in public estimation a more adequate representation of the whole body of English poetry, the Publishers have determined to issue a second series, which will contain some of the older poets, and the works of recent writers, so far as may be practicable by arrangement with the representatives of the poets whose works are still copyright.

One volume, or more, at a time will be issued at short intervals; they will be uniform in binding and style with the last fine-paper edition of the Aldine Poets, in fcap. 8vo. size, printed at the Chiswick Press. Price 5s. per volume.

Each volume will be edited with notes where necessary for elucidation of the text; a memoir will be prefixed and a portrait, where an authentic one is accessible.

The following are already published:—

THE POEMS OF WILLIAM BLAKE. With Memoir by W. M. Rossetti, and portrait by Jeens.

THE POEMS OF SAMUEL ROGERS. With Memoir by Edward Bell, and portrait by Jeens.

THE POEMS OF THOMAS CHATTERTON. 2 vols. Edited by the Rev. W. Skeat, with Memoir by Edward Bell.

THE POEMS OF SIR WALTER RALEIGH, SIR HENRY WOTTON, and Selections from other Courtly Poets. With Introduction by the Rev. Dr. Hannah, and portrait of Sir W. Raleigh.

THE POEMS OF THOMAS CAMPBELL. With Memoir by W. Allingham, and portrait by Jeens.

THE POEMS OF GEORGE HERBERT. (Complete Edition.) With Memoir by the Rev. A. B. Grosart, and portrait.

THE POEMS OF JOHN KEATS. With Memoir by Lord Houghton, and portrait by Jeens.

SACRED POEMS AND PIOUS EJACULATIONS BY HENRY VAUGHAN. With Memoir by Rev. H. F. Lyte.

COLERIDGE'S POEMS. By T. Ashe.

[In the Press.]

LONDON: GEORGE BELL & SONS, YORK STREET, COVENT GARDEN.

*In Ten Volumes, price 2s. 6d. each; in half-morocco, £2 10s.,
or, with Plates, £3 the set.*

CHEAP ALDINE EDITION OF SHAKESPEARE'S DRAMATIC WORKS.

EDITED BY S. W. SINGER.

Uniform with the Cheap Edition of the Aldine Poets.

THE formation of numerous Shakespeare Reading Societies has created a demand for a cheap portable edition, with LEGIBLE TYPE, that shall provide a sound text with such notes as may help to elucidate the meaning and assist in the better understanding of the author. The Publishers therefore determined to reprint Mr. Singer's well-known Edition, published in 10 vols., small 8vo., for some time out of print, and issue it in a cheap form, uniform with the well-known Aldine Edition of British Poets.

CONTENTS.

- Vol. I. The Life of Shakespeare. The Tempest. The Two Gentlemen of Verona. The Merry Wives of Windsor. Measure for Measure.
- Vol. II. Comedy of Errors. Much Ado about Nothing. Love's Labour Lost. Midsummer Night's Dream. Merchant of Venice.
- Vol. III. As You Like It. Taming of the Shrew. All's Well that Ends Well. Twelfth Night, or What You Will.
- Vol. IV. Winter's Tale. Pericles. King John. King Richard II.
- Vol. V. King Henry IV., Parts I. and II. King Henry V.
- Vol. VI. King Henry VI., Parts I. II. and III. King Richard III.
- Vol. VII. King Henry VIII. Troilus and Cressida. Coriolanus.
- Vol. VIII. Titus Andronicus. Romeo and Juliet. Timon of Athens. Julius Cæsar.
- Vol. IX. Macbeth. Hamlet. King Lear.
- Vol. X. Othello. Antony and Cleopatra. Cymbeline.

Uniform with the above, price 2s. 6d; in half-morocco, 5s.

Shakspeare's Plays & Poems. KEIGHTLEY's Edition. 13 Vols. in cloth case, 21s.

ELZEVIR SERIES.

Small fcap. 8vo.

THESE Volumes are issued under the general title of "ELZEVIR SERIES," to distinguish them from other collections. This general title has been adopted to indicate the spirit in which they are prepared; that is to say, with the greatest possible accuracy as regards text, and the highest degree of beauty that can be attained in the workmanship.

They are printed at the Chiswick Press, on fine paper, with wide margins, and issued in a neat cloth binding.

Longfellow's Evangeline, Voices, Sea-side and Fire-side. 4s. 6d. *With Portrait.*

— Hiawatha, and The Golden Legend. 4s. 6d.

— Wayside Inn, Miles Standish, Spanish Student. 4s. 6d.

Burns's Poetical Works. 4s. 6d. *With Portrait.*

— Songs and Ballads. 4s. 6d.

These Editions contain all the copyright pieces published in the Aldine Edition.

Cowper's Poetical Works. 2 vols., each 4s. 6d. *With Portrait.*

Coleridge's Poems. 4s. 6d. *With Portrait.*

Irving's Sketch Book. 5s. *With Portrait.*

— Tales of a Traveller. 5s.

Milton's Paradise Lost. 4s. 6d. *With Portrait.*

— Regained. 4s. 6d.

Shakspeare's Plays and Poems. Carefully edited by THOMAS KEIGHTLEY. In seven volumes. 5s. each.

Southey's Life of Nelson. 4s. 6d. *With Portrait of NELSON.*

Walton's Angler. 4s. 6d. *With a Frontispiece.*

— Lives of Donne, Hooker, Herbert, &c. 5s. *With Portrait.*

LONDON: GEORGE BELL & SONS, YORK STREET, COVENT GARDEN.

ciates in the Conquest of Peru. Second Edition. Crown 8vo. 6s.

The Life of Las Casas, the Apostle of the Indies.

Second Edition. Crown 8vo. 6s.

The Life and Epistles of St. Paul. By THOMAS LEWIN,

Esq., M.A., F.S.A., Trinity College, Oxford, Barrister-at-Law, Author of "Fasti Sacri," "Siege of Jerusalem," "Caesar's Invasion," "Treatise on Trusts," &c. With upwards of 350 Illustrations finely engraved on Wood, Maps, Plans, &c. Fourth Edition. In 2 vols., demy 4to. £2 2s.

"This is one of those works which demand from critics and from the public, before attempting to estimate its merits in detail, an unqualified tribute of admiration. The first glance tells us that the book is one on which the leisure of a busy lifetime and the whole resources of an enthusiastic author have been lavished without stint. . . . This work is a kind of British Museum for this period and subject in small compass. It is a series of galleries of statues, gems, coins, documents, letters, books, and relics, through which the reader may wander at leisure, and which he may animate with his own musings and reflections. It must be remembered throughout that this delightful and instructive collection is the result of the devotion of a lifetime, and deserves as much honour and recognition as many a museum or picture-gallery which has preserved its donor's name for generations."

—*Times*.

LONDON: GEORGE BELL & SONS, YORK STREET, COVENT GARDEN.

ILLUSTRATED OR POPULAR EDITIONS OF
STANDARD WORKS.

Dante's Divine Comedy. Translated by the Rev. HENRY FRANCIS CARY. With all the Author's Copyright Emendations. Post 8vo. 3s. 6d.

Longfellow's Wayside Inn. Illustrated. 16mo. 3s. 6d.

Adelaide Anne Procter's Legends and Lyrics. The Illustrated Edition. With Additional Poems, and an Introduction by CHARLES DICKENS, a Portrait by JENNS, and 20 Illustrations by Eminent Artists, and a short Memoir by Mrs. EWING. Fcap. 4to. Ornamental cloth. 21s.

Mrs. Gatty's Parables from Nature. A Handsomely Illustrated Edition; with Notes on the Natural History, and numerous Full-page Illustrations by the most eminent Artists of the present day. *New complete edition, with Short Memoir by J. H. EWING.* Fcap. 4to. 21s.

The Book of Gems. Selections from the British POETS. Illustrated with upwards of 150 Steel Engravings. Edited by S. C. HALL. 3 vols. Handsomely bound in walnut. 21s. each.

FIRST SERIES—CHAUCER TO DEYDEN.

SECOND SERIES—SWIFT TO BURNS.

THIRD SERIES—WORDSWORTH TO TENNYSON.

LONDON: GEORGE BELL & SONS, YORK STREET, COVENT GARDEN.

BOOKS FOR THE YOUNG.

CAPTAIN MARRYAT'S BOOKS FOR BOYS.

Poor Jack. With Sixteen Illustrations after Designs by CLARKSON STANFIELD, R.A. Twenty-second Edition. Post 8vo., 3s. 6d. Gilt, 4s. 6d.

——— People's Edition, Illustrated. Demy 4to., 6d.

——— Cheap Edition. Fcap. 8vo., 6d.

The Mission; or, Scenes in Africa. With Illustrations by JOHN GILBERT. Post 8vo., 3s. 6d. Gilt, 4s. 6d.

The Settlers in Canada. With Illustrations by GILBERT and DALZIEL. Post 8vo., 3s. 6d. Gilt, 4s. 6d.

The Privateers Man. Adventures by Sea and Land IN CIVIL AND SAVAGE LIFE, ONE HUNDRED YEARS AGO. Illustrated with Eight Steel Engravings. Post 8vo., 3s. 6d. Gilt, 4s. 6d.

Masterman Ready; or, the Wreck of the Pacific. Embellished with Ninety-three Engravings on Wood. Post 8vo., 3s. 6d. Gilt, 4s. 6d.

——— People's Edition, Illustrated. Demy 4to., 6d.

——— Cheap Edition. Fcap. 8vo., 6d.

The Pirate and Three Cutters. Illustrated with Eight Steel Engravings from Drawings by CLARKSON STANFIELD, R.A. With a Memoir of the Author. Post 8vo., 3s. 6d. Gilt, 4s. 6d.

A Boy's Locker. A Smaller Edition of the above Tales, in 12 volumes, enclosed in a compact cloth box. 21s.

Hans Christian Andersen's Tales for Children. With Forty-eight Full-page Illustrations by Wehnert, and Fifty-seven Small Engravings on Wood by W. THOMAS. A new Edition. Very handsomely bound. 6s.

Hans Christian Andersen's Fairy Tales and Sketches. Translated by C. C. PEACHEY, H. WARD, A. PLESNER, &c. With 104 Illustrations by OTTO SPECKTER and others. 6s.

This volume contains several tales that are in no other Edition published in this country, and with the above volume it forms the most complete English Edition.

Mrs. Alfred Gatty's Presentation Box for Young PEOPLE. Containing "Parables from Nature," "Aunt Judy's Tales," and other Popular Books, 9 volumes in all, beautifully printed, neatly bound, and enclosed in a cloth box. 31s. 6d. Any single volume at 3s. 6d.

Anecdotes of Dogs. By EDWARD JESSE. With Illustrations. Post 8vo. Cloth. 5s. With Thirty-four Steel Engravings after COOPER, LANDSEER, &c. 7s. 6d.

The Natural History of Selborne. By GILBERT WHITE. Edited by JESSE. Illustrated with Forty Engravings. Post 8vo. 5s.; or with the Plates Coloured, 7s. 6d.

A Poetry Book for Schools. Illustrated with Thirty-seven highly-finished Engravings by C. W. COPE, R.A., HELMSLEY, PALMER, SKILL, THOMAS, and H. WEIR. Crown 8vo. 1s.

Select Parables from Nature. By Mrs. GATTY. For the Use of Schools. Fcap. 1s.

Besides being reprinted in America, selections from Mrs. Gatty's Parables have been translated and published in the German, French, Italian, Russian, Danish, and Swedish languages.

LONDON: GEORGE BELL & SONS, YORK STREET COVENT GARDEN.

SOWERBY'S ENGLISH BOTANY:

Containing a Description and Life-size coloured Drawing of every British Plant. Edited and brought up to the Present Standard of Scientific Knowledge by T. BOSWELL, LL.D., F.L.S., &c. With Popular Descriptions of the Uses, History, and Traditions of each Plant, by MRS. LANKESTER, Author of "Wild Flowers Worth Notice," "The British Ferns," &c. The Figures by J. E. SOWERBY, JAMES SOWERBY, F.L.S., J. DR. C. SOWERBY, F.L.S., and J. W. SALTER, A.L.S. In Eleven Volumes, super-royal 8vo.; or in 83 Parts 5s. each.

"Under the editorship of T. Boswell Syme, F.L.S., assisted by Mrs. Lankester, 'Sowerby's English Botany,' when finished, will be exhaustive of the subject, and worthy of the branch of science it illustrates. . . . In turning over the charmingly executed hand-coloured plates of British plants which encumber these volumes with riches, the reader cannot help being struck with the beauty of many of the humblest flowering weeds we tread on with careless step. We cannot dwell upon many of the individuals grouped in the splendid bouquet of flowers presented in these pages, and it will be sufficient to state that the work is pledged to contain a figure of every wild flower indigenous to these isles."—*Times*.

"Will be the most complete Flora of Great Britain ever brought out. This great work will find a place wherever botanical science is cultivated, and the study of our native plants, with all their fascinating associations, held dear."—*Athenæum*.

"A clear, bold, distinctive type enables the reader to take in at a glance the arrangements and divisions of every page. And Mrs. Lankester has added to the technical description by the editor an extremely interesting popular sketch, which follows in smaller type. The English, French, and German popular names are given, and, wherever that delicate and difficult step is at all practicable, their derivation also. Medical properties, superstitions, and fancies, and poetic tributes and illusions, follow. In short there is nothing more left to be desired."—*Guardian*.

"Without question, this is the standard work on Botany, and indispensable to every botanist. . . . The plates are most accurate and beautiful, and the entire work cannot be too strongly recommended to all who are interested in botany."—*Illustrated News*.

Sold separately, prices as follows:—

		Bound cloth.			Half morocco.			Morocco elegant.		
		£	s.	d.	£	s.	d.	£	s.	d.
Vol. I. (Seven Parts)	1	18	0	2	2	0	2	8	6

Or, the Eleven Volumes, 22l. 8s. in cloth; 24l. 12s. in half-morocco; and 28l. 3s. 6d. whole morocco.

Volumes XII., by Prof. BOSWELL, containing ferns and other cryptogamous plants, with an Index to the whole work, is now being issued. Part I. with 22 coloured plates is now ready, price 5s.

LONDON: GEORGE BELL & SONS, YORK STREET, COVENT GARDEN.

LIBRARY OF NATURAL HISTORY.

"Each volume is elegantly printed in royal 8vo., and illustrated with a very large number of well-executed engravings, printed in colours. . . . They form a complete library of reference on the several subjects to which they are devoted, and nothing more complete in their way has lately appeared."—*The Bookseller*.

BREE'S BIRDS OF EUROPE AND THEIR EGGS, not observed in the British Isles. With 252 beautifully coloured Plates. Five vols. 3*l.* 5*s.*

COUCH'S HISTORY OF THE FISHES OF THE BRITISH ISLANDS. With 252 carefully coloured Plates. Four vols. 4*l.* 4*s.*

GATTY'S (MRS. ALFRED) BRITISH SEaweEDS. Numerous coloured Illustrations. Two vols. 2*l.* 10*s.*

HIBBERD'S (SHIRLEY) NEW AND RARE BEAUTIFUL-LEAVED PLANTS. With 64 coloured Full-page Illustrations. Executed expressly for this work. One vol. 1*l.* 5*s.*

LOWE'S NATURAL HISTORY OF BRITISH AND EXOTIC FERNS. With 479 finely coloured Plates. Eight vols. 6*l.* 6*s.*

LOWE'S OUR NATIVE FERNS. Illustrated with 79 coloured Plates and 900 Wood Engravings. Two vols. 2*l.* 2*s.*

LOWE'S NATURAL HISTORY OF NEW AND RARE FERNS. Containing Species and Varieties not included in "Ferns, British and Exotic." 72 coloured Plates and Woodcuts. One vol. 1*l.* 1*s.*

LOWE'S NATURAL HISTORY OF BRITISH GRASSES. With 74 finely coloured Plates. One vol. 1*l.* 1*s.*

LOWE'S BEAUTIFUL-LEAVED PLANTS: being a description of the most beautiful-leaved Plants in cultivation in this country. With 60 coloured Illustrations. One vol. 1*l.* 1*s.*

MAUNDS' BOTANIC GARDEN. New Edition. Edited by J. C. NIVEN, Curator of the Botanic Gardens, Hull. With 250 coloured Plates, giving 1247 figures. Six vols. 12*l.* 12*s.*

MORRIS' HISTORY OF BRITISH BIRDS. With 360 finely coloured Engravings. Six vols. 6*l.* 6*s.*

MORRIS' NESTS AND EGGS OF BRITISH BIRDS. With 223 beautifully coloured Engravings. Three vols. 3*l.* 3*s.*

MORRIS' BRITISH BUTTERFLIES. With 71 beautifully coloured Plates. One vol. 1*l.* 1*s.*

MORRIS' BRITISH MOTHS. With coloured Illustrations of nearly 2000 specimens. Four vols. 6*l.* 6*s.*

TRIPP'S BRITISH MOSSES. With 39 coloured Plates, containing a figure of each species. Two vols. 2*l.* 10*s.*

WOOSTER'S ALPINE PLANTS First Series. With 54 coloured Plates. 2*s.*

WOOSTER'S ALPINE PLANTS. Second Series. With 54 coloured Plates. 2*s.*

THE DICTIONARY
OF
SCIENCE AND TECHNICAL TERMS

USED IN
PHILOSOPHY, LITERATURE, PROFESSIONS, COMMERCE,
ARTS, AND TRADES.

BY
W. M. BUCHANAN.

WITH SUPPLEMENT.

EDITED BY
JAMES A. SMITH,

AUTHOR OF A TREATISE ON "THE BEING AND FACULTIES OF MAN," "THE
STRUCTURE OF MATTER," ETC., EDITOR OF "THE GENERAL GAZETTEER,"
"JOHNSON'S POCKET DICTIONARY," ETC.

LONDON: GEORGE BELL AND SONS,
YORK STREET, COVENT GARDEN.

1884.

Presented to the
LIBRARIES of the
UNIVERSITY OF TORONTO

by

Hugh Anson-Cartwright

ADVERTISEMENT.

THE rapid progress of modern invention and discovery, involving the continual increase of discriminative nomenclature, has long made it evident that no absolutely complete Dictionary of Technical Terms can ever be compiled. Yet there are some, even among the critical, who look upon every such work as the present with undue expectation, and do not hesitate to find fault because impossibilities are not achieved. It is necessary, therefore, to explain that an exhaustive dictionary of Chemistry alone, up to the existing stage of that science, would fill several volumes larger than the present, and be, from the necessary cost, almost inaccessible to either the general or the special student. With the terminology of all the other sciences added, it is plain that a work would be involved of such dimensions that a remunerative circulation could hardly be expected.

Still, however, a Scientific Dictionary, accurate in its definitions, and something much more than merely general in its scope and details, was seriously wanted when the first edition of the present work appeared; and Mr. Buchanan, in his "Technological Dictionary,"

which forms the body of this volume, met the demand with an amount of judgment, knowledge, and ability, which at once fixed the character of his performance, as not only an efficient and unrivalled feat of scientific lexicography for the time, but also as an invaluable nucleus for all sound and judicious subsequent augmentations. In both these respects the present Editor is able to testify, from his personal experience, that it is still without an equal in the field of scientific literature; and he can only hope that in the Supplement now appended, and the corrections which time has rendered necessary in the original text, he has, without increasing the cost of the work to the purchaser, been fortunate enough to meet by a further instalment the public requirement, and not wholly unsuccessful in maintaining that clear and condensed style of explanation, of which Mr. Buchanan has given so excellent an example, and without which the present enlargement would not have been possible within due limits.

London, 1876.

A

TECHNICAL DICTIONARY.

A

A is the first letter of all known alphabets, except the Ethiopic, in which it is the *thirteenth*, and the Runic, in which it is the *tenth*.

A is naturally the first letter, because it represents the first vocal sound naturally formed by the human organs; being the sound uttered by merely opening of the mouth, and without effort to alter the natural position of the lips. Hence this letter is found in many words first uttered by infants: which words are the names of objects with which infants are first concerned, as the breast and the parents. Hence in Hebrew, *am* is mother, and *ab* is father. In Chaldee and Syriac, *abba* is father: in Arabic, *aba*; in Ethiopic, *abi*; in Malayan and Bengalese, *bappa*; in Welsh, *tad*, whence Scotch, *daddy*; in old Greek and Gothic, *atta*; in Irish, *aithair*; in Cantabrian, *atta*; in Laponic, *alki*; in Abyssinian, *abba*; in Amharic, *aba*; in Shilhic and Melindane (African dialects), *baba*; and *papa* is found in many languages. Hence the Latin *mamma*, the breast, which is, in popular use, the name of mother: in Swedish, *amma* is a nurse.

A, was used by the Romans as a numeral to denote 500, and with a dash over it, \bar{A} , to mean 5000. The Romans also employed **A**, the initial letter of *antiquo*,—I oppose, to signify dissent in voting. The letters **U.R.** (for *ut rogas*, be it as you desire), were the form of assent. [These letters were marked on two wooden ballots, and given to each voter, who gave one of them as his vote.] In criminal trials, **A.** stood for *absolvo*, I acquit; **C.** for *condemno*, I condemn: and **N. L.** for *non liquet*, it is not evident; and the judges voted by ballots so marked. In Roman inscriptions, **A** stands for *Augustus*, *argentum*, *aurum*, &c.

A B A

A, in *music*, is the nominal of the sixth note in the natural diatonic scale, and the natural key in the minor mood. It is the open note of the second string of the violin, by which the other strings are tuned and regulated.

A, in *commerce*, stands for "accepted;" \bar{a} for "to;" and \textcircled{a} for "at." Merchants and public officers also number their books and documents by the letters **A, B, C**, instead of figures.

A, in *logic*, denotes a universal affirmative proposition. **A** asserts, and **E** denies. In **BARBARA**, the *a* thrice repeated means that so many of the propositions are universal.

A, \bar{A} , or $\bar{A}\bar{A}$, in *pharmacy*, are abbreviations of the Greek word *ava, ana*, which signifies of each, or that equal quantities of each thing are to be taken.

AAA, in *old chemistry*, stands for *amalgam*, or *amalgamation*.

AAM, a Dutch measure for liquids. At Amsterdam it is equal to about thirty-five imperial gallons.

AARON'S ROD, in *architecture*, a rod with a serpent twined round it. It is sometimes confounded with Caduceus, (q. v.)

A. B. an abbreviation of *artium baccalaureus*, bachelor of arts.

AB, in the Jewish Calendar, the 11th month of the civil year, and the 5th month of the ecclesiastical year, answering to a part of July and of August. In the Syriac calendar, *Ab* is the last summer month of the year. As a prefix to English names, *Ab* is usually an abbreviation of *abbot*, or *abbey*.

ABACK', from Saxon, *a*, on, and *baec*, back. A nautical term, signifying the situation of the sails when flattened by the wind against the masts. Taken *aback*, is when they are carried back suddenly by the wind; *laid aback*, is when they are purposely placed so to give the ship stern-way.

B

AB'ACOT, in *architecture*, a small member representing the *abacot*, or cap of state, in the form of a double crown, anciently worn by the kings of England.

ABAC'TOR (Latin, from *abigo*, to drive away), in *law*, one who steals numbers of cattle: in distinction to one who steals one or two.

AB'ACUS, Latin, from $\alpha\beta\alpha\zeta$, any thing flat, as a bench, a table. 1. A small sanded or waxed table, or board, on which, of old, mathematicians traced their diagrams, and children were taught to write.

—2. An instrument to facilitate arithmetical calculations, similar to the *suapan* of the Chinese. It consisted of a board of an oblong figure  divided by lines or cords. A counter placed on the lower line denoted *one*, on the second *ten*, on the third a *hundred*, &c.: on the spaces between the lines, counters denoted half as much as on the lines immediately above. Other schemes are called by the same name.

—3. In *architecture*, the upper member of the capital of a Greek Doric column, and a collection of members or mouldings, serving as a kind of crowning in other orders. It is usually square, but in the Corinthian order it is encurved, which curving is called the *arch* of the abacus. The upper member of the abacus in this order is sometimes called the *boul-tine*, or *enchinus*: the member under it, the *fillet*: and the third and undermost member, the *plinth*. See CAPITAL.—4. A table of numbers ready cast up, to expedite arithmetical operations, e.g. the *Abacus Pythagoricus*, the common multiplication table, invented by Pythagoras: the *Abacus Logisticus*, or *canon* of sexagesimals, is a rectangled triangle, whose sides forming the right angle contain the numbers from 1 to 60, and its area the result of each pair of the numbers perpendicularly opposite.

ABACUS HARMONICUS, the structure and disposition of the keys of a musical instrument.

ABACUS MAJOR, a trough to wash ore in.

ABAD'DON, from *abad*, to be lost. The destroying angel of the bottomless pit.—Rev. ix. The bottomless pit.—Milton.

ABATT, from Sax. *beaftan*, to be behind in place. The situation of anything placed towards the stern of the ship: opposed to *afore*. Relatively it means *farther aft*, or nearer the stern. Contr. *aft*.

AB'AGUN, the name of an Ethiopian fowl, remarkable for a sort of horn on its head. The name means *proud abbot*.

ABAT'SIN, spodium, burnt ivory, or ivory-black.

ABAISSED, Fr. *abaissé*, depressed. In *heraldry*, applied to the wings of eagles, &c., when the *tips* are depressed below

the centre of the shield or shut. The natural bearing is *volant*, (q. v.)

ABALIENATION, from *ab* and *alienation*, (q. v.). In *law*, transferring title to property from one to another. In *medicine*, decay of body or mind.

ABAN'DONMENT, from *abandon*, to forsake entirely. In *commerce* and *navigation*, the relinquishing to underwriters all the property saved from loss by shipwreck, capture, or other peril stated in the policy. The *abandonment* being made, the insured claims indemnification for a total loss.

AB'ANET, in *surgery*, a bandage resembling the *abanet*, or girdle, worn by Jewish priests.

ABAN'GA, the *ady*, a species of palm-tree in the West Indies. It furnishes a juice of which a species of fermented drink is made.

ABAPTIS'TON, in *surgery*, the perforating part of the trephine: der. α , not, and $\beta\alpha\tau\tau\omega$, to dip, because it was made with *abaptista*, or shoulders, so as not to enter the brain.

ABARTICULATION, from *ab* and *articulation*, (q. v.). In *anatomy*, that articulation of joints which admits of manifest motion. Syn. *diarthrosis*, (q. v.)

ABAS', a Persian weight for pearls equal to seven-eighths of a carat.

ABASED, in *heraldry*, the same with *abaissé*, (q. v.)

ABASSI, or **ABASSIS**, a Persian silver coin of the value of ten pence sterling.

ABATAMENTUM, from *abate*. In *law*, an entry of a freehold, when a person dies seized, and another enters before the heir.

ABATE, Fr. *abattre*, to beat down, to destroy, e.g. in *law*, to abate a castle is to pull it down: to abate a writ, is to overthrow or defeat it: to abate by covin, to overthrow by deceit. In *horsemanship*, a horse is said to *abate* when, working upon curvets, he puts both hind legs down at once, and observes the same exactness in all the times.

ABA'TEMENT, from *abate*. In *commerce*, 1. An allowance or discount for prompt payment; 2. A deduction sometimes made at the custom-house from the duties chargeable upon such goods as are damaged. Syn. *rebate*. In *heraldry*, a mark of dishonour in a coat of arms. In *law*, the English word for *abatamentum*, (q. v.)

ABATIS, or **ABATTIS**, from α , not, and $\beta\alpha\tau\omega$, pervious. In *war*, a temporary work, made of felled trees, with the branches pointed outwards.

ABATOR, from *abate*. In *law*, a person who intrudes into a freehold on the death of the last possessor before the heir. See **ABATAMENTUM**.

ABE, yarn for the warp of a web.

AB'EA, the Syrian and Chaldee name

for *father*. In the Coptic, Syriac, and Ethiopic churches, it is the title of bishops, and the bishops bestow it by way of distinction on the bishop of Alexandria. Hence the titles of *baba*, *papa*, *pope*.

AB'NACY, from *abba* (low Lat. *abbatia*), the dignity, rights, and privileges of an abbot.

ABBE, (*abby*), from *abba*. Originally, an abbot; subsequently, a common title in Catholic countries, implying no determinate rank, office, or rights; and latterly, an academic, but not properly a churchman.

AB'BESS, from *abba*, the female superior of a nunnery.

AB'BEY, from *abba*, a monastery or religious society of persons of either sex. The males, called *monks*, are governed by an abbot; the females, called *nuns*, are governed by an abbess. Abbeys were suppressed in England by Henry VIII.

AB'BOT (formerly *abbat*, from *abba*, Latinized *abbas*), the superior of an abbey or monastery. Abbots are *regular* and *commendatory*. The regular abbots are such as take the vow; the commendatory are seculars, but obliged, when of suitable age, to take orders. The title is also borne by bishops whose sees were formerly abbeys. The *A. of unreason* was a sort of histrionic character peculiar to Scotland, similar to the *lord of misrule* in England.

ABBEUVOIR, from *abbreuer*, to water. A watering place. In *masonry*, the joint between two stones, to be filled up with mortar.

ABBE'VIATE, from *abbrevio*, to shorten. In *mathematics*, to reduce fractions to their lowest terms. *A. of adjudications*, in Scotch law, is an abstract of a decree of adjudication, which is recorded in a register kept for that purpose.

ABBE'VIATED, Lat. *abbreviatus*, shortened. In *botany*, an abbreviated perianth is shorter than the tube of the corolla, as in the *pulmonaria maritima*.

ABBEVIA'TION, from *abbreviate*, the contraction of a word or a passage, by omitting some letters or words, as i. e. *id est*, that is; e. g. *exempli gratia*, for example; A.M. *ante meridiem*, before noon; P.M. *post meridiem*, afternoon; *A. of fractions*, the reduction of them to their lowest terms.

ABBE'VIATOR, one who *abbreviates*. *Abbreviatores* are officers in the Chancery of Rome, who draw up the pope's briefs, and reduce petitions, when granted, to due forms for *bulls* or *mandates*.

ABBE'VIATURE, Lat. *abbreviatura*, an abridgment. A mark or character used in abbreviation, e. g. A B C used for the whole alphabet.

ABBUTTALS, the *butting* or boundary of land towards any point.

ABCDARY, belonging to the alphabet

(a, b, c.) *A. psalms*, are those whose parts are arranged according to the letters of the Hebrew alphabet, e. g. psalms 25, 34, 119.

AB'DALS, a sect of fanatics in Persia, who sometimes run out into the streets, and attempt to kill all they meet who are of a different religion; and if they are themselves killed, they are considered martyrs.

ABDERITE, an inhabitant of *Abdera*, in Thrace; Democritus was so called because he was a native of it, and as he was given to laughter, foolish laughter is called *abderian*.

ABDICATE, in a general sense, to relinquish, from Lat. *ab-dico*, to send away. To relinquish an office before the expiry of the time of service. In the *civil law*, to disinherit, e. g. a son during the lifetime of the father.

ABDICA'TION, from *abdicate*, the act whereby a person in office gives it up before the time of service is expired. The term is chiefly used with reference to the supreme magistrate; we say of the monarch that he *abdicated* the throne, and of a minister that he *resigned* his office.

ABDO'MEN, in *anatomy*; the lower belly, or that part of the body between the thorax and the pelvis. It is lined by the peritoneum, and contains the stomach, liver, spleen, pancreas, kidneys, bladder, and intestines. It is separated from the chest internally by the diaphragm, and externally by the extremities of the ribs. It is divided into four regions,—the epigastrio, umbilical, hypogastric, and lumbar. The term is usually derived from Lat. *abdo*, to hide, and *omentum*, the caul, because it conceals the viscera; but some maintain that *men* is merely a grammatical augmentation, and that *abdomen* is formed from *abdo* in the same way as *legumen* is formed from *lego*.

ABDOMINAL, belonging to the *abdomen*, e. g. *A. aorta*, that portion of the aorta which is below the diaphragm: *A. ring*, the inguinal ring, an oblique tendinous ring in both groins, through which pass the spermatic cord in men, and the round ligaments of the uterus in women.

ABDOMINALS, Latinized *abdominales*, a class of fishes whose ventral fins are placed behind the pectoral. The class contains nine genera, the loche, salmon, pike, argentine, atherine, mullet, flying-fish, herring, and carp. They chiefly inhabit fresh water.

ABDOMINOUS, belonging to the *abdomen*.

ABDUCTENT, Lat. *abducens*. In *anatomy*, muscles which pull back the parts into which they are inserted are called *abductent muscles*, or *abductors*; muscles which have an opposite action are called *adductent muscles*, or *adductors*. The sixth pair of nerves are also called *abducent* (*nervi ab-*

ducentes), from their distribution to the abductor muscle of the eyeball.

ABDUCTION, Lat. *abductio*, from *abduco*. See **ABDUCTENT**. 1. In *physiology*, the action by which muscles draw back by their contraction the parts into which they are inserted; and also the state of a part so withdrawn, e. g. when certain muscles withdraw the arm from the side, or the thumb from the rest of the fingers, they are said to perform the abduction of those parts, and the parts are said to be in a state of abduction.—2. In *surgery*, a species of fracture in which the parts recede from each other. It is sometimes used to denote a sprain.—3. In *law*, the taking away of a child, a ward, a wife, &c., either by fraud, persuasion, or open violence.—4. In *logic*, a species of argumentation, called by the Greeks *apagogé*, in which the major is evident; but the minor is not so clear as not to require further proof; e. g. in this syllogism—

Whatever God has revealed is certainly true:
Now God has revealed a future retribution;
Therefore a future retribution is certainly true.

ABDUCTOR, Lat. *abductor-oris*, from *abduco*. In *anatomy*, a muscle which performs the abduction of any part; its antagonist is called an *adductor*, e. g. the *abductor pollicis pedis*, which pulls the great toe from the rest.

ABECEDA'RIAN, or **ABECE'DARY**, one who teaches the letters of the alphabet. A novice in any art or science.

ABECE'DARY, pertaining to or formed of the letters of the alphabet. See **ABECEDARY**.

ABELLE, or **ABEL-TREE**, the hoary or white poplar (*populus alba*). The wood is white and soft, fit only for coarse work. The best sort of abel-trees having come from Holland, it is in some places known by the name of *Dutch beech*.

ABEL'ANS, **ABELO'NIANS**, or **A'BELITES**. In *church history*, a sect which arose in Africa during the reign of Arcadius; they married, but lived in continence, after the manner, as they pretended, of Abel, and attempted to maintain the sect by adopting the children of others.

ABELLICE'A, an old name of the logwood-tree (*hamatoxylon campechianum*).

ABELMOSK, **ABELMOSCH**, or **ABELMUSK**, the Syrian mallow, or musk okro, a species of hibiscus (*H. abelmoschus*). The plant rises on an herbaceous stalk of three or four feet in height. The seeds have a musky odour; hence its name, *habb el musk* (Arabic), musk seed. It is a native of the East Indies.

ABERRA'TION, Lat. *aberratio*, from *aberro*, to wander from; wandering, deviation. 1. In *astronomy*, a small apparent motion of the fixed stars, occasioned by

the progressive motion of light, and the earth's annual motion in its orbit. The *A. of a planet* is equal to the space it appears to move, as seen from the earth, during the time that the light employs in passing from the planet to the earth. Thus, in the sun the aberration (in longitude) is constantly 20", that being the space moved by the earth in 8' 7" of time, the interval that light takes to pass from the sun to the earth. From this the aberration of the other planets is readily found; for, knowing the distance of the sun from the earth, it will be, by common proportion, as the distance of the earth to the sun is to the planet, so is 8' 7" to the time the light takes to pass from the planet to the earth; then finding the planet's geocentric motion in that time, it will be the aberration of the planet.—2. In *optics*, a deviation of the rays of light, when inflected by a lens or speculum, by which they are prevented from uniting in one point. It is occasioned by the figure of the reflecting body, or by the different refrangibility of the rays themselves: this last is called the *Newtonian aberration*, from the name of its illustrious discoverer. *Crown of aberration*, a luminous circle round the disc of the sun, depending on the aberration of the solar rays, by which his apparent diameter is enlarged.—3. In *medical language*, (1.) The passage of a fluid in the living body into vessels not destined to receive it; (2.) The determination of a fluid to a part different to that to which it is usually directed; (3.) The alienation of the mind.

ABESASUM, the oxide which forms on the iron of wheels: formerly used in medicine.

ABET', in *law*, to encourage, counsel, incite, or assist, in a criminal action; from Sax. *betan*, to push forward, or advance.

ABET'TOR, one who *abets* or incites. In *law*, one who encourages another to the performance of an unlawful action. In *Scotch law*, an abettor is said to be *art and part*. In *treason*, there are no abettors; all concerned are principals.

ABEVACUA'TION, from *ab*, dim. and *evacuatio* (q. v.). In *medicine*, a partial evacuation of the morbid humours, either by nature or art.

ABEY'ANCE, from Norm. *abaizance*, in expectation (*bayance*). In expectation of law. The fee-simple or inheritance of lands is in *abeyance*, when there is no person in whom it can vest; so that it is in a state of expectancy, until a proper person shall appear; e. g. if land is leased to a man for life, remainder to another for years, the remainder for years is in *abeyance*, until the death of the lessee for life.

AM'HAL, the fruit of a species of Asiatic cypress, said to be a powerful emmenagogue.

ASHO'AREES, a name given to a party in England about 1680, in opposition to those who petitioned for a redress of grievances.

AS'IS, the first month of the Jewish ecclesiastical year, called also Nisan. It begins at the spring equinox, and answers to the end of March and beginning of April. Its name, which means a full ear of corn, is derived from the wheat being full grown in Egypt at that season.

ABIDE, from Sax. *abidan*, to continue. *Abiding by writings*, in Scotch law, means compelling a person to abide by a false deed as if it were true.

ABIES, the trivial name of the Norway spruce fir (*pinus abies*), which affords the Burgundy pitch, and common frankincense (*abietis resina*). Name, from *αἰγιος*, a wild pear, to which its fruit bears some resemblance.

ABIETIC, from *abies*. *A. acid* (*acidum abieticum*), an acid discovered in the resin of the *pinus abies*. It crystallises in square plates, is soluble in alcohol, and forms salts with the alkalies.

ABETINE (*abietina*), a resinous substance obtained from the Strasburg turpentine.

A'BIGA, the ground-pine, or chamæpitys (*Teucrium chamæpitys*). Name, from *abigo*, to expel, as it was supposed to promote parturition.

ABIGERAT (*abigereatus*), the crime of stealing cattle in droves; called also *abactus*. See **ABACTOR**.

ABIL'ITY, from Lat. *habilitas*, ableness, from *habeo*, to have. In law, the power of doing certain actions, principally with regard to the acquisition and transfer of property.

ABINTES'TATE, from Lat. *ab* and *intestatus*, without a will (*testator*). In law, applied to the person who inherits the estate of one dying *intestate*, or without a will.

ABIOTOS, deadly; from *α*, not, and *βίωω*, to live. A name given to hemlock (*conium maculatum*), from its deadly qualities.

ABIRRITATION, from *ab* and *irritation*, a medical synonyme for *asthenia*, debility, &c.

ABJURATION, from *abjure*, Lat. *ab-juro*, to deny upon oath. A renunciation upon oath; e. g. "an *abjuration* of the realm," by which a person swears to leave the country for ever. This is much the same with what in Scotland is called *signing an act of banishment*, and was allowed formerly in England to felons who had taken refuge in a church, and confessed their guilt. In some statutes, it is an oath disclaiming all allegiance to a pretender.

The "*abjuration of heresy*," is the renunciation of any religious doctrine as false.

ABLACTA'TION, the weaning of a child from the breast. In *gardening*, a mode of grafting, in which the scion is not separated from the parent stock till it is firmly united to the new one. It is now called *grafting by approach*, or *inarching*.

ABLAQUEA'TION, from Lat. *ab* and *laquear*, a covering. In *gardening*, the operation of laying bare the roots of trees to the air and water.

ABLA'TION, Lat. *ab-latio*, a carrying away. In *medicine*, the taking away from the body whatever is hurtful: evacuations generally. In *chemistry*, the removal of whatever is finished.

AB'LATIVE, Lat. *ablativus*, from *aufero*, to carry away (of *ab* and *fero*). In *Latin grammar*, the name of the sixth case, peculiar to that language. Words are used in this case when the actions of *carrying away* or *taking from* are signified. It is therefore opposed to the *dative*. It is sometimes called the comparative case, as being much used in comparing things. *Ablative absolute*, is when a word in that case is independent in construction of the rest of the sentence.

ABLE-BODIED, in *nautical language*, it denotes skill in seamanship.

ABLECT'I (*selected*). In the Roman army, a select body of soldiers chosen from among those called *extraordinarii*.

ABLE'GIMA (*απολεγυμαι*). In Roman *archæology*, the parts of the victim which were offered to the gods in sacrifice. The word is derived from *ablegere*, in imitation of the Greek *απολεγειν*.

ABLEF'SY, Lat. *ablepsia*, from *α*, not, and *βλέπω*, to see. Blindness.

AE'LUENT, Lat. *abluens*, from *ab-luo*, to wash away (Ir. *lo*, or *lua*, water.) In *medicine*, that which purifies the blood. It is sometimes used in the sense of *diluent*, and *abstergent*.

ABLU'TION, Lat. *ab-lutio* (of *luo*, or *lavo*, to wash). 1. Purification by water. Appropriately, the washing of the body as a preparation for religious duties, enjoined by Moses, and still practised in oriental countries. The priests of Egypt used daily ablutions; the Grecians, sprinklings; the Romans, lustrations; the Jews, washings and baptisms. The ancient Christians had their ablutions before communion; the Roman Catholic has his before mass; on Good Friday, the Syrians, Copts, &c., have solemn washings.—2. In *chemistry*, the separation of extraneous matters from any substance by washing.—3. In *medicine*, the washing of the body.

ABNOR'MAL, or **ABNORMOUS**, Lat. *abnormis*, irregular. Deviating from nature: unnatural.

ABOARD (*a* and *board*), within a ship

boat, &c.: hence, *to go aboard*, to enter a ship: *to board*, to enter a ship by force of arms: *to fall aboard*, to strike a ship's side, to encounter; *aboard main-tack*, an order to draw the main-tack, i.e. the lower corner of the mainsail, down to the chess-tree.

ABOLITION, from Lat. *ab* and *oleo* *olesco*, to grow. In *law*, 1. The repealing of any statute. 2. Remitting the punishment of a criminal. 3. Leave given to a criminal accuser to desist from further prosecution of the accused.

Abolition conveys the notion of a more gradual proceeding than either *repeal* or *abrogate*, and seems more applicable to the obliteration of customs; e. g. we say a change of taste has caused the *abolition* of tournaments; but that such a law has been *repealed*, or *abrogated*; such an edict has been *revoked*, contract *annulled*, or debt *cancelled*.

ABOL'LA, in *Roman archaeology*, a woollen cloak or pall, which was worn by the soldiers; and also by judges. The word is identical in signification with *pallium* (παλιος).

ABOMAS'US, the fourth stomach in ruminating animals: from *ab*, and *omasum*, the paunch. In calves, the rumen, or earing, is formed in the abomasus.

ABOMINATION, detestation: from Lat. *abomino* (of *ab* and *omen*), to deprecate as ominous. *A. of desolation*, foretold by Daniel, the statue of Jupiter Olympius, which Antiochus Epiphanes caused to be put up in the temple of Jerusalem. *A. of desolation*, mentioned by the evangelists, the ensigns of the Roman army when Jerusalem was besieged by Titus.

ABO'REA, a species of duck called, by Edwards, the black-bellied whistling duck. It is of a reddish brown colour, with a sort of crest on its head: the belly is spotted with black and white.

ABORI'GINES, the first inhabitants of a country—as the Celts in Europe, and the Indians in America. The term is Lat. from *ab*, and *origo*, origin. Adj. *aboriginal*. The name was first given to the ancient or original inhabitants of Italy, who, according to tradition, were conducted into Latium by Saturn.

ABORTIENT, Lat. *abortiens*, miscarrying. A term sometimes used by botanical writers, as synonymous with *sterilis*, barren.

ABORTION, Lat. *abortio*, miscarriage, (of *ab* and *orior*). The premature expulsion of the fœtus. If it occur before the end of the sixth month it is called *abortion*, or *miscarriage*: if between the sixth and end of the ninth month, *premature labour*.

Miscarriage is restricted by some writers to the expulsion of the fœtus within six weeks after conception: *abortion* and

miscarriage are, however, generally used synonymously.

ABORTIVE, applied, 1. To a medicine which has the power of exciting abortion (q.v.); 2. To flowers or florets which do not produce perfect seed. Abortive flowers are generally such as have stamens, but no pistils.

ABOUT, from Sax. *abutan*, coinciding with *αμφι*. *About ship*, the order to the ship's crew for tacking; the situation of the ship immediately after she has tacked.

AS OVO, from the beginning: literally *from the egg*, with which the banquet began.

ABP., abbreviation for *archbishop*.

ABRACADAB'RA, the name of a deity worshipped by the Syrians. The name was supposed by the cabalists to possess great virtues in preventing and curing fevers. To render its powers certain, it was written on paper as many times as it contained letters, omitting the last letter every time, thus—

A B R A C A D A B R A
A B R A C A D A B R
A B R A C A D A B
A B R A C A D A
A B R A C A D
A B R A C A
A B R A C
A B R A
A B R
A B
A

The word is a corruption of *Abrasadabra*, which means "divine decree."

ABRAC'ALAN, a cabalistic term, to which the rabbins ascribed the same virtues as to the *Abracadabra*.

ABRAHAMIC, pertaining to Abraham the patriarch, e.g. the *Abrahamic covenant*. *Abrahamites*, a sect of heretics who adopted the errors of Paulus, and who are therefore called *Paulicians*. Also an order of monks exterminated in the ninth century, by Theophilus, for worshipping images.

ABRAN'CHIA, from *α*, not, and *βραγχια*, gills. Animals which have no gills, or apparent organs of respiration.

ABRANCHI'ATA, from *abbranchia* (q.v.), the third order of *Articulata*, having no apparent external organ of respiration, but seem to respire, some by the entire surface of the skin, and others by internal cavities. They have a closed circulating system, usually filled with red blood. This order is divided into two families: the *A. setigera*, which are provided with setæ which enable them to crawl, e.g. the earth-worm; and the *A. asetigera*, which are aquatic, and have no setæ, e.g. the leech.

ABRASAX, a word which has been derived from the initial letters of the Hebrew

words, *Ab, Ben, Ruach-hakodesh*, (Father, Son, and Holy Ghost), and the Greek words, *Σωτηρια απο Ευλου* (salvation from the cross); but more probably, it is made up of the Greek numerals, $\alpha=1$, $\beta=2$, $\epsilon=100$, $\alpha=1$, $\sigma=200$, $\alpha=1$, $\xi=60$, which together make 365: for it was, 1. The name of the supreme god under whom the Basilidians supposed 365 dependent deities, who had the government of so many celestial orbs. It was the principle of the Gnostic hierarchy whence sprung the multitude of *aeons*. 2. An antique gem or stone with the word *abraxas* engraven on it. There are many of various figures, e. g. of beetles, serpents, human heads, mostly as old as the third century. The letters are mostly Roman, Greek, and Phœnician. They appear to have been early sought after as amulets.

ABRA'SION, from *abrado* (of Lat. *abrado*, to scrape off). In *physics*, the effect produced by attrition. In *medicine*, the effect produced by corrosive applications.

ABRAUM, a red clay brought from the Isle of Wight, with which cabinet-makers darken and polish mahogany.

ABRAXAS, in *entomology*, a subgenus in the classification of Leach, including the *Phalæna Grossulariata* (magpie), and *Phalæna Ulmata* (clouded magpie), of Latreille. Feed on the leaves of the currant and gooseberry.

ABRAZITE, Zeagonite or Gismondine, a mineral which occurs in semi-globular masses (sometimes in octahedral crystals with a square base), in the volcanic rocks of Capo di Bove, near Rome. Conts. Silica, 41.4; lime, 48.6; alumina, 2.5; magnesia, 1.6; oxide of iron, 2.5.—*Philips*.

ABREAST, (*a* and *breast*), in *nautical language*, the position of two or more ships which have their sides parallel, and their heads equally advanced. *Abreast* within ship, means in a line with the beam, main hatchway, &c. From this point the position is reckoned *fore* or *aft*.

ABRIDG'MENT, from *abridge* (of *βραχυνω*, short), an epitome; a summary of a book. In *law*, shortening a count or declaration; e. g. in assize, a man is said to *abridge* his plaint, and a woman her demand in action of dower, if any land be put therein, which is not in the tenure of the defendant: for, on a plea of non-tenure in abatement of the writ, the plaintiff may leave out those lands, and pray that the tenant may answer to the remainder.

ABROGA'TION, from *abrogate*, to annul by an authoritative act. The act of abolishing by authority of the legislative power. The term is derived from *abrogo*, from *rogo*, to ask, in allusion to the Roman custom which admitted no law to be valid to which the consent of the

people had not been obtained by asking; or *abrogated*, but in the same way, by gaining the popular consent.

ABRO'MA, from α , not, and *βρωμα*, food. A genus of plants of the polyadelphia dodecandria class and order; containing two species, the *A. angusta*, and the *A. fastuosa*. They grow freely in common garden soil, and are easily propagated by seeds and cuttings. The first is a native of the East Indies, and the other of New South Wales.

ABRO'TANUM, southernwood, from *βροτανον* (of α , not, and *βροτος*, mortal, because it never decays). A species of plant arranged under the genus *artemisia*. H. shrub.

ABRUPT, Lat. *abruptus*, broken; applied to the leaves of plants when the extremity of the leaf is, as it were, cut off by a transverse line.

ABRUPTLY-PINNATE, *abrupte-pinnatus*, a term applied in botany to a leaf which is pinnate, and terminates abruptly, without an odd leaflet or cirrus.

A'BRUS, the knob-rooted wild liquorice, from *αβρος*, soft, in reference to the softness of its leaves. A genus of plants of the class and order diadelphia decandria. There is only one species known in Europe, the *abrus precatorius*. It grows wild in both East and West Indies, and in Africa, and produces those beautiful red seeds, called *Angola seeds*, marked with a black spot or eye at the one end, which have been so much used as beads for making necklaces and *rosaries* (whence the specific name *precatorius* of the plant).

ABSC'E'DENT, Lat. *abscedens* (of *abscedo*, to depart). Applied to a decayed part of an organised body, which is separated from the sound.

AB'SCESS, Lat. *abscessus* (of *ab* and *cedo*, to go from), an imposthume; a collection of morbid matter or pus in the cellular or adipose membrane; matter generated by the supuration of an inflammatory tumour.

ABSCISS, or **ABSCISSA**, from *ab* and *scindo*, to cut. In *conics*, any part of the diameter or axis of a curve, intercepted between the vertex, or some other fixed point, and another line called an *ordinate*. An absciss and ordinate considered together are called *co-ordinates*. By means of these the equation of the curve is defined.

ABSCIS'SION, from *absciendo* to cut off. In *surgery*, the separation of any soft part of the body, by an edged instrument, and as *amputation* is when bones are cut.

ABSCO'NSIO, from *abscondo*, to hide. In *anatomy*, the cavity of a bone which receives and conceals the head of another bone.—*Lat.*

ABSCONSA, from *abscondo*, to hide. A

dark lantern, used by the monks in burying the dead at night.—*Lat.*

ABSIN'THATE (*absinthas*), a salt formed by the combination of *absinthic* acid with a base.

ABSIN'THIC, related to *absinthium*. *A. acid* (*acidum absinthicum*), a peculiar acid contained in *absinthium*.

ABSIN'THINE (*absinthina*), the bitter principle of *absinthium*.

ABSIN'THITES, wine impregnated with *absinthium*.

ABSINTHIUM, wormwood: a bitter plant used in medicine as a tonic. It is a species of *artemisia* (*artemisia absinthium*). Name Latinised from $\alpha\psi\iota\nu\theta\iota\omicron\nu$, supposed to be derived from α , not, and $\psi\iota\nu\theta\omicron\varsigma$, sweet, on account of its bitterness.

AB'SIS, in astronomy, the same with *Apsis* (q.v.)

ABSOLUTE. *Lat. absolutus*, independent of anything extraneous. 1. In *grammar*, the **ABSOLUTE CASE** is when a word or member of a sentence is not immediately dependent on the other parts of the sentence in government, e.g. "Pray without ceasing." the word *pray* is taken *absolutely*.

—2. In *mathematics*, an **ABSOLUTE TERM** or **NUMBER**, is one which is completely known, and to which all the other part of the equation is made equal, e.g. in the eq. $x^2 + 10x = 25$, the absolute number term is 25, which is equal to the square of x , added to ten times x .—3. In *astronomy*, **ABSOLUTE EQUATION** is the sum of the optic and eccentric equations: the apparent inequality of a planet's motion in its orbit, arising from its being at different times at different distances from the earth, is called its *optic* equation: the eccentric inequality arises from the uniformity of the planet's motion in an elliptical orbit, which for that reason appears not to be uniform.—4. In *physics*, **ABSOLUTE SPACE** is space considered without relation to any object. *Absolute gravity* is that property in bodies by which they are said to weigh so much, without regard to circumstances of modification: this is always as the quantity of matter they contain.—5. In *chemistry*, *absolute* is applied to substances free of some usual combination, e.g. alcohol free of water is called *absolute alcohol*.

ABSOLUT'ION, *Lat. absolutio* (of *ab* and *solvere*, to loosen). In *civil law*, a definitive sentence of acquittal by a judge, releasing the accused from all further prosecution. In the *Scotch Presbyterian church*, a sentence of the church judicatories, releasing an individual from excommunication and receiving him again into communion. In *Roman Catholic churches*, a remission of sins pronounced by a priest in favour of a penitent. *Absolutio ad cautelam* is a provisional absolution granted to a person

who has appealed from a sentence of excommunication.

ABSOR'BENT, *Lat. absorbens* (of *ab-sorbeo*, to drink in). 1. In *anatomy*, the delicate, transparent vessels which take up substances from the surface of the body, or from any cavity, and carry it into the blood, are termed *absorbents*. These are the lacteals and lymphatics. The same name is given by naturalists to those fibres of roots which draw nourishment from the earth.—2. In *chemistry* the term is applied to any substance which withdraws moisture from the atmosphere, neutralises acids, &c.—3. In *pharmacy*, a medicine which destroys acidities in the stomach and bowels (e.g. *magnesia*, prepared chalk).

ABSORPT'ION, *Lat. absorptio* (of *ab-sorbeo*, to drink in). 1. In *physiology*, a function of living organised bodies, which consists in taking up substances, and conveying them into the mass of circulating fluids, by means of the absorbing vessels.—*Hooper*.—2. In *chemistry*, the passage of a gas into the pores of a liquid or solid substance; the passage of a liquid into the pores of a solid.

ABSTER'GENT, from *abstergo*, to cleanse, (*abstergeo*), a medicine which removes foulness. The term *detergent* is now commonly used.

ABSTRACT, from *Lat. abs-traho*, to separate; distinct from something else, e.g. an *abstract idea*, in metaphysics, is an idea separated from a complex object, or from other ideas which naturally accompany it: as the solidity of marble, considered apart from its colour or figure. *Abstract terms* are those which express abstract ideas, as whiteness, roundness, (in contradistinction to concretes, as white, round), without regard to the subjects in which they exist. *Abstract numbers* are numbers used without application to any particular objects, as 3, 7; but when applied to anything, as 6 men, they become concrete. *Abstract*, or *pure mathematics*, treat of magnitude or quantity in general, as arithmetic and geometry; opposed to mixed mathematics, which treat of the relations of quantity, as applied to sensible objects, as astronomy, optics. An *abstract* is a summary, or epitome, containing the substance of a treatise or writing. To *abstract* means, in chemistry, to separate the volatile parts of a substance by distillation. In this sense the word *extract* is commonly used.

ABSTRAC'TI, in *church history*, a sect of Lutherans, who asserted that Christ is to be adored not only in the concrete, as the Son of God, but that he is in the abstract an object of adoration.

ABSTRACTION, the act of separating or state of being separated. See **ABSTRACT**.

1. In *metaphysics*, the operation of the mind when occupied with abstract ideas, as when some particular part or property of an object is considered apart from the rest, e. g. as when the mind considers a branch of a tree by itself, or the colour of the leaves, as separate from their size or form.—2. In *logic*, the power of the mind in separating the combinations presented to it, bears the name of *abstraction*.—Stewart.

Abstraction may be regarded as the *science of generalization*, as it is by abstracting from individuals that which is peculiar to each, and retaining what is peculiar to all, that we come to form the idea of *species*, and proceeding in the same way with *species*, we arrive at *genera*; from thence we proceed to *orders* and *classes*.

3. In *chemistry*, the term denotes the separation by heat of the volatile parts of a compound. When the part abstracted is collected, the process is called *distillation* or *sublimation*, according as the process is wet or dry.

ABSTRIN'GENT, Lat. *abstringens*. Medicines which are used to resolve obstructions, concretions, &c., are called *abstringents*, e. g. soap.

ABSRD, Lat. *absurdus* (from *ab* and *surdus*, deaf), opposed to manifest truth. In *mathematics*, a term employed in demonstrating converse propositions. The proposition is not proved in a direct manner from principles before laid down, but the contrary of the proposition is proved to be impossible or absurd, and this indirectly proves the truth of the proposition itself. Thus the fourth proposition of the first book of Euclid is demonstrated by showing that if the extremities of two right lines coincide, the lines themselves will coincide in all their parts, otherwise they would enclose a space, which is *absurd*, being contrary to the tenth axiom. This is called *reductio ad absurdum*.

AB'SUS, the trivial name of a small Egyptian lotus (*cassia abous*). The powdered seeds are used in the cure of ophthalmia.

ABUN'DANT, Lat. *abundans* (from *unda*, a wave). In *arithmetic*, a number, the sum of whose aliquot parts is greater than the number itself, is called an *abundant number*, e. g. 1, 2, 3, 4, 6, the aliquot parts of 12, make the sum 16. This is opposed to a *deficient number*, as 14, the aliquot parts of which are 1, 2, 7, the sum of which is 10, and both to a *perfect number*, which is equal to the sum of all its aliquot parts, as 6, whose aliquot parts are 1, 2, 3.

ABUT'ILON, a genus of exotic shrubs, containing 26 species; class *monadelphia*, order *polyandria*, natives of South America, East and West Indies, Senegal,

Egypt, and Canaries. One species (*A. Ari-cenna*) is a native of the south of France.

ABUTMENT, from *abut*, to meet (chiefly used in describing the bounds or situation of land). The extremity; chiefly used to denote the solid mound or pier erected on the bank of a river, to support the end of a bridge. *Synonymes*, land-stool, land-pier. The term, however, often means simply the masonry casing of this pier. Among *carpenters*, the joining of two pieces of timber is called an *abutment*. In this the fibres of the wood are placed as nearly as practicable at right angles to each other.

ABUT'TAL, the butting or boundary of land; a headland. See ABUT'TALS.

ABYSS, from *αβυσσος*, without bottom; something profound, as it were bottomless; e. g. the ocean, hell (bottomless pit).

The term has been used by some to denote a vast cavity filled with water, which they supposed to exist in the centre of the earth; and by others, to signify a deep mass of water, which they conceived encompassed the earth in its state of chaos. These waters were, according to the same authorities, collected by the Deity, into the abyss in the centre of the earth, on the third day of creation. Geology has done much of late to correct our notions on these subjects.

2. In *heraldry*, the centre of an escutcheon, e. g. "He bears azure, a fleur de lis, in abyss," i. e. in the middle of the shield clear of everything else.—3. In *archæology*, the temple of Proserpine, so called from the immense treasures it was supposed to contain.

ABYSSIN'AINS, a sect of Christians in Abyssinia, who admit but one nature in Jesus Christ, and reject the council of Chalcedon. They are governed by a bishop, called an *abura*.

AC, in Saxon, oak; the initial syllable of names, as *Acton*, *Oaktown*.

A.C., an abbrev. of *Ante Christum* (before Christ).

ACAC'ALOT, the *Tantalus Mexicanus*, a Mexican fowl. See ACALOT.

ACA'CIA, Gr. *ακακία*, from *ανακα*, to sharpen, the Egyptian-thorn, a genus of shrubby plants, of the class *polygamia*, and order *monœcia*. This genus contains about 132 species, all natives of hot climates.

The Chinese make a yellow dye from the flowers of one species of it, which bears washing on silks. From another species of it (*acacia vera*), we derive our gum arabic, gum senegal, &c.; and the astringent medicine called *catechu* is the production of a species of the same tree (*acacia catechu*), which is a native of the East Indies.

2. In *medicine*, the name of the expressed juice of the immature pods of the *acacia vera*. It is brought chiefly from Egypt in roundish masses, wrapped up in thin bladders.—3. In *archæology*, a roll or bag on the medals of the Greek and Roman emperors, supposed by some to represent simply a handkerchief rolled up, with which signals were given at the games; by others it is said to be a roll of petitions; others make it a purple bag filled with earth, to remind the prince of his mortality.

ACA'CIANS, in *church history*, sects so denominated from their leaders, *Acacius*, bishop of Cæsarea, and *Acacius*, patriarch of Constantinople. Some of them maintained that the Son was only a similar, not the same substance with the Father; others, that he was not only a distinct but a dissimilar substance.

ACADEMIC, 1. pertaining to an *academy*, college, or university, e.g. *academic studies*; also what belongs to the school or philosophy of Plato, e.g. the *academic sect*.—2. An *academician* (q. v.).—3. One who belonged to the school or adhered to the philosophy of Socrates and Plato.

Plato, the founder of the academical philosophy in Greece, taught that matter is eternal and infinite, but without form, refractory, and tending to disorder, and that there is an intelligent cause, the author of spiritual being, and the material world.

ACADEMICIAN, a member of an *academy*, or society for promoting arts and sciences, particularly a member of the French academies; also an academic philosopher; an *academist*.

ACA'DEMY, Lat. *academia*, from *ακαδημία*; originally a garden or grove near Athens, where Plato and his followers held their philosophical conferences, and ultimately, the sect of academic philosophers.

In the *modern sense*, a society of learned men united for the promotion of the arts and science in general, or of some special department. Hence *academies of antiquity* (for the illustration of whatever regards archæology, as medals, coins, inscriptions, &c.), *ecclesiastical*, *chirurgical*, and *dancing academies*; academies of *belles-lettres*, of *languages*, of *painting*, of *sculpture* and *architecture*, &c. The first modern school under this name was established by Charlemagne, at the instance of Alcuin, an English monk. *Academy* is also applied with us for a kind of school in which the elementary branches of education are taught.

ACADEMY-FIGURE, a draught or design made after a model with a crayon or pencil.

ACÆ'NA, the generic name of a Mexican shrub (*A. elongata*) of the class *tetrandria*, and order *monogynia*. Name *ακαία*, a prickle.

ACENITES, in *entomology*, a genus of ichneumonides.—*Latreille*.

ACALOT, a Mexican fowl resembling the ibis; it is called by some the *water-crow*.

ACA'LYCINE, Lat. *acalycinus*, (*a*, without, and *καλύξ*, a calyx), without calyx or flower-cup.

ACA'LYPHA, from *ακαληφη*, the nettle, (*urtica*, Lin.). 1. A genus of plants of 16 species, some of which much resemble the broad-leaved pellitory of the wall: class *monæcia*, order *monadelphia*.—2. A class of radiated animals (*radiata animalia*), comprising zoophytes (*zoophyta*), which swim in the ocean, and in whose organisation vessels can be recognised. These are generally, however, "mere productions of the intestines excavated in the parenchyma of the body." The acalyphæ are divided into two orders; the *A. simplicia* (simple A.), and the *A. hydrostatica* (hydrostatic A.). The first swim by the alternate contractions and dilatations of their body, although their substance is apparently without fibres. The hydrostatic A. have one or more bladders, filled with air, by means of which they sustain themselves in their liquid element.

ACAMACU, the local name of the Brazilian fly-catcher, or *todus* (q. v.).

ACA'MPSY, Lat. *acampsia*, from *a*, not, and *καμπτω*, to bend. The same with *Anchylosis* (q. v.).

ACANA'CEÆ, a class of plants in some systems of botany, including all those which are prickly, and bear their flowers and seeds on a kind of head; name, from *ακανος*, a prickly shrub.

ACANA'CEOUS, armed with prickles; belonging to the class of plants called *acanaçee*.

ACANOIS, in Turkish military affairs, "a kind of light-armed horse."

ACA'NOS, from *ακανος*, a spine. The *onopordium* (q. v.).

ACA'NTHA, from *ακανθα*, a thorn. In *botany*, a thorn. In *zoology*, the spine of a prickly fish; also an acute process of the vertebra. In *anatomy*, the *spina dorsii*.

ACANTHA'BOLUS, from *ακανθα*, a thorn, and *βαλλω*, to throw out. In *surgery*, a kind of forceps for pulling thorns, &c. from the skin.

ACA'NTHIA, in *entomology*, a genus of hemipterous insects; form oval, with a spinous thorax, and ciliated abdomen. Found chiefly on the banks of rivers. Name anciently given to a species of grasshopper found near the city of *Acantus*.

Acanthia cicada (singing grasshoppers), had the same meaning among the ancients that *timber tuned* has among ourselves.

ACA'NTINE, pertaining to, or resembling the plant *acanthus*. In architecture, a border or fillet ornamented with the *acanthus*-leaf.

The acanthine garments of the ancients were made of the down of the thistle, or embroidered with representations of the *acanthus*.

ACA'NTHINE-GUM (*gunmi acanthinum*). Gum-acacia is sometimes so called, because it is produced by a thorny tree, the *acacia vera*.

ACA'NTHOCEPHALA, an intestinal worm constituting a family of the order *parenchymata*, and class *entozoa*, and forming the genus *echinorhynchus*, of Gmelin. The A. attach themselves to the intestines by a prominence armed with recurved spines, which also appear to act as a proboscis: hence the name, *ακανθες* thorny; *κεφαλη*, head.

ACA'NTHOMERA, in entomology, a genus belonging to the tribe of blaspides of Latreille; name, from *ακανθες*, spinous.

ACA'NTHOPODA, a tribe of coleopterous insects composed of the single genus *heterocerius*, of Bosc; remarkable for their broadish flattened legs armed exteriorly with spines: whence the name, *ακανθα*, a spine, and *πους*, a foot.

ACA'NTHOPTERA, in entomology, a genus belonging to the tribe of cerambycini of Latreille. It comprises the *callichroma*, *purpuricenus*, and *stenoceurus*, of Dejean; name, *ακανθα*, a spine, and *πτειρον*, a wing.

ACA'NTHOPTERYGII, the first and by far the most numerous division of fishes; distinguished by having the rays of their fins bony, and many of them prickly at the extremities: whence their name, *ακανθα*, a spine, and *πτερυξ*, a fin. The perch is an example of this order.

ACA'NTHOPUS, in entomology, a genus of hymenoptera, belonging to the *apis* of Linnaeus, and *apiarie* of Latreille.

ACA'NTHOSCELLIS, a genus of coleopterous insects; anterior tibiae strongly palmated; posterior short, broad, arched, and spinous: whence the name, *ακανθα*, a spine, &c.

ACA'NTHUS, from *ακανθες*, prickly. Lat. 1. In botany, the plant bear's breech or brach ursine; a genus of about ten species, receiving their name from their prickles: class *didynamia*, order *angiospermia*. The *acanthus mollis* is that which was formerly used in medicine: the *branca urti*. It is a native of Italy, Sicily, and the Archipelago.—2. In architecture, the leaf which forms one of the ornaments of the Corinthian capital. The honour of introducing it is ascribed, by

Vitruvius, to Callimachus, who was by the Athenians called *καταπιχος* (the first of artists).

ACA'NTICONE, a sub-species of *prismatoidal* augite, occurring chiefly in primitive rocks, as micaceous schist, gneiss, &c. It is known also as *pistacite* and *epidote*.

ACAPATLI, the *iva frutescens*, a corymbiferous plant which produces the Mexican quinquina.

ACA'PNON, from *απαινος*, unsmoked.

1. Honey taken from the hive without smoking the bees.—2. The herb marjoram (which when burnt gives out no smoke).

ACA'RDA, a genus of fossil mollusca, belonging to the order of testaceous *acephala*. The shells are thick, and of a solid or porous tissue. M. de Lamarck makes a family of this genus, which he calls *radiata*. They are now usually divided into *radiolites*, *sphaerulites*, *hippurites*, *batolithes*.

ACA'RNAS, a bright star of the first magnitude in Eridanus.

ACA'RPIA, from *ακαρπος*, unfruitful. Unfruitfulness. *Acarpius*, sterile, barren.

AC'ARUS, the tick or mite; a numerous genus of insects of the order *aptera*, or those which have no wings. The acari are oviparous, have eight legs, two eyes, and two-jointed tentacula. Name, from *ακτις*, not divisible, as though the insect were too small to be divided. In the system of Cuvier, the acarus belongs to the family of *holetra*, class *arachnides*, and order *tracheares*. Linnaeus enumerates 35, and Gmelin 82 species of acari. They are excessively numerous, and most of them so small as to be almost microscopical. They abound everywhere, even attached to the bodies of other insects, and have been found in the brain and eye of man.

ACATALEC'TIC, from *ακαταληκτος*, not defective in number. In ancient poetry, applicable to such verses as have all their regular feet and syllables, e. g. the first two of the following lines of Horace are *acatalectic*, and the last *catalectic* :—

Solvitur acris hyems grata vice
Veris et Favoni;
Trahuntque siccas machine carinas.

ACATALEP'SIA, from *a*, neg. and *καταλαμβάνω*, to comprehend. *Acatalepsy*. In medicine, uncertainty in the prognosis or diagnosis of diseases.

ACATALEPSY, from *acatalepsia*, (q. v.). In ancient philosophy, the impossibility of comprehending something. The distinguishing tenet of the *pyrrhonists* was, their asserting an absolute *acatalepsy* regarding everything.

ACATA'POSIS, from *a*, neg. and *καταπινομαι*, to swallow. Difficult deglutition.

ACATHAR'SIA, from *ακαθαρς*, impure. Acatharsy; an impurity of the blood, &c.

ACA'TIUM, in *archæology*, a kind of boat used in military affairs.

ACA'ULINE, **ACA'ULOSE**, or **ACA'ULOUS**, in *botany*, plants which have no *caulis* or stem.

ACA'ULIS, from *ακαυλος*, without stem. Stemless: applied in *botany*, to those plants whose flowers are without stalks, and rest on the ground, e. g. the *Carlina thistle* (the term is not to be too rigidly understood).

ACAWERIA, the Ceylonese name of the root of the *ophocylum serpentinum*. It is used in India as an antidote against the bite of serpents.

ACCAPITA'RY, in old law-books, the act of becoming vassal to a lord; or of yielding him obedience: hence,

ACCA'FITUM, money paid by a vassal upon his admission to a fief: from *accapitare*, (q. v.) It is also used for the relief due to the chief lords.

ACCE'DAS AD CURIAM, in law, a writ lying where the man has received, or fears, false judgment in an inferior court. It is issued by the chancery, and directed to the sheriff.

ACCE'LERATE, Lat. *accelero* (of *ad* and *celer*, to hasten), to quicken motion; to add to natural progression. In mechanics, *accelerated motion* is that in which the velocity is continually increasing, from the continued action of the force. *Uniformly accelerated motion* is that in which the velocity increases equally in equal times; e. g. a new impression being made upon a falling body at every instant, by the continued action of gravity, and the effect of the former still remaining, the velocity continually and uniformly increases. *Accelerated motion* is the opposite of *retarded motion*.

ACCELE'RATION, from *accelerate* (q. v.), the act of increasing velocity; the state of being quickened in motion; the opposite of *retardation*. The *acceleration of the moon* is her increase of mean motion from the sun, compared with the diurnal motion of the earth, being about 10" in a hundred years. This arises from the action of the sun upon the moon, combined with the variation of the eccentricity of the earth's orbit. The *acceleration of a planet* is when the real diurnal motion exceeds the mean diurnal motion; and *vice versa*, a planet is said to be retarded when the mean diurnal motion exceeds the real diurnal motion. These inequalities of a planet's motions arise from the change in the distance of the planet from the sun. The *diurnal acceleration*, as applied to the fixed stars, is the time by which they, in one revolution, anticipate the mean diurnal revolution of the sun: that is, a star rises or sets

about 3' 56" sooner each day. This apparent acceleration is owing to the motion of the earth in its orbit, which is at the rate of 59' 8½" a day. Therefore, to find the acceleration we have this proportion—360° : 59' 8½" :: 24h : 3' 56" nearly. In *physiology* and *pathology*, the term is applied to an increased activity of the functions, but particularly of the circulation and respiration.

ACCE'NDENTES, or **ACCE'NSORES**, from *accendo*, to brighten (*canus*, white). In the Romish church, a lower rank of ministers whose business it is to trim the candles and tapers.—*Lat.*

ACCE'NDONES, or **ACCE'DONES**, from *accendo*, to kindle. In *Roman antiquities*, officers in the gladiatorial schools, whose business it was to animate the combatants during the fight.—*Lat.*

AC'CENT, Lat. *accentus*, from *ad* and *canto*, to sing. In a general sense, a tone or manner of speaking peculiar to some country, or province, e. g. the Scotch accent, &c.—2. In *elocution*, a particular force or stress of the voice in pronouncing certain syllables of words, which distinguish them from the others.

Accent is of two kinds, *primary* and *secondary*, as in *aspiration*. In pronouncing this word, we observe that the first and third syllables are distinguished: the *third* by a full sound, which constitutes the *primary* accent; the *first* by a degree of force in the voice which is less than that of the *primary* accent, but evidently greater than that which falls on the second or fourth syllables. When the full accent falls on a vowel, that vowel has its long sound, as in *voe'al*; but when it falls on an articulation or consonant, the preceding vowel is short, as in *hab'it*. Accent alone regulates English verse.—*Webster*.

3. A mark or character used in writing, to direct the stress of the voice in pronunciation. We have three kinds of accents; the acute (´), the grave (`), and the circumflex (^ or ~). The first shows that the voice is to be raised; the second that it is to be depressed; and the third, that the vowel is to be uttered with an undulating sound, between high and low.—4. In *music*, a certain modulation or warbling of the sounds, for the purpose of variety of expression. The principal accent falls on the first note in the bar, but the third place in common time requires also an accent.

ACCE'NTOR, from *accent*, (q. v.) In the old music, one of the three singers in parts, or the person who sung the predominant part in a trio.

ACCE'PTANCE, from *accept*, (q. v.) 1. The receiving of a bill of exchange in such a way as to bind the acceptor to make pay-

ment of the same. This must be by express words; and to charge the drawer with costs in case of non-payment the acceptance must be in writing, under, across, or on the back of the bill. Anything tending to show that the party means to make himself liable for the amount of the bill (as the signature of the initials, or making other marks upon the bill, or even keeping the bill longer than usual), is, in law, an acceptance. The common mode of acceptance is to write the word "*accepted*," and subscribe the name.—2. In mercantile language, a bill of exchange accepted; e. g. "I took his acceptance in payment."—3. In common law, the tacitly agreeing to some act done by another, which might have been defeated without such acceptance; e. g. a bishop's taking rent reserved on a lease made by his predecessor, is an acceptance of the terms of the lease, and bars him from bringing the writ *cui in vita*.—4. In the Romish church, the receiving of the pope's constitutions.

ACCEPTER, or ACCEPTOR, in mercantile affairs, the person who accepts a bill of exchange.

ACCEPTILATION, among civilians, the discharging of a debt without receiving payment: compounded of *acceptum*, something received, and *latio*, from *fero*, to take away.

ACCESSION, from *access*, a coming to. 1. In law, the property acquired in accessories is acquired by the right of *accession*, e. g. the calf of a cow becomes the property of the owner of the cow.—2. In medicine, the commencement of a disease; applied chiefly to fevers having paroxysms or exacerbations.

ACCESSORY, or ACCESSARY, Lat. *accessorius* (from *accedo*, to add to), something that *accedes*—not principal; aiding in certain acts or effects in a secondary manner; e. g. accessory sounds in music. 1. In law, one who is guilty of a felony, not by committing the offence in person, or as a principal, but by advising or commanding another to commit the crime, or by concealing the offender after the crime is committed. There may be accessories in all felonies, but not in treason.—2. In anatomy, the accessory nerves (*par accessorium*), a pair of nerves of the neck, which, arising from the spinal marrow in the vertebrae of the neck, enter the cranium of the great foramen of the occipital bone, and then passing out again with the par vagum, are distributed into the muscles of the neck and shoulders.—*Accessorius lumbalis*, the *sacro-lumbalis*.—3. In painting and sculpture, those parts of a design which are added merely for ornament.

ACCIDENT, from Lat. *accidens*, falling (*ad* and *cado*, to fall). 1. In logic, (1.) What-
ever does not essentially belong to a thing,

e. g. the money in a man's pocket. (2.) Such properties in any subject as are not essential to it, e. g. whiteness to paper. (3.) In opposition to substance, all qualities whatever are called accidents, e. g. sweetness, softness, &c.—2. In grammar, something belonging to a word in composition, but not essential to it, e. g. gender, number, &c.—3. In heraldry, a point or mark not essential to a coat of arms.—4. *Per accidens* denotes what does not follow from the nature of a thing, but from some accidental qualities of it; it stands opposed to *per se*, which denotes the nature or essence of a thing; e. g. "fire burns *per se*, but a piece of iron burns *per accidens*."

ACCIDENTAL, Lat. *accidentalis*, happening unexpectedly. In physics, the term is applied to that effect which proceeds from a cause occurring by accident, without being subject to general laws or regular returns. In this sense *accidental* is opposed to *constant*; e. g. the sun's variation of altitude is the constant cause of heat in summer and cold in winter; but thunder, wind, rain, snow, &c., are accidental causes.—2. In perspective, that point in the horizontal line where the projections of all lines parallel among themselves meet the perspective plane, is called the *accidental point*.—3. In optics, those colours which depend upon the affects of the eye, in contradistinction to those which belong to the light itself, are termed *accidental colours*.—4. In music, the term *accidental* is applied to such sharps, flats, and naturals, as do not occur in the clef, and which imply some change of key or modulation different from that in which the piece began.

ACCIPENSER. See ACIPENSER.

ACCIPITRES, from *accipiter*, a hawk (from *ad* and *capio*, to seize), that order of birds of prey which are distinguished by their hooked beaks and talons. They form two families, the diurnal and the nocturnal: the vulture and hawk are examples of the first, and the owl of the second.

ACCIPITRINA, hawkweed (*accipiter*, a hawk).

ACCIPITRINE, rapacious; belonging to the order of *accipitres*.

ACCLAMATION, Lat. *acclamatio* (from *ad* and *clamo*, to cry out), anciently, a formula of words, uttered with vehemence, somewhat resembling a song, sometimes accompanied with applause given by the hands, and usually in approbation of some individual or performance. The acclamations were ecclesiastical, military, nuptial, theatrical, &c.: they were musical and rhythmical. At first, the acclamations of the Roman theatres were confused shouts; but in process of time they assumed a regular form, and were performed by a band instructed for that purpose. When Nero played in the theatre, he had 15

attendance an acclamation band of 5000 soldiers to chant his praise, which the spectators were obliged to repeat in chorus. Acclamations, at first practised in the theatre, passed to the senate, and at length into the acts of councils and the ordinary assemblies of the church. Sermons were applauded with hands and feet, by leaping up and down, and shouting "orthodox," by the waving of handkerchiefs, &c. The acclamation of the Jews was "Hosanna;" of the Greeks, *Ἀγαθὴ τύχη* (good luck); of the Romans, *Dii te nobis servent* (may the Gods preserve you!). In the famous French Convention of 1792, decrees were voted by acclamation.

ACCLIMATE (Fr. *acclimater*), to accustom to the temperature of a foreign climate.

ACCLIVIS, Lat. from *clivus*, an ascent. In *anatomy* a muscle of the belly: named from the oblique ascent of its fibres.

ACCOLADE, from Lat. *ad* and *collum*, the neck. An ancient mode of conferring knighthood, by the king's laying his arm about the young knight's neck, and embracing him.

ACCOLLE, in *heraldry*, 1. The same with *ascolade*. 2. Two things joined together. 3. Animals with collars or crowns about their necks. 4. Batons or swords placed saltierwise behind the shield.

ACCOMMODATION, from *accommodate*. In a commercial sense, a loan of money. An accommodation bill or note, in the language of bankers, means one drawn for the purpose of borrowing its amount, in contradistinction to a note or bill received in payment of goods. The term is also used of a note lent merely to accommodate the borrower, and of one given instead of a loan of money.

ACCOMPANIMENT, from Lat. *ad* and *compagino*, to join (Fr. *accompagnement*). Something that attends as a circumstance, or is added as ornament to the principal thing, or for symmetry; e.g. in *music*, the instruments which accompany the voice to make the music more full: in *painting*, the dogs, guns, &c. of a hunting piece, or the warlike instruments accompanying the portrait of a military character.

ACCOMPLICE, Fr. *accomplice*, from Lat. *ad-complicatus* (from *con* and *plicio*, to fold). An associate in crime: generally applied to such as are admitted to give evidence against their fellow-criminals. By the law of Scotland accomplices cannot be prosecuted till the principal offenders are convicted.

ACCORD, Fr. *accord*, agreement. In *painting*, the harmony which prevails among the lights and shadows of a picture. In *law*, an agreement between parties in controversy, by which satisfaction for an injury is stipulated, and which, when executed, bars a suit.—

Blackstone. In *music*, the same with *accord* (q. v.). This work is derived by some from Lat. *cor*, *cordis*, the heart. In some of its applications it comes naturally from *chorda*.

ACCORDION, from *accord*, a small musical instrument, the sounds of which are produced by the action of bellows upon strings made of German silver.—*Crabb*.

ACCOUCHEMENT, the French word for the act of parturition.

ACCOUCHEUR, the French word for a man-midwife.

ACCOUNT, Fr. *compte*, or *compté*, Fr. *compte*, from Lat. *computo*, to reckon. In a general sense, any arithmetical computation. *Account* signifies more strictly, in mercantile affairs, a single entry or statement of particular debts and credits: in the plural it is used to denote the books containing such entries. A writ of *account*, in law, is a writ which the plaintiff brings demanding that the defendant shall render his just account, or show good cause to the contrary. This is also called an *action of account*. *Commissioners of public accounts*, are individuals who examine and report the receipts, issues, and expenditure of the public moneys. *Chamber of accounts*, in the old French polity, was a sovereign court answering to our exchequer.

ACCOUNTANT, one skilled in accounts; more generally, a person who keeps accounts; a book-keeper in a public office; e.g. an officer in the court of chancery, who receives money, and pays it to the bank, is called *accountant-general*.

ACCOUPLEMENT, in *carpentry*, a tie or brace, and sometimes the whole work when framed.

ACCRETION, Lat. *accretio*, increase (*ad* and *cresco*, to grow).—1. Growth by the accession of new parts.—2. The growing together of parts naturally separate; e.g. the fingers or toes. In *law*, property acquired in something not occupied, by its adhering to or following another thing already occupied; e.g. a legacy left to two persons, and one of them dies before the testator, the legacy devolves to the survivor by right of *accretion*. Alluvion is another instance of *accretion*.

ACCROCHE' (*Anglice*, accroach), in *heraldry*, denotes that one thing is hooked in another. Fr. *croc*.

ACCURED, in *heraldry*, a full blown tree.

ACCUMULATION, from *cumulus*, a heap. A collecting together. In *law*, the concurrence of several titles to the same thing, or of several proofs to make out one fact. In *universities*, the accumulation of degrees means the taking of several of them together, or at shorter intervals than the rules allow.

ACCUSATION, Lat. *ad-cusatio* (from *causa*, blame, &c.) In *law*, a declaration charging

a person with something punishable. Promoters of accusations must find security to pursue them; and failing, must pay damages to the accused, and a fine to the sovereign.

ACCUSATIVE, Lat. *accusativus*. In grammar, that case of nouns, on which the action of the verb falls: called in English grammar the *objective case*.

ACE, Lat. *as*. 1. A unit; e. g. a single point on a card or die, or the card or die so marked.—2. A trifle; e. g. he would not abate an *ace* of his demand.

ACENTRIC, from *a*, not, and *centric*; not centred.

ACEPH'ALA, from *a* without, and *κεφαλη*, head. 1. A class of mollusca, having no apparent head, but merely a mouth, which is always edentated, concealed between the folds of their mantle. This mantle is generally provided with a calcareous bivalve, and sometimes multi-valve shell. All the acephala are aquatic: the oyster is an example.—2. An order of insects in some systems of entomology.

ACEPH'ALA NU'DA (*naked acephala*), an order of mollusca, in which the shell of the ordinary acephala is replaced by a cartilaginous substance sometimes so thin as to be as flexible as a membrane. The order consists of two families, the *segregata* and the *aggregata*.

ACEPHALI, from *κεφαλος*, headless. In history, a party in the reign of James I. who acknowledged no government, civil or ecclesiastical.

ACEPH'ALIA, from *κεφαλος*, without head. In medicine, that variety of partial agenesia which consists in absence or imperfection of the head.

ACEPHALOBRACH'IA, from *κεφαλος* and *βραχιον*, that species of agenesia characterised by absence of head and arms.

ACEPHALOBRACH'IUS, from *κεφαλος* and *βραχιον*, a foetus without head or arms.

ACEPHALOCAR'DIA, from *κεφαλος* and *καρδια*, the heart. That species of agenesia characterised by absence of head and heart.

ACEPHALOCAR'DIUS, from *κεφαλος* and *καρδια*, a foetus without head or heart.

ACEPHALOCY'RIUS, from *κεφαλος* and *χειρ*, a hand. A foetus born without head or hands.

ACEPHALOCYST', Lat. *acephalocystis*, from *κεφαλος* and *κυστις*, a bladder. The headless cyst: the name given by Laennec to the visceral hydatid of Linnæus.

ACEPHALOGAST'ER, from *κεφαλος* and *γαστηρ*, the belly. A foetus, defective of the head, chest, and superior parts of the belly.

ACEPHALOGAST'ERIA, from *κεφαλος* and

γαστηρ, that species of agenesia which consists in a defective formation of the head and superior parts of the body.

ACEPH'ALOTS, applied, 1. to animals which belong to the class *acephala* (q. v.). 2. to a lusus nature born without head.

ACEPHALO'PHORA, from *κεφαλος* and *φορω*, a class of mollusca in some systems.

ACEPHALOP'DIA, from *κεφαλος* and *πους*, a foot. That species of partial agenesia in which the head and feet are wanting or defective.

ACEPHALOP'DIUS, from *κεφαλος* and *πους*, a foetus born without head or feet.

ACEPHALORA'CHIA, from *κεφαλος* and *ραχis*, the spine. That species of agenesia in which the head and vertebral column are wanting.

ACEPHALOS'TOMUS, from *κεφαλος* and *στομα*, a mouth. An acephalous foetus, having at its superior part an aperture resembling a mouth.

ACEPHALOTHORA'CIA, from *κεφαλος* and *θωραξ*, the chest. That species of partial agenesia which consists in the absence of head and chest.

ACEPHALOTHOR'US, from *κεφαλος* and *θωραξ*, a foetus born without head and chest.

ACEPH'ALUS, from *κεφαλος*, headless. An obsolete name of the *tenia* or tapeworm, which was supposed to have no head. As an adjective, the Lat. form of *acephalous*, (q. v.) Also a verse defective in the beginning.

ACER, the generic name of the maple-tree; class *octandria*, order *monogynia*; name, from *acer*, sharp, sour; Celtic, *ac*, on account of the hardness of the wood, which was employed in fabricating spears, pikes, &c. There are 24 species, two of which are natives of Britain—the sycamore (*A. pseudo-platanus*), and the common maple (*A. campestre*). The wood of sycamore is chiefly used in turnery.

ACER virginianum odoratum, an old name of the liquid amber.

ACERAS, the generic name of the man-orchis; a hardy perennial belonging to Britain: class *gynandria*, order *monandria*. There is only one species, the *A. anthropophora*, which inhabits dry or clayey pastures. Name from *a*, without, and *πτερας*, a horn; in allusion to the absence of the spur from the lip, which is found in the orchis proper.

AC'ERATE, in chemistry, a salt formed with the aceric acid and a base.

ACERB, Lat. *acerbus*, from *acer*, sharp. Taste combining acidity and astringency or roughness; e. g. that of an unripe sloe.

ACERIC ACID is obtained from juice of the maple tree (*acer*).

ACERINÆ, a natural order of dicotyledonous plants; mostly trees of the temperate parts of the northern hemisphere. The leaves are generally simple and lobed; flowers often polygamous; fruit a double samara, each 1-celled, with one or two erect seeds; style 1, stigmas 2; petals about 8, inserted in the disk; calyx 4-5-9-partite. Typical genus *acer*.

ACEROSE, or **ACEROUS**, Lat. *acerosus*, chaffy (*acus*, chaff). In botany, leaves which are linear, needle-shaped, everywhere of an equal breadth, mostly acute and rigid, e.g. the leaves of the fir-tree (*pinus sylvestris*).

ACERBA, in architecture, vases representing those in which the ancients burned incense before a dead body until the period of its inhumation. The term is corrupted from *arcerra*, a private altar (*arce* and *ara*).

ACESCENT, Lat. *acescens*, turning sour. That has a tendency to become sour by spontaneous decomposition. It sometimes means "slightly sour," but this is more correctly expressed by *acidulous*.

ACESIS, a cure or remedy, from *axis*. A name of the herb water-sage.

ACES'IA, from *axis*, diseases which are easily cured.

ACESTE, a species of papilio or butterfly, with subdentated wings, found in India.

ACES'TIS, a factitious chrysocola made of Cyprian verdigris, urine, and nitre.

ACETABULUM, Lat. from *acetum*, vinegar. (Among the Romans the *acetabulum* was a cruse or saucer in which vinegar was held for table use. 1. In anatomy, a cavity of a bone formed for receiving the head of another bone, and thus named from its cup-like shape. It is used especially for the *os innominatum*, which receives the head of the thigh bone. 2. In botany, (1.) used in the sense of *cotyledon*, (q. v.) (2.) "The trivial name of a species of peziza, the cup peziza. (3.) A species of lichen."—3. The lobes or cotyledons of the placenta in ruminating animals, have been called *acetabula*.—4. The name has been given to the mouths of the uterine veins terminating in the placenta.

ACETARY, Lat. *acetaria*, from *acetum*, vinegar. 1. A salad.—2. An acid pulp, found in some fruits, especially the pear, round the core.

ACETATE, Lat. *acetas*, any salt formed by the union of acetic acid with a salifiable base, e.g. acetate of potash (called also *regenerated tartar*, *essential salt of wine*, &c.) The acetates are all characterised by their solubility in water; by the pungent smell of vinegar which they exhale on the affusion of sulphuric acid; by their yielding, on distillation, *pyroacetic spirit*.

ACET'IC, from *acer*, sour. The *acetic acid* is vinegar (*acetum*), in a very dilute and impure state. It is the product of

the acetous fermentation, and exists, with potash, in the juices of a great many plants, and is generated during the destructive distillation of most vegetable substances. It consists of three equivalents of water, and four equivalents of carbon.

ACETIFICA'TION, from *acetum*, vinegar, and *facio*, to make. The operation of making vinegar.

ACETIMETER, or **ACETOMETER**, from *acetum*, vinegar, and *μετρον*, a measure. An instrument to ascertain the strength of vinegar.

ACETITE, a neutral salt formed by the acetous acid, with a salifiable base, e.g. *acetite of copper*, &c. See **ACETOUS ACID**.

ACETONE, the new chemical name of *pyroacetic spirit*.

ACETO'SA, the trivial name of the herb garden sorrel (*rumex acetosa*). It is a hardy native perennial. Name from *aceto*, to be sour.

ACETOSCEL'IA, the trivial name of the herb sheep's sorrel (*rumex acetosella*). It is a hardy native perennial. Name from *acetosa*.

ACETOUS, of or pertaining to vinegar (*acetum*).

ACETOUS ACID, chemists formerly supposed that there was a difference between the *acetic* and the *acetous* acids; the salts of the former were therefore called *acetates*, and those of the latter *acetites*. The distinction is without foundation; the acids are one and the same.

ACHAN, from *αχανς*, large. In medicine, a species of herpes.

ACHA'NIA, a genus of West Indian shrubs, containing three species. Class *monadelphia*, order *polyandria*. Name from *αχανια* (from *α* priv. and *χανω*), as the corolla does not open.

ACHARIS'TON, from *αχαριστος*, invaluable. A name of various antidotes and collyria.

ACHATES, the agate, so called from the river *Achates*, in which it was first found. The word *agate* is a corruption of *achate* (*αχατης*).

ACHATINA, a genus of land shells, chiefly found in Africa, where the animals which inhabit them are used as food. They are the largest of land shells, and constitute the first and typical genus of *achatinæ*. The subgenera are the *achatina* (proper), *cochlicopa*, *chacrospira*, *leucostoma*, and *achatinella*.

ACHATINÆ, a subtypical group of *helicidae*, or snails, representing in their own family the zoophagus tribe. Besides the *achatina*, which is the first and typical genus, there are other four genera of this group—the *bulinus*, *clausilia*, *helicina*, and *acetoma*.

ACHATINELLA, a subgenus of *achatina*.

These shells are very small, but remarkable for the beauty of their colours; they are all inhabitants of the Pacific Islands, where they are used as beadlike ornaments.

ACHER'NER, a star of the first magnitude in the southern extremity of the constellation Eridanus.

ACHERSET, an ancient measure of corn, supposed to be about eight bushels.

ACHICOLUM, the sudatorium of the ancient baths.

ACHILLEA, millefoil, yarrow; a genus of plants of the class *syngenesia*, and order *polygamia superflua*. There are fifty-three species, all, with one exception, hardy perennials. Only three species are peculiar to Britain,—sneeze-wort (*A. ptarmica*), yarrow (*A. millefolium*), woolly millefoil or yarrow (*A. tomentosa*) in meadows and pastures, and waysides. Name from *Achilles*, who is said to have made his tents of it.

ACHILLE'ON, a sort of sponge used by the ancients to make tents for wounds.

ACHILLES. In *anatomy*, a strong tendon of the heel is called *tendo Achillis*. Fable says it was by this tendon that Thetis, the mother of *Achilles*, held him when she dipped him in the river Styx, to render him invulnerable.

ACHIOTE, a name of the annotta tree (*Bixa orleana*).

ACHIRITE, "emerald malachite;" a mineral consisting of oxide of copper, carbonate of lime, silica, and water.

ACHIROPOETOUS, Gr. *αχειροποιητος*, not made with hands. Achiropoetous paintings were certain pictures of Christ said to have been painted in a miraculous manner.

ACH'LYS (ἄχλυσ), darkness. Any opacity of the cornea of the eye.

ACH'MIT, a mineral of a brownish-black or reddish-brown colour. It is considered a bisulphate of soda.

ACHNODON'TON, a genus of plants of the class *triandria*, order *digynia*. There are three species, one of which belongs to Britain, the land A. (*A. arenarium*), a hardy annual.

ACHOLEUS, Lat. *acholus*, deficient in bile.

A'CHOR, Gr. *αχωρ*. 1. A species of scald-head; a disease which attacks the hairy scalp of the head, particularly of young children. It is called *achor* from the branny scales it throws off.—2. In *mythology*, the god of flies, said to have been worshipped by the Cyreneans, to avoid being vexed by them.

ACH'RAS, a genus of shrubby plants of the class *hexandria*, order *monogynia*. In this country they are stove plants. The sapota plum is the fruit of the West Indian species (*A. sapota*).

ACHROMA'TIC, from *a*, priv. and *χρωμα*,

colour. Without colour, a term applied to those telescopes formed by such a combination of lenses as separates the various coloured rays of light to equal angles of divergence, at different angles of refraction of the near ray, and thereby corrects in a great measure the optical aberration arising from the various colours of light.

ACHYRANTHES, chaff flower (*αχυρον*), chaff, and *ανθος*, a flower. The descriptive name of a genus of hot-house plants. Class *pentandria*, order *monogynia*. There are seven species.

ACIC'ULAR, from *acicula*, in the shape of a needle. *Aciculary*, needle-like.

A'CID; Lat. *acidum* (Sax. *aced*, vinegar). In a popular sense, the word *acid* is synonymous with *sour*; but the term is applied in chemistry to several substances which are not so. The general characteristic properties of acids are these, 1. Their taste is *generally* sour, and in the stronger it is *acid* and *corrosive*.—2. They unite with water in almost any proportion, with a condensation of volume and evolution of heat.—3. They *generally* change the vegetable blues to a red.—4. They unite with the alkalies, earths, and metallic oxides in definite proportions, and form salts. This may be reckoned their indispensable property.

The salts produced by any acids which terminate in *ous*, have their termination in *ite*, e. g. the combination of *sulphurous* acid and potassa is a *sulphite* of potassa; and when an acid whose name terminates in *ic*, enters into combination, the salt produced has the termination *ate*, e. g. *sulphuric* acid and potassa produce *sulphate* of potassa. *Ic* generally indicates an acid with much oxygen, e. g. *sulphuric* acid: *ous* indicates a smaller quantity of oxygen, e. g. *sulphurous* acid. *Hypo* prefixed to the name indicates that the acid has a smaller quantity of oxygen than that to which the prefix is made, e. g. *hyposulphuric* acid, and *hyposulphurous* acid. *Sub* is occasionally employed to denote an intermediate degree of oxidation, e. g. *subsulphurous* acid, which contains less oxygen than sulphurous, and more than hyposulphurous acid. *Per* is used where acids have been found to contain more oxygen than those whose names terminate in *ic*, e. g. *perchloric* acid. *Hyper* where a still larger quantity is observed. Acids are usually divided into two classes,—*oxacids* and *hydracids*. The first class includes all those acids which contain oxygen, and the second those which contain hydrogen. There are acids, however, which belong to neither of these classes. The term *aqueous* is now used to designate definite combinations with water: the term

hydrate was formerly used in the same sense. We have also the composed terms *binaqueous*, *teraqueous*, &c.

ACIDIFEROUS, from *acidum* and *fero*, containing acid.

ACIDIFIABLE, from *acidum* and *fio*, capable of being converted into an acid. Substances with this property are called *radicals*, or *acidifiable bases*.

ACIDIFICATION, the formation of an acid.

ACIDIFYING, that which combines with an acidifiable substance is called the *acidifying principle*, or *acidifier*.

ACIDIMETER, from *acid* and *μετρον*. measure. An instrument to show the strength of acids.

ACIDIMETRY, the measurement of the strength of acids, by saturating a given weight of them with an alkaline base. The quantity necessary is the measure of their strength.

ACIDULOUS, Lat. *acidulus*, somewhat acid; sub-acid. Applied to salts in which the base is combined with such an excess of acid that they manifestly exhibit acid properties.

ACILIUS, a genus of coleopterous insects of the tribe of *hydrocanthari* of Latreille. Name from *cilium*, in reference to the hairy elytra of the females.

ACINACIFORM, Lat. *acinaciformis*, from *acinaces*, a cimeter, and *forma*, form. Cimeter-shaped, applied to leaves, one edge of which is straight and thick, and the other curved and thin.

A'CINI, plural of *acinus*. Granulations; compound berries.

ACINO'PUS, a genus of insects belonging to the tribe of *carabici*, of Linnaeus. Name from *acinus* and *pes*, which is in some measure descriptive.

A'CINOS, the generic name of the common basil-thyme (*thymus acinos*.—Lin.) Class *didynamia*, order *gymnospermia*. "Name, *ακινος*, ab *ακην*, *acies*."

A'CINOSE, from *acinus*, granular. A variety of iron ore found in masses, and commonly lenticular. Col. generally brownish red; lust. metallic; text, granular; brittle.

A'CINUS, Lat. from *ακινος*, a grape. Each part of a compound berry containing a seed, e.g. the blackberry has many *acini* united. The term is used in opposition to *baccæ*, or such berries as grow single. 2. A genus of plants of the class *didynamia*, and order *gymnospermia*.

A'CIPENSER, a genus of fishes of the order *sturiones* or *chondropterygii branchiis liberis* (i.e. with free branchiæ). The sturgeon, sterlet, and paddle-fish of the Mississippi, are examples. *Acipenser*, or *ecpenser*, is the ancient name; *sturio* (whence *sturgeon*) is the modern.

ACITTI, a name of the water-hare, or great crested grebe or diver.

ACKNOWLEDGMENT, confession. In *law*, a declaration or avowal of one's own act, to give it legal validity, e.g. the acknowledgment of a deed before a proper officer. **Acknowledgment-money**, in some parts of England, is a sum paid by tenants on the death of their landlords, as an acknowledgment of their new lords.

ACME, from *ακμη*, the top or highest point. In *medicine*, the height or crisis of a disease. Old medical writers divide the progress of disease into four stages:—1. *αρχη*, the beginning; 2. *αναβασις*, the increase; 3. *ακμη*, the height, or maturity; 4. *παρακμη*, the decline.

ACMEL'IA, a genus of plants of the class *syngenesia*, and order *polygamia superflua*. There are three species, all annuals; two natives of South America; one Mauritius (a stove plant).

AC'MITE, a mineral of a brownish-black colour, opaque, and brittle; fracture imperfect conchoidal. Its constituents are silica, 53·25; oxide of iron, 31·25; soda-10·4, with traces of oxide of manganese and lime. It resembles paratomous augite-spar in a remarkable degree. Locality, Eger, in Norway, where it is found imbedded in granite. Name from *ακμη*, a point, from the form of its crystals.

AC'NA, or **AC'NE**, from *ακνη*. An eruption of hard, inflamed tubercles, on the face, which are sometimes permanent for a considerable time, and sometimes separate very slowly.

ACNE'STIS (*ακνηστις*), that part of the spine, in quadrupeds, between the shoulder-blades and the loins.

ACNI'DA, Virginian or bastard hemp, a genus of plants of the class *dioecia*, and order *hexandria*. Locality, North America. There is only one species. A hardy annual.

ACCOLOGY, Lat. *acologia*, from *ακας*, a remedy, and *λογος*, doctrine. The doctrine of remedies; usually restricted to surgical remedies.

ACOLUT'HEIA (*ακολουθια*), the service in the Greek church, or the book which contains it.

ACOLYTE, or **ACOL'OTHIST**, from *ακολουθος*. In the ancient church, a subordinate officer who trimmed the lamps, prepared the elements for sacraments, waited on the bishops, &c. An officer of a similar kind is still employed in the Romish church.

ACON, an instrument, resembling the discus, used in ancient exercises; also the name of an ancient order of knight hood.

ACON'DYLOUS, or **ACONDYLOSE**, Lat. *acon-dylus*, without joint; applied to the stalks of plants which have no joints.

ACONITA, a poisonous vegetable principle extracted from *aconitum*.

ACONITE, the herb wolf's bane, particularly the species monk's-hood (*aconitum napellus*).

ACONITINE, the narcotic principle of the *aconita*. It is uncrystallisable, alkaline, inodorous, little soluble in water, but readily so in either alcohol or ether. It combines with the acids, and forms uncrystallisable salts. It may be obtained either in a granular white substance, or as a colourless transparent mass having a glassy lustre.

ACONITUM, wolf's bane; a genus of hardy perennial plants, containing about forty-five species, most of which are poisonous. Class *polyandria*, order *trigynia*. Locality, all countries of Europe. Name, *ακονιτον*, from *ακονω*, of *ακων*, a dart, because the ancients used its juice for the purpose of poisoning their darts.

ACONTIAS (*ακοντιας*, from *ακοντιον*, a dart). 1. A species of African serpent called *dartsnake*, or *jaculum*, from its manner of darting on its prey.—2. A comet or meteor resembling the serpent.

ACOPIC (*ακοπικος*), preventing or remedying weariness.

ACOR, Lat. from *aceo*, to be sour. Acidity; sourness in the stomach.

ACORIA, from *ακορος*, not satisfied. Canine appetite; a diseased desire for food or drink.

ACORN, the fruit of the oak; an oval nut which grows in a rough permanent cup. Name, from Sax. *aec*, or *ac*, oak, and *corn*, a grain.—3. In *nautical language*, a small ornamental piece of wood of a conical shape, fixed on the point of the spindle above the vane, on the mast head, to keep the vane from being blown off.—3. In *conchology*, the *lepas*, a genus of shells of several species found on the British coasts. The shell is multivalvular, unequal, and fixed by a stem. It is always found fixed to some solid body.

ACORUS, aromatic calamus, sweet flag or sweet rush or sedge. A genus of hardy perennial plants of three species, belonging to the class *hexandria*, and order *monogynia*. Name, *ακορος*, from *κορη*, the pupil of the eye, from its being supposed good for disorders of the eyes. There is only one British species, common in the middle and south-eastern counties of England, and watery places on the banks of rivers, &c.—2. In *natural history*, a blue coral found on the coasts of Africa. It grows in the form of a tree on a rocky bottom.

ACOTYLEDON, from *α*, without, and *κοτυληδων*. A plant whose seed is not furnished with lobes or cotyledons. In the natural system of Jussieu, the *acoty-*

ledones form a class which corresponds with the cryptogamia of Linnaeus.

ACOTYLEDONOUS, not having cotyledons, or seed lobes.

ACOUETER, from *ακουω*, to hear, and *μετρον*, a measure. An instrument for estimating the extent of the sense of hearing.

ACOUSMATICS, *Ακουσματικοι*. In antiquities, disciples of Pythagoras, who had not finished their five years of probation.

ACOUSTIC, from *ακουστικός*, (from *ακουω*, to hear). Relating to hearing. *Acoustic duct*, in *anatomy*, the meatus auditorius, or external passage of the ear. — *Acoustic nerve*, the portio mollis, the immediate organ of hearing. An *acoustic medicine* is one used for disorders of the sense of hearing. *Acoustic instruments*, such as produce, convey, or concentrate sound, e. g. the speaking trumpet. *Acoustic vessels*, in ancient theatres, were brazen tubes or vessels shaped like a bell, to propel the voice of the actors, so as to render them audible at a great distance.

ACOUSTICS, the science which treats of the nature, phenomena, and laws of sound. The science is sometimes divided into *diacoustics*, which explains the properties of sounds coming immediately from the sonorous body to the ear; and *catacoustics*, which treats of reflected sounds.

Sound is the result of vibratory motions produced in bodies, and transmitted to the ear through the air (or any other body in contact with the ear). The intensity increases or diminishes as the elasticity of the air increases or diminishes. If the impulses from the sonorous body be repeated continuously, and at shorter intervals than the ear can attend to them individually, *tone* is produced, and this is *grave* or *sharp*, according as there are many or few in a given time. The sudden termination of the impulses produces *noise*. The shock which causes the sensation of sound spreads somewhat as a wave spreads in water, with a strength decreasing in the inverse ratio of the square of the distance. The velocity is usually estimated at 1142 feet per second, but the latest experiments make it 1120 feet. Sound is reflected from smooth surfaces, hence *echoes*, &c.

ACQUEST, Lat. *acquisitus*. In law, something acquired by purchase, in contradistinction to what is acquired by inheritance.

ACQUIREMENT, from *acquire*, Lat. *acquiro*. Something attained, and which is in a degree permanent. It denotes especially personal attainments, in opposition to material or external things gained, which are more usually called

acquisitions. A mere temporary possession is not an *acquisition*, but something *gained, obtained, or procured*.

ACQUIT'TAL, from Fr. *acquitter* (It. *quitare*, to remit, forgive, remove). A judicial deliverance from the charge of offence, as by verdict of a jury, or sentence of a court. The acquittal of a principal operates as an acquittal of accessories.

ACQUITTANCE, from *acquit*. 1. A discharge or release from a debt.—2. The writing which is evidence of a discharge, e. g. a receipt in full which bars a further demand.

ACRÆA, a genus of butterfly (*lepidoptera*) of the diurnous family.—*Fabricius*.

ACRÆLEA, from *ακρος*, extreme. Any extreme parts of the body, e. g. the legs, arms, &c.

ACRANY, Lat. *acrania*, from *κερανιον*, defect of the cranium.

ACRA'SY, Lat. *acrasia*, from *ακρασια*. 1. Predominancy of the quality above in mixture or in the human constitution.—2. Intemperance of any kind.

ACRE, pron. *āker*. (Sax. *acer*, *acera*, or *acer*; Ger. *acker*; Dut. *akker*; Sw. *acker*; Dan. *ager*; Ir. *acra*; Gr. *αγρος*; Lat. *ager*.)

In these languages the word retains its primitive meaning, an open, ploughed, or sown field. In English it retained its original signification, that of any open field, until it was limited to a definite quantity by statutes 31 Ed. III., 5 Ed. I., 24 H. VIII.—*Coael.*) 1. A measure of land containing four roods, each rood containing forty poles or perches, and each pole 272 sq. feet, and consequently each acre contains 43560 sq. feet, or 4840 sq. yards. The Scotch acre contains 6150 sq. yards, and is therefore equal to 1'261 imperial acres. The Irish acre contains 1 ac. 2 rd. 19 pol.; 30 Irish acres are therefore equal to 49 imperial acres. The French *arpent* is very nearly equal to the Scotch acre. The Roman *jugerum* was 3200 sq. yards.

—2. In the Mogul's dominions *acre* is the same as *lakh* = 100,000 rupees = 12,500l. sterling.—3. *Acre-fight*, a sort of duel in the open field.—4. *Acre-tax* or *acre-shot*, a tax levied upon lands at a certain rate by the acre.—5. In *physiology*, the extremity of any part. In this sense the word is derived from *ακρος*, the top, e. g. of the nose.

ACRÆA, the same with *acralea*, (q. v.)

ACRIFO'LIIUM, Lat., any prickly-leaved plant.

ACRITA, that division of mollusca which consists of polypes, corals, and other plant-like animals. "Our impression is, that the whole, or nearly so, of the true *ACRITA*, are compound zoophytes, or, in other words, plant-like animals."—*Swainson*.

ACRA'SY, Lat. *acrisia*, from *α*, not, and

κρινω, to judge: A condition of which no correct judgment can be formed.—2. That of which no choice is made.

ACROAMAT'IC, or **ACROATIC**, from *ακροαματικος*, abstruse, applied to the secret doctrines of Aristotle. His lectures were of two kinds; *acroamatic*, *acroatic*, or *esoteric*, delivered to a class of select disciples, who had been previously instructed in the common branches of philosophy; and *exoteric*, delivered in public. The former consisted of speculations regarding being, God, and nature; the principal subjects of the latter were logic, rhetoric, and policy. The abstruse lectures were called *acroatics*, and those admitted to hear them were called *acroatic*.

ACROCERA, a genus of dipterous insects of the family of *inflata*, of Latreille. Name *ακρος*, summit, and *κερας*, a horn.

ACROCERAU'NIAN, from *ακρος*, summit, and *κεραυνος*, thunder. Mountains between Epirus and Illyricum, supposed to be especially subject to the effects of lightning.

ACROCHORDON, Lat. *acrochordus*, from *ακροχορδων*, a wart. The wart-snake; a genus of snake the body and tail of which are completely covered with warts. The snake which gave rise to the institution of this genus is a native of Java. It is said to measure eight feet. There are three species.

ACROCINUS, a genus of beetles (*coleoptera*) belonging to the tribe of *lamiaræ* of Latreille, and constituted of the *cerambyx longimanus*, of Linnæus. It is distinguished from all the longicornes by the thorax being provided with a moveable tubercle on each side, terminated by a spine, whence the name. It is called by the French colonists the *harlequin* of Cayenne, from the mixture of its colours, grey, red, and black. This genus includes the *prionus accentifer*, of Olivier.

ACROCO'LIA (*ακροκυλια*), the extremities of quadrupeds.

ACROGEN, from *ακρος* and *γενναω*. In *botany*, a cylindrical plant, growing at its point only, and not augmenting in thickness.

ACROMANIA (*ακρομανια*), incurable insanity.

ACRO'MIAL, Lat. *acromialis*, appertaining to the acromion.

ACRO'MION, from *ακρος* and *ωμος*, shoulder. In *anatomy*, the humeral extremity of the spinous process of the scapula or shoulder-blade.

ACROMONOGRAMMATIC (*ακρομονογραμματικος*), a term applied to a kind of poem, in which every line or verse commences with the letter with which the one preceding ended.

ACROM'PHALON (*ακρομφαλον*). In *anatomy*, the centre of the umbilicus, to which the umbilical cord is attached in the fœtus.

ACRO'NIC, or **ACRONICAL**, from *ακρος*, extreme, and *νυξ*, night; applied to the rising of a star at sun-set, or its setting at sun-rise. The word is opposed to *cosmical*.

ACROPA'THY, (*ακροπαθια*), disease of the extremities.

A'CROPY (*ακροσια*), imperfect articulation.

ACROSPIRE, the shoot or sprout of a seed, especially of the barley, developed by germination: called also the *pluma*, *plumule*, or *plumula*. In matting, when the barley has sprouted at both ends, it is said to be *acrospered*.

This word is usually derived from *ακρος* and *σπείρα*, a spiral line, but the more obvious etymology appears to be *acherspyre*, an old word of the same meaning, compounded of *æchir*, an ear of corn, and *spyre*, a point.

ACROS'TIC, from *ακρος* and *στιχος*, order or verse. A composition in verse in which the first letters of the lines, taken in order, make a word, name, or phrase, or some title or motto, which is the subject of the poem.

ACROS'TICHUM (*ακροστιχον*), a genus of perennial plants of the class *cryptogamia*, and order *filices*. There are eleven species, mostly natives of warm climates.

ACROTELEUTIC, from *ακρος*, extreme, and *τελευτη*, end. A term applied to something added to the end of a psalm, e. g. the *gloria patri*, or doxology.

A'CROTER, from *ακροτης*, a summit. In *architecture*, a small pedestal, usually without a base, placed in the middle of pediments or frontispieces, to support globes, statues, &c. *Acroteria* also denotes figures placed as ornaments or crownings on the tops of churches, and the sharp pinnacles that stand in ranges about flat buildings with rails and balusters.

ACROTHERIA, the Latinised plural of *Acroter* (q. v.). Anciently this word signified the extremities of the body, eminences of bones, &c.

ACROTHYM'ION, from *ακρος*, extreme, and *θυμος*, thyme. A species of conical wart, resembling the flower of thyme.

ACROTIC, Lat. *acroticus*, pertaining to the surface.

ACRO'ISM, Lat. *acrotismus*, defect of pulse.

ACRYDIUM, in *entomology*, a genus of orthoptera of the saltatoria family. This genus contains the noted insects called *locusts*, the scourge of Africa.

Mr. Barrow records, that, in the southern districts which he visited, the surface of an area of nearly 2000 square miles might literally be said to be covered by locusts. The water of a wide river was scarcely visible in consequence of the innumerable dead which floated on it, apparently drowned in their attempts to reach the reeds along its shores; except these reeds they had devoured every other green thing. Their destruction on a former occasion was sudden and singular. All the full-grown insects were driven into the sea by a tempest, and were afterwards cast upon the beach, where they formed a bank of three or four feet high, extending nearly fifty English miles. The Arabs, except those of Sinal, are in the habit of eating these insects. They are sold by measure in shops in almost every town. They are first boiled, and afterwards dried in the sun.—*Ency. Brit.*

ACT, Lat. *actus*, from *ago*, to do. The exertion of power; the effect of which power exerted is the cause. 1. In *logic*, any operation of the human mind, e. g. to discover is an act of the understanding; to judge is an act of the will.—2. In *law*, an instrument or deed in writing, serving to prove the truth of some transaction, e. g. records, certificates, &c.—3. The final resolution, or the result of a public declaration of a legislative body, council, court of justice, or magistrate; or the book, record, or writing containing the same.

Acts of parliament are called *statutes*, of the Royal Society, &c. *transactions*, of the French Academy, *mémoires*; of the Academy of Sciences of Petersburg, *commentaries*; at Leipzig, *acta eruditiorum*; those of the lords of session at Edinburgh are called *acts of sederunt*. The same name is given to those of the general assembly of the kirk of Scotland.

4. In *theatricals*, a part or division of a play to be performed without interruption, after which the action is suspended to give respite to the actors. *Acts* again are subdivided into smaller portions called *scenes*.—5. In the *English universities*, a thesis maintained in public by a candidate for a degree, to show proficiency.

ACT OF FAITH (*auto da fé*), in Catholic countries a day set apart by the inquisition for burning heretics, and absolving persons found innocent of heresy; or it is the sentence of the inquisition.

ACTS OF THE APOSTLES, the title of a book of the New Testament, containing a history of the transactions of the Apostles.

ACTA DIURNA, among the Romans, a sort of gazette resembling our newspapers.

ACTA POPULI, or **ACTA PUBLICA**, the Roman registers of assemblies, trials, executions, births, marriages, and deaths, &c.

ACTA SENATUS, minutes of what passed in the Roman senate; called also *commentarii*.

ACTÆA, herb christopher. A genus of hardy perennials, belonging to the class *polyandria*, and order *monogynia*. There are four species, two of which are peculiar to North America, and one, bane-berry (*A. spicata*), is found growing in mountain-forests in most parts of Europe. The root is strongly cathartic, and the berries are poisonous. Name, *ακταία*, *ακτη*, "quod in aussibus circa maris littus crescit."—*Pliny*, 27, c. 7. These are also Greek names of the elder-tree.

ACTIAN, relating to *Actium*, a town and promontory of Epirus, as *Actian games*, which were instituted by Augustus in honour of his naval victory over Antony, near that town, Sept. 2, B. C. 31. According to Strabo, they were held every fifth year, and were sacred to Apollo, thence called *Actius*. Actian years were reckoned from the battle of Actium.

ACTINE (*ακτινη*), the earth-nut (*bunium bulbocastanum*).

ACTINIA, the sea-anemone; a genus of *polypi* of the order *carnosi*. The fleshy body of the actinia is frequently ornamented with bright colours, and exhibits numerous tentacula placed round the mouth in several ranges, like the petals of a double flower; and hence their popular name of *sea anemones*. Name from *ακτινη*, the sea.

ACTINOCARPUS, the generic name of the herb star-fruit. Class *hexandria*, order *hexagynia*. Name, *ακτιν*, a ray, and *καρπος*, a fruit; its curiously radiated fruit resembling a star-fish, found in ditches, pools, &c.

ACTINOCOMAX, from *ακτιν* and *κομην*. A genus of fossil shells resembling the belemnites.

ACTINOCRITE, from *ακτιν* and *κριθη*. A fossil crinoidan, found in the carboniferous limestone near Bristol.

ACTINOLITE, from *ακτιν*, a ray, and *λιθος*, a stone. Ray-stone (the *strahlstein* of Werner), a mineral nearly allied to hornblende. There are three varieties,—the crystallised, the asbestose, and the glassy actinolite. Colour, green, varying in shade. Constituents: silica, 50; lime, 9.75; magnesia, 19.25; oxide of iron, 11; alumina, 1; with traces of the oxides of manganese and chromium. It is found chiefly in primitive districts: rarely in secondary rocks. *Actinolite schist* is a metamorphic rock, consisting chiefly of actinolite, with a mixture of mica, quartz, or felspar.

ACTINOMERIS, a genus of hardy American perennial plants, of five species. Class *syngenesia*, order *polygamia fruticosa*.

ACTINOTE, the amphibole, *actinote Actædære*, of Haüy, is the same with the green diallage of Jamieson, and the actinolite described above.

ACTINOÏTUS, a genus of plants containing only one species, a native of New Holland. It is a greenhouse perennial, resembling the sunflower (*helianthus*). Class *pentandria*, order *digynia*.

ACTION, Lat. *actio*, literally, a driving. Action is opposed to rest, and when exerted on one body by another, it is said to be *mechanical*; when produced by the will of a living being, it is said to be *spontaneous*, or *voluntary*.—*Webster*. 1. In *mechanics*, operation; effort of one body upon another, e. g. *action* of the wind upon a ship's sails; also the result of such effort. *Quantity of action* is the product of the mass of a body by the space passed through, and velocity.—2. In *physiology*, the motions or functions of the body, *vital* (*actiones vitales*), *animal* (*animales*), and *natural* (*naturales*). *Vital* and *involuntary*, e. g. *action* of the heart; *animal*, e. g. all voluntary muscular motions; *natural*, e. g. digestion and assimilation. *Morbid actions* are those derangements of the ordinary actions which constitute disease.—3. In *ethics*, the external signs or expression of the sentiments of a moral agent, e. g. conduct, behaviour, demeanour, that is, motion with respect to a rule of propriety.—*Webster*.—4. In *poetry*, the series of events which constitutes the subject of the fable.—5. In *oratory*, the gesticulation of the speaker, or the accommodation of his voice, attitude, gesture, and countenance, to the subject. "The matter is not so important as the manner."—*Cicero*.—6. In *painting* and *sculpture*, the attitude or position of the several parts of the body to exhibit passion, &c.—7. In *law*, an urging for right; the suit or process which is brought by which a demand is made for a right. The suit till judgment is properly called the *action*, but not after. Actions are *real* or *feudal*, *personal* or *mixed*. *Real actions* concern landed property only (for that was the only property accounted real by our ancestors), as when a title to an estate is claimed. *Personal actions* are brought to recover a debt, damages for trespass, &c. *Mixed actions* are in demand of real estate and damages for a wrong sustained. Actions are also *criminal* or *civil*; *criminal*, or *penal*, when brought to recover a penalty imposed by way of punishment; *civil*, when instituted solely in behalf of private persons to recover debts, damages, &c. The word is also used for a *right of action*, e. g. "the law gives an action for every claim."—*Blackstone*. A *chase in action* is a right to a thing in opposition to the possession, e. g. a bond is a *chase in action*, as it gives the

owner a right to prosecute his claim to the money, as he has an absolute property in a right as well as in a thing in possession.—*Chose*, Fr. a thing.—8. In military language, battle; engagement between troops, whether by land or water.—9. In commerce, a term used in some countries of Europe to denote a certain part or share in the capital stock of a company, or in the public funds. It is therefore equivalent to our term *share*.

In many cases *action* and *act* are synonymous; but *action* seems to have more relation to the power that acts, and its operation and mode of acting; *act* more relation to the effect or operation complete.

ACTIONARY, or ACTIONIST. In commerce, a proprietor of stock in a trading company; one who owns shares or actions of stock.—V. *ACTION*, def. 9.

ACTIVE, Lat. *actīvus*, that has the power or quality of acting, or contains the principle of action independent of any visible external force, e. g. attraction is an active power. It is opposed to *passive*.—2. Practical; producing real effects. Opposed to *speculative*.—3. *Active capital*, in mercantile language, is money, or property which may be readily converted into money.—4. *Active commerce* is that which a nation carries on with its own and foreign commodities in its own ships. Opposed to *passive commerce*, where the productions of one country are transported by the people of another, e. g. the commerce of Britain is *active*; that of China is *passive*.—5. *Active verbs* are those which not only signify action, but have a noun or name following them, denoting the object of the action. They are also called *transitive*, as implying the *passing* of the action expressed by the verb to the object.

ACTOR, Lat. from *ago*. An active agent. In *theatricals*, a man who acts in a play. Among *civilians*, an advocate or proctor in civil courts or causes.

ACTORA, a genus of dipterous insects of the family of *muscides*. The *A. æstivum* has been taken in England: it is rare.

ACTUAL, Lat. *actualis*, that exists truly and absolutely, e. g. *actual heat* opposed to that which is *virtual or potential*; *actual cautery* or burning with a red-hot iron, opposed to a *cautery or caustic application* that may produce the same effect upon the body by a different process. Existing in *act*; independent of *theory*; e. g. *actual crime*.

ACTUARY, Lat. *actuarius*, a notary or clerk who writes down the proceedings of a court.

ACTUS, a Roman measure of length equal to 120 Roman feet. In *agriculture*, the length of one furrow. Lat.

ACUTION, Lat. *acutio* (from *acuo*, to

sharpen), the augmentation of the strength of an acid or medicine by the addition of something which has similar powers in a greater degree.

ACULEATA, the second primary section of hymenopterous order of insects, according to Latreille. The *ant* belongs to this division, forming the family called *heterogyna*; name, *aculeus*, a sting; the ovipositor of the female being represented by a sting composed of three parts: it is concealed and retractile. It likewise exists in those individuals called *neuters*.

ACULEATE, or ACULEATED, Lat. *aculeatus*, having prickles (*aculeus*, a prickle). Applied to animals and vegetables which have prickles that separate with the epidermis or bark, e. g. the *echinus* or sea-urchin, and *rosa centifolia*.

ACULEI, plural of *aculeus*. In zoology and botany, spines or prickles growing upon the skin or bark.

ACULER, in the *manège*, said of a horse, when, working upon volts, he does not go far enough forward after each motion, so that his shoulders take in too little ground, and his croup comes too near the centre of the volt.

ACULEUS, a spine or prickle, from *acus*, a needle; plural *aculei*, (q. v.) The *aculei* of plants are peculiar to the bark; *spinæ*, or thorns, proceed from the wood.

ACULON (ακυλος), the acorn or fruit of the ilex or scarlet oak.

ACUMINATE, Lat. *acuminatus*, terminated by a point (*acumen*) somewhat elongated. Applied by botanists to several parts of plants, as leaves, leaf-stalks, &c.

ACUPUNCTURATION, improperly used for *acupuncture*, (q. v.)

ACUPUNCTURE, from *acus*, a needle, and *punctura*, a prickle. A surgical operation which consists in pricking the part affected with a needle. This process is sometimes called *acupuncturation*. It was introduced into Europe in 1679 from China, where it had long been practised.

ACUS, a needle; Lat. from *ακμή*, a point.

1. In *surgery*, the pointed instrument having an eye at one end, used for making setons. It is sometimes called the seton-needle. *Acus canulata*, or *triquetra*, a trocar.—2. In *natural history*, (1.) The needle or gar-fish. (2.) The ammodyte, or sand eel. (3.) The oblong cimex.

ACUSTO, an alchemical name of nitre (*nitrate of potassa*).

ACUTANGULAR, Latinised, *acutangularis* or *us*, applied to parts of plants having acute angles.

ACUTZ, Lat. *acutus*, sharp-pointed. Ending in a sharp point, opposed to *obtus*, or *blunt*. An *acute angle* is one which is less than a right angle, or which subtends less than 90°. An *acute-angled triangle* is one whose three angles are all

acute, or less than 90° each. The *acute accent* is that which marks the elevation or sharpening of the voice (see *Accent*). An *acute disease* is one attended with violent symptoms, and comes speedily to a crisis: the opposite of a *chronic disease*. In *music*, the term *acute* is applied to a tone which is sharp or high—opposed to *grave*. In *botany*, *acute* is applied to parts of plants ending in acute angles, as leaves, &c. The term is figuratively applied to the *senses and intellect*, as an *acute eye-sight*, *acute reasoning*.

ACUTENACULUM, Lat. from *acus* and *tenaculum*, the handle of a surgical needle; also the name given by Heister to the *portiguille*.

ACUTIA'TION, from *acuo*; in the *middle ages*, a military officer whose business it was to see to the sharpening of the instruments of the soldiers.

ACT'ANOBLEPSY, Lat. *actyanoblepsia*, from *αἴμας*, blue, and *βλέπω*, to see. A defect of vision, consisting in incapability of distinguishing the colour of blue.

ACTYRO'LOGY, from *αἴμας*, empty, and *λογος*, discourse. Unmeaning discussion.

Ad, a Latin preposition signifying *to*. In *composition*, the *d* is usually changed into the first letter of the word to which it is prefixed; e.g. *accession* for *adcession*, *affinity* for *adfinity*, &c. The reason of this change is agreeableness of sound. *Ad hominem*, i. e. to the man, in logic, an argument adapted to touch the prejudices of the person addressed. *Ad inquirendum*, in law, a writ commanding inquiry to be made. *Ad valorem*, i. e. according to the value: applied to duties or charges laid upon goods at a certain rate per cent. upon their value, in opposition to a specific sum upon a given quantity. *Ad libitum*, i. e. at pleasure.

A.D., abbreviation of *Anno Domini*, i. e. In the year of our Lord.

ADA'GIO, Ital. from *ad* and *agio*, leisure. In *music*, (1.) A slow movement.—(2.) Leisurely and with grace. When repeated, *adagio adagio*, it directs the movement to be very slow.

ADAM, in *oriental languages*, means *man*. *Adam's needle*, the popular name of the *yacca*, (q. v.) *Adam's apple*, the popular name of a species of citron; also the protuberance in the forepart of the throat, vulgarly attributed to a piece of the forbidden apple having stuck in the throat of Adam! *Adami morsus os*, in *anatomy*, the thyroid cartilage.

AD'AMANT, Lat. *adamas*, from *αδάμας*, a name given to different stones of great hardness, e.g. the diamond. Chaucer uses adamant for the loadstone (*Romaunt of the Rose*, line 1'82). In modern mineralogy the word has no technical significance.

ADAMA'TINE, having the qualities of adamant. *Adamantine spar*, a variety of rhombohedral corundum, found in India, Ava, China, &c., both massive and crystallised. Colour usually reddish-brown; fracture foliated and sparry, and sometimes vitreous. It is brittle, and so hard as to cut rock crystal. Sp. gr. 3.7 to 4.2. The crystals brought from India are the most pure.

AD'AMIC, relating to Adam. *Adamic earth*, a name given to several kinds of clay or bole which are of a red colour, in consequence of a mistaken opinion that *Adam* means "red earth."

AD'AMITES, in *church history*, a sect of visionaries who pretended to establish a state of innocence, and, like Adam, went naked.

ADANSON'IA, Ethiopian sour-gourd; monkeys' bread-tree; African calabash-tree: a genus of one species belonging to the class *monadelphia*, order *polyandria*. This huge tree is a native of Africa. It grows mostly on the western coast, from the Niger to the kingdom of Benin. Its height is rarely 18 feet, but its circumference is often upwards of 75 feet. The branches shoot out 60 or 70 feet, the ends bending to the ground. Its bark is mucilaginous, and promotes perspiration. It is considered a powerful antidote against the epidemic fevers of the country, and is used by the negroes, when dried and powdered, as pepper on their food. The fruit is oblong, pointed at both ends, ten inches in length, and covered with a greenish down, under which is a ligneous rind. It hangs to the tree by a pedicle two feet long, and contains a white spongy substance. The tree is named from M. Adanson, who first described it. The native name is *baobab*, or *bahobab*.

A'DAPIS, one of the extinct pachydermata, found in the gypsum quarries of Montmartre. Its form nearly resembles that of the hedgehog, but it was three times the size of that animal: it seems to have formed a link connecting the pachydermata with the insectivorous carnivora.

AD'AR, a Jewish month answering to the end of February and beginning of March: the twelfth of the sacred, and sixth of the civil year. Name, from *adar*, to become glorious, in respect to the exuberance of vegetation during that month in Egypt and Palestine.—*Parkhurst*.

ADAR'CA, **ADAR'CE**, or **ADAR'CES**, a saltish concretion found encrusting the reeds and grass in the marshes on the sea-coast of Galatia. It was formerly in repute as a medicine for freeing the skin from tetters, freckles, &c. Name, *αδαρδιεξω*, from *a*, priv. and *διεξω*, to see, "quod herbas qui occultet."

ADAR'CON, an old Jewish coin worth about 15s.

ADAR'ME, a Spanish weight, equal to the sixteenth of an ounce: Fr. *demi-gros*.

ADARTICULATION, Lat. *adarticulatio*, the same with *arthrodia* (q. v.).

ADA'TIS, a species of fine, clear cotton cloth, manufactured in India. The pieces are fifteen yards in length, and three quarters wide.

ADDE'CIMATE, from *ad* and *decimus*, tenth. To ascertain the value of tithes.

ADDEPH'ISTY, Lat. *addephagia*, *ἄδδην* and *φάγη*, the disease of gluttony.

ADDER, a venomous serpent (*vipera*) of several species. Sax. *adder*, a serpent or poison.

ADDER-FLY, a name of the dragon-fly (*libellula*) sometimes called *adder-bolt*.

ADDER'S-TONGUE, a popular name of the *ophioglossum* (q. v.); the seeds of which are produced on a spike resembling a serpent's tongue.

ADDER'S-WORT, bistort or snake-weed, a species of *polygonum* (q. v.) peculiar to Britain, and supposed to be a specific for the bite of a serpent.

ADDEX'TRATORES, from *ad* and *dextra*, the pope's mitre-bearers, who walk at his right hand when he rides to visit the churches.—*Ducange*.

ADDITAMENT, Lat. *additamentum*, something added. In *anatomy*, forming the same with *epithysis*, but now only applied to two portions of the lambdoidal and squamous sutures of the skull.

ADDITION, Lat. *additio*, augmentation; opposed to diminution. 1. In *arithmetic*, the uniting of two or more numbers into one sum. Addition is either *simple* or *compound*: the first relates to quantities which are all of the same denomination; and the second to quantities which are of different denominations. Addition forms the first of the four fundamental rules of arithmetic.—2. In *algebra*, the forming of two or more expressions into one, by connecting them together by means of their proper signs + or —: e. g. the sum of *a* and *b* is *a + b*, and the sum of *a* and —*b* is *a — b*, which, in an arithmetical sense is the difference of *a* and *b*.—3. In *law*, a title annexed to a man's name, to show his rank, occupation, or residence; e. g. James Roydd, Esq. Surgeon, London.—4. In *music*, a dot marked on the right of a note, to show that its sound is to be lengthened half as much more as it would have been without such mark.—5. In *heraldry*, something added to a coat of arms as a mark of honour: opposed to *abatement*. Among additions are reckoned *bordures*, *quarters*, *cantons*, *gyrons*, *piles*, &c.—6. In *distilling*, anything added to the wash, or liquor in a state of fermentation.

ADDITION OF RATIOS is the same with *composition of ratios*

AD'DITIVE. *Additive* quantities, in *algebra*, are such as have the sign + prefixed or understood.

ADDO'RSSED, from *ad* and *dorsum*. In *heraldry*, having the backs turned to each other, e. g. animals so situated.

ADDRESS, from *ad* and *dirigo* (Fr. *adresser*, which corresponds with the Span. *enderexar*, and Ital. *dirizzare*). 1. As a verb, 1. To direct in writing, e. g. the letter was *addressed* to, &c. 2. To consign to the care of an agent or factor; e. g. he *addressed* the goods to, &c. 3. To present a petition or a testimony of respect; e. g. parliament *addressed* her majesty in, &c. 4. To direct discourse; e. g. he *addressed* the jury, &c.—2. As a noun, 1. A formal speech, as when introduced, e. g. he made a neat *address*. 2. Direction of a letter, including the name, title, and place of residence of the person for whom it is intended: the particulars constitute a man's *address*. 3. A formal or written application, petition, or congratulation; e. g. an *address* of thanks.

ADDU'CENT, Lat. *adducens*, performing the action of adduction: muscles of the body which draw together the parts of the body to which they are attached: opposed to *abducent*.

ADDUC'TION, Lat. *adductio*, the action by which a part is drawn towards some other more principal part; the action of the adducent muscles.

ADDUC'TOR, Lat. from *ad* and *duco*, to draw. A muscle which performs the adduction of the part into which it is inserted; e. g. *adductor oculi*, a muscle which turns the eye towards the nose; *adductor indicis pedis*, a muscle which pulls the fore-toe inwards from the rest of the small toes.

AD'ZB, an Egyptian weight of 210 okes, each of three rotolos; the rotolo is about fourteen drams avoirdupois. At Rosetta the *adeb* is only 150 okes.

ADELA, the generic name of a beautiful little butterfly, *lepidoptera*. It occurs in woods, and is said to appear with the leafing of the oak. There are several species, all beautiful. Name, *αδελος*, obscure: belongs to the *tincites* of Latreille.

ADELANTA'DO, Spanish, a governor or lieutenant-governor of a province.

ADE'LIA, **ADELLA**, a genus of shrubby plants, natives of Jamaica. Class *diacna*, order *monadelphia*. Name, from *a*, not, and *δηλος*, obvious, in reference to the obscure nature of the fructification. There are three species.

ADELING, a title of honour given by our Saxon ancestors to the children of princes and young nobles. It is compounded of *adel*, or rather *athel*, the Teutonic term for noble or illustrious, and *ling*, young.

AD'ELITE, the Spanish name for one who predicted the fortunes of individuals by the flight and singing of birds, and other circumstances. The *Adelites* were also called *Almogarenis*.

ADELUM, a genus of coleopterous insects belonging to the *helopi* of Latreille.

ADELPHIA, from *αδελφος*, a brother. Cognate. In *botany*, a collection of stamens into a bundle or brotherhood.

ADELPHIANS, *adelphiani*, a sect of Christians, whose peculiar tenet was to fast on the sabbath.

ADEM'TION, from *ad* and *emo*, to take. In the *civil law*, the revocation of a grant, &c.

ADENAL'GIA, from *αδην*, a gland, and *αλγος*, pain. A pain seated in a gland.

ADENANTHE'RA, from *αδην*, a gland, and *ανθος*, a flower. Glandflower: a genus of stove shrubs, of three species; natives of the East Indies and Ceylon. Class, *decandria*, order, *monogynia*.

The *A. pavonina* is one of the largest and handsomest trees of India, and commonly lives 200 years. The seeds are very beautiful; and from their equality in weight (each = 4 grains) they are used by goldsmiths as weights.

ADEN'IFORM, Lat. *adeniformis*, of a gland-like shape.

ADENI'TIS, from *αδην*, a gland. Inflammation of a gland.

ADENO'GRAPHY, from *αδην*, a gland, and *γραφω*, to describe. That which treats of the glands.

AD'ENOID, from *αδην*, a gland, and *ειδης*, form. Resembling a gland.

ADENOI'OGY, from *αδην*, a gland, and *λογος*, discourse. The doctrine, nature, and use of the glands.

ADENOPHARYNGI'TIS, from *αδην*, a gland, and *φαρυγγξ*, the pharynx. Inflammation of the tonsils and pharynx.

ADENOPHTHAL'MIA, from *αδην*, a gland, and *οφθαλμος*, the eye. Inflammation of the Meibomian glands.

AD'ENOS, a species of cotton from Aleppo: called also *marine cotton*.

AD'ENOSE, } Lat. *adenosus*. Glandiform:
AD'ENOUS, } having the shape of a kernel, or gland.

ADENOSTY'LE, Gr. *αδην*, a gland, and *στυλος*, a style. A subdivision of composite plants; the branches of the style are covered with long glandular hair.

ADEPHAGÆ, the first primary and numerous division of coleopterous insects, all of which agree in being voracious; whence the name from *αδηφαγος*, voracious. The *adephaga* of Clairville, corresponds with *carnivora* of Cuvier.

ADEPT, from *ad* and *opto*. A name as-

sumed by alchymists, who had attained extraordinary skill in alchemical researches. The term is now used in a wider sense, to denote great proficiency, especially in some art.

AD'EPS, Lat. Fat; a concrete oily matter which is contained in the cells of the adipose tissue. It differs in its physical properties in different animals, and in the same animal at different ages: it is white and insipid in the young, and has a deeper colour and stronger taste in those of greater age. Excessive fatness constitutes a disease, called *polysarcia*; and it is questionable whether fat generally does not indicate disease.

ADESENA'RIANS, from *adesse*, to be present. In *church history*, a sect who hold the real presence of Christ's body in the eucharist, but not by transubstantiation.

AD'FFECTED, in *Algebra*, consisting of different forms of the unknown quantity, e. g. $x^2 + ax + b = 0$, is an *affected* quadratic equation: it contains both the first and second powers of x .

AD'FILIA'TION, from *ad* and *filius*, a son. A Gothic custom, whereby the children of a former marriage are put upon equality with those of the second marriage. This is otherwise called *unio prolium*, and is still retained in Germany under the name of *einkindschaft*.

ADH'E'SION, Lat. *adhasio*. In *physics*, the force with which two bodies of different kinds remain attached to each other, when they are brought into contact: distinct from *cohesion*, which is the force uniting together the particles of a homogeneous body. In *surgery*, the reunion of divided parts, by a kind of inflammation called the *adhesive*. In *pathology*, the morbid union of contiguous parts, by means of adhesive inflammation.

ADIAN'TUM, maidenhair: a genus of thin-leaved ferns, consisting of about fifteen species, most of which belong to hot climates. The only native specimen is the *A. capillus veneris*, formerly employed in the manufacture of syrup of capillaire; a hardy perennial. Flowers from May to July; class *cryptogamia*, order *filices*. Name, *αδιαντον*, from *α*, not, and *διασσω*, to grow wet; the leaves not being easily wetted.

ADIAPH'ORITES, } from *αδιαφορος*, indif-
ADIAPH'ORITES, } ferent. Moderate Lutherans: the name given in the 16th century to the followers of Melancthon, who was more pacific than Luther.

ADIAPH'ORESIS, } from *α*, not, and *δια-*
ADIAPH'ORESIS, } *φορεω*, to dissipate. In *medicine*, deficient perspiration.

ADIAPH'OROUS, from *αδιαφορος*, indifferent. In *chemistry*, synonymous with neutral.

ADIAPNEUSTIA, from α , not, and $\delta\iota\alpha\pi\nu\epsilon\upsilon\sigma\iota\alpha$, to perspire. In *medicine*, diminution or obstruction of perspiration.

ADIARRHŒA, from α , not, and $\delta\iota\alpha\rho\epsilon\iota\sigma\iota$, to flow through. In *medicine*, suppression of any of the natural evacuations.

AD INFINITUM, a Latin phrase, meaning indefinitely, or to infinity.

AD INQUIRENDUM, a writ to command inquiry concerning something connected with a cause in a court of law.

ADIFOCERATION, the process of being converted into adipocere.

ADIPOCERE, } from *adeps*, fat, and *cera*
ADIPOCIRE, } (Fr. *cire*), wax. A peculiar substance, intermediate between fat and wax, and closely resembling spermaceti. It results from the spontaneous conversion of animal matter when exposed to running water, or more speedily by maceration in dilute nitric acid. It is produced also, but not so rapidly, by heaping together large masses of animal matter; as was exemplified, on an immense scale, on the removal of the bodies from the Cimetiére des Innocens in Paris, in 1787. When the coffin-lids were taken off, the bodies were found flattened into irregular masses of soft, ductile, greyish-white matter, resembling common white cheese. All the soft parts were converted into this substance; the bones were frangible; and no trace of viscera remained: all were confused together, and blended in a common mass of adipocere.

ADIPOCERE-MINERAL, a fatty mineral matter, found in the argillaceous iron ore of Merthyr: inodorous when cold, but when heated it emits a slightly bituminous odour. Fuses at 160° Fah.

ADIPOSE, } Lat. *adiposus*, from *adeps*,
ADIPOUS, } fatty: e. g. the adipose membrane is the tissue containing the fat in its cells in the animal body: the adipose ducts contain the fat.

ADIPSY, Gr. $\alpha\delta\iota\psi\alpha$. In *medicine*, absence of thirst; mostly symptomatic of brain diseases.

ADIPSON, from α , not, and $\delta\iota\psi\alpha$, thirst. A medicine which allays thirst, e. g. liquorice.

ADIT, Lat. *aditus*, from *ad* and *eo*, to go. The horizontal entrance to a mine, sometimes called the *drift*. It is usually made in the side of a hill. The term is often used as synonymous with *air-shaft*.

ADJACENT-ANGLE, in *geometry*, an angle immediately contiguous to another, so that one side is connected to both angles.

ADJECTIVE, Lat. *adjectivum* quasi *ad-junctivum*. Adjective colours, in dyeing, are such as require to be fixed by some base or mordant.

ADJOURNMENT. 1. The closing of a session of a public or official body. 2. The time or interval during which a particular

official body intermits its business. The close of a session of parliament is called a *prorogation*: the close of a parliament is a *dissolution*; an intermission of business for a definite time is an *adjournment*. Parliament has the privilege of adjourning itself, but its prorogation is the act of the sovereign.

ADJUDICATION, the act of trying and determining judicially. 1. The decision of a court.—2. In *Scotch law*, an action by which a creditor attaches the heritable estate of his debtor, or his debtor's heir, in security of the payment of the debt; or an action by which the holder of an heritable right, labouring under a defect of form, may supply that defect.—3. Transferring the property of a thing sold by auction to the highest bidder.

ADJUNCT, Lat. *adjunctus*, joined, from *adjungo*, to join to. 1. Literally, something added to another, but not essentially a part of it, e. g. water in a sponge is an adjunct to the sponge.—2. In *metaphysics*, a quantity of a body, or of the mind, whether natural or acquired, e. g. colour, weight, form, &c. in the body, and thinking in the mind, are adjuncts.—3. In *ethics*, adjuncts are what are otherwise called *circumstances*: these are reckoned seven, viz. *quis*, *quid*, *ubi*, *quibus*, *auxiliis*, *cur*, *quomodo*, *quando*.—4. In *grammar*, words added to other words to amplify the force of other words, e. g. the history of the *French revolution*. The words in italics are adjuncts to *history*.—*Webster*.—5. In *music*, the word is employed to denominate the relation between the principal mode, and the modes of its twofifths.

In the Royal Academy of Sciences at Paris, there are twelve members called *adjuncts* attached to the study of some particular science. Geometry, astronomy, mechanics, chemistry, botany, and anatomy, have each two members. These appointments were instituted in 1716.

The Roman *adjunct* deities were inferior deities, added as assistants to the principal gods; e. g. *Bellona* to Mars; the *Cabiri* to Vulcan; the *Lares* to the Good Genius, and the *Lemures* to the Evil.

AD JURA REGIS. In *law*, a writ which lies for a clerk presented to a living by the sovereign, against those who endeavour to eject him to the prejudice of the sovereign's title.

ADJUSTMENT. The act of adjusting: settlement, e. g. of a loss incurred at sea, by the insured. In this case, it is usual for the insurer to indorse upon the policy, "Adjusted this loss at £— per cent. payable at — days. M. N." This is considered as a note of hand, and, as such, is *prima facie* evidence of the debt.

ADJUTAGE, from *ad* and *jacio, jactus*, }
As'UTAGE, from Fr. *ajouter*, to join. }
 The tube fitted to the mouth of a vessel, through which the water of a fountain is to be played. It is by its means that the water is directed into any desired figure, so that the diversity of fountains consists chiefly in the different structure of their adjutages.

ADJUTANT, Lat. *adjutans*, aiding. In military affairs, an officer who assists the major by receiving and communicating orders, and therefore has sometimes been called the *aid-major*. Each battalion of foot and regiment of horse has an adjutant, who receives orders from the brigade-major, to communicate to the colonel and subalterns. He places guards, receives and distributes ammunition, assigns places of rendezvous, &c.

ADJUTANT-GENERAL is the chief adjutant: he is to an army what the adjutant is to a regiment.

ADJUTANTS-GENERAL, among the Jesuits, were a select body of fathers who resided with the general of the order, each of whom had a province or country assigned to his care. Their business was to keep up correspondence with such countries by means of their delegates and emissaries, and give information of state occurrences to the father-general.

ADJUTORIUM, Lat. from *ad* and *juvo*. In anatomy, a name given to the humerus from its usefulness in lifting the arm.

ADJUVANT, Lat. *adjuvans*, helping. Adjutant: applied to an ingredient introduced into a medical prescription, to aid the operation of the principal ingredient or basis.

ADLEGATION, Lat. *ad* and *legatio*, from *lego*, to send. In the public laws of the German Empire, a right claimed by the states, and by some princes, of joining their own ministers with those of the emperor in all negotiations where the interests of the empire are concerned.

ADMANUENSIS, from *ad* and *manus*, the hand. In old law books, a term denoting laymen, who swear by laying their hands on the bible; whereas the clergy were forbidden to swear so, their word being deemed equal to an oath.

ADMEASUREMENT, from *ad* and *measure*-ment. In law, the adjustment of shares of something to be divided; e.g. *Admeasurement of dower* takes place when the widow of the deceased claims more than belongs to her as dower: *Admeasurement of pasture* takes place when any one of the persons who have title to a common pasture, puts more cattle to feed upon it than he ought. These take place by writ of *admeasurement*, addressed to the sheriff.

ADMINICULATOR, Lat. from *adminiculator*, to give help. In church history, an officer, otherwise called the Advocate of the poor.

ADMINISTRATION, the act of administering; management or government of public affairs; the office of an administrator.

2. The executive part of a government, consisting in the exercise of the constitutional and legal powers, the general superintendence of national affairs and the enforcement of laws.—3. The persons collectively who are entrusted with the execution of the laws, and the superintendence of public affairs: the chief magistrate and his council, as in America; the council alone, as in Great Britain.

—4. The management of the estate of an intestate person, a lunatic, &c., under a commission from the proper authority.

—5. Among ecclesiastics, the power with which a person is invested both as regards the temporalities and spiritualities of his cure.—6. In commerce, the name given by the Spaniards to the staple magazine at Calao, in Peru, where all ships loaded with European goods were required to unload and pay duties.

ADMINISTRATOR, Lat. from *ad* and *minister*. In law, the person to whom the goods, &c., of a person who died intestate are entrusted. He must give account of the same when required. The bishop of the diocese, when the person dies, is regularly to grant administration; but, if the deceased has goods in several dioceses, administration must be granted by the archbishop in the prerogative court. The persons to whom administration is granted, are first the next of kin to the deceased, and then to a creditor.—2. In Scotch law, a tutor, curator, or guardian, having the care of one who is incapable of acting for himself.—Administrator is used in several other senses, e.g. an advocate of a church; a person appointed to manage the revenues of an hospital, or other charitable institution; a prince who enjoys the revenues of a secularized bishoprick; the regent of a state during a minority, or a vacancy of the throne.

ADMINISTRATRIX, a female who administers upon the estate of an intestate person.

ADMIRAL, an officer who commands the naval forces, and decides all maritime causes. According to Ducange, the Sicilians were the first, and the Genoese the next, who gave this name to the commanders of their fleets; deriving it from the Ar. *émir*, or *amir*, a commander, a designation applicable to any commanding officer: hence low Lat. *amira*, *amiras*, *admiralis*, Sp. and Port. *admirante*, Fr. *amiral*: the termination *al*, is probably from *אל*, the sea. The admiral has the same authority over the maritime forces, that a general has over the land forces. There are three ranks of admirals, the admiral, the vice-admiral, and rear-admiral, besides the lord high admiral,

who is the ninth great officer of state in England. He superintends all maritime affairs, and has the government of the navy; but this office is now executed by a certain number of commissioners, called *lords of the admiralty*. These have jurisdiction over all maritime causes, and commission naval officers. The office of lord high admiral was held by William IV., while duke of Clarence, in 1827, and following year. The *admiral of the fleet* is the highest officer under the admiralty: when he embarks on an expedition, the union flag is displayed at the main-top-gallant mast-head. The *vice-admiral* is an officer next in rank to the admiral: he has command of the second squadron, and carries his flag at the foretop-gallant mast-head. This name is given also to certain officers, who have power to hold courts of vice-admiralty in various parts of the British dominions: there are upwards of twenty such. Appeal lies from their sentence or award to the admiralty court in London. The *rear-admiral*, next in rank to the vice-admiral, has command of the third squadron, and carries his flag at the mizentop-gallant mast-head. Admirals on shore receive military honours, and rank with generals of the army. *Admiral* is also an appellation given to the most considerable ship of a fleet of merchantmen, or of fishing vessels.

ADMIRAL, in *conchology*, the popular name of a sub-genus of magnificent shells of the volute genus (*voluta*). There are four species: the *grand-admiral*, the *orange-admiral*, the *vice-admiral*, and the *extra-admiral*. The first is of an elegant white enamel, variegated with bands of yellow, which represent in some measure the colours of the flag of a man-of-war. It is distinguished from the vice-admiral by a denticulated line, running along the middle of the largest yellow band. The orange-admiral has more yellow than any of the others, and the bands of the extra-admiral run into each other.—In *entomology*, a species of "butterfly, which lays her eggs in the nettle."

ADMIRALTY, the office of the lord high admiral, which is discharged (usually) by seven commissioners, called *lords of the admiralty*.

ADMIRALTY COURT, or **COURT OF ADMIRALTY**, is the supreme court for the trial of maritime causes, held before the lord high admiral, or lords of the admiralty. All crimes committed on the high seas, or in rivers beneath the bridge, next the sea, are cognisable only in this court: trial by judge and jury. Subordinate to this court, there is another of equity, called *court-merchant*, wherein all causes between merchants are decided, agreeable to the rules of the civil law. In the United States of America, there is no

admiralty court distinct from the others; the district courts are invested with admiralty powers. The prize court, which decides causes relating to prizes in time of war, is a separate court from the court of admiralty, but is usually presided over by the same judge.

ADMIRATION, in *grammar*, the character (!) used after a word, or at the close of a sentence, or a remarkable or emphatic nature, is called a *point*, or *note of admiration*.

ADMISSIO, Lat. *admissio*, from *ad* and *mitto*, admittance. 1. Among *ecclesiastics*, the act of a bishop's admitting a clerk to be qualified for a cure: this is done after examination, by pronouncing the formula *admitto te habilem*. Any person presuming to be admitted without episcopal ordination forfeits 100l.—2. Among *logicians*, &c., grant of an argument or proposition not fully proved.

ADMITTENDO CLERICO, a writ granted to a person who has recovered his right of presentation in the common pleas: it directs the bishop or metropolitan to admit his clerk.

ADMITTENDO IN SOCIUM, a writ associating certain notable persons of the county to the justice of the assize already appointed.

ADMITIO, Lat. *admixtio*, of *ad* and *misceo*. The union of substances by mixing them. The admixed bodies retain their characteristic properties: they undergo no chemical change, as they do in *composition*.

ADMONITIO, Lat. *admonitio*, of *ad* and *moneo*. A part of church discipline, which consists principally in warning an offender of his irregularities. By the ancient canons, nine admonitions were necessary before excommunication.

ADMORTIZATION, from *ad* and *mors*, death. The reduction of property in lands or tenements to *mortmain* (q. v.).

ADNASCENT, Lat. *adnascens*. Growing to some other thing.

ADNATA, Lat. from *ad* and *nascor* to grow. 1. In *anatomy*, one of the coats of the eye, called also *albuginea*. It is that portion of the conjunctiva which covers the sclerotic coat.—2. Such parts of animal or vegetable bodies as are usual and natural, as hair, wool, horns; or accidental, as fungus, and the several epistitil plants.—3. In *horticulture*, offsets of plants germinating underground, as from the lily, narcissus, hyacinth, and afterwards grow to the roots.

ADNATE, Lat. *adnatus*, grown to. Applied to parts which appear to grow to other parts: e.g. in *botany*, when a leaf adheres to the branch or stem by the surface or disc itself; or when the stipules are fixed to the petioles.

ADOLECERA, a genus of coleopterous in-

sects. Name, from ἄδολος and κεφαλή, in reference to the form of the antennæ. Belongs to the elaterides of Latreille.

ADON'AI, a Hebrew, Chaldean, and Syrian name of the Supreme Being, meaning *Lord or Sustainer*.

ADON'IA ancient festivals kept in honour of Adonis, by females, who spent two days in lamentations and the most infamous pleasures. These Adonia were celebrated by the Greeks, Egyptians, Syrians, Sicilians, &c.

ADON'IC, } pertaining to Adonis, the
ADON'IAN, } favourite of Venus. *Adonic* is applied to a kind of short verse, consisting of a dactyl, and a spondee or trochee, e. g. *rūd jāvēntis*. It was originally used in bewailing the fate of Adonis.

ADON'IS, pheasant's-eye, or bird's-eye. A genus of plants of the class *polyandria*, order *polygynia*. } There are eight species, resembling the anemone in appearance, but smaller. The *A. autumnalis*, an annual common in our gardens, is the only British specimen. Name, *adonis*, the mythological youth, from whose blood it is fabled to have sprung.

ADON'ISTS, among *critics*, a party who maintained that the Hebrew points ordinarily annexed to the consonants of the word *Jehovah* are not the natural points belonging to that word, and that they do not express the true pronunciation of it.

ADOP'TER, a two-necked chemical vessel, placed between a retort and receiver, to lengthen the neck of the retort, and thereby give more space to elastic vapours.

ADOP'TIANS, a sect which held that, with regard to his human nature, Christ was not the *natural*, but the *adoptive* son of God.

ADOP'TION, Lat. *adoptio*, from *ad* and *opto*, to choose. 1. The act whereby one man makes another his heir, giving him all the rights of a son. Adoption was common among the Greeks and Romans, who had many regulations concerning it. The Lacedæmonian law required that it should be confirmed before their kings; at Athens, slaves, madmen, and persons under age were incapable of adopting; and at Rome, adoptions were confirmed before the prætor in an assembly of the people, or by a rescript from the emperor. The adopter, besides, was required to be at least eighteen years the senior of the adopted, and the natural father required to renounce all authority over his son, and consent to his translation into the family of the adopter. The various ceremonies of adoption have given rise to many kinds of it: e. g. *adoption by testament*, the appointment of a person to be heir by will, on condition of his taking the name, &c. of the adopter: *adoption by matrimony*, the taking the children by a former marriage into the condition of

children of the second marriage: *adoption by baptism*, the spiritual affinity contracted by godfathers was supposed to entitle the godchild to a share of the godfather's estate: *adoption by hair* was performed by cutting off the hair of a person, and giving it to the adoptive father: *adoption by arms*, an ancient ceremony of presenting a suit of armour to one for his merit or valour, which laid the person under an obligation to defend the giver. Among the Turks, the ceremony of adoption is performed by obliging the person adopted to pass through the shirt of the adopter. In France, the adopter must have neither children nor other legitimate descendants.

ADOP'TION is also used for many kinds of admission to a more intimate relation, as the admission into hospitals, particularly that of Lyons, and is, therefore, very nearly equivalent to *reception*.

ADORA'TION, Lat. *adoratio*. The act of worshipping; the worship paid to the Supreme Being. Among the Jews, adoration was performed by bowing, kneeling, and prostration. Among the Romans, the devotee, with his head veiled or covered, applied the right hand to his lips, the forefinger resting on the thumb, which was erect, and then bowing he turned round from left to right. The Gauls thought it more religious to turn from right to left: the Greeks to worship with their heads uncovered. The Christians copied the Grecian rather than the Roman mode, and universally uncover when they perform any act of adoration. In modern times adoration is paid to the pope by kissing his foot, and to a prince by kneeling and kissing his hand. The word has been sometimes used in the sense of *acclamation*, e. g. a pope is said to be elected by *adoration*, when he is elected by sudden acclamation, without scrutiny.

ADORIUM, a genus of coleopterous insects; the species are foreign. The adorium is included among the *isopodes* of Latreille.

ADOSCU'LATION, Lat. *adosculatio*, from *ad* and *oculum*, a kiss. A term used by naturalists to denote impregnation by mere external contact: this takes place in many birds and fishes. It is also used in botany for the impregnation of the plant by the falling of the farina on the pistils; and also for the insertion of one part of a plant into another.

ADOS'SED, English of *adosés*, part. of *adosser*, to place back to back; *dos*, the back. A heraldic term denoting two figures or bearings placed back to back.

ADO'XA, } Moschatel: a genus of a
ADO'XIA, } hardly perennial plant, peculiar to Britain; class *octandria*, order *tetragynia*. Name, *ω*, without, and *δῆξ*,

glory, from the humble aspect of this little flower. There is only one species, the *A. moschatellina*, so called from its smelling like musk. It is also known by the name of *bastard fumitory*; grows in shady places.

AD PONDUS OMNIUM, literally, "to the weight of the whole." These words after the name of any ingredient, in a medical prescription, signify that the weight of such ingredients is equal to that of all the others put together.—*Lat.*

AD QUOD DAMNUM, literally, "to what damage." The name of a writ issued before certain liberties are granted, as, a fair, market, &c., ordering the sheriff to inquire what damage may be caused by such grant.—*Lat.*

ADPRESSED, *Lat. adpressus*. Appressed: pressed close together: applied to branches or leaves, when they rise nearly parallel to the stem, and are close to it, e.g. the branches of the *Genista tinctoria* and leaves of the *Thlaspi campestre*.

ADRIFF, a nautical term denoting the condition of a vessel broken from her moorings. It is the participle of the Sax. verb *adriftan*, to drive.

ADROGA'TION, a species of adoption among the Romans, by which a person was admitted to the relationship of a son, derived from *ad* and *rogo*, to ask; in reference to the questions put to the parties.

ADSTRICTIO, *Lat. adstrictio*, from *stringo*, to bind. In medicine, 1. The action of an astringent.—2. Constipation.

ADULARIA, the moonstone of lapidaries: a transparent white-coloured variety of prismatic felspar, with a silvery or pearly opalescence. The finest crystals are found at Adula, the summit of St. Gothard. The sunstone of the lapidaries is the Siberian variety of Adularia; it is of a yellowish colour, and numberless golden specks appear distributed throughout it.

ADULT, *Lat. adultus*, grown to maturity: *oleo*, to grow. Among civilians, a person upwards of 14 years of age. The term is also applied to animals and plants at a state of maturity.

ADULTERY, *Lat. adulterium*, from *ad* and *alter*, other. The crime of married persons, whether husband or wife, who violate their marriage vow by incontinence. In Europe and America, adultery is reckoned a private offence: none but the husband being allowed to intermeddle; and except in Scotland, though the husband be guilty of adultery, the wife is not allowed to prosecute him for the same. In England adultery is a spiritual offence, and therefore the injured party can have no other redress than to bring an action of damages against the adulterer, and to divorce and strip the adulteress of her

dower.—*See* DIVORCE. In scriptural language, adultery is sometimes used for idolatry, and at other times for any species of unchastity. It is in this sense that divines interpret the seventh commandment.

ADULTERY, in church affairs, means the thrusting a person into a bishoprick during the life of the bishop.

ADUMBRATION, *umbra*. In heraldry, a figure painted of the same colour as the ground of the field, but darker.

ADUSTION, *Lat. adustio*, from *ad* and *uro*, to burn. In surgery, the same with cauterisation (q. v.)

ADVANCE, from *ad* and *van*, the front. In commerce, 1. To supply beforehand, to furnish on credit.—2. Additional price or profit on the prime cost of goods.—3. Money paid before goods are delivered upon consignment. This is usually from a half to two-thirds of the value of the goods consigned.

ADVANCE-DITCH, } In fortifications, that
ADVANCE-MOAT, } drawn round the
glacis or esplanade of a place.

ADVANCEMENT, in law, provision made by a parent for a child, by gift of property, during the parent's life, to which the child would be entitled, as heir, after the parent's death.

ADVENT, *Lat. adventus*, from *ad* and *venio*, to come. A coming: appropriately the coming of the Saviour. It is intended as a season of devotion, with reference to the past and future coming of Christ, and includes four sabbaths before Christmas, beginning at St. Andrew's day, or on the sabbath next before or after it according to the day of the week on which the 25th of December falls.

ADVENTITIOUS, *Lat. adventitius*, extraordinary. Added extrinsically, e. g. among civilians, goods which are acquired accidentally, are said to be *adventitious*. The same is said of fossils, as shells, &c., which are found embodied in other fossils. Applied also to diseases which are not hereditary or congenital; and in botany, to anything which appears out of the ordinary course of nature. It is in speaking of natural things, what *abnormal* is in speaking of productions of art.

ADVENTURE, *Fr. aventure*. *See* ADVENT. 1. Among sailors, something which a seamen is permitted to carry aboard, with a view to sell for profit. Seamen usually call this a *venture*.—2. A bill of adventure is a writing signed by a person who takes goods on board of his ship, wholly at the risk of the owner.

ADVENTURER, one who adventures, e. g. merchant-adventurers constituted a company, formed for the purpose of exploring unknown regions, and opening up new channels of trade; called also the *society of adventurers*.

AD'VERB, Lat. *adverbium*, from *ad* and *verbum*. In *grammar*, a word used to modify the sense of a verb, participle, adjective, or attribute, and usually placed near it; e. g. he spoke *fluently*; the day is *extremely* cold, where the words *fluently* and *extremely* are adverbs. This part of speech may be called a *modifier*, as its use is always to qualify the sense of another word.

ADVERSA'RIA, Lat. from *adversus*. Among the *ancients*, a book of accounts, not unlike our journals and day-books, and so named from the debt and credit being placed in opposition to each other. The word also imports, among literary persons, a species of commonplace-book, in which the notes are not digested under regular heads.

ADVERS'ATIVE, Lat. *adversativus*. In *grammar*, a word denoting some difference or opposition between what goes before and what follows it; e. g. he has genius, *but* wants application. The word *but* is an *adversative* conjunction.

But is not, however, always an *adversative* conjunction; it often implies something superadded. It has therefore two senses: in the first it is a corruption of *bot*, the participle of the Saxon verb *butan*, to be out, and in the second it is the imperative of *botan*, or *betan*, to make better, and is radically the same as *bet*, in the word *better*. "*Botan*" is the verb to boot.

ADVERSIFO'LIATE, } Lat. *adversifolium*,
ADVERSIFO'LIOSUS, } from *adversus* and
folium, a leaf. Having opposite leaves: applied to plants where the leaves are so arranged on the stem.

ADVICE, from Fr. *avis*, opinion, whence the verb *aviser*, to advise. *Advice* is usually given by one merchant or banker to another, by letter, informing him of the bills or drafts drawn on him, with all particulars of date, &c., &c. For want of such *letter of advice*, it is allowable to refuse accepting a bill of exchange.

ADVICE-BOAT, a small vessel employed to carry despatches, &c.

AD VITAM AUT CULPAM, an office to be held *quandiu se bene gesserit*, that is, till the death or some delinquency of the holder.

AD'VOCATE, Lat. *advocatus*, from *ad* and *voco*, to call. *Advocate*, in its primary sense, signifies one who pleads the cause of another in a court of civil law: hence it came to signify one who pleads the cause of another before any tribunal or judicial court. The fees are of a gratuitous character, and cannot be recovered at law. In *England* and *America*, advocates are the same as counsel or counsellors. In *England* they are of two degrees, *barristers* and *serjeants*: the former being apprentices or learners, cannot, by ancient custom, be admitted serjeants till of 16

years standing.—In *Scotland*, the *faculty of advocates* is a society of eminent lawyers who practise in the highest courts, and who are admitted members only on the severest examination at three different times. It consists of about 200 members, from whom vacancies on the bench are usually supplied.—The *lord-advocate* is the principal crown-lawyer. He pleads all the causes of the crown, and is the public prosecutor in criminal cases. In *France*, the *avocats* form a separate order, of which each member is attached to a particular local court.—*Advocates* have different titles, according to their particular duties.—At *Rome*, *consistorial advocates* appear before the consistory, in opposition to the disposal of benefices. Among the ancient Romans, the *fiscal advocate* defended causes in which the public revenue was concerned.—*Feudal advocates* were of a military kind: to attach them to the church, they had grants of land, with power to lead the vassals of the church to war.—*Juridical advocates* became judges, in consequence of their attending causes in the earl's court.—*Matricular advocates* defended the matricular or cathedral churches.—*Military advocates* were employed by the church, to defend it by arms, when force was the eloquence of Europe. There were besides, *elective advocates*, chosen by the chapter, bishop, abbot, &c.; *nominative advocates*, appointed by the emperor, pope, &c. In *France*, there are two kinds of advocates: those who plead, and those who only practise, like our chamber-counsellors. In *Germany*, an advocate is a magistrate appointed, in the emperor's name, to administer justice.

ADVOCA'TION, Lat. *ad* and *vocatio*. Among *civilians*, the act of calling another to assist in pleading some cause.—A *bill of advocacy*, in *Scotland*, is a written application to a superior court, to call an action before them from an inferior court: the order granted, is called a *letter of advocacy*.

ADVOCATIONE DECIMARUM, is a writ for claiming a fourth part or upwards of tithes belonging to any church.

ADVOWER, he who has the right of *advowson*. 2. The advocate of a church, &c.

ADVOW'SON, in *English law*, a right of presentation to a vacant benefice: the right of patronage. The word is derived from *advocatio*, because the right was first obtained by such as were founders, benefactors, or defenders, that is, *advocates* of the church; hence those who have this right are styled *patrons*.

Advowsons are either *appendant* or *in gross*: the first are such as are annexed to a manor or lands, and pass as appurtenances of the same; whereas *advowson in gross*, is a right of presentation subsisting by itself, and belonging to the patron, independent of lands. In

either case, adownsons are no less the property of the adwower than landed estates, and may be granted away by deed or will, and are assets in the hands of executors.

ADVOYER, Nor. Fr. *advocæ*. A chief magistrate of a town or canton in Switzerland.

ADYNA'MIA, Gr. *αδυναμία*. A defect of vital power (*δυναμῖς*).

A'DYTUM, Gr. *αδυτον*. The most sacred place in the heathen temples, corresponding to the Jewish *Holy-of-Holies*. The term is derived from *a*, not, and *δύω*, to enter.

ADZ, or **ADDICE**, Sax. *adese*. A cutting tool of the axe kind; the blade is thin or arching, and set at right angles to the handle. It is chiefly used for paring away inequalities on boards, planks, &c.

ÆACEA, Grecian festivals in honour of *Æacus*, who, on account of his justice on earth, was supposed to be appointed one of the judges in hell.

ÆCHMALOTARCHA, the title given anciently to the principal governor of the Hebrew captives residing in Chaldea, Assyria, &c. The Jews called him *Rosch-Galuth*, or chief of the captivity. At present the æchmalotarch is only the head of the Jewish religion, like the *episcopus Sudaorum* in England, the *altarch* at Alexandria, and the *ethnarch* at Antioch.

ÆDES, a temple of an inferior order among the Romans. From *αἶδης*, dark, being originally dark buildings. The name latterly became synonymous with *templum*, or *temple*.

ÆDILE. In ancient Rome, an officer who had charge of the public buildings (*ædes*), and, indeed, buildings of all kinds, highways, aqueducts, public places, spectacles, &c. The ædiles were four in number, and of two classes—the plebeian and curule. Julius Cæsar afterwards added two other plebeian ædiles, called *cereæ*: their business was to inspect weights and measures, public stores of provisions, &c.

ÆGEOTOMY, from *αἰδοῖν* and *τεμνέω*. The anatomy of the organs of generation.

ÆDORTOSIS, from *αἰδοῖον* and *πτωσις*. Genital prolapsus.

ÆGAGROPILE, Lat. *ægagropilus*, from *αἰγαγρος* and *πίλος*. 1. A concretion found in the stomach of the chamois-goat (sometimes in that of deer, cows, &c.), consisting of hair which the animal has swallowed in licking itself. These balls were formerly called *bezours*, and believed to possess the same virtues as the oriental bezours.

ÆGICERAS, a genus of plants found in the Molucca Islands. Class *pentandria*, order

monogynia. Name from *αἶξ*, a goat, and *κέρας*, a horn, the pods having some resemblance to the horn of the goat.

ÆGILOPS, from *αἶξ*, a goat, and *ὤψ*, an eye. 1. A sore under the inner angle of the eye: now generally considered a stage of the fistula lachrymalis. Named from the supposition that goats are peculiarly liable to it.—2. Hard-grass: a genus of hardy European annuals, of the class *polygamia* and order *monæcia*. There are seven species.—Named from its supposed virtues in curing the disease called *ægilops*.

ÆGIS, in *mythology*, is particularly used for the shield or cuirass of Jupiter and Pallas. Named from *αἶγῖς*, a goat's skin, with which shields were anciently covered.

ÆGOCEROS, the same with *Ægiceras* (q. v.)

ÆGOP'DIUM, goat-weed, gout-weed, or goat's-foot. A British genus of plants, of the class *pentandria* and order *trigynia*: named from *αἶξ*, a goat, and *πους*, a foot, "the leaves being cleft something like the foot of that animal." There is only one species, *Æ. podagraria*, found in gardens and wet places. The root is pungent and aromatic.

ÆGYPTILES (Latinised *Ægyptilia*). A species of ornament in Egyptian architecture having a light-blue figure on a dark ground.

ÆELOFODES, the name of a pedo-motive carriage lately exhibited in the metropolis by Mr. Revis, of Cambridge. It consists of two large driving wheels, urged round by cranks acted upon by treddles, on each of which the rider's weight is thrown alternately. The name, in which the only novelty consists, is from *Æλλο*, one of Actæon's dogs (Ov. Met. iii. 219), and *πους*, ποδος, a foot.

ÆLURUS, the Egyptian god-cat, sometimes represented in architectural decorations in *proprâ personâ*, and sometimes as a man with a cat's head!

ÆOLIC, pertaining to *Æolia* or *Æolis*. The *Æolic dialect* is one of the five dialects of the Greek tongue, agreeing in most things with the Doric dialect. The *Æolic verse* consists of an iambus or spondee, then of two anapests separated by a long syllable.

ÆOLIAN, pertaining to *Æolus* (q. v.)

ÆOLIAN-HARP, a musical instrument, so named from its producing its wild and often exquisite strains merely by the action of the wind. It is made thus: a box of thin deal is made of such a length as will suit the window into which it is to be fitted; a number of strings (catgut) are fixed upon the mouth of it, and tuned in unison. It is fitted into the window with the strings outwards.

ÆOLOPILE, from *Æolus* (q. v.), and *πύλις*, a passage. A hollow metal ball, with a small hole into which a slender pipe is fitted: the ball being half-filled with water and heated, vapour issues vehemently from the orifice. It is used principally to show the convertibility of water into steam, but was anciently used as bellows, and is still sometimes used as a blow-pipe.

ÆOLOPHON, from *Æolus*, the god of the winds, and *φωνή*, voice. The name of a musical instrument somewhat resembling a cabinet pianoforte in shape, &c. Its tones are produced by metallic springs, set in vibration by the air produced from bellows.

ÆON, from *αἰών*, age, duration. A term used in the Platonic philosophy to designate a virtue, attribute, or perfection. The Platonists represented the Deity as an assemblage of *æons*. The Gnostics considered *æons* as certain substantial powers, of divine natures, emanating from the Supreme Deity, and performing various parts in the operations of the universe.

ÆERATE, from *æër*. To *æerate*, is to impregnate with carbonic acid, formerly called *aerial acid*; e. g. *æerated water*.

ÆERATION, from *ἀήρ*, air. The saturation of a liquid with some gas; e. g. the æeration of water with carbonic acid or fixed air.

ÆERIAL, Lat. *ærius*. In *painting*, the term is applied to the diminishing intensity of colour on objects receding from the eye.

ÆERIAL PLANTS, a general name for such plants as derive their nourishment chiefly from the atmosphere, e. g. the *epidendra*, *æerides*, &c. These are often, especially in the East, suspended by a string in a room, as ornaments, and continue to blossom even for months, without earth or water.

ÆERIANS. In *church history*, a branch of Arians who take their name from Aërius, who maintained that there was no difference between bishops and priests.

ÆERIDES, air-plants. A genus of perennials of four species, natives of China and the East Indies. Class *gynandria*, order *monandria*. Name, *ἀήρ* and *ἰδος*.

ÆERIFICATION, from *æër*, air, and *facio*, to make. 1. The act of passing from a liquid or solid state into gas or elastic vapour.—2. Being filled with air.

ÆERIFORM, from *æër*, air, and *forma*, form. Having the nature and properties of air; e. g. the gases are æeriform fluids.

ÆERO-DYNAMICS, from *ἀήρ*, air, and *δύναμις*, power. That department of experimental science which treats of the motion of air and the mechanical effects of air in motion.

ÆEROGRAPHY, from *ἀήρ*, air, and *γραφία*,

to describe. A description of the atmosphere, its nature, &c. It includes meteorology.

ÆEROLITE, from *ἀήρ*, air, and *λίθος*, a stone. A meteoric stone. See METEOROLITE.

ÆEROL'OGY, from *ἀήρ*, air, and *λογος*, science. That branch of physics which treats of the nature and properties of the atmosphere as regards its salubrity.

ÆEROLUM, an ancient weight, equal to the sixth part of an obolus, or about 2 grs. It was the same with the Greek *χαλκός*.

ÆEROMEL, from *æër*, and *mel*, honey. Manna (*mel æereum*), which was believed to descend like dew from the atmosphere. It was also called *δρυσσινεῖς*, *mel rosicidum*, or honey-dew.

ÆEROMETER, from *ἀήρ*, air, and *μέτρον*, measure. 1. An instrument for ascertaining the weight or density of the atmosphere.—2. An instrument for ascertaining the relative bulk and density of the gases.

ÆEROMETRY, from *ἀήρ*, air, and *μέτρον*, measure. 1. That branch of *aërography* which considers the pressure, elasticity, and rarefaction of the air.—2. The art of measuring the relative bulk and density of gases.

ÆERONAUTICS, the science of navigating the air in balloons. See AERONAUT.

ÆEROPHOBIA, from *ἀήρ*, air, and *φοβός*, fear. Dread of wind; symptomatic of hydrophobia, and occasionally observed in hysteria and phrenitis.

ÆEROPHYTES, from *ἀήρ*, air, and *φυτον*, a plant. Plants which live exclusively in air, in distinction to hydrophytes, which live under water.

ÆEROSTAT, from *ἀήρ*, air, and *στατός*, sustaining. An air-balloon, a fire-balloon.

ÆEROSTATICS, from *ἀήρ*, air, and *στατός*, sustaining. 1. The same with *acrostation*, (q. v.)—2. The same with *pneumatics*, (q. v.)

ÆEROSTATION, from *ἀήρ*, air, and *ἵστημι*, to weigh. The art of raising, suspending, and latterly, of guiding balloons in the air. Primarily, the word signified the art of weighing air or æeriform fluids, but is now used synonymously with *aeronautics*, (q. v.), though not very correctly.

ÆRUCCO, primarily, the rust of brass (*æs*), latterly, verdigris. The *linimentum æruginis* of the London Pharmacopœia, corresponds with the old *mel Ægyptiacum*, or *ozymel æruginis*.

ÆS, the Latin word for *brass*. Among the Romans, *æs* meant coined money, in contradistinction to *æs grave*, money paid by weight.

ÆSCULACEÆ, a natural order of *exogæous* plants, consisting of the horse-chest-

nut (*æsculus hippocastanum*), and other nearly allied species.

ÆSCULINE, an alkaline substance, extracted from the horsechestnut (*æsculus*).

ÆSCULUS, the horsechestnut: a genus of shrubby plants, of the class *heptandria*, and order *monogynia*. There are six species, with some varieties; natives of the northern parts of Asia and America. Name from *æscu*, food.

The bark of the common horsechestnut tree (*Æ. hippocastanum*) is much esteemed on the Continent as a febrifuge; and it is by some considered superior to Peruvian bark. This tree is now well known in Britain.

ÆSHNA, a sub-genus of neuropterous insects (dragon-flies), included in the *libellula* of Linnæus.

ÆSTHETICS, Gr. *αἰσθητικός*, having the power of perception by means of the senses. In the *fine arts*, the science which derives the first principles in all the arts from the effects which certain combinations have on the mind, as connected with nature and right reason. It is intimately related to sentiment, and links together with feeling the different parts of a composition.

ÆSTIVAL, Lat. *æstivalis*, pertaining to summer (*æstas*), e. g. æstival solstice. Applied also, 1. To plants which flower during summer.—2. To diseases which appear during summer.

ÆSTIVATION, Lat. *æstivatio*. 1. The effect produced by summer heat (*æstas*).—2. The state of the bud before the evolution of the corolla.

ÆSTUARUM, Lat. from *æstuo*, to heat. An apparatus for conveying heat. The term is chiefly used by medical writers.

ÆTHEOGAMOUS, from *ἀἰθεῖς*, and *γάμος*, marriage. A term used to express characteristically the nature of cryptogamic plants.

ÆTHIOPS, a name given by the older chemists to several black powders, on account of their colour; e. g. *æthiops martialis* was the black deutoxide of iron; *æthiops per se* was the protoxide of mercury; *æthiops animalis* and *vegetabilis* were the powders formed by the incineration of animals and vegetables! The term *æthiops mineral* is still popularly used to denote the black sulphuret of mercury, which is formed by triturating mercury with sulphur, till the whole forms a deep black powder.

ÆTHUSA, fool's parsley, or lesser hemlock, a genus of plants of two species. The British species, *Æ. cynapium*, resembles parsley, and is often mistaken for it: it is poisonous. Class, *pentandria*, order, *digynia*. Name from *αἰθεῖς*, to burn, on account of its acrid quality.

ÆTHRISCOPE, from *αἰθρίος*, clear, and

σκοπέω, to view. An instrument contrived by Sir J. Leslie, to measure the variations of radiation in different states of the atmosphere. It consists of the differential thermometer, having one of the balls excluded from the light, and the other placed in a metallic cup, exposed to a clear part of the sky; the heat radiates from it rapidly, and the temperature falls; exposed to a cloud the radiation is returned, and there is no reduction of temperature.

ÆTIOLOGY, from *αἰτιον*, a cause, and *λόγος*, discourse. 1. A figure of speech, whereby in relating an event, we unfold the causes of it.—2. The doctrine of causation.

ÆTITES, from *ἄετος*, an eagle. The *lapis aquilæ*, or eagle-stone: a variety of the oxide of iron and clay. It is found in nodular masses in the coal formations of Great Britain, and is known to mineralogists by the name of clay-iron ore. It takes its name from a popular notion, that the eagle carries it to her nest to prevent the eggs from becoming rotten.

ÆΤΥΜΑ, } Gr. from *ἄετος*, an eagle.
Æ'ETOS } The name given by Greek architects to the tympanum of a pediment, from the custom of decorating the apex or ridge of the roof with figures of eagles. The name thus first given to the ridge, was transferred to the pediment itself.

AFFA, a weight used on the Guinea coast, equal to an ounce troy. Half an affa is called an *eggeba*.

AFFECTATION, Lat. *affectatio*, from *affecto*, to seek for overmuch. In the *fine arts*, overcharging any part of a composition with an artificial and overstrained appearance, in colouring, drawing, or action.

AFFEEER, in law, to assess or reduce an arbitrary amercement to a precise sum, according to the circumstances of the case.

AFFEEERMENT, the act of affeeering an amercement. See **AFFEEER**.

AFFEEEROR, } In law, one of several per-
AFFEEERER, } sons appointed in courts
AFFEEER, } leet, courts baron, &c., to settle the fines upon those who have been guilty of faults arbitrarily punishable. See **AFFEEER**.

AFFETTO, **AFFETUOSO**, or **CON AFFETTO**, Ital. from Lat. *affecto*. In music, a direction to perform certain notes in a soft and affectionate manner, and therefore rather inclined to slow than the reverse.

AFFIDA'VIT, in law, a declaration upon oath before a competent authority, more particularly when reduced to writing and signed by the party.

The term is an old law verb in the perfect tense; *he made oath*, from *aid* and *ades*, faith; *affido*, I confirm by oath.

AFFINITY, Lat. *affinitas*, from *affinis*, near. 1. Among *civilians*, the relation of one of the parties married to the kindred of the other. It is distinguished into three kinds: (a) *Direct affinity* is that subsisting between the husband and his wife's relations by blood, or between the wife and her husband's relations by blood. (b) *Secondary affinity* is that which subsists between the husband's and wife's relations by marriage. (c) *Collateral affinity* is that which subsists between the husband and the relations of the wife's relations. The degrees of affinity are always the same with those of consanguinity.—2. In *natural history*, a relation of animals to one another in the similarity of a greater proportion of their organisation: distinct from analogy, which denotes a resemblance of external form. Thus, anatomy shows that the porpoise has an affinity to man, and its appearance denotes a close analogy to a fish.—3. In *chemistry*, the tendency which dissimilar particles of matter have to combine together and form new compounds, and the power which causes them to continue in combination. It is otherwise called *chemical attraction*. This preference of uniting, which a given substance is found to exhibit with regard to other substances, is by an easy metaphor called *elective affinity*, and is of two kinds: (a) When a simple substance is presented to a substance compounded of two elements, and unites with one of them so as to exclude the other, the effect is said to be produced by *simple elective affinity*: it is called *simple*, because only one compound is decomposed,—*elective*, because the substance seems to choose one body to combine with rather than another. (b) When two compound substances, each consisting of two elements, are brought together, and a mutual exchange of an element takes place, by means of which two new substances are formed differing in their properties from the original compound, the effect is said to be produced by *double elective affinity*, by *complex affinity*, or by *double decomposition*.—It often happens, that bodies which have no tendency to unite are made to combine by means of a third, which is then called the *medium*: thus, water and the fat oils are made to unite by means of an alkali in forming soap. Some writers call this action the *affinity of intermedium*, others *disposing affinity*, others again *reciprocal affinity*.—Affinity agrees with sensible attraction in every point which it has been possible to determine. All the elementary substances yet known are 64: by the union of these with one another are formed the almost innumerable substances which are met with in nature, or which are only formed artificially. These substances have, besides, different degrees of affinity for one another.

AFFIRMATION, a solemn declaration, under the penalty of perjury, by those conscientiously objecting to an oath; in *law*, equivalent to testimony on oath. An indulgence to Quakers under Will. III., extended to all conscientious scruples under Will. IV.

AFFIRMATIVE. In *algebra*, synonymous with *positive*: the term applied to quantities which have the sign + prefixed to them, in contradistinction to *negative* quantities, which have the sign — prefixed to them.—2. In *logic*, a term used to denote the quality of a proposition which asserts the agreement of the predicate with the subject. Example: "Man is an animal."

AFFLA'TUS, Lat. from *afflo*, to blow upon. A blast of wind. The word is also used for a species of erysipelas, which attacks suddenly, as if produced by some unwholesome wind blowing on the part.

AFFORCEMENT, from *ad* and *force*. In *old charters*, a fortress for defence.

AFFORESTATION, from *ad* and *forest*. The turning of ground into forest or wood land, as was done by the first Norman kings in England, for the purpose of affording them the pleasures of the chase.

AFFRAY, or **AFFRAYMENT**, from Fr. *ef-frayer*, to frighten. In *law*, the fighting of two or more persons in a public place, to the terror of others. A fighting in private is not an affray in the legal sense.

AFFRONTED (Fr. *affrontée*). In *heraldry*, front to front: applied to animals that face each other.

AFFRONTING. In *heraldry*, opposed face to face. See **AFFRONTED**.

AFFUSION, from Lat. *ad* and *fundo*, to pour out. Affusion with cold water is a mode of treatment in fever, brought into general notice by the late Dr. Currie, of Liverpool: it consists merely in placing the patient in a bathing tub, and pouring a pailful of cold water upon the body. This mode of treatment has been generally attended with success, when employed in the early stage of the disease.

AFORA, from Lat. *a*, and *fores*. A term applied to plants in which the seed-vessels are not furnished with valves.

AFORE, from *a*, and *fore*. In *nautical language*, towards the head of the ship; further forward, or nearer the stern; e.g. "afore the windlass."—*Afore the mast* is applied to a common seaman, or one who does duty on the main-deck, or has no command or office aboard.

AFT. In *nautical language*, applied to what pertains to the stern of a ship, as, the *aft* part of the ship.—*Fore and aft* means the whole length of the ship.—*Right aft* means in a direct line with the stern. See **ABAST**.

AFTER-BIRTH. the same with *placenta* (q. v.).

AFTER-CROP, the second crop from the same ground in the same year.

AFTER-GUARD, the seaman stationed on the poop, or after part of a ship, to attend the after sails.

AFTER-MOST. In *nautical language*, nearest the stern; opposed to *foremost*.

AFTERPIECE, in *theatricals*, a piece performed after a play; a farce or other light entertainment.

AFTERSAILS, the sails of the mizen-mast, and stays between the main and the mizen-masts.

AFTERSWARM, any of the swarm of bees which leave a hive after the first.

ARZELIA, a genus of shrubby plants of three species, natives of Sierra Leone. Class *decandria*, order *monogynia*.

AGA, Per. *aka*, lord or master. In the *Turkish dominions*, a commander or chief officer. The title is also given to great landholders, and to the eunuchs of the Sultan's seraglio. It is also a common title of respect in addressing a distinguished person.

AGA'LOCHOR, } *ἀγάλλοχου*, aloes-wood

AGA'LOCHUM, } (*lignum aloë*). The produce of a large forest tree, to be found in most countries between the 24° of north latitude and the equator. It seems to be the result of the diseased action of a small part of a few trees of the same kind, and the rest of the wood is without value. The kind most valued—and it was at one time reckoned nearly as valuable as gold—is so soft and resinous, that it may be modelled with the fingers. It is in high repute for fumigations and incense in all Hindoo, Mohammedan, and Catholic countries.

AGALMA'TOLITE, *figure-stone* (*ἄγαλμα* and *λίθος*); a sub-species of mica of various colours. The best specimens are those of China.

AGAPE (pron. *ag'apy*). Among the primitive Christians, a love-feast held before or after communion. The meaning of the name (*ἀγάπη*, love,) was latterly taken in too literal a sense, and this feast became scandalous: it was finally suppressed.

AGAPHITE. See *TURQUOISE*.

AGA'RIC, } the *mushroom*; a genus of

AGA'RICUS, } plants of the class *cryptogamia*, and order *fungi*. The plants of this genus approach more nearly to animal matter than any other productions of the vegetable kingdom. Name, *ἀγαρίξον*, because primarily found near the river Agræos, in Sarmatia.

AGARIC, MINERAL, a variety of soft carbonate of lime. It is found in the clefts of rocks, in pieces loosely cohering, and so light as nearly to swim on water. It takes its name from its resemblance to a fungus in colour and texture.

AGASTRIS, Gr. *a*, without, and *γαστήρ*, stomach. A name formerly given to certain animalcules, on the erroneous supposition that they were devoid of internal digestive organs. The name is still used to designate a family of medusæ.

AGATZ, a genus of semipellucid gems, the basis of which is calcedony, blended with variable proportions of jasper, amethyst, quartz, opal, hellotrope, and cornelian. When cut and polished, agates present an appearance of waving lines, sometimes accurately parallel, as *ribbon agate*, and sometimes containing a resemblance to mosses, ferns, &c., as in *Mocha stone*, and sometimes the parallel lines are zigzag, as in *fortification agate*. Name *γαγάτης*, because found near the river of that name in Sicily, afterwards called *achates*, and finally *agate*.—2. An instrument used by gold wire-drawers; so called from the agate in the middle of it, through which the wire is drawn.

AGATHIDIUM, a genus of coleopterous insects belonging to the family of Clavipalpi. Name from *αγαθός*, a clue, in reference to the faculty possessed by the species, of rolling themselves into a ball, in which state "they feign death in the most imperturbable manner."

AGATHODÆMON, Gr. *αγαθός*, good, and *δαίμων*, demon. In *mythology*, a good spirit.

AGATIZED, having the coloured lines and figures of agate; e.g. *agatzed wood*, a species of hornstone, apparently produced by the petrification of wood.

AGA'VE, the generic name of the *American aloë*. There are fourteen species, thirteen of which are beautiful shrubby plants, the other a perennial. Class *hexandria*, order *monogynia*. Name *αγανής*, noble, in reference to the beautiful appearance of the great aloë, which rises upwards of twenty feet, and its branches form a pyramidal top. The genus is the type of a subdivision of the amaryllidaceous plants.

AGEDOITE. See *ASPARAGIN*.

AGE'MA, a body of soldiery in Macedonia, not unlike the Roman legion.

AGEMOGLANS, such children as were obtained by a tax, levied every third year in the Turkish empire upon the Christians: the collectors usually took every third child, and the handsomest.

AGENDA, from *ago*, to act. 1. In *theology*, what one is bound to perform, in contradistinction to *credenda*, what one is bound to believe.—2. A memorandum-book of things to be daily attended to.—3. A ritual or liturgy.

AGENE'IA, from *a*, not, and *γενεῖς*, generation. 1. Impotence.—2. Any

anomaly of organization, consisting in absence or imperfect development of the parts.

AGER, a Roman acre of land.

AGERATUM, the generic name of the bastard hemp *Agrimony*. There are seven species, natives of America. Class *syn-genesia*, order *polygamia æqualis*. Name, *αγρεατον*, from *α* and *γρας*, old, in reference to the length of time which the flowers of some of the species preserve their beauty.

AGEUSTIA, from *α*, not, and *γαστρις*, to taste. A defect or loss of taste; symptomatic of many diseases.

AGGER, Lat. from *ad* and *gero*, to heap. A fortress, a tumulus.

AGGEROSE, full of heaps.

AGGLOMERATE, from *agglomero*, to roll into a ball. Applied: 1. In botany, to the stamina of plants when collected into a globular form, as in *Anona triloba*, and to amentæ when of a similar form, as in *Pinus sylvestris*.—2. In anatomy, to glands in the same sense as aggregate.

AGGLUTINANT, from Lat. *agglutino*, to glue together. 1. Any viscous substance which unites other substances by causing an adhesion.—2. The adhesion of parts by the effusion of a coagulating medium.

AGGLUTINATION, the action of an agglutinant. In surgery, the natural process of adhesion in wounds.

AGGRAVATION, from *ad* and *gravis*, heavy. The addition of one degree of guilt to another. Technically, an ecclesiastical censure threatening excommunication after three admonitions used in vain. From aggravation, the next step is *re-aggravation*, which is the last excommunication.

AGGREGATA, the second family of *Ascidia*. This family consists of animals analogous to the *Ascidia*, but united together in a common mass, so that they seem to communicate organically with each other, and in this respect to connect the Mollusca with the Zoophytes. Hence the name of the family, from *aggrego*, to flock together. The form of the mass is sometimes that of a single star, e.g. the *botrylla*; sometimes that of many stars strung together, e.g. the *pyrosoma*; sometimes the mass is globular, e.g. the *polyclina*.

AGGREGATE, from Lat. *aggrego*, to assemble together, from *grex*, a flock. In physics, a whole or mass formed by the uniting together of many parts of the same kind: the chemical properties of the aggregate do not differ from those of its parts. The smallest parts into which an aggregate can be divided without altering its chemical properties are sometimes called *integral parts*.—2. In botany, the term is applied to flowers composed of many small florets

having a common undivided receptacle, the anthers being distinct and separate the florets commonly standing on stalks, and each having a partial calyx. *Aggregate flowers* are, therefore, opposed to *simple flowers*.—3. In law, applied to a corporation, the existence of which is preserved by accession of new members.—4. In anatomy, applied to glands which are clustered together.

AGGREGATION. By attraction of aggregation is meant the power which causes homogeneous bodies to tend towards each other, and to cohere when united. The aggregate differs from a heap, whose parts do not cohere; and from a mixture, which consists of parts dissimilar in their nature. The word is used of solid, liquid, and gaseous bodies.

AGILD, (In old law books, a person of Agilds.) so little account that whoever killed him was not liable to any fine for so doing!

AGIO (Italian), the difference in value between bank-stock, or money, and current coin, or cash. Also the rate of premium which is given when a claim that can only be legally demanded in one kind of money is paid in another. Thus, in countries where the standard is silver, the receiver will often pay agio for gold. The agio is subject to variations. The term is also sometimes used to denote the premium on the discounting of a bill.

AGIO OF ASSURANCE is the same with what, in this country, is called *policy of assurance*.

AGIST. In law, to take the cattle of others to graze at a certain sum: used originally for the feeding of cattle in the king's forests. The word is probably from Fr. *gesser*, from the old word *gister*, to lodge for a short time.

AGISTAGE, } In law, the taking of
AGISTMENT, } other people's cattle to
AGISTATION, } graze, especially in the king's forests, and also the profits thence arising. These terms also denote a tax, burden, or charges levied for repairing the sea-banks in different parts of England. The *agistment-tithe* is a tithe paid to the vicar for pasture of barren cattle, usually 10 per cent. on the agistage-money taken by the agistor. This tithe is abolished in Ireland.

AGISTON, } An officer of, the king's
AGISTATOR, } forest, who has the care of
AGISTER, } the cattle agisted, and collects the money for the same: hence called *gist-taker*, which is popularly rendered *guest-taker*.

AGITATO (Ital. from Lat. *agito*), in music, denotes a broken style of performance, adapted to awaken surprise.

AGITATOR, that which agitates. In the time of Cromwell, "there were certain officers appointed by the army to watch

over its concerns, called *agitators*." The word is Latin for *charioteer*, that is, one who drives, from *ago*, to drive.

AGLAOPÆ, a genus of "hawk-moths" (*crepuscularia*).

AGLET, { Fr. *aiguillette*, a point, from
AGLET, { *aiguille*, a needle. Qu. from
αἴγλη, bright. 1. A tag, or knob, on a point, usually made to represent some animal, often a man.—2. In *botany*, a pendant at the ends of the chives of flowers; e.g. in the rose and tulip.

AGLET-BABY, a small image on the top of a lace.

AGLIA, the generic name given by Ochseneimer to the *Bombyx* of Latreille.

AGLOSSA, a genus of nocturnal Lepidoptera belonging to the sub-family of Zineites.

A'GMEN, a part of the Roman army, which, drawn up in the form of an oblong parallelogram, answers to what moderns call a *column*. From *ago*.

The Roman army consisted of three *agmina*, the van (*primum agmen*), main body (*medium agmen*), and rear (*postremum agmen*); but the square (*agmen quadratum*), and the column (*agmen pilatum*), were the forms in which the armies were usually brought to the combat.

AGNATA, the same with *adnata* (q. v.)

AGNATE, from Lat. *ad* and *nascor*, to be born. Any male relation by the father's side, in contradistinction to *cognate*, (q. v.)

AGNATION, relation by the father's side, or descent in the male line, distinct from *cognition*, (q. v.)

AGNEL, from Lat. *agnus*, a lamb. An ancient French coin, value 12 sols 6 deniers: it had the figure of a lamb struck on it, and was therefore indifferently called *mouton d'or* and *agnel d'or*.

AGNO'MEN, Lat. from *ad* and *nomen*. Among the *Romans*, a kind of fourth or honorary name bestowed on a person on account of some noble action, or extraordinary virtue or accomplishment; e.g. the agnomen *Africanus* was conferred upon Publius Cornelius Scipio, on account of his great achievements in Africa.

AGNON, a name given by Fabricius to a genus of dragon-flies.

AGNOTHER'IUM, an extinct animal of the miocene period; order *mammalia*, allied to the dog; but of very large size. Named from *ἀγνός* and *ἴδιον*. Epplshheim, in Germany, has furnished the only species as yet recognised.

AGNUS CASTUS, a species of vitex; so called from *αἴγος*, chaste, from its supposed power of preserving chastity. The Athenian ladies reposed on the leaves of this plant at the *thesmophoria* or feasts

of Ceres. The Lat. *castus*, chaste, now added to the name, forms a duplication of the sense.

AGNUS DEI (*Lamb of God*). In the *Romish church*, a cake of wax stamped with the figure of a lamb supporting the banner of the cross. It is consecrated by the pope, and distributed to the faithful. Also a prayer, which begins "Agnus Dei qui tollis peccata mundi."

AGNUS SCYTHICUS (*Scythian lamb*). A name given to the roots of a species of fern (*polypodium Barometz*). It is covered with brown woolly scales, and in shape resembles a lamb: it is found in Russia and Tartary.

AGOMPHIA, AGOMPHIANS, the name given by Ehrenberg to those rotifers in which the jaws are deprived of teeth: from *α*, without, and *γρομφιος*, a tooth.

A'GON, *αἰών*. In *Roman antiquity*, 1. The place where agonistic games were celebrated.—2. The day on which the *rex sacrorum* sacrificed a victim.

AGONA'LIA, Roman festivals in honour of the god *Agonius*.

AGONISTICS. In *church history*, such of the disciples of Donatus as he sent to fairs, markets, &c., to propagate his doctrines: from *αγωνιστής*, a champion.

AGO'NITES, { from *αγωνίζω*, to strive.
AGO'NIUM, { The Roman god of business and gymnastics.

AGONOTH'ETA (*ἀγωνοθίτης*). In *archæology*, the superintendent of the gymnastic games: he inspected the discipline of the athlete, and adjudged the prizes.

A'GORA, the market-place of a Greek town. It was in the agora that the assemblies of the people met; hence the name from the verb *αγείρειν*, to assemble. The Agoranomi were certain magistrates, who had charge of the markets, and collected the customs imposed upon certain articles.

AGOUTI, { the popular name of the
AGOUTY, { *Chloromys* of Cuvier. The agouties very much resemble hares and rabbits in disposition and the nature of their flesh, and, indeed, may be said to hold the place of those animals in the Antilles and hot parts of America.

AGREGARIAN, Lat. *agregarius*, from *ager*, a field. Pertaining to lands. The *agregarian laws* of the Romans were those which related to the division and distribution of public lands, accruing to the state by conquest. These lands were leased out by the state to the patricians at a nominal rent, and the plebeians gained nothing by them. This abuse was attempted to be reformed by the *agregarian laws*, the object of which was to restrict the quantity occupied by individuals, and to cause a real *rent* to be paid from them

for the support of the army. There were many laws relating to the distribution of the conquered lands, but that called *agregaria lex*, by way of eminence, originated with Spurius Cassius, in 486, B.C.

AGREEMENT, In the *fine arts*, a certain degree of resemblance in style and character, whereby the parts seem to belong to each other.—2. In *law*, the consent of persons to anything done or to be done. "All agreements, to be valid, ought to be on a stamp, or at least duly stamped at the Stamp-office within 21 days after the date of the agreement. We derive this term immediately from the Fr. *agrément*.

AGRESTIS, Lat. from *ager*, a field. Pertaining to the field: the trivial name of many plants. The term is opposed to *hortis*.

AGRIA (*αγρία*). 1. The common holly (*Ilex aquifolium*).—2. A pustular disease of the skin, accompanied with redness and erosion.

AGRICULTURE from Lat. *ager*, a field, and *cultura*, cultivation. In a general sense, the cultivation of the ground for the purpose of producing vegetables and fruits for the use of man and beast. In this sense, the word includes gardening or horticulture, and also the raising and feeding of cattle. But *appropriately*, the word is used to signify that species of cultivation which is intended to raise grain and other crops in large quantities. The word is thus synonymous with *husbandry*, and opposed to horticulture. The term is also sometimes considered to include every description of territorial improvement, as embanking, road-making, draining, planting, &c.

AGRIELÆA, the oleaster or wild olive; (*αγριος*, wild, and *ελαια*, the olive-tree).

AGRIOLIUM, the holly-tree, so named from *αγριος*, fierce, and *folium*, leaf, on account of its sharp prickles.

AGRIMONIA, a genus of plants. Class, **AGRIMONY**, } *dodecandria*, order *digynia*. The name *ἀγριμόνη* was given by the Greeks to a plant supposed to cure the cataract in the eye, called *αγριμια*. There are seven species of this perennial, one of which, *A. eupatoria*, is common in Britain, in waste places, as road-sides.

AGRIMONY, the popular name for *Agri-monia* (q. v.). Hemp agrimony is *Bidens tripartita*.

AGNIOCOCCUMELÆA, the sloe-tree (*Prunus spinosa*), from *αγριος*, wild; *κoccος*, a berry; and *μηλια*, an apple-tree.

AGRIONIDÆ, the name of a family of dragon-flies (*Libellula*, Lin.), of which the type is the blue dragon-fly (*Agriion puella*), found frequenting the sides of ditches in most parts of Britain.

AGRIPETIST, from Lat. *ager*, a field, and

peto, to seek. One who claims a portion in the division of lands.

AGRIPPA, a difficult birth. *Agrippæ*, children of difficult birth, *ab agro partu*.

AGROM'YZA, a genus of *muscides* (q. v.). From *αγριος* and *μύζω*, a fly.

AGRONOMY, from *αγρος*, a field, and *νομος*, a rule. The art of cultivating the ground: sometimes used synonymously with agriculture.

AGROSTEM'MA, corn-cockle or rose-campion (*A. githago*). A genus of the class *dodecandria*, and order *pentagynia*. Name, *αγρου στεμμα*, garland of the field. The trivial name *githago* is from *gith*, the Celtic word for any peculiar black seed. There are, besides that mentioned, seven foreign species, most of which are perennials.

AGROSTIS, bent-grass. A genus of the class *triandria*, and order *digynia*. Name, *αγρωστις*, given by the Greeks to grasses generally, from *αγρος*, a field. The genus contains about 24 species, five of which are British, mostly perennials.

AGROSTOLOGY, from *αγρωστις*, grass, and *λογος*, discourse. The part of botany which relates to grasses. The term is commonly used as synonymous with agrostography.

AGRY'NIA, from *αγρυπνος*, sleepless. *Agrypnny*, sleeplessness.

AGRY'NOCOMA, from *αγρυπνος*, sleepless, and *κομα*, lethargy. A lethargic state, common in bad cases of typhus fever. It is synonymous with *coma-vigil*.

AGUE, a disease consisting of febrile paroxysms, which completely subside and return at certain intervals. The febrile paroxysm is distinguished into three stages—the *cold*, the *hot*, and the *sweating*—and these follow in regular succession. The name is also applied to a sense of chilliness, attended with shaking, though in health. The word is Goth. *agis*, fear, which is one of the chief characteristics of the disease. *Ague-cake*, the popular name for a tumour, consisting of an enlarged spleen, which projects under the false ribs on the left side: it occurs in persons who have suffered from protracted ague. *Ague-drop*. The medicine sold under the name of Fowler's tasteless ague-drop is a solution of arseniate of potash in water (*liquor arsenicalis* of the Pharmacopœia).

AGUE-FREE, a name sometimes applied to sassafras, on account of its supposed febrifuge qualities.

AGUIL'LANEUF, a form of rejoicing among the ancient Franks on the first day of the year; it was derived from the druidical custom of cutting mistletoe, which was held sacred by the druids, who, on the first day of the year, consecrated it,

by crying *aguillaneuf*, "a new year to the misieto" (*a*, to, *gui*, misieto, and *l'an-neuf*, the new year). This cry is said to be still observed in some parts of France, but for the purpose of extracting new-year-gifts.

AOTREAS, from *ayueis*, a collection. An opacity of the crystalline lens of the eye.

AHA, a sunk fence, not visible without near approach.

AHEAD, in *nautical language*, denotes the situation of an object in advance of the ship: opposed to *astern*. The word is composed of *a*, for at, and *head*.

AHICCYATLI, a poisonous serpent of Mexico, somewhat resembling the rattlesnake, but destitute of rattles: its poison is as fatal as that of any known species.

AHRIMAN, } one of the chief deities of
ARIMAN, } the ancient Persians. **Ahriman** was the god of evil, opposed to **Oromasdes**.

AHULL, from Sax. *helan*, to cover. The situation of a ship when all her sails are furled on account of the violence of the wind, and when, having lashed her helm to the lee-side, she lies nearly with her side to the wind and sea, her head being somewhat inclined in the direction of the wind.

AHUITLA, a worm peculiar to the lake of Mexico, about four inches in length, as thick as a goose-quill, and having a hard and poisonous tail containing a sting.

AHUITZOTE, a small amphibious quadruped of tropical America: its body is a foot long, its snout long and sharp, its skin of a dark brown.

Ai, the three-toed sloth (*Acheus tridactylus*, F. Cuvier). "A species in which sluggishness, and all the details of the organisation which produce it, are carried to the highest degree." The animal takes the name *Ai* from its peculiar cry, as it takes the name of *Sloth* from its tardy movements. It is of the size of a cat, and is the only mammiferous animal known which has nine cervical vertebrae.

AID, Fr. *aider*, to help. Assistance. 1. In *English law*, a subsidy granted by parliament, and making a part of the king's revenue. In *France*, aids are equivalent to customs or duties on exports and imports.—2. In *England*, a tax paid by the tenant to his lord; originally a gift: use and want converted it into a right demandable by the lord. The aids of this kind were chiefly three. (1). To ransom the lord when a prisoner. (2). To make the lord's eldest son a knight. (3). To marry the lord's eldest daughter.

AID PIER, a petition made in court, to call in help from another person who has interest in the thing contested. Thus a tenant for life may pray in the aid of him in remainder or reversion, that is, he may pray or petition that he be joined in

the suit to aid or help to maintain the title. The petition is otherwise called *aid prayer*.

AIDS, THE COURT OF, in *France*, is a court which has cognizance of causes respecting duties or customs.

AIDS, in the *manège*, cherishings used to avoid the necessary corrections. The *inner aids* are the inner heel, leg, rein, &c.; the *outer aids* are the outer heel, leg, rein, &c.

AID-DE-CAMP, in *military affairs*, an officer whose duty it is to receive and communicate the orders of a superior officer.—This word is French, *aide-de-camp*, but naturalized, and it would perhaps be well to naturalize its pronunciation also.

AIGUE MARINE, a variety of topaz of a bluish or pale green colour.

AIGUILLE, Fr. for a needle. An instrument used by engineers to pierce a rock for the lodgement of powder, in mining, &c. *Aiguille* is also taken to mean the needle-like points or tops of granite rocks.

AIGUISSE, } in *heraldry*, a cross with its
AIGUISSE, } four ends sharpened into obtuse angles. The term is French, from *aiguiser*, to sharpen. It is sometimes written *eguisé*.

AILURUS, a genus of the plantigrade tribe of mammalia. There is only one species known, the *panda* of the north of India (the *A. refuigens* of Fred. Cuv.): size, that of a large cat; fur, soft and thick; above, of the most brilliant cinnamon red, behind, more fawn-coloured, beneath, deep black; the head is whitish, and the tail marked with brown rings.

AIR, Fr. *air*, Ital. *aira*, Sp. *ayre*, Gr. *arg*, Lat. *aër*, Ir. *aer*. The root is probably אֵר , whence אֵר , which means the vehicle of light. That fluid, transparent, impenetrable, ponderable, compressible, dilatable, perfectly elastic substance, which surrounds the earth, constituting what we otherwise call the atmosphere. Air is one of the four classical elements of antiquity; but modern chemistry shows, that of 1000 parts, 788 are nitrogen, 197 are oxygen, 14 are vapour, and 1 carbonic acid. 100 cubic ins. weigh 31 grains. The term *air*, though now restricted to atmospheric air, was formerly used to designate gases generally. Thus ammonia was called *alkaline air*; nitrogen or azote, *azotic air*; carbonic acid, *fixed air*; fluoric acid, *fluoric air*; carburetted hydrogen, *heavy inflammable air*; sulphuretted hydrogen, *hepatic air*; hydrogen, *inflammable air*; nitrogen, *nitrous air*, *phlogisticated air*, and *nitrous dephlogisticated air*; phosphuretted hydrogen, *phosphoric air*; sulphurous acid, *sulphureous air*; oxygen, *vital air* and *empyreal air*; and even hydrochloric or muriatic acid had the odd cognomen of *marine air*.—

2. In *music*, the term *air* signifies the melody or treble part of a musical composition; also the peculiar modulation of the notes which gives music its character. The common meaning is the leading part of a tune, as distinct from the bass, treble, and counter.—3. In *painting*, as the air is the medium in nature through which every object is viewed, it is to be transferred to the imitation on the canvas, and the effects which it produces, in regulating the sizes and colours of objects, constitute a large part of the artist's knowledge.

AIRA, the *hair-grass*, a genus of the class *triandria*, and order *digynia*. There are eleven species, seven of which are British, and all the order perennials. Named from *aëra*, to *destroy*. This name was anciently given to the bearded darnel (*Lolium temulentum*), on account of its injurious effects; and now to this genus of plants, which it was thought somewhat to resemble.

AIR-BALLOON. See *BALLOON*.

AIR-BLADDER, } the sound or swim of

AIR-BAG, } fishes: an organ situated in the abdomen, by altering the dimensions of which the fish regulates its depth in the water.

AIR-CELLS. 1. Of *plants*: cavities in the stems and leaves intended to render the part buoyant in water.—2. Of *birds*: membranous receptacles which communicate with the lungs. These permeate throughout the whole body.

AIR-GUN, a pneumatic instrument resembling a musket, to discharge bullets by the elastic force of the air compressed into an iron or copper globe by means of a condenser. To produce an effect equal to that of gunpowder, 1000 atmospheres must be forced into the globe, that is, the air must be compressed into one thousandth of the bulk which it occupies at the common pressure of the atmosphere, taken at the earth's surface.

AIR-HOLDER, an instrument for holding air, for the purpose of counteracting the pressure of a decreasing column of mercury.

AIR-JACKET, a jacket made of leather in which are several receptacles for air, communicating with each other, and fitted to receive air by means of a brass tube. This jacket is used by persons who cannot swim, to support them in the water. A jacket, formed of corks strung together, serves equally well.

AIR-LAMP, another name for Doberrenier's lamp.

AIR-PIPE, a pipe used to withdraw vitiated air from the hold of a vessel, &c. by means of communication with the furnace and the place to be cleared of noxious air. Through this pipe only, the fire is supplied with air; and as one end

is placed in the hold, a perpetual current is thus kept up, the foul air being constantly withdrawn from the hold to the fire.

AIR-POISE, an instrument for ascertaining the weight of a given quantity of air.

AIR-PLANTS. See *AERIAL* and *AERIDES*.

AIR-PUMP, a pneumatic machine for exhausting the air of a proper vessel, A,

by means of a pump, B. The figure represents a section of the machine. CD supports the receiver, A, and the pump, B, is fitted air-tight to this sole. There is a communication-tube, *t*, through which the air passes from A on working the pump, just as water is drawn from a well by means of a common pump, from which this does not differ. See *PUMP*.

AIRS. In the *manège*, the artificial motions taught horses, as the demivolt, curvet, capriole.

AIR-SACS, certain receptacles of air in birds, or vesicles lodged in the fleshy parts, in the hollow bones, and in the abdomen: they all communicate with the lungs. These are supposed to be for the purpose of rendering the body specifically lighter, and to supply the place of a muscular diaphragm.

AIR-SHAFT, a passage for air into a mine, usually opened in a perpendicular direction, and meeting the adits or horizontal passages, to cause a free circulation of fresh air through the mine. It may be made to communicate with a furnace above.

AIR-THREAD, a name given to the spiders' webs which are often seen in autumn floating in long filaments in the air: they are attached to branches of trees and shrubs, and serve to support the spider when in search of prey.

AIR-TRAP, an opening for the escape of air from drains, or sewers, or pipes.

AIR-VESSELS, spiral ducts or canals in the leaves and other parts of plants, which are supposed to supply them with air, after the manner of lungs in animals.

AISLE (pron. *île*), Fr. *aîle*, from Lat. *ala*, a wing. When a church is divided in its breadth into three parts, the two extreme outward divisions are called *aisles*, and the centre division the *nave* or *middle aisle*, although the last seems im-

proper, and "side alale" seems a tautology.

ALISOON, a genus of exotics, of which there are several species: three, shrubs of the Cape of Good Hope; one, an annual of the Canary Islands; and another, of Spain. Name *αἰζων*, from *αι*, always, and *ζων*, alive; the old name for the house-leek (*sempervivum*).

ALABARATH, an old name for lead.

ALUGA, the *bugle*. A genus of plants, of ten species and some varieties. Class *didymia*, and order *gymnospermia*. Four of the species are British, inhabiting pastures chiefly: they are hardy perennials. "Name altered from the *abiga* (*abigo*, to drive away) of the Latins, a medicinal plant allied to this."—Hooker.

ALURU-CATINGA, a species of American parrot: colour green, with eyes of fiery red, encircled with white.

ALURU-CURAU, a species of the American parrot: colour lively green, with a blue crown, the throat and sides of the head of a fine yellow.

ALURU-PARA, a small American parrot, of an elegant green: the beak, legs, and circulets of the eyes, white.

ALUTAGE, the same with *Adjutage* (q. v.).

AKEBA, a genus of mollusca, of the order *tectibranchiata*.

AKIS, a genus of coleopterous insects, of the Melasoma family, and Pimeliarise tribe. Named from *ακίς*, a javelin, in reference to their form.

ALA, the wing of a bird, Lat. from *ελεω*, to enclose. 1. In *botany*: (a) The angles which the leaves or their stalks make with the stem or branches of the plant from which they arise are called *alæ* or *axillæ*. (b) The two lateral petals of papilionaceous flowers placed between the *cerillum* and the *carina* are called *alæ*. (c) The borders formed on the stem of a plant by decurrent leaves are called *alæ*. (d) An appendage of some seeds, consisting of a membranous prolongation from the side of the seed. According to the number of these appendages, seeds are distinguished into *monopterygia* (1-winged); *dipterygia* (2-winged); *tripterygia* (3-winged); *tetrapterygia* (4-winged); *polypterygia* (many-winged); and, from their form, *molendinacea* (windmill-winged).—Hooper.—2. In *anatomy*, the lobes of the liver, the lateral cartilages of the nostrils, the cartilaginous parts of the ears, are called *alæ*. The term is also applied in the same sense as *axilla*.

ALABASTER, Lat. from *ἀλάβαστρον*, compounded of *α*, without, and *λαβον*, a handle. See **ALABASTRITES**. This name is applied indifferently to two minerals: *calc-sinter*, which is a carbonate of lime, and *gypsum*, which is sulphate of lime. The

latter is the alabaster of the ancients, used by them, as it is now, for the purposes of sculpture, as for making small statues, ornamental vases, perfume-boxes, bottles, &c.

ALABASTRITES, Lat. from *ἀλάβαστρος*, alabaster-stone: gypsum. Horace calls it *onyx*. Also, among the ancients, a vase without a handle, for holding perfumes; often seen as ornaments on tombstones. Pliny compares them to oblong pearls.

Alabastrites were often made of other materials than alabaster, as lead, gold, coloured glass, terra-cotta, and the common stones of the country.

ALÆ, plural of *ala* (q. v.). In the ancient Roman architecture, the *alæ* were recesses or alcoves for conversation or study, surrounded on three sides by seats: their thresholds were of mosaic work. In *malacology*, a species of shell-fish.

ALA'GAO, the local name of a shrub of the Philippine Islands, used by the natives for making cataplasms for diseases of the belly and head, for tumours, &c.

AL'AGAS-OS, a name of the sacrum and coccyx.

ALA'LIA, from *αλλεω*, speechless. Defect of articulation.

ALA'LITE, a variety of augite, called also *diopside*; so named by Bonvoisin, from his finding a variety of it near the village of *Ala*, in Piedmont.

ALA-MIRE, in music, the lowest note but one in Guido Aretine's scale.

ALAMODE, Fr. *à la mode*, after the fashion. In *commerce*, a thin, glossy silk, for scarfs, &c. It is often called simply *mode*.

ALANOTACEÆ, a natural order of plants closely allied to the myrtaceæ: the typical and only genus is *alangium* (q. v.).

ALANGIUM, a genus of showy Indian trees of two species. Class *polyandria*, and order *monogynia*. Named from *alangi*, the Malabar name of the first known species. The other species is called *angolam* by the natives.

ALA'NIS, Lat. from *ala*. Formed like, or pertaining to, a wing. *Alaris externus*, the external pterygoid muscle, which takes its rise from the wing-like process of the spheroid bone.

ALARM. *Alarm-bell*, a bell rung to give notice of danger, as of fire.—*Alarm-gun*, a gun fired to give notice of an enemy.—*Alarm-post*, a rendezvous appointed in case of defeat, in time of war.—*Alarm-clocks* sometimes have *alarms*, absurdly called *alarums*: they can be so adjusted as to give notice of the hour at any time wanted.

ALARMWATCH, a watch that strikes the hours.

ALASMODON, a genus of shells of the fa-

mily unionidae, having two cardinal and no lateral teeth.

ALASMODONTINÆ, a sub-family of unionidae; the typical genus is the *alasmodon*.

ALATE, Lat. *alatus*, winged: having dilations like wings. Applied: 1. In botany, to stems and leaf-stalks when the edges and angles are longitudinally expanded into leaf-like borders.—2. In conchology, to shells having an expanded lip, or when any portion of them is much expanded.

ALAU'DA, the generic name of the lark: a granivorous bird which builds on the ground, and generally sleeps there. There are several species: the sky-lark (*A. arvensis*), is universally known by its perpendicular mode of soaring, and powerful song; and the crested lark (*A. cristata*), is well known for the power it has of erecting the feathers on the top of the head into a tuft. Name, from *ad*, and *laudo*, to praise. It is classed among the *convivores* by Cuvier, in the order *passerine*.

ALBA, } Lat. *albus*, white. A vestment
ALBE, } worn by priests of the Roman Catholic church. It differs from the surplice in fitting more closely to the body, and being tied with a girdle.

ALBA-FIRMA, anciently a rent paid in silver, and not in coin, which was called *black-mail*.

ALBATROSS, the most massive of all aquatic birds, called sometimes the *great gull*, and *diomedea*, by Lin. The *D. exulans* is the species best known to navigators, who, on account of its size, white plumage, and black wings, and because it is particularly common beyond the tropic of Capricorn, call it the *Cape sheep*. To English sailors, however, it is best known by the name of the *man-of-war-bird*. It is classed in the family of *longipennes*, and order *palmipedes*, by Cuvier. Named from *alcatros* or *alcatross*, by which the early Portuguese navigators designated all oceanic birds.

ALBERTUS, a gold coin of the time of Albertus, archduke of Austria.

ALBICORE, a marine fish, noted for following ships: named from Port. *albacor*, the little pig.

ALBIGENSES, } A party of reformers
ALBIGENOIS, } who separated from the Church of Rome in the 12th century.

They take their name from *Albigensis*, a small territory in France, where they resided. They are sometimes confounded with the *Waldenses*, but they were prior to them in time, and different from them in some of their tenets, and resided in a different part of France. The Catholics made war upon them, and they gradually dwindled till the Reformation, when the remains of them fell in with the followers of Zwinglius and the Genevan Protestants.

ALBINISM, the anomaly of organisation, which distinguishes the *albino*. It is regarded as a disease.

AL'BINO, (from *albus*, white). A white descendant of black parents, or a white person belonging to a black race. The name was originally given by the Portuguese to negroes who were born mottled with white spots, or whose entire skin was white.

The whiteness of the albino is not similar to that of the fair European: it is pallid and death-like, communicating a peculiar and very unpleasant appearance to the individual. The hair is white on every part of the body, the iris is of a pale rose colour, the eye cannot bear a strong light, and vision is very imperfect during the day-time. For this reason, the albinos of Africa sleep during the day and go abroad during night, when they see with great accuracy.

ALBION, an old name of England still used in poetry: supposed to be given on account of its white chalk cliffs, (*albus*, white.)

ALBITE, a name of tetarto-prismatic felspar: a variety of felspar in which the alkali is soda instead of potash. It is sometimes gray, green, or red; but generally white, whence its name from *albus*, white.

ALBORA, a disease of the skin terminating without ulceration, but with fetid evacuations from the mouth and nose: it is described as a complication of morpew, serpigo, and leprosy.

ALBUCA, *bastard star* of Bethlechem. A genus of shrubaceous plants of 15 species, all natives of the Cape of Good Hope. *Hexandria—monogynia*. Name, from *albus*, the daffodil.

ALBUGINEA, Lat. from *albugo*, the white of the eye. The outer coat or tegument of the eye is called *tunica albuginea oculi* by anatomists, on account of its whiteness. It is otherwise called the *conjunctiva*.

ALBUGINEOUS, Lat. *albugineus*, pertaining to, or resembling the white of the eye, or of an egg; e.g. albugineous humour is the aqueous humour of the eye.

ALBU'GO, the white of the eye, from *albus*, white. Technically, a white spot on the corner of the eye, which causes blindness; otherwise called *Leucoma*.

ALBULA, a genus of fishes of the trutta-ceous kind. An Indian species (*A. indica*) is called by the Dutch "wit-fish." Another species (*A. nobilis*) is very plentiful in the German lakes.

ALBUM, (*Latin*). Literally anything white. 1. Among the *Romans*, a white table, board, or register, on which the names of public officers and public transactions were written.—2. The term is

now generally used to designate a book originally blank, kept at places of resort, wherein visitors insert their names. Also a book much in fashion, especially among ladies, wherein friends and visitants are compelled to insert verses, mottos, &c. Some illustrated annual publications, designed for light reading, are likewise so called, in reference to their similarity to the albums of young ladies.

ALBUMEN, the white of egg, (from *albus*, white).—1. *Animal albumen*. This substance is one of the chief constituents of all animal solids. The white of egg is almost pure albumen, being combined only with a little water, soda, and saline matter. It abounds in the serum of the blood, the humours of the eye and the fluid of dropsy. From its coagulability, albumen is much used for clarifying liquids; and as it forms precipitates with the solutions of almost all the metallic salts, it is a ready antidote against some of the metallic poisons.—2. *Vegetable albumen*. This vegetable principle bears a close resemblance to animal albumen, and, like it, is coagulable by heat. It is procured from gluten, of which it is a constituent. It is never deleterious, however poisonous the plant may be which affords it.

ALBUM GRÆCUM, the white excrement of dogs, sometimes used to soften leather in the process of dressing it, after the depilatory action of lime. It principally consists of phosphate of lime.

ALBURN, the small fish otherwise called *bleak*. It belongs to the order of abdominals, and genus *cyprinus*: is deemed delicious food, and artificial pearls are sometimes made of its scales. Named from *albumus*, whitish.

ALBURNUM, Lat. *albus*, white. The soft white substance which, in trees, is found between the inner bark and the wood. In process of time it acquires solidity, and becomes itself wood. It is popularly called *sap-wood*.

ALCA, a genus of birds including the *aik* and *puffin*. These birds inhabit the northern seas: their wings are too small to support them in flying, which they, therefore, do not attempt; but live on the ocean and breed on the rocks. They belong to the brachypterous family of palmipeds. Twelve species are enumerated. The name *alca* is latinised from *aik* or *auk*, the name of these birds in the Feroe Islands and the north of Scotland.

ALCABA'LA, } a tax formerly imposed in
ALCAVA'LA, } Spain and her colonies, consisting originally of 10, and subsequently of 14 per cent., *ad valorem*, on all property sold as often as it changed hands.

ALCAIC, in *ancient poetry*, a term applied to several kinds of verse, from *Alcaeus*,

their inventor. The following are specimens:

1. Eheu! | fuga | ces, | Postume, | Postume,
Labun | turan | ni! | nec pie | tas moram.
2. Afferet | indom | teque | morti.
3. Cur timet fla | vum Tiberim | tangers,
car | olivum?

ALCAID, } in the polity of Spain and
ALCALDE, } Portugal, a magistrate answering nearly to our justice of the peace: the Moors have an officer of the same name, but he is invested with supreme jurisdiction both in civil and criminal cases. The title is written in Spain *alcayde*; in Portugal *alcaide*; the common root of which is *Ar. kaidon*, governor, with the prefix *al*, the; hence also the *cadi* of the Turks.

ALCALIMETER, a graduated glass to be employed in determining the quantity of alkali in the potash and soda of commerce.

ALCAMPHORA, a Brazilian herb, the *croton perdicipes* of botanists. The leaves are used in decoction against syphilis, and as a diuretic.

ALCANNA, the Arabic name of three plants. (1.) The *Lansonia inermis*. (2.) A species of *filaria*. (3.) The *anchusa tinctoria*. It is also the name of a powder prepared from the Egyptian privet, used by the Turkish females to give a golden colour to the nails and hair.—Infused in water it gives a yellow, in vinegar a red, colour.

ALCANTARA, the name of a town in Spain, from which the military order of the knights of Alcantara took its name, otherwise called the knights of the pear-tree.

ALCARAZAS, a species of porous earthen ware, made in Spain, for cooling liquids by promoting evaporation of the transuded water upon the external surface.

ALCAVALA, in Spain, a tax on the transfer of every kind of property, real or personal. To this tax, which has been as high as 14 per cent., and which is levied on the same property at every transfer, is perhaps to be traced the real cause of the ruin of Spanish manufacturers.

ALCE, the elk. Name from *ἀλκῆ*, strength.

ALCEA, the hollyhock: a genus of plants. Class *monodelphia*, order *polyandria*. Name *ἀλκία*, given by Pliny to a species of mallow.

ALCEDO, the king-fisher: a genus of *tenuirostres* of the order *passerina*. There are numerous species of this genus, with one or other of which almost every part of the world is furnished. They frequent rivers, feed on fish, which they capture by precipitating themselves into the water, and nestle in holes on the

banks. Blue is the predominating colour; the wings and tail are short, the beak long, straight, angular, and pointed.

The bird known to the ancients by this name, is described as little bigger than a sparrow; feathers purple, mixed with white, neck long and slender, bill green, and proportioned in length to the neck. During her incubation, which was in the sands of the sea-shore, the sea remained perfectly calm: these days, forty in number, were thence called *Alcyonidæ*, or *Halcyones dies*, that is "halcyon days." See HALCYON.

ALCHEMIL'LA, the generic name of *ladies'-mantle*, of which there are seven species, and three of these British. Class *tetrandria*, order *monogynia*. Named from Arabic, *alkemelyeh*, on account of its supposed alchemical virtues.

ALCHEMY, a pseudo-science, which had for its object the transmutation of the baser metals into gold and silver—the discovery of an alkahest or universal menstruum—a panacea or universal remedy—a universal ferment, and many other things equally ridiculous. It was much cultivated in Europe during the 16th and 17th centuries, and, notwithstanding the chimerical nature of its objects, we are indebted to its followers for many important discoveries in chemistry and medicine. The earliest notice that we find of alchemy, is in an edict of the Roman emperor Diocletian, commanding all books which treat of the art of making gold and silver to be burned. The term is composed of the Arabic *al*, the, and *kāmya*, secret, from *kamay*, to hide.

ALCIOPA, a genus of articulatæ, of the order *dorsibranchiata*, of Cuvier.

ALCMANIAN, pertaining to Alcman, a lyric poet of the 27th Olympiad, celebrated for his amorous verses.—*Alcmanian verse* consists of two dactyls and two trochees.

AL'CO, an American quadruped nearly resembling the dog, but mute and melancholy. This circumstance has given rise to the fable, that dogs transported to America become mute. The animal was used as food by the native tribes and the first Spanish settlers, but it is said now to be extinct. It is known also by the name of *zechichi*.

ALCOATES, } definite compounds of
ALCOOLATES, } alcohol and various
saline substances: discovered by Professor Graham. The alcohol seems simply to replace the water of crystallization.

AL'COHOL, a word compounded of Arabic, *al*, the, and *kāhol*, a paint for the eyebrows. Sulphuret of antimony reduced to a very fine powder is used for this purpose by eastern ladies, and is called *al kāhol*; alcohol came ultimately to signify anything raised to the highest degree of

fineness and purity, and (in Europe) now designates the purely spirituous part of liquors which have undergone the vinous fermentation. It is light, transparent, colourless, of a sharp, penetrating smell, and a warm stimulating taste. It cannot be frozen by any known degree of cold, and boils at 174° Fah., sp. gr. '792, but the strongest spirit obtained by mere distillation is '820; and alcohol can rarely be had from the shops less than '835. Its constituents are 2 atoms of carbon, 3 of hydrogen, and 1 of oxygen. When distilled with sulphuric acid, ether is produced. Alcohol burns with a pale flame, producing carbonic acid and water. It gives no smoke.

ALCOHOLIZ'ATION. 1. Conversion into alcohol. 2. Rectification of spirit till wholly dephlegmated. 3. Reduction of a substance to an impalpable powder.

ALCOHOL'OMETER, } an instrument for
ALCOHOL'IMETER, } ascertaining the amount of absolute alcohol in a given quantity of alcoholic fluid. Sike's hydrometer is generally used in England for this purpose.

AL'COR, a small star adjoining to the large bright one in the middle of the tail of *ursa major*. The word is Arabic.

AL'CORAN, see ALKORAN.

ALCO'VE, a part of a room, separated by an estrade or partition of columns, or by other corresponding ornaments, in which is placed a bed of state, and sometimes seats for company. The use of alcoves, as well as the word, which we have altered from *alcoba*, seems to have been derived from the Spanish builders, and by them from their Arabian conquerors. They have fallen into disuse.

The Sp. word is from Ar. *al kubbeh*, a place for the bed, the root of which is *khaub*, sleep.

AL'CYON, a trivial name of the kingfisher. See ALCEDO.

ALCYONITES, spongiform flint fossils, common in the chalk formation.

ALCYONITUM, a genus of polypi, placed in the family *corticati*, by Cuvier. The animal grows in the form of a plant: the stem or root is fixed, fleshy, gelatinous, spongy, or coriaceous, with a cellular epidermis penetrated with stellated pores, and shooting out tentaculated oviparous hydræ. The best known species is that popularly called "Dead Man's Hand," *A. digitatum*, Lin.

ALDEBA'KAN, a star of the first magnitude in the constellation Taurus, called also the Bull's eye. Term, from Ar. *al*, the, and *débrân*, a leader.

ALDEHYDE, a newly-discovered, colourless, inflammable liquid, having a peculiar ethereal smell; sp. gr. '79; boils at 71° Fah. It is named from the first syllables of *alcohol* and *dehydrogenatus*, and may

be prepared by distillation from 1 part of water, 1 part of alcohol, $1\frac{1}{2}$ binoxide of manganese, and $1\frac{1}{2}$ of aqueous sulphuric acid. Symbol. OC^2H^2 .

ALDEHYDIC acid is prepared from aldehyde, and is composed of oxygen, hydrogen, and carbon.

AL'DER, a tree which usually grows in moist or boggy places: it is the *Betula alnus* of the botanist, and is a native of Europe, from Lapland to Gibraltar; and of Asia, from the White Sea to Mount Caucasus.

ALDERMAN, from Sax. *alb*, old, *aldept*, older, and man. 1. Among our *Saxon ancestors*, the second order of nobility: it answered to our title of *earl*, it was inferior to *atheling*, but superior to *thane*. The title was also used in the time of Edgar for a justice or judge.—2. In *present usage*, a magistrate or officer of a town corporate, next in rank below the mayor. In London there are 26 aldermen, each having one of the wards of the city committed to his care. The office is for life. They are, by their office, justices of the peace, and, with the mayor, constitute the court of corporation. In other boroughs, the aldermen are, by 5 & 6 W. 4, c. 76, to be in number one-third of the councillors, one part to be elected triennially from among the councillors.

ALDINE EDITIONS, in *bibliography*, those editions of the Greek and Roman classics which proceeded from the press of the family of Aldus Manutius, first established at Venice, not long after the year 1490. The impress is an anchor and dolphin engraved on the last page.

ALE, a fermented liquor made from malt and hops, and chiefly distinguished from beer, made of the same ingredients, by a smaller quantity of hops being used in its preparation, which renders it less bitter, and less fitted to keep than beer. The word is altered from Sax. *eale*. See BEER.

ALFATO'RIMUM, in the old Roman architecture, an apartment appropriated to the use of players with dice (*alea*).

ALE-CONNER, an officer in London, whose business it is to inspect the measures used in ale-houses, &c. The situation is now a sinecure. Conner, from Sax. *con*, to see, examine.

ALECTOR, the generic name of the *Hoccos*. "The *hoccos* are large gallinaceæ of America, which resemble turkeys, with a brown, round tail, formed of large stiff quills. They live in woods, feed on buds and fruits, build on trees, and are very social and easily domesticated." Name, *αλεκτωρ*, the cock, for what reason uncertain.

ALECTO'RIA, the *alectorius lapis* or cockstone (*αλεκτωρ*, a cock): a peculiar stone,

said to be got in the stomach of the cock, and fabled to possess great medicinal virtues.

ALECTORIDES, a tribe of gallinaceous birds, including the curassow, and analogous species. Typical genus *Alector* (q.v.).

ALEE. In nautical language, when the helm is moved over to the lee-side, it is said to be *ales* or *hard ale*.

ALEHOOF, a name of a species of ground-ivy; the *Glechoma hederacea* of Lin. The leaves are used in clarifying ale. The name is Dutch, *eiloof*.

ALEMBIC, from Ar. *al*, the, and *umbeq*, a kind of cup. A chemical vessel used in distilling, called also a *Moorshead*. It is made of glass, metal, or earthenware; consists of a bottom part, called the *cucurbit* or boiler, to which is adapted a head, called the *capital*. The head is of a conical figure, and has its external circumference or base depressed lower than its neck, so that the vapours which rise, and are condensed against its sides, run down into the circular channel formed by the depressed part, from whence they are conveyed by a tube into a receiver.

ALEM'BROTH, salt of wisdom. The alchemists gave this name to a preparation made by dissolving equal parts of corrosive sublimate and sal ammoniac in distilled water, and adding carbonate of soda as long as any precipitate was formed. This precipitate is the *sal alembroth*: a hydrochlorate of mercury and ammonia, and the same with the *hydrargyrum præcipitatum album*, or white precipitate of mercury of the present London pharmacopœia. The word is Arabic, and signifies the *key of art*.

ALEPIDOTE, any fish whose skin is not covered with scales (*αλις*, without scales).

ALE-SILVER, a duty paid to the Lord Mayor of London by sellers of ale within the city.

ALE-TASTER, an officer appointed in every court-leet, and sworn to inspect ale, beer, and bread; and examine the quality and quantity within the precincts of the lordship.

ALETRIS, a genus of exotic perennials, of eight species, belonging to the class *hexandria*, and order *monogynia*.

ALEVRITES, the generic name of a South Sea shrub, which belongs to the class *monœcia*, and order *monodelphia*. Name, from *αλευρον*, flour.

ALEXANDRIAN SCHOOL, an academy of learning of all kinds, founded at Alexandria, by Ptolemy, son of Lagos, and supported by his successors. The grammarians and mathematicians of this school were particularly celebrated. Among the first may be mentioned Aristarchus and Aristophanes; and among the latter Ptolemy and Euclid.

ALEXAN'DRINA, the bay-tree or laurel of Alexandria: is so called from the place of its growth.

ALEXAN'DRINE, } An epithet applied to

ALEXAN'DRIAN, } a kind of verse, consisting of 12 and 13 syllables alternately; so called from a poem, in French, on the life of Alexander the Great. The French tragedies are generally composed of Alexandrines.

ALEXIPHAR'MIC, from *αλιζα*, to expel, and *φαρμακον*, poison. Antidotal: that has the power of expelling poison or infection by fortifying the system against it.

ALGA, a sea-weed. *Algæ* (plural of *alga*) is the name of one of the seven families, or natural tribes, into which the whole vegetable kingdom is divided by Linnaeus, who defines them as plants, the roots, leaves, and stems of which are all in one. Under this description are comprehended all the *sea-weeds* (plants which grow in salt-water), and such fresh-water plants (*CONFERVÆ*) as vegetate exclusively under water. The *algæ* form the third order, the class *cryptogamia*.

ALGAROBÆ, the name of a tree found in the southern parts of Europe and in some parts of Asia, especially Palestine. Its pods are filled with a sweetish powder, which is supposed to have been the locusts on which St. John fed in the wilderness. Name, from Arabic, *al*, the, and *garoba*, a bean-tree.

AL'GAROTH. When chloride of antimony (butter of antimony) is poured into water, the metallic oxide is precipitated in the form of a white powder, which is *powder of Algaroth*: it is, therefore, a subchloride of antimony. It acts as a violent emetic, and takes its name from Victor Algarotti, a physician of Verona.

ALGEBRA, the science of quantity in general or universal arithmetic: it treats of the method of representing magnitudes and their relations to one another in general terms, by means of symbols and signs respectively; and by such method of representation, it comprises all particular cases of quantities, and their connection with each other, in general language, dependent upon the nature of the questions in which they are involved. The symbols employed are the letters of the alphabet, and the signs are, + for addition; —, for subtraction; =, for equality, and >, for inequality; X, is sometimes used for multiplication; and \div , for division: but the use of these signs is generally evaded by more concise modes of denoting the operations for which they stand.

"Algebra is the European corruption of an Arabic phrase, which may be thus written—*al jebre al makabalah*, meaning *restoration and reduction*. The

earliest work on the subject is that of Diophantus, a Greek of Alexandria, who lived between A.D. 100 and A.D. 400, but when cannot be well settled, nor whether he invented the science himself or borrowed it from some eastern work. It was brought among the Mahometans by Mohammed ben Musa (Mahomet, the son of Moses), between A.D. 800 and A.D. 850; and was certainly derived by him from the Hindoos. The earliest work which has been found among the latter nation, is called the *Vija Genita*, written in the Sanscrit language, about A.D. 1150. It was introduced into Italy, from the Arabic work of Mohammed, just mentioned, about the beginning of the 13th century, by Leonardo Ronacchi, called Leonard of Pisa; and into England by a physician, named Robert Recorde, in a book called the *Whetstone of Witte*, published in the reign of Queen Mary, in 1557."—*Augustus De Morgan*.

ALGEBRA'IC, } Pertaining to algebra;

ALGEBRA'ICAL, } containing an operation of algebra, or deduced from such an operation. Thus an algebraic curve is one of which the relation between the abscissa and ordinates is expressed by an equation which contains only algebraic quantities: in contradistinction to a *transcendental curve*, in which the relation is expressed in infinite series. See also EQUATION and QUANTITY.

AL'GENEB, a star of the second magnitude, on the right shoulder of Perseus.

AL'GOL, a star of the third magnitude, called Medusa's head, in Perseus.

AL'GORAB, a star of the third magnitude on the right wing of Corvus.

AL'GUAZIL, an officer in Spain, corresponding to the bailiff in England.

ALHA'GEE, a tribe of plants in the natural system; type *alhagi*.

ALHA'GI, the prickly hedysarum; a shrub of the Levant. Name altered from the Arabic name *Aigul* or *Aghul*.

ALIAS the Latin word for *otherwise*: a term used in judicial proceedings to connect the different names by which a person is called, who has assumed fictitious ones.—*Alias* is also the name of a second writ, issued when the first has failed to enforce the judgment, as an *alias capias*, &c.

ALIBI, the Latin word for *elsewhere*; a law term used where a person charged with an offence, pleads that he could not have committed it, because he was at the time *elsewhere*. The part of a plea which avers the party to have been elsewhere, is also called an *alibi*.

ALICO'NEDA, a large tree found in Congo, from the bark of which a kind of flax is manufactured.

AL'TADAZ, an Arabic name for the index

which moves about the centre of an astrolabe or quadrant, carrying the sights of the telescope, and showing the number of degrees and minutes of altitude on the quadrated limb of the instrument.

A'LIEN, from Lat. *alius*, another. In law, a foreigner: one not within the allegiance of the sovereign; opposed to denizen.

In France, a child born of residents who are not citizens is an *alien*. In Britain, the children of aliens born in that country are natural-born subjects; and the children of British-born subjects, owing allegiance to the crown of England, though born in other countries, are naturalised subjects, and entitled to the privileges of resident citizens.

ALIENA'TE, Lat. *alienatus*. Applied to leaves of plants, when the first leaves give way to others totally different from them.

ALIENA'TION, in law, denotes the act of making over a man's property in lands, tenements, &c. to another person.

To *alien* or *alienate* in fee, is to sell or convey the fee-simple of lands, &c.

ALIEN-DUTY, a tax upon goods imported by aliens, beyond the duty upon like goods imported by citizens; a discriminating duty on the tonnage of ships belonging to aliens; or any extra duties imposed by law on aliens.

ALIENATION-OFFICE, an office to which all writs of covenant and entry, on which fines are levied and recoveries suffered, are carried, to have fines for alienation set and paid thereon.

ALIMENT, from Lat. *alimentum*, nourishment. In Scotch law, the natural obligation of parents to provide for children, is termed the *obligation of aliment*.

ALIMENTARY-CANAL, } a name given to

ALIMENTARY-DUCT, } the whole conduit through which the food passes from the mouth to the anus. The presence of this duct may be said to form the true characteristic of the animal. The thoracic duct is sometimes so called.

ALIMENTARY-LAW, among the Romans, a law that obliged children to support their parents, when they were unable to provide for their own sustenance.

ALIMONY, Lat. *alimonia*, from *alo*, to feed. An allowance made to a woman legally separated from her husband, when she is neither charged with elopement nor adultery. The sum is fixed by the proper judge, and granted out of the husband's estate.

ALIPED, wing-footed, from *ala*, a wing, and *pes*, a foot. Substantively, an animal whose toes are connected by a membrane, and which serve for wings, e.g. the bat is an aliped.

ALIQUNT, from Lat. *aliquantum*, a little. In arithmetic, an aliquant number

is one which does not measure another exactly, e.g. 6 is an aliquant part of 20, for 6 does not divide 20 without leaving a remainder.

ALIQUOT, from Lat. *aliquoties*, sometimes. In arithmetic, an aliquot part of a number is one which measures it a certain number of times; e.g. 7 measures 21, and is therefore called an aliquot part of 21. See MEASURE.

ALIS'MA, the water-plantain; a genus of plants of the class hexandrio, and order polygynia. There are five British species, all hardy perennials, inhabiting the margins of lakes, rivers, ditches, &c., whence the name, from Celtic *alis*, water.

ALISMA'CEÆ, an order of aquatic plants in the natural system; typical genus *alisma*.

ALI-TRUNC, } in entomology, the posterior segment of the thorax to which the abdomen of the insect is affixed, and which carries the legs, properly so called, and the wings.

ALIZA'RINE, a substance extracted from madder, and believed by some to be the dyeing principle of the root. It is, however, to be observed, that the richer madders of Avignon afford little or no alizarine; and that the *purpurine*, from which the alizarine is immediately procured, is a richer dye than the *pure* substance itself. The term is derived from *ali-zari*, the commercial name of madder in the Levant.

ALKAHEST, a term used by Paracelsus to signify a liquid capable of removing every kind of obstruction; and by Van Helmont, to designate a universal solvent, capable of reducing every substance in nature to a state of purity. The preparation of this wonderful fluid was one of the chief objects of alchemy. Query.—If it dissolves all substances, in what vessels could it be contained?

The term is usually derived from the Arabic, but others maintain that Paracelsus compounded it of the German words *all* and *geist*, spirit; others, again, assert, that it is nothing more than a corruption of *alkali est*, so that the etymology appears as difficult as the preparation of the wonderful fluid of which it is the name.

ALKALI, } from Arabic *kali*, with the ALCALI, } common prefix *al*, the plant called glasswort (from its use in the manufacture of glass), or rather the salt obtained from the ashes of the plant. A general name in chemistry for all bodies which combine with acid, so as to neutralise or impair the activity of the latter, and produce certain saline substances, differing in their properties from either. The name was formerly confined to the three substances *potash*, *soda*, and *ammonia*, but it is now extended to na-

merous other substances, and these are become the representatives of three classes of alkalies, the *vegetable*, *mineral*, and *animal*. The first two are called *fixed alkalies*, and the third is called *volatile alkali*. They have these properties in common: they change the vegetable purples and blues to green, the reds to purple, and the yellows to brown, both before and after being saturated with carbonic acid; they are powerful solvents of animal matter, with which, as with fat of oil, they combine, and form soap.

AL'KALIMETER, an instrument for ascertaining the amount of absolute alkali in commercial potash and soda by the quantity of acid of a known strength which a given weight of it will neutralise.

AL'KALOID, from alkali, and *ἄλδος*, like. A substance possessing some of the properties of an alkali. The name is applied to a large class of vegetable substances possessed of alkaline properties, and which are more commonly designated *vegetable alkalies*. These generally consist of carbon, oxygen, hydrogen, and nitrogen, and possess great medicinal activity.

AL'KANET, the plant bugloss (*Anchusa tinctoria*), the root of which yields a fine red colour to alcohol, oil, wax, and all unctuous substances. The colouring matter is confined to the bark: it is named by chemists *alcannine* or *anchusic acid*. The name is altered from *alkenna* (q. v.).

ALKEKEN'GI, the Arabic name of the winter cherry (*Physalis alkekengi*). The berry is medicinal.

ALKEN'NA, the Egyptian *privet*, (a species of *Lawsonia*), the pulverised leaves of which are much used in eastern countries for staining the nails of the fingers yellow. The powder being wetted forms a paste which, bound on the nails for a night, gives colour enough to last for several weeks. The name is Arabic, *al*, the, and *kénny*, a dye.

ALKER'MES, an Arabic name of a celebrated remedy in the form of a confection, of which *kermes* (q. v.) forms the basis.

ALKOO'HL, ALEKO'L, a preparation of antimony (black sulphuret), used by oriental ladies to tinge their eyelids, eyelashes, and eyebrows of a black colour.

AL'KORAN, (from *Ar. al*, the, and *koran*, book, that is, *the book*, by way of eminence, as we say *the bible*). The book which contains the Mohammedan doctrines of faith and practice. It was written by Mohammed in the dialect of the Koreish, which is the purest Arabic; but the languages of Arabia have suffered such changes since it was written, that the book is no longer intelligible to the Arabians themselves, without being studied like any other book written in a dead language.

The great doctrine of the koran is the unity of God; that there never was, and never can be more than one orthodox religion; that the ceremonies of worship are only temporary, and may be altered by divine direction, yet the substance being eternal truth continues immutable; and that whenever religion became corrupted in essentials God in his goodness re-informed mankind by his several prophets, of whom Moses and Jesus Christ were the most distinguished, till Mohammed, who is their seal, and no other is to be expected after him.

ALKORANIST, one who adheres strictly to the letter of the koran, rejecting all comments. The Persians are alkoranists. The Arabs, Turks, and Tartars admit many traditions.

ALL, the whole. *All in the wind* is a phrase which expresses the state of a ship's sails when they are parallel to the direction of the wind.—*All hands ahoy!* the phrase by which a ship's company are summoned on deck.

ALLAGITE, a mineral of a brown or green colour; massive, semi-opaque, fracture conchoidal; it is a carbo-silicate of manganese.

ALLAH, the Arabic name of God, compounded of the particle *al* and *lah*, adorable, i. e. the Adorable.

ALLA BREVE, *Italian*, according to the breve. In *music*, the name of a movement whose bars consist of the note called a breve. It is denoted at the beginning of a staff by a C with a vertical line through it.

ALLAMAN'DA, the generic name of a shrub of Guiana, the leaves of which are used at Surinam as a specific for colic. *Pentandria—Monogynia*.

ALLA CAFELLA, *Italian*, literally, according to the chapel. In *music*, the same as *Alla breve* (q. v.), this time being principally employed in movements used in the church or chapel.

AL'LANITE, a mineral named in honour of Mr. Thomas Allan of Edinburgh. It is a siliceous oxide of cerium, and is found in Greenland.

ALLANTO'IC, pertaining to the *allantois*. The *allantoic acid* is obtained from the fluid of the allantois. The same acid was formerly called the *amniotic acid*, being supposed to exist in the *liquor amnii* of the cow.

ALLANTO'ID. The allantois is also called the *allantoid membrane*.

ALLANTO'IS, from *ἄλλα*, a sausage, and *ἴδος*, likeness. A thin membrane which exists in most of the *mammalia*, situated between the chorion and amnion, and communicating with the bladder of the canal called the *urachus*: it contains the urine of the fœtus.

ALLANTOX'ICON, from *ἄλλας*, a sausage,

and *ταξις*, poison. A poison developed in putrid sausages made of blood and liver.

ALLEGATION, in *ecclesiastical courts*, a formal complaint or declaration of charges. In *law*, the production of instruments or deeds to justify something.

ALLEGIANCE, the duty or fidelity of a subject to his sovereign or government.—The *oath of allegiance* is that taken in acknowledgment of the temporal authority of the sovereign, as the *oath of supremacy* acknowledges the sovereign to be the supreme head of the church. The term is old Fr. from Lat. *alligo*, of *ad* and *ligo*, to bind.

ALLEGORY, from *αλληγορία*, of *αλλος*, other, and *αγορεύω*, to speak. A figurative sentence or discourse, wherein something else is signified than the words in their literal meaning express. The principal subject is thus kept out of view, and is described by another subject, which is represented as to bear some resemblance to it in properties and circumstances. The reader or hearer is thus left to collect the meaning from the resemblance which he can find between the secondary and the primary subject.

ALLEGRETTO, in *music*, denotes a movement of time quicker than *andante*, but not so quick as *allegro*. See **ALLEGRO**.

ALLEGRISSIMO, in *music*, means very lively. See **ALLEGRO**.

ALLEGRO, Ital. from *leggiero*, to be merry. In *music*, a word denoting a brisk movement; a sprightly part or strain. There are two other degrees of the same: *allegro-simo*, very lively; *allegretto*, or *poco allegro*, a little lively. The word *più*, more, is sometimes prefixed to strengthen the meaning.

ALLELUIAH (in Heb. *הלל לה'*, praise to Jah). Praise to Jehovah: a word used to denote pious joy and exultation, chiefly in hymns and anthems. The Greeks retained the word in their *Ελελις*, *Iη*, praise to Io; probably a corruption of *Jah*. The Romans retained the latter word in their *Io triumphe*.

ALLELUIAH, a name given to wood sorrel (*oxalis acetosa*). It was so called, because the alleluiah was sung in the church at the time when its leaves first appeared above ground.

AL'LEMAND (French). In *music*, a slow air in common time, or grave, solemn music with a slow movement. Also the name of a brisk dance common in Germany and Switzerland.

ALLERION, in *heraldry*, an eagle without beak or feet, with expanded wings, denoting imperialists vanquished and disarmed. The word is also written *alerion*.

ALL-FOURS, a game at cards played by two or four persons; so called from pos-

session of the four honours by one person, who is then said to have *all fours*.

ALL-HALLOWs, all-saints'-day: the first day of November, dedicated to all the saints in general.

ALL-HEAL, a popular name of several plants; e.g. a species of hedge nettle (*stachys palustris*), is called "clown's all-heal;" and a species of St. John's wort (*hypericum androsaemum*), has the name of all-heal, besides several others.

ALLIA'CEOUS, pertaining to garlic (*allium*): having the properties of garlic.

ALLIANCE. 1. In *civil* and *canon law*, the relation contracted between two persons or two families by marriage.—2. In *politics* and *international law*, a treaty entered into by sovereigns or states, for their mutual safety and defence, or for the purpose of attacking some other state, or for both; sometimes also the instrument of confederacy.—The term is Fr. *alliance*, the root of which is *lier*, to unite.

ALLIGATION, Lat. *alligatio*, of *ad* and *ligo*, to bind. A rule in arithmetic to find the value of compounds, consisting of ingredients of different values. It is divided into two kinds. 1. *Alligation medial* is when the price and quantities of several simples, which are to be mixed, are given to find the mean price of the mixture.—2. *Alligation alternate* is when the prices of several things are given to find the quantities which must be taken of them to make a mixture of a given mean price.

AL'IGATOR, a species or rather subgenus of the crocodile family of reptiles; to which belongs the *crocodilus lucius* of Cuvier. The animal belongs to the lizard order (*sauria*, Cuv.), has a long naked body, four feet, five toes on each fore foot, and four on each hind one, armed with claws, and a serrated tail. The mouth is very large and furnished with sharp teeth; the skin is brown, tough, and on the sides covered with tubercles. The larger of these animals grow to the length of 17 or 18 feet; they live in and about the rivers of the southern parts of North America; eat fish, catch hogs on the shore, or dogs when swimming. In winter they burrow in the mud, and remain torpid till spring. Name altered from *allagarto*, from Sp. and Port. *lagarto*, a lizard.

ALLIGATOR-PEAR, a West Indian fruit, resembling a pear in shape. It is the fruit of the *Laurus Persea* of Linnaeus.

ALLIN'EMENT, from Fr. *alignement*, a squaring, a row, from *ligne*, a line.

ALLIOTH, a star in the tail of the Great Bear (*ursa major*), much employed in finding the latitude at sea.

The Arabs gave the name of *Al'ioth* or *Alliuth*, meaning "the horse," to each of the three stars in the tail of the Great Bear, on account of their appear-

ing like three horses, ranged for drawing the waggon represented by the four stars called Charles' Wain.

AL'LIVM, garlic; a genus of plants of the class *hexandria*, and order *monogynia*. There are upwards of 60 species, almost all of which are hardy perennials. Eight species are British. The *A. porrum*, or leek, and the *A. cepa*, or onion, are perhaps among the most useful of the species; and the *A. Canadense*, or Canada onion-tree, which bears excellent eatable onions on the top of the stalk, is perhaps the most remarkable. Name latinized from Celtic *all*, acid.

ALLOCA'TION, from Lat. *ad* and *loco*, to place. The admission of an article of an account, or the allowance of an account, in the English Exchequer. The certificate of allowance of cost of taxation, granted by the master or other officer of court, is in practice termed an *allocatur*. The writ *de allocatione faciendi* is directed to the Lord Treasurer or Barons of the Exchequer, commanding them to allow an accountant such sums as he shall lawfully expend in the execution of his office.

ALLOCHROITE, a variety of the dodecahedral garnet. It is found massive, of a green, brown, gray, or yellowish colour; lustre, glimmering. Name, from *alles*, other, and *χρῶμα*, colour, expressive of the changes of colour it undergoes before the blow-pipe, by the action of which it is finally converted into a fine black enamel.

ALLODIAL, pertaining to *alloáium* (q. v.), and opposed to *feudal*.

ALLODIUM, freehold estate: land which is the absolute property of the owner: real estate held in absolute independence, without being subject to any rent, service, or acknowledgment to a superior: opposed to *feud*. In England there is no allodial land, all land being held of the sovereign: in the United States of America, most lands are allodial. The word is probably latinized from Celtic *allod*, that is, *all*, complete, and *od*, possession.

ALLONGE, from Fr. *allonger*, to lengthen, to thrust.—1. A pass with a sword made by stepping forward and extending the arm.—2. A long rein when a horse is trotting in hand.

ALLO'PATHY, Lat. *allopathia* of *alles*, other, and *παθος*, disorder. The effect of a medicine which cures a diseased action by inducing another: opposed to *homœopathy*.

ALLOPHANE, a mineral of a blue, green, or brown colour; occurs massive, or in imitative shapes. It is hard and brittle, and gelatinizes in acids. Name, from *alles*, other, and *φαινω*, to appear.

ALLOTMENT OF LANDS. Any piece of land set apart for a special purpose is called an

allotment. Thus, when a cottage has more land than suffices for a garden, it is commonly called a cottage allotment.

ALLOTROPHIAGY, from *αλλοτροφος*, extraneous (things), and *φάγω*, I eat. A desire to eat what is improper for food, depraved appetite: symptomatic of disease.

ALLOWANCES. In selling goods, or in paying duties upon them, certain deductions are made from their weights, depending on the nature of the packages in which they are inclosed, and which are regulated in most instances by the custom of merchants, and the rules laid down by public offices. These deductions are termed *allowances*; and are further distinguished by the epithets *Draft*, *Tare*, *Tret*, and *Cloff*, which see in their places.

ALLOY, from Fr. *alloyer*, to mix one metal with another, perhaps from *à la loi*, the proportions being regulated by law; but more probably from *allier*, to unite. To alloy is to mix one metal with another by fusing them together: the compound formed is called an *alloy*. Formerly the term was restricted to compounds formed of gold and silver, with other metals of inferior value, but it is now extended to any compound of any two or more metals whatever, except when one of the constituents is mercury: the term *amalgam* is then used to denote the compound. Brass, bronze, and type metal are familiar instances of alloys. When a metal of inferior value is used to deteriorate another metal, as gold, the inferior metal is sometimes distinguished as the *alloy*. Thus, when gold is alloyed with copper, the copper is called the *alloy*, although strictly the term is referable to the compound. Thus our gold coin is an alloy, consisting of 11 parts pure gold and one part copper; and our silver coin is likewise an alloy, consisting of 11·1 silver and 0·9 copper. The silver alloy used for plate is the same as that used for coin, and the purity is guaranteed by the assay stamp of the Goldsmiths' Company. To produce an alloy of two metals, they must be fused together. *Alloy* is sometimes written *allay*.

ALL-SAINTS, the first day of November, called also *All-hallows*.

ALL-SOULS, the second day of November, which is set apart by the Romish church, to supplicate for the souls of the faithful deceased.

ALLSPICE, a popular name of the *Myrtus pimenta*, or more particularly the dried berry of that tree, which has a spicy, pungent, but agreeable aromatic taste. It is a native of Jamaica, and is thence called Jamaica pepper: similarly, the *Chimonanthus fragrans* of Japan is called the Japan allspice.

ALLUM'ED, Fr. *allumée*, lighted. In *he*

valdry, applied to the eyes of beasts, when they are drawn sparkling and red.

ALLUVIAL, composed of alluvion.

ALLUVION, } Lat. *alluvio*, of *ad* and *luo*,
ALLUVIUM, } to wash. Detritus, consisting of earth, sand, gravel, stones, or other transported matter, which has been washed away and deposited by water upon land, not permanently submerged beneath the waters of lakes and seas. Alluvion is distinguished by geologists into ancient and modern: the first is characterised by the fossil remains of large extinct mammalia and carnivora; and the second, by the remains of man and contemporaneous animals and plants.

ALMA. 1. An alchemical name for water.—2. In *Egyptian customs*. See ALME.

ALMADIC. 1. A bark canoe used on some parts of the coast of Africa.—2. A long boat used at Calicut, in India, 80 feet in length, and 6 or 7 broad; called also *cathuri*.

ALMAGES'T, the name of a celebrated book drawn up by Ptolemy; being a collection of the problems of the ancients relative to geometry and astrology. Its original Greek title was *Συναγωγὴ Μεγίστη* (the *Great Computation*). The Arabians translated it in the ninth century, and prefixed their article *al*, the, to the word *Μεγίστη*, which, when the work was retranslated into Latin, was corrupted into *Almagestum*; whence English *Almagest*. The best modern edition is that published at Paris in 1813-15, in 2 vols., 4to. It contains the Greek and a French translation, by M. Halma.

ALMA MATER, fostering mother. The name sometimes given to a university by those who have taken their degrees in it.

AL'MANAC, } A small book containing

AL'MANACK, } a calendar of days and months; the rising and setting of the sun; the age, changes, &c., of the moon, eclipses, tides, church festivals, &c., for the ensuing year. The *Nautical Almanac* and *Astronomical ephemeris* is a kind of national almanac, published for every year, by anticipation, under the direction of the Commissioners of longitude: the astronomical calculations are adapted to the meridian of Greenwich. The term is compounded of Arabic *al* and *mánach*, reckoning, perhaps from *μαναχός*, a lunar circle.

ALMAN'DINE, Fr. *almandine*, It. *alabandina*. A beautiful mineral of a red colour, of various shades: commonly translucent, often transparent. It is usually termed *precious garnet*: the finest crystals are those of Ceylon and Pegu, where they occur in the sand of the rivers.

AL'NE. In *Egyptian customs*, the *alme* are girls, whose occupation is to amuse

company with singing and dancing. They derive their name from having received a superior education to other women.

AL'MEHRRALES. In *Mohammedan mosques*, a niche pointing out the direction of the *kebla*, or temple of Mecca, towards which the faithful look during prayer.

ALMOND, the seed or kernel of the nut or fruit of the almond-tree (*amygdalus communis*), which grows spontaneously in warm countries, particularly in Barbary: it nearly resembles the peach. There are sweet and bitter almonds, but they are only distinguishable by the taste and by chemical analysis. Sweet almonds contain 54 per cent. of a fixed oil; bitter almonds contain less of this oil, but they yield instead a bitter poisonous principle, known in chemistry as *amygdaline*.—

2. The tonsils, two glands near the basis of the tongue, are called *almonds of the throat*, from their resemblance to that fruit; and the external glands of the neck, situated near the ears, are called *almonds of the ears*.—3. Among *lapidaries*, almonds signify pieces of rock crystal, used in adorning branch candlesticks: they are so called in reference to their form.—

4. A measure, by which the Portuguese sell their oil, is called an *almond* (written *almude*): 26 almudes = 1 pipe.

ALMOND-FURNACE, a furnace used by refiners to reduce to lead the slags of litharge, used in refining silver, by the aid of charcoal.

ALMOND-PASTE, a paste made of blanched bitter almonds, white of egg, spirit of wine, &c. It is a cosmetic for softening the skin and preventing chaps.

ALMOND-TREE. See AMYGDALUS.

ALMONER, a distributor of alms. By the ancient canons, every monastery was to dispose of a tenth of its income in alms to the poor, and all bishops were obliged to keep an *almoner*. This title is sometimes given to a chaplain, as an *almoner* of a ship or regiment. The *lord almoner*, or *lord high almoner* of England, is an ecclesiastical officer, usually a bishop, who has the forfeiture of all deadlands, and the goods which accrue from *felo de se*, which he is required by his office to distribute among the poor.—The *grand almoner* of France is the first ecclesiastical dignitary, and has the superintendence of hospitals and other charities.

ALMONRY, the residence of the almoner, or the place where the alms are distributed. Hence the words *ambry*, *aumby*, and Scotch, *aumery*.

ALMS, whatever is given out of charity to the poor. *Tenure by free alms*, or *frank-almoign*, was that by which the possessor was bound to pray for the soul of the donor, whether dead or alive. By this tenure most of the ancient monasteries and religious houses in England held their

lands, as do the parochial clergy, and many ecclesiastical and eleemosynary establishments at the present day.

ALMUCANTAR, the Arabic name of each of a series of circles of the celestial sphere, which are conceived to pass through the centre of the sun or of a star parallel to the horizon. The almucantars are the same, with respect to the azimuths and horizon, which the parallels of latitude are with respect to the meridians and equator.

ALMUCANTAR-STAFF, an instrument of box or pear-tree, having an arch of 15 degrees: formerly used at sea for observing the sun's amplitude at rising or setting, and the variations of the compass.

ALMUDE, a wine measure in Portugal, of which 26 make a pipe; written also *almond*, (q. v.).

ALMUS, the Scriptural name of a tree or wood, which the Vulgate translates *lignia thynia*; the Septuagint, *wrought-wood*, and which some consider to be *ebony*. The Rabbins render the word *coral*, but the more common opinion is that it means gummy or resinous wood in general, and perhaps especially the *shit-tim*. See 1 Kings x. 11.

ALNUDE. See **ALMUDE**.

ALNUS, the generic name of the alder-tree, of which there are 15 species besides many varieties. Class *monacia*, order *tetrandria*. The common alder (*A. glutinosa*), is frequent in Britain; inhabits wet meadows and moist grounds. The bark and leaves are employed in dyeing and tanning leather; wood valuable for piles of bridges, &c. Name Latinized of Celtic *al*, near, and *lan*, the river bank "where the alder dank delights to dwell."

ALOË, the name of a genus of plants comprehending upwards of 100 species, some of which are arborescent, others shrubby, and some perennials; all natives of warm climates, and most of them of the south of Africa. Class *hexandria*, order *monogynia*. Name aloë, Gr. *αλόη*, of uncertain origin, but perhaps from the Arabic name *allock*.

A series of trials has been made within these few years, at Paris, to ascertain the comparative strength of cables made of hemp and of the aloë from Algiers. Of those of equal size, that made of aloë raised a weight of 2000 kilogrammes (about two tons); that made of hemp a weight only of 400 kilogrammes.

A'LOES, the inspissated juice obtained from the leaves of some species of the aloë. It is bitter, gummy, and resinous, and extensively used in medicine. There are four sorts. 1. The *Socotrine aloes*, imported from the island of Socotra, in the Indian ocean: it is obtained from *Aloë spicata*.—2. The *Hepatic aloes* takes its name from its liver colour: it is obtained

from the *Aloë vulgaris*, or true aloë, according to Sibthorp, but others believe that it is the produce of the *Aloë perfoliata*.

—3. The *Cabaline* (Horse) *aloes* is merely the coarsest species of the Barbadoes or hepatic aloes. It is extensively used in veterinary medicine.—4. The *Cape aloes* is obtained from the same species of the plant as the Socotrine, but it is of a coarser quality. The use of aloes in medicine is to stimulate the large intestines.

ALOËTIC, pertaining to the *aloe*, or to *aloes*: containing aloes, e.g. an *aloetic medicine*. Braconnot has given the name of *aloie* or *aloetic acid* to a substance obtained by treating aloes with sulphuric acid; but Chevreuil regards it as an artificial tannin.

ALOFT, in *nautical language*, in the top, at the mast-head, or on the higher yards or rigging.

ALO'GIANS, a sect of ancient heretics, who denied Jesus Christ to be the *Λεγος*, or Word, and, consequently, rejected the gospel of St. John.

ALOGOTROPHY, Lat. *alogotrophia*, from *αλογος*, disproportionate, and *τροφή*, nutrition. An unequal nutrition of different parts of the body, especially of the bones, in the disease called *rachitis*.

ALOOF, in *nautical language, the command to the man at the helm to keep the ship near the wind when sailing upon a quarter-wind.*

ALOPE'CES, from *αλωπηξ*, a fox. The psoas muscles are sometimes so called, probably because they are peculiarly strong in the fox.

ALOPECTY, Lat. *alopecia*, of *αλωπηξ*, a fox, the urine of which is said to occasion baldness. Fox-evil: a disease which is also called scurf; it consists in a falling-off of the hair, from any or every part of the body. The term is now nearly synonymous with *baldness*.

ALOPECUR'US, the generic name of the fox-tail grass. Class *triandria*, order *digynia*. There are 12 species, 6 of which are British, mostly perennial. Name, from *αλωπηξ*, a fox, and *ουρα*, a tail; the flowers being arranged in tail-like stalks.

ALO'BA, a fish called the shad (*A. vulgaris*). It is a sub-genus of the clupeæ or herring family, but is much larger and thicker than the *clupea* or herring.

ALPA'NA, the *Damalus paco* of Lin. and the *Pacos* of Pennant: it is used as a beast of burden in Peru.

ALPHA, the name of the first letter of the Greek alphabet, and *omega*, the name of the last; whence the metaphorical expression, *alpha* and *omega*, meaning the first and the last.

ALPHABET, *αλφα* and *βητα*, that is, A and B. The ordinary series of letters or syllables (in syllabic alphabets) of a language. The number of letters differ in

different languages: The Hebrew contains 22 letters; as also the Chaldee, Samaritan, Syriac, Persian, and Æthiopic. The Irish, which is the same as the Pelasgian or Scythian, has only 17; the Greek alphabet, which was brought by Cadmus into Greece from Phœnicia, and was also Pelasgian in its origin, consisted of 16, to which 8 were afterwards added. The ancient Arabic alphabet consisted of 24 letters, but 4 were added, making 28. The Sanscrit (Devanagaree) alphabet contains 100 letters. The Coptic consists of 32, the Turkish of 33, the Georgian of 36, the Russian of 39, the Spanish of 27, the Italian of 20, the Latin of 22, the French of 22 (strictly 28), and the English of 26. The Chinese have no proper alphabet.

ALPHON'SIN, a surgical instrument for extracting balls from gun-shot wounds; so called from its inventor, Alphonso Ferrus, a Neapolitan physician.

ALPHON'SINE TABLES, the name given to a set of astronomical tables compiled by order of Alphonso, king of Arragon, in the first year of his reign (A.D. 1252).

AL'PHUS, from *αλφες*, white. The species of leprosy called vitiligo, in which the skin is rough, with white spots.

ALPIA, AL'PIST. The seed of the fox-tail grass; used for feeding birds.

ALPIN'IA, a genus of exotic perennials, of 15 species, of the class *monandria*, and order *monogynia*. Name, from *alpinus*, elevated, in reference to their favourite situations.

Alpine plants are such low plants as grow naturally in mountainous situations, where they are covered with snow during some part of the year.

ALPIN'ACEÆ, one of the names of the natural order of plants called Zingiberaceæ.

AL'QUIER, a Portuguese measure of capacity, equal to about two gallons; called also a *cantar*. It contains half an almude.

ALQUIFOU, } names of a lead ore found

ALQUIFORE, } in Cornwall, and used by potters to give a green varnish to their wares; hence called *potters' ore*.

ALBU'NE, small images carved out of the roots of trees, and held in great veneration formerly among the northern nations. They had the same rank as the penates of the ancient Italians.

AL SEGO, a direction in written music to return to a former part, where the character *S* appears.

ALSINACEÆ, an order of weedy plants, of which the genus *Alsinia* is the type.

ALSINI, the generic name of the chickweed, according to Linnaeus; but the *A. media*, or common chickweed, is now referred to the genus *Stellaria*. The name is from *αλσος*, a shady place, and *αλω*, to love.

ALSTON'IA, the generic name of two species of Indian shrubs, class *pentandria*, order *monogynia*; the one resembles the tea-plant, the other is poisonous. Named in honour of Professor Alston, who first established the genus.

ALSTROEM'ERIA, a genus of American perennials, of the class *hexandria*, and order *monogynia*. There are thirteen species.

ALT, } from Lat. *altus*, high. A term
ALTO, } applied in music to that part of the great scale of sounds which lies between F above the treble cleff and G in altissimo.

ALTAR, Lat. *alta, ara*. See ARA. 1. An elevated place upon which sacrifices were formerly offered to some deity. Altars were originally of turf, latterly of marble, wood, or horn, and those of the Jews of shittim-wood, and covered with gold or brass. Some altars were round, others square, others triangular; but all faced the east, and there is no doubt but that they are as ancient as the practice of sacrificing.—2. In *modern churches*, the communion-table, or table for the distribution of the eucharist, &c.

ALTARAGE the profits arising to priests on account of the altar; also altars, erected before the reformation, in virtue of donations, within parochial churches, for the purpose of performing mass, &c. for deceased friends.

ALTARIST, } In *old law-books*, the
ALTAR-THANE, } priest or parson to whom the altarage of a church belonged; also a chaplain.

ALTERNATIVE, Lat. *alteratus*, causing alteration. Substantively, a medicine which establishes the healthy functions of the body, without sensible evacuation by perspiration, purging, or vomiting.

ALTERN, Lat. *alternus*, of *alter*, other. Alternate: reciprocal. In *crystallography*, exhibiting on an upper and a lower part faces which alternate among themselves, but which, when the two parts are compared, correspond with each other.

ALTERN-BASE, in *trigonometry*, is a term used in contradistinction to the true-base; e. g. in oblique triangles, the true-base is either the sum of the sides, and then the difference is the altern-base; or the true-base is the difference of the sides, and then the sum of the sides is the altern-base.

ALTER'NATE, Lat. *alternatus*, being by turns: one following the other in succession of time or place. 1. In *botany*, applied to branches and leaves, when they stand singly on each side, in such a manner that between every two on any side, there is but one on the opposite side.—2. In *heraldry*, applied to denote the situation of the quarters. Thus the first and fourth quarters, and the second and third, are usually of the same nature, and

are called *alternate quarters*.—3. In *geometry*, applied to the internal angles made by a line cutting two parallels, and lying on opposite sides of the bisecting line. Thus,—

a and a' are *alternate angles*, and if the two straight lines be parallel they are equal. The *alternate terms* of a proportion are the first and third, and the second and fourth; and the terms of the proportion are said to be taken alternately or by alternation, when the second and third are made to change places; thus,— $a : b :: c : d$, by alternation, becomes $a : c :: b : d$.

ALTERNATION, Lat. *alternatio*. In *arithmetic*, the alternation of numbers is called *permutation*. See **ALTERNATE**.

ALTHEA, the generic name of the *marsh-mallow*, of which there are 12 species, two of which are British. Class *monadelphia*, order *polyandria*. Name from *αλθεω*, to cure, in reference to its supposed healing virtues.

ALTICA, a genus of tetramerous coleoptera, of the family cyclica. Name from *αλτις*, a leaper, in reference to their lively movements. The insect is known familiarly by the name of the *garden flea*.

ALTIMETER, from Lat. *altus*, high, and *μετρον*, measure. An instrument for measuring altitudes on geometrical principles; e. g. a quadrant.

ALTIN, a money of account in Russia, value three copecks.

ALTINCAR, a species of factitious salt used in the fusion and purification of metals: it is crude borax, and now usually called *tincal*.

ALTISIMO, Italian, highest: applied in music.

ALTITUDE, Lat. *altitudo*, of *altus*, high.

1. Height: the elevation of the vertex of an object above its foundation, as the elevation of a column: the elevation of an object above the surface on which we stand, or other surface to which we refer it, as the *elevation* of a meteor.—2. In *mensuration*, altitudes are divided into *accessible* and *inaccessible*, according as the base is approachable or inapproachable.

—3. In *astronomy*, the elevation of the sun, a star, or other object above the horizon, is called its *altitude*; and this is true or apparent altitude, according as it is taken from the true or apparent horizon. See **HORIZON**.—4. The *altitude of the eye*, in perspective, is its perpendicular height above the geometrical plane.—5. *Meridian altitude*, in *astronomy*, is an arc of the meridian, between the horizon

and any star or point on the meridian. The difference between the true and apparent place of the star, caused by refraction, is called the *parallax of altitude*.

—6. *Altitude of motion* is its measure estimated in the line of direction of the moving force.—Dr. Wallis.—7. *Determinative altitude* is that whence a heavy body falling acquires a certain velocity, by its natural accelerations.

ALTO (Ital. from Lat. *altus*), high. In *music*, the counter and tenor part; the part immediately below the treble or highest. The term is also used to denote the tenor violin.

ALTO AND BASSO (high and low), in *old law*, signified a submission of all differences of every kind to arbitration.

ALTO-OCTAVO (Ital.), an octave higher.

ALTO-RELIEVO (Ital. for high relief). The name given to that species of sculpture in which the figures project half or more, without being wholly detached from the ground. See **RELIEVO**.

ALTO-RIPEN'O (Ital.). in *music*, a name given to the tenor of the great chorus, which sings or plays only in particular places.

ALTO-TENORE (Ital.), that part of the great vocal scale between the *mezzo* soprano and the tenor.

ALTO-VIOLA, } (Ital.), a small tenor
ALTO-VIOLINO, } violin. *Alto* is sometimes used in the same sense.

ALU'DEL, Lat. *al*, and *lutum*, lute. A spear-shaped vessel open at both ends, used in sublimation. A series of them are placed above one another, and fitted exactly together, with a pot at the bottom, containing the matter to be sublimed, and a receiver at the top to collect the volatile matter. They are now rarely used except in Spain for distilling mercury.

ALU'LA, Lat. *ala*, a wing. In *ornithology*, the group of ill-feathers attached to the carpus, and sometimes called the *bastard wings* (*ala spuria*).

ALUM, Lat. *alumen*, Gerin. *alaum*. A triple sulphate of alumina and potash, or ammonia: it is both native and factitious. It is usually obtained by roasting and lixiviating certain clays containing pyrites, and to the leys adding a certain quantity of potash; the salt is then obtained by crystallization. In *medicine* it is used as an astringent; in *dyeing*, to fix colours; in *tanning*, to restore the cohesion of skins; in *candle-making*, to harden the tallow. The crystals are octahedrons; the taste acerb and subacid: the solution reddens the vegetable blues. It dissolves in about five parts of water at 60° Fah.

ALUM-EARTH, a massive mineral of a blackish-brown colour. It is nearly allied to the clay-slate, but contains a considerable quantity of bituminous matter.

ALUMINA, } one of the primitive
ALUMINE, } earths, which, as constituting the plastic principle of all clays, loams and boles, was called *argil*, or the *argillaceous earth*, but now being obtained in greatest purity from alum, it is called *alumina*. In its mixed state it is one of the most abundant substances in nature, but pure and unmixed it is one of the rarest. The sapphire and ruby are perhaps the purest native specimens of it: these gems are simply the clay crystallized and combined with small portions of colouring matter. To obtain it pure, it must be precipitated from alum by means of ammonia. Thus obtained, it is destitute of smell or taste, insoluble in water, but mixes with it readily: may be made into a ductile paste, and kneaded into regular forms. Alumina was deemed an elementary substance, till Sir H. Davy's electro-chemical researches led to the knowledge that it is a metallic oxide, the metallic basis of which is called *aluminium*, (q. v.). It consists of 52·84 aluminium, and 47·06 oxygen.

ALUMINITE, a mineral of a snow-white colour, dull, opaque, and having a fine earthy fracture. It is a native subsulphate of alumina, and occurs chiefly in the alluvial strata round Halle, in Saxony.

ALUMINUM, the metallic basis of alumina. It somewhat "resembles platinum in powder." Sp. gr. 13·7. The experiments of Sir H. Davy first led to the belief that alumina is a metallic oxide, but it was Woehler who first succeeded in separating the metallic substance.

ALUM-SLATE, } a bluish or greenish
ALUM-SCHIST, } black mineral, containing more or less iron pyrites mixed with coaly or bituminous matter. It occurs in the strata of brown coal, where the upper layers lie immediately under clay-beds. From this schist the greater portion of the alum manufactured in Britain is made. Mineralogists distinguish between *common* and *glossy* alum-slate.

ALUM-STONE, } Alum-stone is a mineral
ALUM-ROCK, } of a white colour, sometimes inclined to grey. It occurs in beds of a hard substance, characterised by numerous cavities, containing drusy crystallizations of basic alum. The beds in which the alum-stone occurs, is called *alum-rock*. Hungary yields large quantities. The alum-stone contains all the constituents of alum, being a siliceous subsulphate of alumina and potash: the alum-schists contain only two of them. Clay and sulphur, convertible into sulphate of alumina: the alkali must be added.

ALUTA (Lat. for *tanned leather*). Leather-stone; a soft, pliable mineral, not laminated.

ALVEARY, Lat. *alvearium*, of *alveare*, a bee-hive. The *meatus auditorius externus*, the hollow of the external ear, or bottom of the concha, where the wax is contained.

ALVEOLAR, Lat. *alveolaris*. Appertaining to the alveoli or sockets of the teeth.

ALVEOLATE, Lat. *alveolatus*. Having small cavities, so as to resemble a honey-comb.

ALVEOLE, Lat. *alveolus*. A little cavity. Technically: 1. A cell in a honey-comb, in a fossil, &c.—2. A socket in which a tooth is placed.—3. A marine fossil, of a conical figure, composed of a number of cells like a honey-comb, joined by a tube of communication.

ALVEOLITE, a marine fossil composed of numerous concentric beds, each formed by the union of hemispherical cells: the body itself is usually of a hemispherical shape. From *alveolus*, and *λίθος*. Only one species is known, and it occurs in the Portland stone.

ALVINE, Lat. *alvinus*. Appertaining to the belly (*alvus*): usually applied in relation to the intestinal excretions.

ALVUS (Lat.), the belly: used in *anatomy*.

ALYFON, the *Globularia alypum* of Lin. It is a drastic purgative. Name, from *α*, not, and *λύω*, pain.

ALYSM, Lat. *alysmus*, of *αλυσ*, to be anxious. The inquietude which a patient exhibits under disease.

ALYSUM, the generic name of the plant *madiaort*, supposed to be a specific in cases of hydrophobia. Class *tetradynamia*, order *siliculosa*. There are ten species, all foreign. Name, from *α*, not, and *λύσσα*, hydrophobia.

A.M. stand for *artium magister*, master of arts, the second degree given by universities and colleges, and called in some countries doctor of philosophy. Also for *anno mundi*, in the year of the world; and *ante meridiem*, before noon.

A'MA, from Dan. *aam*, a vessel. Written also *Hama*. 1. In *church affairs*, a vessel to contain the wine for the Eucharist.—2. A wine measure of indefinite size, as a cask, a pipe.

AMABLY, an old British word, signifying "the price of virginity," and expressing a barbarous custom which formerly prevailed in England and Wales, being a sum of money paid to the lord when a maid was married within his lordship.

AMACRA'TIC, } A lens photographically

AMASTHENIC, } perfect, or which unites all the chemical rays into one focus, may be called *amacratic* (*αμα*, together, and *κρᾶσις*, power), or *amasthenic* (*αβῆσις*, force). If this nomenclature be adopted, a *diacritic* or *diasthenic* medium will be one which transmits the chemical power

or force: *diacrescence* that quality in virtue of which it does so, &c.—Sir J. Herschel, *Phil. Trans.* 1840.

AM'ADOU, } A species of *boletus*, or agaric,
AM'ADOU, } found in the trunks of old trees, especially in Germany, where it is called *munderschamm*. According to some, it is *B. ignarius*; according to others, the *B. fomentarius*. Boiled in water, dried, beaten with a mallet, and finally impregnated with a solution of nitre and dried, it constitutes *spunk*, *pyrotechnic sponge*, or *German tinder*—names significant of its inflammability. *Black amadou* is the same material impregnated with gunpowder: this is *black-match*; the common amadou is *red-match*. It is used on the Continent extensively instead of tinder.

AMAI'N (Sax. a, and mægn, force). A nautical term, signifying to yield or let go suddenly. Thus, to *let go amain*, is to let fall or lower at once; and to *strike amain*, is to let fall the topsails in token of surrender. To *wave amain*, is to make a signal to a vessel to strike its topsails.

AMAL'GAM, a compound produced by mixing a metal, in a state of fusion, with mercury: any metallic alloy, of which mercury forms an essential constituent. The term is usually derived from *άμα*, together, and *γαμειν*, to marry; but Webster, with more probability, supposes it to be from *μέλαγμα*, of *μαλάσσω*, to soften, as metallists commonly apply the term to soft alloys.

AMALGAMA'TION, a process by which an amalgam is formed.

Amalgamation is extensively employed in extracting gold and silver from certain of their ores, founded on the property which mercury has of readily dissolving these metals as disseminated in the minerals, and thus to separate them from the earthy matters. The mercury is afterwards driven off from the amalgam by heat.

AMALTHE'A. In mythology, a goat of Crete alleged to have suckled Jupiter. The horn of this goat was the magic *Cornu Copia*, or horn of plenty.

AMANI'TA, a genus of fungi, some species of which are edible, others poisonous.

AM'ARANTH. 1. The *Amaranthus* (q. v.).

—2. A colour inclined to purple.

AMARANTHACEÆ, an order of plants in the Natural System of Jussieu: typical genus, *Amaranthus*. The order comprehends some other dry-flowered genera.

AMARAN'THINE. 1. Resembling the amaranth.—2. Purplish.

AMARAN'THUS, the *Amaranth*, or *Flower-Gentle*: a genus of annuals, of about fifty species, only one of which (and that a bad specimen) is a native of England. Class *monocotyledon*, order *pentandria*. Name, from

α, not, and *μαραινω*, to fade; or flowers which do not fade, commonly called "Everlasting Flowers." Love-lies-bleeding, Prince's-feather, &c. are well known in our gardens.

AMAR'INE, a name given by some to the bitter principle of vegetables, from *amarus*, bitter.

AMARYLLIDA'CEÆ, a natural order of beautiful endogenous plants, named from its typical genus *amaryllis*. The greater part of its species are bulbous plants, inhabiting the Cape of Good Hope and the tropical parts of both hemispheres. The snow-drop is the most northern example.

AMARY'LIS, the *lily-daffodil*; a genus of liliaceous perennials, of about forty species, much cultivated in flower-gardens. Class *hexandria*, order *monogynia*. Named from *Amaryllis*, a peasant girl, celebrated by Theocritus and Virgil for her beauty.

AMA'TIA, a subgenus of polypt, belonging to the *Sertularia* of Linnæus; it is the name given by Lamouroux to the *Sertularia* of Lamarck.

AMATORY, from *amo*, to love.—2. In anatomy, the oblique muscles of the eye have been called *musculi amatorii*, that is, *amatory muscles*, from their use in ogling.—Hooper.

AMAURO'SIS, *Αμαυρωσις*, from *αμαυρος*, obscure. A diminution or total loss of sight, arising from a paralysis of the retina or optic nerve, and which may exist independently of any visible lesion of the structure of the eye, or complicated with cataract or other affection. The disease is usually characterised by dilatation of the pupil and immobility of the iris, but these are not constant symptoms. It is also called *gutta serena*, the "dropserene" of Milton.

AM'AZON, from *α*, without, and *μαζος*, breast. The Amazons are said to have been a race of female warriors, who founded an empire on the river Thermodon, in Asia Minor, on the coast of the Euxine, and that they cut off their right breast that it might not incommode them in shooting and throwing the javelin. The name was latterly conferred on some American females, who joined their husbands in attacking the Spaniards who first visited the country. This occurred on the banks of the Marañon; and trivial as the circumstance is, it gave the name *Amazon* to that mighty river, and *Amazonia* to the country on its banks.

AMAZONE-STONE, } a beautiful variety
AMAZONIAN-STONE, } of prismatic felspar of a bluish green colour, found in rolled masses near the river Amazon.

AMBARVA'LIA, religious fêtes among the Romans, to propitiate Ceres, and so called from *ambire arva*, to go round the fields, the victim being carried round the fields

at the proper season (the end of May), and a blessing invoked of the goddess on the coming harvest.

AMBASSADOR, a minister of the highest rank, employed by one sovereign or state, at the court of another, to manage the public concerns of his own government, and representing the power and dignity of his sovereign. Ambassadors are *ordinary* when they reside permanently at a foreign court, and *extraordinary* when sent on a special mission. Ambassadors are also called *ministers*; but *envoys* are of lower rank, and only employed on special occasions.—Webster pleads the authority of good authors for spelling the word *ambassador*, more especially as the orthography of *embassy* is established.—The etymology of the word is doubtful.

We have in Sax. *ambyhtrecga*, a *message-sayer*; from Goth. *andbahts*, a servant; but in the laws of Burgundy we find *ambascia*, service, and *ambasciator*, a servant, whence probably Ital. *ambasciadore*, Fr. *ambassadeur*, and Ang. *ambassador*. Spelman derives the word from Germ. *ambact*, which Cesar calls *ambactus*, a retainer, whence Norm. *ambazeur*.

AMBE, } from *αμβη*, the rim or margin

AMBI, } of anything. A surgical instrument for reducing dislocations of the shoulders; so called, because its extremity is rounded to fit into the axilla. It is not now used.

AMBER, a mineral solid of a yellow colour of various shades; usually nearly transparent; brittle and inodorous except when pounded or heated; it then emits a fragrant odour. It has considerable lustre; becomes negatively and powerfully electrical by friction; is found in nodules varying from the size of coarse sand to balls of several pounds weight. Sp. gr. 1.07 to 1.08. Constituents, carbon 70.68, oxygen 7.77, and hydrogen 11.62, which is so nearly the composition of vegetable resin, that it is now regarded as fossil resin by chemists generally. It often contains the remains of certain families of insects, as hymenoptera, diptera, coleoptera, and sometimes, though rarely, lepidoptera. When distilled, it yields an empyreumatic oil and an acid sublimate, which has received the name of succinic acid. The name is from Sp. *ambar*, from Ar. *ambaron*. Most of the amber imported into this country is brought from the Baltic. Amber is chiefly used for ornamental purposes; it is cut, for instance, into beads for necklaces; it is also used in the manufacture of varnish. The substance called fossil copal, which closely resembles amber, contains no succinic acid, and is much less soluble in alcohol.

AMBERGRIS. Fr. *ambre* and *gris*, that is, *gray timber*. A solid opaque ash-coloured

fatty inflammable substance, *variegated* like marble; remarkably light, rugged on its surface, and when heated, it has a fragrant odour. It breaks easily, but cannot be reduced to powder; melts like wax, does not effervesce with acids, is soluble in ether and the volatile oils, and, assisted by heat, in alcohol, ammonia, and the fixed oils. It is found generally in small, but sometimes in large masses of 250 lb. floating on the sea, near the coasts of India, Africa, and Brazil. There has been much diversity of opinion regarding its origin—some supposing it to be a vegetable, others a mineral production, but it is now known to be a concretion discharged from the intestines of the spermaceti whale (*physeter macrocephalus*), in which it is found abundantly on opening the animal. It is probably a product of disease. It is chiefly used in perfumery, the odour being exceedingly diffusive. The name is sometimes corruptly written *ambergreece*.

AMBIDEX'TER, Lat. from *ambo*, both, and *dexter*, the right hand. In law, a juror who takes money from both parties for giving his verdict.

AMBI'GENAL, from Lat. *ambi*, about, and *geno*, a produce. In geometry, a term applied to one of the triple hyperbolas of the second order, having one of its infinite legs falling within an angle formed by the asymptotes, and the other without.

AMBI'GU, Fr., from Lat. *ambiguus*, doubtful. A feast or entertainment consisting of a medley of dishes.

AMBIT, Lat. *ambitus*, a circuit. In geometry, the perimeter of a figure; the periphery or circumference of a circular body.

AMBITUS, Lat. from *ambio*, to encompass. 1. In conchology, the outline of the valves of a shell.—2. In politics, a term used by the ancient Romans to designate canvassing for office, by soliciting the suffrages of electors.

AM'BLE, Fr. from *ambler*, to walk. In the manege, the pace of a horse when his two legs on one side move at the same time.

AMBLI'GON, } from *αμβλως*, obtuse, and **AMBLY'GON**, } *γωνια*, an angle. An obtuse angled triangle; a triangle with one angle more than 90°.

AMBLIO'ONITE, } a massive, crystallised, **AMBLYG'ONITE**, } greenish coloured mineral, which frequently occurs in granite alone, with green topaz and tourmaline, near Penig, in Saxony. Name from *αμβλυγωνιος*, obtuse-angled, in reference to the form of its crystals, which are oblique, four-sided prisms.

AMBLIO'TIC, Gr. *αμβλωσις*, abortive. Having the power to cause abortion.

AMBLIO'TRY, Lat. *amblyopia*, from *αμβλω*

ἑλκυσία of ἀμῆλυσ, dull, and ὤψ, the eye. Incipient amaurosis; defect of sight, without apparent defect of the organs of vision.

AMBLYRHYNCHUS, Gr. ἀμβλυσ, obtuse, and ῥυγχος, snout. A genus of marine lizard. The *A. cristatus* is the only marine lizard now known. It is found on the shores of the Galapagos Islands.

AMBLYTERES, a genus of *phyllophagii* (leaf-eating insects).

AMBLYTERUS, Gr. ἀμβλυσ, obtuse, and πτερον, a fin. A genus of fossil fishes, which occur in the strata of the carboniferous order. Their teeth are small and numerous, and set closely together, like a brush. They are besides characterised by rounded pectoral and ventral fins, from which they take their generic name.

AM'BOŃ, ἀμῶν, a boss or knob. In anatomy, the margin of a socket in which the head of a bone is lodged.

AM'BREADA, a sort of factitious amber which the Europeans sell to the Africans.

AM'BREATE, a salt formed by the combination of the ambreic acid with a base.

AM'BREIC ACID. Ambreic acid is a product obtained by heating ambreine with nitric acid.

AM'BREINE, a fragrant substance extracted from ambergris, by digestion with alcohol. It is obtained in white tufts, which fuse at 100°.

AMBRO'SIA, Ἀμβροσία, immortality. In mythology, the food of the gods: hence whatever is pleasant to the taste or smell. The name has been given to many alexipharmic preparations, and to several plants, as tansy, botrys, &c. It is also the name of an American genus of plants of the class *monœcia*, and order *pentandria*. They are chiefly valued for their fuscous flowers.

AMBRO'SIAN, pertaining to St. Ambrose. The Ambrosian ritual is a formula of worship in the church of Milan, instituted by St. Ambrose in the fourth century. The Ambrosian chant was also composed for that church by St. Ambrose; it is distinguished from the Gregorian chant by monotony and want of beauty in its melody.

AMBRO'SIN, a coin of the middle ages, struck by the Dukes of Milan; on which St. Ambrose was represented on horseback, with a whip in his right hand.

AMBULACRA, Lat. *ambulacrum*, an alley. The narrow longitudinal portions of the shell of the sea-urchin (*echinus*), which give passage through their perforations to the tentacular suckers.

AMBULANT, Lat. *ambulans*, wandering. Ambulant brokers, at Amsterdam, are certain exchange-brokers, or agents, who

are not sworn, and whose evidence is not received in courts of justice.

AMBULA'TION, Lat. *ambulo*, to walk. In surgery, the spreading of a gangrene.

AMBULA'TOR, in entomology, a species of *Lamia*.

AMBULATO'RES, Lat. plural of *ambulator*, a wanderer. The name given by Illiger to an order of birds nearly corresponding to the Passeres of Linnæus.

AMBULATORY, not stationary; e. g. an *ambulatory court*, which exercises its jurisdiction in different places; an *ambulatory will*, which may be revoked at pleasure, before the person's death.—2. Formed for walking, e. g. the term is applied to the feet of birds, when the toes are placed three before and one behind, as in the lark.

AM'BURY, } in *farriery*, a tumour, wart, }
AN'BURY, } or swelling on a horse: it is soft to the touch, and full of blood.

AME'DIANS, a religious sect who styled themselves the *amati Deo*, the beloved of God. The name is compounded of *amo*, to love, and *Deus*, God.

AM'EL, the old word for *enamel*, (q. v.).

AMELAN'CHIER, a genus of shrubaceous plants, class *icosandria*, order *pentagynia*. There is one European species and three American.

AMEL'US, the *starwort*; a genus of plants, class *syngenesia*, order *pol. superflua*. Named from the *flos amellus* of Virgil, but it is not the same. There are three species, natives of the Cape of Good Hope and America.

AM'EN. This word, with slight differences of orthography, is in all the dialects of the Assyrian stock. As a *verb*, it signifies to confirm or establish, to trust or give confidence; as a *noun*, truth, firmness, trust, confidence. In *English*, after the oriental manner, it is used at the beginning, but more generally at the end of declarations and prayers, in the sense—*be it firm, be it established*.

AMEN'D, } In *France*, the *amende ho-*
AMEN'DE, } norable is an infamous punishment (imposed for any false prosecution or groundless appeal), inflicted on traitors, parricides, and sacrilegious persons. The culprit is delivered into the hands of the executioner, who strips him to the shirt, puts a rope about his neck, and a taper into his hand: he is then led into the court, and begs pardon of God, the king, the court, and the country. For smaller offences, this is the amount of the punishment, but in some cases it is a prelude to banishment to the galleys, or even to death. The simple *amende honorable* consists merely in an acknowledgment and recantation in open court, bareheaded and kneeling, of the offence committed.

AMEN'DMENT, Lat. *emendo*, of *mendæ*, a

fault. In *law*, the correction of an error in a writ or process. In *parliament*, a word, clause, or paragraph added to, or proposed to be added to, a bill.

AMENOR'RHEA, from α, neg. μην, a month, and ρεω, to flow. Morbid irregularity of the menstrual discharge, a disease of which there are two species, *emansio mensium*, and *suppressio mensium*.

AMENT, Lat. *amentum*, a thong. In *botany*, a catkin; a species of inflorescence consisting of a simple peduncle, covered with numerous chaffy scales, under which are the flowers or parts of fructification, exemplified in the poplar, birch, willow, beech, &c.

AMENTACEÆ, amentaceous plants; a natural order, comprehending all such as have catkins or aments. As this order was found to comprise plants of different kinds of structure, it has been broken up into several others.

AMENTACEOUS, having an ament or catkin; belonging to the order *amentaceæ*: growing in an ament.

AMENTIA, Lat. *amens*, deprived of mind. Idiotism.

AMEN'TUM, Latin of *ament*, (q. v.); called also *julus*, *nucamentum*, *catulus*; also a name of the alumen scissum.

AMER'CEMENT, } Fr. *merci*. A pecu-

AMER'CEMENT, } niary punishment inflicted on an offender, at the discretion (mercy) of the court. It differs from a fine, which is a fixed sum prescribed by statute, whereas the amercement is arbitrary. It has now, however, become common to enact that the offender shall be *fined* at the discretion of the court, and thus the *fine* being rendered indefinite, the word has in a measure superseded *amercement* (written in old law-books *amerciament*).—*Amercement-royal* is a penalty imposed upon an officer for a misdemeanour in his office.

AMERIM'NUM, a genus of shrubaceous plants of two species. Class *diadelphia*, order *decandria*. Natives of the West Indies and South America.

AMETABO'LIA, ametabolians. A division of insects which do not undergo any metamorphosis. Hence the name, from α, without, and μεταβολη, change.

AM'ETHYST, Gr. ἀμύθυστος, from α, priv. and μεθύσκειν, to be inebriated. 1. In *mineralogy*, a subspecies of rhombohedral quartz: it is merely coloured rock crystal. Its colour resembles that of the violet, and when perfect it is considered a gem of exquisite beauty; but the colour is sometimes confined to one part of the stone, while the other is left almost colourless. This is the amethyst proper: it is called by lapidaries the *occidental amethyst*, in distinction to the *oriental amethyst*, a variety of rhombohedral corundum of

the most perfect violet colour and extraordinary brilliancy and beauty.—The ancients supposed that wine drank out of an amethystine cup did not produce intoxication.—2. In *heraldry*, a purple colour. It is the same in a nobleman's escutcheon, as *purpure* in a gentleman's, and *mercury* in that of a prince.

AMIAN'TH, } Gr. ἀμύανθος, undefiled.

AMIAN'THUS, } Mountain-flax or earth-flax: a mineral of which there are several varieties, all more or less fibrous, flexible, and elastic. The colour is usually grayish or greenish white, not unlike flax or unspun silk. It is incombustible, and anciently was woven into cloth, which when soiled was put into the fire, which cleaned it better than washing. Pliny states that its principal use was to wrap the bodies of the dead, previous to their being exposed on the funeral pile, that the ashes of the corpse might not be mixed with those of the wood. Amianthine cloth, however, was very scarce, and was sold at an enormous price. Amianth includes the finer varieties of asbestos (q. v.) It is found in great profusion in Corsica, and many other places, especially in Germany.

AMIAN'THINITE, an amorphous variety of actinolite, having an amianthine or fibrous fracture.

AMIANTHOIDE, from *amianth* and εἶδος, form. A mineral, in long capillary filaments of an olive-green, found at Osians in France.

AMIAN'TUS, the same with amianthus or amianth (q. v.) Amiantus is the correct, but not the received, orthography.

AMICE, Lat. *amictus*, clothed. The square piece of linen cloth which the Catholic priest ties about his neck, hanging down under the alb, when he officiates at mass.

AMID, from a and midd, the middle. *Amid-ships* is a nautical phrase signifying the middle of a ship with regard to her length and breadth.

AMIDINE, the soluble basis of starch. Fr. *amidon*, starch. When starch has been gelatinized in water, it is converted into amidine, which is soluble in cold water; but, according to Raspail, starch consists of a vesicle which he terms *amidine*, and of a soluble matter contained within the vesicle, which he terms *amidin*.

AMIRANTE, in *Spain*, a high officer answering to our lord high-admiral.

ΑΜ'ΜΑ, Αμμα. In *surgery*, a girdle or truss used in ruptures: written also *Hamma*.

AM'NAN, } in the German and Belgic
AM'NANT, } polity, a judge who has cognizance in civil cases. In *France*, a notary public. Germ. *amtman*, the root of which is *ampt*, office, charge.

Αμ'μι, *Bishop's-weed*, a genus of umbelliferous plants of four species. Class *pentandria*, order *digynia*. Warm climates. Name, from *αμμος*, sand, in reference to the appearance of its seeds, which are used extensively as an ingredient of the-riaca.

AMMITE, from *αμμος*, sand, and *λιθος*, stone, sand-stone; the roe-stone or oolite of recent authors. Written also *Hamnite*.

AMMOBATES, a genus of honey-making bees (*apiarise*). They belong to the *Cuculinae* of Latreille.

AMMOCHRYSE, *αμμοχρυσος*. A yellow soft stone found in Germany. In the time of Pliny it was used, when ground to powder, to strew over writing like black sand with us. It is probably a micaceous sulphuret.

Αμ'μodyte, the sand-eel. The *ammodytes* belong to the order malacopterygii apodes of Cuvier. The name is also common to a small African serpent of the viper tribe, and to a large venomous serpent of Ceylon.

Αμ'μON, the title under which Jupiter was worshipped in Libya. "Ammon was originally a Libyan deity adopted by the Greeks." The name seems derived from *αμμος*, sand, and the situation of the celebrated temple, in an oasis surrounded by desert, further justifies this etymology.

AMMONACEA, according to the arrangement of De Blainville, a family of the order polythalamacea: it embraces the genera *discerbis*, *scaphites*, *ammonites*, and *simplegas*. In the Lamarckian system, the ammonacea is a family of the order polythalamous cephalopoda, embracing the genera of ammonites, ammonoceras, baculites, and turritiles.

AMMONIA, a chemical compound, otherwise called the *volatile alkali*, and which, in an uncombined state, and under ordinary atmospheric pressure, exists in the state of a highly pungent gas, possessing all the mechanical properties of air, but very condensable in water, with which it forms the *water of ammonia*, *aqua-ammonia*, or *spirit of hartshorn* of the shops. It is called *ammonia* from its being chiefly obtained from *sal ammoniac*; *volatile alkali*, from its being an alkaline gas; *hartshorn*, from its having been originally obtained by distillation from the horn of the hart. Its constituents are three vols. hydrogen, and one vol. of nitrogen, condensed into two vols. By strong compression it becomes a liquid of sp. gr. 76.

AMMONIAC, gum-resin, the inspissated juice of an umbelliferous plant (the *dorema armeniacum*) which grows in Persia. It possesses a fetid smell and bitterish taste. It is imported in large masses, composed of small whitish tears. It is used in medicine, and in making the substance

called *diamond cement*. It is called also *gum-ammoniac*, and is latinised *ammoniacum*. Pliny says that it takes its name from its being produced in the vicinity of the temple of Jupiter Ammon in Africa.

Αμ'MONITE, *snake-stone*, or *serpent-stone*, or *cornu-Ammonis*. The Ammonites constitute an extensive genus of fossil shells, allied to the Nautili, which inhabit chambered shells curved like a coiled snake. They are very abundant in the strata of the secondary mountains, varying from the size of a lentil to that of a coach-wheel. M. Brochant enumerates 270 species. They appear to have been almost universally distributed in the ancient world. They are found at an elevation of 16,000 feet on the Himalaya Mountains, and are so plentiful in some parts of Germany as to be broken for mending roads. They belong to the cephalopodous order of Mollusca, and take their name from their resemblance to the horns on the statues of Jupiter Ammon.

AMMONITIDE, a family of Cephalopods, with chambered syphoniferous shells, and distinguished from the other Ammonites by the septa being sinuous.

AMMONIUM. Sir H. Davy gave this name to what he believed to be the metallic basis of ammonia. According to the hypothesis of Berzelius, ammonium consists of 1 vol. of nitrogen and 4 vols. of hydrogen.

AMMONIURET, a compound of ammonia and any substance not acid, as a metallic oxide.

AMMONOCERAS, } From *Ammon*, and
AMMONOCERATITES. } *κέρας*, a horn.

Ammon's-horn, a genus of fossil shells resembling the Ammonites in their internal structure; but they are simply curved, instead of being spirally convolute.

AMMO'PHILA, *sea-reed*, *marum*, or *mat-weed*. A genus of the class *triandria*, and order *digynia*. Named from *αμμος*, sand, and *φίλος*, a lover; in allusion to its being generally found on sandy sea-shores; in consequence of which habit, it is extensively employed in Norfolk and Holland for preserving the banks of sand which protect those countries from the inroads of the sea.

Αμ'NION, **Αμ'NIOS**. The membrane of the ovum, which immediately surrounds the fœtus: it lines the chorion, covers the placenta, and is reflected on the umbilical cord, which it invests as far as the umbilicum, where it terminates. From *αμνιον*, which primarily meant a vessel for receiving the blood of the victims at sacrifices, and came afterwards to mean the membrane described.

Αμ'NIOS. In *botany*, a thin, semitransparent, gelatinous membrane, in which the embryo of a seed is suspended when

it first appears. It seems to afford nourishment to the embryo in its earlier stages. The term is commonly derived from *amnios*, a lamb, in reference to the softness of the membrane.

AMNIOTIC ACID, an acid formerly supposed to be peculiar to the liquor amnii of the cow, but now known to belong to the liquor allantois. See ALLANTOIC.

AMOMUM, a genus of perennials, of 13 species, one of which (*A. Granum Paradisi*), produces the Grains of Paradise or Great Cardamom seeds; and the root of another (*A. Zingiber*) is the ginger of commerce. Class *monandria*, order *monogynia*. Hot climates—Africa and Asia. Name, *αμωμος*, from *Ar. hamaama*, of *hamma*, to warm, in reference to the pungent aromatic qualities of the plants.

AMORPHIA, false or bastard indigo. A genus of American shrubby plants, of ten species, from some of which a coarse kind of indigo is made. Class *diadelphia*, order *decandria*. Name, from *α*, without, and *μορφη*, form, in reference to its irregular stems.

AMORPHOUS, shapeless, from *αμορφος* of *α*, without, and *μορφη*, form. Applied to bodies which have no determinate form, or whose forms cannot easily be defined.

AMORTIZATION, { Lat. *ad*, and *mors*,
AMORTIZEMENT, { death. The act or right of alienating property to corporations, which was formerly regarded as transferring them to dead hands, as such alienations were mostly made to religious houses for superstitious purposes.

AMORTISE, { Lat. *ad*, and *mors*, death.
AMORTIZE, { To alienate in Mortmain. See AMORTIZATION and MORTMAIN.

AM'PAC, an East Indian tree which affords an odoriferous resin.

AMPELIDÆ. In *botany*, another name of the natural order Vitaceæ. From *αμπελος*, a vine.

AM'PELITE, a mineral of which there are two varieties, the *aluminous* and *graphic*. The first is the *alum-slate*, and the latter the *graphic-slate*. The name is sometimes applied to the species of slaty coal which in England is called *cannel-coal*, and in Scotland *parrot-coal*. The term is from *αμπελος*, a vine, being anciently the name of a bituminous matter with which husbandmen anointed their vines to destroy worms.

AMPELOSAR'RIA, the wild vine (*Bryonia alba*), from *αμπελος*, a vine, and *αρχειος*, wild.

AMPHIARTHR'OSIS, from *αμφι*, both, and *αρθρωσις*, arthrosis. A mixed kind of articulation, which partakes of the nature both of diarthrosis and synarthrosis: the articular surfaces of the bones are united

by an intermediate substance, in a manner which admits of a small degree of motion.

AMPHIBIA, from *αμφι*, both, and *βιος*, life. In the system of *Linnaeus*, the third class of animals. The lungs differ essentially from those of animals of the classes *mammalia* and *aves*. Their heart has but one ventricle; their blood is red and cold, and they can for a considerable time suspend respiration, so as to live under water. Their body is covered with a shell, with scales, or is quite naked. They have neither hair, *mammæ*, feathers, nor radiated fins. They are divided into reptiles and serpents, and are either oviparous, or viviparous. In the system of *Cuvier*, the third tribe of *carnivorous mammalia*. Their feet are so short and so enveloped in the skin, that the only service they can render them on land is to enable them to crawl; but as the intervals of the fingers are occupied by membranes, they are excellent oars; and, in fact, these animals pass the greater portion of their time in the water, never landing, except for the purpose of basking in the sun, and suckling their young. Their elongated body; their very moveable spine, which is provided with muscles that very strongly flex it; their narrow pelvis, their short hair that adheres closely to their skin,—all unite to render them good swimmers, and all the details of their anatomy confirm these indicia. We have as yet distinguished two genera only, *phoca* (the seal), and *trichechus* (the morse).

AMPHIBIOUS, *αμφιβιος*, capable of two modes of life. This term is variously applied. 1. To animals which, at one period of their existence, live entirely in water, breathing by means of gills, and at another respire air, and are frequently on land; e. g. frogs.—2. To animals which respire air, but are capable of remaining under water for a length of time; e. g. seals.—3. To animals of the class (Lin.) or tribe (Cuv.) *amphibia* (q. v.).—4. To plants which grow indifferently on dry land or in the water; e. g. *Polygonum amphibium*.

AM'PHIBOLE, *αμφιβολος*, the name given by Haüy to the Hemi-prismatic Augite-spar of Mohs. The varieties are Hornblende, Actinolite, and Tremolite. The name is more particularly referable to the first.

AMPHIBOLITE, a general name for all trap rocks, which have amphibole for their bases.

AMPHIBRA'CH, Lat. *amphibrachus*, from *αμφι*, both, and *βραχος*, short. In *poetry*, a foot of three syllables, the middle one long, and the first and third short, as in the word *habere*.

AMPHICO'MA, a genus of *anthodii*, from *αμ*, around, and *κειμη*, hair, in refer-

ence to the frequent covering with which the species are invested.

AMPHICOME, a kind of figure-stone, anciently used in divination, and called *eruylos*, on account of its supposed power of exciting love. Name *αμφι*, both, and *κομη*, hair.

AMPHICTYONS, council of. In history, an assembly of deputies from the different states of Greece, which met sometimes at Thermopylae but generally at Delphi; so named because established by king Amphictyon.

AMPHIDEON, *Αμφιδέον*, from *αμφιδεω*, to bind round. In anatomy, a name of the os uteri.

AMPHIDESMA, a genus of bivalve shells belonging to the Tellininae of Swainson. Name from *αμφι*, and *δισμα*, of *δεω*, to bind.

AMPHIDIARTHRISIS, from *αμφι*, both, and *διαρθρωσις*, diarthrosis. A name given to the articulation of the lower jaw with the os temporis, because it partakes both of the nature of ginglymus and arthrodia.

AMPHIGAMOUS PLANTS, the most imperfect of all plants—having no trace whatever of sexual organs: hence the name from *αμφι*, doubtful, and *γάμος*, marriage.

AMPHIGENÆ, Gr. *αμφι* and *γίνος*. Trapezoidal zeolite, or leucite, called also Vesuvian. This mineral occurs in imbedded grains or crystals in the more ancient lavas.

AMPHIHEXAHEDRAL from *αμφι* and hexahedral. A term applied to crystals which have two hexahedral outlines, when counted in two directions.

AMPHIMACER, from *αμφιμακρος*, long on each side. In poetry, a foot of three syllables, the middle one short, and the other two long; e. g. *glatténare*.

AMPHIPNEUSTS, the name given by Merrem to a tribe of reptiles, comprehending such as have both lungs and gills; from *αμφις*, on both sides, and *πνέω*, to breathe. The tribe comprehends the true amphibia, or perennibranchiate amphipods; the third order of crustacea in Latreille's arrangement, comprehending such as have subcaudal natatory feet, with sessile eyes. Name from *αμφις*, on both sides, and *πνέω*, a foot.

AMPHIPROSTYLE, from *αμφι*, double, *πρὸ*, before, and *στυλος*, a column. A temple, or house, having four columns in front and four behind, or two fronts; but without columns at the sides.

AMPHISBÆNA, } from *αμφις*, both ways,
AMPHISBÆNA, } and *βαίνω*, to go. A genus of opidian reptiles of South America. They feed on insects, and are often

found in ant-hills, which has given rise to the notion that the large ants are their purveyors. There are two species, both oviparous, and not poisonous. They have the power of moving with either head or tail foremost: hence the name.

AMPHISCII, } from *αμφις*, on both
AMPHISCIA, } sides and *σκια*, a shadow. In geography, the inhabitants of the torrid zone, whose shadows at one part of the year fall on the north, and at another on the south, according as the sun at noon is south or north of their zenith.

AMPHITHEATRE, from *αμφι*, a round, and *θεατρον*, a theatre. 1. An elliptical building among the ancients, having seats entirely round, and an arena in the middle where spectacles were exhibited. Some amphitheatres, as the Coliseum at Rome, could accommodate from 50,000 to 60,000 persons.—2. In gardening, a disposition of shrubs, &c. in the form of an amphitheatre on a declivity, or forming such by placing them in the order of their growth.

AMPHITRITE, *αμφιτρίτη*. A genus of *Tubicola*, of the class *annulata*, easily recognised by the golden-coloured setæ, arranged like a crown. Hence named *Αμφιτρίτη*, or the goddess of the sea. The *A. auricoma* inhabits the south coast of England; its tube is conical, and two inches long; formed of grains of sand agglutinated together by a sort of mucus which exudes through the skin.

AMPHORA. The Roman amphora contained 8 congios or 48 sextarii = $7\frac{1}{2}$ imp. gallons. The Grecian *αμφορεως* was equal to 28 $\frac{1}{2}$ gallons. The Venetian *amphoro* contained 14 quarts. The capacity of the old *ambra* of England is not known. The measure takes its name from having two handles; *αμφι*, on both sides, and *φέρω*, to carry, *αμφορεως*, two-handled.

—2. The amphora is frequently represented in architectural decoration. It is represented as a vase with two handles.

AMPLEXICAUL, Lat. *amplexicaulis*. Clasp ing (*amplexus*), the stem (*caulis*): applied to leaves, the bases of which project on each side, so as to clasp the stem with their lobes.

AMPLEXUS, Lat. for embracing, from *amplecto*, to embrace. In natural history, a fossil resembling a coral, found in the Dublin limestone. It is nearly cylindrical, divided into chambers by numerous transverse septa, which embrace each other with reflected margins.

AMPLIATION, Lat. *ampliatio*, enlargement. In Roman law, postponement of a decision, to obtain further evidence.

AMPLITUDE, Lat. *amplitudo*, to enlarge, largeness. In astronomy, an arc intercepted between the east and west points

of the horizon, and the point of the same circle on which the centre of the sun or star appears in rising or setting, on any particular day, is called the *amplitude* of the sun or star for that day, and so is either eastern or western, or *technically*, *orises* at rising, and *occiduous* or *occaves* at setting. The distances of the points of rising or setting from east and west, as shown by the compass, is called the *magnetic amplitude*, and the difference between this and the true amplitude is the variation of the compass, or the *amplitude of azimuth*, and is found by the azimuth-compass. The *amplitude of the range of a projectile* is the horizontal line subtending the path of the body, or the line which measures the distance it has moved.

AMPUL'LA, literally, a large-bellied bottle. 1. In *chemistry*, any bellied vessel, as a bolt-head, receiver, cucurbit.—2. In *anatomy*, the dilated part of the membranaceous semicircular canals of the ear.—3. In *botany*, a small membranaceous bag, attached to the roots and the immersed leaves of some aquatic plants, rendering them buoyant.—4. In *pathology*, the same with *Bulla* (q. v.).

AMPULLACE'RA, from *ampulla*, a bellied bottle; the name given by M. Quoy to a genus of Turbidae, to which Swainson gives the name *Thallicera*.

AMPULLARIA, from *ampulla*, a bellied bottle, a river shell of warm climates, called the *apple-snail*, from the form of the shell. It belongs to the trochoid family of Cuvier, but Swainson places it among the Turbidae or marine snails.

AMPULLARI'Æ, from *ampulla* a bellied bottle; a sub-family of Turbidae, "most like the garden-snails; they are generally globose, the spire is very short, and the body whorl enormous." Their typical genus is the *ampullaria*.

AMULET, Lat. *amuletum*, from *amoli*or, to repel. A gem, stone, piece of metal, paper, or other substance, usually inscribed with mystical characters, words, sentences, numbers, or other devices, commonly worn suspended from the neck, or carried about the person, from a belief that it had the power of averting evil, as witchcraft, poverty, &c.; or of conferring some particular gift, as strength, courage, eloquence, &c. Amulets are distinct from *prophylactics*, which were supposed to prevent disease.

AMYGDALA, αμυγδαλη. 1. The fruit of the almond-tree (*Amygdalus communis*).—2. The tonsils are called *amygdalæ*, from their shape.

AMYGDAL'ÆÆ, in *botany*, a tribe of the natural family Rosaceæ, of which the genus *amygdalus* is the type. The peach, plum, and apricot are examples.

AMYGDALOID, from αμυγδαλια, an almond, and ειδος, likeness. 1. As a name, toadstone: a volcanic or igneous rock, of any composition, containing nodules of other minerals embedded plentifully in it: "cellular volcanic rock, having its cells occupied with nodules of a dissimilar substance."—2. As an adjective, almond-shaped.

AMYGDALUS, the generic name of the almond-tree, of which there are eight species, mostly natives of Asia. Class *icosandria*, order *monogynia*. Name αμυγδαλον, an almond.

AMYLA'CEOUS, pertaining to, or possessing the properties of, starch (*amylum*).

AMY'LIC, amylaceous. *Amylic acid* is obtained from starch by distillation with peroxide of manganese.

AMYL'INE, a substance between gum and starch, called also *amidine*.

AMYRALDISM, the doctrine of universal grace, as explained by Amyraldus or Amyraut, of France, in the 17th century.

AMY'RIS, the generic name of the balsam-tree, of which there are several species, all natives of the hotter climates. Class *octandria*, order *monogynia*. Named from αμυγες, odorous ointment, in the composition of which it is much used. Gummolemi is obtained from an American species (*A. elemifera*), and the balm of Gilead from the *A. Gileadensis*, which grows in Abyssinia and Arabia.

ANA. 1. In *medical prescriptions* means "of each." See A.—2. As an affix to names of celebrated persons, *ana* denotes a collection of their memorable sayings, anecdotes of them, extracts from their works, &c.

ANABAPTISTS, a sect who hold the doctrine of the validity of infant baptism, and the necessity of rebaptization at an adult age; and who maintain that baptism ought to be performed by immersion.

AN'ARAS, the *paneiri* or *tree-climber*; a peculiar acanthopterygious fish common in India, which, it is asserted, not only leaves the water, but climbs trees on the banks of rivers: hence its name from αναβαινα, to ascend.

AN'ABLEPS, a genus of malacopterygious fishes which inhabit the coast of Surinam. They are characterized by a remarkable projection of the eyes, and a still more singular structure of the cornea and iris, from which there results two pupils, and the eyes appear to be double on each side. They have, however, but one crystalline lens, one vitreous humour, and one retina. Name from αναβλεπω, to raise the eyes.

ANACAM'FEROS, a genus of shrubby plants of ten species, belonging to the Cape of Good Hope. Class *dodecandria*,

order *monogynia*. Named from the Greek *ανακαμπτικός*.

ANACAMPICS, from *ανα*, back, and *καμπω*, to bend. That branch of optics now called *catoptrics* (q. v.).

ANACANTHES, a genus of chondropterygious fishes; from *ανα*, and *κανθα*, a spine, being covered with spines.

ANACARDIACEÆ, a natural order of exogenous plants, of which the cashew-nut (*Anacardium occidentale*), is the type. The marking-nut, Burman varnish, mastich, pistacio nuts, and sumach, are all produced by species of this order.

ANACARDIUM, the cashew-nut; a genus of the class *euneandria*, and order *monogynia*. There are two species, the *acajou* or *acajuba* (*A. occidentale*), the oil of the nut of which is a good marking ink; and the Malacca bean (*A. orientale*). Name from *ανα*, resembling, and *καρδια*, a heart, in allusion to the form of the fruit.

ANACLASTIC, refracting, from *ανα*, backwards, and *κλασις*, a breaking. *Anaclastic glasses* are sonorous glasses, made chiefly in Germany. They resemble inverted funnels, with very thin convex bottoms. On drawing out a little air by applying the mouth to the orifice, the bottom springs into a concave form with a sort of crash, and again, by blowing into them, the bottom with a like noise springs into its convex form. These glasses are used to show the elasticity of glass.

ANACLASTICS. See **ANACLASTIC**. The old name for that branch of optics which treats of refracted light, and which is now called *dioptrics* (q. v.).

ANACOLUTHON, Gr. *ανακολουθον*, something which does not follow. A grammatical term denoting the want of sequence among the members of a sentence.

ANACONDA, } a name given in Ceylon to
ANACONDO, } a large snake, a species of *boa*, "which is said to devour travellers." Its flesh is much esteemed as food. The name is Ceylonese, and means *the great snake*.

ANACREONTIC. The *anacreontic verse* consists of three feet and a half, usually spondee and iambics, but sometimes anapests.—An *anacreontic* is a poem in anacreontic verse.

ANADIPLOSIS from *ανα* and *διπλος*, double, duplication. A rhetorical figure, consisting in the repetition of the last word or words in a line or clause of a sentence, as,

"He retained his virtues amid all his misfortunes—misfortunes which" &c.

2. Among *physicians*, the reduplication of a paroxysm in agues of a double type.

ANAGALLIS, the herb *pimpernel*, of which there are two British species; one of which is called the *poor man's weather-*

glass. Class *pentandria*, order *monogynia*. Named from *αναγίλαω*, to laugh; because, says Pliny, it excites pleasure; and, according to Dioscorides, because it cures bilious disorders.

ANAGLYPH, from *ανα*, upon, and *γλυφω*, to engrave. An embossed or chased ornament, usually of metal and worked in relief. When raised on stone, the anaglyph becomes a cameo: when sunk, an intaglio.

ANAGNOSTA, Lat. from *αναγνωσκω*, to read. A domestic servant employed by the wealthy Romans to read to them during meals. The old clergy continued the custom and the name.

ANAGOGE, } from *ανα*, upwards, and

ANAGOGE, } *αγω*, to lead. In *theology*, a mode of interpreting the Bible, whereby the text is turned from its literal sense to signify something of a more spiritual and mysterious nature.

ANAGRAM, from *ανα* and *γραμμα*, a letter. A transposition of the letters of a name, by which a new word or sentence is formed; e.g. *Horatio Nelson* becomes *Honor est a Nilo*.

ANAGRAFH, from *ανα*, upon, and *γραφω*, to write. A transcription, inventory, register, prescription, anagram, commentary.

ANAGYRIS, *αναγυρις*, bean-trefoil. A genus of shrubaceous plants, natives of the southern parts of Europe. Class *decandria*, order *monogynia*.

ANAL, Lat. *analysis*, pertaining to the anus; e.g. the *anal fin* is that between the vent and the tail. The anal valves of certain of the cephalopods are intended for the defence of the terminal orifice of the intestines.

ANALCIME, cubic zeolite, called also cubizite. A stone which is found chiefly in the cavities of amygdaloidal rocks, regularly crystallised, in angulo-granular concretions, and massive. It is remarkable as having no cleavage lines: each crystal is composed in a singular manner of 24 solids, all symmetrically arranged with respect to the axes of the icosatetrahedron, and each of them possessing a separate optical structure and double refraction. It is rendered feebly electrical by heat, whence its name, from *αναλκω*, feeble.

ANALEMMA, Lat. from *αναλημμα*, altitude. 1. In *geometry*, a projection of the sphere on the plane of the meridian, orthographically made by straight lines, circles, and ellipses, the eye being supposed at an infinite distance, and in the east or west points of the horizon.—2. An instrument of wood or brass, upon which an analemmatic projection is drawn, with a horizon and cursor fitted

so ft. in which the solstitial colure, and all circles parallel to it, are concentric circles; all circles oblique to the eye are ellipses; and all circles, whose planes pass through the eye, straight lines. The use of the instrument is to show the common astronomical problems, which it does very imperfectly.

ANALEPSY, from *αναλαμβάνω*, to recover. A species of epileptic attack, of sudden and frequent occurrence, but not reckoned dangerous.

ANALOGY, Gr. *αναλογία*, of *αναλογος*, according to rule. A certain relation or agreement between things in some circumstances or effects, when the things are otherwise entirely different, and which in reasoning serve to explain or illustrate, but not to demonstrate. Thus, there is an analogy between plants and animals, in so far as both grow and decay. In matters of experience analogy is one of the principal bases of reasoning.

ANALYSIS, Gr. *ἀνάλυσις*, resolution; R. *λύω*, to loosen. 1. Generally, the resolution of something into its constituents: an examination of the different parts of a subject separately, as the propositions of an argument; opposed to *synthesis* or composition.—2. In *mathematics*, the name given to "the method of resolving problems by means of algebraical equations." The analytic method of resolving problems consists in "reasoning upon the whole problem, reducing it at every step to simpler terms, and so coming at last to those considerations which must be put together to make a solution and to verify it." *Analysis* is divided into *finite* and *infinite*, *determinate* and *indeterminate*, and *residual*. The analysis of finite quantities constitutes algebra, and that of infinite quantities constitutes the method of fluxions, or differential calculus. Analysis of powers is evolution.—3. In *chemistry*, the resolution of a compound body to its elements, which is effected by means of heat, mixture, electricity, &c. *Qualitative analysis* consists in the determination of the component parts of a compound merely in respect to their nature, and without reference to their proportions; by quantitative analysis, on the other hand, it is required to determine the relative proportions of the component parts.

ANALYTICS, the method of analysis. A name given to algebra, as being a general analysis of pure mathematics.

ANAMORPHOSIS, from *ανα*, and *μορφοσις*, formation. 1. In *perspective drawing*, a projection or representation, which, under ordinary points of view, appears extravagantly distorted and ridiculous, yet seen from a particular situation, it strikes the eye as one of complete symmetry. The *anamorphosis* is also something restored

by reflection from specula, with certain surfaces as those of cones and cylinders, and by refraction through lenses. Delineations of this sort depend on the simplest rules of mathematics and perspective.—2. In *natural history*, an appearance unusual to the production.

ANANAS (Brazilian), the pine-apple plant. A species of bromelia which is a native of South America, but now grows wild in some parts of Africa and Asia, especially the Malayan Archipelago, where it seems to thrive better than in its native woods.

ANANDROS, from *ἀν*, without, and *ανηρ*, *ανδρως*, a male, a stamen. Plants whose flowers are destitute of stamens; thence called female flowers.

AN'APEST, } from *ανα* and *παῖω*, to beat
AN'APEST, } time. A metrical foot in Greek and Latin, having the two first syllables short and the last long; e. g. *πίπτεδ*. It is a reversed dactyle.

ANAPHRODISIA, from *ἀν*, and *αφροδιτις*. Want of generative power.

ANAPLEOSIS (*αναπληρωσις*). Restoration of parts destroyed, as in the healing of a wound.

ANARRHICH'AS, the sea-wolf, or wolf-fish. A genus of acanthopterygious fish, belonging to Cuvier's family *Gobiodes*. Named from *ανα*, upwards, and *ρως*, to drag, in allusion to its climbing rocks and shoals by aid of its fins and tail.

ANARRHIN'UM, a genus of herbaceous plants of the class *didynamia*, and order *angiospermia*. Named from *ανα* and *ρινος*, the seed vessel being recurved.

AN'AS. The *anas* of Cuvier is a genus of palmipedes, of the family *Lamellirotres*, and which comprises three subgenera: the cygnus (*swan*), the anser (*goose*), and the *ANAS* of Meyer, the *duck*, properly so called, of which there are many species. Name from *αναω*, to swim well.

ANASAR'CA, from *ανα*, between, and *σαρξ*, the flesh. A species of dropsy which consists in a collection of serous fluid in the cellular membrane, immediately under the skin.

ANASTOMA, a subgenus of land-volute shells (*lucernina*), belonging to the genus *lucerna*. Name from *ανα*, upwards, and *στομα*, a mouth.

ANASTOMATIC. See **ANASTOMOTIC**.

ANASTOMO'SE, from *ανα* and *στομα*, the mouth. To inosculate: the term is used of parts, which growing in different directions, meet and grow together, as the veins in leaves.

ANASTOMO'SIS (*αναστομωσις*). Inosculatio: applied to the opening of one vessel into another, as arteries, veins and lymphatics, in the animal body.

ANASTOMO'TIC, applied, 1. In *anatomy*, to those branches of vessels which anastomose with other vessels.—2. In *medicine*, to medicines supposed to have the power of opening the mouths of vessels and promoting circulation, e.g. cathartics.

ANASTROUS, from α , without, and $\alpha\sigma\tau\epsilon\sigma$, a star. *Anastrous signs* are the 12 portions of the ecliptic which the signs anciently possessed (called *duodeca'temoria*), but which are now deserted by reason of the precession of the equinoxes.

ANATA'SE, from $\alpha\nu\alpha\tau\acute{\alpha}\sigma\iota\varsigma$, extension. Pyramidal titanium-ore: a very pure mineral oxide of titanium, called also *octohedrite* and *rutile*.

ANATH'EMA, $\alpha\nu\alpha\theta\epsilon\mu\alpha$, a placing behind. A thing laid by as consecrated or devoted: Hence, 1. In *heathen mythology*, an offering made to some deity and hung up in a temple.—2. In *church affairs*, "excommunication with curses;" hence denunciation by ecclesiastical authority, accompanied by excommunication. A person thus placed under the ban of the church is here said to be *anathematized*.

There are properly two kinds of *anathemas*, the *judiciary* and the *abjulatory*. The former is pronounced by a council, bishops, &c., the latter is the act of a convert, who *anathematizes* (denounces) the religion which he abjures.

ANATIDÆ, the duck family of birds. The genus *anas* is the type.

ANATIFA, the barnacle. A genus of cuneiform multivalve shells, belonging to the class *cirrhopoda*, of Cuvier; often found adhering to rocks, piles, keels of vessels, &c. There are many species. Named from *anas*, a goose, and *fero*, to bring forth, in allusion to the absurd notion once entertained, that the "barnacle-geese" was bred within these shells.

ANATOMY, from $\alpha\nu\alpha\tau\omicron\mu\iota\alpha$ of $\alpha\nu\alpha\tau\iota\mu\omega$, to cut up. The dissection of organised bodies, with a view to elucidate their structure and functions; also the science which treats of the structure of organised bodies, and which is learned by dissection. Anatomy is distinguished into *human* and *comparative*, the one treating of the structure of the human body, the other describing and comparing the structure of other animals. The anatomy of the inferior animals is also sometimes called *zootomy*, and that of vegetables *phytotomy*. The science is also divided into *general* and *descriptive*. The first teaches the structure and physical properties of the various tissues which compose the body, without reference to the form or situation of the organs into whose composition they enter; while descriptive anatomy takes cognizance of the shape, position, and connexion of the parts. When dissections are made for the

purposes of investigating the changes induced in the structure of organs by disease, the operations are called *pathological* or *morbid anatomy*; with a view to surgical operations, they constitute *surgical anatomy*; for the purpose of elucidating the functions of organs, *physiological anatomy*; and finally, to exhibit the plan on which the living frame and its organs are developed, *transcendental anatomy*. The art of making models of wax or of other materials to illustrate the healthy or diseased structure of parts, is sometimes termed *artificial anatomy*.

ANATROPOUS, from $\alpha\nu\alpha\tau\epsilon\iota\sigma\tau\omega$, to invert. A term applied to a very common kind of embryo, produced by one side of the ovule growing upon itself, while the other remains immovable, till that part originally next the apex is brought down to the hilum, as exemplified in the apple.

ANAXIMAN'DRIANS, the followers of Anaximander, the most ancient of philosophical atheists. They admitted of nothing in nature but matter.

ANBAT'KEND, the name of a celebrated book of the Brahmins, wherein the Indian philosophy and religion are contained. The word means literally, the cistern wherein is the water of life.

AN'CEPS, two-edged, having two sharp edges: applied to the stems and leaves of plants.

ANCH'LOTS, $\alpha\nu\chi\lambda\omicron\tau\omega$, from $\alpha\iota\chi$, a goat, and $\omega\tau$, the eye. Goat's-eye, a tumour near the inner angle of the eye. See *ÆGILOTS*.

ANCHOMENUS, a genus of adephagous coleoptera, belonging to the Patellimani of Latreille.

ANCHOR, Lat. *anchora*, from $\alpha\nu\chi\upsilon\rho\alpha$, probably from $\alpha\nu\chi\eta$, a hook. A hooked iron instrument of considerable weight and strength, for enabling a ship to lay hold of the ground and fix itself in a certain situation by means of a rope, called the *cable*. The arms which take hold of the ground are technically called *flukes*; the cross-bar of wood is called the *stock*; the massy iron bar constituting the body of the anchor is called the *shank*; and the flattened points of the flukes are called *palm*s.

Anchors are of different sizes, and have different names, according to the purposes which they serve: as *sheet*, *best bower*, *small bower*, *spare*, *stream*, and *kedg*e anchors. Ships of the first class have usually seven anchors; and smaller vessels, as brigs and schooners, three. The weight in cwts. of the principal anchor, should be a twentieth of the number of tons burden, in ordinary vessels. Thus, a vessel of 1000 tons will require an anchor of 50 cwts. There are many nautical phrases connected

with the anchor: as, the anchor comes home, when it comes from its bed; it is foul, when entangled with another; a-peak, when drawn in so tight as to bring the vessel immediately over it; a-trip, or a-weigh, when just drawn out of the ground in a perpendicular direction. To back an anchor, is to lay down a small anchor a-head of that by which the ship rides, with the cable fastened to the crown of the latter, to prevent its coming home. At anchor, to lie at anchor, to ride at anchor, to cast anchor, to weigh anchor, are well-known phrases.

—2. In architecture, a carving somewhat resembling an anchor, commonly placed as part of the enrichment of boulders.—3. In heraldry, anchors are emblems of hope.

ANCHORAGE, ground suited for holding an anchor, that is, neither too deep, shallow, nor rocky. The best anchorage is land-locked and out of the tide.—2. The duty charged to ships for the use of a harbour where they cast anchor.—3. The anchor and necessary tackle for anchoring are also sometimes called the ship's anchorage.

ANCHORET, } Gr. ἀναχωρητής, from

ANCHORITE, } ἀναχωρεῖν, to retire. A recluse: one who retires into a solitary place to devote himself to religious duties. Also a monk, who with the leave of the abbot retires to live in solitude with an allowance from the monastery. A hermit. Many of the early Christians became anchorites to escape persecution; but this kind of life afterwards became fashionable among religious enthusiasts.

ANCHOR-GROUND, ground suited for anchoring. See ANCHORAGE.

ANCHOVY, a small fish (*clupea encrasiolus*, Linn.), common in the Mediterranean. It closely resembles the sprat, and is chiefly used as a sauce. About 120,000 are consumed in Britain annually.—The name is Span. *anchova*, of uncertain origin. See ENGRAULIS.

ANCHOVY-PEAR, a large esculent fruit of Jamaica; also the tree which bears it, the *grias cauliflora*.

ANCHUSA, the buglos or alkanet. The popular name of a genus of which there are two British species, class pentandria, order monogynia. Named from ἀγκύρωσα, a paint, in reference to the dye obtained from the roots of one species of it. See ALKANET.

ANCHYLO'SIS, from ἀγκυλωσ, to bend. A stiff and bent joint.

ANCIENT, Fr. ancien, old. 1. Substantively in the plural, ancients: those who lived in former ages, opposed to moderns. The term is now commonly applied to the Greeks and Romans.—2. In French history, the council of ancients was one of the

two assemblies which composed the legislative body in 1795. It consisted of 250 members, and derived its name from each of them being at least 40 years of age.—

3. A flag or streamer in a ship of war, probably a corruption of end-sheet, a flag at the stern.

ANCIENT-DOMAIN, } In English law, a
ANTIENT-DEMESNE. } tenure by which all manors belonging to the crown were held in the reign of William the Conqueror. The numbers, names, &c., of these lands were all entered in the record called the domesday-book, as terra regis. The tenure resembles copyhold in some respects.

ANCIENTLY, in old statutes, eldership or seniority.

ANCILLA'RIA, a volute shell, of an oblong subcylindrical form. It belongs to the genus buccinum of Linn., and the family buccinoida of Cuv. The shell is highly polished. Named from ancilla, a maid.

ANCIP'ITAL, Lat. ancipitas. Compressed so as to form two opposite angles or edges: applied to leaves in the same sense as anceps (q. v.).

ANCIPITOUS, from anceps, two-edged. See ANCIPITAL.

AN'CON, Gr. αγκων, the elbow. Sometimes applied to the olecranon or projecting part of the elbow on which we lean. In architecture, the ornaments or consoles cut on the keystones of arches, &c., are termed ancones. The term is also applied to the corners of walls, cross-beams and rafters, and to other projecting parts.

ANCONO'SE, } Lat. anconeus, angular.

ANCO'NOUS, } The anconose muscle (anconeus minor of Winslow), is a small triangular muscle situated in the back part of the elbow, and which assists in extending the forearm.

AN'CONY, probably from ancon (q. v.). In iron works, a piece of half-wrought iron; the middle is of the shape of a bar, but the ends are unwrought.

ANC'LE. In antiquity, a shield, which it was pretended fell from heaven in the reign of Numa Pompilius, at which time likewise a voice was heard to declare that Rome should be mistress of the world, so long as she preserved this holy buckler; it was kept with great care in the Temple of Mars, under the protection of twelve priests. Among surgeons, a contraction or stiffness of a joint; from ἀγκυλος, crooked, or contracted.

ANCYLOME'LE, a curved probe used by surgeons; ἀγκυλος, crooked, and μέλη, a probe.

ANCYLUS, the fresh-water limpet; a genus of river snails. See LIMNACIÆ.

AN'DA, a Brazilian tree, the fruit of which is an oval-shaped nut, containing two seeds, which are strongly cathartic.

ANDALUSITE, a massive mineral, of a flesh-red colour, and vitreous lustre, which takes its name from Andalusia, in Spain, where it was first found. Its chief elements are alumina, silica, and potash, coloured by a minute portion of oxide of iron. It occurs in primitive rocks; chiefly in gneiss in England, Scotland, and Ireland. Mohs places it among the gems.

ANDA'NTE, an Italian term (literally *going*) employed in music to denote a movement moderately slow between *largo* and *allegro*.

AND'NA, in *old writings*, the swath made in mowing of hay; as much ground as a man can stride over at once.

ANDERSO'NIA, the generic name of a tree of New Holland; class *pentandria*, order *monogynia*. Named in honour of Dr. O. Anderson.

ANDI'RA. 1. The name of a species of Brazilian bat, "nearly as large as a pigeon."—2. The generic name of the *cabbage-tree*; a lofty tree which grows in the East and West Indies, and other hot countries: class *diadelphia*, order *decandria*. The bark and seed are used in medicine.

ANDRANAT'OMY, from *ανη*, a man, and *ανατεμνω*, to cut up. The dissection of the human body, particularly of the male.

ANDRENE'Æ, a tribe of hymenoptera, embracing all those genera of bees which live solitarily, and consist of two kinds of individuals, males and females. They correspond with the *andrenæ* of Fabricius, and take their name from the typical genus *andrena*.

ANDROCE'UM, from *ανη*, a male, and *οἶκος*, a house. In *botany* all that part of a flower to which the male organs belong; the male apparatus of a plant.

ANDRO'GINAL, } Gr. *ανδρόγυνος*, from
ANDRO'GINE, } *ανη*, a man, and *γυνη*.

ANDRO'GINOUS, a woman. Having two sexes, or being an hermaphrodite. In *botany*, the term is applied, 1. To flowers which have both male and female organs.—2. To plants which have separate male and female flowers. Such plants constitute the *Monœcious* class in the Linnean system, and have frequently *aments*.

AN'DROID, from *ανη*, a man, and *ιδος*, likeness. In *mechanics*, a figure constructed so as to imitate the actions or motions of man. See *AUTOMATON*.

ANDRO'MEDA. 1. In *astronomy*, a constellation of the northern hemisphere, behind Pegasus, Cassiopeia, and Perseus, representing a woman chained. It is fabled to have been formed in memory of Andromeda, daughter of Cepheus and Cassiopeia, and wife of Perseus, whom her father chained to a rock, and left ex-

posed to a sea-monster.—2. In *botany*, the *March cistus*: a genus of the class *decandria*, and order *monogynia*, of which there is one British species. This beautiful tribe of plants takes its name likewise from the fable of Andromeda, being found in dreary and northern wastes, feigned to be the abodes of hobgoblins and monsters.

AN'DRON, in *Grecian antiquity*, an apartment for the use of men; hence, among *ecclesiastical writers*, the southern side of a church, which was anciently appropriated to the men; the northern being appointed for the women. Among the Greeks and Romans, the *andron* was always in the lower part of the house, and the *gynœcea* or women's apartments in the upper.

ANDROPETALOUS, from *ανη*, a male, and *πτελον*, a petal. A term used in botany to describe double flowers, which are produced by the conversion of the stamens into petals, as is exemplified in most double flowers.

ANDRO'PHORON, } from *ανη*, a male, a
ANDRO'PHORUM, } stamen, and *φειν*, to bear. The columnar expansion in the centre of some flowers on which the stamens seem to grow, as in the passion-flower.

ANDROPO'GEON, a genus of plants; *man's-beard*, from *ανη*, a man, and *παγων*, a beard. Class *polygamia*, order *monœcia*. There are many species, all natives of warm climates; two of them are known to physicians under the names of Indian nard and camel's-hay, or sweet-rush.

ANDRO'TOMY. See *ANDRANATOMY*.

ANDRUM, a kind of elephantiasis of the scrotum, which is epidemic in the south of Asia, particularly Malabar. The root of the word is Indian.

ANDRY'ALA, the downy sow-thistle, a genus of exotics. Class *syngenesia*, order *polygamia æqualis*.

ANELECTRIC, non-electric; from *α*, not, and *ηλεκτρον*, electricity.

ANEM'IA, a genus of cryptogamous plants of the order *filices*. There are five species, all perennials, and natives of the West Indies and South America. Named from *ανεμος*, the wind.

ANEMO'LOGY, from *ανεμος*, the wind, and *λογος*, discourse. The doctrine of the winds, or a treatise on the subject of aerial currents.

ANEMO'METER, from *ανεμος*, the wind, and *μετρον*, measure. A machine or instrument for measuring the force or velocity of the wind: called also a *wind-gage* (q.v.) An instrument of this sort was first invented by Wolfius.

ANEMONE, the *wind-flower*, a genus of

the class *polyandria* and order *polygynia*. There are four British, and 24 foreign species, all perennials. Named from *ἀνέμος*, the wind, because the flower is said not to open till blown upon by the wind. From the beauty of the flower it is fabled that Venus changed her Adonis into an *anemone*.

ANEMO'NIA, } an acid crystallisable and
ANEMO'NIN, } inflammable substance,
obtained from some species of *anemone*.

ANEMOSCO'PE, from *ἀνέμος*, the wind, and *σκοπεῖν*, to view. Properly, a machine for showing from what point of the compass the wind blows; but the term is oftener used as synonymous with *anemometer* (q.v.) The common weathercock is strictly an anemoscope.

ANEPITHY'MIA, loss of any natural appetites, as that for food and drink: from *α*, without, and *ἐπιθυμία*, desire.

AN'E'SIS, in medicine, remission or diminution of symptoms; from *ἀνιημι*, to remit.

ANETH'UM, the herbs *dill* and *fennel*; the name of a genus of the class *pentandria*, and order *dygynia*. Named *ἀνθον*, *quod citò crescat* (Pliny, 20, 18). The fennel, *A. feniculum*, grows plentifully on the chalky cliffs in England; its seeds are carminative.

AN'EURISM, Gr. *ανευρισμα*, from *ανυγναι*, to dilate. "The term signifies strictly a tumour arising from the dilatation of an artery; but it has been extended to several diseases and lesions of the blood-vessels, and to dilatations of the heart."

ANFRAC'TUOS'ITY (*supra*), an involution of parts.

ANFRAC'TUOUS, Lat. *anfractus*, a winding backwards and forwards. A term most commonly used in botany, to signify that the marginal parts are folded back, and doubled and bent until all trace of the normal character is lost.

ANGEL, 1. literally a messenger, from *αγγελος*, one employed to communicate information, from *αγγελλω*, to announce; hence, in *scripture*, a spiritual intelligence employed by God to execute his will.—

2. The name of a gold coin formerly current in England bearing the supposed figure of an angel. This coin had different values in different reigns; e.g. 6s. 8d. in the reign of Edward VI.; 7s. 6d. in 1st Henry VIII., and 8s. in 34th Henry VIII.; 10s. in the reigns of Mary and Elizabeth. The angel was first struck in commemoration of a saying of Pope Gregory, that the English, whom he denominated pagan Angli, were so beautiful, that if they were Christians they would be angels.—3. The order of the *Golden Angel* was an ancient order of knighthood, said to have been instituted by Constantine, but

more probably by the imperial house of Comnenus of Constantinople. The order was revived by Charles V. It is the same as that known as the orders of St. George and of St. Constantine.—4. Angel is also the popular name of a genus of fishes (*chatodon*, Lin.) remarkable for their beautiful colours. See CHATODON.

ANGEL'ICA, a genus of aromatic plants of the class *pentandria* and order *dygynia*, named *angelic*, from the cordial and medicinal properties of some of its species.

ANGELICÆ, the name given by Decandolle to a tribe of umbelliferous plants, of which the genus *angelica* is the type.

ANGELICS, *angelici*, in church history, an ancient sect of heretics, who maintained that the world was created by angels, also a congregation of nuns founded at Milan, in 1534, by Louisa Torelli, Countess of Guastalla. *Angelica* is also the name of an order of knights instituted in 1191, by Angelus Flavius Comnenus, emperor of Constantinople, probably the same as the order of the golden angel. See ANGEL (3).

ANGELITES, in church history, a sect so called from Angelicum, in Alexandria, where they held their first meetings. They are also called *Severites*, from Severus, their head; and *Theodosians*, from one Theodosius, whom they made their pope.

ANGELOT. 1. A musical instrument somewhat resembling a flute; so called from Fr. *auche*, the reed of a hautboy or other musical instrument.—

2. An ancient gold coin, struck at Paris while under the dominion of England; so called from its being the figure of an angel, supporting the scutcheon of the arms of England and France.—3. A small rich sort of cheese, made in Normandy: supposed to be so called from the name of the person who first made it, or from its resemblance to the form of the coin *angelot*.

ANGEL-SHOT, from Fr. *ange*, a chain-shot. A sort of chain-shot having two halves of a cannon-ball fastened to the ends of a chain.

ANGEL-WATER, a mixture of rose, orange-flower, and myrtle water, perfumed with ambergris. It is made in Portugal.

ANGINA, Lat. from *ango*, to strangle. A general name for diseases called *sore throat*, and which are attended with difficult deglutition and respiration, as quinsy, mumps, croup. That peculiar affection of the chest called *suffocative breast-pang* is also named by physicians *angina pectoris*.

ANGIOCAR'POUS, from *αγγισιον*, a case, and *καρπος*, fruit. A term applied in botany to seed-vessels which are enclosed in a covering that does not form part of them—

selves. The filbert in its husk, and the acorn in its capsule, are examples of angiocarpous fruits.

ANGIOGRAPHY, from *αγγιον*, a vessel, and *γραφω*, to describe. A description of the vessels of the human body.

ANGIOLOGY, from *αγγιον*, a vessel, and *λογος*, discourse. The doctrine of the blood-vessels and absorbents of the body.

ANGIOMONOSPERMOUS, from *αγγιον*, a vessel, *μονος*, one, and *σπερμα*, seed. Applied to plants which produce only one seed in a pod.

ANGIOSPERMIA, the name given by Linnaeus to an order of plants of the class *didynamia*, which have their seeds inclosed in a pericarp or seed-vessel.

ANGIOSTOMA, "a family of univalve shells of the order *siphono-brachiata*." Name, from *αγγιον*, a vessel, and *στομα*, a mouth.

ANGIOTOMY, from *αγγιον*, a vessel, and *τομω*, to cut. The analogy of the sanguiferous and absorbent vessels of the body. The word has been confounded with *arteriotomy* and *phlebotomy*.

ANGLE, Lat. *angulus*, a corner, from *αγγυλος*, a bend. In plane geometry,

when two straight lines, not lying in the same direction, as AB and AD, meet in a point as at A, the opening between them is called an *angle*. Thus, the opening commencing at A is called the angle BAD, or DAB; and the lines AB and AD are called its *sides* or *legs*. When the legs of the angle intercept less than the fourth part of a circle drawn round the point A, the angle is said to be *acute*. When exactly a fourth of the circle is similarly intercepted, the angle is called a *right angle*; but when more is intercepted, the angle is *obtuse*. Thus, BD is less than the fourth; BC exactly a fourth; and BE more than a fourth: therefore, the angle BAD is an *acute angle*; the angle BAC is a *right angle*; and the angle BAE is an *obtuse angle*. And as all circles are supposed to be divided into 360°, an acute angle will contain less than 90°; a right angle, 90°; and an obtuse angle, more than 90°. The number of degrees which an angle wants of 90°, or of being a right angle, is called its *complement*; and the number of degrees which

it wants of being equal to two right angles, or 180°, is called its *supplement*. Thus, the angle CAD is the complement of the angle DAB, or these angles are complements of each other; and are also called *contiguous* or *adjacent angles*, because one leg, AD, is common to both.—A *solid angle* is "formed by the meeting of two plane angles, which are not in the same plane, in one point."—*Euclid*. Solid angles do not, like other subjects of geometrical investigation, admit of accurate comparison with one another, as no multiples of them can be taken; and therefore all reasoning regarding them must be confined to the plane angles by which they are bounded.—A *spherical angle* is an angle made on a sphere by the intersection of two great circles, or by the inclination of the planes of these circles to each other.

—*Facial angle*, in zoology, signifies the angle formed by the intersection of a line drawn from the most prominent part of the frontal bone over the anterior margin of the upper jaw, with another line drawn from the external orifice of the ear-passage along the floor of the nasal cavity.—The *frontal angle*, in ornithology, is the angle which the upper line of the beak makes with the forehead.

ANGLE OF DRAUGHT. When a power is applied to drag or roll a body over a plane surface, it has to overcome two obstacles: one is the friction of the surface over which the body moves, and the other the weight of the body itself. There is, in every case, a certain direction of the drawing power which is best adapted to overcome these combined obstacles; and the angle made by the line of direction with a line upon the plane over which the body is drawn, and perpendicular to that line of direction, is termed the *angle of draught*.

ANGLE OF INCIDENCE. See REFLECTION.

ANGLE OF REFRACTION. See REFRACTION.

ANGLE OF VISION, the angle formed by two rays of light proceeding from different objects, or opposite extremities of the same object: called also the *visual angle* and the *optic angle*.

ANGLER, one who fishes with an *angle*, or hook attached to a line. Also the popular name of a singular fish, known also by the name of the *fishing-frog*, from the resemblance which it has to the frog in the tadpole state.

ANGLICAN, pertaining to England or the English nation; e.g. the *Anglican church*. The word is the adjective of *Anglia*. A tribe of Saxons, called *Angles*, who, being employed by the Britons against the Scots and Picts, ultimately turned upon and conquered their employers, and gave the name of *Anglia* to England. The Angles were the *Ingevones* of Tacitus.

ANGLO-DANISH, pertaining to the An-

glican Danes, or Danes who settled in England (*Anglia*).

ANGLO-NORMAN, pertaining to the Normans who settled in England.

ANGLO-SAXON, pertaining to the *Angles*, or tribe of Saxons that settled in England. See ANGLICAN.

AN'GON, the javelin of the ancient French, the iron head of which resembled a fleur-de-luce.

AN'GOR, Lat. from *ango*, to strangle. In *pathology*, a feeling of anxiety, and constriction in the præcordial region: it is an accompaniment of many severe diseases.

ANGU, bread made of the cassava, a plant of the West Indies.

ANGUINA, a family of serpents having an osseous head, teeth, and tongue, and eyes furnished with three lids. They are all comprised in the genus *anguis* of Linnæus (whence their family name), and belong to the order *ophidia* of Cuvier.

ANGUIS, a genus of serpents (Linnæus) composing the family *anguina* of Cuvier, and now subdivided into *pseudopus*, *ophisaurus*, *anguis proper*, and *acantias*. They are all characterised by having subcaudal and abdominal imbricated scales. The slow-worm (*A. fragilis*) is an example.

ANGULAR, relating to angles. *Angular motion* is the motion of a body about a fixed point, which is measured by the angle described at the centre by lines drawn from its positions at different points of its circular path. By *Angular section* is meant, in the old geometry, the division of an angle into any number of equal parts. The bisection only of an angle is possible by plane geometry; the trisection of an angle requires the aid of solid geometry, and the general division of an angle into any proposed number of equal parts is a problem which has not as yet been solved. *Angular sections*, in modern mathematics, is the name used to denote a branch of analysis, which is employed in the investigation of the properties of circular functions.

ANGULATE, angled; applied to stems, leaves, petioles, &c., which are of an angular shape.

ANGUS'TATE, Lat. *angustatus*, beginning with a narrow base and growing broader; tapered downwards, or towards the base.

ANGUS'TICLAVE, from Lat. *angustus*, narrow, and *clavus*, a knob. A robe or tunic worn by the Roman knights; it was embroidered with narrow purple knobs, or studs, whereas the *latidlave* worn by the senators had broad studs.

ANGUSTIFOLIATE, narrow-leaved; *angustus*, narrow, and *folium*, a leaf.

ANGUS'TURA, bark; a medicinal bark (of the *Bonplandia trifoliata*); is so called because brought from Angustura, in South America. It is occasionally used as a tonic, and in diarrhœa. *Spurious angus-*

tura is a poisonous bark, sometimes found in commerce; it is obtained from a species of *strychnos*.

ANHELATION, from *anhelo*, to breathe with difficulty. Difficult respiration, with a sense of suffocation. See DYSPNŒA.

ANHÍ'MA, an aquatic fowl of Brazil, somewhat like a crane. It is said that when the male or female dies, the living one remains by the carcass till it also expires.

ANHYDRITE, anhydrous gypsum. A variety of sulphate of lime containing no water of crystallisation. It is also called *prismatic gypsum*.

ANHYDROUS, from *an*, priv., and *ūdang*, water. Containing no water in combination. Anhydro is a contraction of this word; e.g. anhydro-sulphuric acid.

ANIL, one of the indigo plants (*indigofera*). *Anil* is the Spanish and Portuguese word for indigo, perhaps from Arabic *nila* blue. The plant is a native of America.

ANILLE'ROS, in *history*, the name given to the moderate party during the Spanish revolution of 1820-23. They directed the Cortes, and were headed by Arguelles and Martínez de la Rosa.

ANIMAL, an organised and living body, endowed with sensation and the power of voluntary movement, in whole or in part. Locomotion, although a general characteristic, is not an essential attribute of animality. There are numerous animals as permanently fixed to their native rocks and coral reefs, as the most deep-rooted plants are to the soil on which they grow. The word *animal* is Latin, from *anima*, air, breath, soul.

ANIMAL KINGDOM. The ANIMAL KINGDOM is arranged into four divisions. Division I. *Vertebral Animals*, so called from their possessing a vertebral column, or spine.—Division II. *Molluscous Animals*, such as shell-fish, which are of a *soft* structure, and without a skeleton, from *mollis*, soft.—Division III. *Articulated Animals*, such as the worm, or insect, which are also without a skeleton; but whose skins or coverings are divided and jointed; from *articulus*, a small joint.—Division IV. *Zoophytes*, animals believed to be composed very nearly of a homogeneous pulp, which is moveable and sensible, and resembles the form of a plant; from *ζωον*, a living creature, and *φυτον*, a plant.

DIVISION I.

Vertebral Animals are composed of four classes: viz., 1. *Mammalia*, animals which suckle their young; from *mamma*, a teat; 2. *Aves*, from *avis*, a bird; *Reptilia*, animals that crawl, from *repto*, to creep; 4. *Pisces*, from *pisces*, a fish.

The FIRST CLASS, *Mammalia*, is again divided into orders, which are subdivided

into genera, and these are further divided into species. The following familiar examples will illustrate the principal orders: 1. *Bimana*, two-handed, from *bis*, double, and *manus* a hand. Of this order man is the type and sole genus.—2. *Quadrumanus*, four-handed, from *quatuor*, four, and *manus*. Apes, baboons, lemures, and the *loris tardigradus*, are of this character.—3. *Cheiroptera*, from *χειρ*, hand, and *πτερον*, wing. These have their hands so modified, as to serve the office of wings. Of this order the common bat may be considered the type.—4. *Insectivora*, from *insecta*, insect, and *vor*, I devour. Animals which live wholly or chiefly on insects, as the hedgehog, shrew, mole, &c.—5. *Plantigrade*, from *planta*, the sole of the foot, and *gradior*, I walk. These are generally carnivorous animals, as the bear, racoon, &c.—6. *Digitigrade*, from *digitus*, the finger, or toe, and *gradior*; so called from walking on the extremities of their digits, as the lion, wolf, dog, &c.—7. *Amphibia*, from *αμφι*, both, and *βιος*, life; having the faculty of existing both in water and on land, as the walrus, seal, &c.—8. *Marsupialia*, from *marsupium*, a pouch. The females of this order have a bag, or pouch, underneath the belly, in which they deposit their young after parturition, as the kangaroo and opossum.—9. *Rodentia*, from *rodo*, I gnaw, so called from having two long incisors in each jaw, and no canine teeth, as the squirrel, rat, beaver, hare, &c.—10. *Edentata*, from *edentulus*, toothless; i. e. animals without the front teeth, as the ai, unau, armadillo, ant-eater, &c.—11. *Pachydermata*, from *παχυ*, thick, and *δερμα*, skin; i. e. *thick-skinned*, as the rhinoceros, elephant, mammoth, horse, &c.—12. *Ruminantia*, from *ruminatio*, chewing the cud, as the camel, deer, cow, goat, sheep.—13. *Cetacea*, from *cetus*, a whale. To this order belong the dolphin, whale, dugong, &c.

SECOND CLASS.—*Aves*, or *Birds*.—1. *Accipitres*, from *accipiter*, a hawk; such as the vulture, eagle, hawk, &c.—2. *Passeres*, from *passer*, a sparrow; those which neither manifest the violence of birds of prey, nor the fixed regimen of terrestrial birds, but feed indiscriminately on insects, fruit, or grain, as the lark, thrush, swallow, crow, wren, &c.—3. *Scansores*, from *scando*, I climb; i. e. climbing birds, which have the toes arranged in pairs; two before and two behind, as the parrot, woodpecker, toucan.—4. *Gallinæ*, from *gallina*, a hen. This order is sometimes called *rasores*, scratchers, being provided with strong feet, and obtuse claws for scratching up grains, as the peacock, pheasant, pigeon, hen.—5. *Grallæ*, from *grallæ* stilts. i. e. long-legged, as the

ostrich, stork, ibis, flamingo.—6. *Palmpedes*, from *palmæ*, the palm of the hand, and *pes*, foot; i. e. swimming birds, as the swan, goose, pelican, gull, &c.

THIRD CLASS.—*Reptiles*.—1. *Chelonia*, from *χελύς*, a tortoise, including terrapenes and turtles.—2. *Sauria*, from *σαυρα*, a lizard, an order which have their mouths well armed with teeth, and their toes generally furnished with claws, as the crocodile, alligator,ameleon, dragon, &c. The most gigantic of this species have been long extinct.—3. *Ophidia*, from *οφίς*, a serpent, as the boa, viper, &c.—4. *Batrachia*, from *βατραχος*, a frog. To this order belong the salamander, proteus, &c.

FOURTH CLASS.—*Fishes*.—1. *Chondropterygii*, from *χονδος*, gristle, and *πτερυξ*, the ray of a fin: as the sturgeon, shark, lamprey, &c.—2. *Plectognathi*, from *πλεκω*, I join, and *γναθος*, the jaw: as the sun-fish, trunk-fish, &c.—3. *Lophobranchi*, from *λοφος*, a loop, and *βραγχια*, the gills, as the pipe-fish, pegasus, &c.—4. *Malacopterygii*, from *μαλακος*, soft, and *πτερυξ*: as the salmon, trout, cod, herring, &c.—5. *Acanthopterygii*, from *ακανθα*, a thorn, and *πτερυξ*: as the perch, sword-fish, mackerel, &c.

DIVISION II.—*Molluscous Animals*.

1st Class. *Cephalopoda*, from *κεφαλή*, the head, and *ποδα*, feet, i. e. animals which have their organs of motion arranged round their heads. This class includes sepia, or cuttle-fish, argonauts, the nautilus, ammonite, an extinct cephalopode which inhabited a shell resembling that of the nautilus, coiled like the horns of a ram, or of the statues of Jupiter Ammon, whence the name; belemnites also extinct, of which the shell was long, straight, and conical; nummulites, likewise extinct: whole chains of rocks are formed of its shells, and the pyramids of Egypt are built of these rocks: so called, from *nummus*, a coin.—2nd Class. *Pteropoda*, from *πτερον*, a wing, and *ποδα*, feet: those having fins resembling wings on each side of the mouth: the *cilio borealis*, which abounds in the north seas, and is the principal food of the whale.—3rd Class. *Gasteropoda*, from *γαστρις*, the stomach, and *ποδα*: animals which move by means of a fleshy apparatus placed under the belly, as the snail, slug, limpet.—4th Class. *Acephala*, from *α*, without, and *κεφαλή*, head: as molluscous animals that have no head, viz., the oyster, muscle.—5th Class. *Brachiopoda*, from *βραχιον*, arm, and *ποδα*: animals which move by means of processes resembling arms, as the lingula,

terebratula, &c.—6th Class. Cirrhopoda, from *cirrus*, a tuft of hair, and *ποδ*: animals which are commonly called barnacles and acorn-shells, as the balanus, anatifera, &c.

DIVISION III.—Articulata.

1st Class. Annelides or vermes, from *annellus*, a small ring, and *vermis*, a worm. Animals having a long cylindrical body divided into ring-like segments, as the leech, sea-mouse, earth-worm, and sand-worm; worms which cover themselves by means of a slimy secretion that exudes from their surfaces, with a case of small shells and pebbles, like the caddis-worm, or with sand and mud.—2nd Class. Crustacea, from *crusta*, a hard covering. Animals which have a shelly crust covering their bodies, as crabs, shrimps, lobsters, &c.—3rd Class. Arachnida, from *αράχνη*, a spider; as spiders, the leaping spider, the scorpion spider, the mite, &c.—4th Class. Insecta, insects. This class is divided into insects without wings, *aptera*, and those which have them; and these are again subdivided, according to the peculiarities of their wings. (1.) Apteræ, from *α*, without, and *πτερον*, wing: as centipedes, the louse, flea, &c. (2.) Coleoptera, from *κολλας*, a sheath or scabbard, and *πτερον*: insects which have their wings protected by a cover: as the beetle, corn-weevil, &c. (3.) Orthoptera, from *ορθος*, straight: as the locust, grasshopper. (4.) Hemiptera, from *ήμισυ*, half: insects which have one-half of their wings thick and coriaceous, and the other membranous: as the bug, tick, fire-fly. (5.) Neuroptera, from *νευρον*, a nerve: as the dragon-fly, ant-lion, ephemera. (6.) Hymenoptera, from *ήμεν*, a membrane: as the bee, wasp, ant. (7.) Lepidoptera, from *λεπτις*, a scale: as the moth, butterfly. (8.) Rhipiptera, from *ρηπις*, a fan: as the xenos, stylops. (9.) Diptera, from *δις*, double: as the house-fly, gnat.

DIVISION IV.—Zoophytes.

Echinodermata, from *εχινος*, a hedgehog, and *δερμα*, the skin: as the star-fish, sea-urchin.—Entozoa, from *εντος*, within, and *ζωον*, an animal: as the *tænia hydatia*.—Acalephæ, from *ακαληφη*, a nettle: as the medusa, polypi, tubipora, sertularia, cellularia, fustra, coralline, sponge.—Infusoria, from *infundo*, I pour in: as monas, vibrio, proteus.

ANIMALCULE, literally a little animal. This name is applied by naturalists to those minute beings which become apparent only by aid of the microscope. They are hence called *microscopic animals* by some; and as numerous species are developed through the medium of infused

substances, they are very commonly called *infusoria*, and under this name Cuvier places them in his fourth great division: the radiated or zoophitical animals.

ANIMAL-FLOWER, an absurd name given to several species of animals of the genus actinia, but especially the *urtica marina*, or the sea-nettle and the sea-anemone.

ANIMALIZATION, endowing with properties peculiar to animals; e. g. the process by which the nutritive part of the food is converted into the various substances which compose the body. *Animal substances* are the products of animal bodies, chemically considered, which are chiefly characterised by the presence of nitrogen usually combined with carbon, hydrogen, and oxygen.

AN'IME (Fr.). In heraldry, a term used to denote that the eyes of a rapacious creature are borne of a different tincture from the creature itself.

AN'IME (Sp.). A transparent amber-coloured resin, exuded from the trunk of a large American tree, called by the Indians *courbaril*—a species of *Hymenæa*. It is sometimes called *gum-anim*.

ANION, from *άνω*, upwards, and *ειμι*, to go. A substance which in electrolysis passes to the anode. See ELECTRODE.

ANISOB'ROTUS, from *ανισος*, unequal, and *βρῦον*, to grow. A term applied to monocotyledonous plants, which having only one cotyledon, grow at first with more force on one side of their axis than on the other.

ANISODAC'TYLE, } Gr. *ανισος*, unequal,
ANISODAC'TYLES, } and *δακτυλος*, a toe.
The term given by Temminck to an order of birds, the toes of which are of unequal length, as in the nuthatch.

ANISODY'NAMOUS, from *ανισος*, unequal, and *δυναμις*, power. A term applied in botany in the same sense as anisobryous (q. v.).

ANISOSTEM'ONOUS, from *ανισος*, unequal, and *στημων*, a stamen. A term applied in botany when the stamens in a flower neither correspond with the calyx nor corolla in number or power; e. g. when a flower having five sepals has three or seven stamens: in such case the stamens are neither equal to the number of sepals nor to any power of their number.

ANISO'STOMUS, from *ανισος*, unequal, and *στομα*, a mouth. A term sometimes used to denote that the divisions of a calyx or a corolla are unequal.

ANISOTOM'IDE, Gr. *ανισος*, unequal, and *τεμνω*, to cut. The name of a family of coleopterous insects, having moniliform antennæ, subelongate, slender at the base, and gradually increasing towards the apex with a terminal club-shaped mul-

articulate joint. The family includes eight genera: tritoma, phalacrus, ephisyomus, leiodes, agathidium, clamibus, elypester, and sericoderus. Many of the species are British.

ANNATS, from *annus*, a year. A year's income of a spiritual living, originally given to the pope on the death of an incumbent, and paid by the successor. At the Reformation the annats were vested in the king, but were restored by Queen Anne to the church, and appropriated to the augmentation of poor livings.—2. Masses said in the Romish church for the course of a year.

ANNE. The order of *St. Anne* is a Russian order of knighthood, which originated in Holstein, and was carried by the princes of that country into Russia. It became a Russian order in 1796.

ANNEALING, from *Sax. anealan*, to heat. A process by which glass is rendered less frangible; and metals which have become brittle, either in consequence of fusion or long continued hammering, are again rendered malleable. The process consists in bringing the material to be annealed to a high heat, and allowing it to cool gradually: it is frequently called *nealing* by the workmen.

ANNELIDA, } the class of sea-worms
ANNELIDES, } having the joints of their bodies, like the common earth-worm, disposed in rings, and having red blood. They constitute the first class of *articulata* in the system of Linnaeus. Name, from *annelus*, a little ring, and *udos*, like.

ANNO DOMINI [Lat.] In the year of our Lord; noting the time from Christ's incarnation, as *Anno Domini* 1844, contracted A.D. 1844.

ANNO'NA, the custard-apple. A genus of many species, mostly natives of America and the West Indies. Class *polyandria*, order *polygynia*.

ANNOTTA, } a species of red dye, formed
ANNOTTO, } of the pulp which surrounds the seeds of the *Bixa orellana*, a plant common in South America. It is employed in colouring cheese, and, in dyeing, to give an orange tint to simple yellows.

ANNUITY, from *annus*, a year. A periodical payment of a specified sum of money at particular dates agreed upon, to be continued either for a definite period, as ten, fifty, &c. years, in which case it is called an *annuity certain*; or for an indeterminate time, dependent upon some contingency, as the death of a person, in which case it is a *contingent annuity*; or for an indefinite period, in which case the annuity is said to be *perpetual*. A *deferred annuity* is one to commence after a certain number of years: if after the death of a person now living, it is a *reversionary annuity*. When the annuity is limited by the duration of a given life, it is termed a

life annuity; when it is to continue only for a term of years, provided a certain life or lives continue, it is a *temporary life annuity*. The present value of an annuity is that sum which, being improved at compound interest, will be sufficient to pay the annuity.

ANNULA'RIA, a species of phalæna, of the geometra section.

ANNULA'TA, the first class of *articulata*, according to Cuvier, comprehending all red-blooded worms. The body is usually soft, more or less elongated, and divided frequently into a considerable number of segments, whence the name *annulata*, from *annulatus*. They nearly all inhabit the water, the lumbrici or earth-worms excepted. Several penetrate into holes at the bottom; others construct tubes with the ooze or other matter.

AN'NULATE, Lat. *annulatus*. Formed or divided into rings, or marked with distinct annulations, or surrounded with rings.

AN'NULET, from Lat. *annulus*, a ring. In *architecture*, 1. A small square member in the Doric capital, under the quarter-round.—2. A narrow flat moulding which is common to many places, as the bases and capitals; called also a *fillet*, a *listil*, a *cincture*, or a *list*, *timea*, *eye-brow*, or *square-rabbit*. In *heraldry*, a little circle borne as a charge in coats of arms; formerly regarded as a mark of nobility and jurisdiction, it being the custom of prelates to receive their investiture *per baculum et annulum*, by staff and ring. It is also an emblem of strength and eternity.

ANNULO'SA, from Lat. *annulus*, a ring, segment. A division of the animal kingdom in some systems, containing the five classes *crustacea*, *myriopoda*, *arachnida*, *insecta*, and *vermes*. In the arrangement adopted by Macleay, the annulosa comprehend only the classes *insecta*, *arachnida*, and *crustacea*.

ANNULOSE, furnished with, or composed of, rings (*annuli*).

AN'NULUS, a Lat. word for *ring*, used chiefly in botany in that sense, but with considerable latitude.

ANNUN'CIATION, order of the Annunciada, Annunciata, Annuntiada. An order of knighthood in Savoy, instituted by Amadeus III., in 1335, but named *annunciata* by Amadeus VIII.

ANNUN'CIATION. 1. The tidings brought by the angel Gabriel to the virgin Mary, of the incarnation of Christ.

—2. A festival kept by the church of Rome on the 25th of March, in commemoration of those tidings; called also *Lady-day*.—3. The Jews give the name to a part of the ceremony of the passover.

ANO'BIVM, a sub-genus of *ptini* (see *PTINUS*). Name, from *ανωβιον*, resuscitated, the species being characterised, in

common with most of their congeners, by their frequent simulation of death, and their reassumption of activity as soon as the threatened danger is over. Several species inhabit the interior of houses, where they attack the timbers, furniture, books, &c., and pierce little round holes, resembling those made by a very small gimlet. When much pierced the article is popularly said to be *worm-eaten*. The sexes frequently summon each other by reiterated and rapid strokes of their mandibles against the wood they inhabit, and mutually answer the signal. These signals constitute that noise resembling the accelerated tick of a watch, so often superstitiously listened to as "the death-watch."

AN'ODE, from ἀνά, up, and ὁδός, a way. The way which the sun rises; the surface at which electricity passes into a body, supposing the current to move in the opposite direction of the sun: opposed to *cathode*.

AN'ODON, } the fresh-water muscle. A
ANODON'TA, } genus of mollusca belong-
ANODON'TEA, } ing to Cuvier's second
family of testaceous acephala, *mytilacea*, or muscles. Character, doubly-winged, no lamellar or other teeth, whence the name, α, without, and ὀδόντα, teeth, ὁδός a tooth.—2. The name has also been applied to a genus of serpents which have the teeth very minute: the *A. typus*, a South African species, answers to the *coluber scaber* of Linnæus.

AN'O'LI, the vernacular name in the Antilles of a species of lizard, to which the generic name *anolis* (q.v.) is applied.

AN'O'LS, the name of an inguanoid genus of lizards, all the species of which are natives of the warmer parts of America, and are remarkable for agility, beauty, and brilliancy of their colours, and their power of inflating the skin of the throat. The typical species is the *anolis* of the Antilles.

ANOM'ALIPED, any fowl whose middle toe is united to the exterior by three phalanges, and to the interior by one only; from ἀνώμαλος, anomalous, and πούς, foot.

ANOMALIS'TIC, } from ἀνώμαλιστα, in-
ANOMALIS'TICAL, } quality, irregular. In astronomy, the *anomalistie year* is the time in which the earth passes through her orbit, otherwise called the *periodical year*. It is longer than the tropical year by 25 minutes, on account of the precession of the equinoxes. See APSIDES.

ANOM'ALY, ἀνώμαλεια, irregularity, deviation from law. In astronomy, an irregularity in the motion of the planets, whereby they deviate from their perihelion, which is owing to their unequal velocity. There are three anomalies; the

true, the mean, and the eccentric.—2. In grammar, an exception to a general rule.—3. In music, a false scale or interval.

ANOM'EANS, } the name by which the
ANO'MEANS, } pure Arians were called in the fourth century, in contradistinction to the Semi-Arians: from ἀνόμοιος, different, because they maintained that the Son was in no respects like the Father.

ANOMORHOMBO'ID, } from ἀνόμοιος, ir-
ANOMORHOMBOIDA, } regular, and ρομβοειδής, rhomboid-
ANOMORHOMBOIDIA, } dal.

A genus of pellucid, crystalline spars of no determinate external figure, but always fracturing into regularly rhomboidal masses. There are five known species, all white, and possessing in some degree the double refraction of Iceland spar.

ANONA'CEÆ, an extensive natural order of evergreen, exogenous plants, trees, and shrubs, whose fruit is sometimes edible; as the annona, the type of the order.

ANOPLO'THERE, } from ἀνοπλος, un-
ANOPLOTHERIUM, } armed, and θηρίον,

a wild beast. The name given by Cuvier to a genus of fossil quadrupeds, which presents many affinities with the various tribes of the pachydermata, and approximates in some respects to the order of the ruminantia. The bones of this extinct genus have hitherto been only found in the gypsum quarries near Paris. Five species are ascertained; the largest appears to have been of the size of a dwarf ass, with a thick tail, equal in length to its body, probably to assist the animal in swimming.

ANOR'MAL, commonly written *abnormal*, irregular; from *ab* and *norma*, law. Opposed to *normal*.

ANOR'THITE, a variety of felspar, distinguished by the absence of right angles in its fracture: whence its name.

ANOS'TOMA, from άνω, upwards, and στομα, a mouth. A genus of air-breathing gastropods, named from the peculiarity of the adult shell, that the last whorl turns upwards towards the spire of the shell.

ANOU'RA, } from α, without, and ουρα,
ANOU'RANS, } tail. The name of a tribe of Batrachian reptiles which lose the tail on arriving at maturity. The toad and frog are well-known examples.

AN'SÆ, plural of *ansa*, a handle. In astronomy, the parts of Saturn's ring projecting beyond the disc of the planet, like handles to the body of the planet.

AN'SERES, the third order of *aves*, in the system of Linnæus: the *anser*, or goose, is the type. See NATATORES.

ANT, contracted from SAX. æniet, an emmet. A tribe of insects, celebrated

from time immemorial for their provident habits, and, in some countries, for their depredations. The species are numerous, and constitute a family of aculeate hymenoptera, to which Cuvier gives the name of *Heterogyna*, the most celebrated genus of which is the *Formica* of Linnaeus. Gould describes five species of English ants: viz.—(1.) *Formica rufa*, Lin., the hill ant; (2.) *Formica fuliginosa*, Latr., the jet ant; (3.) *Myrmica rubra*, Latr., *Formica*, Lin., the red ant; (4.) *Formica flava*, Latr., the common yellow ant; and, (5.) *Formica fusca*, Lin., the common yellow ant. The larvæ and nymphs are vulgarly called *ant-eggs*.

ANTA (plural **ANTÆ**, Lat. from *ante*, before. In *architecture*, a pilaster or square projection attached to a wall. When detached from the wall, antæ are termed *parastatæ* by Vitruvius.

ANTA'CID, from *ἄντι*, against, and *acid*. Applied to medicines which neutralise acidity of the stomach.

ANT-BEAR, } This name is common to
ANT-EATER, } the *Myrmecophaga* and *Manis* of Linnaeus. The first, which is pre-eminently the *ant-eater*, is a hairy animal, with a long muzzle, terminated by a smooth toothless mouth, from which is protruded a filiform tongue, which the animal insinuates into ant-hills and the nests of termites, whence these insects are drawn by being entangled in the viscid saliva that covers it. The *manis*, called also the pangolin, or scaly ant-eater, is also destitute of teeth, has a very extensible tongue, and, like the true ant-eater, lives on ants and termites; but the body is covered with large trenchant scales, arranged like tiles. The name of ant-bear is confined to the *Myrmecophaga*, all the species of which belong to the Western Continent; while all the species of *Manis* belong to the Eastern Continent. Both belong to Cuvier's order of *Endentata*, or quadrupeds without front teeth.

ANT-CATCHER, the *Myothera* of Illiger, a bird very much resembling the thrush. The species live on insects, and chiefly on ants. They are found on both continents.

ANTAG'ONIST, *ἄντι*, against, and *ἀγωνίζω*, to contend. An opponent. In *anatomy*, a muscle whose action is opposed to that of another muscle; e.g. the flexors and extensors of a limb are antagonists, and also the adductors and abductors.

ANTANACLA'SIS, *αντανάκλασις*, a rhetorical figure, which repeats the same word in a different sense, as, "*Dum vivimus, vivamus*" (whilst we live, let us live). The return to the former train of thought after the interruption of a parenthesis, is also called *antanaclasis*.

ANTAPHROD'ISAC, } from *ἄντι*, against,
ANTAPHROD'ITIC, } and *Ἀφροδίτη*, Ve-

nus. Applied: (1.) to medicines which diminish venereal desire: (2.) to medicines against venereal syphilis.

ANTARCTIC, from *ἄντι*, opposite, and *ἄρκτος*, a bear. Opposite the arctic or northern pole: relating to the southern pole, especially to a lesser circle, distant 23° 28' from the south pole. See **ARCTIC**.

ANTARES, a star of the first magnitude, popularly known as the Scorpion's Heart.

ANTATRO'PHIC, from *ἄντι-τροφία*, against wasting. Counteracting atrophy.

ANTE, a Latin preposition signifying before. 1. In *heraldry*, *ante* denotes that the pieces are let into one another, as by dove-tails, rounds, swallow-tails, &c.—

2. In *architecture*, see **ANTA**.

ANTECEDENCE, from *ante*, before, and *cedens*, going. Precedence. In *astronomy*, an apparent motion of a planet towards the west, or contrary to the order of the signs.

ANTECEDENT, from *ante*, before, and *cedens*, going. In *grammar*, the word or words to which a relative refers. In *logic*, the first of two members of a hypothetical proposition; the second member is the consequent. In *mathematics*, the first of two terms of a ratio, or that which is compared with the other. See **RATIO**.

ANTECES'sOR, Lat., one who *antecedes*, or goes before; a leader, a principal; formerly given as a title to one who excelled in any science. In the universities of France, the teachers of law take the title *antecessors* in all their theses.

ANTE'CIA'NS, Lat. *antæci*, from *ἄντι*, opposite, and *αἰτία*, to dwell. Those people who live under the same meridian but on different sides of the equator, and equally distant from it. They have the same hours of day and night, but different seasons, it being winter to the one, while it is summer with the other.

ANTECUR'sORS, Lat. *antecursores*, fore-runners. In the Roman armies, the *antecursores* were a body of light horse detached to obtain intelligence, provisions, &c. They were also called *antecessores* and by the Greeks *προδρομοί*.

ANTEJURAMEN'tUM, by our ancestors called *juramentum calumnia*, an oath which anciently both accuser and accused were to take before any trial by purgation. The accuser swore that he would prosecute the criminal, and the accused that he was innocent of the crime charged against him.

AN'TELOPE. See **ANTILOPE**.

AN'TELU'CAN, before light; *ante*, before, and *lux*, light: applied to assemblies of Christians in ancient times, held before light in the morning.

ANTEMU'RALE, *ante*, before, and *murus*, a wall. In *fortification*, an out-work.

ANTENA'TI, from *ante*, before, and *natus*,

born. In *history*, the subjects of Scotland, born before the accession of James I. to the English throne, and alive after it; opposed to *postnati*.

ANTEN'CE, anterior to the council of Nice; *ante*, before, and *Nice*. A term in ecclesiastical history.

ANTEN'NÆ, Lat. plural of *antenna*, a yard-arm. In *zoology*, the horns, or feelers of insects. These are peculiar to this order of beings, and seem to constitute very delicate organs of touch. Their form and size vary greatly in different genera and species, and even in the two sexes of the same species. When the antennæ have but one joint, they are said to be *exarticulate*; when they have two joints, *biarticulate*; when furnished with three, *trarticulate*; while those whose joints are numerous are said to be *multarticulate*. The antennæ rarely exceed two in number, but some apterous insects have as many as six.

ANTEN'NULE, Lat. dim. of *antennæ* (q. v.) A term applied to the small articulate filaments attached to the lower-lip of some mandibulate insects, and which seem to be endowed with great sensibility.

ANTENNULA'RIA, a subgenus of *Tubularia* of Linnæus, in which the cells form horizontal rings round the stem; whence the name.

ANTEPA'GMENTS, Lat. *antepagmenta*. In *architecture*, the mouldings, or architraves round doors; also the jambs of a doorway.

ANTEP'ECTUS, Lat. from *ante*, opposite to, and *pectus*, the breast. In *entomology*, a term used to signify under the breast-plate of the manitrunk, and the bed of the first pair of extremities.

ANTEPO'ITION, from *ante* and *position*, from *pono*, to place. In *grammar*, the placing of a word before another, which, by the ordinary rules, should follow it.

ANTEP'EDICAMENT, from *ante*, before, and *predicament*. In *logic*, a preliminary question to illustrate the doctrine of predicaments and categories.

ANTER'IOR, *ante*, before, in time, or place. Thus historians use the word in the first sense, and anatomists in the latter. In descriptions of shells, the anterior of bivalves is the side opposite to the hinge; of a spiral univalve, that part of the aperture most distant from the apex; of a symmetrical conical univalve, that part where the head of the animal lies.

ANT'ES, a range of pilasters attached to the front of a building. See *ANTA*.

ANTEIGNANT, a class of picked soldiers in the Roman armies, who were drawn up before (*ante*) the standards (*signa*), whence the name.

ANTESTA'TURE, from *ante* and *statura*, stature. In *fortification*, a small retrenchment made of palisades, sacks of earth, &c.

ANTH'ELA, Gr. from *ανθελιον*, a little flower. A name given by Meyer to the inflorescence of the rush tribe of plants.

ANTH'ELIX, } from *αντι*, opposite, and
ANTHE'LIX, } *ελix*, the *helix*, or margin of the external ear. The inward protuberance of the external ear, being a semicircle within, and almost parallel to the helix.

AN'THEM, from *αντι*, opposite, and *θμνος*, a hymn. A hymn performed in cathedral service by choristers, who sing alternately: first introduced into church service, it is said, in the reign of Queen Elizabeth; but, according to Pliny, the early Christians sang their hymn to Christ in parts by turn (*secum invicem*).

AN'THEMIS, the generic name of the *camomile*, or *chamomile*; a genus of the class *syngenesia*, and order *poly. superflua*. Named from *ανθισμον*, a flower, in allusion to the profusion of its blossoms. There are five indigenous species, the flowers of one of which (the *A. nobilis*), is much used as a stomachic.

AN'THER, from *ανθος*, a flower. In *botany*, the part of the stamen which is situated on the top of the stem, or filament, and which contains the pollen, or farina; this, when mature, it emits for the impregnation of the stigma. See *STAMEN*. Different terms are applied to the anthers, to designate their form; as oblong, globose, semilunar, angular, linear, &c.; and others to designate their position, as erect, incumbent, versatile, lateral, sessile, free, cuneate, &c.

ANTHERIF'EROUS, bearing anthers. *Anthera*, an anther, and *fero*, to bear. Forming a support to an anther.

ANTHERO'GENOUS, *anthera*, an anther, and *γενεαι*, I am produced. A term applied in *botany*, when in double flowers the anthers are converted into horn-like petals.

ANTHESPHO'RIA, from *ανθος*, a flower, and *φερω*, to carry. A Sicilian festival in honour of Proserpine.

ANTHES'TERIA, an Athenian festival in honour of Bacchus—from *ανθος*, flowers being offered to Bacchus.

ANTHES'TERION, the sixth month of the Athenian year. It answered to a part of November and December.

ANTHO'III, a tribe of pentamerous coleoptera, which take their common name from *ανθος*, a flower, and *βίος*, life; because they live among flowers, and the varied foliage of shrubs and trees.

ANTHODIUM, Gr. *ανθωδης*, full of flowers, from *ανθος*, a flower. A species of calyx which contains many flowers, being common to them all, as the head of a thistle or daisy.

ANTHO'LOGY, from *ανθος*, a flower, and

Λογος, a discourse. A collection of flowers, or beautiful passages from authors. In the Greek church, a collection of devotional pieces.

ANTHO'LYSIS, from *ἄνθος*, a flower, and *λυσις*, a loosening. The expanding of a flower-bud; also the changing of flowers from their usual state to some other state, as leaves, branches, &c.

ANTHOMY'CA, a genus of diptera of the Muscida family. Name from *ἄνθος*, a flower, and *μυια*, a fly. There are upwards of 100 British species of this insect.

ANTHO'PHILA, a family of aculeate or stinging hymenoptera. Name from *ἄνθος*, a flower, and *φίλος*, a lover. The insects of this family all collect the pollen of flowers or honey. Latreille divides them into two sections, the *andrenatæ* and the *apiariæ*, to which the honey-bee properly so called belongs.

ANTHOPH'ORUM, from *ἄνθος*, a flower, and *ορεν*, to bear. In botany, the name given to a columnar process arising from the bottom of the calyx, and having the petals, stamens, and pistil, at its apex.

ANTHOPHY'LLITE, from *ἄνθος*, a flower, and *φύλλον*, a leaf. A mineral usually massive, but sometimes found crystallised, of a yellowish-grey, inclined to brown; pearly lustre. It is found in Inverness-shire, and in the cobalt mines of Malmö in Norway. Its constituents are silica, alumina, lime, with oxide of iron and manganese.

ANTHO'RISM, from *ἀντι*, against, and *ορισμος*, definition. In rhetoric, a definition or description opposite to what is given by the adverse party.

ANTHOKAN'THUM, the sweet "vernal-grass." A genus of perennials, of which there are two British species: class *dianthia*, order *digynia*. Name from *ἄνθος*, a flower, and *ξανθος*, yellow, "from the yellowish hue of the spikes, especially in age." Hay is supposed to derive its fragrance from the presence of this dwarf grass, which is found plentifully in pastures.

ANTHOZA'RIA, from *ἄνθος*, a flower, and *ζωον*, to flourish. A term used by botanists to signify that the leaves of a plant assume the appearance of petals.

ANTHRA'CITE, a species of coal found in the transition-rock formation, and often called *stone-coal*. Its colour is iron-black, lustre imperfect metallic, fracture conchoidal; Sp. gr. from 1.3 to 1.6. It contains about 97 per cent. of carbon, with minute proportions of iron, alumina, and silica. It is difficult to kindle, but burns without smell or smoke, and with intense heat whence its name from *ανθραξ*,

charcoal. It is called also *glance-coal* and *blind-coal*.

ANTHRACOTHE'RIMUM, a name given to a fossil and extinct mammiferous animal of the tertiary strata, supposed to belong to the pachydermata. Seven species are known, some approximating to the size and appearance of the hog, others resembling the hippopotamus. Name from *ανθραξινος*, carbonaceous, and *θηριον*, wild beast; the bones being found chiefly in the tertiary coal or lignite of Cadibona, in Liguria.

AN'THRA'X, Gr. *ανθραξ*, a burning coal. A carbuncle, which is the name of a gem, and also of a disease nearly allied to a boil, but more aggravated in its symptoms. The name is also given to a genus of dipterous insects belonging to the *tamystoma* of Cuvier, and placed among the bombyliars by Latreille. The genus is now raised to the rank of a family, and named *anthracidæ*.

ANTHRE'NUS, the name of a Linnæan genus of pentamerous coleoptera, from *ανθρην*. An ancient name of an insect, probably allied to this genus, in the habit of living among flowers.

AN'THRIBUS, the name of a Fabrician genus of tetramerous coleoptera, from *ἄνθος*, a flower, and *τεριβω*, to destroy. The genus is formed of a section of the curculiones of Lin., which has the lip and jaw bifid and short, also the proboscis short.

ANTHRIS'CUS, the beaked-parsley. A genus of which there are three British species, one of which is well known as a salad and pot-herb, under the name of *garden chervil*: class *pentandria*, order *digynia*. Name given by Pliny to a plant analogous to this genus.

ANTHROPO'GLOTE, } from *ανθρωπος*,
ANTHROPO'GLOTTE, } man, and *γλωττα*, tongue. A name given to animals, in which the tongue resembles the human tongue; e.g. the various species of parrot,

ANTHROPO'LITE, from *ανθρωπος*, man, and *λίθος*, a stone. A petrification of the human body; a fossil human skeleton, of which several have been found in the West Indies.

ANTHROPOMOR'PHITE, from *ανθρωπος*, man, and *μορφη*, form. One who believes a human form in the Supreme Being. An ancient sect of heretics were called *anthropomorphites*, because they took literally the passage, "God made man after his own image." Their doctrine was called *anthropomorphism*.

ANTHROPOF'ATHY, from *ανθρωπος*, man, and *παθος*, passion. A rhetorical figure, by which some passion is ascribed to the Supreme Being that belongs only to man.

ANTHROPOPH'AGI, from *ανθρωπος*, man,

and *φαγω*, I eat; cannibals. The practice is called *anthrophagy*.

ANTHROPOS'COPT, from *ανθρωπος*, man, and *σκοπω*, I view. The art of judging or discovering man's character, disposition, passions, and inclinations, from the lineaments of his body; in which sense physiognomy is a branch of anthroposcopy.

ANTHYLLIS, the *kidney-vetch*: a genus of 20 species, mostly natives of Europe. *Diadelphia*—*Decandria*. Name from *ανθος*, a flower, and *ιουλος*, a beard, or down, from the downy calyces. The *A. vulneraria* is sometimes provincially called *Lady's-fingers*, from the form of the flower heads.

ANTHYPOCONDRIAC, from *αντι-υποχονδριακος*, not-hypochondriac. Applied to medicines used against hypochondriasis.

ANTHYPOPH'ORA, from *αντι*, and *hypo-phora* (q.v.). A rhetorical figure, which consists in refuting an objection by the opposition of a contrary sentence.

ANTHYSTER'IC, from *αντι*, against, and *υστερα*, the womb. Counteracting hysteria.

ANTIBAC'CHUS, Lat. from *αντι* and *βακχιος*, a foot of one short and two long syllables. In *poetry*, a foot of three syllables, first two long, and the last short, e.g. *ambra*.

AN'TIC, old; usually written *antique*. In *architecture*, antics are fancies having no foundation in nature, as sphinxes, centaurs, syrens; representation of different sorts of flowers growing on the same stem; grotesque ornaments of all kinds, as lions and pards with acanthus tails, or other tails than their own proper ones; human forms with similar ridiculous appendages.

ANTICACHECTIC, from *αντι*, against, and *κακηκτικος*, of a bad habit of body. Substantively, applied to medicines used to cure a bad habit of the constitution.

ANTICAR'DIUM, Lat. from *αντι*, opposite, and *καρδια*, the heart. The pit of the stomach, or scrobiculus cordis.

ANTICAT'OR'IC, from *αντι*, against, and *καυσος*, burning fever. Applied to antifebrile medicines.

AN'TICHRIST, from *αντι*, against, and *Christ*. Among *ecclesiastics*, a great adversary of Christianity, who is to appear upon the earth towards the end of the world. Some place his capital at Constantinople; others at Jerusalem; others at Moscow; a few at London; and the generality at Rome.

ANTICH'RONISM, from *αντι*, against, and *χρονος*, time. Deviation from the right order, or account of time.

ANTICIPA'TION. In *music*, the obstruc-

tion of a chord upon a syncopated note, to which it forms a discord.

ANTICLI'MAX, from *αντι*, against, and *κλιμαξ*, gradation. A sentence in which the ideas become less important towards the close; opposed to *climax*, as—

"Next comes Dalhousie, the great god of war, Lieutenant-Col'nel to the Earl of Mar."

ANTICLINAL, Gr. from *αντι*, against, and *κλινω*, to incline. If a range of hills, or a valley, be composed of strata, which on the two sides dip in opposite directions, the imaginary line that lies between them, towards which the strata on each rise, is called the *anticlinal axis*. In a row of houses, with steep roofs, facing the south, the slates represent inclined strata dipping north and south, and the ridge is an east and west anticlinal axis. The term *anticlinal* is opposed to *synclinal*.

ANTICOSMET'IC, Gr. from *αντι*, against, and *κοσμος*, order, beauty. Destructive or injurious to beauty. Substantively, any preparation which injures beauty.

ANTIDES'MA, the *Chinese-laurel*: a genus of East Indian shrubby plants. *Diacia*—*Pentandria*. Name *αντι*, against, and *δισμα*, a bandage; the leaves being regarded as an antidote to the bite of serpents.

ANTIDOTA'R'IUM, the old name, 1. for a dispensatory.—2. For a book containing directions for preparing medicines, or *antidotes*.

ANTIENNEAHE'DRAL, from *αντι*, opposite, *εννις*, nine, and *εδρα*, side. A term used in crystallography, to denote that the crystal has nine faces on two opposite sides.

ANTIUGG'GLER, } from *anti* and *guggle*.
ANTIUGGLER, } A small metallic siphon, which is inserted into the mouths of casks, or large bottles, called carboys, for drawing off the liquor without disturbing the sediment, or making any guggling noise.

ANTILOG'ARITHM, from *anti*, against, and *logarithm*. The complement of the logarithm of a sine, tangent, or secant; or the difference of that logarithm from the logarithm of 90 degrees.

AN'TILOPE, a numerous genus of ruminant mammalia, usually divided according to the form of the horns, the nucleus of which is bony, without pores or sinuses, like the antlers of the stag. The most remarkable species are the *gazelle*, *springbok*, *plunging-antelope*, *rock-springer*, *algazel*, *chamois*, *gnu*, and *nylgau*. The name is corrupted from *antholops*, from *ανθος*, a flower, and *ωψ*, an eye. Flowery-eyed or beautiful-eyed; the beauty of the eye in the animal of this genus being proverbial, especially in oriental countries.

ANTIMONIC ACID, the sesquioxide of antimony ($Sb^3 + O^3$). It combines with alkalies in definite proportions, and forms salts, which are called *antimoniates*.

ANTIMONIOUS ACID, the deutoxide of antimony ($Sb + O^2$), which combines in definite proportions with alkalies, and forms salts, called *antimonites*.

ANTIMONY, a metal but rarely found native. It is usually combined with sulphur in the state of a sesquisulphuret, usually called *crude antimony*, while the metal itself is called *regulus of antimony*. The metal is of a bluish-white colour, crystalline texture, and brittle. Sp. gr. 6.7; fuses at 810° . At a high heat it oxidates rapidly, forming the white crystals called *argentine flowers of antimony*. With tartaric acid it forms *tartar-emetie*. Among oriental ladies, the powdered sulphuret (properly *sesquisulphuret*, which is the common ore of the metal), is used as a paint for the eyelashes and eyebrows. See **ALCOHOL**. It is extensively used as an alloy, e. g. in type-metal, bell-metal, Britannia-metal, specula-metal, &c. Even its fumes render gold brittle, which, with other things, led the alchemists to assign it a royal lineage, and call it by the title of *regulus*, or the little king.

The Latin name of antimony is *stibium*; hence the chemical symbol Sb , but the etymology of the modern name is uncertain. The term *antimonium* is low Latin, which some writers suppose to have been formed from *anti*, and *Fr. moine*, a monk, from the ludicrous story related by Furetiere of Basil Valentine, who appears to have been the discoverer of the metal about 1620. He was a monk, and practised as a physician. By way of experiment, he gave some hogs a dose of some preparation of the metal, and observed that after they were well purged, they immediately fattened. Imagining that the effect on his brother-monks would be the same, he administered to them a similar dose. Unlike the hogs, the monks, however, did not get fat—they died of the experiment. The substance thenceforth obtained the name of *antimoine*, which is still the French name, and may be translated *antimonk*.

ANTINOMIANS, a sect who maintain that virtue and good works are unnecessary under the gospel dispensation—that faith is sufficient for salvation. Name from *anti*, against, and *nomos*, law, the law being of no use or obligation.

ANTINOS, a figure inserted into the consellation aquila, from *Antinous*, the favourite youth of Adrian.

ANTIOCHIAN. The *Antiochian sect* or *academy* was founded by Antiochus a philosopher, contemporary with Cicero. He attempted to reconcile the doctrines

of the different schools, but was really a Stoic.—*Antiochian epoch*, a method of computing time from the proclamation of liberty granted to the city of Antioch, about the time of the battle of Pharsalia.

ANTIPAR'ALLEL, from *anti* and *paralleli*, opposite. Applied to lines which make equal angles with other lines, but in a contrary order; also to lines running in the opposite direction.

ANTIPATHY, from *ἀντι*, against, and *πάθος*, an affection. In pathology, disgust and horror at the presence of particular objects, with great restlessness or fainting; e. g. the aversion of some persons to cats, toads, vipers, &c.; to the smell of roses, the sound of music; to the sight of a drawn sword, as in James I., or the rattling of a carriage along a bridge, as in Peter the Great, all of which depend on some peculiar idiosyncrasy; but in what such idiosyncrasy consists is not yet explained.—In *ethics*, hatred (against persons), aversion (against things), repugnancy (against actions).—In *physics*, a contrariety in the properties of matter, e. g. oil and water.

ANTIPERISTAL'TIC, from *anti* and *peristaltic*. Applied to an inverted action of the intestines, by which their contents are urged upwards: opposed to *peristaltic*.

ANTIPHLOGIS'TIC, from *anti* and *phlogistic* (q. v.), counteracting heat. A term applied to those means, whether medicinal or regiminal, which tend to reduce inflammation.

ANTIPH'ONARY, a service book in Catholic churches, containing whatever is said or sung in the choir, except the lessons: called also a *responsary*.

ANTIPH'ONY, from *ἀντι*, opposite, and *φωνή*, sound. The answer made by one choir to another, when the psalm or anthem is sung between two. It sometimes also denotes that species of psalmody wherein the congregation, being divided into two parts, repeat the psalm, verse for verse, alternately; in contradistinction to *symphony*, where the whole congregation sing together. In a more modern sense, antiphony denotes a kind of composition made of several verses extracted out of different psalms, adapted to express the mystery solemnized on the occasion.

ANTIPRAX'IA, ἀντιπράξια, antipraxy. A contrariety of action or affection in similar things, as spasm of the muscles of one leg and paralysis of those of the other.

ANTIPTOSIS, ἀντιπτώσις. In grammar, the putting of one case for another.

AN'TIQUARY, from *antiquarius*, from *antiquus*, oldest (*quasi ab ante et otum*). A person who studies and searches after monuments and remains of antiquity, as old medals, books, statues, sculptures.

and inscriptions, and in general whatever may afford any light into antiquity. The title has also been given to keepers of cabinets of antiquities; e.g. Henry VIII. gave John Leland the title of his *Antiquary*. The monks who were employed in making new copies of old books, before the art of printing, were also called *Antiquarii*. Under the reign of George II., the Royal Society of Antiquaries, in London, was founded.

ANTIQUATED, grown old. In *conchology*, "longitudinally furrowed, but interrupted by transverse furrows, as if the shell had acquired new growth at each furrow."

ANTIQUÉ, from *antiquus*, first. Generally, something that is very old; but the term is chiefly used by sculptors, painters, and architects, to denote such pieces of their different arts as were made by the ancient Greeks and Romans; e.g. antique busts, antique vases, &c. Works of art dated after the sixth century are *ancient*, but not antique.

ANTIQUITY, ancient times: Lat. *antiquitas* (v. supra), from the root *ante*, before. The term is generally used in the plural—*antiquities*, comprehending all that remains of ancient times, e.g. monuments, coins, inscriptions, edifices, literature, offices, habiliments, weapons, manners, ceremonies. Scholars, however, distinguish between *antiquities* and *archæology*: the former relating to the middle ages, the latter to ancient Greece and Rome.

ANTIRRHINEÆ, a small division of plants in the natural system. Type, the *Antirrhinum* (snapdragon) of Linnæus. See **ANTIRRHINUM**.

ANTIRRHINUM, the generic name of the volant *snapdragon*, or *calves'-snout*, of which fluellen, or female speedwell, and toad-flax, are species. *Didynamia*—*Angiospermia*. Name, *antirrhion*, from *ἀντι* and *ῥίς*, the nose, in allusion to the resemblance of the flower to the nose of a calf.

ANTISABBATARIANS, a sect who oppose the observance of the Christian Sabbath: hence the name, from *anti* and *Sabbath*. See **ANTISABBATH**.

ANTISCIANS, Lat. *Antiscii*, from *ἀντι*, opposite, and *σκία*, a shadow. Those inhabitants of the earth, who, living on opposite sides of the equator, their shadows at noon are thrown in contrary directions; and from this circumstance the epithet is applied.

ANTISEPTIC, from *ἀντι*, against, and *σῆτος*, putrid. A term applied to such substances as have the power of preventing animal and vegetable substances from passing into a state of putrefaction, and of obviating putrefaction when already begun; as culinary salt, nitre, spices, and sugar. The term is also applied by physicians to medicines used to correct the

tendency to putrescency, which is supposed to exist in the fluids of the body, in certain malignant diseases. Thus, cinchona, alcohol, camphor, and some other substances, are named antiseptics.

ANTISPASIS, from *ἀντι*, against, and *σπασω*, to draw. In *pathology*, a revulsion of the humours from one part of the body to another.

ANTISPASMODIC, from *ἀντι*, against, and *σπασμος*, a spasm. An antispasmodic medicine properly means one which has the power of allaying spasms of the muscles; the term, however, is usually extended to those medicines which allay severe pain, from any cause unconnected with inflammation; and hence it is not easy to draw the line between antispasmodics and narcotics.

ANTISTASIS, *αντιστάσις*. The defence of an action, founded on the consideration that, if it had been omitted, worse would have ensued: called by Latin writers *comparativum argumentum*.

ANTISTOCHEON, *ἀντιστοιχίων*. In *grammar*, the using of one letter instead of another, as *oili* for *illi*.

ANTISTRAGUS, in *anatomy*, the process of the external ear opposite (*anti*) the *tragus* (q. v.), and behind the meatus auditorius, or ear-passage.

ANTISTROPHÉ, from *ἀντι*, opposite.

ANTISTROPHÉ, and *στροφία*, to turn. Reciprocal conversion. In *grammar*, a figure by which two things, mutually depending upon each other, are reciprocally converted; e.g. the master of the servant, the servant of the master. In *lyric poetry*, that part of a song and dance, in use among the ancients, which was performed before the altar, in turning from east to west; in opposition to *strophe*. See **ODE**. **STROPHE**.

ANTITHESIS, *αντιθέσις*, of *ἀντι* and *thesis*. In *rhetoric*, an opposition of words, or sentiments, as,—

"Liberty with laws, and government without oppression."

ANTITRAGUS, Lat. from *anti* and *tragus*. An eminence on the outer ear, opposite the *tragus*.

ANTITRINITARIAN, from *anti* and *trinitarian*. One who denies the existence of three persons in the Godhead; opposed to trinitarian. The antitrinitarians of modern times are understood to be the Socialists, otherwise called Unitarians.

ANTITYPE, from *ἀντι* and *τυπε*, type, or pattern. A figure corresponding to some other figure, type, or pattern. The term is chiefly used by theologians; but it may be understood to mean generally anything formed according to a model, or pattern. In the *Greek liturgy*, the sacramental bread and wine are called *anti-*

types, meaning thereby similitudes, in a theological sense.

ANTIRROPAL, Gr. from ἀντί, against, and τρέπειν, to turn. A term in botany, used when in a seed the radicle of the embryo is turned to the end farthest away from the hilum, which, indeed, is the normal position, if the development of an ovule be rightly understood.

ΑΝΤΙΖΥΜ'IC, from ἀντί and ζύμωσις, to ferment. Applied to whatever prevents fermentation.

AN'TLIA, an ancient machine, supposed to be the same with our pump; called by the Greeks ἀντλίον, from ἀντλῶ, to draw water. In *astronomy*, the *Antlia pneumatica*, or pneumatic pump, is a new asterism formed by De la Caille, out of a few stars, between Hydra and Argo Navis. In *entomology*, the oral instrument of Lepidopterous insects, in which the ordinary *trophix*, or instruments of manducation are replaced by a spiral, bipartite, tubular apparatus, and appendages for suction.

ANTOSIAN'DRIANS, a sect of rigid Lutherans are so denominated, because they opposed the doctrines of Osiander.

AN'TRUM, Lat. a cave, from αντρος. This term is applied by anatomists to many cavities, but especially the maxillary sinus, situated above the molar teeth of the upper jaw. The term was formerly used by botanists to denote such hollow fruits as the apple.

ANTRUSTIONS. In *history*, a class of people among the Franks, who were the personal vassals of the kings and counts. The word seems to be formed from the same root as our word *trust*.

AN'UBIS, a symbolical deity of the Egyptians, regarded as a faithful companion of Osiris and Isis. He had temples and priests consecrated to him, but was only an ugly dog after all.

A'NUS, Lat. the termination of the rectum. In *conchology*, a depression of the posterior side near the hinge of bivalves. In *botany*, the posterior opening of a monopetalous flower. In *entomology*, the last two segments of the abdomen.

AN'VIL, a mass of iron, having a smooth and nearly flat top surface of steel, upon which blacksmiths, and various other artificers, forge metals with the hammer. Blacksmiths place their anvils upon a wooden block; but cutlers and file-makers fasten theirs to a large block of stone. The old English name is *anvelt*, from *on* and *build* (Belg.) to shape; hence, *on-build*, *anbeeld*, *anvelt*, *anvill*, *anvil*, that on which things are shaped.

ANXIETY, *anxietas*. In *medical language*, this term is applied to a painful restlessness and inquietude, usually accompanied with a sense of weight in the precordial region.

AO'NIAN, pertaining to Aonia, in Boeotia. The Aonian font was Aganippe, at the bottom of Mount Helicon, near Thebes, and sacred to the Muses, which were therefore called *Aonides*.

A'ORIST, from αοριστος, indefinite. In *grammar*, a tense peculiar to the Greek language, expressing action in an indeterminate manner, without regard to past, present or future.

AOR'TA, from αορτη, an ark, or chest. The principal trunk of the arterial system, called also the *magna arteria*. It proceeds from the left ventricle of the heart, and gives, either mediately or immediately, to all the other arteries, except the pulmonary. In *mammalia* and in birds, it is single; in most reptiles, and in cephalopods, double; and triple in crustaceans.

AOR'TA, the paper-mulberry tree (*Broussonetia papyrifera*). It is found in Japan and Otaheite.

APAG'OGÉ, } from απο, from, and αγω, APAG'OGY, } to drive. 1. In *logic*, a kind of argument wherein the greater extreme is evidently contained in the medium, but the medium not so evidently in the lesser extreme, as not to require further proof.—2. In *mathematics*, a passage from one proportion to another, when the first, having been demonstrated, is employed in proving others.—3. In the *Athenian law*, the carrying of a criminal taken in the act, to a magistrate; or when this was impracticable, taking the magistrate to the criminal.

APAGOG'ICAL (See APAGOGÉ). An apagogical demonstration is an indirect proof, which consists in showing the absurdity of the contrary.

APAG'TNOUS, Gr. from ἀπαξ, once, and γυνη, a female. A term applied to plants that fructify only once, and perish immediately after they flower.

AP'ALUS, a Linnæan genus of coleopterous insects.

AP'ANAGE, an allowance to younger branches of a sovereign family out of the revenues of the country. In ordinary cases, it descends to the children of the prince who enjoys it.

APAN'THROPY, from α, neg, and ανθρωπος, man. A species of melancholy characterized by a dislike of society.

APARITH'MESIS (απαριθμησις). In *rhetoric*, an answer to a prothesis.

AP'ATHY, from α, neg, and παθος, affection. In the *Stoic philosophy*, an utter privation of passion, and an insensibility to pain, which was regarded as the highest wisdom. In *medicine*, a morbid suspension of the natural passions and feelings.

AP'ATITE, a native phosphate of lime, constituting a genus of brittle minerals; green, blue, red, brown, and yellow

colours, occurring both crystallised and massive. Finest specimens found in Devon and Cornwall.

APATŪRA, a genus of butterflies (*lepidoptera diurna*), of which the "purple emperor" is a species.

APATŪRIA, an Athenian festival which took place in October, and continued three days. On this occasion children accompanied their fathers, that their names might be entered on the public register.

APĒ, a popular name extended to all the tribe of monkeys and baboons (*quadrumania*, Cuv., which comprehends the *simia* and *lemurs* of Lin.), but more especially to those species which have no tail; those having tails being called baboons: the gibbons are examples of the first, and the patras of the latter.

APĒAK, in nautical language, perpendicular. See ANCHOR.

APĒRIENT, Lat. *aperiens*, opening. Mildly laxative or deobstruent.

APĒRTOR, Lat. from *aperio*, to open. The muscle which raises the upper eyelid is sometimes called *apertor oculi*, the eye-opener.

APĒRTURE, from *apertus*, open. An opening. In *geometry*, the space between two right lines which meet in a point and form an angle. In *optics*, a round hole in a turned bit of wood, or plate of tin, placed within a telescope or microscope, near the object-glass, by which more rays are admitted, and a more distinct appearance of the object is obtained.

APĒT'ALOUS, from α, without, and *πιταλον*, a petal. Applied to flowers that want the corolla.

APĒT'ALOSE, } Lat. *apetalus*, without petal.
APĒT'ALOUS, } tal. Applied to flowers which have no corolla.

APHĒ'RESIS. See APHERESIS.

APHĒ'REUS, from ἀφαιρεῖν, to take away. The removal of a vowel from the beginning of a word, as 'tis, for it is, 'bide, for abide. See also APHERESIS.

APHANIPTERA, from ἀφανης, obscure, and *πτερον*, wing. An order of apterous haustellate insects, having perfect rudimental wings, and undergoing a metamorphosis like that of the *tipalida*, or crane-flies.

APH'ANITE, a mineral included among the rocks, which the older mineralogists called *cornéennes*, or *lapis corneus trapezius*. The predominant principle is amphibole. Name α, not, and *φαινω*, to appear, in allusion to the homogenous appearance of the rock.

APHELEXIS, a genus of superb flowering shrubs, natives of the Cape of Good Hope, class *syngenesia*, order *pol. superflua*.

APHĒ'LION, } ἀφῆλιος of ἀπό, and ἥλιος,
APHĒ'LUM, } the sun. That point in

the orbit of a planet at which it is at the farthest distance from the sun that it can be: opposed to *perihelion*.

APHELXIA, from ἀφελω, to abstract. Reverie: a genus of diseases of which there are three species. *A. socors*, absence of mind, *A. intenta*, abstraction of mind, and *A. otiosa*, brown study.

APHĒ'RESIS, } from ἀπό, and ἔγω, to
APHĒ'RESIS, } take. In *grammar*, the taking of a letter or syllable from the beginning of a word; e. g. to write *mittere* for *omittere*. In *surgery*, amputation.

APHID'ES, } the second family of homop-
APHID'II, } terous hemiptera. In the system of Cuvier; typical genus, *aphis* of Linnaeus.

APHIDIPH'AGI, a family of trimerous coleoptera. Name, from the circumstance of their feeding on aphides (*aphidii* and *φαγω*, to eat). The cow-bug and lady-bug belong to this family, and are well known to gardeners.

A'PHIS, the *pucceron*, *vine-fretter*, or *plant-louse*. A genus of homopterous hemiptera, and the type of the family *aphidii* or *aphides*, which is simply the plural of *aphis*.

APHLOGIS'TIC, flameless, from α, not, and *φλογιστος*, inflammable. An aphlogistic lamp is one in which a coil of platinum wire is kept in a state of ignition by vapour of alcohol or ether, without flame.

APHO'NIA, ἀφωνία, speechless. Aphony; a suppression or total loss of voice.

APHROD'ISIA, in *archæology*, festivals kept in honour of Venus (*ἀφροδιση*).

APHROD'ITA, } the sea-mouse, a genus of
APHROD'ITE, } articulatæ, of the order *dorsibranchiata* (Cuv.) Name, ἀφροδιτην, Venus, in allusion to the splendid colouring of some of the species, e. g. the *aphrodita aculeata* of Lin.

APH'THA, ἀφθαι, the thrush. A disease which shows itself in small white ulcers upon the tongue, gums, inside of the lips, and palate, resembling particles of curdled milk.

APHYL'LOSE, } Lat. *aphyllus*, of ἀφυλλος,
APHYL'LOUS, } leafless. Applied to parts of plants when altogether void of leaves, as an aphylous stem. Plants which are devoid of leaves are naturally arranged under one head, *aphyllæ plantæ*.

APIA'CÆ, Lat. *apium*, parsley. A name recently proposed to replace that of *umbellifera*.

APIA'RIZ, a tribe of honey-making hymenoptera, of which the *apis*, or garden-bee is the type.

APIAS'TER, the bird otherwise called the *bee-eater*; a species of *merops*, Lin. It resembles the swallow. Name, from *apis* a bee

APIC'ULATED, from *απεξ*, a sharp point. Leaves, &c. terminating suddenly in a point are so called.

APIOCRINITE, the pear-encrinite (*apio-crinites rotundus*), the pear-like remains of which are plentifully found near Bath.

When living, the roots of the *apio-crinites rotundus* were confluent, and formed a thin pavement at this place over the bottom of the sea, from which their stems and branches rose into a thick submarine forest, composed of these beautiful zoophytes.

A'PION, a genus of tetramerous coleoptera, of the attelabide tribe. Name, from *ἄπιον*, a pear, which the insects somewhat resemble in form.

A'PIS. 1. The honey-bee; a genus of aculeate hymenoptera, of the family anthophila. This extensive genus is divided into two tribes, the *andrenetæ* and *apiariæ*; the honey-bee, *par excellence*, or *apis* of Latreille, belongs to the latter. Name, from *α*, without, and *πους*, a foot, "*quod sine pedibus nascantur*"—plural, *apides*. —2. In mythology, a bull, worshipped by the Egyptians, especially at Memphis. He was required to be black, and was changed every twenty-five years.

APISTES, Gr. from *απιστος*, treacherous. A genus of spiny-finned fishes, remarkable for a strong suborbital spine, with which they are apt to inflict severe wounds when incautiously handled.

A'PIUM, the herb celery: a genus, *pentandria: digynia*. Name, Celtic, *apon*, water, in reference to the places where it naturally grows. The *A. graveolens*, or smallage, is the origin of our *garden celery*. Among the older botanists, *apium* was the generic name of the herb *parsley*. See PETROSELINUM.

APLAN'TIC, from *α*, not, and *πλανω*, to wander, free from error. Applied to those optical instruments in which the spherical aberration is completely corrected: distinct from *achromatic*.

APLO'ME, a mineral of a deep orange colour, found in Siberia and New Holland. It is usually regarded as a variety of garnet; but the primitive form of the crystal is a cube, and not a dodecahedron. Name, from *ἄπλος*, simple, in allusion to its crystalline structure.

APLYS'IA, the sea-hare: a genus of mollusca, of the order Tectibranchiata. Name, from *α*, not, and *πλυνω*, to make clean, in allusion to the power possessed by some of the species of throwing out an acrid and deep purple humour when in danger. The English name is taken from the form of the tentacula, which are four in number, being folded so as to resemble the ears of a hare.

APOCALYPSE, from *ἀποκαλύπτω*, I reveal.

Revelation: the name of one of the books of the New Testament, written according to Irenæus, A.D. 96, in the island of Patmos, whither St. John had been banished by the emperor Domitian. Anciently there were numerous books published under the same name.

APOCAR'POUS, Gr. from *απο*, from, and *καρπος*, fruit. The term is employed when the carpels of a flower either do not adhere at all, or when they adhere only by the ovaries.

APOCRISARY, from *αποκρισις*, answer. Anciently a resident in an imperial city, in the name of a foreign church, or bishop answering to the modern *nuncio*.

APOC'RYPHA, from *απο* and *κρυπτα*, I hide. The apocrypha, or apocryphal books, are those writings not admitted into the canon of Scripture, being either not acknowledged as divine, or regarded as spurious. When the Jews published their sacred books, they gave the appellations of *canonical* and *divine* only to those which were then made public; while such as still remained in their archives were denominated apocryphal, for no other reason than that they were not published.

APOGYN'ACEÆ, a family of plants of which the genus *apocynum* is the type.

APOCYNUM, the plant dog's-bane: a genus *pentandria: digynia*. Name, *απο* and *κυων*, a dog; it was anciently believed to be poisonous to dogs.

A'PODA, the second order of the Echinodermata, comprising but a small number of animals, closely related to the Holothuriæ; but which want the vesicular feet of that order. The body is invested with a coriaceous unarmed skin. From *α*, without, and *πους*, a foot.

A'PODE, an animal without feet (*α* and *πους*). The apodes of older travellers were birds without feet, which supported themselves on trees by means of their hooked bills.

APODYTE'RIUM, Gr. from *ἀποδυσθαι*, to strip one's self. That part in the palaestra, or bath, in ancient architecture, for undressing before bathing, or engaging in gymnastic exercises.

A'POGEE, from *ἀπό* and *γή*, the earth. That point of the moon's orbit in which she is at the greatest distance from the earth: opposed to *perigee*.

When the earth was regarded as the centre of the system, the terms apogee and perigee were applicable to the places of all the planets, and also of the sun, with respect to their variable distances from the earth; but now these terms are referable to the moon only. What was formerly the sun's *apogee* is therefore, in strictness, the earth's *aphel-*

lion, and the *perigee* of the former has become the *perihelion* of the latter.

APOLLINARIANS, a Christian sect deriving their name from Apollinaris, bishop of Laodicea, in the fourth century, who maintained that the body of Christ was endowed with a sensitive, but not with a rational soul; and that the divine nature supplied the place of the intellectual principle in man.

APOLLO. In *mythology*, the god of medicine, music, and the fine arts, of the Greeks and Romans. Cicero mentions four deities of this name; three of Grecian, and one of Egyptian origin; the last the Great Apollo. The *Apollo Belvidere* is reckoned in the first class of ancient statues, and takes its name from having been placed in the Belvidere of the Vatican, at Rome, by Pope Julius II. The artist is unknown.

APOLOGUE, from *απο*, and *λογος*, speech.

A relation of fictitious events, differing from a *parable* in this: the parable is drawn from events among men, and is therefore supposed probable; the apologue may relate the supposed actions of brutes or inanimate things; and therefore does not require to be supported by probability; e.g. Æsop's fables are in general apologies.

APONEURO'SIS, from *απο*, and *νευρον*, a tendon. A tendinous expansion.

ΑΠΟΡΗ'ΤΟΞ, } from *απο* and *φυγη*, flight.

ΑΠΟΡΗ'ΤΟΥ, } In *architecture*, a concave quadrantal moulding joining the shaft of a column to the base, and connecting the top of the shaft to the fillet under the astragal; the small fascia, or bend, at the top and base of the shaft of columns.

ΑΠΟΦΥΛ'ΙΤΗ, a mineral called also Ichthyophthalmite, or fish-eye-stone. Its constituents are silica and lime, with a small proportion of potash. It occurs both massive and crystallised in the secondary trap rocks of the Hebrides and Iceland. Name *απο* and *φυλλον*, a leaf, in reference to its tendency to exfoliate.

ΑΠΟΡΗ'ΤΙΣ, *ἀπόφυσις*, a process. 1. In *anatomy*, a process, projection, or protuberance of a bone, or other part, otherwise called *appendix*, and differing from *epiphysis*.—2. In *botany*, a fleshy tubercle under the basis of the pericarp of some moses.

ΑΠ'ΟΦΛΕΞ, from *αποτληξια*, a stroke. A sudden deprivation of all the powers of sense and voluntary motion, the action of the heart continuing, as well as the respiration, which is often accompanied with a stertorous sound.

ΑΠ'ΟΡΟΒΡΑΝ'ΧΙΑΝΣ, } Gr. from *απορια*,

ΑΠ'ΟΡΟΒΡΑΝ'ΧΙΑ'ΤΑ, } I want, and *βραγχιαι*, gills. A name applied by Latreille to an order of Arachnida, which are

destitute of stigmata on the surface of the body.

ΑΠΟΡΟΝ, *ἀπορον*, a problem difficult to resolve, and which has never been resolved, though not in itself impossible; e.g. the squaring of the circle. Among the ancients, when a question was proposed which the person to whom it was put could not solve, the answer was *απορια*, I cannot see through it. The term *aporon* has also been used generally for whatever was inexplicable.

ΑΠΟΣΕ'ΠΕΔΙΝ, *απο*, from, and *σηπιδων*, product of putrefaction. A peculiar crystallised substance obtained from putrid cheese.

ΑΠ'ΟΣΙΟΠΕ'ΣΙΣ, a rhetorical figure, afterwards called *reticency* and *suppression*, and which consists in the person really speaking of a thing at the time that he makes a show as if he would say nothing of it. From *αποσιωπαι*, to be silent.

Α-ΠΟΣΤΕΡΙΟ'ΡΙ, *posteriori*, after. Arguments *a-posteriori* are drawn from effects, consequences, or facts; in distinction to arguments *a-priori*, which are from causes previously known.

ΑΠΟΣΤ'ΛΗ, *αποστολος*, a messenger used to denote one of the disciples commissioned by Jesus Christ to preach the gospel. According to Theodoret, "those who are now bishops were called *apostles*" in the primitive ages. In the *Greek liturgy*, the term *apostle* means the Epistles of St. Paul, printed in the order in which they are to be read in the churches through the course of the year.

APOSTLES' CREED. A confession of faith, formerly supposed to have been drawn up by the Apostles themselves.

ΑΠΟΣΤΟΛ'ΙC, in the *primitive church*, was an appellation given to all such churches as were founded by the Apostles, and even to the bishops of those churches, as the reputed successors of the Apostles. These were Rome, Alexandria, Antioch, and Jerusalem.

ΑΠΟΣΤΟΛ'ΙCΣ, certain sects of Christians who pretended to imitate the practices of the Apostles, abstaining from marriage, wine, flesh, pecuniary reward, &c.

ΑΡΟΣΥ'ΑΙ, a tribe of nocturnal lepidoptera, characterised by the absence of feet on the anal segment of the body of the larvæ; whence the name, *α*, neg., and *πους*, a foot.

ΑΠΟΘΗ'ΕΑ, *αποθηκη*, a repository. In *ancient architecture*, a storehouse for oil, wine, &c.

ΑΠΟΘΗCΑΡΥ, from *αποθηκη*, a repository. On the Continent, and formerly in this country, the functions of the apothecary consisted in compounding and dispensing the prescriptions of the physician and surgeon; but now the term

is applied to practitioners in medicine who deal also in drugs. The apothecaries of old times were allied with the grocers; but having separated from them, they were incorporated by a charter from James I.

APOTHEOSIS, In *archæology*, a ceremony whereby emperors and great men were ranked among the gods, which was followed by the erection of temples and the institution of sacrifices to the new deity. From *apo* and *theos*, God.

APOTOME, from *apotomai*, to cut off.

1. In *mathematics*, the difference between two incommensurable quantities, or an irrational remainder, as AB; when from

a rational line, AC, is cut off a rational part, BC, only commensurable in power with the whole line AC.—2. In *music*, the difference between a greater and lesser semitone, expressed by the ratio 128 : 125.

APPANAGE, lands appropriated by the sovereign to the younger sons of the family as their patrimony, the reversion being reserved to the crown on failure of male heirs. The term is derived from the *panage*, *panagium* of the middle ages, from *panis*, bread, provision.

APPARATUS, Lat. from *apparo*, to prepare. Things provided as a means to an end, as the tools of an artisan; but in a strictly technical sense, the instruments or utensils for performing an operation.

—2. In *surgery*, certain methods of performing operations; as *A. major* and *A. minor*, which are particular methods of operating for the stone.—3. In *physiology*, a catenation of organs all ministering to the same function; as the *respiratory apparatus*, the *digestive apparatus*.

APPA'RENT, from *ad* and *pareo*, to appear. Visible; appearing to the eye. 1. In *mathematics* and *astronomy*, this term is applied to things as they appear to us, in contradistinction to *real* or *true*; as the apparent diameter, distance, and motion of the sun. Conjunctions are said to be apparent when the bodies appear to be placed in the same right line with the eye; e.g. when a right line, supposed to be drawn through the centres of two planets, passes through the eye of the spectator, the conjunction is only apparent; but if the same right line pass, not through the eye, but through the centre of the earth, the conjunction is then real.—The *apparent diameter* or *magnitude* of an object is the angle which it subtends at the bottom of the eye; and this diminishes as the distance increases, so that a small object at a small distance may have the same apparent diameter as a larger object at a greater distance: the

condition to be fulfilled is, that they subtend equal angles at the eye.—The *apparent figure* of an object is the form under which it appears when viewed at a distance; thus, the apparent figure of a straight line may be a point; of a surface, a line; and of a solid, a surface.—An object may have *apparent motion* when it is really at rest (at least, relatively speaking); as in the case of an observer moving in one direction, any remote object at rest will appear to move in a parallel line in the contrary way. The apparent motions of distant objects are also very different from the real motions, these being only perceptible from the mutation of the angle at the eye.—The *apparent place* of an object differs from the true place in proportion to its distance and the refracting power of the medium through which it is observed. See *TIME* and *HORIZON*.—2. In *law*, an *apparent heir* is one whose right is indefeasible, provided he outlives his ancestor, as the eldest son or his issue: in distinction to an *heir presumptive*, whose right of inheritance may be defeated by the contingency of some nearer heir being born.

APPARITION, from *apparitio*, an appearance. In *astronomy*, the becoming visible of a star, &c., which before was hid: opposed to *occultation*.

APPA'RITOR, Lat. from *appareo*, to attend. Among the *Romans*, any officer who attended the magistrates and judges to execute their orders.—In *England*, an officer who serves the process of a civil court; also a beadle in the universities who carries the mace.

APPAU'MEE, in *heraldry*, denotes that the hand is extended with the full palm appearing, and the thumb and fingers at full length.

APPE'AL, from Lat. *appello*, to drive or send. In *law*, to call or remove a cause from an inferior to a superior court; also to institute a criminal prosecution for some heinous offence; e.g. to appeal a person of felony. Substantively, the removal of a cause or suit from an inferior to a superior tribunal; also a process instituted by a private person against another person for some heinous crime by which he has been injured, as for *murder*, *larceny*, *mayhem*. The process was anciently given to private persons to recover the *waregild*, or private pecuniary satisfaction for an injury received in the murder of relations, or other personal affront.

APPEAR'ANCE, from *appear* of Lat. *ad* and *pareo*. 1. In *perspective*, the representation or projection of a figure upon the perspective plane.—2. In *optics*, the view of an object by direct rays, without either reflection or refraction, is termed *direct appearance*.—3. In *astronomy*, &c.,

appearances are usually termed phenomena and phases.

APPEL'ANT, in *church history*, one who appeals from the constitution of Unigenitus to a general council.—*Milton*.

APPELLA'TION, the name by which anything is distinguished when spoken of.

Appellations are frequently vulgar corruptions. For instance, at the institution of yeomen of the guards, they used to wait at table on great occasions, and were ranged near the buffets, which procured them the name of *buffetiers*, now jocularly *beef-eaters*. The designation of a sheriff's officer was originally a *bond* or *bound bayliffe*, now both written and pronounced *bum bayliffe*. The proclamation called "O yes," was originally a proclamation commanding silence, being the French word *oyez*, listen. *Blackness* is the corruption of *blanc nez*, or the white-head-land. *Bull and mouth*, vulgarised from *Boulogne mouth*, means the port or harbour of Boulogne, which was taken by Henry VIII., and became a popular subject for signs. The *bull and gate* has a similar origin, being the representation of the principal gate of Boulogne, which Henry VIII., Samson-like, carried away with him when he took the town.

APPEL'LATIVE, a common name in distinction to a proper name. Appellatives stand for whole ranks of beings; e. g. *man* is the name of the whole human race, *fowl* of all winged animals.

APPEN'DAGE, something added to a principal, but not essential to it; from *ad* and *pendeo*, to hang. In *botany*, the term is applied to additional organs of plants which are not universal or essential; as there is one plant furnished with them all, e. g. *stipules*, *fold leaves*, *thorns*, *prickles*, *tendrils*, *grands*, and *hairs*.

APPEN'DANT, from Lat. *appendo*. Hanging to something else, but not forming an integral part of it. In *law*, common *appendant* is a right belonging to the owners or occupiers of lands to put commonable beasts upon the waste lands of the manor. So also a common of fishing may be *appendant* to a freehold.—An *advowson appendant* is the right of patronage annexed to the possession of a manor.

APPENDIC'ULATE, Lat. *appendiculatus*, appendicled or appended. Applied to parts of plants which are furnished with additional organs for some particular purposes; e. g. to flowers furnished with some addition distinct from the tube; to petioles with leafy films at the base; to seed furnished with hooks, scales, &c.

APPEN'SUS, Lat. *appendo*, I hang up. When an ovule is attached to the placenta by some point intermediate between the apex and the middle.

AP'PETENCE, } Lat. *appetentia*, desire,
AP'PETENCY, } appetite. The disposition or power of organised bodies to select and imbibe such portions of matter as serve to support and nourish them.

AP'PIAN-WAY, the most famous of the highways leading from Rome, and constructed by the Censor, Appius Claudius, A. U. C. 442.

APPLAU'SE, Lat. *applausus*, approbation, expressed by the hands, in distinction to *acclamation* (q. v.).

In the ancient theatres, persons were appointed for the purpose of applauding, and masters were appointed to teach them the art. There were three species, viz. *bombus*, a confused din; *inbrices* and *testæ*, by beating on a sort of sonorous vessels, placed in the theatres for the purpose. The *plausores* or applauders let themselves out on hire to the vain-glorious among the poets and actors.

AP'PLE. In former times this word signified fruits in general, especially those of a roundish form; but now it is restricted to that of the *Pyrus malus*, or cultivated crab-apple of our hedges. The *apple of love* or *love-apple*, is the tomato or *lycopersicum*, a species of solanum. The *apple of the eye* is the pupil. An *apple-graft* is a scion of an apple-tree engrafted.

AP'PLICATE, from Lat. *applicatus*, applied. In *geometry*, an *applicate*, or *ordinate applicate*, is a right line drawn at right angles across the axis of a curve, and terminating at both ends in the curve, called now more commonly a *double ordinate*.

APPLICA'TION, in Lat. *applicatio*, is the laying of two things together. 1. In *geometry*, a division for applying one quantity to another: the areas being the same and the figures different; or the transferring of a given line into a circle or other figure; so that its ends shall be the perimeter of the figure.—2. In *sermons*, that part of the discourse in which the principles, before laid down and illustrated, are practically applied.

APPOGGIA'to, in *music* (particularly in *song*), a blended and not abrupt utterance of the tones, so that they insensibly glide and melt into each other, without any perceptible break. The term is Ital. from *appoggiare*, to lean on.

APPOGGIATU'RA, in *music*, a small additional note of embellishment, preceding the note to which it is attached, and taking away from the principal note a portion of its time. Ital. from *appoggiato* (q. v.).

APPOR'TIONMENT, in *law*, the dividing of a rent, &c. among the parties who lay claim to it.

APPRENTICE, from Fr. *apprenti*, of ap-

prendre, to learn. One who is bound by indenture to serve a tradesman or artificer, or company of such, a certain time, upon condition that the master instructs, or causes him to be instructed, in his art, business, or profession. The term for which the apprentice is bound is called his *apprenticeship*, and varies in different businesses from three to seven years. In *old law books*, barristers are called *apprentices ad legem*, and their technical apprenticeship lasted sixteen years, after which they might take the name of serjeants, *servientes ad legem*.

APPRES'SED, (Lat. *appressus*. In botany, APPRES'T,) applied to leaves pressed to the stem; also to peduncles.

APPROACH, from *ad* and Fr. *proche*, near.

1. In *military language*, both the advances of an army, and the works thrown up by besiegers to protect themselves in their advances, are called *approaches*.—2. In *gardening*, when a scion of one tree is grafted into another without cutting it from its parent stock, it is said to be *ingrafted by approach*. See *INGRAFTING*.—3. In *geometry*, the curve of approach is defined by this property—that a heavy body descending along it by the force of gravity, makes equal approaches to the horizon in equal times.

APPROPRIATION, from Lat. *ad* and *proprius*, private. In *law*, the sequestering of a benefice to the perpetual use of a spiritual corporation sole or aggregate.

APPROVE, from *ad* and *prove*, proof. In *law*, when a person indicted of felony or treason, and arraigned, confesses the fact before the plea is pleaded, and appeals (*accuses*) his accomplices of the same crime to obtain his pardon, this confession and accusation are called *approval*, and the person an *approver*, because he must *approve* (adduce sufficient proof) to what he alleges in his appeal.

APPROXIMATE, in *zoology*, when the teeth are so arranged in the jaws that there is no intervening vacancy.

APPROXIMATION, from Lat. *ad* and *proximus*, next. In *mathematics*, a continual approach to a quantity required, where no process is known for arriving at it exactly: this is the case in all rules for finding the square or cube root of a number which is not an exact square or cube.

APPUR, in the *manège*, the stay upon the horseman's hand, or the reciprocal sense between the horse's mouth and the bridle hand; or the sensibility of the horse to the action of the bridle.

APPULSE, Lat. *appulsus*. The act of striking against. In *astronomy*, the approach of a planet to a conjunction with the sun or a star.

APPURTENANCE, an appendage or adjunct. Fr. *appartenance*. Appropriately, such buildings, rights, and improvements

as belong to land are called *appurtenances*. Common *appurtenant* is that which is annexed to land, and can be claimed only by prescription or immemorial usage, on a legal presumption of a special grant.

APRICOT, the fruit of the *Prunus Armeniaca*, which grows wild in many parts of Armenia, and was introduced into England about the middle of the 16th century. Apricot-trees are chiefly raised against walls, and are propagated by grafting upon plum-tree stocks. Old orthography, *apricock*, Fr. *abricot*.

APRIL, the fourth month of the year. Lat. *Aprilis*, from *aperio*, to open, in allusion to the season, which is truly the spring and opening of the year.

A-PRIORI, the opposite of *a-posteriori*. To judge or prove a thing *a-priori*, is to do it upon grounds or reasons preceding actual knowledge, or independently of it.

A-PRON, from *a* or *ag*, and Celt. *bron*, the breast. 1. A cloth or piece of leather worn to defend the clothes.—2. In *gunnery*, a flat piece of lead as a cover for the touch-hole of a cannon.—3. In *ships*, a piece of curved timber fixed behind the lower part of the stem, and immediately above the foremost end of the keel: it connects the stem and keel.—4. A platform at the entrance of a dock, on which the dock-gates are shut.—5. A piece of leather or wax-cloth spread before a person riding in a gig, to defend him from rain, &c.

APSIDES, plural of *apsis*, a circle (q. v.). Those two points in the orbit of a planet or comet, one of which is the farthest from, and the other the nearest to, the sun. The nearest point is called the *lower apsis* or *perihelion* (q. v.), and the farthest point is the *higher apsis* or *aphelion* (q. v.). In the orbits of the satellites, the corresponding terms are *perigee* and *apogee*. The (imaginary) straight line which joins the apsides, that is, the transverse axis of the orbit (which is an ellipse), is called the *line of the apsides*. This line moreover has a slow progressive motion, which may be represented by supposing a planet to move in an ellipse, while the ellipse itself is slowly revolving about the sun in the same plane: this is called the *motion of the apsides*, and the time which the earth takes, setting out from either apsis, to return to the same point, is called the *anomalistical year*. This, in consequence of the motion of the apsides, is longer than the tropical year. The motion of the apsides is however so slow, that more than 109,830 years are required for the major axis of the earth's orbit to accomplish one sidereal revolution. See *EQUINOXES*.

APSES, Lat. of ἀψίς of ἄπτε, to connect. 1. In *astronomy*, either of the two

points of a planet's orbit, otherwise called the perihelion and aphelion. See *APSIDES*.

—2. In the *old churches*, an inner part where the altar was placed, and where the clergy sat, answering to the choir: used in opposition to *nave*, where the congregation were seated, and synonymous with *concha*, *camera*, *presbyterium*. —3. In *architecture*, the bowed or arched roof of a house, room or oven; the canopy of a throne; and anciently, the throne of a bishop; at present called *apsis-gradata*, from being raised a few steps above the seats of the priests.

APTENODYTES, the scientific name of the penguins, a tribe of palmipedes, or web-footed birds of the family of brachypterus (Cuv.): they are found only in the Antarctic seas. Name from *απτηνός*, wingless, and *δύτης*, a diver, in allusion to "their little wings, covered with mere vestiges of feathers, which at first sight resemble scales, and their habits in the water:" they are totally incapable of flying, and when they do go on shore, they push themselves along on their bellies as in swimming. The great penguin (*A. patagonica*), of about the size of a goose: the flesh is black, but eatable.

APTERS, } the name of a class of insects,
APTERA, } in the system of Linnæus. Named *α*, without, and *πτερος*, a wing, being characterised by the absence of wings.

APTEROUS, belonging to the class of apters: destitute of wings and scutellum.

APTERYX, Gr. from *α*, without, and *πτερυξ*. A New Zealand genus of very rare birds, in which the wings are reduced to a single defensive spur.

AP'THANE, a title anciently given to the higher degrees of nobility in Scotland. See *THANE*.

AP'THOUS, *απθής*, to inflame. A disease termed the thrush.

APYCNIS SIONI, in *music*, sounds distant one or more octaves, and which yet accord.—*Apynosis* is said of the diatonic genus, on account of its having spacious intervals in comparison with the chromatic and enharmonic.

APYRETIC, from *α*, not, and *πῦρ*, fire. A medical term applied: 1. To those days on which the intermission happens in agues. —2. To local affections not attended with febrile excitement of the system.

AQUAFORTIS, *strong water*. Nitric acid was so named by the alchemists, on account of its strong solvent and corrosive action upon numerous mineral, vegetable and animal substances; and the name is still used to denote the weak and impure nitric acid used in the arts. This is distinguished according to its strength, *double* and *single*, the single being only half the strength of the other.

AQUA MARI'NA, sea-water. A name given by jewellers to the *beryl* on account of its colour.

AQUA REG'IA. } Royal water. The
AQUA REGA'LIS. } name given by the alchemists to that mixture of nitric and muriatic acids which was best fitted to dissolve gold, styled by them the king of the metals. It is now called *nitro-muriatic acid*; or, adopting the more recent name for the muriatic acid, its synonym is *nitro-hydrochloric acid*.

AQUA TOFFA'NIA, } Water of Toffana.
AQUA DELLA TOFA. } A poisonous liquid, prepared by a woman at Naples, named *Toffana*, or *Tofania*. It was as limpid as rock water; and from four to six drops were a fatal dose. It was contained in small glass vials, bearing the inscription *Mamma of St. Nicholas of Bari*, and ornamented with an image of the saint. Toffana distributed this poison to women who were anxious to get rid of their husbands; and when put to the rack, in 1709, she confessed that she had destroyed upwards of 600 persons by means of it. The mode of preparing it is now happily lost.

AQUA VI'VE, water of life. A name familiarly applied to native distilled spirits: equivalent to the *eau-de-vie*, or brandy, of the French; the *whisky*, of the Scotch and Irish; and the *Geneva*, of the Dutch. It has been the *aqua mortis* of myriads of the human race.

AQUA'RIANS. Christians, in the primitive church, who consecrated water (*aqua*) instead of wine for the celebration of the Eucharist.

AQUA'RIUM. A place in gardens, in which only aquatic plants are grown.

AQUA'RIUS, the water-carrier. The name of the eleventh sign of the Zodiack, emblematic of the rainy season. It is marked thus ♒, and answers to the Egyptian Canopus.

AQUATIN'TA, from *aqua* and *tinta*, dyed. The art of engraving on copper after the manner of Indian ink, by which happy imitations are made of pencil drawings in Indian ink, bistre, sepia, &c.

A'QUEDUCT, from *aqua* and *ductus*, a conduit. A structure made for conveying water from one place to another, either under ground or above it, without employing any other mechanical principle than that water will descend along an inclined plane. A structure continuing the line of a canal across a river, road, or valley, is called also an *aqueduct*, and, perhaps more correctly, an *aqueduct bridge*.

A'QUEO, from *aqua*. When prefixed to a word, *aqueo* denotes that water enters into the composition of the substance named, as *aqueo-sulphuric acid*: opposed to *anhydro-sulphuric acid*.

A'QUIFOLIA'CES, Lat. *aquifolium*, the holly. A natural order of robust Exogens.

which connect the monopetalous and poly-petalous subclasses. *Ilex*. *Prinos*, and *Cassia* are the most common genera.

A'QUILA, the eagle. The name of a tribe of diurnal birds, of the order *accipitres*, embracing the most powerful of all the birds of prey.

The eagles are now divided into the *Aquila proper* (to which belongs the Ring-tailed Eagle), the *Haliæetus* of Savigny, or *Fisher Eagles* of Cuvier (the Pygargus and Bald Eagle), *Pandion* (the Osprey), *Circæetus*, *Harpyia* (where we find the "Great Harpy of America," that possesses such strength of beak as to be able to cleave a man's skull), and *Morphnus*, differing in certain peculiarities of the tarsi, claws, and wings.

—2. In *astronomy*, a constellation of the northern hemisphere, usually joined with *Antinôus*, or of which the asterism *Antinôus* is an integral part.

AQUILARIA'CEÆ, from *aquilaria*, eagle-wood, one of the genera. A very small order of Indian plants, whose species is but little known. The *aquilaria agallochum* produces the eagle or aggul wood, which, in all probability, was the aloe wood of scripture.

AQUILÆ'GIA, the herb Columbine. A genus. *Polyandria—Pentagynia*. Named from *aquila*, an eagle, whose claws the nectaries resemble. About 12 species, of which one is indigenous. Perennial.

A.R. stand for *anno regni*, the year of the reign; e.g. A.R. V. R. 4, in the fourth year of the reign of Queen Victoria.

ARA, an altar. The name given to an asterism south of the Scorpion's Tail. It is also called *Ara Thurihudi*, the Altar of Incense.

AR'ÆESQUE (Fr.). } Something done af-
AR'ÆESK (Eng.). } ter the manner of
the Arabs: applied to sculptural and
painted ornaments consisting of imaginary
foliage, plants, stalks, &c., but in which
no human or animal figures appear, rep-
resentations of these being forbidden by
the Koran. The term is synonymous with
moresque (q. v.), but not necessarily with
grotesque (q. v.).

AR'ABIS, the herb wall or rock cress. A genus. *Tetradynamia—Siliquosa*. Named so "because originally an Arabian genus," or more probably from the Greek *Δραβη*, a species of nasturtium used in pickles. Walls and rocks throughout Europe.

AR'ABO-TEDES'CO, Ital. *arabo*, and *tedescho*, German. In painting and sculpture, a style of art composed of Moorish, Roman, and German-Gothic.

ARACATS'CHA, a South-American plant, said to be more nourishing and prolific than the potato (*solanum tuberosum*), and which may be cultivated with advantage in most parts of Europe. Scientific name, *Heracleum tuberosum* Molina.

What is most peculiar regarding this plant is, that it is also found growing in the country of Sus on the south side of the Atlas, and is called by the Arabians *aracatscha*, which means the dry root. Now the question is, how does the plant come to bear among the natives of Santa Fé de Bogota an Arabian name? Did the Arabs, in old antiquity, trade with South America? Or, shall we believe that a continent—a real *Atlantis*—formed a connection between Africa and South America?

ARA'CEÆ, or **AROIDEÆ**, *arum*, one of the genera. Acriid endogens, with the flowers arranged upon a spadix, inclosed in a spathe.

ARACH'NIDA, the name given by Linnaeus to the spider-tribe of articulated animals, from *αραχνη*, a spider, and *ιδος*, likeness. They compose the two families of spiders and scorpions.

ARACH'NIDES, the spiders composing the second class of articulated animals in the system of Cuvier. They are provided with moveable feet, are destitute of wings, do not experience any metamorphosis, and generally feed on insects, though many are parasitical, and some are only found among flour, on cheese, and various plants. They are divided into two orders, *pulmonaria* and *trachearia*.

ARACH'NOID, cobweb-like, from *αραχνη*, a spider, or spider's web, and *ιδος*, likeness. In *anatomy*, (1). A cobweb-like membrane forming one of the tunics or coats of the brain. (2). One of the tunics or coats of the eye.—In *natural history*, a species of fossil madrepora.

ARA'CK, the native name of a spirituous liquor prepared in India from rice, the juice of the sugar-cane and of the cocconut, by distillation. It is the *aqua vite* of India.

ARÆOM'ETER, from *αραιος*, rare, thin, and *μετρον*, measure. An instrument to measure the density or gravity of fluids. See **HYDROMETER**.

ARÆOSTYLE, from *αραιος*, rare (thin set), and *στυλος*, a column. In *architecture*, one of the five proportions by which the ancients regulated the intervals called intercolumniations, between the columns of porticoes and colonnades. In modern practice the word denotes the intercolumnar space of 4 diameters, and is restricted to apertures decorated with the Tuscan order.

ARÆOSYSTYLE, from *αραιος* and *systyle* (qv.) In *architecture*, a method of proportioning the intervals between columns ranged in pairs. The disposition is composed of two systyle intercolumniations, as exemplified in the west front of St. Paul's.

ARAION'S'E, Fr. a spider. In *military affairs*, a branch, return, or gallery of a mine.

ARA'LIA, a genus of American plants, chiefly arborescent, of which the angelica-tree is a species. *Pentandria—Pentagynia*. The berries of the angelica-tree (*A. spinosa*), are said to be useful in tooth-ache and colic, whence called *tooth-ache tree*. It is also called *prickly-ash*.

ARALIA'CEÆ, a natural family of plants, of which the genus *aralia* is the type.

ARA'NEA, a spider; a genus of arachnides, of the order pulmonariæ. The species are exceedingly numerous, some so small as to be nearly microscopic, and others so large as to kill small birds, and so poisoning that their bites have proved fatal to man. The domestic spider is a species of this genus; it is harmless from its want of power to pierce the skin.

A'RA'R, the tree whose wood is chiefly used by the Mahometans for the construction of their mosques, and whose resin is the sandarach of commerce.

ARAUCA'RIA, a genus of trees somewhat resembling the pine tribe. *Diazia—Monodelphia*. Named from *Araucania* in South America, where one of the species (Sir Joseph Banks' pine) grows plentifully, and being the first discovered gave name to the genus.

AR'BALEST, } a cross-bow, from *arcus*, a
AR'BALIST, } bow, and *balista* (q. v.). This instrument consisted of a steel bow set in a shaft or stock of wood, furnished with a spring and trigger. The arrows shot from it were called *quarrels*.

ARBITRA'TION, the hearing and determining between parties in controversy, by arbiters either chosen by the parties or appointed by a magistrate. It is usual for each party to choose an arbiter, and these to nominate a third party called an *umpire*. The final determination is called an *award*; and this is binding upon the parties.

ARBITRA'TOR. Properly, a person to whom the presiding judge proposes questions depending on scientific or technical knowledge, which affects the matter in dispute.

AR'BOR, the Latin word for *tree*, as distinguished from *shrub*. 1. In *gardening*, a bower, usually formed of lattice-work covered with parasitical plants, as ivy.—

2. In *mechanics*, the same with *shaft* (q. v.).—

3. In *chemistry*: If mercury be thrown into a dilute solution of nitrate of silver, the silver is gradually precipitated in a beautiful arborescent form, constituting what is usually called the *Arbor Diana* (the tree of Diana), or *Arbor philosophorum* (the philosophical tree).—

4. In *anatomy*: When the cerebellum is cut vertically, the medullary substance appears ramified so as to represent a tree: this dendriform

arrangement is called the *Arbor vitæ* (tree of life).—5. In *botany*: A beautiful evergreen tree—the *Thuja occidentalis*—is likewise called the *Arbor vitæ*. It is a native of Siberia, Canada, Japan, and China.

ARBO'REOUS, Lat. *arboreus*, tree-like. Having a permanent woody stem. This term is sometimes used to distinguish such fungi or mosses as grow upon trees from those which grow upon the ground.

ARBORES'CENTE, from *arboresco*, to grow like a tree. The resemblance of a tree frequently observed in crystallizations and in mineral productions.

ARBORES'CENT, Lat. *arborescens*, growing like a tree (*arbor*). Becoming woody; dendriform. A species of *Asterias*, called sometimes *Caput Medusæ* (Medusa's head), is popularly called the *arborescent star-fish*, in allusion to its appearance.

ARBOR'ETUM, a place in parks, pleasure grounds, gardens, or nurseries, in which a collection of different species of trees is cultivated.

AR'BORICULTURE, Lat. from *arbor*, a tree, and *colere*, to cultivate. The art of cultivating trees and shrubs grown for timber, or for ornamental purposes. The practice includes propagation by seeds, by cuttings, layers, grafting, raising in beds and rows, transplanting, pruning, thinning, and, finally, felling, and the succession of kinds.

AR'BUS, the *strawberry-tree*. A genus. *Decandria—Monogynia*. The *A. unedo*, or true strawberry-tree, is a beautiful evergreen, which, from its frequency and elegant foliage, adds greatly to the lake scenery in Killarney in Ireland. The *A. alpina*, called popularly the bear-berry, bear's whortle berry, bear's bilberry, wild cranberry, &c., is a trailing shrub found plentifully among the Highland hills of Scotland; as is also the *A. uva ursi*, or red bear-berry, which affords excellent food for moor-fowl. This derives the name from Celtic *ar*, rough or austere, and *boise*, a bush, which is characteristic of the Scottish species.

ARC, Lat. *arcus*, a bow, vault, or arch. In *geometry*, any part of a curved line which does not consist of contrary curvatures. It is by means of circular arcs that all angles are measured, the arc being described from the angular point as a centre. See *ANGLE*.

ARCA'DE, Fr. from Sp. *arcada*, from Lat. *arca*. In *architecture*, a series of recesses with arched ceilings or soffits.

The use of this word is very vague. Some use it for a single arched aperture or inclosure, instead of *vault*, or for the space covered by a *continued vault* or arch, supported on piers or columns, instead of *gallery* or *corridor*; and by others for the space inclosed by two or more arcades, or a wall and an arcade,

instead of a *piazza* or ambulatory.—*Stuart.*

ARCADE, a family of marine bivalve shells, of which the genus *arca* is the type.

ARCA'DIANS, a society of Italian poets in Rome, established in the latter half of the 17th century, for the improvement of taste, and the cultivation of Italian poetry. It took the title of *The Academy of Arcadians*; in conformity with which they pretend to imitate the pastoral life of the Arcadians (inhabitants of Arcadia, the Greek Switzerland).

ARC-BOUTANT, Fr. from *arc* and *bouter*, to abut. An arched buttress formed of a flat arch, abutting against the feet or sides of another arch or vault to support them and prevent their giving way in that direction: called also a *flying buttress*.

ARCH, probably from *αρχη*, beginning, origin; Fr. *arc*, *arch*. 1. In geometry, part of a circle, not more than a half.

Among modern mathematical writers this form of the word is disused, being replaced by *arc* (q. v.), except as restricted to its signification among architects and mechanics.

—2. In architecture, a mechanical arrangement of separate inelastic bodies in the line of a curve, which preserve a given form when resisting pressure. A concave structure of stone or brick raised upon a mould in the form of an arc of a curve, and serving as the inward support of some superstructure. The arch may be supported by the form of its own curve, the stones acting against each other, and resisting with the force by which they would otherwise fall; or it may be constructed of wood or iron, and supported by the mechanism of the work.

The lateral supports of an arch are *abutments* or *butments*, and the internal supports are *piers*. The first or undermost stones at A and B of the arch are

termed *springers*, and the line A B on which they are placed is called the *springing line* or *reins* of the arch. The upper end of the pier on which the arch rests is the *impost* or *platband*. The stones ranged in the curvature of the arch are *archstones* or *voussoirs*. The whole interior curved surface of the arch A B C, is called the *intrados* by

geometers, and *soffit* by architects, or popularly the *arch*. The *extrados* is the convex surface A' D' B'. The *span*, called by geometers the *chord of the arch*, is measured from the lines where the intrados rises from the impost. The *rise of the arch*, or, geometrically, the *versed sine*, is the distance CD of the highest point of the intrados above the chord line A B C. The highest point D of the intrados, is by geometers called the *crown* or *vertex*, but by the workmen the *underside of the crown*, the *crown* with them being the upper end of the *key-stone*, or stone which connects the two semi-arches A D and C D at D. These semi-arches are called *haunches*, or *hances*, or *flanks*, and the spaces above these, being the outer walls, forming the elevation of the arch, is the *spandrels*, or, collectively, the *spandrel-wall*. Sometimes small circular arches are constructed through the spandrel and haunch walls, mostly over piers in stone bridges: these are called *ox-eyes* by the workmen.

ARCH, chief, from *αρχι*: used as a syllabic prefix to words, to denote the highest degree of their kind, whether good or bad.

ARCHÆOLOGY, from *αρχαιος*, ancient, and *λογος*, a discourse. The science or subject of antiquities, especially of Greece and Rome.

AR'CHAISM, Gr. from *αρχαιος*, ancient. A term used by ancient chemists and physicians, to imply the occult cause of certain phenomena.

ARCHBISHOP, from *arch* and *bishop*. The name of a church dignitary of the first class.

The title was introduced about A.D. 340. England has two archbishops, that of Canterbury and that of York, who are called *primates* and *metropolitans*. The archbishop of Canterbury had anciently jurisdiction over Ireland, and was styled a *patriarch*, and is still accounted the first peer of England, and next to the royal family. He has the precedence of the dukes and all the officers of the crown.

ARCHBUTLER, one of the great officers of the German empire, who presents the cup to the king on solemn occasions. The office belongs to the king of Bohemia.

ARCHCHAMBERLAIN, an officer of the German empire, much the same as the great chamberlain in England.

ARCHCHANCELLOR, a high officer who in ancient times presided over the secretaries of the court.

ARCHCOUNT, a title formerly given to the earl of Flanders, on account of his great power and riches.

ARCHDEACON, from *arch* and *deacon*. An

ecclesiastical dignitary next to a bishop: his jurisdiction may extend over the whole diocese, or only a part of it. There are sixty archdeacons in England, and as many *archdeaconries* over which they have authority.—*Archdeacon's court* is an inferior church court held in the absence of the archdeacon, and from which appeal lies to the bishop's court. The judge in this court is called the *archdeacon's official*.

ARCH'DUKE, from *arch* and *duke*. A title given to the princes of the house of Austria, all the sons being archdukes and daughters archduchesses.

ARCHER'ON, the most retired and secret place of the Grecian temples, used as a treasury.

ARCHES-COURT, an ecclesiastical court of appeal belonging to the archbishop of each province, the judge of which is called the *Dean of Arches*. The court takes its name from the church of St. Mary-le-Bow (*de arcubus*), whose top is raised of stone pillars built archwise, where it was anciently held.

ARCH'ETYPE, from *αρχιτυπον*, a first pattern. Among *minsters*, the standard weight to which the others are adjusted.

ARCHIACO'LYTE, from *αρχος*, chief, and *ακολουθος*, minister. In the ancient cathedral churches, the ministers were divided into four orders, viz. priests, deacons, subdeacons, and acolyths (or Lat. *acolythi*), each of which had its chiefs: that of the acolythi was called the *archiacolyth* or *archiacolythus*.

ARCH'ATER, from *αρχη*, chief, and *ιατρος*, physician. An old title for the chief physician to a prince who retained several.

ARCHIDAP'ITER, from *arch* and *dapifer*, sewer. In *Germany*, a great officer of the empire: the office belongs to the elector of Bavaria.

ARCHIL, } A violet, red, or purple

ARCHIL'LA, } paste, obtained from a species of whitish moss (*lichen roccellus*) which grows upon rocks in the Canary and Cape de Verd Islands. It is used in dyeing for modifying other colours. It is analogous to the substance called *cudbear* in Scotland. Litmus is obtained from the same lichen, by a modified process practised in Holland. A sort of archil is also obtained from the *lichen parellus*, which grows on the basaltic rocks of Auvergne.

ARCHILO'CEIAN, appertaining to Archilochus, a Greek poet, who flourished about 700 B.C. The *Archilochian verse*, which is called from him, is—

— — — — —

ARCHIMAN'DRITE. In the *Greek church* the abbots were called *mandra*, and their chief *archimandrite*, the prefix *archi* meaning chief. See **ARCH**.

ARCHIMED'ES' SCREW, a machine for raising water, said to have been invented by Archimedes, the most celebrated among the ancient geometricians (287 B.C.). The machine consists of a tube rolled in a spiral form about a cylinder, as in the figure. The handle, A, being turned, the

water enters the spiral tube at B: the orifice being brought to C, the water will fall to E; another revolution brings it to G; and so on, till it is finally discharged at D.

ARCHIPELAGO is a corruption of *Ægeopelago*, the modern Greek pronunciation of *Αιγαίου Πέλαγος*, the *Ægean Sea*. The term is applied to any sea interspersed with many isles, and to the isles situated therein.

ARCHITECTURE, the art of contriving and erecting buildings. According to the objects to which it is applied, architecture is divided into civil, naval, and military. The word is from the Lat. *architectura*, *o* the verb *architector*, from *αρχιτικταν*, a constructor, an architect.

The Egyptian style of building takes its origin in the *cavern* and *mound*; the Chinese architecture is modelled from the *tent*; the Grecian is derived from the *wooden cabin*; and the Gothic from the *bower* of trees.

ARCHITRAVE, from *αρχος*, chief, and *trabs*, a beam. In *architecture*, that part of the entablature which rests immediately upon the columns. It probably represents the beam which in ancient buildings extended from column to column, to support the roof. In Gothic architecture there is no architrave.

ARCHIVES, a collection of written documents containing the rights, privileges, claims, treatises, constitutions, &c. of a family, corporation, community, city, or kingdom; also the place where such documents are kept. The term is Fr., from Ital. *archivio*; Low Lat. *archivium* or *archicum*, from *αρχων*.

ARCHIVOLT. In *architecture*, the inner contour of an arch or band, adorned with mouldings, running over the facings of the archstones and bearing upon the impost. It differs in different orders. The term is from the Fr. *archivolte*, and the same as the Lat. *arcus volutus*.

Arch'lute, } Ital. *arcileuto*. A large
Arch'ilute, } lute, a theorbo: the base
 strings are doubled with an octave, and
 the higher strings with a unison.

Arch'marshal, the grand marshal of
 the German empire. The dignity belongs
 to the elector of Saxony.

Arch'on, from *αρχων*, a prince. The
 highest magistrates of Athens were called
 Archons. There were nine: the first was
 properly the *archon*; the second, *king*;
 the third was the *polemarch*, or general of
 the forces; and the other six were *thesmo-*
thetae, or legislators.

Archon'tics, a branch of the Valen-
 tinians, who held that the world was
 made by *archontes* or angels.

Arctic, an epithet given to the north
 pole in reference to the constellation of
 the Little Bear, called by the Greeks
αρκτος, the last star in the tail of which
 points out the north pole. The *arctic*
circle is a lesser circle of the sphere, pa-
 rallel to the equator, and 23° 28' distant
 from the north pole, from which it takes
 its name. This, and its opposite, the
antarctic (q. v.), are called the *two polar*
circles, and within these lie the *frigid*
zones.

Arctium, the plant *burdock* or *clitbur*.
 A genus. *Syngenesia*—*Poly. æqualis*.
 Name, *αρκτος*, a bear, in allusion to the
 coarse texture of the involucre. Waste
 places, as way-sides.

Arctomys, the marmot. A genus of
 mammalia, of the order rodentia. The
 marmots live in societies and are easily
 tamed. There are many species, the most
 interesting of which are the *Alpine M.*,
 which inhabits high mountains, and the
bobac of Poland and Kamschatka, both
 about the size of a hare, and burrow in
 the hardest soils. The American species
 are smaller. Name, *αρκτος*, a bear, and
μυς, a rat; the bear-rat.

Arctophylax, Lat. from *αρκτος*, a bear,
 and *φυλάξ*, a keeper. The Greek name of
 the constellation Boötes, or Charles's
 Wain.

Arcturus, Lat. from *αρκτος*, a bear,
 and *ούρα*, a tail. A star of the first mag-
 nitude in the constellation Arctophylax, or
 Boötes.

Arctus, *αρκτος*. The name given by
 the Greeks to two constellations, called by
 the Latins *Ursa major* and *Ursa minor*,
 and by us the *Great Bear* and the *Little*
Bear.

Arctuation, Lat. *arcuatio*, a bending. In
gardening, a method of raising by layers
 such trees as cannot be raised from seed.
 It consists in bending to the ground the
 branches which spring from the offsets or
 stools, and covering them with earth
 three inches deep upon the joints. When

they have taken root, they are re-
 moved.

Ar'dea, the heron. A genus of birds of
 the order *grallatoriae*, and family *cultri-*
rostræ. There are several species,
 including the crabeaters and bitterns.
 Named by the Latins from *αἰετα δῖνον*,
 ab alto volatu.

Are, from *area*. A superficial square
 measure in France, substituted for the
 former square rod. It contains 1076'44
 square feet, English.

A-re, in the Guidonian scale of music,
 denotes the lowest note but one.

A'rea, a Latin word signifying—1.
 A threshing-floor.—2. A vacant space
 bounded on all sides, or before a public
 building. In *geometry*, the superficial con-
 tent of any figure; the surface included
 by any given lines. The extent is ascer-
 tained by finding how many times the
 surface contains another smaller surface,
 of which we have an accurate idea; as a
 square inch, a square foot, &c., which we
 use as superficial measures. Among *physi-*
cians, the term *area* has been used
 vaguely to denote certain cutaneous dis-
 eases producing baldness.

Are'ca, the *cabbage-tree*, a genus of
 palms, one species of which, called the
 cabbage-palm (*A. oleracea*), grows abun-
 dantly in South America, and is cul-
 tivated in both the Indies. The pith
 forms an inferior sago, the young buds
 are eaten as cabbage, and the fruit
 yields oil. The fruit (nut) of another East
 Indian species (*A. catechu*), yields two
 kinds of catechu, called *cuttacambo* and
casheutti by the Indians. *Monæcia*—*Mo-*
nodelphia. Called also *fauvel-nut* (nut
 resembles the nutmeg), and *drunken-*
date.

Are'na, sand. In the Roman amphi-
 theatres, a plain space in the middle,
 covered with sand, on which the gladi-
 ators, &c. fought. Hence, also, the com-
 batants were called *arenarii*.

Arena'ria, the plant *sandwort*. A genus,
 of which there are eleven indigenous spe-
 cies. *Decandria*—*Trigynia*. Named from
arena, sand, the greater number of species
 growing in sandy soils.

Arenda'tor. In *Russia*, one who con-
 tracts with the government for the rents
 of the farms is called an *arendator*, from
arenda, a farm. And he who rents an es-
 tate of the crown is called a *croon-aren-*
dator. The estate and rent paid for it are
 indifferently denoted by *arende*.

Aren'ga, a genus of palms peculiar to
 the Moluccas. The pith affords a kind of
 sago, and the sap sugar by evaporation,
 and a pleasant liquor by fermenta-
 tion.

Arenil'ic, pertaining to sandstone,
arena and *λίθος*; consisting of sand-
 stone.

AREO'DA, a very brilliant genus of pentamerous coleoptera, belonging to Brazil, closely allied to the cockchafer.

AREOLA, Lat. dim. of *area*. In *anatomy*, the small interstices of cellular tissues. In *Surgery*, an inflamed ring around pustules, &c. The coloured circle which surrounds the nipple of the breast.

AREOLÆ, the smaller spaces into which the wings of insects are divided by the nervures.

AREOLATE. 1. In *entomology*, divided into small spaces.—2. In *botany*, in composite plants, when the florets are placed on the surface of the receptacle, and dropping off leave pentagonal spaces.

AREOLATION. Any small space, bounded by something different in colour, texture, &c.

AREOMETER. See *AREOMETER* and *HYDROMETER*.

AREOMETRY, the art of measuring the density or gravity of fluids by means of a hydrometer (generally an *areometer*).

AREOPAGUS, the name of the oldest of the Athenian courts of justice, and also the most respectable. The title is derived from *Areis*, Mars, and *παγος*, hill. Mars' Hill, a hill in the city on which its first meetings were held. The judges were called *areopagita*.

ARETOLOGY, a name sometimes given to that part of moral philosophy which treats of virtue, its nature, and the means of attaining it; from *ἀρετή*, virtue, and *λόγος*, discourse.

ARGAL, crude tartar, called also *argol*.

ARGAND. When a strong light is required from oil or gas, it is common to make a circular burner, with a hole perforated through the middle for the admission of air into the interior of the flame, and a series of small perforations around the circumference for the egress of gas, or one continuous opening into which the wick is put when it is required to burn oil. Such burners are called *argands* or *argand burners*, from the inventor's name.

ARGEMONE, a genus of Mexican plants. *Polyandria—Monogynia*. Name from *argema*, an ulcer of the eye, which the first known species was said to cure.

ARGENT, from *argentum*, silver. The white colour in coats of arms, intended to signify in a woman, chastity; in a maid, virginity; in judges, justice, &c.; the rich, humility.

ARGENTATE. Fulminating silver is sometimes called *argentate of ammonia*.

ARGENTIFEROUS, producing silver, *argentum* and *fero*.

ARGENTINE, resembling silver, *argentum*. Also a name of *slate-spar*, which is a nearly pure sub-species of carbonate of lime, of a slaty structure. The antimo-

niou acid is popularly termed *argentine flowers of antimony*.

AR'GIL, } Lat. *argilla* of ἄργιλλος, white

AR'GILL, } earth, ἄργιλος, white. Generally potter's earth, but strictly the earth of clay called in chemistry *alumina* (q. v.).

ARGILLA'CEOUS, of the nature of argil, containing argil. *A. earth*, alumina, *A. schist*, clay-slate: an indurated clay common to the fossiliferous and metamorphic series.

ARGILLITE, argillaceous-schist or clay-slate used in roofing houses.

AR'GOL, crude tartar, called also *argal*, which when purified is called *cream of tartar*.

ARGONAUTA, the paper nautilus or sailor, a sub-genus of *sepia* or cuttle-fish; there are several species closely resembling each other in animal and shell.

These mollusca are always found in a very thin shell, symmetrically fluted and spirally convoluted, the last whorl so large that it bears some resemblance to a galley, of which the spine is the poop. The animal makes a constant use of it, and in calm weather whole fleets of them may be observed navigating the surface of the ocean, employing six of their tentacula as oars and elevating the two membranous ones by way of a sail. If the sea becomes rough, or they perceive any danger, the argonaut withdraws all its arms, concentrates itself in its shell, takes in water, and descends to the bottom. There is, however, considerable doubts whether the animal found within this shell be really the constructor of it, or a parasitical intruder into a shell formed by some other animal not yet discovered. The animal has no other connection with the shell than that it is found within it, and occupies the last or large whorl only. The others being entirely empty.—The name is derived from *ἄργω*, the name of the ship in which Jason sailed to Colchis in search of the golden fleece, and *ναυτης*, a sailor.

AR'GO-NA'VIS, the ship Argo (Jason's ship). The name of a constellation in the southern hemisphere, and type of the ship in which Jason sailed to Colchis.

AR'GUMENT. Lat. *argumentum*. In *astronomy*, a quantity upon which another quantity or equation depends, or some circumstance relative to the motion of a planet or satellite; or it is an arc whereby we endeavour to find another unknown arc proportional to the first; hence *argument of inclination*, called also the *argument of latitude*, the portion of a planet's orbit intercepted between the ascending node and the place of the planet from the sun, counted according to the succession

of the signs. *Argument of the moon's apogee*, called also the *annual argument*, the distance of the moon's apogee from the sun's place, that is, the arc of the ecliptic comprised between these two points. *Argument of parallax*, denotes the effect produced by parallax on an observation, and which is the argument for determining the quantity of horizontal parallax.

ARGUMENTUM AD HOMINEM, an argument which presses with consequences drawn from one's own principles and concessions.

ARGUS-SHELL, a species of porcelain shell, beautifully variegated with spots, in some measure like the peacock's tail.

ARGYNIS, a genus of butterflies, remarkable for the silvery spots on the under part of the body.

AR'GYRIS, an old name of licharge, from *argyros*, silver, because separated in the process of extracting silver from the lead ores.

ARGYROCOME, a sub-genus of cud-weed (*gnaphalium*). From *argyros*, silver, and *κωμη*, hair, because the flowers are silvery white.

A'RIA, in music, Ital. for air (q. v.)

A'RIANS, the adherents of the Alexandrian bishop, Arius, who held Christ to be a created being, inferior to God in nature and dignity. Their doctrine is *Arianism*.

A'RIES, Latin for ram. In astronomy, a constellation forming the first of the twelve signs of the zodiac. Symbol, ♈. In the ancient military art, *aries* means a battering ram.

ARIETTA, in music, Italian for dim. of aria (q. v.).

A'RIL, Lat. *arillus*. A tunic investing the seed of some plants completely or partially. It is fixed at the base of the seed, and more or less closely envelopes the other parts. Mace is the aril of the nutmeg.

ARIM'ANES, } The evil principle in the
ARIM'AN. } Persian theology, which perpetually counteracts the designs of the good principle, Ormuzd or Hormindia.

ARIO'RO, Italian for light, lively. Applied in music to a kind of melody bordering on the majestic style of a capital air.

ARISTA, the awn. A sharp bristle-like appendage which proceeds from the husk or glume of grasses.

ARISTATE, Lat. *aristatus*, awned. Applied to leaves, &c. terminating in a long rigid spine, which does not appear as a contraction.

ARISTOLOCHIA, the plant birthwort. Genus. *Gynandria*—*Hexandria*. Name, *αριστος*, and *λοχια*, for its supposed medicinal virtues. One indigenous species.

ARISTOLOCHIA, a natural family of

plants, of which the genus *Aristolochia* is the type.

ARISTOTELIA, the generic name of a South American tree. *Dodecandria*—*Monogynia*. Named in honour of Aristotle, the ancient philosopher.

ARITHMETIC, from *αριθμητική*, the art of numbering, *αριθμος*, number. A branch of mathematics which has for its object the combination of numbers according to certain rules, in order to obtain results which satisfy given conditions. These rules, methodically arranged, constitute the science to which is given the name *arithmetic*. Arithmetic is called *theoretical* when it treats of the properties and relations of numbers considered abstractedly: and *practical*, when it treats simply of the art of computing. *Integral arithmetic* treats of whole numbers; *fractional arithmetic* of fractional numbers; *decimal arithmetic* of decimal numbers. *Logarithmic arithmetic* is that which is performed by tables of logarithms. *Political arithmetic* is the calculation of revenue, determination of taxes, adjustment of expenditure, &c. *Specious and universal arithmetic* are names given to algebra. All arithmetical operations are performed by means of addition, subtraction, multiplication, and division.—*Arithmetical complement* of a number is what it wants of the next higher decimal denomination. Thus 4 is the arithmetical complement of 6, as it is what 6 wants of 10.—*Arithmetical mean* between two numbers is a number, such that its excess over the first is equal to its defect from the second. Thus 5 is an arithmetical mean between 3 and 7.—*Arithmetical progression*, a series of numbers, such that each differs from the quantity that precedes and follows it by the same number. Thus, 3, 5, 7, 9, form an arithmetical progression, when the common difference of the terms is 2.—*Arithmetical proportion* of four numbers consists in the difference of the first and second being equal to that of the third and fourth. Thus, 2, 5, 8, 11.

ARITHMETICAL RATIO. The difference of any two of an arithmetical progression.

ARK, the name given, in our translation of the Bible, to the floating edifice in which Noah resided during the deluge. From Sax. *epc* or *epk*, a chest. Lat. *arca*. Dut. *arke*. The chest in which the tables of the law were preserved was called the ark of the covenant. This coffer was 3 feet 9 inches long, by 2 feet 3 inches in breadth, and the same in depth. It was made of shittim-wood, and covered with the mercy-seat, or propitiatory (*ilacingsien ιλαθημα*), made of pure gold, and having at each corner a cherub with expanded wings.

ARM, Sax. *aſtm* or *eaſtm*. That part of the upper extremity of the human body which extends from the shoulder to the wrist: divided into the brachium and antibrachium by anatomists.

AR'MA, Lat. for arms, applied in botany to various pointed appendages of plants, as *spina*.

ARMADIL'LO, a mammiferous genus of quadruped peculiar to America; the dasypos of Linnaeus, and belonging to his order bradypoda, but placed by Cuvier in the order edentata. The armadillos take their name from the peculiar scaly and hard shell, formed of compartments resembling little paving stones, which covers their head and body, and frequently their tail. They dig burrows and live partly on vegetables, and partly on insects and dead bodies. There are several species or rather sub-genera.

AR'MATURE, Lat. *armatura*, armour, that which defends, but sometimes used of offensive weapons. A piece of soft iron applied to a loadstone, or connecting the poles of a horse-shoe magnet, is called its *armature*; when the armature is applied the magnet is said to be *armed*.

ARMED. In *heraldry* the term is used with respect to beasts and birds of prey when their teeth, horns, feet, beak, talons or tusks are of a different colour from the rest of the body; e.g. "He bears a falcon armed, or."

ARMENIAN STONE, a blue mineral or earth variously spotted, and not unlike the lapis lazuli; found first in Armenia or Turcomania.

AR'MIGER, literally a bearer of arms, *arma* and *gero*; an old title of dignity next in degree to a knight, now replaced by *esquire*.

AR'MILLARY, from *armilla*, a bracelet. Consisting of rings or circles, chiefly applied to an artificial sphere composed of various circles put together in the proper order of the imaginary circles which surround the earth, for the purpose of illustrating the motions of the celestial bodies.

AR'MINGS, in nautical language the *waist-clothes* hung about a ship's upper works.

ARMIN'IANS, a religious sect which has its name from Arminius (the Latin name of James Hermann), who maintained, in opposition to Calvin, that the merits of Christ extended to all mankind; and that the grace necessary to salvation is attainable by every one. The Arminians still remain a distinct sect in Holland, under the name of *remonstrants* (q.v.), and have been the predominant party in the church of England since the time of Laud.

AR'MOR, } a defensive habit composed

AR'MOUR, } of the casque or helmet, gorget, cuirass, gauntlet, taces, braccets,

cuisse and covers for the legs, to which the spurs were fastened. This furniture was denominated *harness* or *armour*, *cap-à-pié*, i.e., from head to foot, and was used by cavaliers and men-at-arms. In *statutes*, *armour* is used for the whole apparatus of war. *Coat-armour* signifies the escutcheon of any person or family, with its several charges and other furniture, as mantling, crest, supporters, motto, &c.

ARMS, Lat. *arma*. In botany, see **ARMA**. In *heraldry*, the ensigns armorial of a family, and consisting of figures and colours borne in shields, banners, &c., as marks of distinction and dignity. *Charged arms* are such as retain their ancient integrity, and acquire some new honourable charge or bearing. *Vocal arms* are such that the figures bear some allusion to the name of the bearer.

AR'NICA, the plant leopard's bane, a genus of perennials; *Syngenesia*—*Polygamia superflua*; a European species, is used medicinally. Name anciently given to a different plant.

ARNOIDEÆ, a natural family of plants of which the genus *arum* is the type.

AR'NOLDISTS. The partisans of Arnold of Brescia, who, in the twelfth century, was the first to raise his voice against the abuses and vices of the clergy.

AR'ORA, } in Sp. *arroba*, and in the dia-
AR'ORE, } lect of Peru *arroz*. 1. A weight used in Spain, Portugal, Goa, and Brazil; that of Madrid is 25lbs. avoird.—
2. A measure of capacity, that of Malaga contains 794 cub. ins.

ARO'MA, Lat. of *aroma*. The odoriferous principle of aromatic plants, or such as have a warm and agreeable odour, as the cardamom.

AROU'RA. 1. A Grecian measure of 50 feet.—2. An Egyptian measure of 100 square feet.

ARPE'GIO, } Ital. *arpeggiare*, to play
ARPEGGIO'LO, } on the harp. In *music*, the striking or bowing of notes on a violin or similar instruments in quick succession, in imitation of the harp.

AR'PENT, the French acre, corrupted from *arripendium* or *aripennium*, which denotes the measuring of land with a cord. The arpent is about $\frac{1}{2}$ acre English.

ARQUEBUS'ADE, from arquebuss, a handgun. An aromatic spirituous lotion applied to strains, &c., originally applied to wounds from an arquebuss.

ARRAC'ACHA. The South American name for an umbelliferous plant, the *Arracacia esculenta* of botanists. Its roots, which are of a large size, and fleshy and sweet, are cultivated in Columbia and Jamaica.

ARRA'ON, arraignment. To arraign is to set in order or fit for trial: as to ar-

raign a writ of novel disseisin; to call a prisoner to the bar of the court to answer to the matter charged in the indictment, and the calling of the prisoner to the bar is denominated an *arraignment*. The term from Norm. *arreser*, to answer. Blackstone says from Lat. *ad rationem ponere*; in Fr. *ad reson* or abbreviated a *resm*.

AR'RAS, a kind of tapestry, said to take its name from Arras, the capital of the department Pas de Calais, where the article was first manufactured.

ARRENTA'TION, from Sp. *arrendar*, to rent. In the *forest laws* of England the licensing of an owner of land in a forest to inclose it in consideration of a yearly rent.

AR'REOTS, the name given to a class of individuals in Otaheite and the neighbouring islands, who destroy their own offspring at the moment of their birth.

AR'REST, from French *arrêter*, for *arrest*, to stop. To *arrest judgment*, is to stop judgment after verdict, for causes assigned. The motion for this purpose is called a motion in arrest of judgment.

ARRESTMENT. In *Scotch law*, 1. The detention of a criminal till he finds bail.—2. An order of a judge, by which a debtor to the arrestor's debtor is prohibited to make payment till the debt due to the arrestor is paid or secured.

AR'RESTS, in *farriery*, mangy tumours upon a horse's hind legs.

ARRIÈRE, the rear of an army. The *arrière-ban* of the old French kings was a proclamation (*ban*) by which their vassals were summoned to take the field for war (*arrière*, the last). *Arrière-fief* or *fee*, a fee or fief held of a feudatory. *Arrière-vassal*, the vassal of a vassal.

AR'RIIS, probably from *risega*, Ital., at the projection. The intersecting line of two planes cutting one another, and presenting a salient angle.

ARRONDE'ES. In *heraldry*, the curved cross, the arms of which terminate in the escutcheon.

ARROW-ROOT, a kind of starch, manufactured from the roots of the *Maranta arundinacea*, a native of South America, cultivated both in the East and West Indies; also the popular name of the genus *Maranta* (q. v.); supposed to be an antidote to the poisonous arrows of the Indians.

ARS'CHIN. 1. A Russian measure of length = $2\frac{1}{2}$ feet English.—2. A Chinese measure of length = 302 Paris lines. Written also *arskin*.

ARSEN'IATE, a salt formed by the combination of the arsenic acid with a base.

AR'SENIC, *ἀρσενικόν*. Properly, the name of a metal of a bluish-white or steel-gray colour; brittle, of considerable brilliancy, and sp. gr. 5.76; but more frequently used to designate the white oxide of the metal, called by chemists *arsenious acid*, and in common *white arsenic*. Arsenic is met

with abundantly in nature; sometimes in its metallic state, occasionally in the state of an oxide, but more frequently united with sulphur, forming the *native realgar*, or *native orpiment* of mineralogists: with iron and sulphur forming *arsenical pyrites*, and along with cobalt and sulphur forming the mineral called *cobalt pyrites*, in which the arsenic predominates, and from the roasting of which the *arsenious acid* of commerce is obtained.

The term *ἀρσενικόν*, from which we derive the term *arsenic*, was an epithet applied anciently to those natural substances which possessed strong and acrimonious qualities, as the poisonous quality of arsenic was found to be remarkably powerful; the name was given especially to the yellow sulphuret now called *orpiment*.

ARSEN'IC ACID. } The only known
ARSEN'IOUS ACID. } compounds of arsenic and oxygen are two, and they both possess acid properties. That which has the least oxygen is called *arsenious acid*, and is the well-known and virulent poison called *white arsenic*, or simply *arsenic*, in commerce; and the other, containing a larger quantity of oxygen, is called *arsenic acid*.

ARSENITE, a salt formed by the union of the arsenious acid with a base.

ARSIS, *ἀρσις*, of *αἶμα*, to raise. The raising of the voice in pronunciation; opposed to *thesis*. In the ancient music, arsis and thesis were applied to the lifting and falling of the hand in beating time.

AR'sON, from Lat. *ardeo*, *arsum*, to burn. In *law*, the act of wilfully setting fire to a house or other property belonging to another person, which by the law of England is felony, and punishable with death.

ART, Lat. *ars*, *artis*, the primary sense of which is strength and skill. The application of knowledge to practice; hence we have *useful* or *mechanical arts*; *liberal*, *polite*, or *fine arts*: the former requiring manual labour principally, the latter requiring the exercise of the mind more than of the body.

The old division of the liberal arts (*artes liberales*) was—grammar, dialectics, rhetoric, music, arithmetic, geometry, and astronomy.

ARTEMESIA, wormwood, mugwort, southernwood. An extensive genus of plants. *Syngenesia*—*Poly. superflua*. Much used in medicine. Named from Queen *Artemesia*; according to others, from *Artemis*, the Grecian Diana.

ARTERIO'TOMY, from *ἀρτηρία*, an artery, and *τομή*, to cut. The opening of an artery for the purpose of abstracting blood; only practised by modern surgeons on the temporal artery.

AR'TERY, from *αἷς*, air, and *τρίβω*, to

hold (the ancients supposed that the arteries contained air only). The arteries are strong elastic canals, which convey the blood from the heart to the different parts of the body, and are during life distinguished from the veins by pulsation. The original arterial trunks are only two in number, the *aorta* (q. v.) and the *pulmonary artery*, which arises from the right ventricle of the heart.

ARTESIAN WELLS, springs of water obtained by boring through strata destitute of water into other strata which contain it. Thus named from the operation having been first practised in Artois, the ancient Artesium of France.

ARTHRITIS, from *αρθρος*, a joint. Any disease that affects the joints, but gout particularly.

ARTHRORHACE, from *αρθρος*, a joint, and *ῥαχη*, vice. A collection of matter within the cavity of a bone.

ARTHRODIC, a connection of bones in which the head of one is received into the hollow of another so as to admit motion in all directions.

ARTHRODIÆ, Gr., from *αρθρος*, a joint, name given to those algæ which have an articulated structure.

ARTHRODYNIC, Gr., from *αρθρος*, a joint, and *δύνη*, pain—rheumatic and other painful affections of the joints.

ARTICHOKE, the popular name of the *Cynara scolymus* which is extensively cultivated for culinary purposes. The *Jerusalem Artichoke* is a species of *helianthus* or sun-flower.

The popular etymology of this word is, that any one unfortunate enough to get the artichoke into his throat would certainly be choked! The word occurs, with little variation of orthography, in most modern European languages. The Italians write *carciofala*, probably from Lat. *carduus*.

ARTICLE, from Lat. *articulus*, a little joint. In law, to article is, 1. To acquire or charge by an exhibition of articles (e.g.) "He shall be *articled* against in the High Court of Admiralty," 33 Geo. III.—2. In *sear*, the code of military law embodied in the Mutiny Act, which is passed each year.—3. In *theology*, a point of Christian doctrine established by the church (e.g.), the 39 Articles of the Church of England, which are founded upon certain *articles* compiled and published in the reign of Edward VI.

ARTICULAR, jointed, Lat. *articularis*, appertaining to the joints.

ARTICULATA, one of the great divisions of the animal kingdom. A primary division of the animal kingdom, characterised by an external skeleton consisting of a series of rings, articulated and surrounding the body. The third in the

arrangement of Cuvier, embracing four classes: annulata, crustacea, arachnoides, and insecta.

ARTICULATE, Lat. *articulatus*, jointed. Applied, 1. In *grammar*, to the sounds made by opening and shutting the organs of speech; the junction of the organs forming a joint or articulation.—2. In *botany*, to roots, stems, and other parts which are so united as if one piece grew out of another.

ARTICULATED, Lat. *articulus*, a joint. Connected by moveable joints, and in plants applied to parts so slightly connected, as finally to fall asunder, as in the case of a withered leaf.

ARTICULATING, fitting by means of joints.

ARTICULATION, Lat. *articulatio*, of *articulus*. The junction of bones, of which there are three kinds: *synthrosis*, *diarthrosis*, and *amphi-artrosis*. In *botany*, the connection of the parts of a plant by joints, also the nodes or joints. In *grammar*, the distinct utterance of syllables and words by the human voice.

ARTICULATION, the connections of the bones of a skeleton by joints.

ARTICULUS, a joint, Lat. dim. of *artus*. In *botany*, a part lying between two knots in an articulated stem. The knots are also called *articuli*.

ARTIFICER, Lat. *ars*, art, and *facio*, I make. One who requires intellectual refinement in the exercise of his profession, in distinction from an artisan, who may practise either the fine or useful arts without knowing more than the general rules of his art.

ARTIFICIAL, contrived by art (*ars* and *facio*). *Artificial lines* on a sector or scale are lines so contrived as to represent the logarithmic sines and tangents. *Artificial numbers* are the same with logarithms.

ARTILLERY, from Fr. *artillerie*, archery (primitively). Artillery denotes all cannon, mortars, howitzers, petards, &c., together with all apparatus thereto belonging; as also the art or science of managing the same, (more commonly called gunnery.) The same name is also given to the troops by whom these arms are served, being subsidiary to the instruments. The *artillery park* is the place appointed for the encampment of the artillery apparatus and troops for its service and defence. *Flying artillery* consists of light pieces, and is thus distinguished from *field artillery*.

ARTOCARPÆE, a tribe of dicotyledonous plants, of which the genus *Artocarpus* is the type.

ARTOCARPUS, the bread-fruit tree: a genus of several species, of which the *A. incisa*, which grows to about the size of a small oak, is the most celebrated. It is a native of the South Sea Islands, but is

now cultivated in other parts of the world. The fruit, which is contained in a round catkin, is often as large as a man's head; it is baked in an oven, and the rind being removed, the internal parts resemble the crumb of bread. It forms a substitute for bread in the countries where it grows. *Monacia*—*Monandria*. Name, *αἶτος*, bread, and *καίτος*, fruit.

ARTOTRITES, a sect of the second century, in Galatia, which used bread and cheese in the eucharist; hence the name, *αἶτος*, bread, and *τῦτος*, cheese.

ARTS, plural of *Art* (q. v.)

ARUM, an extensive genus of perennials, of which the only British type is the cuckoo-pint or wake-robin (*A. maculatum*). Common in hedges. *Monacia*—*Polyandria*. Name, *ἄρον*, supposed to be an Egyptian word by which one of the tribe was known.

ARUNDELIAN MARBLES, a series of ancient sculptured marbles, procured from the ruins of Greece, by William Petty, at the expense of the Earl of Arundel (1627), from whom they take their appellation. Their authenticity has been questioned.

ARUNDINACEÆ, a natural tribe of plants, of which the genus *Arundo* is the type.

ARUNDO, a Latin word meaning generally a reed, but applied permanently by botanists to denote the reed-grass, an extensive genus of perennials of the class *triandria*, and order *digynia*.

ARUSPICES, plural of *aruspe*. The Roman priests, whose business it was to predict events by examination of the entrails of sacrificed animals.

ARVICOLA, Lat. *arvum*, a field, and *colere*, to inhabit. A genus of rodent or gnawing animals, of the family of the rat and mouse.

ARYTÆNOID, from *ἀρυταίνα*, a funnel, and *ἴδος*, likeness. Funnel-shaped. Applied to two cartilages of the larynx, and to the muscles and glands connected with these cartilages.

AS, a word used by the Romans to denote, 1. Any unit considered as divisible. —2. The unit of weight, or their pound (*libra*) divided into twelve ounces. —3. Their most ancient coin, originally a pound, but reduced finally to half-ounce.

ASAFETIDA, from *asa* and *fetidus*, fetid. A strongly fetid resinous gum, procured from the root of a large umbelliferous plant (*Ferula assafetida*), which grows in some parts of Persia. It is much used in medicine.

ASARABACCÆ, a popular name of the *Asarum* (q. v.); but more especially of the *A. Europæum*, the root and leaves of which are had from the shops under this

name. The powdered leaves form the basis of most cephalic snuffs. Name, *asarum*, and *bacca*, berries.

AS'ARINE, the name given by Götz to the emetic principle of the *asarabacca*.

AS'ARUM, the *asarabacca*. A genus of perennials. *Dodecandria* — *Monogynia*. Name, *α*, not, and *σαρω*, to adorn, being rejected from the ancient coronal wreaths. *Asarum* is also the pharmacopœial name of the *asarabacca* or *Asarum Europæum*.

ASBESTOS, a mineral of which there **ASBESTUS**, are several varieties, all marked by their fibrous and flexible qualities. The most celebrated are the *ami-anthus* (q. v.), the *mountain-cork*, *rock-wood*, and *mountain-wood*. *Asbestos* is itself a variety of hornblende. Named from *ἀσβηστος*, of *α*, not, and *σβινω*, to perish, in allusion to its incombustibility.

ASCALAPHUS, a Fabrician genus of insects, characterised by having nearly equal palpi, distinct from the ant-lions *o*. Linneus.

ASCARIS, the thread-worm, a genus of intestinal worms, found in all animals. The *ascarides* (plural of *ascaris*), are placed by Cuvier in the order *Nematorideæ*, and class *Entozoa*. Name, *ασκαρίω*, to leap.

ASCEND'ANT, in *astrology*, the degree of the ecliptic above the horizon at one's birth. In *law*, ascendants are opposed to the descendants in succession; e.g. when a father succeeds his son, an uncle his nephew, &c., the inheritance is said to *ascend*, or go to *ascendants*.

ASCEND'ING, Lat. *ascendens*, rising. Applied, 1. In *botany*, to leaves, stalks, &c. —2. In *astronomy*, to such stars as are rising above the horizon in any parallel of the equator. *Ascending latitude*, the latitude of a planet when moving towards the north pole. *Ascending node*, that point of a planet's orbit wherein it passes the ecliptic to proceed northward; otherwise called the *northern node*. The symbol is Ω .

ASCEN'SION, Lat. *ascensio*, a rising. In *astronomy*, the *right ascension* of a star, &c. is that degree of the equator, reckoned from the beginning of Aries, which comes to the meridian with the star in a right sphere. *Oblique ascension* is an arc of the equator, intercepted between the first point of Aries, and of the point of the equator which rises with a star in an oblique sphere. The *ascensional difference* is the difference between the right and oblique ascension.

ASCET'ICS, a name given in old times to persons who devoted themselves to severe exercises of piety and penance. The term is taken from *ασκησις*, exercise, used by

the Greeks to signify the meagre diet of the athlete, who, to prepare themselves for the combat, abstained from many of the ordinary indulgences. Hence, also, many writings on the spiritual exercise of piety are called *ascetic* writings.

ASCI, Gr. from *ἀσκις*, a bottle. Small membranous bladders, in which are inclosed the seed-like, reproductive particles of lichens, fungi, &c.

ASCIA, Lat. *ascii*, from *α*, without, and *σκία*, shadow. The inhabitants of the torrid zone, who at Meridian have no shadow.

ASCIDI, a genus of naked acephalous *ASCIDIA*, mollusca, found adhering to rocks, and other bodies in the ocean. Name, *ἀσκις*, a bottle, which the animal in some degree resembles.

ASCIDIUM, Lat. of *ascidior*, a bottle. Used in botany to express a hollow appendage resembling a small bottle, which occurs on the stem, leaves, &c. of some plants.

ASCLEPIADEAN VERSE, so called from its inventor Asclepias, consists of four feet and a half, of this kind, and in this order, viz. a spondee, a dactyl, a long syllable, then two dactyls, as:—

1 2 3 4
Ma-ce | na a-ta | te | di-te | re-gi-bus.

ASCLEPIAS, the *swallow-wort*, or *tame-poison*. A genus of plants—*Pentandria—Diyymia*. Named after *Asclepias* or *Esculepius*. Several species are used in medicine.

ASH, **ASH-TREE**, the *fraxinus excelsior* of botanists. A forest tree of which there are many varieties. The *mountain-ash* is the *pyrus aucuparia* of the botanist.

ASHES, the residuum of any substance after it has been burnt; but in commerce the term is used to denote the ashes of vegetable substances, from which are extracted the alkaline matters called pot-ash, pearl-ash, barilla, kelp, &c. The term is Sax. *afca*, from Goth. *azga*, and has no singular number.

ASHLAR. 1. Free stones as they are brought from the quarry.—2. The facing of squared stones on the front of a building. This facing when smooth is called *plane ashlar*; when wrought so as to exhibit parallel flutes, it is termed *tooled ashlar*; when the surfaces of the stones are cut with a broad tool, without regularity, it is said to be *random-tooled*; when wrought with a narrow tool, *chiselled* or *doasted*, or if the tool be very narrow, the facing is said to be *pointed*; and when the stones project from the joints, the ashlar is said to be *rusticated*.

ASH'LERING, in *carpentry*, the fixing of short upright quarterings in garrets, between the rafters and the floor, in

order to cut off the acute angles at the bottom.

ASILIDÆ, a family of dipterous insects, of which the genus *asilus* is the type.

ASILUS, the *hornet-fly*. A genus of diptera, of which there are about 60 European species, many of which are known in Britain from their voracious habits. Name given by the ancients to the *horse-fly*.

ASLAN, a name given to the Dutch *ASLANI*, dollar in some parts of the Levant: it is worth from 115 to 120 aspers. The word is of Turkish origin, signifying a lion, the figure stamped upon the coin. Written also *asselani*.

ASMO'DAI, the destroying angel of the Hebrew mythology, written *Abaddon*.

ASF, a species of viper found in *ASPIC*, Egypt resembling the *cobra de capello*, or spectacle serpent of the East Indies: it is the *coluber haje* of Lin., and *vipera haje* of Geoff. When the cervical spine is compressed between the finger and the thumb, the animal becomes stiff and motionless: the trick is practised by the jugglers, and is called *changing the serpent into a rod*.

ASPALATHUS, the *African broom*. A genus of shrubby plants which are natives of tropical countries. *Diadelphia—Decandria*. Name *ασπλάχθος*, a thorny shrub, mentioned by the Greek and Roman writers.

ASPARAGIN, a peculiar principle of *ASPARAGINE*, tained from the juice of the asparagus by evaporation. It crystallises in white transparent rhomboidal prisms. It consists of 8 Car + 8 H + 6 O + 2 N, but the crystals included 2 atoms of water. It is identical with the substance called *agedoite*, obtained by Robiquet from liquorice root, and also with the *althin* discovered by Bacon.

ASPARAGINEÆ, a natural family of plants. the genus *asparagus* is the type.

ASPARAGINOUS PLANTS. Those culinary vegetables, of which the points of the tender shoots are eaten.

ASPARAGUS, popularly named *sparrow-grass*. A genus of many species. *Hexandria—Monogynia*. Name *ασπαράγος*, which denotes generally a young shoot before it unfolds its leaves. The only British type of this genus is the *A. officinalis*, the favourite culinary vegetable.

ASPECT, Lat. *aspectus*, of *ad* and *specio*. 1. In *astronomy*, the situation of the planets and stars with respect to each other. There are five aspects: 1st, sextile, marked *, when the planets are 60° distant; 2nd, quadrile, □, at 90°; 3rd, trine, Δ, when 120°; 4th, opposition, ♂, when 180°; and 5th, conjunction, ☿, when both in the same degree. The aspects were

introduced into astronomy by the old astrologers, and were distinguished by them into benign, malignant, and indifferent.—2. In *architecture*, the direction towards the point of the compass in which a building is placed.—3. In *horticulture*, used in reference to the inclination of the ground with respect to the sun.

ASPEN, aspen-tree, called also the trembling poplar, from the trembling of its leaves when moved by the slightest impulse of air, is the *populus tremula* of the botanist. The name is Sax. ætpe, restless. The aspen grows in all soils, but especially moist.

ASPERGILLIUM, a genus of testaceous accephala: animal lives in the sand, and inhabits a calcareous tube seven or eight inches in length; hence the name *aspergillum*, "a holy water-stick" (to sprinkle holy water), and *aspergilliform*, applied to any shaped like that instrument.

ASPERIFOLIUM, a natural family of plants characterised as asperifolious.

ASPERIFOLIUS, Lat. *asperifolius*, rough-leaved, *asper* and *folius*, a leaf.

ASPERMUS, α, without, and σπέρμα, seed. Destitute of seed.

ASPHALT-OS-UM, native bitumen, so called because anciently procured only from the Lake Asphaltites (Dead Sea) in Judea. Hence called also Jew's Pitch (*bitumen Judaicum*). See **BITUMEN**.

Instead, however, of the lake giving name to the bitumen, it is probable that the bitumen gave name to the lake, and that ἀσφαλτός, the general Greek word for bitumen, is derived from ἀσφαλίζω, to make secure, the substance being used as pitch is with us for ships.

ASPHODELEA, a natural order of plants of which the genus *asphodelus* is the type.

ASPHODELUS, the *asphodel*, a genus of hardy exotic perennials, the best known of which is the branched asphodel or king's spear (*A. ramosus*), used medicinally. *Hexandria—Monogynia*. Name, ἀσφόδιλος, of uncertain origin.

ASPHYXY, Lat. *asphyxia*, of α, without, and σφύξ, pulse. Literally, absence of pulse, but applied usually to that state in which the vital phenomena are suspended, from some cause interrupting respiration, but in which life is not actually extinct.

ASPIC. 1. The *asp* (q.v.)—2. A gun which carries 12lb. shot.

ASPIDIUM, the shield-fern. an extensive genus of ferns of which there are upwards of 15 British species. Name ἀσπίδιον, a shield, which the involucre resembles.

ASPIRATE. spiritus asper. In *grammar*, an accent peculiar to the Greek lan-

guage, marked ' and denoting that the letter over which it is placed should be strongly aspirated, i.e. pronounced as if h were prefixed.

ASPLENIUM, the spleenwort, an extensive genus of perennials of which there are 10 British species. *Cryptogamia—Filices*. Name of α, not, and σπλήν, the spleen, some of the plants being supposed useful in removing disorders of the spleen. Leek-fern or black maiden hair, milkwaste, mule's-fern, wall-rue or tent-fern, &c., are species.

ASRAEL, an angel in the Mohammedan mythology, who watches the souls of the dying.

ASS, this well-known animal is a native of the deserts of central Asia. It belongs to the equine genus of the solipede family of pachydermata: Cuvier. Latin name *asinus*, native name *onager*.

ASSAI, an Italian term used in music, which, when annexed to a word meaning slow, signifies a *little more lively*, and when annexed to a word meaning quick, it indicates a *little slower*.

ASSART, in the old laws. 1. A tree plucked up by the roots.—2. The offence of grubbing up trees.—3. A piece of forest land cleared. *Assart rents* were paid to the crown for lands assarted. Assart is from the old Fr. word *assartir*, which was latinised *assartum*.

ASSASSINS, a tribe or clan of Ismaelites which took possession of the mountains of Lebanon about 1090, and became famous for their assassinations.

ASSAULT, *assultus*. 1. In *law*, an attempt or offer to do corporeal hurt to another, as by striking at him with or without a weapon, without touching his person. If the person be actually struck it is *battery*.—2. In *war*, an effort made to carry a fortified post, camp, or fortress, wherein the assailants do not screen themselves by any works.—3. In *fencing*, a mock engagement with single foils.

ASSAY, *Assa'ying*. The process by which the quantity of gold or silver in any mineral or metallic compound is determined. It differs from analysis in this:—the analysis is instituted for the purpose of ascertaining the exact proportions of all the ingredients in the compound, whereas the whole object of the assay is to determine the precise amount of the particular metal in question, contained in the specimen under examination. The purposes of assaying were, till lately, confined to the valuation of the alloys of gold and silver, but are now extended to determine the quantity of palladium and platinum in certain bullion and gold dust brought from Brazil. The term is from Fr. *assayer*, to try.

ASSAY BALANCE, a very delicate balance employed in chemical analysis, and so called from its being first employed in assaying metals. It ought to indicate **100 gr.**

ASSEMBLY, Fr. *assemblée*, any convocation. The *general assembly* of the church of Scotland is an ecclesiastical court composed of delegates from every Presbytery, university, and royal burgh in Scotland. In *military language*, assembly means the second beating of the drum before a march.

ASSESSOR, in *Scotch law*, a person who sits along with the judges in the inferior courts, and assists with his professional knowledge in the decisions pronounced.

ASSEZ, from Fr. *assez*, enough. 1. Property placed for the discharge of some particular obligation or trust in the hands of executors, assignees, &c.—2. The stock in trade and the entire available property belonging to a merchant or trading company.

ASIENTO, a Spanish word signifying a contract or treaty, and used to denote the contract or agreement by which the Spanish government ceded, first to the French, and afterwards (by the treaty of Utrecht) to a company of English merchants, called the *asiento company*, the right of importing slaves into the Spanish colonies in America, on payment of certain duties. Ships so employed were called *asiento ships*.

ASSIGNAT, the name of the French paper currency in the time of the French revolution, which by over-issue (40,000 millions), after a while, became of no value.

ASSIGNATION, a Russian paper money used since 1769. There are assignments for 5, 10, 25, 50, and 100 rubles, but the nominal and real values are such that, in 1809, four assignment-rubles were paid for one ruble silver money.

ASSIGNEE, a person appointed by competent authority to transact some business, or exercise some particular privilege or power, on account of some specified person or persons. The term is most commonly applied to the creditor of a bankrupt appointed to manage for the rest of the creditors, and who has the bankrupt's estate assigned over to him. This person is called *trustee* in Scotland.

ASSIZE, Fr. *assizes*, of Lat. *ad* and *sedeo*. 1. In the *middle ages*, the name given to assemblies, and especially to courts for the administration of justice to vassals and freemen.—2. In *England*, the sessions of the court of justice held by the judges in the counties are called *assizes*. At these assizes the judges sit under five different commissions, some of which relate to civil and others to criminal causes. The first is the commission of *assize*, from which the session derives its

name, and by which they are authorised to take *assizes* in the several counties; that is, to take the verdict of the particular kind of jury called an *assize*, and summoned to decide certain cases respecting the titles of land.—3. In *Scotch law*, a jury of fifteen sworn men, picked out from the court by a greater number, not exceeding forty-five, who have been summoned by the sheriff for that purpose. A list of these is given to the defender when a copy of the libel is served upon him.

—*Assize of Novel Disseisin*, a writ given to recover possession of lands, tenements, &c., of which the tenant has been lately disseised.—*Assize of Mort d'Ancestor*, lies against an abator, who enters upon land after the death of the tenant and before the heir enters.—*Assize of darrein Presentment*, lies against a stranger who presents a clerk to a benefice.—*Assize of Bread*, the price of bread as formerly regulated by statute, in proportion to the price of wheat.

ASSOCIATION. 1. In *psychology*, a name given to that property of the mind, by which any object or state of consciousness has a tendency to recall other states or objects of consciousness with which it has been formerly connected.—2. In *politics*, a society formed of a number of individuals acting under common rules and an elective government, for the accomplishment of some definite object.

ASSONANCE. In *rhetoric* and *poetry*, a resemblance in termination without making rhyme, called by the Romans *similiter desinens*, and by the Greeks *ὁμοεισληκτος*.

ASSONANT RHYMES, in *Spanish poetry*, are those in which the vowels only are required to rhyme, as *ligera, tierra*.

ASSUMPSIT, a Latin word meaning *he undertook*, used in English law to denote an action to recover a compensation in damages for the non-performance of a *parol* promise; i. e. a promise whether verbal or written, not contained in a deed under seal. The word is taken as the name of the action, from its occurrence in declarations of the plaintiff's cause of action when these were in Latin.—Assumpsits are either *express* or *implied*, according as the contract is actually expressed by words, or inferable from some benefit accruing to one person from the acts (as the labour) of another.

ASSUMPTION, Lat. *assumptio*. The festival by which the Roman and Greek Catholic Churches celebrate the miraculous ascent of the Virgin Mary on the 15th of August.

ASSUMPTIVE, Lat. *assumptus*, can be assumed. In *heraldry*, assumptive arms are such as a person has a right, with the approbation of his sovereign and the heralds, to assume in consequence of some exploit.

ASSUR'ANCE, insurance; a contract to make good a loss (*See* INSURANCE).—In law, legal evidence of the conveyance of property.—In *theology*, full confidence in possessing an actual interest in the divine favour. The root of this class of words is, *Fr. sûr*, sure, certain.

AS'TACUS, *ἀστράξος*, *Cancer marinus* (Plin. 9. 31). A genus of Crustacea, constituting Cuvier's family Macroura (long-tailed), and divided into four sections, each consisting of numerous sub-genera. In one of these (the *Pagurus*) we find the Hermit (*Cancer Bernhardus*, Lin.), which inhabits a univalve shell: it is common in the European seas. In another (the *Astacus*, Fab.) is the common lobster (*A. marinus*). The fresh-water species are known by the name of *Craw-fish*. Among these are also the shrimp (*Crangon*), and the prawn (*Palæmon*). *See* CANCER.

ASTAR'TE, a Syrian goddess, probably corresponding to the *Semele* of the Greeks, the *Astaroth* of the Hebrews, and the *Juno* of the Romans.

ASTAT'IC, from *ἄστατος*, *balanced*. The *Astatic needle* is a double magnetic needle, not affected by the earth's magnetism.

AST'EISM, from *ἄστιος*, *polite*. In *rhetoric*, "polite irony," "genteel derision."

AS'TER, a genus of syngenesious plants, of the order *Poly. superflua*, containing upwards of 150 species, mostly hardy perennials. The sea Starwort or Michaelmas daisy (*A. tripolium*), found in salt-marshes, is a bad type, and the only one which inhabits Britain. Name, *aster*, a star, which the flowers resemble.

AS'TERIA, from *aster*, a star. 1. A variety of sapphire, not perfectly transparent, and showing a star-like opalescence in the direction of the axis, if cut round. It is sometimes called *cat's eye* and *bastard opal*.—2. The generic name of the starfish or sea-star, so called because the body is divided into rays (usually five), in the centre of which, and underneath, is the mouth. The asterias have the power of reproducing the rays which have been removed, even if only the centre and one of the rays remain: for this reason their figure is often irregular. They are placed by Cuvier in the order *Pendicellata* and class *Echinodermata*, of the radiated animals or zoophytes. They inhabit the ocean, and are frequently found fossilised.

ASTER'IALITE, fossilised asterias or starfish: *ἀστὴρ*, a star, and *λίθος*, stone.

AS'TERION AND CHARA (*canes venatici*), the greyhounds. A constellation occupying the space between Boötes and the hind legs of Ursa Major, particularly distinguished by a star of the third magnitude (called *Cor Caroli*, in honour of Charles I.), in the neck of Chara.

AS'TERITE, } star-stone, *ἀστὴρ*, a star,
AS'TRITE, } and *λίθος*, stone. 1. The
AS'TROITE, } same with asteria. *See* AS-
TERIA, 1st def.—2. Used to denote detached articulations of encrinites. This is especially the application of the French word *astroite*.

ASTERN', in *nautical language*, towards the after-part of the ship, opposed to a-head (q. v.).

AS'TEROIDS, from *ἀστήρ*, a star, and *εἶδος*, likeness. The name given by Herschel to the little planets between the orbits of Mars and Jupiter, now called *PLANETOLDS*, q. v.

ASTHENOL'OGY, from *ασθενος*, weakness, and *λογος*, discussion. The doctrine of diseases arising from debility.

AS'THENY, Lat. *asthenia*, debility; *α*, without, and *σθένος*, strength.

AS'THMA (*ασθμα*). A disease characterised by difficulty of breathing, recurring in paroxysms, accompanied with cough and a sense of constriction in the chest.

AS'TRAGAL, in *architecture*, a small moulding, having a semicircular profile, usually surrounding the top or bottom of a column, and representing a ring, to prevent the splitting of the part which it binds.—The ring or moulding near the mouth of a canon.—In *anatomy* and *botany*—*See* ASTRAGALUS.

ASTRAG'ALUS, Gr of *ἀστράγαλος*, the ankle-bone. 1. That bone of the *tarsus* upon which the tibia moves, called popularly the sling-bone.—2. In *botany*, a genus of plants of which there are three British species, known by the popular name of the milk-vetch: perennials. *Diadelphica*—*Decandria*. The seeds are supposed to bear some resemblance to the astragalus of the foot.—The gum tragacanth or gum dragon is derived from a Persian species, the goat's horn (*A. verus*).

ASTRAN'TIA, the black-master-wort. A genus of hardy European perennials. *Pentandria*—*Digynia*. Named from *astrum*, a star, from the star-like shape of the flowers.

ASTRIN'GENT, Lat. *astringens*, binding. Applied to medicines, which when applied to the body, renders the solids denser, by contracting the fibres. The astringent principle of vegetable substances is tannin.

AS'TROLABE, from *αστρων*, a star, and *λαβειν*, to take. 1. An instrument for measuring angles, and formerly used for taking the altitude of the sun or stars. It consists of a circular plate with the degrees and minutes marked round the edge, and a moveable index, with a sight glass at each end. The instrument is suspended when used.—2. An old stereo-

ographic projection of the celestial sphere, equivalent to the modern armillary sphere.

ASTROL'OGY, from *αστρον*, a star, and *λογος*, discussion. This term, in its more extended sense, is synonymous with astronomy, but it has generally been employed to denote the pseudo-science which professes to explain the phenomena of nature by astral influences, and to predict future events, especially the character and fate of persons, from the aspects or relative positions of the heavenly bodies. This latter department was called *judicial astrology*.

ASTRON'OMY, from *αστρον*, a star, and *νομος*, law. The science which treats of the heavenly bodies, their motions, positions, magnitudes, and all consequent phenomena. It is founded on observation, and perfected by calculation. See *TABLE below*.

ASTROSCOPE, from *αστρον*, a star, and *σκοπος*, to view. An astronomical instrument consisting of two cones, on the surfaces of which the constellations are delineated according to their respective positions in the heavens, so that by observing any particular star, and the position of another with regard to it, that other may be known by reference to the astroscope.

ASTUR, a genus of accipitrine birds, including the goshawks and sparrow-hawks. Name anciently applied to the buzzard.

AST'UCE, from *αυλος*, of *α*, not, and

σολαω, to plunder. A place where persons find protection. The name was anciently given to temples, statues of the gods, and altars where criminals and debtors sheltered themselves from justice, it being sacrilege forcibly to remove them. In modern times the name is given to many charitable institutions, for the relief of orphans, and persons who are blind, dumb and deaf, lunatic, &c.

ASYM'METRY, from *α*, not, and *συμμετρια*, symmetry. A want of proportion between parts. Applied in *mathematics* in the same sense as incommensurability, e.g. $1 : \sqrt{2}$.

ASYM'PTOTE, from *α*, not, and *συμπιπτα*, to fall together (coincide). A right or straight line which continually approaches a curve, but which, though both were infinitely extended, would never meet it; or it may be regarded as a tangent to the curve, when infinitely produced, or at an infinite distance. See *HYPERBOLE*.

ASTY'DETON, from *α*, not, and *συνδενω*, to bind together. A grammatical figure, which omits the connective, in order to render the expression more forcible and lively, as *veni, vidi, vici*.

AT'ABAL, a Spanish word, meaning a kettle-drum, and used to designate a kind of labor.

ATACAMITE, prismatoidal green malachite; a native muriate of copper. It takes its name from its being found in alluvial sand in the river of Lipas. In the

TABLE OF THE SOLAR SYSTEM.

Name.	Sidereal Revolutions in mean Solar days.	Mean Distance from the Sun.	Inclination of Orbits to Plane of Ecliptic. 1800.	Mean Orbital Velocity per hour in miles.	Mean Equatorial Diameter. (New value parallax 3090")	Density.	Volume.

* Vesta, Juno, Ceres, and Pallas were discovered in the early part of the 19th century, and a numerous set of discoveries of other planetoids, or *small planets*, forming with these part of the remarkable group between Mars and Jupiter with orbits at a great deviation from the plane of the ecliptic, have since been made. An attempt to give them names failed, as up to 1876 they had reached the vast number of about 156, and the simpler method has been adopted of indicating them by an easily remembered distinction and a symbol, i.e., by placing their number in the order of discovery within a small circle.

desert of Atacama, in Peru. Primitive form, octohedron.

ATAR. When the petals of roses are immersed in water and distilled, there separates a small portion of fragrant butyrateous oil, which liquefies by heat, and appears yellow, but concretes in the cold into a white mass. This is called *atar of roses*, and is highly prized as a perfume.

ATELES, ἀτέλης, *irritus, imperfectus*. Brande has it, "A genus of South American monkeys, characterised by the absence of the thumb of the anterior hand, for the want of which they are sufficiently compensated by a very efficient prehensile tail."

ATELL'NE FAULX, a species of comedy, which originated among the Oscan inhabitants of Campania, from the town Atella, which gave it its name.

A TEMPO GIUSTO. (*In tempore justo*). An Italian phrase used in music to signify in equal time, or just time. *A tempo*, at the same time.

ATEN'CHUS, a genus of pentamerous coleoptera, two of the species of which were worshipped by the ancient Egyptians, and form a conspicuous feature in their system of hieroglyphics. They were also figured on all their monuments, and separately on the most precious metals, and were used as seals and as amulets, which were suspended to the neck, and buried with the mummies. AtENCHI are also found in some of their coffins. One of the species, *A. sacer*, is an object of superstitious distinction, even in Europe.

ATHAL'AMOUS, Gr. from α, without, and θαλαμος, a bed. Lichens whose thallus is not furnished with shields or beds for the spores, but whose reproductive matter is supposed to be dispersed through the absence of the crust, as in *Lepraria*.

ATHAMAN'TA, a genus of European perennials, of which the Candy carrot (brought from the island of Candy), and the black mountain parsley, used in medicine, are species. *Pentandria—Digynia*. Named from the country of the Athamantes, in Epirus.

ATHANA'SIAN CREED, the exposition of faith composed by Hilary, bishop of Arles (430), and formerly attributed to Athanasius, bishop of Alexandria.

ATHEISM, from α, without, and Θεός, God. The doctrine which teaches the non-existence of a Supreme Intelligent Being. Opposed to *theism* and *deism*. As a manner of thinking with regard to religion, it is the opposite of *faith* and *belief*.

ATHENÆUM. Ἀθηναιον. In antiquity, 1. The school which Adrian established on the Capitoline Mount.—2. A gymnasium at Athens.—In modern times, a name given to different establishments connected with literature or the sciences.

ATHEAIC'TRA, a family of dipterous insects in the system of Cuvier, generally found on foliage, comprehending the modern families Syrphidæ, Astridæ, Conopidæ, and Muscidæ. Name from αθήη, acute, and τριγᾶ, a horn.

ATHERI'NA, a genus of abdominal fishes, the best known of which, *Hepectus*, is found abundantly in the Mediterranean.

ATHER'OMA, ἀθήρομα of αθήρα, pap. **ATHERO'ME**, Ἀν encysted tumour, which contains a substance of a pulpy consistence.

ATHLETÆ, combatants who took part in the public games of Greece, and made wrestling and boxing their business. From αἰθλος, contest.

ATHWA'RT (from *a* and *twert*, traverse), in nautical language, across the line of a ship's course. *Athwart ships*, reaching across the ship from side to side, or in that direction.

ATHWA'RT-HAWSE, the situation of a ship when she is driven by the wind, tide, or other accident, across the fore-part of another. *Athwart the fore-foot*, denotes the flight of a cannon-ball from one ship across the course of another to intercept that other, and make her shorten sail.

ATLAN'TIDES. 1. In astronomy, the Pleiades (q. v.).—2. In architecture, statues of men used to support entablatures with mutules, otherwise called *atlases*.

ATLAS. 1. In the Greek mythology, a Titan condemned by Jupiter to bear the vault of heaven.—2. In anatomy, the first vertebra of the neck which supports the head, as Atlas did the heavens!—3. A collection of maps to which a picture of the fable is usually prefixed.—4. In commerce, a beautiful silk manufacture of the East Indies.—5. In architecture, see ATLANTIDES (2nd def.).

ATMOM'ETER, from ἀτμός, vapour, and μέτρον, to measure. An instrument contrived by Sir J. Leslie to measure the quantity of vapour exhaled from a humid surface in a given time.

AT'MOSPHERE, from ἀτμός, vapour, and σφαῖρα, a sphere. The body of air which surrounds the earth. (See AIR.) In a wider sense, it is that mass of elastic fluid with which any body is surrounded. Hence we speak of an atmosphere of the sun, of the moon, of electric bodies, &c. *Atmosphere*, one, two, &c., means a pressure of 15 lbs., 30 lbs., &c., on the square inch, resulting from condensation. The force of steam, weight of fluids, &c., are often so estimated.

AT'OM, Ἄτομος (from α, not, and τέμνω to cut), one of the elementary particles of matter, and so small as to be incapable of further division. See MOLECULE and COR-

PUSCULE. *Component atoms*, are those atoms which, being different in their nature, united form a third or *compound atom*. Thus the atoms of sulphur and oxygen are the component atoms of sulphuric acid. *Organic atoms* are the atoms of substances found only in organic bodies.

ATOM'IC PHILOSOPHY. See CORPUSCULE.

ATOM'IC THEORY. See EQUIVALENTS.

ATRAC'TYLES, the distaff-thistle, a genus of European plants of five species. *Syngenesia*—*Poly. æqualis*. Name from *ατρακτῆς*, a distaff. A species, called the pine-thistle, is used for diseases of the gums.

ATRI'P, a nautical term applicable to the anchor when it is drawn perpendicularly out of the ground, and to the sails when hoisted to the top of the mast.

ATRI'P'LEX, the *orache*. A genus of plants of which there are seven British species, mostly inhabiting muddy sea-shores and salt-marshes. *Polygamia* — *Monœcia*. Name from *α*, not, and *τρίφυλλον*, to nourish, and written by the Greeks *ατρακταλίς*.

AT'R'IVM, *αίθριος*, exposed. In ancient architecture considered the same as the vestibule.

ATRO'PA, a genus of plants of which the deadly nightshade or dwall (*A. belladonna*), is a species. *Pentandria*—*Monogynia*. Named from *Ατροπος*, the eldest of the *Parce* or Fates, in allusion to its deadly quality.

AT'ROPHY, from *α*, not, and *τροφή*, to nourish. A wasting of the body or any particular part of it, in consequence of some derangements of the functions of assimilation and absorption.

AT'ROPIA, } a peculiar vegetable salt,

AT'ROPI'NE, } obtained from the *Atropa belladonna*. It is tasteless, alkaline, and highly poisonous, and is soluble in boiling alcohol.

AT'TA, a subgenus of *formica* (q. v.), including some of the largest species of ants (some an inch in length of body). The visiting ant (*formica cephalotes*, Linn.), of South America, is the type of the genus, and receives its name from its habit of visiting in troops the houses of the residents, who open their doors and receive it gladly, as it consumes or drives away not only the cockroaches and spiders, but even mice and rats.

ATTAC'CA, an Italian word meaning attach, and used in music to signify that a passage is to follow another immediately: e. g., *attacca allegro*.

ATTACH, **ATTACHMENT**. (Fr. *attacher*, to fasten.) In *English law*, to attach, means to take or apprehend a person by virtue of a writ or precept. Attachment differs from arrest by proceeding out of a

higher court, by precept or writ, whereas the latter proceeds out of an inferior court by precept only; and further, an arrest lies only against the body of a man, whereas the attachment often lies only against the goods, and may lie against both body and goods. *Attachment* is also a mode of punishing contempts. (See CONTEMPT.) The first notice to appear in a Court of Equity is by summons. If the defendant disobeys this monition, a writ of attachment issues, commanding the sheriff to *attach* him, by taking gage or security of goods, which he forfeits by non-appearance, or by making him find securities for his appearance. Attachment for this cause is not made in courts of law, for should the defendant not appear when summoned, his default is noted and judgment is given against him. Attachments are issued by courts of law for various kinds of contempts, but in all the use is to bring the offender into court.—*Foreign Attachment* is the attachment, by a creditor, of a debt due to his debtor from a third party; it is so called from its being one of the modes of securing debts due by foreigners. In Scotland, it is called *assisting* the debt. In London the process is called *garnishment* or *seizure*, the person summoned being the *garnishee*.

ATTAIN'DER, (Nor. Fr. *atteinde*, to corrupt). In *law*, the corruption of blood consequent upon a person's being adjudged guilty of a capital offence; the law thereby sets a mark of infamy upon him, and takes no further concern about him than to have him executed. A statute attainting a person is called an *act of attainder*.

ATTAINT', a writ at the common law which lies to inquire whether a jury have given a false verdict: it is so called because the party who obtains it endeavours to *taint* the character of the jury.

ATTEND'ANT, accompanying. In *law*, depending on or owing service to. In *music*, applied to the keys on the fifth above, and the fifth (or fourth) above any given key.

ATTEN'UATED, Lat. *attenuatus*, tapering: applied to parts of plants &c.: disproportionately slender; thinned.

ATTENUA'TUS. When the thickness of a part diminishes in some direction, it is often used in the sense of narrowed or angustate.

ATTIC, Lat. *Atticus*, of *Αττικος*. Pertaining to Attica, or its capital Athens.

AT'IC SALT, a delicate, poignant kind of wit peculiar to the old Athenians. In *architecture*, an *attic* denotes a low story erected over an order of architecture by way of crowning.—An *Attic base* consists of an upper and lower torus, a scotia

and fillets between them, used by ancient architects in the Ionic order, and sometimes in the Doric.—*Attic order* is a term sometimes used to denote the pilasters employed in the decoration of an attic story.—An *attic story* is the upper story of a house.

ATTIRE. 1. Dress.—2. Horns of a deer.—3. The sexual parts of plants.

ATTOLLENT, Lat. *attollens*, lifting up; applied to muscles which raise the parts they are affixed to.

ATTORNEY, Lat. *attornatus*; one appointed by another to transact some business in his name and stead. An attorney is either *public* or *special*; the former is one who is authorized by the rules of the court to represent suitors without any especial written authority for the particular case—a special attorney is appointed by a deed called a *power*, *warrant*, or *letter of attorney*, which is a commission from the principal specifying the acts for which he, the principal, will hold himself liable on their being performed by the attorney.

ATTORNEY-GENERAL, a principal law-officer appointed to manage all law affairs on the part of the government.

ATTORNMENT, } Lat. *attornamentum*,
ATTOURNMENT, } (from Fr. *tourner*). In *English law*, the act of a feodatory vassal or tenant, by which he consents, on the alienation of an estate, to receive a new lord or superior.

ATTRACTION, Lat. *attractio*, a drawing to, *ad* and *trahō*. The tendency which bodies have to come together, or the principle which inclines them to unite and remain in union. (See **AFFINITY**.)

The terms attraction and repulsion in the language of modern philosophy are employed merely as the expression of the general facts that the masses or particles of matter have a tendency to approach or recede from each other under certain circumstances. The term affinity has been used synonymously with attraction, but it is now generally restricted to chemical attraction, while the term *gravity* is used to designate that influence which one mass of matter exerts over another at sensible distances (See **GRAVITY**). Whether the several kinds of attraction are referable to one and the same cause is still an open question; all that is at present known is, that they give rise to different phenomena, and appear to operate according to different laws.

ATUS, is a Latin termination; Anglicised *ate* or *ated*, and denotes the presence of something general; e. g. *alatus*, Ang. *alate*, winged. The same applies to *itus*.

AUBAINE, Fr. *aubain*, an alien. The *droit d'aubaine* was a French law, by which the king became heir to an alien dying within his jurisdiction.

ARCHENIA, a genus of ruminant animals allied to the camel: the species are two, the Lama and the Paco, both natives of America.

ARCU'BA, the *Gold-Plant*, shrub; native of Japan. *Monœcia*—*Tetrandria*.

AUDEANISM, anthropomorphism; the doctrine of Audeus.

AU'DIENCE, Lat. *audientia*, of *audio*, to hear. 1. The ceremonies practised in courts at the admission of ambassadors and public ministers to a hearing.—2. A court held in England by an archbishop whenever he chooses to call up a cause to be argued before himself.—3. In *Spain*, a court of oyer and terminer.

AU'DITOR, a Latin word denoting a *hearer*; and in the language of the ancient law, an officer of courts whose duty it was to interrogate the parties. In England, the term is employed as the designation of certain officers who examine accounts, compare the charges with the vouchers, interrogate parties, allow or reject charges, and state the balance. Accounts so examined are said to be *audited*, and the process is called *auditing*.

AU'DITORY, Lat. *auditorium*. 1. A seat or bench where a magistrate or judge hears causes.—2. That part of an ancient church where the people sat, now called the *nave*.—3. Belonging to the parts connected with the sense of hearing; e. g. the auditory nerves.

AUGITE, a mineral of a dark green, brown or black colour, of which the most remarkable varieties are Diopside, Sahlite, Coccoilite and Omphazite; the Zillertal, used in jewelry, is also a variety. It occurs in volcanic rocks, crystallised in six or eight sided prisms, terminated by dihedral summits. Name from *αυγή* (Pin. 37, 16), *splendour*. It is the pyroxène of Haly, and the paratamous augite-spar of Mohs.

AUGMENTATION, from Lat. *augmen*, increase. In *music*, a doubling the value of the notes of the subject of a fugue or canon. In *heraldry*, additional charges to a coat-armour. The *Augmentation Court* was a court erected by 27 Hen. VIII., to augment the revenues of the crown by the suppression of monasteries; *abolished*.

AUGURS were certain priests among the Romans, who from the flight and cries of birds, from lightning, &c., pretended to foretell future events, and announce the will of the gods.

AUGUST, the eighth month of the year, having 31 days. The name was changed by the Romans from *Sextilis* (the sixth month from March), in honour of the emperor Oct. Augustus.

AUGUSTAN CONFESSION, a memoria drawn up at Augsburg (Lat. *Augustal*), by Luther and Melancthon in 1530, setting

forth their reasons of separation from the Romish church.

Augustians, } an order of monks so
Augustins, } called from St. Augustin.
They made one of the four orders of Mendicants, and were originally called Austin friars.

AULAI'RIAN, belonging to *aula*, a hall. A member of a hall, at Oxford, in distinction to a *collegian*.

AULIC, pertaining to *aula*, a court. An epithet generally given to one of the two supreme courts of the ci-devant German empire—the *Reichshofrath*.

AULOSTOMA, Gr. from *αῦλος*, a pipe, and *στόμα*, a mouth. A genus of acanthopterygians, belonging to the family called by Cuvier *bouches en flute*; including the pipe-fishes, or those species whose mouth is elongated into a kind of tube or pipe.

AURANTIA'CEÆ, a natural family of plants, of which the orange (*aurantium*) is the type.

AURANTIUM, the orange (*citrus aurantium*), so called *ab aureo colore*.

AURELIA, some of the two-winged tribe of insects. Butterflies and moths when in their pupa state are inclosed in a membranaceous envelope, and as these pupæ are often tinged of a gold colour, they were called from this circumstance *chrysalides* by the Greeks, and *aureliæ* by the Romans, both which terms are in some measure become Anglicised, and though not strictly applicable to ungilded pupæ, are often given to those of all lepidopterous insects. These by Linné are denominated *obscured pupæ*.

AUREOLA, of the colour of gold. In painting, the glory with which the ancient painters decorated the heads of the saints, martyrs, and confessors, which they executed.

AUREUS, a Roman gold coin worth about 16 shillings, according to Tacitus, and weighing about 2½ oz. avoird.

AURICLE, Lat. *auricula*, a little ear (*auris*). Applied, 1. In *anatomy*, to the external ear, and to two cavities of the heart, which have some resemblance to ears.—2. In *botany*, to plants whose leaves or other parts more or less resemble ears.

ATRICC'LA, a subgenus of *bulimi*. See *BULIMUS*.

AURICULAR CONFESSION. Confession of sins to a priest in private, distinguished from public confession.

AURICULATE, Lat. *auriculatus*, having ears or appendages resembling ears. Applied, 1. In *botany*, to leaves which are furnished with a pair of leaflets, generally distinct, but sometimes joining them at the base.—2. In *conchology*, to a few bivalves which have a flat angulated projection on one or both sides of the

umbones or bosses: most developed in the *pecteus*.

AURIGA, in *astronomy*, the *waggoner*. A constellation of the northern hemisphere, containing 86 stars according to the British catalogue.

AUROCHS, Germ. *urochs*, the *ure-ox*. A name given to an animal of the bovine kind, found fossil in alluvion.

AURORA BOREALIS, literally *northern dawn*. The name given to that extraordinary luminous appearance or meteor which shows itself in northern latitudes after sunset, called also *northern light* (Germ. *nordlicht*), and popularly *streamers* and *merry dancers*.

This appearance is from our position on the earth regarded as peculiar to the north, but a similar phenomenon is also observable in the southern hemisphere, called with like propriety *Aurora Australis*. It was witnessed in 1773 between 58° and 60° S. lat. by Cooke's sailors, and later travellers have observed the same. These phenomena therefore, as they are common to both poles, ought properly to be called *Polar lights*.

AURUM MUSIVUM, or *MOAICUM*. Moaic gold, composed of 100 tin + 54 sulphur.

AUSCULTATION, Lat. *auscultatio* (of *ausculto*, to listen). This term is applied to the several methods of detecting the nature and seat of disease by means of the sense of hearing, but particularly to the exploration of the thorax by means of the sounds in that part, rendered more distinct to the ear by the intervention of an instrument called a *stethoscope* (q. v.).

AUSPICES, the observations taken by the Roman augurs from the flight of birds and other natural appearances. An *auspex* was any one who interpreted omens; an *augur* was a member of the sacred college.

AUSTER, the south-wind. *Austral*, south, southern.

AUTERFOITS, from Fr. *autre*, another, and *fois, fois*, time. A term introduced into law phraseology under the Norman princes of England, to signify at another time, formerly; as *auterfois acquit*, formerly acquitted, which, being specially pleaded, bars a second prosecution for the same offence.

AUTHENTIC (*αὐθεντικός*), of genuine origin. Applied in *music*, 1. To chords which have the 4th uppermost.—2. In melodies whose principal notes lie between the key-note and its octave.

AUTHENTIC MELODIES, in *music*, such as have their principal notes contained between the key-note and its octave.

AUTHENTICS, in *civil law*, a name given to an extract from the Novels (q. v.), by which a law of the code is either changed

or abolished. So called, because first extracted from a MS. copy of the Novel (*liber authenticus*), put among the altered passages of the code, and have thus remained in the editions of the *Corpus Juris*.

AUTOCAR'PUS, Gr. from *αὐτός*, himself, and *καρπός*, fruit. A name given to such fruit as consists of nothing but pericarp, without any additional organ.

AUTOCH'THON (*αὐτοχθών*), one produced from the ground. Several ancient nations assumed the name of *autochthones*, to indicate the antiquity of their origin.

AU'TO DA FE, Port. } literally, *act of*
AU'TO DE FE, Span. } *faith*. A sentence given by the Inquisition, and read to a criminal (*heretic*), on the scaffold just before he is executed.

AUTOM'ALITE, } octahedral corundum.

AUTOM'OLITE, } A variety of corundum containing oxide of zinc (thence called *pinelle zincifere* by Haüy) and alumina. It is sometimes called *fahumite*, because found in a talcose rock at Fahlun, and *gahnite*, from Gahn, its discoverer.

AUTOMATIC, self-acting. Applied to machinery which in some measure supercedes manual labour and attention.

AUTOM'ATON, from *αὐτομάτος* (of *αὐτός*, self, and *μαίω*, to move. Any mechanical contrivance which, by some concealed force (springs or weights), can carry on for some time certain movements, more or less resembling animal exertion. In this respect all kinds of clocks, watches, and numerous other machines employed in cotton and other factories, are denominated *automata*; but the term is more commonly restricted to that class of mechanism in which the power is made to imitate the voluntary motions of living beings. When such automata represent human figures and actions, they are termed *androides* (man-like).

AUTUMN, Lat. *autumnus*. That one of the seasons, which, in the N. temperate zone, begins when the sun, in its apparent descent to the southern hemisphere, touches the equator, and enters Libra (23rd September), and ends at the winter solstice (20th December): from this astronomical autumn, the popular autumn differs according to climate.

AUTUM'NAL POINT, the point where the equator cuts the ecliptic: the sun reaches it on the 23rd September. It is said to be at the beginning of Libra, but the point has really long since receded from this constellation: it is now near the stars on the left shoulder of Virgo.

AUTUM'NAL SIGNS, the signs Libra, Scorpio, and Sagittarius.

A'VA-A'VA, a plant of Otaheite, from which the inhabitants obtain a species of arack.

AV'ALANCHE, the name given to those

vast snow-slips which roll down the Alps and often overwhelm forests, villages, &c., in their course. The term is from Fr. *avalier*, to swallow.

AVA'ET, with *seamen*, cease, stop, stay; Germ. *basta*, stop.

AVELLA'NA, the hazel-nut: a species of *corylus*. Named from *Avella*, a town of Campania.

A'VE MAR'IA, Ave Mary. Among Catholics, the beginning of a prayer to the Holy Virgin is *Ave Maria*, whence the whole prayer takes that name (*Ave* means *hail*). The name *Ave Maria* is also given to the little balls in rosaries, each of which denotes a prayer called *Ave Maria*, while the larger balls denote a *Pater-noster*.

AV'ENA, the oat-grass. A genus of which the plant that produces the grain, well known under the name of *oats*, is a species (*A. sativa*). *Triandria—Digynia*. Name applied by the ancients to the Brome-grass.

AV'ENAGE, oats (*avena*). Paid by a tenant in lieu of rent or other duty.

AV'ENER, OR, in *feudal law*, an officer of the king's stables, whose duty it was to provide oats.

AV'ERAGE, a term used in commerce and navigation, to signify a general contribution to make up a particular loss; as when the goods of a particular merchant are thrown overboard to prevent the ship from sinking, or where the masts, cables, anchors, or other furniture of the ship, are cut away or destroyed for the preservation of the whole, or money or goods are given to pirates to save the rest, or where any expense is deliberately and voluntarily made, or any expense fairly and *bond fide* incurred, to prevent a total loss—such sacrifice or expense ought to be rateably borne by the owners of the ship, freight, and cargo, so that the loss, for the good of all, may fall equally on all.—There are also some small charges called *petty* or *accustomed averages*: it is usual to charge one-third of them to the ship, and two-thirds to the cargo. Hence the expression in bills of lading, "freight with primage and *average* accustomed."

AVER'NUS, a lake of Italy, 10 miles west of Naples, celebrated in antiquity as the entrance to the infernal regions.

AVERRUNCA'TOR, Lat. *averrunco*, I dress or weed; in *arboriculture*, an instrument for cutting off the branches of trees, consisting of two blades fixed on the end of a rod; one of which has a moveable joint, which, by means of a line fixed to it, operates like a pair of scissors.

AVER'SE, Lat. *acernus*, turned back. In ornithology, when the posterior extremities are attached to the trunk near the anus, so that the body is held erect, as in the penguin.

AVICEN'NA, the generic name of the *Mangrove-tree*. *Didynamia—Angiospermia*.

Named in honour of an Arabian physician. Native of the hot parts of both Eastern and Western continents.

AVICULA, a genus of equivale shell with a rectilinear hinge: it belongs to the oyster family, and is known popularly as the Mother-of-pearl oyster. The species which produces the fine pearls of Ceylon is the *Mytilus Margaritifera*, Lin.

AVICULIDÆ, a family of shell-fish comprehending the muscles and pearl oysters. *Swinson*.

AVOIDANCE. In ecclesiastical law, signifies the condition of a benefice when void of an incumbent, and is opposed to plenarity.

AVOIRDUPOIS, Fr. *avoir du pois*, to have weight. The weight commonly used for bulky and coarse commodities. The pound contains 16 oz., and is to the troy pound as 17 to 14.

AVOSTET, the *Avostet*, a species of grallæ placed by Pennant among the palmipedes. The bird is of the size of the lapwing, and is common to Europe and America.

AVOWRY, in law, the act of the distrainer of goods who in an action of replevin *avows* and justifies the taking; the act of maintaining the right to distrain.

A-WEIGH, in nautical language, the same with *a-trip*.

AWLWORT, the *Subularia aquatica*, an indigenous aquatic perennial, so named from its awl-shaped (*subulate*) leaves.

AWNING. 1. A covering of canvas extended over the decks of a ship to give shelter from the sun, rain or wind.—2. That part of the poop deck which is continued forward beyond the bulk head of the cabin.

AWNLESS, without awn or arista.

AXATACAT, a Mexican fly whose eggs, deposited on rushes, &c. in large quantities, are collected and used as a sort of caviare, called *ahuauhtli*.

AXESTONE, a mineral; a sub-species of jade, which in some respects resembles nephrite. It occurs in New Zealand and the isles of the Pacific, where it is made into axes and other cutting instruments by the natives, from which circumstance it has obtained its name.

AXIFEROUS, Lat. *axis*, a centre, and *fero*, I bear. Said of those plants which consist solely of an axis with foliage or other appendage.

AXIL, Lat. *axilla*. 1. In *anatomy*, the arm-pit.—2. In *botany*, the angle formed by the stalk of a leaf with the stem.

AXILE, Lat. *axis*, lying in the axis of anything, as an embryo in the axis of a seed; viz., from the base to the end diametrically opposite.

AXILLARY, Lat. *axillaris*, pertaining to *axilla*, the arm-pit. In *botany*, applied to leaves, &c. which grow from the angle

formed by the stem and branch. *Generally*, applied to parts which spring from the point of union of two or more other parts.

AXINITE, thunderstone, (*thunderstein*, Werner). A mineral commonly found in crystals of four-sided prisms, so flattened that some of its edges become thin and sharp; hence its name from *αξινη* an *ax*, and *λίθος* stone. Colours, brown, grey, black and violet.

AXIS, *αξων*. This term is applied in the language of science to a right line passing through the centre of a body on which it may revolve. The axis may either be real or imaginary, as: 1. In *mathematics*, the straight line which divides the area of a figure and about which it revolves to produce a solid. Further, the straight line drawn from a point in the periphery through the centre of a sphere is its axis; and a straight line drawn from the vertex of a cone through the centre of its base is the axis of the cone. See *CONES* and *CONIC SECTIONS*.

—2. In *mechanics*, the line about which a balance moves or rather turns is the axis of the balance; the axis of oscillation is a right line parallel to the horizon, about which a pendulum vibrates; the axis in *peritrochio* is another name for the mechanical contrivance called the wheel and axle.—3. In *optics*, that ray of light which passing from the eye falls perpendicularly on the eye.—4. In *astronomy*, an imaginary right line passing through the two poles and the centre of the sphere, is called the axis of the sphere, and similarly the sun and all the planets are each conceived to revolve about their respective axes.—5. In *botany*, a taper column in the centre of some flowers about which the other parts are disposed.

—6. In *anatomy*, the second vertebra of the neck: the atlas rotates on its tooth-like process as on an axis.

AXOTOMOUS, from *αξων* an *axis*, and *τιμνω*, to cut. A mineralogical term, signifying cleavable in one particular direction.

AYE-AYE, the name given by the natives to an animal of Madagascar, *Cheiromys Madagascariensis*, for its peculiar cry. It is a nocturnal quadruped, size of a hare, burrows, and motion seems painful to it.

AZALEA, an extensive genus of plants of the class *pentandria*, and order *monogynia*. Name from *αζαλεος*, arid, because found only in such places. The trailing azalea, a low shrub with very woody tortuous stems, and crowded leafy branches, found plentifully on the Scottish Highland mountains, is the only British type.

AZIMUTH, from *Ar. al* and *samath*, path. In *astronomy*, the arc of the horizon inter-

cepted between the meridian of the observer and a vertical circle passing through the celestial object whose azimuth is measured. *Azimuth circles*, are great circles of the sphere, intersecting each other in the zenith and nadir, and cutting the horizon at right angles. The *magnetic azimuth* is an arc of the horizon, intercepted between the vertical circle passing through the centre of the celestial body and the magnetic meridian. It is found by the *azimuth compass*.

AZIMUTH DIAL, a dial of which the style or gnomon is perpendicular to the plane of the horizon.

AZOGA SHIPS were those Spanish government ships, called also *quicksilver ships* (Sp. *azogue*, quicksilver) because employed to carry mercury to the Spanish West Indies, to extract the silver from the ores of the mines of Mexico and Peru.

AZOTE, from α, not, and ζην, life. A gas otherwise called nitrogen (q.v.), which when breathed alone destroys life.

AZOTIZED, containing azote, said of some vegetables which contain much azote, and therefore in some measure partake of the nature of animal matter.

AZURE. 1. The fine blue pigment commonly called *smalt*. It is a glass coloured with oxide of cobalt, and ground to an impalpable powder.—2. In *heraldry*, the blue colour in coats of all persons under the rank of baron.

AZYGES. Αζυγος, an anatomical term applied to muscles, veins, &c., which have no corresponding muscle, vein, &c.

AZYMITES (from αζυμος, unleavened). Christians who administer the eucharist with unleavened bread (*azyme*).

B.

B is the first letter of all known alphabets except the Ethiopic, in which it is the ninth. As a numeral B was used by the Hebrews and Greeks, as now by the Arabians, for 2: by the Romans for 300, and with a dash over it, thus, B̄, for 3000. It is often used as an abbreviation: thus, B.A., stands for bachelor of arts; B.L., for bachelor of laws; B.D., for bachelor of divinity; B.F., before the decrees of the old Romans, for *bonum factum*. In *music*, B is the designation of the seventh note in the natural diatonic scale of C; but anciently it denoted the second interval in the scale beginning with A. B♭ stands for B flat, or the semitone major above A. B also stands for base, and B.C., for thorough base (*basso continuo*). In *chronology* B is one of the dominical letters, and in the *old chemical alphabet* it denotes mercury.

BAAL, a name common to the male, as *Ashtaroth* was to the female idols of the

East. The name is common to several of the oriental languages, and signifies *lord* or *master*.

BAB'LAH, the rind or shell which surrounds the fruit of the *mimosa cineraria*, and which is brought from the East under the name of *neb-nab*. It is used in dyeing cotton for proving various shades of drab.

BABOON, a name common to several of the larger species of the monkey tribe, which have short tails, and more or less approximate to the human figure. They are peculiar to the eastern continent. The term is Fr. *babouin*, from the resemblance which the animals bear to a child.

BABYRUS, the Indian hog; a species of the genus *sus*. It is a native of Celebes and Bourou.

BAC. 1. In *navigation*, a praam or ferry-boat.—2. In *brewing*, a large flat vessel in which wort is cooled before boiling, hence called a *cooler*.—3. In *distilleries*, a tub in which liquor to be fermented is pumped from the cooler in order to be worked with the yeast.

BAC'CA, a berry. A fruit which consists of a pulpy pericarp without valves, inclosing several naked seeds.

BACCALAU'REUS, Lat., the lowest academic degree in the English and French Universities.

BACCAULA'RIIS, a fruit consisting of distinct carpels, seated upon a short receptacle.

BACCHANA'LIA, festivals at Rome in honour of Bacchus, the god of wine. They were ultimately suppressed for their licentiousness.

BACCHUS, the god of wine, and son of Jupiter and Semele.

BACCHI'US, a foot in ancient poetry composed of one short and two long syllables; e.g., *dolores*, employed much in hymns to Bacchus.

BACCIF'EROUS, Lat. *bacciferus*, berry-bearing, applied to plants which produce berries.

BACCIVOROUS, berry-eating, *bacca* and *coro* to eat.

BACHE'LOB, Lat. *baccalaureus*, from *baculus*, a shoot. 1. A person who has taken the first degree in the liberal arts and sciences, at a college or university. The honour or degree is called the *baccalaureate*.—2. In the *middle ages*, a knight of the lowest order, or rather a young knight, called a knight bachelor (*bachelier*).—3. A canon of the lowest rank.

BACILLA'REE, a small group of algaecous plants, much the same as those called *cymbellæ*. They are said to possess the power of spontaneous motion.

BACK, a nautical term. 1. To *back* an anchor. See *ANCHOR*.—2. To *back* sails is to arrange them so that the ship shall

move astern.—3. To *back astern* is to manage a boat in rowing so that it shall move stern foremost. Back is here used as an abbreviation of backwaters.

BACKER. In architecture, used to denote a narrow slate laid on the back of a broad, square-headed slate when the slates begin to diminish in width.

BACKGAMMON, a game played with dice by two persons on a table divided into two parts, upon which there are 24 black and white spaces called *points*. Each player has 15 men, black and white, to distinguish them. The term is from Welsh *bac*, little, and *canmaun* battle. The little battle.

BACKQUADRANT, a quadrant formerly used at sea for taking the sun's altitude; so called from the back being turned towards the sun in using it.

BACKSET. In Scotland, a sublease, in which possession is restored to those having the primary interest in it. From *back* and *set*, a lease.

BACKSTAFF, the backquadrant (q. v.); called also, from its inventor, Davis's Quadrant, and by the French, the English Quadrant.

BACKSTAYS, ropes or stays extending from the topmast heads to both sides of a ship, to assist the shrouds in supporting the mast, when strained by a weight of sail.

BACKSWORD. In England, a stick with a basket-handle, used in rustic fencing.

BACKTACK. In Scotland, a deed by which a wadsetter, instead of himself possessing the lands which he has in wadset, gives a lease of them to the reverser, to continue in force till they are redeemed, on condition of the payment of the wadset-interest as rent. From *back* and *tack*, lease.

BACONIAN PHILOSOPHY. The system propounded by Francis Bacon, Lord Verulam.

BACULARES, a sect of anabaptists is so named from *baculum*, because they held it unchristian to carry any other weapon than a staff.

BACULOMETRY, the art of measuring heights with a staff—*baculus* and *metrum*.

BADOER. In old law, a person licensed to buy corn in one place and sell it in another, without incurring the penalties of engrossing. In zoology, a genus of quadrupeds belonging to the plantigrade tribe, and placed by Linnæus with the Racoons, in the genus *Ursus*.

In the first sense, *badger* is from Sax. *byrgan*, to buy. In the second, from Gothic *baydga*, to fight, to beat.

BADIA'OA, a marine plant of the order algae, used in Russia to remove the livid marks of bruises.

BADIG'ON, a mixture of plaister and freestone well sifted and ground together. Used by statuary to fill up the little

holes, and repair the defects in stones of which their work is made. Joiners also give this name to a mixture of sawdust and glue, with which they fill up the chaps and other defects of wood after it has been wrought.

BAD'INAGE, a method of hunting wild-ducks practised in France. It consists in covering a boat with foliage, and sailing it cautiously towards the birds, when a small dog, trained to the sport, is silently put out; the birds seek shelter about the insidious island, and are generally speared, but sometimes shot.

BÆLYT'IA, certain anointed stones worshipped by the Phœnicians. *Bætylos*, the stone which Saturn devoured instead of Jupiter!

BE'TOEN, an exceedingly venomous serpent of Africa, described by Foskal.

BAG. 1. In commerce, a certain quantity of a commodity, such as it is common to carry to market in a sack; e. g. a bag of meal is 240 lbs. avoird.—2. In *farriery*, a bag or list of one oz. asafoetida, with as much powder of safin, tied to the bit of a horse's bridle, to restore his appetite. Norm. *bage*.

BAGA'SSE, the sugar-cane in its dry and crushed state, as delivered from the sugar-mill. Used for fuel.

BAG'GING, a mode of reaping corn or pulse with a hook by chopping, instead of by a drawing-cut.

BAG'LAFECHT, a variety of the Philippine Grosbeak (*Loxia Philippiana*) found in Abyssinia.

BAG'IO, an Italian term for a bath. Applied to a house provided with conveniences for bathing, &c.

BAG'TIFE, the *αργαυλος* of the Greeks, and the *tibia utricularis* of the Romans, is a musical wind-instrument of high antiquity, especially among the northern nations. Its peculiarity consists in collecting the air into a leathern bag, from which it is forced, by the pressure of the performer's arm, into the pipes. The base pipe is very appropriately called the *drone*, and the tenor or treble is called the *chanter*. This has eight holes, like those of a flute, which the performer opens and stops at pleasure. Air is supplied either with bellows, as in the Irish bagpipe, or with the mouth, as in the Scottish or Highland bagpipe.

This instrument has so long been a favourite in Scotland and Ireland, that it is regarded as the national music of those countries; but it is by no means peculiar to them. It is found on Grecian and Roman sculptures, and in several other countries it is a popular instrument at the present time. It is, besides, one of the few things on which time has wrought no improvement. It

is still exceedingly defective. The range of the Irish or soft pipe does not exceed twelve tolerable notes, and that of the Scottish or Highland pipe nine; and it can hardly be said that the music of either is a "pleasant noise," unless when filtered through a stone-wall of two feet thick.

BAGUETTE, an architectural term, from the French, denoting a small round moulding, somewhat less than an astragal, which, when enriched with ornaments, is called a *chaplet*, and when plain, it is a *bead*.

BAH'AR BARRE, a weight used in various parts of the East Indies. That of Acheen = 490 lbs., that of Bencoolen = 560 lbs., that of Junkseylon = 485 lbs. 5½ oz., that of Malacca = 405 lbs., and that of Mocha = 445 lbs. *avoirdupois*.

BAIL, from Fr. *bailier*, to deliver. In law, to bail is to liberate from arrest and imprisonment. Thus the magistrate *bails* a man when he sets him at liberty upon bond given with securities; and the surety *bails* a man when he procures his release by giving bond for his appearance. When a person has procured his liberty on bond given for his appearance when cited, he is said to be *out on bail*; the persons who are surety for him are his *bail*, and the bond of surety is the *bail-bond*. When the securities are mere fictitious names, a John Doe and Richard Roe, the bail is called *common*; when the bail-bond is *bond fide* a bond of surety, the bail is called *special*.—The word *bail* is used by seamen to signify the process of clearing a boat of water; but in this sense it is usually written, though improperly, *baile*.

BA'ILEE, the person to whom a *bailment* (q. v.) is made.—*Bailer*, the person making the bailment.

BA'ILIE, in *Scotland*, a magistrate of a royal burgh, possessed of certain jurisdiction by common law as well as by statute: the title is analogous to alderman in England.

BAILIFF, Fr. *bailif*, of Lat. *baila*, authority. This name was anciently used to signify an officer appointed for the administration of justice within a certain district, and comprehended sheriffs of counties (called *bailiwick*s or *bailiwa*s), as well as bailiffs of hundreds. There are now many sorts of bailiffs: 1. *Sheriff's-bailiffs*, who are either special, and appointed for their adroitness to apprehend defaulters; or bailiffs of hundreds, who collect fines, summon juries, attend the assizes, and execute writs and processes. The *special-bailiffs* are more commonly in Scotland called *sheriff-officers*, and the bailiffs of hundreds have in England got the homely appellation of *bum-bailiffs* (an odd corruption of *bound-bailiff*. See *APPELLATION*).—2. *Bailiffs of liberties*, are appointed by the lords of their respective

jurisdictions, to execute processes and perform other duties.—3. *Bailiffs of courts baron*, summon these courts and execute the process thereof.—4. *Water-bailiffs*, are appointed in seaport towns to search vessels, gather toll for anchorage, arrest debtors on the water, &c.—5. In some provincial towns of England the principal magistrates are called *bailiffs*; there is a *high-bailiff* of Westminster; the lord mayor of London sits under his title of *bailiff* (which title he bore before the present became usual), in the court of Old Bailey; the sheriff is the Queen's *bailiff*, and there are *bailiffs* of castles, as that of Dover, and *bailiffs* on estates, who have charge of the inferior servants and direct their work.

BAI'LIWICK (*baili*, and Sax. *plc*, jurisdiction). The jurisdiction of a *bailiff* (q. v.). Under William I., the counties of England were called *bailiwicks* (Lat. *ballivæ*), and the subdivisions *hundreds*. The courts of the latter have long since ceased.

BAIL'MENT, from *bail*. A delivery of goods, in trust, upon a contract expressed or implied that the trust shall be faithfully executed. It comprehends: (1.) Deposit. (2.) Loan. (3.) Hire. (4.) Pledge. (5.) Carriage of goods for reward. (6.) Mandate.

BAIL'PIECE, a slip of parchment or paper, containing a recognisance of *bail above* or *bail to the action*.

BAIR'AM, an annual festival among the Mohammedans. It may be called the *Easter*, as the *ramadan* is the Lent of the followers of Mahomet. See *RAMADAN*.

BAIRMAN, *bair* and *man*. An old law term, denoting a debtor sworn in court not to be in possession of property worth five shillings and fivepence. Synonymous with *dysour*.

BAJ'ADERES, the Portuguese name of the Indian dancing girls, employed partly as priestesses, and partly as means of entertainment and pleasure to the *grandes* of India.

BAJ'ULUS, Lat. *bajulare*, to carry. In the lower Greek empire, the officer intrusted with the education of a prince.

BA'KER'S-ITCH, a species of psoriasis is so called when it is confined to the back of the hand, where it often appears among bakers.

BALÆ'NA, from *βαλαιναι*, a whale (of *βαλλω*, to throw, in allusion to its power of spouting the water, technically called *blowing*). A genus of mammalia belonging to the order *cetacea* of Cuvier; and to that tribe popularly called the *blowers*. See *CETACEA* and *WHALE*.

BALALA'IKA, a musical instrument of the guitar kind, of very ancient Slavonian origin, and common among the Russians

and Tartars, and also found in Egypt and Arabia.

BALANCE, Fr. *balance*, Sp. *balanza*, Lat. *bilanz*; of *bis*, double, and *lanx*, a dish, scale. A well-known mechanical contrivance which serves to find out the equality or difference of weight in ponderable bodies. It is commonly reckoned among the mechanical powers, but it is only a particular species of the lever, in which the arms are equal, and which must therefore be in equilibrio when the power or weight are equal. Beside the common, there are various other kinds of balances, as: 1. The *Bent-lever balance*, is a bent lever ABC, to whose extremity, C, a weight is fixed, and at its extremity, A, a hook, carrying a scale-pan, is moveable about an axis, B. Every different weight placed in the scale-pan varies the perpendicular, CD, and therefore the inclination of BC and these positions are noted upon the quadrant, FG, usually in lbs. and oz.—2. The *Denish balance* differs from the steel-yard or Roman statera, in having a

moveable fulcrum instead of a moveable weight. It is often nothing more than a batten of hard wood AB, with a knob of lead B, and a shifting fulcrum F, often a piece of cord, by which to suspend it in weighing. The weight is read off on a division marked along the arm for the purpose.—3. The *Hydrostatic balance* is a delicate balance of the common form, used in determining the specific gravities of bodies.—4. *Roman balance*. See **STEEL-YARD** and **STATERA**.—5. *Torsion balance*. See **TORSION**.—*Balance*, in commerce, is the term used to denote the difference in value between the exports from and imports into a country. The balance is said to be favourable when the value of exports exceeds that of the imports, and unfavorable when the value of the imports is the greater.—*Balance of power*, in politics, a system by which the relative power of different states and alliances is so maintained as to render any extensive derangement improbable.—*Balance*, among watch-makers, that part of a watch or clock which regulates its beats. It is a sort of wheel, the circumference of which

is called the *rim*, and its spindle the *verge*. It answers the purpose of a pendulum.

BALANCE-FISH, a species of squalus or shark, weighing about 500 lbs.

BALANCE-REEF, a reef-band crossing a sail diagonally, used in *balancing* (q. v.)

BAL'ANCING, in nautical language, the contracting a sail into narrower compass by folding up a part of it at one corner, by which it is distinguished from *reefing*.

BAL'ANUS, a genus of mollusca; order *Cirrhopoda*, Cuv. The principal part of the shell of the balani consists of a testaceous tube attached to various bodies, as rocks, shells, and the bottoms of ships. One species, the barnacle, (*Lepas balanus*, Lin.) is exceedingly numerous on the coasts of Europe. They often penetrate into the flesh of large fish, as the whale. Name *Bálaxos*, a nut.

BAL'ASS-RUBY, } A sub-species of Cor-
BAL'ASS-RUBY, } undum, which being
found chiefly in Ceylon has obtained the name of Ceylonite. It is called also *Spinelle Ruby*. The name *balass* is the Fr. *balais*, and Lat. *balasius lapis*.

BALCONY, Fr. and Sp. *balcon*, from Ar. *balkana*. 1. A projection in front of a building supported by pillars, and usually encompassed with a balustrade.—2. A gallery in a ship, either open or covered, made abaft the captain's cabin for convenience or ornament.

BALDACH'IN, } A term derived from the
BALDACH'IN, } Italian *baldachino*, and ap-
plied to a building in the form of a canopy, supported by columns, and serving as the crowning or covering to an altar.

BAL'DERICK, Ir. *balta*, a belt, and *rick*, rich. 1. A richly ornamented belt.—2. The zodiac. (*obsolete*).

BALDWIN'S PHOSPHORUS, ignited nitrate of lime.

BALD-GOODS, are such as are imported or exported in bales.

BAL'EEN, Fr. *baleine*, a name given by the whale-fishers to the whalebone of commerce. The term is a corruption of *balena*, the generic name of the common whale.

BALENOPTERA, the jubarta; a sub-genus of the whale-tribe, from *balena* (q. v.) and *ptera*, a fin, the animal being provided with dorsal fins.

BAL'ISTER, a cross-bow, named from the ancient *balista*, a warlike engine, used in besieging fortified places, for projecting stones, arrows and other missiles. Root, *Bállax*, to throw.

BAL'IVA, in old statutes, a balliwick, (q. v.) *Ballivous*, a bailiff. *Ballivo amovende* is the name of a writ to remove a bailiff from his office.

BALISE, Fr. *balise*, Sp. *baliza*, a beacon; a sea-mark or pole raised on a bank

BALK, (D. *balk*.) Balks are large pieces

of timber or beams, of from 5 to 12 inches square, as imported; the larger are accounted timber. *Balk* is also a provincial name of the summer-beam of a building; and in some parts of Scotland it is synonymous with *Cubber*. Among bricklayers, the term denotes the pieces of timber used in making scaffolds. In agriculture, a balk is a ridge of land passed over in ploughing and not turned.

BALK'ERS, in fishery, persons stationed on rocks and eminences to spy the shoals of herrings, and give notice to the men in the boats which way they pass.

BALL, is a popular name of any spherical body, whether natural or artificial; found in most European languages with little variation of meaning or orthography.—In heraldry, balls are common bearings, called, according to their different colours, ogresses, besants, golpes, guzes, hurts, pellets, plates, pomeys, oranges, torteaux.—A printer's ball consists of hair or wool covered with leather, fixed into a stock called the *ball-stock*, somewhat hollow at one end, and serving as a handle: used (formerly) to put ink on the types in the forms (instead of the roller now used).—*Puff-ball* is a popular name of the lycoperdon; and *ball-vein*, a miner's name for a species of iron ore which occurs in loose nodular masses.

BALL AND SOCKET, an instrument made usually of brass, with a perpetual screw, so as to move horizontally, vertically, and obliquely: used in managing surveying and astronomical instruments.

BALL-COCK, a hollow globe of metal attached to the end of a lever which turns the stop-cock of a cistern pipe, by floating on the surface of the water, thereby regulating the supply.

BAL'LET, a Fr. term, dim. of *bal*, a dance. 1. A dramatic dance, the object of which is to express by the different movements some subject, sentiment, passion, or action.—2. A species of dramatic poem representing some fabulous subject.—3. In heraldry, the term is used in the same sense as *ball* (q. v.).

BALLIAGE, a small duty paid to the city of London by aliens, and even by denizens, for certain commodities exported by them.

BALLISTA, written also *balista*. See **BALISTER**.

BALLISTIC PENDULUM, a machine for ascertaining the force of military projectiles, and consequently of gunpowder. It consists of a large block of wood, suspended vertically by a horizontal iron axis, to which it is connected by an iron stem. The ball impinges against the block, and causes it to vibrate through a certain arc proportional to the force of the impact, and this arc being accurately observed, the force of the projectile is consequently known.

BAL'LUM, in the architecture of the middle ages, the open space or court of a fortified castle.

BALL'ON is a French term, meaning a large ball or balloon; used to denote a globe on the top of a pillar.

BAL'LOON, from *ballon* (q. v.). 1. A chemical glass receiver in the form of a hollow globe with a short neck.—2. A spherical silk bag filled with hydrogen gas or with heated air, by the buoyancy of which it ascends into the atmosphere: sometimes called for distinction an *air-balloon*.—3. A ball of pasteboard filled with combustibles to be played off when fired, either in the air or in water, bursting like a bomb, and throwing out sparks like stars.

BAL'LOT, a ball used in voting: Fr. *ballote*; Sp. *balota*, a little ball. Voting by ballot signifies voting by putting little balls of different colours into a box or urn: the greater number of one colour determines the result. Tickets are also used instead of ballots, and called by the same name.

Most clubs elect their members by ballot—a white ball indicating assent, and a black one dissent: hence when an applicant is rejected, he is said to be *blackballed*.

BALLOTA, the stinking-horehound. A genus of perennials. *Didymia*—*Gymnosperma*. Name *βαλλων*, from *βαλλω*, to repel, in allusion to its disagreeable smell.

BAL'LOTADE, in the *ménage*, the leap of a horse between two pillars or upon a straight line, so that when his fore feet are in the air, he shows nothing but the shoes of his hind feet, without jerking out: it is thus distinguished from *capriole*.

BALM, contraction of *balsam* (q. v.). In botany, the popular name of several plants, especially the *Melissa*, the species of which are aromatic.—*Balm of Gilead*, the balsamic produce of the *amyris gileadensis*, a low tree or shrub indigenous to Arabia and Abyssinia, and transplanted at an early period to Judea. This is the most valuable of all the balsams, but it rarely finds its way to this country. The *balm of Canada*, which is merely a fine turpentine, obtained from an American species of fir-tree (*pinus balsamea*), is usually substituted for it, and the tree itself is in consequence popularly called the *balm of Gilead*. See **OPOBALSAM**.

BAL'SAM, Lat. *balsamum*, of *βαλσαμον*, from the oriental *baal samem*, prince of oils. Balsams are vegetable juices either liquid, or which spontaneously become concrete, consisting of a substance of a resinous nature, combined with benzoic acid, or which are capable of affording benzoic acid by being heated alone or with

BANDERO'LE, a Fr. term meaning a narrow flag or streamer, used in heraldry to denote the streamer affixed under the crook of a crossier and folding over the staff.

BAND'ORE, Sp. *bandurria*. A musical-stringed instrument resembling the lute.

BANDROL, a little flag or streamer affixed to the top of masts, from *banderois* (q. v.).

BANGUE, an opiate much used throughout the east to produce intoxication. It is obtained in several ways, from a kind of hemp. The Persians call it *beng*.

BAN'YANS, a name formerly given by Europeans to all Hindus, because *baniya*, the term whence it is derived, signifies a *banker*, the class with which Europeans had most frequent intercourse. *Banian* is with us the name of a sort of morning dress resembling the loose gown worn by the Banians of India. The *banian-days* of the sailors are those upon which no flesh meat is allowed, also borrowed from the habits of the Banians, who, being metempsychosists, refrain not only from eating flesh, but even from killing noxious animals.

BAN'IAN-TREE, } the Indian fig or God-
BAN'YAN-TREE, } tree, the (*Ficus Indica*). The branches of this famous tree descend, take root, and are in time converted into great trunks, so that a single tree, with all its props and stems, may cover a space of 2000 feet circumference.

BANK. 1. In *carpentry*, a piece of fir-wood unsplit of about six inches square, and of any length.—2. In *nautical language*, a bench of rowers in a galley, so called from their seat, *bench* and *bank* being radically the same word.—3. In *commerce*, an establishment for the custody and issue of money. *Bank for savings*, a bank established for the receipt of small sums deposited by the poorer class, and for their accumulation at compound interest.

BANK-CREDITS are credits peculiar to Scottish banking, by which, on proper security being given to the bank, a person is entitled to draw money to the extent agreed upon.

BANK'ER. 1. Among *masons*, the stone bench on which they cut and square their work.—2. Among *seamen*, a vessel employed in the cod-fishery, on the banks of Newfoundland.—3. The individual who manages a bank, or who carries on the business of banking.

BANK'ET. In *bricklaying*, a piece of wood of about eight inches square, and nine feet in length, on which to cut the bricks.

BANKRUPTCY, the state of an insolvent merchant. From *bancus*, a bench (whence bank), and *ruptus*, broken, in allusion to the benches formerly used by the money-

lenders of Italy, which were broken in case of their failure. No person but a trader can be a bankrupt.

BANK'SIA, a very extensive genus of greenhouse shrubs, natives of New Holland.

BAN'LIÈRE, Fr. The territory without the walls, but comprised within the legal limits of the city.

BAN'NER. 1. In *military language*, the colours, or square standard.—2. In *botany*, the upper large petal of a papilionaceous flower.

The origin of this term, which occurs in all modern languages of Western Europe, is, perhaps, the Persian *band*, a standard, from *bandan*, to bind. Qu. Goth. *bannan*, to summon, proclaim?

BAN'NERET, a knight made on the field, with the ceremony of cutting off the point of his standard, and making it a square. The custom is obsolete. He was then called a knight of the *square flag*, and held a rank between a baron and simple knight.

BAN'QUET, **BANQUETTE**. 1. The footpath of a bridge.—2. The elevation of earth behind a parapet, on which the garrison of a fortress may stand in order to fire upon an approaching enemy.

BAN'SHEE, **BANSHI**, an Irish fairy.

BAN'STICKLE, a small fish called also *stickle-back*, and *bantickle* in some parts of Scotland.

BAN'YAN, a kind of Indian fig, forming a very large tree, which sends down roots from its branches, which in their turn become trunks, and prop the extending branches.

BAPHOMET, the imaginary symbol which the Templars were accused of employing in their mysterious rites.

BAP'TISTERY. In *architecture*, a building destined for the purpose of administering the rite of baptism.

BAP'TISTS, a protestant sect, distinguished by opinions regarding the *mode* and *subjects* of baptism. As to the *mode*, the Baptists maintain the necessity of immersion, from the literal translation of the word βαπτίζω; and the *subjects*, they maintain, should only be those who profess repentance and faith. Hence, they are often called *antipædobaptists*, because they consider infants unfit subjects for baptism.

BAR, literally that which obstructs. 1. In *law-courts*, an inclosure made with a strong partition of timber, three or four feet high, where the counsel are placed to plead causes. Hence, lawyers licensed to plead, are called *barristers*. The benches where the lawyers are seated are also called *bars*, and the lawyers themselves are collectively called the *bar*. A *trial at bar* is a trial at the courts of Westminster, in distinction to a trial at *nihi opus*,

in the circuits.—2. In *law*, a peremptory exception sufficient to destroy the plaintiff's action, either for the time being, or for ever, according as it is *temporary* or *perpetual*.—3. A bank of sand or gravel, or both, forming a shoal at the mouth of a river or harbour, obstructing entrance, or rendering it difficult.—4. In *music*, a stroke or line drawn perpendicularly across the lines of a piece, to divide the notes into equal portions with respect to time.—5. In *heraldry*, one of the honourable ordinances, consisting of two horizontal lines drawn across the escutcheon. The space inclosed is the *bar*.—6. In the *ménage*, the highest part of the place in a horse's mouth between the tusks and grinders, so that the part of the mouth which lies under and at the side of the bars retains the name of the gum. The upper part of the gums which bears no teeth, and to which the bit is applied.—7. A bar of gold or silver is an ingot, wedge, or mass that has been cast in a mould, and unwrought. A bar of iron is a long piece wrought in the forge, and hammered from a pig. Iron when first formed into bars is called *bar-iron*, and is marked No. 2; but when cut up, piled, and worked over again, it is denominated No. 3, or *best iron*.—8. To *bar a vein* is an operation in farriery, which consists in opening the skin over a vein, disengaging it, and tying it in two places, and striking between the two ligatures.

BARALIT'ION, an arbitrary term, used in logic, to denote the first indirect mode of the first figure of syllogism.

BARALLOTS, a sect of Manicheans, at Bologna, who had all things in common, even their wives and children. The name is the compound *bar-all-lots*.

BARATRY, in *commerce*, is the act of a master of a vessel, or of the mariners, when they cheat the owners or shippers, by running away with the ship to embezzle their goods. From Ital. *baratrare*, to cheat.

BARB, Lat. *barba*, beard. 1. The beard, or that which grows in the place of it, as the *barb* of a fish.—2. In *botany*, the hairy tufts which are found on various parts of plants; a sort of pubescence.—3. The points that stand backwards in an arrow, fish-hook, &c. are called *barbs*, and are intended to prevent easy extraction. Barb is also the common name of the Barbary pigeon and Barbary horse.

BAR'BA, Lat. a beard. In *mammalogy*, the long tuft of hair dependent from the under-jaw. In *ornithology*, the setiform or simple feathers which depend from the skin covering the gullet or crop. In *Ichthyology*, a kind of spine, with the teeth pointing backward. In *botany*, any collection of long loose hairs forming a tuft or crest, as on the petals of the iris.

BAR'BACAN, *BARBICAN*, Fr. *barbacane*. In *fortification*. 1. An outwork or defence of a city or castle, consisting of an elevation of earth along the foot of the rampart.

—2. A fort at the entrance of a bridge, or the outlet of a city having a double wall with towers.—3. An opening in the wall of a tower or fortress, through which to fire upon an enemy; called also an *embrasure*.

BARBADOES-LEG is a disease indigenous to Barbadoes, in which the limb becomes tumid, hard, and misshapen.

BARBADOES-TAR, a mineral fluid which trickles down the sides of the mountains in some parts of America, and sometimes is found on the surface of the waters.

BAR'BARA, an arbitrary term used in logic to denote the first mode of the first figure of syllogism. A syllogism in *barbara*, is one in which all the propositions are universal and affirmative, as, mice eat cheese; mouse is a syllable; ergo, syllables eat cheese!

BARB'AREA, the *winter-cress*. A genus of which there are two British types. *Tetradynamia-Siliquosa*. Named in honour of St. Barbara.

BAR'BATE, } Lat. *barbatus*, having beard
BAR'BED, } (*barba*), bearded. Applied to leaves, &c., terminated by a pubescence of strong hairs: awned.

BARBE, in the *military art*. To *fire in barbe*, is to fire the cannon over the parapet, instead of firing them through the embrasures. Anciently, armour with which horses were covered.

BAR'BEQUE. 1. In the *West Indies*, a hog roasted whole.—2. At home, any animal dressed whole.

BAR'BED, bearded. In *botany*, the same with *barbate*.—In *heraldry*, applied to extremities pointed with barbs, and also used synonymously with *crested*.

BAR'BEL, a fish, a species of cyprinus (q. v.). Its dorsal fin is armed with strong spines, whence its name from *barb*.

BAR'BELLATE. When the pappus of composite plants is bearded by short, stiff, straight bristles. When the roughness is caused by short points, it is termed *barbellulate*.

BAR'BELS, small cylindrical processes appended to the mouths of certain fishes, subservient to the sense of touch.

BAR'BERRY, a popular name of the genus *berberis*, of which there is one British species, common in hedges, and well known for its oblong, red berries. It is called also *pipperidgebush*.

BAR'BET, the *bucco* (q. v.), of ornithologists, is so named from its beak being barbed or furnished with bundles (five) of stiff hairs directed forwards, one behind the nostril, one on each side of the lower jaw, and a fifth under its symphysis.

BARBER'IE, a Fr. term meaning a *glat-*

form; used to denote a breastwork of a fortification, from which the cannon may be fired over the parapet.

BAR'ITON, a musical instrument of the lyre kind.

BAR'IBLES, a white excrescence that grows under the tongue in cattle: called *barbes* by the French.

BAR'BULA, Lat. dim. a *little beard*. A finely divided beard-like apex to the peristome of some mosses, as in the genus *tortula*.

BAR'CAROLE, a Venetian boat song.

BAR'CON, a luggage vessel used in the Mediterranean.

BARDIGLIONE, a blue variety of anhydrite, cut and polished for ornamental purposes.

BAR'DIN, in *military antiquities*, a complete set of armorial trapping for a horse. This word is written in the plural *bar-dynges*, and is derived by Grose from Fr. *barde*, covered; but it is more probable that the term was primarily used to denote the pikes or spears fixed in the horse's trappings, and consequently may be from the Teut. *barde*, a pole-axe.

BARDS, the ancient Celtic poets are so termed by Roman writers. The etymology of the word is uncertain. They were the priests as well as the instructors of the people, and were greatly venerated.

BAR-POLES, the masts of a ship at sea without sails.

BAR'-FEE, a fee of 1s. 8d. which every prisoner acquitted (at the bar) of felony pays to the gaoler.

BAR'GAIN, from Welsh, *bargen*, to engage. *Bargain and sale* is a species of conveyance by which the bargainer contracts to convey certain lands to the bargainee, and becomes by such contract a trustee for and seised to the use of the bargainee. The statute then completes the purchase, that is, the bargain vests the use, and the statute vests the possession.

BARGE-BOARDS, in *architecture*, the inclined boards placed at the gable of a building, to hide the horizontal timbers of the roof, and frequently ornamental.

BARGE-DOUPLES, in *architecture*, a beam mortised into another to strengthen the building.

BARGE-COURSE, in *bricklaying*, that part of the tilting which projects over the gable or kirkinhead of a building, and is made up below with mortar.

BARGE-MOTE, a court which takes cognisance of causes and disputes among miners: also *barmote*.

BARIT'LA, the name given in commerce to the impure carbonate of soda imported from Spain and the Levant. It is procured by the incineration of various plants which grow on the sea-shore, but especially the *salsola soda*, which is extensively cultivated for the purpose. Kelp (q. v.)

is sometimes called *British barilloo*. The term *barilla* is Spanish, probably from an Arabic root.

BAR'ITONE, in *music*, a voice the compass of which partakes of the bass and tenor: *Bagos*, heavy, and *reyes*, tone.

BA'R'IVM, the metallic basis of the earth, *baryta* (q. v.)

BARK. 1. The exterior part of trees, &c., corresponding to the skin of animals: it consists of a *cuticle* and *epidermis*.—

2. *Cinchona* (q. v.).

In medicine many kinds of bark are used; but the *Peruvian* or *Jesuit's bark* is especially called *bark* by way of eminence. It is the produce of a Peruvian tree (*cinchona lancifolia*), and was introduced into Europe by the Jesuits. Among tanners, oak bark is *bark par excellence*.

—3. A particular form of rig of vessels, namely, that of a ship, but having a gaff top-sail instead of the square main top-sail.

BARK'ER'S MILL, a valuable hydraulic machine, of which A B is a hollow cylinder moveable about a vertical axis M N; P P' another hollow cylinder placed at

right angles to the former, and communicating internally with it. Near its extremities, which are closed, two apertures are made—the sides of this horizontal cylinder opening in opposite directions. The cylinders being filled with water, the pressure on the portions opposite the orifices P and P' being unsustained, the cylinder will tend to move in the direction of that pressure that is round its axis M N; and being free to move about that axis, it will continue to revolve about it in a direction opposite to the efflux as long as any fluid remains in the cylinders, and being connected with a system of

machinery, it operates as a powerful moving principle.

BARLEY, strictly the grain, but popularly the grain and plants indifferently which produce it. The English barley is that with two-rowed ears (*hordeum distichon*): the Scotch beer or *bigg* is two-rowed, but has the appearance of being six-eared: it is the *hordeum hexastichon* of the botanists.

BARLEYCORN, a grain of barley. The third part of an inch in length, and the least of our long measures.

BAR'NACLE, the popular name applied to Cuvier's class of *cirrhipodes*, but especially used to designate the *Lepas balanus*, L.in. In ornithology, the name barnacle is popularly applied to two species of the goose tribe, the brant and Egyptian goose. See **BERNACLE**.

BARO'CO, an arbitrary term used by logicians to denote the fourth mode of the figure of syllogism; the first proposition is universal and affirmative, the other two particular and negative.

BAROM'ETER, from *βαρος*, weight, and *μετρον*, measure. An instrument for measuring the variation in the weight of the atmosphere. The common barometer is

a glass tube somewhat more than 30 ins., hermetically sealed at one end H, and being filled with mercury, the tube is inverted, and the open end placed in a dish M, containing mercury. The mercury in the tube will then stand somewhere between 28 and 30 inches above the level of the mercury in the cup, and the variations in the height denote the variation of atmospherical pressure. The *wheel-barometer* is a tube filled with mercury and inverted as shewn in Figure 2. It differs nothing in principle from the common barometer. A float is placed upon the surface of the mercury at L; and to this a thread is attached, which is brought

over a pulley at P, so that as the float rises or falls in the tube the pulley will move towards the left or right, and these variations are rendered more perceptible by attaching an index to the pulley. The common barometer is preferable for accuracy.

BAR'OMETZ, the hairy stem of a species of aspidium which looks like an animal crouching, from its procumbent position; hence it has been called the *Scythian lamb*.

BAR'ON. 1. A title of nobility next below that of viscount and above that of baronet. The title was introduced into England by William I., and used to signify an immediate vassal of the crown who had a seat and vote in the royal court and tribunals, and subsequently in the house of peers. Hence in old records the whole nobility are included in the word *barons*, which is equivalent to landholders, manor-holders, or royal feudatories; and as every manor had its court, these courts were called *courts-baron*. The title is not now attached to a manor, but is conveyed by letters patent, and the privileges of the courts-baron are merged in the house of peers, as the representatives of the ancient barons.—2. *Baron* is also a title of certain officers:—*Barons of Exchequer* are the four judges who try cases between the sovereign and the subjects relative to revenue.—The *Barons of the Cinque Ports* are members of the House of Commons, elected for the seven Cinque ports, two for each. These ports are Dover, Sandwich, Romney, Hastings, Hythe, Winchelsea and Rye.—3. In law, a husband, as *baron and feme*, husband and wife.

BAR'ONET, dim. of *baron*, a title next below a baron and above a knight. It is hereditary, and was originally instituted by James I., in 1611.

BARONY, a term used both of the territory over which the jurisdiction of a baron extended, and the jurisdiction itself. This lordship was held in chief of the sovereign.

BAROU'CHE, a light open summer carriage on four wheels.

BARRAC'UBA, a Sp. name for a marine fish of the pike tribe, about 10 ft. in length.

BAR'RAS, a resinous juice which exudes from the *pinus maritima*, and concretes on the bark in yellow masses; called also *galipot*.

BARRA'TOR, from old Fr. *barat*, strife. In law, a person who stirs up strife between other persons is called a common barrator, and the offence common barratry.

BAR'BATRY, 1. In commerce. See **BARRATRY**.—2. In law. See **BARRATOR**.

BAR'REL. 1. A cask or vessel of cylindrical form, bulged in the middle and bound with hoops.—2. The quantity

which a barrel contains:—A barrel of beer is 36 Imp. gal.; a barrel of Essex butter is 106 lbs., of Suffolk butter 256; a barrel of soap is also 256 lbs.; and a barrel of herrings should measure 32 gals. W. meas., and contain 1000 herrings; a barrel of flour should weigh 226 lbs. gross, and contain 196 lbs. of flour. Among workmen, the terms *barrel* and *drum* are used to designate a cylinder, e. g. the barrel of a watch.

BARREN. A barren flower, *flos abortivus*, is one which produces no perfect seeds. Barren flowers are generally such as have stamens, but no pistils; they are called perhaps more commonly male flowers.

BARICADE. A Fr. word signifying a series of *bars* or *barriers*, and used to denote, 1. In *fortification*, a defence made in a narrow passage with such things as can be hastily collected, as trees, waggons, &c., to obstruct the progress of an enemy.—2. In *Naval architecture*, a strong wooden rail supported by stanchions, extending across the foremost part of the quarter-deck in ships of war, and filled with ropes, mats, pieces of old cable, and full hammocks to prevent the effect of small shot in time of action.

BARRIER-TREATY. In 1713, a negotiation between the Dutch and the French, by which the former reserved the right to hold garrisons in certain fortresses in the Spanish Netherlands.

BARROWS, or **TUMULI,** are said to be the most ancient monuments in the world. They were generally raised as sepulchres for the heroes of war, though not uniformly so. Barrow-burial is said by Sir E. Hoare to have existed from a period of unknown antiquity till the eighth century.

BARRULET, in *heraldry*, the fourth part of the bar, or the one half of the closet.

BARRULT, in *heraldry*, means that the field is divided *barways*, i. e. into several parts from side to side.

BARRY-BENDY, in *heraldry*, means that the escutcheon is divided evenly *barways* and *bendways*, i. e. by lines drawn traversely and diagonally, interchangeably and varying the tinctures of which it is composed.

BARRY-FILY, in *heraldry*, is when a coat is divided by several lines drawn obliquely from side to side, where they form acute angles.

BAR'TON, means literally *barley-town* (**barle-ton**), and is taken to denote: (1.) The demesne lands of a manor. (2.) The manor-house. (3.) The manor itself.

BARYTA, } from *βαρύς*, heavy. A
BARYTE, } mineral which occurs abundantly in nature in the form of sulphate and carbonate, well known under the name of *heavy spar*, in allusion

to its great specific gravity: but the baryta of the chemist is only obtained artificially, e. g. by subjecting the nitrate to a red heat, or the carbonate to an intense white heat, which drives off the acid, and a protoxide of barium is obtained. This is the simple earth baryta; it is alkaline, and all its salts are poisonous except the sulphate. Hence the best antidote is dilute sulphuric acid (or a solution of sulphate of soda).

BAS'ALT, a variety of trap-rock, usually of a dark green or brownish black colour; composed of augite and felspar, with some iron and olivine. It occurs sometimes in veins or dykes, traversing all formations, sometimes in layers spreading over the surface of strata, and sometimes it forms hills of considerable magnitude. It has usually a columnar structure, e. g. the Giants Causeway, and bears so close a resemblance to recent lavas, as to leave no doubt of its igneous origin. The name is derived by Cuvier from Ethiopic, *basal*, iron, and Pliny informs us that the Egyptians found in Ethiopia a species of marble called *basaltis*, of an iron colour and hardness, whence it received its name.

BAS'ANITE, a variety of schistose hornstone. So named from *βάσανος*, the trier, in reference to its being formerly used as a touchstone in trying metals. It was also called Lydian stone (*Lapis Lydius*, Plin.), from its being found abundantly in Lydia.

BASE, Lat. *basis*, Gr. *βασίς*, a foundation.

1. In *geometry*, the lowest side of the perimeter of a figure, in which sense *base* is opposed to *vertex*. In rectangled triangles the base is the side opposite the right angle, and in solid figures it is the surface on which they rest. The base of a conic section is a right line in the hyperbola and parabola arising from the common intersection of the secant plane and the base of the cone.—2. In *architecture*. The base of a column is that part which is between the shaft and pedestal, or if there be no pedestal, between the shaft and the zocle or plinth. The base of a room is the lower projecting part of a room, consisting of a plain board which adjoins the floor, called the plinth, and one or two mouldings above it called the base-mouldings.

—3. In *surveying*, a line measured with the greatest possible exactness, on which a series of triangles are constructed, in order to determine the position of objects and places.—4. In *fortification*, the exterior side of the polygon, or an imaginary line drawn from the flanked angle of a bastion to the angle opposite.—5. In *tactics*, a tract of country well protected by fortresses, or possessing certain natural advantages, and from which the operations of an army may proceed.—6. In

gunnery, the smallest piece of ordnance used: bore $1\frac{1}{2}$ in., length, 4 ft., load 5 lb.

—7. In *conchology*, that part of the shell in univalves by which they are attached to rocks or other substances: in multivalves, the opposite extremity to the apex. The last whorl of a spiral shell is called the *base* or *basal whorl*. In unattached bivalves the term cannot be properly applied.—*Base* and *basis* are often used indifferently, the latter generally in professions, and especially in chemistry, pharmacy, and anatomy. See *BASIS*.

BASE-FEE. In *law*, to hold in base-fee is to hold at the will of the Lord: opposed to *seage tenure*.

BASE-LINE. In *perspective*, the common section of a picture, and the geometrical plane.

BASEMENT. In *architecture*, the ground floor on which an order is placed with a base or plinth, die and cornice.

BA'SENET, a helmet. Sometimes written *basinet* and *bascinet*.

BASHAW', a title of honour in the Turkish dominions, which ought to be written and pronounced *pashah*. It is often written *pashah*. The Ar. is *bashā*, and the Per. *pashā*.

BAS'ATOR, the orbicularis oris, a muscle of the mouth: from *basio*, to kiss.

BASIO'NIUM, Gr. from *basis*, the base, and *γυνή*, female. A stalk rising above the origin of the calyx, and bearing an ovary at its apex, as in Capparid.

BA'SIL. 1. A word used by carpenters and joiners, who pronounce it *bazil*, to denote the angle to which the edge of an iron tool is ground.—2. The popular name of the *Ocymum* of botanists, especially the *Ocymum basilicum* or citron basil, an Indian plant much used as a condiment to season dishes, to which it imparts a grateful odor and taste. Hence the name from *basilic* (q. v.)

BAS'ILARY-MONKS, are an existing order of monks of the order of St. Basil, who founded the order in Pontus.

BASIL'IC, royal, from *βασιλεύς*, a king. This word, or its Latin type *basilica*, is used by architects to denote a spacious building; e.g. a church, cathedral, royal palace.

BA'SIL-LEATHER, tanned sheep-skin: written also *basan*.

Anciently, the term *basilica* was used to designate a public hall or court of judicature, where the magistrates sat to administer justice; but from the circumstance of Constantine giving the use of some basilica to the Christians for their worship, the term became with them synonymous with *Church*.

—*Basilic* is applied, in *anatomy*, to parts supposed to be pre-eminently important in their functions; and in *pharmacy*, to

compositions highly esteemed for their efficacy.

BAS'ILISK, from *βασιλεύς*, a king. A highly poisonous serpent, which was so called, according to Pliny, from a white spot upon its head, which resembled a crown. Many extravagances were believed by the ancients regarding this serpent; the moderns added more wonders, and made it a monster sprung from a cock's egg! whence it got the name of *cockatrice*. The animal at present known by the name of *basilisk*, is a harmless lizard. *Basilisk* is also a name given to a large piece of ordnance from its supposed resemblance in deadly effect to the wonderful serpent of that name. The old basilisk carried a ball of 200 lbs. The Dutch basilisk is 15 ft., the French 10 ft., and carry a ball of 48 lbs.

BASILOSAUR'US, an enormous fossil saurine, described by Dr. Harlan of Philadelphia. Neither its relations to other species, nor its geological position, are yet determined.

BA'SIS, Lat. from *basis*, from *βαινω*, to go. originally the step or walk of an animal on the sole of the foot on which the body is supported in walking, and hence, analogically, that part of the body which supports all the rest, viz., the lowest part: Anglice, *base*. In *anatomy*, the term is used to denote a part from which other parts appear, as it were, to proceed, or by which they are supported. In *chemistry*, the term is usually applied to alkalies, earths, and metallic oxides, in their relations to the acids and salts. It is sometimes also applied to the particular constituents of an acid or oxide, on the supposition that the substance combined with the oxygen &c. is the basis of the compound to which it owes its particular qualities. In *pharmacy*, the basis is the principal ingredient in a compound. For other significations, see *BASIS*.

BASIS'OLUTE, Lat. *basis* and *solutus*, free. Applied to leaves prolonged at the base below the point of origin.

BAS'KET, from W. *basged*, of *basq*, a netting. 1. A vessel made of twigs, &c. &c.—2. As much as a basket will contain. In *military affairs* the term is used to designate small baskets of earth, which serve as a defence against small shot: called by the French *corbeilles*. In *architecture*, the term denotes a carving in the form of a basket filled with flowers and fruits.

BAS'KING-SHARK, a species of Squali. (See *SQUALUS*.) It is the largest of all the shark tribe, and has nothing of the ferocity of the shark. It inhabits the Arctic seas, and lies much on the surface, basking in the sun.

BAS-RELIEF. See *BASIO RELIEVO*.

BAS2, in *music*, the deepest or *gravest*

part of a tune. The word is thus written in imitation of the Ital. *basso*, which is the Engl. *bass*, low. The bass is the foundation of the harmony, and the *base* or support of the whole composition. Figured bass is a bass which, while a certain chord of harmony is continued by the parts above, moves in notes of the same harmony. *Fundamenta bass* is that which forms the tone or natural foundation of the harmony, and from which that harmony is derived. *Ground bass* starts with some subject of its own, and continues to be repeated throughout the movement, while the upper parts pursue a separate air and supply the harmony. See THOROUGH-BASS. Bass is the name of several species of fishes. In England it is a name of the fish otherwise called the *Sea-wolf* (the *Anarrhichus lupus*, Lin.), and in America of the *perca ocellata*, Lin. Another species of the same tribe is called the *sea-bass*.

BAS'ANET, } A kind of helmet, a hat or
BAS'ANAT. } casque of steel, very light, made in the form of a basin. The soldiers in the French army who wore *bassanets* were called *bascinets* or *bacinets*.

BASS-CLIFF, called also the F. CLIFF. The character here represented, and placed at the beginning of a  staff, in which the base or lower notes are placed.

BASS-COUNTER, the under bass or *contra-bass*. That part which, when there are two bass parts in a musical composition, is performed by the double basses, the violincellos taking the upper bass or *basso concertante*.

BASS-HORN, a modification of the bassoon, much lower and deeper in its tones; it is now generally substituted in field music for the serpent.

BASSET, a term used by miners to express an upward slanting direction of a vein from below the surface. *Basseting*, slanting upwards, opposed to *dipping*.

BASSET-HORN, the richest of all musical wind instruments; it is properly an enlarged clarinet. Although differing in form, its intonations, the mode of holding and fingering it are such, that any clarinet-player can perform on it without practice. It has the name *cornet* from its curvature.

BASSO, the Italian word for *bass* (q. v.). *Basso-concertante*, the bass of the little chorus, usually taken by the violincellos, called also *basso recitante*, and opposed to *basso repieno*, the bass of the great chorus. The former plays throughout the piece, the latter only at full parts.

BAS'BO-RELIEVO, Ital. } The terms are

BASS-RELIEF, Eng. } used to denote sculptured representations raised upon a flat surface, or back-ground, in such a manner as to project from it less than one-half the general depth of the figures,

distinguished from *alto relievo*, in which the figures project more than a half, and *mezzo-relievo*, in which they project a half. Popularly, however, the first term includes the other two.

BASSOON, Fr. *bas son*, low sound. A musical instrument which forms the natural bass to the hautboy. It is played like that instrument, with a reed, and forms a continuation of its scale downwards, hence called by the French *basson de hautbois*. It consists of four tubes bound together like a faggot, hence its Italian name *faggotte*, which the Germans write *faggott*.

BAS'SUS, a genus of terebrantian hymenoptera.

BASS VIOL, a stringed instrument resembling the viol in form, but much larger. It has four strings and eight stops, and is played with a bow.

BASTARD, Lat. *bastardus*, an individual born out of wedlock. The subsequent marriage of the parents legitimises the bastard according to the common law of Scotland. *Bastard eigné*, bastard elder, is when a man has a bastard son, and afterwards weds the mother, and has a legitimate son, *mulier puise*, or younger. The term *bastard* is otherwise used in the sense of *spurious*, and especially in botany, thus: *bastard balm* is the *melittis* of botanists, so distinguished from *melissa* or true balm. *Bastard cabbage-tree*, is the genus *Geoffroya* in distinction to the *calceola kleinia*, or cabbage-tree of the Canary Islands, &c. &c.

BASTARD STUCCO. In architecture, plastering of three coats: first, the roughing-in, second, the floating; the third or finishing coat, contains a small quantity of hair additional.

BASTARD WING, three or five feathers, placed at a small joint at the middle of the wing.

BASTINA'DO, } a punishment used among

BASTONA'DO, } the Turks, consisting in beating the offender on the soles of the feet with a *baston* or wooden club.

BAS'TION, a bulwark, from old Fr. *bastir*, to build. The bastion, formerly

called a *bulwark*, is an erection by which the line of fortification is broken so as to obtain lateral defences and due command of every point at the bottom of the ramparts, and in the ditch before the citadel. They are built in very different ways.

Some are solid, being entirely filled with earth, some have a void space inside, some are straight, some curved, some double, that is, one raised on the plane of another, some are *composed*, or have three or four flanks one over the other; some have *fausse-brays*; some casemates for retreat of the garrison or for batteries; some cavaliers, orillons, &c. The parts generally considered essential are marked in the figure.

BAT'ON, BATOON. See TORUS.

BAT, a name common to a large tribe of mammiferous quadrupeds, characterized by a fold of skin, which commences at the sides of the neck, and, extending between their front feet and toes, constitutes wings capable of supporting them in the air, and in many species so complete as to enable the creature to fly with great rapidity. They are all nocturnal, and in our climate pass the winter in stuper. During the day they suspend themselves in obscure places by the thumb-nails. The bats belong to Primates of Lin., and constitute the family Chiroptera of Cuvier. See VESPERTILIO and GALIOPITHECUS.

BATA'TAS, the name given by the natives of Peru to the potato, *solanum tuberosum*, and also to the root of a species of convolvulus. *Batatas* is also the name of a mite found in the potatoes of Surinam.

BATEAU, Fr. from Lat. *batillum*. A light boat long in proportion to its breadth.

BATH-STONE, } a species of limestone,
BATH-OLITE, } consisting of minute globules, cemented together by yellowish earthy calcareous matter, and presenting somewhat the appearance of the roe of a fish, hence called *roe-stone*. This member of the oolite formation affords excellent freestone for building. The quarries at Bath are well known. See OOLITE.

BATIST, BATISTE. A very fine, thick, white linen cloth, manufactured in various parts of the Continent. Different kinds of it are called *linons*, *clairs*, and *cambrics*. With us, *cambric* is the general name. The manufacture takes its name from Baptista Chambrai, who brought it into vogue in Flanders, in the 13th century.

BAT'ON. Fr. In *music*, a rest of four semibreves. Also the staff of a field-marshal.

BATEA'CHIA, the name given by Cuvier to the fourth order of reptilia, from *βατράχος*, a frog, the batrachians being analogous to frogs. It comprises frogs, toads, salamanders, and sirens, all of which have two equal lungs, and a heart composed of one auricle and one ventricle.

BAT'RACHOMYOMACH'IA, composed of *βατράχος*, a frog, *μῦς*, a mouse, and *μαχῆ*,

a battle; the battle of the frogs and mice. A mock-heroic poem, which has been ascribed to Homer.

BATTAL'ION, a body of infantry, usually from five to eight hundred strong. So called because originally a body of men arrayed in order of battle (*battalia*).

BAT'TEL. In *old law*, the wager of battle was a species of trial for the decision of causes between parties, introduced into England by William the Norman Conqueror, and used in three cases:—in courts of honour; in appeals of felony; and in issues joined upon a writ of right. The contest took place before judges, and the combatants were bound to fight till the stars appeared, unless the death of one party, or victory, sooner decided the contest. At Oxford the word *battel* is used to designate the account of expenses of a student in the college books. *Batteler* there is the same with *sizer* at Cambridge.

BAT'TEN. In *carpentry*, a scantling of stuff from 2 to 6 inches broad, and from $\frac{1}{2}$ to 2 inches thick. Used in the boarding of floors; also upon walls, in order to secure the lath on which the plaster is laid. The act of *fixing* the battens is called *battening*. The name *batten* is also used in *commerce*, to designate wood $2\frac{1}{2}$ inches thick, and 7 wide: if more than 7 inches, it is called *deal*.

BAT'TENED DOWN. The hatches of a ship covered down in bad weather with strong gratings nailed to battens.

BAT'TER, Fr. *battre*. 1. Among *masons*, when a wall is built in a direction that is not perpendicular to its base, it is said to *batter*, and the amount of deviation from the perpendicular is called its *batter*. Walls are made to *batter* in order to resist the weight of a body of water, mound of earth, or other pressure that may rest against it.

BAT'TERING RAM, a warlike instrument used by the ancients to beat down the

walls of fortified places. These were of two kinds, the *swinging* and the *rolling* ram, and when worked under a cover, to protect the assailants, they were denominated *tortoise-rams*, from the shed being assimilated to a tortoise-shell. The nature of the swinging-ram is obvious from the figure; and the only difference of the

rolling-ram was, that it was mounted on wheels instead of being suspended. Some of these machines, from accounts, must have weighed little short of 100,000 lbs. They were wrought by human force.

BATTERY, Fr. *batterie*. In law, see ASSAULT. In experimental physics, a combination of Leyden jars forms an *electrical battery*; and a combination of metallic plates (one set of which consists of oxidizable metal) constitutes a *galvanic battery*. See LEYDEN JAR, and GALVANIC TROUGH and PILE. In fortification, a parapet thrown up to cover the gunners from the enemy's shot, and in which embrasures are made, through which the cannon are projected to be fired. *Cross batteries* are two batteries which play athwart each other. A *battery d'enfilade* is one which scours the whole line. A *battery en echarpe* is one which plays obliquely. A *battery de revers* is one which plays upon the enemy's back.

BATTLE-AX, } a weapon much used by
BATTLE-AXE, } the people who fought on foot, during the middle ages. It was especially a cutting instrument, but had usually a point for thrusting. It was much used in England, Ireland, and Scotland, and, indeed, the *Lochaber-axe* remained a formidable weapon of destruction in the hands of the Highlanders till very recently.

BATTLE-PIECE, a painting which represents a battle, exhibiting large masses of men in action.

BATTON, in commerce and carpentry. See BATTEN.

BATON, BATON, BATOON. 1. The staff of a marshal.—2. A truncheon used in coats of arms to denote illegitimacy.

BATUTE, Fr. In *sporting*, a practice of huntsmen, consisting of surrounding a portion of the forest, and, by beating the bushes and shouting, endeavouring to bring out wolves or other animals for the chase.

BATTUTA, It. *abeattius*. In music, beating time with the hand or foot.

BAUHINIA, mountain-ebony. An extensive genus of arborescent plants. *Desmodia*—*Monogynia*. All the species inhabit warm climates. Named in honour of Gaspard Bauhin.

BAULK, from the Dutch. A piece of timber from four to ten inches square. *Baulk-roofing* is roofing constructed of baulk timber.

BAWREL, a species of hawk.

BAXTERIANS, the followers of Richard Baxter, on the subject of grace and free-will, whose opinions were midway between Calvinism and Arminianism.

BAY, the wood of the bay-tree. See LAURUS. The term is likewise used to designate the colour of horses when reddish and inclined to chestnut, like the

leaves of the bay-tree. The shades of this colour are *light-bay*, *dark-bay*, *dapple-bay*, *gilded-bay*, *chestnut-bay*. Commonly all bay horses are called *brown*.

BAY, from Teut. *baeye*, synonymous with *bulge*. 1. An arm of the sea smaller than a gulf and larger than a creek. The term is used very indefinitely, as will be observed in its application in *Hudson's Bay* and the *Bay of Biscay*.—2. Among *builders*, any kind of opening in a building, as a door, window, or chimney.—A *bay of joists* consists of the joists between two binding joists, or between two girders where there are no binding joists.—*Bay of roofing*, the small rafters and purlins between principal rafters.—*Bay*, as applied to windows, is the same with *bow*.—The *bay* of a barn is a part often about 15 feet, at the end where corn, &c., is laid: when a barn consists of a floor and two heads, it is called a barn of *two bays*.—3. In ships (of war), that part on each side between decks which lies between the bitts.

BAY-CHEER'RY, } the *prunus lauro-cerasus*
BAY-LAUREL, } of botanists; called also poison-laurel, and Alexandrian-laurel. The leaves yield prussic acid.

BAYONET, the iron blade for affixing on the muzzle of the musket, to transform it into a thrusting instrument: takes its name from Bayonne, where bayonets were first made.

BAY-SALT, salt obtained by evaporating sea water in shallow ponds by the heat of the sun—whence its name. It is of a dark-grey colour, and contains iodine.

BAY-TREE, a name common to the whole genus *Laurus* (q. v.), consisting of 17 species.

BAZA'AR, BAZAR, a market-place. The word is borrowed from the Oriental; among whom *bazars* have been common from time immemorial: it signifies *sale*.

BAZ'AT, a long, fine spun cotton from Jerusalem, hence called *Jerusalem cotton*.

BDELLA (βδέλλα). The horse leech.

BDELLIUM (βδέλλιον). A gum-resin produced by an unknown plant, which grows in Persia and Arabia. It is imported in semi-pellucid, yellowish-brown pieces, which smell feebly like myrrh. It contains 59 resin, 9·2 gum, 30·6 cerasin, and 1·2 etherous oil.

BDELLOSTOMES, } Gr. from βδέλλα, I
BDELLOSTOMA, } suck, and στόμα, a mouth, i. e. a *mouth formed for suction*. A genus of cyclostomous fishes.

BEACONAGE, dues levied for maintenance of beacons.

BEAD, from Sax. *beað*, a praying. Beads are the small globules or balls used as necklaces, and made of different materials, as pearl, amber, steel, &c. The Catholics use strings of beads in rehearsing their prayers; hence the phrases, *to tell*

beads and to be at beads, means to be at prayers.

BEAD, among *builders* and *wrights*, is a round moulding (originally and often yet carved in short embossments like beads in necklaces), frequently set on the edge of each fascia of an architrave; also used as the mouldings of doors, shutters, skirtings, impost and cornices. When the bead is flush with the surface, it is called *quirk-bead*, and when raised, *cock-bead*.

The term is frequently used by carpenters, thus: *Bead and butt work*, a piece of framing in which the panels are flush, having beads upon the two edges.—*Bead, butt, and square work*, framing with bead and butt on one side, and square on the other, used chiefly in doors.—*Bead and flush work*, a piece of framed work with beads run on each edge of the inclined panel.—*Bead, flush, and square work*, framing with bead and flush on one side, and square on the other.—*Bead and quirk*, a bead stuck on the edge of a piece of stuff, flush with its surface, with only one quirk.—*Bead and double quirk*. See RETURN BEAD.

BEAD-PROOF, a rude method of determining the strength of spirituous liquors from the continuance of the bubbles (*beads*) on the surface, produced by shaking.

BEADS, a number of glass globules for trying the strength of spirits, which is denominated by the number of the bead. Thus if the bead marked 22 be exactly suspended, while those which are heavier sink, and those which are lighter stand above the surface, the spirit is said to be of bead 22.

BEAD-TREE, the popular name of the genus *melia*, but used to denote especially the species *azedarach* and *azedarachta*, both Asiatic ambroscent plants. The fruit is a nut, which, being bored, is strong, and worn as beads, especially in Spain and Portugal.

BEAK, the bill or nib of a bird, from the same root as *peak*. In *architecture*, a small fillet left on the edge of a larmier, which forms a canal, and makes a kind of pendant chin, answering to what is otherwise called the *mentum*.—In *farriery*, a little shoe, at the toe, about one inch long, turned up and fastened upon the fore part of the hoof.

BEAM, from Goth. *bagm*, a tree; Sax. *beam*. Among *builders*, a piece of timber or metal of a rectangular section, laid across the walls, and serving to support the principal rafters. When the word is technically used, it is commonly compounded with another word used adjectively, as *tie beam* *collar-beam*, *camber-*

beam. There are also *scarfing* and *truss beams* (q. v.). The *beam of a ship* is a great cross timber which holds the sides of a ship from falling together. The beams support the deck and orlops—the *main-beam* is that nearest the main-mast.—*Beam-ends*: a vessel is said to be on her beam-ends when she inclines so much on one side, that her beams approach a vertical position.—*On the beam* signifies at any distance from the ship on a line with the beams, or at right angles with the keel.—*Before the beam* is an arc of the horizon intercepted crossing the ship at right angles, and the point of the compass on which she steers.—The *anchor-beam* is the shank of the anchor.—The word *beam* is also used to signify: 1. The pole of a carriage, which runs between the horses.—2. The lever or rod of a balance is termed the *beam*, and the parts on each side of the pivot are its *arms*.—3. The main horn of a stag, which bears the antlers, royal and tops.—4. The cylinders of a loom on which the warp and cloth are rolled, are called, the one the *back* and the other the *fore-beam*.—5. The main piece of a plough, in which the plough-tails are fixed, and by which it is drawn.

BEAM-BIRD, a species of the genus *Motacilla*, Lin.; called also petty-chaps and hay-bird. The name is also given in some parts to the spotted fly-catcher, a species of *muscipapa*.

BEAM-COMPASS, an instrument consisting of a square wooden or brass beam, having sliding sockets that carry steel or pencil-points. Used for describing large circles.

BEAM-FILLING, the filling in masonry or brickwork between beams or joists, its height being equal to the depth of the timbers filled in.

BEAM-TREE, WHITE BEAM. The *Pyrus aria* of botanists.

BEAR, a name common to all the animals of the genus *Ursus* (q. v.). There are various species of the Bear, as the Polar Bear, Thibet Bear, Malay Bear, and the Grizzly Bear. The thick-lipped Bear (*U. labiatus*, Lin.) is peculiar to India, where it is a great favourite with the jugglers on account of its blackness and general ugliness. The name is from the Goth. *biörn*, Icelandic, *bearn*, *beorn*, the primary sense of which is *rough*.

BEAR (Great and Little). In *astronomy*, see *URSA*.

BEARD, Sax. beorb, Lat. barba (q. v.). 1. In *botany*, the awn which grows from the glume or chaff, in corn and grasses: and sometimes the lower lip of a ringent corolla.—2. In *conchology*, the processes by which some univalves adhere to rocks, &c.—3. In *farriery*, the chuck of a horse,

or that part which bears the curb of the bridle under the lower jaw or mandible, on the outside and above the chin.—4. In *astronomy*, see *COMET*.

BEAR'ER, that which supports. Among *builders*, &c. whatever supports a body in its place, as a post, a strut. Among *heralds*, a figure in an achievement, placed by the side of a shield, and seeming to support it; generally the figure of a beast. A human figure similarly placed is called a *tenant*.

BEAR'ING, the situation of an object or place with regard to another, as estimated by the points of the compass; as A bears S. by SE. of B or the bearing of A is, &c. In *heraldry*, whatever is borne in, or fills the escutcheon is called a *bearing*. Among *builders*, the *bearing* of a piece of timber is the unsupported part between two fixed extremities or supports, which are likewise called *bearings*. When a wall or partition is made to support another, it is called a *bearing-wall* or *partition*, and the supported wall, if built in the same direction, is said to have a *solid bearing*; if built in a traverse direction a *false bearing*, or as many false bearings as there are intervals below the wall or partition.

BEAT. In the *manège*, a horse *beats the dust*, when at each motion he does not take in ground enough with his forelegs; at *curvets*, when he does them too precipitately or too low. He *beats upon a walk* when he walks too short. In *seamanship*, a ship *beats up*, when she sails against the direction of the wind, in a zigzag line. In *music*, a *beat* is a small transient grace-note, struck immediately before the note it is intended to ornament.

BEAUT IDEAL, Fr. In *painting*, that beauty which is freed from the deformity and the peculiarity found in nature in all individuals of a species.

BEAVER, the *Castor*, Lin. A genus of aquatic animals, highly interesting from their habits, industry, and ingenuity. The animal is about two feet long, its body thick and heavy, and its fur, which is in great demand with hatters, is of a reddish brown colour, but sometimes flaxen-coloured, and at others black, or even white. The beaver is easily tamed, lives on bark and other hard substances, and builds huts on the banks of some solitary river for winter habitation, each hut serving for several families, which separate in summer and live solitarily. See *CASTOR*.

BED. 1. In *geology*, a stratum of two yards or more in thickness.—2. In *masonry*, the horizontal courses of a wall are called *beds*: that at the under surface of any particular stone is the *under-bed*, and that at the upper surface, the *upper-bed*.—3. In *gunnery*, the frame of timber in

which cannon, mortars, &c. are placed to give them a steady and even position.

BED-CHAM'BER, Lords of the. Officers of the royal household, under the groom of the stole; they are 12 in number.

BED-MOULDING. In *architecture*, the members of a cornice which are placed below the coronet, consisting of an ogee, a list, and boutine.

BED-STRAW, a popular name. 1. Of the *Pharnaceum mollugo*, an Indian shrub.

—2. Of all the plants of the genus *Galium*, of which there are sixteen British species, known by many other names, as mug-wort, goose-grass, goose-share, cleavers, hayriff, cheese-rennet, ladies' bed-straw.

BEЕ, a name common to all the insects of the genus *Apis*, Lin., but particularly applied to the *Apis mellifica*, Lin., or honey-bee (*Apis*, Latreille). There are several other species, however, which deserve the name nearly as well. The bee-communities consist of neuters (barren females), usually from 1500 to 2000, but sometimes exceeding 3000, with 600 or 800 males, about 1000 drones, and commonly a single female styled *king* by the ancients, and *queen* by us. When the hive becomes overstocked, a young colony is sent out under the direction of a queen-bee; this is called *swarming*, and *casting* in some parts of Scotland.

BEЕ-BREAD, the pollen of flowers collected by bees as food for their larvæ or young.

BEЕ-EATER, a bird of which there are several species closely allied to the swallows: it feeds on insects, chiefly bees. The name is common to all the species of the genus *Merops* (Lin.), but especially denotes the apiaster.

BEЕ-SLICE, a soft unctuous matter with which bees cement the combs to the hives and close up the cells: called also *propolis*.

BECH, a name common to all the species of the genus *Fagus* (q. v.). The beech-tree, well known in England as the *Fagus sylvatica*, a valuable forest-tree. The name is Sax. *becc*, *bec*, probably the name of the bark, and this being used by our ancestors as the material for writing on, the word came to signify a *book*.

BEЕF-EATERS. 1. The yeomen of the Queen's guard, corrupted from Fr. *buffetiers*, of *buffet*, a sideboard, in allusion to their being stationed by the sideboard at royal dinners.—2. A genus of African bird of one species (*Buphaga Africana*), so named from the popular notion, that in extracting the larvæ of the æstrus, on which it feeds, from the skin of cattle, it really feeds on the cattle themselves. The bird is brownish, has a cuneiform tail, and is as large as a thrush.

BEER Fr. *bière*, Germ. *bier*. The fer-

mented infusion of malted barley, flavoured with hops, constitutes the best species of beer, but there are many beverages of inferior quality to which this name is given, as spruce-beer, ginger-beer, molasses-beer, &c., all of which consist of a saccharine liquor, partially advanced into the vinous fermentation, and flavoured with peculiar substances. The Romans gave beer the appropriate name of *Cerevisia*, as being the product of corn, the gift of Ceres.

BEET, a name common to all the plants of the genus *Beta*, but especially the *Beta vulgaris*, cultivated throughout the greater part of Europe for its succulent root (*beet root*), from which sugar has been pretty extensively manufactured, especially in France, and more recently used in the manufacture of beer. Nitre is obtained from the leaves of the same plant. There are three varieties known in our kitchen-garden, the red, white, and green.

BEE-TLE. 1. A name common to all the insects of the genus *Scarabæus* (Lin.). See *SCARABÆUS*. Beetles are for some reason, or none, called *clocks* in Scotland.—2. In *architecture*, a large wooden hammer, or mallet, with one, two, or three handles for as many persons, for drawing piles, stakes, &c.

BEO, a Turkish title equivalent to *prince* or *lord*: written *begh*, and pronounced *bey* or *bec*, by the Turks themselves.

BEO'LERBEO, a title of a high officer among the Turks, next in dignity to the grand vizier. The title *beglerbeg* means *prince of princes* or *lord of lords*, and implies that the bearer is the governor of a province, called a *beglerbeglic*, and having several *begs* under him.

BE'GUINES, certain female societies in Germany and the Netherlands, whose members united themselves for the purposes of devotion and charity, without taking the monastic vows. The name means *suppliants*; and in Germany several eleemosynary institutions are called *be-guinages*, in imitation of the *beguinages* or houses inhabited by the *beguines*.

BE'HEMOTH, the scriptural name of an animal which Bochart endeavours to prove to be the hippopotamus. The Hebrew word is from an Arabic root signifying a *beast*, but indefinitely.

BEJU'IO, the bean of Carthage. A small bean of South America, famous as an antidote against the poison of all serpents, when eaten immediately.

BELEM'NITES, an extinct genus of mollusca, the shells of which are found plentifully in the chalk rocks. They are classed with the cephalopods: about 90 species are known. The name is from *βέλαινον*, a dart, in allusion to the straight tapering form of the shell.

BELEM'NOID, in *anatomy*, a term applied to the styloid processes in general: from *βέλαινον*, a dart, and *ειδος*, likeness, in allusion to their shape.

BEL-ESPRIT, naturalised from the French. An agreeable vivacity in writing or conversation.

BEL'FREY, Fr. *béffroy*, or rather, Sax. *bell*, and Lat. *ferre*, to carry. In the middle ages this term denoted a tower raised by the besiegers to overlook the place besieged, in which sentinels were stationed to watch the avenues, and to prevent surprise by parties of the enemy, and to give notice of fires by ringing a bell.—The name has since been transferred to that part of a steeple in which the bell is hung. This was called in the middle ages the *campanile*.

BELL. A bell consists of three parts—the *barrel* or body, the *clapper* or hammer called also the *tongue*, and the *ear* or *cannon*, which is the enlarged mouth.—Church-bells originated in Italy, and were introduced into England in the eighth century.—The word *bell* is used to designate many instruments and parts of machines of forms similar to that of a bell. The word is also used popularly to denote the calyx of a flower, from its shape.

BELL-FLOWER, a name common to all the plants of the genus *Campanula*, of which there are nine British species. The name is synonymous with *harebell*.

BELL-MET'AL, a composition of tin and copper, usually consisting of three parts of copper and one of tin. Less tin is used for church-bells, than for clock-bells, and for very small bells a small quantity of zinc is added to the alloy.

BELL-PEPPER, the *Capsicum grossum*, a biennial plant of both Indies. It is the red pepper of the gardens, and pepper of Guinea used in pickling.

BELLADONNA, the deadly nightshade (*Atropa belladonna*), said to be named *belladonna*, because the Italian ladies use the juice of its berries as a cosmetic.

BELLES-LETTRES (Anglicè, *bell-letter*). A French term meaning *polite literature*.

It is impossible to give a satisfactory explanation of what is or has been called *belles-lettres*; in fact, the vaguest definition is the best, as almost every branch of knowledge has at one time been included in, at another excluded from, this denomination. The most correct definition, therefore, would be, perhaps, such as embrace all knowledge and every science not merely abstract, nor simply useful; but there is a general understanding, at present, that the name ought to be restricted to poetry, rhetoric, and such prose writings as lay claim to elegance of style.

BEN'LIS, the daisy. A genus of the class *Syngenesia*, and order *Poly. superflua*. Named from *bellus*, pretty. There is only one British type, *B. perennis*, called also bruisewort.

BELO'MANCY, Gr. from *βελος*, javelin, and *μαντια*, prophecy, divination by a flight of arrows, quite common among the Arabians. The inscription on the label on the arrow first found, generally serves as a guide.

BEL'ONE, the generic name of the gar-fish, of which there are several species. Name from *βελωνη*, a point, in reference to the pointed snout. The gar-fish are placed by Cuvier among the pikes (*esoces*), in the soft-finned order of abdoinales (*Malacopterygii abdoinales*), and were first formed by him into a distinct genus.

BELT, Sax. belt, Lat. *balteus*. A girdle or band, as that in which a sword is hung. Machinery is often driven by means of belts. Those two zones or girdles which surround the planet Jupiter are named belts, and surgeons use the same term to denote the broader sort of bands used in dressing wounds. In masonry, the term belt means a course of bricks or stones projecting from the rest of the wall, generally placed in a line with the sills of the first-floor windows. In heraldry, it denotes the badge given to a person when raised to knighthood.

BELTEIN, an ancient festival in Ireland and Scotland, held on the 21st of June, where fires were kindled on the tops of the hills. It was among the last remains of animism.

BELUGA, a Russian term signifying white-fish, and used to designate a species of the dolphin found in the Arctic seas, and rivers, and caught for its oil and skin.

BELVEDERE, an Italian term, which literally means *fine view*, used to designate a turret or lantern raised above a roof, &c. as an observatory; and in Italy and France, a small edifice erected in gardens for enjoying a fine prospect.

BEN, BEN-NUT. The fruit of the *Moringa aptera*. It affords an oil by simple pressure, called oil of ben and sometimes ben-oil.

BENCH'ERS, in the inns of court, are the senior members of the society. They have been readers, and being admitted to plead within the bar, are called *inner barristers*.

BEND. In nautical language, to bend is to fasten, as the cable to the ring of an anchor; and the knot by which the fastening is made, is called a bend. The bends of a ship are the strongest and thickest planks of her sides, more usually called wales. They are reckoned from the water, first, second, &c. bend.

BEND. In heraldry, an honourable ordinary, formed by lines drawn from the

dexter corner to the sinister base. It is supposed to represent a shoulder-belt or scarf, and to signify that the bearer has been valiant in war.

BEND'LET, in heraldry, dim. of bend. It occupies a sixth part of the shield.

BEND'Y. In heraldry, applied to the field when divided into parts diagonally, and varying in metal and colour.

BENE, the *Sesamum orientale*, an African plant.

BENEDICTINES, a celebrated order of monks, called also *Black Friars*. They take their name from professing to follow the rules of St. Benedict.

BEN'EFICE, from *bene*, well, and *facio*, to make. All church preferments are called benefices, except bishoprics, which are called dignities; but ordinarily the latter term is applied also to deaneries, archdeaneries, and prebendaries; and benefices is appropriated to parsonages, vicarages, and donatives. In the middle ages, benefice was used for a fee, or an estate in lands, granted at first for life only, and held *ex mero beneficio* of the donor. The estate afterwards becoming hereditary, took the appellation of *feud*, and benefice was transferred to church livings.

BENEFIT OF CLEROCY, a privilege in law, at first peculiar to clergymen, but afterwards made available to the laity who could read, all such being considered clerks. It consisted in the exemption, wholly or partially, from the jurisdiction of the lay tribunals. The felon, on being convicted by the latter, claimed the benefit of clergy, had a book put into his hands, and if the ordinary pronounced these words, "*legit ut clericus*," he reads like a clergyman, the culprit was handed over to the ecclesiastical court for a new trial or purgation, the pretty uniform result of which was his acquittal. Benefit of clergy was finally abolished in England by 7 & 8 George IV. c. 28.

BENEVOLENCE, a species of tax levied by the sovereign. It was nominally a gratuity; but was in fact exacted as a forced loan, with or without repayment.

BEN'JAMIN-TREE, a name common to two distinct trees. 1. The *Laurus benzoin*, called also *spice-bush*, native of America.—2. The *Styrax benzoin*, which affords the gum benzoin. See BENZOIN.

BENT, bent-grass, a name common to all the species of grasses composing the genus *Agrostis*. There are five British species.

BEN'ZINE, the name applied by Mitscherlich to the bi-carburet of hydrogen, which is procured by heating benzoic acid with lime.

BEN'ZOATE, a salt formed by the union of the benzoic acid with any sulcidable bases.

BENZO'IC ACID, a peculiar vegetable

acid procured in small white needles of a silky lustre, from gum benzoin by sublimation, hence called *flowers of benjamin* or *benzoin*, as well as by more complicated chemical processes. The taste is acrid, hot, acidulous and bitter, its smell slightly aromatic.

BENZOIN, Ger. *benzoe*, { a substance
BENJAMIN, Fr. *benjoin*, } classed by modern chemists among the balsams and chiefly used in perfumery. It is extracted by incision from the trunk and branches of the *styrax benzoin*, a tree which grows in several parts of the East Indies and adjacent islands. It comes to us in brittle masses, which, when white and of the form of almonds, are called *amygdaloid*, but when coloured and impure are called *sorted benzoin*.

BENZOINE, a crystalline compound deposited from oil of bitter almonds and some other oils when kept in contact with potassa.

BENZONE, a volatile fluid procured by Peligot by heating dry benzoate of lime. Syn. $C_{13}H_8$.

BERBERIDÆA, a natural order of plants of which the genus *berberis* is the type.

BERBERIS, the barberry or pepperidge-bush, a genus. *Hexandria—Monogynia*.

BERDASH, a kind of neck dress formerly worn in England. Persons who made and sold berdashes, were called *berdashers*, whence our modern *haberdashers*.

BEREANS, a sect of Protestant dissenters from the Church of Scotland, who profess to follow the example of the ancient Bereans (Acts xvii. 10—13, and xx. 4), in building their system of faith and practice upon the scriptures alone, without regard to human authority.

BERENGA'RIANS, the adherents of Berengarius or Berenger of Tours, who declared (1050) against transubstantiation, in which he agreed with John Erigena.

BERENICE'S HAIR (*Coma Berenices*), a name given to seven stars in the tail of the constellation *Leo*, in compliment to Berenice, wife of Ptolemy Evergetes, who made an offering of her hair to the gods for the preservation of her husband.

BERGAMOT, a species of citron (*Citrus medica*), of which there are three varieties.—1. The lemon-tree, (*petiols linearibus*, Lin.), a native of the upper part of Asia, but cultivated in Spain, Portugal, and France.—2. The citron-tree (*Citrus medica*, Lin.), the fruit of which is the cedronel, less succulent than the lemon.—3. The *Citrus mella vera*, Lam., produced at first by grafting a citron on a stock of a bergamot pear-tree, whence the fruit participates both of the citron and pear. The essential oil, called *essence of bergamotte*, is prepared from this fruit.

BERGMOTE, a court held on a hill (Sax. beorg, a hill, and mote, meeting) in Derbyshire, to decide controversies among the miners.

BERIBERI. Two perfectly distinct diseases have been confounded under this name, the one a peculiar form of *acute dropsy*, the other a chronic disease of which paralysis is the most prominent feature. The first is the true beriberi.

BERLIN BLUE, Prussian blue.

BERME, in fortification, a space of ground, of three or four feet in width, left between the rampart and the moat or foss, designed to receive the ruins of the rampart, and prevent the earth from filling the foss. It is usually palisaded or planted with hedge.

BERNACLES, a genus of palmipedes, distinguished from the common geese by a shorter and slenderer bill. The brant and Egyptian goose are species. The bernacles were included by Lin. in the genus *anas* (q. v.), and are placed by Cuvier among the *lamellirostres*.

BERNARDINES, Bernardine monks. See CISTERCIANS.

BERRY. See BACCA. Berries are the fruits or seeds of many plants. The *bay berries* are of the fruit of the *Laurus nobilis*, a tree which is a native of the south of Europe. The *juniper berries* are the fruit of the common juniper, *Juniperus communis*, principally imported from Holland, Germany, and Italy. The *Turkey yellow berries*, the *Persian berries*, and the *berries of Avignon*, are extensively used in dyeing yellow; they are the unripe fruit of the *Rhamnus infectorius*, a plant cultivated in Turkey, Persia, France, and other countries, for the sake of its berries. These are the berries quoted in the London price currents.

BERYL, Lat. *beryllus*, Gr. *βερυλλος*. A beautiful mineral ranked among the gems, usually a green colour of various shades, hence called by jewellers *aquamarine*. See EMERALD.

BESAYLE. (Norm. *ayle*, grandfather.) Great grandfather.

If an abatement happen on the death of one's grandfather or grandmother, a writ of *ayle* lieth; if on the death of the great-grandfather, then a writ of *besayle*, but if it mount one degree higher to the *tresayle*, or grandfather's grandfather, the writ is called a writ of *cosinage*, or *de consanguineo*.

BE'TA, the beet (q. v.). A genus of plants. *Pentandria—Digynia*. Named from the river Bætus in Spain, or according to Théis, from Celtic, *bett*, red.

BE'TEL, the piper betel is a species of pepper vine cultivated extensively in India for its leaves, which the natives are in the habit of chewing, either alone

or more commonly when compounded with a little lime obtained from sea-shell (*chunam*), and wrapped round slices of the areca nut (*See ARECA*). This whole compound is called *betel*, of which there is an almost incredible consumption throughout India and other parts of the East as an article of luxury. It is carried about in boxes, and presented, by way of civility, as snuff is in Europe. It reddens the saliva, gives a bright hue to the lips, and renders the teeth quite black.

BETH'LEMITES, an order of monks introduced into England in 1257. They were habited like the Dominicans, only that they wore a star of five rays, in memory of that which conducted the wise men to Bethlehem: hence called also star-bearers (*stelliferi*).

BET'ONICA, the *betony*. A genus of hardy perennials. *Didynamia—Gymnospermia*. Name altered from *bentonic*, in Celtic: *ben*, meaning *nead* and *ton*, *good* or *tonic*: Its properties are cephalic. Whole volumes have been written on the virtues of betony, and at the present time, *you have more virtues than betony*, is a proverbial compliment in Italy.—The wood-betony (*B. officinalis*), is the only British type: it is common in Scotland in woods and thickets.

BETROTH'MENT, in *law*, a mutual promise or compact between two parties, by which they bind themselves to marry. The word imports, giving one's *troth*, i. e. true faith or promise. Betrothment amounts to what civilians and canonists call *sponsalia* or *esponsals*, sometimes *desponsation*, or what the French call *fiançailles*.

BET'ULA, the *birch*. A genus of hardy trees of about 20 species, besides several varieties. *Monœcia—Polyandria*. Name Latinised from Celtic, *betu*, the birch, which is the badge of the clan Buchanan.

BET'ULINE, a vegetable principle obtained from the bark of the common birch (*Betula alba*). It is of a white colour, very light, and crystallises in the form of long needles; soluble in concentrated sulphuric acid, ether, alcohol, and the fixed and volatile oils, but insoluble in water and alkaline solutions; fusible, volatile and inflammable.

BEV'EL, an instrument used by masons, carpenters, joiners, &c. It differs from a square in having a moveable tongue, so that the instrument may be set to any angle.

BEVEL-ANGLE is a workman's term for any other angle than one of 90° or 45°.—The operation of cutting to a bevel-angle is called *beveling*.

BEVEL-GEER, in *mechanics*, a species of wheel-work, in which the axes of the two shafts are neither parallel nor at right angles to each other.

BEVELMENT, in *mineralogy*, supposes the

removal of two contiguous segments from the edges, angles, or terminal faces of the predominant form, thereby producing new faces inclined to each other at a certain angle, and forming an edge.

BEVILLE, } in *heraldry*, a thing broken
BEVILLE, } or opening like a carpenter's bevel; e. g. "He bears argent, a chief bevilé, vert."

BEY. *See* **BEG**.

BEZANT'S, round flat pieces of pure gold without any impression, supposed to have been the current coin of Byzantium. This coin was probably introduced into coat-armour by the Crusaders. The gold offered by the Queen on the altar at the feast of Epiphany and Purification, is called *bezant*.

BEZEL, the upper part of the collet of a ring which encompasses and fastens the stone. *Sw. betzla*, to curb.

BE'ZOAR, a concretion found in the stomach of an animal of the goat kind (*capra gazella*); hence the name from Pers. *pazar*, a goat. Some however derive the word from Pers. *pazacher*, which means the *poison-destroyer*; the substance being regarded in Oriental countries as an infallible antidote to poison; and hence all alexipharmics were called bezoardics.—The name *bezoar* has latterly been extended to all the concretions found in animals: hence we have the *bovine*, and the camel *bezoar*; the Persian bezoar is however most highly valued: it is of the size of a kidney-bean. The King of Persia sent three as a present to Napoleon: these consisted of woody fibre.

BE'ZOAR-MINERAL, a deutoxide of antimony awkwardly prepared.

BI, a Latin prefix for *bis*, double, twice; e. g. when prefixed to the name of a saline compound, it indicates two equivalents of acid to one of the base.

BIARSEN'ATE, a salt in which there are two primes of the arsenic acid to one of the base.

BIARTIC'ULATE, Lat. *bis* and *articulus*, joint. Applied to the antennæ and the abdomen of insects, consisting of but two joints.

BIAURIC'ULATE, Lat. from *bis*, and *auricula*, an auricle. In comparative anatomy, a heart with two auricles.

BI'BLE, βιβλος. **THE BOOK**, by way of eminence. The authorised version now in use in England was made by command of James I., and is commonly called *King James' Bible*. It is the work of 47 translators.

BIBLE SOCIETY. A society established in England in 1804, with the sole object of encouraging a wider circulation of the Scriptures without note or comment, as expressed in its regulations.

BIBLIO'GRAPHY, from βιβλος, a book, and γραφή, description. A history or

description of books as to their dates, editions, form, type, and other particulars connected with their publication. The term is now sometimes used to denote the arrangement and classification of the particulars, facts, or objects of some department of science, as the bibliography of the mammalia.

BIBLOMA'NIA, from βιβλος, a book, and μανια, madness, book-madness, a disease which manifests itself in an over-anxiety to obtain old and scarce editions of books, without much regard to the value of their contents.

BICAL'CARATE, Lat. *bis* and *calcar*, a spur. When a limb or part is armed with two spurs.

BICAP'SULAR, Lat. *bicapsularis*, having two capsules; e.g. a bicapsular pericarp.

BICAR'ONATE, a carbonate containing two equivalents of the acid to one of the base.

BICE, **BISE**. A blue colour used in painting, and prepared from the *Lapis Armenus* (Armenian stone). It is a small reduced to a fine powder by levigation.

BICEPS, Lat. *bis* and *caput*, head. Applied to muscles having a double insertion.

BICHROMATE, a chromate containing two equivalents of the acid, for one of the base.

BICIP'ITAL, } Lat. *biceps*, having two
BICIP'ITOUS, } heads. A term applied to muscles which have two distinct origins.

BICOL'LIGATE, Lat. *bis*, and *colligo*, I bind together. In *ornithology*, the connexion of all the anterior toes by a basal web.

BI'CORN, } from Lat. *bis* and *cornu*, a
BICOR'NUS, } horn, two-horned. Applied to parts of plants from their shape, as the anthers of the *Erica vulgaris*.

BICUSPIDATE, } Lat. *bicuspidatus*, two-
BICUSPID, } pointed, two-fanged (*cuspis*, a spear). Applied, 1. To leaves that terminate in two points. 2. To teeth which have double fangs.

BID'ALE (*bid* and *ale*). A local custom in some parts, of inviting friends to a poor person's house to drink ale, and make up a *charitable* reckoning.

BIDEN'TATE, Lat. *bidentatus*, furnished with two teeth. Applied to parts of plants.

BIDIG'ITATE, Lat. *bidigitatus* (*bis* and *digitus*, a finger). Applied to leaves, the common petiole of which has two leaflets at its extremity.

BIDIGITI-PENNALE, Lat. *bidigiti-pennatus*. Applied in botany to bidigitate leaves, the leaflets of which are pinnate.

BIDET, a kind of basin supported on legs: used in washing the lower part of the body.

BIER-BALK, the church-road for burials.

BI'FER, Lat. *biferus* (*bis*, twice, and *fero*, to bear). A plant that bears fruit twice

a year, which is the case with many tropical plants.

BI'FID, forked, Lat. *bifidus*, divided into two. Applied chiefly in *botany*, as to seed-vessels, petals, &c., which are two-cleft, but not deeply divided.

BIFLO'RATE, Lat. *biflorus*, two-flowered. Applied to a pedicle having two flowers.

BIF'ORATE, Lat. *biforatus* (*bis*, and *foris*), a door. Having two apertures or pores.

BI'ORMES, singular bodies, minute oval sacs, lately discovered in the interior of the green pulpy part of the leaves of some plants.

BIG, a kind of barley (Scotch barley), more commonly written *bigg*. See **BARLEY**.

BI'GA. In *old records*, a cart or vehicle with two wheels, drawn by two horses. *Bis* and *jugum*.

BI'AMX, from *bis* and γαμος, marriage.

A hybrid term meaning double marriage, or the having of two wives at once, which is felony by statute. The term is frequently used synonymously with *polygamy*, and in this sense means the crime of having a plurality of wives. In the *canon law*, the term was formerly applied to marriage with a second wife after the death of the first, or once marrying a widow, which disqualified a man for orders, and holding ecclesiastical offices.

BIGAS'TER, from *bis* and γαστήρ, a belly. A hybrid term sometimes used for *biventer* (q. v.).

BIGEM'INATE, Lat. *bigeminatus*, double-paired (*bis* and *geminus*, twins). Applied to a leaf, when near the apex of the common petiole there is a straight pair of secondary petioles, each of which is supported by a pair of opposite leaflets; e.g. *Mimosa unguiculata*.

BIGHT, Dan. *boyt*, a bend, coil, or turning. 1. The double part of a rope, where it is folded, in distinction to the ends.—2. The inward bent of a horse's chambreb, and of the fore knees.

BIGNO'NIA, the trumpet-flower. A very extensive genus of plants, most of which are shrubs. *Didynamia*—*Angiospermia*. Inhabit warm climates. Named in honour of Bignon, by Tournefort.

BIGNONIA'CEE, a natural family of plants. The genus *Bignonia* is the type.

BI-HYDRO-CARBON, carburetted hydrogen, or olefant gas, is sometimes so named. It is composed of two equivalents of carbon, and two of hydrogen.

BI-HYDROG'URET OF CARBON, sub-carburetted hydrogen gas, called also heavy inflammable air, and *fire-damp*, = C + 2 H. See **HYDROGURET**.

BIHIRAK', } a Persian Intercalary
BIHURAK' } month, introduced once in 120 years. It serves the same purpose as our leap year intercalations.

BIHYDROG'URET, a double hydroguret: *See* HYDROGURET.

BIL'UGOUS, Lat. *bijugus*, twice-paired (*bis* and *jugum*). Applied to leaves composed of two pairs of opposite leaflets on the common petiole.

BIKH, a deleterious plant used by the inhabitants of Nepal to poison their wells, at the time the British troops invaded it. This poison has been ascertained to be the *Aconitum ferox*.

BIL'ABATE, Lat. *bilabiatus*, two-lipped (*bis* and *labium*). Applied in botany; e.g. the corols of flowers.

BILACIN'ATE, Lat. *bilaciniatus*, double lacinate. Applied to a leaf when the margin is cut into two segments.

BILAM'ELLATE, Lat. *bilamellatus*, having two layers (*bis* and *lamella*). Used in botany to denote that the part is of the form of a flattened sphere longitudinally bifid.

BI'LANDER, *by* and *land*. A small vessel with two masts, distinguished from other two-masted vessels by the form of the mainsail, which is bent to the whole length of a yard, hanging fore and aft, and inclined to the horizon in an angle of about 45°, the foremost lower corner, called the *tack*, being secured by a ring-bolt in the deck, and the aftermost or sheet in the taffarel. It was used chiefly in the canals of the Low Countries: hence its name.

BILAT'ERAL, Lat. *bilateralis*, two-sided (*bis* and *latus*, a side).

BIL'BOES. } In *ships*, long bars of iron
BIL'BOWS. } with shackles sliding on them, and a lock at the end, used to confine the feet of offenders. Hence, also, the punishment of offenders in this way is called by the same name, and is equivalent to punishment in the stocks on land.

BILE, Lat. *bilis*, the gall; a bitter fluid secreted by the liver, in part flowing into the intestines, and in part regurgitating into the gall-bladder. This fluid is secreted in the minute lobules of the liver from the blood, contained in the extreme branches of the portal vein, and is brought by minute canals, called biliary ducts, into the hepatic duct, which conveys it into the common biliary duct, by which it is carried into the duodenum.

BILE'STONES, biliary calculi are popularly so named. *See* CALCULUS.

BILGE, from Goth. *bulgia*, to swell. The protuberant part of a cask, which is usually in the middle. The *bilge* of a ship is the underpart of her floor which approaches to a horizontal direction, and on which she would rest if aground. When this part of the ship is fractured, she is said to be *bilged*; the water which rises in the bilge, is called the *bilge-water*, and the pump adapted to withdraw it is called the *bilge-pump*.

BIL'ARY, Lat. *biliarius*, appertaining or relating to bile; e.g. the bile or *biliary ducts*, which are minute canals adapted to convey the bile into the hepatic duct. *Biliary calculi* are concretions which form in the gall bladder or bile ducts.

BILIN'QUENT, from *bis* and *lingua*. A jury impanelled on a foreigner, part being English and part being natives of the same country with the panel.

BILL. 1. The beak of a bird, from Sax. *bille*, the primary sense of which is a shoot.—2. A cutting instrument, used by plumbers, basket-makers, and gardeners, made in the form of a bird's mandible, and fitted with a handle; when short it is called a *hand-bill*, when long, a *hedge-bill*, being used for cutting hedges and pruning-trees. From Sax. *bille*, Ger. *beil*, an axe, a hatchet.

BILL, from Norm. *bille*, a note. In *law*, a declaration in writing expressing some wrong the complainant has suffered from the defendant, or a fault committed by some person against a law. It contains the fact complained of, the damage sustained, and a petition or process against the defendant for redress. In *Scots law*, the term extends to every application in writing, by way of petition to the court of session. The term is also used in England to signify an obligation or security given for money under the hand, and sometimes the seal, of the debtor, without a condition or forfeiture for non-payment, in which circumstance it differs from a bond. This kind of security is very generally called a *note of hand*. In *parliament*, the word *bill* is used to denote a draft or form of a law presented but not enacted. In some instances statutes are called *bills*, but they are usually qualified by some descriptive title, as a *bill of attainder*. When a bill has received the sanction of both houses of parliament and the royal assent, it is generally named an *Act of Parliament*.

BILL OF ENTRY, a written account of goods entered at the custom-house, whether imported or intended for exportation.

BILL OF EXCHANGE, a written request or order to one person or company to pay a certain sum of money therein stated to another person or company, on his or their order. The person who makes the bill is called the *drawer*, the person to whom it is addressed, the *drawee*, and the person to whom or to whose order on the face of the bill it is payable, the *payee*. If the drawee accepts the bill, he thereby becomes the *acceptor*. A bill of exchange differs from a *promissory note* in being a request to another person to pay, whereas the latter is a promise on the part of the maker himself

to pay the sum specified to the payee. Bills of exchange are either *inland*, i.e., when both the drawer and drawee reside in the same county; or *foreign*, i.e., when drawn by a person in one country upon one residing in another.

BILL OF HEALTH, a certificate or instrument, signed by consuls or other proper authorities delivered to the masters of ships at the time of their clearing out from all ports or places suspected of being particularly liable to infectious disorders, certifying the state of health at the time that such ship sailed. A *clean bill* imports that, at the time the ship sailed no infectious disorder was known to exist there. A *suspected bill*, more commonly called a touched patent or bill, imports that no infectious disorder had actually broken out, but that there were rumours of such. A *foul bill* imports that the place was affected when the vessel left; this is more commonly known by the absence of clean bills, a foul bill not being worth having.

BILL OF LADING, a formal receipt signed by the master of a trading vessel in his capacity of carrier, acknowledging that he has received the goods specified in it on board his ship, and binding himself, under certain exceptions, to deliver them in the like good order as received, at the place and to the individual named, &c. There are usually triplicate copies, one for the party sending, another for the party to whom the goods are sent, and the third for the captain.

BILL OF MORTALITY, an account of the number of deaths in a place in a given time. These bills usually contain also a summary of births, christenings, &c.

BILL OF PARCELS, an account given by the seller to the buyer of the several articles purchased, with the price of each. See **INVOICE**.

BILL OF RIGHTS, a summary "of that residuum of natural liberty which is not required by the laws of society to be sacrificed to public convenience; or else those civil privileges which society has engaged to provide in lieu of those natural liberties so given up by individuals." The name is usually given to the declaration presented by the houses of Lords and Commons to the Prince of Orange in 1688, on his succession to the British throne, wherein they "do claim, demand, and insist upon, all and singular the premises" as their undoubted rights and privileges. A similar declaration was made in the *act of settlement*.

BILL OF SALE, a contract under seal, by which an individual conveys away the right and interest he has in the goods and chattels named in the bill, on some consideration given or promised.

BILL OF SIGHT, when a merchant is

ignorant of the real nature of the goods assigned to him, so that he is unable to make a perfect entry of them, he must give due notice of the circumstance at the custom-house: the collector is thereupon authorised to take an entry by *bill of sight*, and to grant warrant that the goods be landed and examined by the importer in presence of the officers.

BILL OF STORE, a license granted by the custom-house to merchants, to carry such stores and provisions as are necessary for a voyage free of duty.

BILL'A VE'RA, *true bill*. The indorsement of the grand inquest upon any indictment which is found to be probably true.

BILLETE', *billetti*. A French word used in heraldry to signify that the ground of the escutcheon is strewn with *billets* or rectangular oblong figures—supposed to represent cloth of gold and silver—number of such indefinite.

BILLIARDS, an interesting game of French invention, played on a rectangular table covered with green cloth, with ivory balls which are to be driven into holes called *hazard-nets* or *pockets*, at the corners of the table, with sticks, one of which is a *mace*, and the other a *cue*.

BILLION, that is, *bi-million*. According to the English system of numeration, a billion means a million times a million, or $1,000,000 \times 1,000,000 = 1,000,000,000,000$; but in the French system it expresses a thousand times a million, or $1000 \times 1,000,000 = 1,000,000,000$. See **NUMERATION**.

BILO'BED, Lat. *bilobus*, two-lobed. Applied in botany to leaves, petals, seed-vessels, &c., which are divided into two rounded portions or lobes; e. g. the capsules of the *veronica biloba*.

BILOC'ULAR, Lat. *bilocularis*, two-celled. Applied to capsules, &c., which have two cells.

BIMAC'ULATE, Lat. *bis* and *macula*, a spot. Anything marked with two spots.

BIMA'NA, Lat. from *bis* and *manus*, a hand: two-handed animals. The *bimana* constitute the first order of mammalia—comprehends but one genus, and that genus is *man*.

BIMAR'GINATE, two-margined. A term applied to shells which are furnished with a double margin as far as the lip.

BIXE'DIAL, *bis* and *medial*. If two medial lines, commensurable only in power, and containing a rational rectangle, be compounded, the whole will be irrational with respect to the other too, and is a *first bimedral line*: but if the lines be commensurable only in power and contain a medial rectangle, the whole, when compounded, will be irrational, and constitute a *second bimedral line*. Euclid, B. x. prop 38 and 32

BIN, for *binus*, as a prefix is synonymous with *bi* (q. v.).

BINARY, Lat. *binarius*, arranged in twos; e. g. a binary compound is that resulting from the union of two elements; a binary number is one made up of two units; a binary arrangement is made with pairs.

BINARY ARITHMETIC is that wherein unity or 1 and 0 are only used. In this arithmetic the cypher multiplies by 2 instead of 10, as it does in the common arithmetic.

BINARY LOGARITHMS were contrived and calculated by M. Euler for facilitating musical calculations. The modulus is two instead of ten, as in the common logarithms, or one in the hyperbolic logarithms.

BINARY MEASURE, in *music*, is that used in common time, wherein the time of rising in beating is equal to the time of falling.

BINATE, Lat. *binatus*, in pairs. Applied to a leaf divided into two parts almost its whole length; or to a compound leaf having only two leaflets on a common petiole.

BIND. 1. *Bind and clunch* are names used indifferently by miners to designate the soil upon which the coal strata rest. It is an argillaceous shale, more or less indurated, and sometimes intermixed with sand and resembling sandstone, but almost always passing into a clayey soil on exposure to the action of the atmosphere.

—2. In *music*, a tie for grouping notes together.

BINDING-JOISTS, those joists of a floor into which the trimmers of stair-cases, or well-holes of the stairs and chimney-ways, are framed.

BINERVATE, Lat. *binervius*, two-nerved; applied in botany to leaves which have two longitudinal ribs or nerves.

BINACLE, a box containing a ship's compass, and light to show it at night. It was formerly called *bittacle*, supposed to be a corruption of Fr. *habitable*, but more probably *boite d'aiguille*, needle-box.

BINOCLE, **BINOCULAR TELESCOPE**, a telescope to which both eyes may be applied, hence the name from *binoculus*, double-eyed. It consists of two tubes with two sets of glasses of the same power, and adjusted to the same axis. The instrument is not now used, being found inconvenient.

BINOMIAL, from *binus* and *nomen*. In *algebra*, a quantity consisting of two terms or names, and connected by the sign + or —. When connected by the latter sign the quantity is usually called a *residual*, and by Euclid an *apotome*.

BINOMIAL THEOREM, a general algebraical expression or formula by which any power or root of a quantity of two terms may be expanded into a series. It is usually called the *Newtonian theorem*,

Newton being considered the inventor, as he certainly was, in the case of the fractional and negative exponents, and this includes all the other cases of powers, division, &c.

BIN'OXALATE, an oxalate in which there are two (*binus*, twice) equivalents of the acids to one of the base.

BIN'OXIDE, written incorrectly for *deutoxide*. See **OXIDE**.

BINUS, a Lat. word meaning by couples, (*bis* and *unus*.) applied to leaves when there are only two upon a plant.

BIO'CELLATE, Lat. *bis* and *ocellus*, dim. a small eye. In *entomology*, when the wing of an insect is marked with two eye-like spots.

BIF'ARTILE, Lat. *bipartitus*, having two corresponding parts, applied to the corolla, leaf, and other parts of plants when divided into two corresponding parts at the base.

BIPART'ITI, a tribe of pentamerous coleoptera, composed of carabici which, "in relation to their habits, might be styled *fossorers*." These insects all keep on the ground, conceal themselves either in holes or under stones, and frequently leave their retreat only at night, to prey on other insects; they are particularly proper to hot climates, though Britain produces some genera.

BIPEC'TINALE, Lat., *bis* and *pecten*, a comb; a part having two margins toothed like a comb.

BIFEL'TATE, Lat. *bis*, and *pelta*, a buckler; an animal or part having a defence like a double shield.

BIPEN'NATE, Lat. *bipennatus*, doubly pinnate, applied to a compound leaf having a common petiole which produces two partial ones, each bearing leaflets of its own.

BIPET'ALOUS having two petals, *bis* and *petalov*, a petal.

BIPINNAT'IFID, Lat. *bipinnatifidus*, doubly pinnatifid: applied to a pinnatifid leaf, the segments of which are themselves pinnatifid.

BIPU'PILLATE, Lat. *bis*, and *pupilla*, a pupil. In *entomology*, an eye-like spot on the wing of a butterfly, having two dots or pupils within it of a different colour.

BIGUAD'RATE, Lat. *biquadratus*, doubly-squared. The biquadrate of a number is the square of the square. Thus 4 is the square of 2, and 16 is the square of 4; 16 is therefore the biquadrate of 2.

BIGUADRATIC, from *bis* and *quadratus*, squared. In *algebra*, a biquadratic power, root, or equation, is a power, root, or equation of the fourth degree. See **EQUATION**, **POWER**, and **ROOT**.

BIRCH, the *betula* of botanists, a genus of arborescent plants of about 20 species, met with in every part of the north of Europe. Two species are found in Bri-

tain, the common and dwarf birch, but there are four varieties of the former. The Scotch name is *birk*, Sax. *birc*.

The second letter of the Runic alphabet is called *biarkann*, i.e. the birch-leaf, and the second of the Irish is *beith* or *beith*, birch.

BIRD'-CALL, a little stick, cleft at one end, in which is put a leaf of some plant for imitating the cry of birds when blown upon like a whistle. A laurel leaf counterfeits the cry of lapwings, a leek that of nightingales, &c.

BIRD'-LIME, *bird* and *slime*, a vegetable substance generally prepared from the middle bark of the holly, and so called because, from its great viscosity, it is used to entangle birds. It may likewise be obtained from the mistletoe, the *viturnum lantana*, young shoots of alder, and other vegetables.

BIRD OF PARADISE. The birds of Paradise are natives of New Guinea and the adjoining islands, are said to live on fruits, and are particularly fond of aromatics. See PARADISEA.

BIRD'-PEPPER, the *capsicum baccatum*, a shrubby plant of both Indies, bearing an oval fruit, very biting, to which the name of bird-pepper is given.

BIRDS, in *heraldry*, are emblems of expedition, liberty, readiness, and fear.

BIRD'S-EYE. 1. A species of the primrose, the *primula farinosa*.—2. The *Adonis verna*, and sometimes the whole genus *Adonis*, more usually called pheasant's-eye.

BIRD'S-EYE-VIEW, a view taken from a point considerably above the objects represented.

BIRD'S-MOUTH, in *architecture*, an interior angle or notch cut in the end of a piece of timber for its reception on the edge of a pole or plate. It signifies also the internal angle of a polygon.

BIRD'S-NEST. 1. A genus of ferns, the *struthiopteris germanica*.—2. The plants of the genus *monotropa* are distinguished by the name *yellow-bird's-nest*, but are often called simply *bird's-nest*. The British species is the *M. hypopithys*.—3. The *listera nidus avis* of Britain.

BIRD'S-NESTS, in *commerce*, the nest of a species of swallow peculiar to the Indian islands (the *hirundo esculenta*), very highly valued in China as an article of luxury. The nest in shape resembles that of other swallows. It is formed of a viscid substance not unlike fibrous, imperfectly concocted isinglass. These esculent nests are chiefly found in caverns in Java, and the better sorts are sold at Canton at from 6l. to 7l. per lb.

BIRREM, Lat. *biremis*, a vessel with two banks or tiers of oars (*bis* and *remus* an oar).

BIRHOMBOI'DAT, *bis* and *rhomboid* Having a surface of 12 rhombic faces, which being taken 6 and 6, and prolonged till they intercept each other, would form two different rhombs.

BIRTH, evidence of. By the French civil code it is required that a declaration be made of the birth of every child to the proper officer within three days, with the production of the child.

BIRTH OR BERTH, of a ship. The ground in which she is anchored; also, an apartment, as the midshipman's berth; also, the space allotted to a seaman to hang up his hammock in.

BIRTH'WORT, a name common to all the plants of the genus *aristolochia* (q. v.).

BIS, Lat. *twice*. In *music*, a word placed over passages signifying that they are to be played twice over.

BIS'CUIT, Lat. *bis* and *cuit*, baked. Earthenware when it has been baked, but not glazed.

BIS'ECT, BISECTION, Lat. *bis* and *seco*, to cut. To *bisect* is to divide into two equal parts; e.g. the rational horizon bisects the globe; and such division is called a *bisection*.

BISEC'MENT, *bis* and *segment*. One of the parts of a line, &c., divided into two equal parts.

BIS'ETOUS, Lat. *bis* and *seta*, a bristle. When an animal is furnished with two bristle-like appendages.

BISEX'UAL, when flowers contain both stamens and pistils in the same envelope. It is the same as hermaphrodite.

BISHOP, Lat. *episcopus*; Gr. *ἐπίσκοπος*, of *ἐπί*, over, and *σκοπος*, inspector; *σκοπία*, to view. This Greek and Latin word accompanied the introduction of Christianity into the west and north of Europe, and has been corrupted into Saxon, *biscop*, *bisceop*; Sw. and Dan. *biskop*; D. *bisschop*; Germ. *bischof*. It is the title which the Athenians gave to those whom they sent into the provinces subject to them, to inspect the state of affairs; and the Romans gave the title to those whose business it was to inspect the provisions brought into the markets. In the primitive church the title denoted one who had the pastoral charge of a church. In process of time the maintenance of their ecclesiastical prerogatives, and their extensive ecclesiastical as well as criminal jurisdiction, left the bishops little time or inclination for the discharge of their duties as teachers and spiritual fathers. They therefore attached to themselves particular vicars, called *suffragans*, for the inspection of all that concerned the church. The office now became an object of ambition for the nobility and the sons of kings: it was honourable, profitable, and permitted sensual enjoyments of every

description. The reformation, in some of the Protestant countries, left the higher clergy with the title of *bishop*, but stripped them of many of their privileges and much of their revenues: the English bishops fared the best, and for that reason the English church has received the name of *episcopal*. Her bishops are appointed by the Sovereign, must be thirty years of age, and are, with the exception of the bishop of Sodor and Man, peers of the realm.

BIS'MUTH, Germ. *bismut*. A metal of a reddish white colour, and almost destitute of taste and smell. It is softer than copper, breaks when struck smartly with a hammer, and consequently is not malleable, neither can it be drawn into wire. Its sp. gr. is 9.82, but its density may be much increased by cautious hammering; it melts at 476° Fah., and, if gradually cooled, it crystallises in octohedrons. At a strong heat it burns with a pale blue flame, and sublimes in the form of the yellow-coloured oxide known by the name of *flowers of bismuth*. It occurs both native and combined with other substances, as oxygen, sulphur, and arsenic, and, in veins of primitive rocks, accompanied by ores of lead, silver, and sometimes cobalt and nickel. When found as an oxide, it is called *bismuth ochre*; as a sulphuret, *bismuth glance*; as a sulphuret with copper, it is *copper bismuth ore*; with copper and lead, it forms *needle ore*. The metal used in the arts is derived chiefly from the mineral called *native bismuth*. It generally contains small proportions of sulphur, iron, and copper. It is known among workmen by the names of *marcasite* and *tin-glass*: the last a corruption of French, *étain de glace*.

BISON. *Bison*. A large, wild, untamable, herbivorous, and gregarious animal of the bovine genus, which inhabits the temperate parts of North America, and which, from its resemblance to the buffalo (*bos bubalus*, Lin.), is often termed the buffalo of America (*Bos Americanus*, Gmel.). It is particularly distinguished by a great hump or projection over its fore-shoulders, and by the length and fineness of its woolly hair.

BISPINO'SUS, Lat. *bis* and *spina*, a spine, armed with two spines.

BIS'SEXTILE, leap-year. A year consisting of 366 days, the additional day being added to the month of February. This is done every fourth year, on account of the excess of six hours by which the year really exceeds 365 days. It takes its name thus: the Romans, instead of making a 29th day in February, reckoned the 24th twice, and called this 24th day, *sexto calendas Martias*, i.e. the sixth day before the calends of March. This, with the prefix *bis*, to denote that it was reckoned twice,

gave the name *bissextilis*, which we write *bissextile*, to the leap-year.

BISTON'TA, snakeweed. A species of polygonum, named from *bis* and *torqueo*, to twist, in allusion to the contortions of its root.

BIS'TOURY, Fr. *bistouri*, any small knife for surgical purposes.

BIS'TRE, } Fr. *bistre*, from *bis*, brown.

BIS'TER, } A brown colour prepared from wood soot, and used in water-colours in the same way as China ink.

BISULPHATE, a sulphate in which the oxygen of the sulphuric acid is a multiple by two of that of the base.

BISULPHITE, a sulphite in which the oxygen of the sulphurous acid is a multiple by two of that of the base.

BISULPHURET, a sulphuret with a double proportion of sulphur.

BIT, from Sax. *bita*, a mouthful, of *bitan*, to bite. 1. The iron part of a bridle, which is inserted into the mouth of a horse, and its appendages to which the reins are fastened. It includes the bit-mouth, the branches, the curb, the level-holes, the tranchefil, and the cross-chains. There are various kinds; the musrole, snaffle or waterbit, the canon mouth, jointed in the middle, the canon or fast-mouth, all of a piece, kneed in the middle; the scotch-mouth, the masticador or slaving-bit.—2. A boring instrument: the boring end of the stock and bit. See *Stock*.—3. A small coin of the West Indies, half a pistareen, about fivepence sterling.

BITER'NATE, Lat. *biternatus*, doubly-ternate. Applied to compound leaves when the common footstalk supports three secondary petioles on its apex, and each of them bears three leaflets.

BIT-NOBEN (Indian), Salt of Bitumen. A white saline substance prepared by the Hindus, and variously used to improve the appetite, cure diseases of the liver, paralytic disorders, cutaneous affections, rheumatisms, and indeed all chronic disorders of man and beast. It is called in the country *pandanoon*, *soucherloon*, and popularly *khalamimuc*, or black salt—*Hooper*.

BIT'TER-APPLE, } The *cucumis colo-*
BIT'TER-CUCUMBER, } *cynthis*. An an-
BIT'TER-GOURD, } nual of Turkey and Nubia, and also its fruit, which is a round berry or pepo of the size of a small orange, yellow, and smooth on the outside when ripe. It is gathered, peeled, and dried in a stove, and in this state sent into this country, where it is known popularly by the names given, and scientifically as *coloquintida*. It is intensely bitter, and strikes, with sulphate of iron, a deep olive colour. It is much used in medicine.

BIT'ERN. 1. A species of heron, the *ardea stellaris*, a native of Europe.—2. The mother-water which remains after the crystallisation of common salt from sea-water.

BITTER PRINCIPLE. Applied to certain results of the action of nitric acid upon organised matter, of an intensely bitter taste.

BITTERSWEET, a species of nightshade, the *solanum dulcamara*, a slender climbing plant, whose root, when chewed, produces first a bitter, then a sweet taste.

BITTERWORT, a name common to all the British species of the Gentian. See **GENTIANA**.

BITTS, a plural word used to denote a frame of two pieces of timber, fixed perpendicularly in the forepart of a ship, on which to fasten the cables when she rides at anchor. There are several other smaller bits, as the topsail-sheet-bits, paul-bits, carrick-bits, &c.

BITUMEN, a generic name for a number of inflammable mineral substances known under the names of naphtha, petroleum, mineral tar, mineral pitch, malthu or sea-wax, asphalt, elastic bitumen, or mineral caoutchouc, jet, mellilite or honey-stone, mineral coal, amber, and mineral tallow or adipocire. The four first are liquid, the others are solid at ordinary temperatures. All the varieties of bitumen seem to partake, more or less, both of an oily and resinous nature, and are composed, in a great measure, of carbon and hydrogen, but their origin is not known; the tar-like substance which oozes out of coal when on fire, is a good example of bitumen.

BITUMINOUS CEMENT, } a factitious sub-
BITUMINOUS MASTIC, } stance which has of late been much used in France for covering roofs, lining water cisterns, &c. It is made by boiling asphaltum, and when hot mixing it with chalk or brick-dust. Boiled coal-tar treated in the same way is equally good.

BITUMINOUS LIMESTONE, a limestone of a lamellar structure, more or less charged with bitumen. It is found near Bristol, and abundantly in Galway, hence called Galway marble.

BITUMINOUS SPRINGS, properly springs impregnated with petroleum and analogous nominal substances; but the name is commonly used to designate those fountains of almost pure petroleum, so very numerous, especially in Persia, where some of them yield from 1000 to 1500 lbs. of petroleum a day, and seem to be quite inexhaustible.

BI'VALVE, Lat. *bivalvis*, two-valved shells.

BI'VALVES, one of the three Linnean classes of shell-fish, the shells of which are composed of two pieces or valves

joined together by a hinge. The oyster is an example.

BI'VOUAC, Ger. *biwacht*. The name given to the modern system by which the soldiers in service lie in the open air without tents, in opposition to the old system of camps and cantonments.

BIX'A, the *arnotto-tree* or *roucou*, a genus of two species, one of which, the *B. orellana*, common to both Indies, produces the *terra orellana* or *arnotto* of the shops. Class, *polyandria*; order, *monogynia*.

BIX'ACEÆ, a natural order of plants of which the genus *bixa* is the type.

BLACK ACTS. In *England*, the statutes of 9 George I. and 31 George II. In *Scotland*, the acts or statutes of the five Jameses, with those of Mary's reign and of James VI., down to 1587, all of which were printed in the old English character, or black letter.

BLACK'AMOOR'S-HEAD, a chemical vessel of a conical form, named from its supposed resemblance to a negro's head. It is now rarely used.

BLACK'BAR, a plea obliging the plaintiff to assign the place of trespass.

BLACK'-BIRD. In *England*, the *turdus merula*, Lin. In *America*, 1. The *gracula guiscula*, Lin. This is called the crow black-bird.—2. The *sturnus predatorialis*, Wilson; *oriolus phœnicus*, Lin. This is called the red-winged black-bird.

BLACK'-BOOK. 1. A book kept in the Exchequer of *England*, and containing the orders of that court, its officers, their ranks and privileges, wages, perquisites and jurisdiction, with the revenues of the Crown in money, grain, and cattle. It is supposed to have been composed in 1175, by Gervais of Tilbury.—2. A book compiled by order of the visitors of monasteries under Henry VIII., containing an account of the enormities practised in those houses.—3. Any book which treats of necromancy or the black art.

BLACK-CAP, a little bird, the *motacilla atricapilla*, Lin.; called otherwise the mock nightingale; it has obtained its name from the fine black crown on its head.

BLACK CATTLE, a general name for all cattle of the bovine genus, reared expressly for slaughter, in distinction from dairy-cattle.

BLACK COCK, the heath cock, *tetrao tetrix*, Lin., named from its black plumage. In some places it is called *black grouse*, and in others *black game*.

BLACK DYE, the principal ingredients of black dye are logwood, Aleppo galls, verdigris, and sulphate of iron or green vitriol, but the process is intricate, and varies with the stuff to be dyed.

BLACK FISH, the *tautog*, a dark coloured species of *labrus* (q.v.). Fish newly

spawned are in Scotland called *black* or *foul fish*; and the practice of taking salmon in the rivers when they come up to spawn, is called *black fishing*.

BLACK FLUX, a mixture of carbonate of potash and charcoal, made by deflagrating tartar with half its weight of nitre.

BLACK IRON, malleable iron, in contradistinction to that which is tinned, called *white iron*.

BLACK LEAD, the same with plumbago and graphite, a compound of carbon and a small proportion of iron and earthy matters. It takes its name from its leaden appearance, but contains no trace of lead. It is chiefly used in the manufacture of black-lead pencils, the first specimens being procured from the celebrated mine of Borrowdale in Cumberland, worked since the time of Queen Elizabeth.

BLACK LETTER, the old English alphabet. (*ABE abc.*)

BLACK'MAIL. In Scotland, a sort of yearly payment, formerly made for protection to those bands of armed men who, down to the middle of last century, laid many parts of the country under contribution. *Mail* means tax or rent.

BLACK-MONKS, a name of the Benedictines.

BLACK-ROD, the usher belonging to the Order of the Garter; so called from the black rod which he carries. He is usher of Parliament.

BLACK-SPAIL, a disease of cattle, called also *blackleg* and *blackquarter*.

"The blackspail is a species of pleurisy, incident to young cattle, especially calves, which gives a black hue to the flesh. It is indicated by lameness in the forefoot (*spail* or *leg*), and the common remedy is immediate bleeding."

BLACK-THORN, the sloe (*Prunus spinosa*), in distinction from white-thorn or hawthorn.

BLACK-TIN, tin ore when dressed, stamped, and washed, ready for melting.

BLACK-VOMIT, the yellow fever.

BLACK-WADD, one of the ores of manganese, used as a drying ingredient in paints.

BLACK-WATCH, the designation given to the companies of loyal highlanders raised after the rebellion in Scotland, in 1715, for preserving peace in the highland districts. The black-watch formed the nucleus of the 42nd regiment, and received the denomination of *black* (Gal. *dhu*) from their dark tartan habiliments.

BLAD'DER, Sax. *blaber*, of *blæð*. A thin membranous substance, which serves as the receptacle of some fluid or secretion, as the urinary bladder and gall-bladder in animals. When unrestricted the name applies to the former.

BLAD'DER-NUT, a name common to both

species of the genus *staphylea* (q. v.). There is also a species of *royena*, called the *African bladder-nut*, and a species of *ilex*, holm, or holly, called the *laurel-leaved bladder-nut*.

BLADDER'WORT, a name common to all the plants of the genus *Utricularia*. The British species are all aquatics, with roots, stems, and leaves, furnished with numerous membranaceous reticulated vesicles, which are filled with water till it is necessary that the plant should rise to the surface and expand its blossoms. The vesicles are then found to contain only air, by aid of which the plant floats; this air, again, gives place to water, and the plant descends to ripen its seeds at the bottom.

BLAD'DER-WRACK, a sea-weed (the *Fucus vesiculosus*) called also the *sea-oak* and *sea-wrack*.

BLAIN, Per. *blaen*. 1. A watery vesicle of the skin.—2. A distemper incident to animals, being a bladder which grows at the root of the tongue to such a degree as to stop the breath. It answers to croup in the human subject.

BLANCHIMETER, from *blanch* and μέτρον, measure. A measure of the bleaching power of chloride of lime (bleaching-powder) and potash.

BLANCH'ING, whitening, from Fr. *blanchir*, to whiten. Applied, 1. To an operation performed upon pieces of metal, as silver, to give them whiteness and lustre.—2. To the whitening of living plants, by making them grow in the dark.

BLANCH'-TERM, **BLANK-FARM**. In ancient law, a white-farm. A farm, of which the rent was paid in silver, and not in cattle.

BLANCH'-HOLDING. In law, a tenure by which the tenant is bound to pay only an elusory yearly duty to his superior, as an acknowledgment of his right.

BLANDFORDIA, a genus of New Holland plants, of the class *hexandria*, and order *monogynia*. Named from Blandford.

BLANK-BAR. In law, a common bar, or a plea in bar, which in action of trespass is put in to oblige the plaintiff to assign the place where the trespass was committed.

BLANK'-DOOR, a doorway which has been blocked up to prevent entrance. Also a false door, placed in an apartment opposite to the real door, for the sake of uniformity.

BLANK'ET, Fr. *blanchet*. Among printers, woollen-cloth or white baize, to lay between the tympan.

BLANK-WINDOW, a sash-frame, sashes and glass fixed into a recess corresponding with the real windows, to preserve the uniformity of an elevation.

BLASPHEMY, from βλασφημία, to de-

fame. Treason against the Deity: the denying the existence of God, assigning to him false attributes, or denying those which are true; speaking irreverently of the mysteries of religion; and, in Roman Catholic countries, speaking disrespectfully of the Holy Virgin and of the saints. Blasphemy was formerly punished by death, but the laws with respect to it are now modified in most countries.

BLAST, Sax. *blaest*, a puff of wind; applied, 1. To the column of air forced into a fire, as in forges by bellows, or the blasting-machine, for the purpose of quickening the combustion.—2. To erysipelas which appears suddenly on the face in consequence of exposure to cold wind or a blast.—3. To the explosion of gunpowder in splitting rocks, and also the explosion of inflammable air in a mine, &c.

BLASTĒMA, in botany, the axis of growth of an embryo. In *anatomy*, the homogeneous, gelatinous, and granular basis of the ovum, in which the organic elements, which characterise the different tissues, are deposited in the early stages of development.

BLASTOCAR'FOUS, *βλαστος*, a germ, and *καρπος*, fruit. That kind of fruit which germinates inside the pericarp, as the mangrove.

BLAT'ŦA, the cockroach; a genus of orthopterous insects placed among the Cur-soria or Runners by Cuvier. "The blattæ are very active nocturnal insects, some of which live in the interior of our houses, particularly the kitchen, in bake-houses and flour-mills, and others inhabit the country. They are extremely voracious, and consume all sorts of provisions," hence the name from *βλαττο*, to destroy.

BLA'ZONING. } In *heraldry*, the deci-
BLA'ZONRY. } phering of coats of arms, from Ger. *blasen*, Dut. *blaazen*, to blow, because the herald blew a trumpet and called out the arms of a knight when he entered the lists at a tournament.

BLEACHING-LIQUID, Fr. *eau de javelle*, chlorine-water. When chlorine is condensed in water, the result is called *bleaching liquid*, when condensed in quick lime, it is called *bleaching powder*. Bleaching liquid is prepared from the bleaching powder simply by solution.

BLEACHING-POWDER, chloride of lime, quick-lime saturated with chlorine.

BLECH'NUM, a genus of perennials. *Cryptogamia*—*Filices*. Name *βληκνον*, a fern. This genus is sometimes distinguished by the name of *hard-fern*, and the British species (*B. boreale*) by the names *northern hard-fern* and *rough spleenwort*.

BLENC'H-RO'LDING, } a tenure of lands
BLENC'H-TE'NUAL, } upon payment of a

small sum in silver, *blanch*, i.e. white money.

BLÉNDE, black-jack. a native sulphuret of zinc, named from Ger. *blenden*, to dazzle. There are several varieties of this one, as brown, yellow, and black; the primitive form of crystals is a rhomboidal dodecahedron.

BLENNĪUS, the blenny, a genus of acanthopterygious fishes, placed by Cuvier among the gobrises, and by Linnæus among the juglares. The blennies live in small troops among the rocks on the coast, and take their name from *βλέννα*, mucus, a slimy mucus being smeared over their skin.

BLENNORRHŌ'ŒIA, a discharge of mucus, from *βλέννα*, mucus, and *εργοναι*, to burst forth.

BLENNORRHŌ'ŒA, a flow of mucus, from *βλέννα*, mucus, and *ερω*, to flow, applied to an increased discharge of mucus from any mucous surface, but commonly restricted to that from the urethra and vagina.

BLEPHAROPLE'GIA, the same with *blepharoptosis* (q.v.), from *βλεφαρον*, the eyelid, and *πληγη*, a stroke. The word *πληγη* was applied by the Greek physicians to paralysis.

BLEPHAROPT'OSIS, a prolapse of the upper eyelid, arising from a relaxed state of the common integuments of the eyelids, or from paralysis of the levator muscle, from *βλεφαρον*, the eyelid, and *πτωσις*, a prolapse; of *πιπτω*, to fall.

BLET'ME, from Teut. *bleima*, to hinder. In *farriery*, inflammation between the sole and bone of the foot. It usually arises from a bruise.

BLIGHT, a general name for various distempers of corn, fruit-trees, &c., by which the whole plant sometimes perishes; sometimes only the leaves and blossoms which become shrivelled as if scorched, from Sax. *blæcetha*, leprosy.

BLIND, a skreen, a cover. In military affairs, and especially in operations against fortresses, all which tend to intercept the view of the enemy are called blinds. These are of several kinds: 1. A fascine placed across the embrasures to prevent the enemy from observing what passes near the canon.—2. Shutters made of strong planks placed before the port-holes as soon as the guns are discharged.—3. A screen consisting of three strong perpendicular posts, five feet in height, between which are planks covered with plates of iron on the outside, and thus made shot proof, used to protect labourers in the trenches, is called a *single blind*. A *double blind* is constructed of large wooden chests filled with earth or bags of sand. Both these

kinds of blinds are furnished with block-wheels or rollers to enable the labourers in the trenches to push them forward. The kind of blinds called *chandeliers* are constructed on the principle of the single blind, and are used for the same or similar purposes.—4. The coverings placed over the most exposed parts in the saps or the fortress, are also called *blinds*. These are made of beams over which hurdles or fascines are spread, and these receive a sufficiently thick layer of earth as a covering.

BLIND'-WORM, a small reptile called also *slow-worm*, and classed among the serpents, though quite harmless. It is covered with scales and has a forked tongue.

BLINK, from Sax. *blican*, to shine. The *blink of ice* is the dazzling whiteness about the horizon occasioned by the reflection of light from the fields of ice at sea.

BLINK'ERS, expansions of the sides of the bridles of horses, to prevent them from seeing on either side.

BLISTER-FLY, the *musca hispanica*, an insect found in Italy and France, and more or less throughout Europe, but particularly common in Spain, and therefore called the Spanish fly. It is about two-thirds of an inch in length, and one-fourth in breadth, of a somewhat oblong shape, and of a greenish gold shining colour, with soft elytra. It is much used in blistering. See *CANTHARIS*.

BLOCK, Fr. *bloc*, Germ. *block*. A piece of wood in which one or more sheaves or pulleys are placed for the purpose of forming tackles in various operations in naval tactics and architectural constructions. Blocks are single, double, treble, or four-fold, according as the number of sheaves is one, two, three, or four. The sheaves are grooved to receive the rope, and have in their centre a brass *bush* to receive the *pin* on which they revolve. The sides of the block are called cheeks. A *running block* is attached to the object to be moved, a *standing block* is fixed to some permanent support. See *PULLEY*.

BLOCK'ADE, the interception by one belligerent of communication with a place occupied by another, from Ital. *bloccare*, to inclose. A declaration of blockade or siege is an act of national sovereignty, which claims as a right the power of declaring war, and the right which nations at war have, of destroying or capturing each others subjects or goods, imposes on neutral nations the obligation not to interfere with the exercise of this right within the rules and limits prescribed by the law of nations.

BLOCK'HOUSE, in *fortification*, a house made of beams, joined together crossways, and often doubled, with a covering and

loopholes. It is usually large enough to contain from 50 to 100 men; is sunk several feet beneath the surface; is fitted up to receive cannon; sometimes contains two stories, and is commonly rendered bomb and fire-proof. Its use is to afford a feeble garrison an opportunity of holding out against the cannonade of the enemy till relieved. Blockhouses are also made as places of last resort in the interior or intrenchments and in the covered passages of fortresses.

BLOCK'ING, } in *masonry*, a
BLOCK'ING-COURSE, } course of stones placed on the top of a cornice crowning the walls.

BLOCK'INGS, in *joinery*, small pieces of wood fitted and glued to the interior angle of two boards or other pieces, with a view to strengthen the joint.

BLOCK-TIN, tin cast into blocks or ingots; it is generally less pure than *grain-tin*.

BLOM'ARY. See *BLOOM*.

BLOOD, Germ. *blut*, Fr. *sang*. The red fluid contained in the blood-vessels of animal bodies. It is found in the mammalia, in birds, in reptiles, and in fishes. In the last two classes of animals, the temperature of the blood is much lower than in the former, for which reason they are distinguished by the name of *cold-blooded*, while the others are termed *warm-blooded* animals. Insects and worms, instead of red blood, have a juice of a whitish colour, which is called *white-blood*. In the mammalia the blood circulates in the arteries and veins: it is bright red in the former and purple in the latter. It consists: 1st, of a colourless transparent solution of several substances in water; and 2nd, of red undissolved particles diffused through the solution. When fresh drawn from the vessels, it rapidly coagulates into a gelatinous mass called the *evaculum* or *clot*, from which, after some time, a pale yellow fluid oozes forth, called the *serum*. The coagulum may be divided into two parts—the *crutor*, or that part of the blood which is intrinsically red and coagulable, and the *lymph* or *fibrine* to which the coagulation of the blood is to be ascribed. The specific gravity of the blood varies from 1·053 to 1·057 at 60°.—In *law*, a kinsman of the *whole blood* is one who descends from the same couple of ancestors; of the *half-blood*, one who descends from either of them singly by a second marriage.

BLOOD'-HEAT, } a fluid raised to the tem-
BLOOD'-HOT, } perature of the blood
(98° Fah.), is blood-hot.

BLOOD-HOUND, the *canis sagax*, Lin., and *chien courant*, Buffon. A variety of the common dog, remarkable for the perfection of its sense of smell. Owing to this circumstance, the blood-hound was anciently much employed in pursuing cri-

minerals, and tracing robbers and enemies, whose course he invariably discovered if once placed upon their track. These dogs were in Scotland called *slouth-hounds*, and any person refusing one of them entrance, in his pursuit of stolen goods, was by law deemed accessory to the theft. This variety of the hound is perhaps now extinct.

BLOOD'-ROOT, } Names common to the
BLOOD'-WORT, } species of the genus *sanguinaria* (q. v.). These plants have also the names buccoon, turmeric, and red-root.

BLOOD'-STONE, the *lapis hematites*. A species of calcedony, of a reddish colour, hard, ponderous, with fine striae or needles. It is used for trinkets, and by goldsmiths and gilders to polish their work. The best much resembles cinnabar.

BLOOD'-VESSEL, any vessel or tube in which the blood flows or circulates in an animal body, as an artery or vein.

BLOOD'-WITE. In *ancient law*, a fine or amercement paid as a composition for the shedding of blood.

BLOODY HAND, a hand stained with the blood of a deer, which in the old forest laws of England was sufficient evidence of a man's trespassing in the forest against venison.

BLOOM, BLOOMERY. At *iron-works*, amass of iron, after having undergone the first hammering, is called a *bloom*, and the process of forming blooms is called *bloomery*, or *blomary*. The term is Sax. *bloma*, a mass or lump.—In *botany*, see *Blossom*. The word *bloom* is the Goth. *bloma*, Ger. *blume*, D. *bloem*. from the root of *blow*. The term *blossom* is a dialectical word from the same root through the Saxon.

BLOSSOM, from Sax. *blosma*. The flower or corolla of a plant; a general term applicable to every species of tree or plant, but more generally used than *flower* or *bloom* when we have reference to the fruit which is to follow. Thus, we use *flowers* in speaking of shrubs cultivated for ornament; and *bloom* in a more general sense, as flowers in general or in reference to the beauty of flowers. The term *blossom* is used to denote the colour of a horse when the hair is white, but intermixed with sorrel and bay hairs, otherwise *peach-coloured*.

BLOWING-MACHINE, an engine employed at *iron-works* and other places for supplying the large furnaces with a regular and rapid volume of air. C is a hollow cylinder, furnished with a piston E, with its rod P working through a stuffing-box at the top of the cylinder, as in a common steam-engine. A and B are pipes leading into the cylinder, and furnished with valves opening inwards. F and G are valves opening outwards into two pipes, which lead into the upright pipe H.

From this pipe, which is closed both at bottom and top, there proceeds a pipe, D O, giving off a branch at I into the

iron chest, K, which has no bottom, but rests upon a cistern of water, a part of the stone-work of the sides of which is shown at M and N. Above this branch there is a species of safety-valve, L, opening upwards, and loaded to a certain pressure. When the piston is raised, the valves A and F are shut, and the air contained in the cylinder is forced through the valve G; at the same time the valve B opens to admit more air into the cylinder. When the piston begins to descend, the condensation of the air within the cylinder causes the valve B to shut, and F and A to open: the first allows the air to pass into the pipe H, and the latter admits more air into the cylinder. The condensed air in H passes along the pipe D O, but the branch I allows it a passage into the iron chest K, where it presses upon the surface of the water, and causes it to rise on the outside of the chest. By this contrivance a perpetual pressure is obtained, equal to the height to which the water is raised, and thus the force with which the air passes through O into the furnace is equalised, notwithstanding those irregularities which unavoidably accompany the ascent and descent of the piston. From O two branches strike off to each side of the furnace.

BLOW-PIPES, are instruments used by anatomists and chemists, enamellers, &c. The anatomical blowpipe is a silver or brass tube, by means of which parts are inflated in order to develop their structure more distinctly. It is usually provided with a stopcock about its middle, by turning which, when the operator ceases to blow, the disagreeable effluvia from the parts in a state of putrefaction is avoided. The chemical blowpipe is usually made of brass; it is about one-eighth of an inch in diameter at one extremity, and tapers to a much smaller size at the other. The smaller end is bent to one side, and has a minute aperture, through which a stream of air is blown upon the flame of a candle, lamp, or gas-jet, producing thereby a fine conical flame, possessing a very intense heat.

The air is supplied from the lungs of the operator, or by bellows or bladders adapted to the purpose: but modifications of the blowpipe are made, whereby jets of oxygen, hydrogen, or the two gases mixed in the due proportions, are substituted for atmospheric air. When the two gases are used, the proper apparatus constitute what is called the *oxyhydrogen blowpipe*. The blowpipe is an invaluable instrument to jewellers, mineralogists, chemists, enamellers, glass-workers, &c., as it affords them instantaneously a heat equal to the strongest heat of a furnace.

BLUBBER. 1. The fat of whales and other sea-animals, of which train-oil is made. The blubber is the adeps of the animal; it lies immediately under the skin, and over the muscular flesh; it is about six inches thick, but about the upper lip it is from two to three feet in thickness.—2. The sea-nettle is also called the sea-blubber. See *MEDUSA*.

BLUE-BONNET. 1. A small bird common in Britain: so called from a blue spot on its head.—2. A species of *centaurea* (q. v.) is so called from the colour and shape of its flower.

BLUE-CAP, a species of the salmon tribe, so called from the blue spots on the head.

BLUE DYES are indigo, prussian blue, logwood, bilberry (*Vaccinium myrtillus*), elder-berries (*Sambucus nigra*), mulberries, privet-berries (*Ligustrum vulgare*), and some other berries, whose juices become blue by the addition of a small portion of alkali, or of the salts of copper.

BLUEING, the process of heating iron and some other metals until they assume a blue colour. The blue colour depends on a film of sub-oxide.

BLUE-JOHN, a name given by the miners to fluor-spar, called also Derbyshire-spar.

BLUE PIGMENTS. The blue pigments found in common are Prussian-blue, mountain-blue, Bremen-blue or verditer, iron-blue, cobalt-blue, smalt, charcoal-blue, ultramarine, indigo, litmus, and blue-cake.—The molybdates of mercury and tin, the hydrosulphuret and the prussiate of tungsten, the ammonuret of copper, and the silicate of copper, may be useful in particular cases.

BLUE-STOCKING, a pedantic female: one who has sacrificed the characteristic excellencies of her sex to learning. The term originated with Mr. Stillingfleet, who constantly wore blue stockings, and whose conversations on literary subjects were highly prized in certain female evening assemblies afterwards denominated *blue-stockng clubs*.

BLUE VITRIOL, sulphate of copper.

BLUFF, a high headland presenting a precipitous front. Hence a ship is said to be *bluff-headed* when her stern is upright

or nearly so; and *bluff-bowed*, when her bows and broad are flat.

BLUND'ERBUSS, *blunder* and *D. bus*, a gun. A short gun with a large bore, so as to contain a number of small balls, and intended to do execution without exact aim.

BLUNK, a name in Scotland for calico, or that species of cotton cloth manufactured for being printed; hence *blunker*, a calico-printer. The word is a trivial application of the word *blunk*, dull, this species of cloth being denominated by weavers "heavy work."

BOA. 1. The Latin name of a popular eruption.—2. An old name of the *lues venerea*.—3. A *boa-like* ruff worn by ladies. It takes its name from its great length.—4. The name of a genus of reptiles belonging to Cuvier's tribe of *serpentia* or true serpents. It is in this genus that are found the largest serpents on the globe. Certain species attain a length of 30 or 40 feet, prey on dogs, deer, and even oxen, which they manage to swallow entire, after having crushed them in their folds, and covered them with saliva. The species, of which the *boa constrictor* and the *anaconda* are the most celebrated, are natives of the hottest latitudes of South America. The great serpents of the old continent belong to the genus *python*, to which however, the name *boa* appears to belong as a matter of right, having been so named, according to Pliny, because they sucked the teats of cows (*Sows*, a cow). Certain large Italian serpents appear to have been first called *boa*, and subsequently the name came to signify any very large serpent, and was but recently restricted.

BOAR. In the *manège*, a horse is said to *boar* when he shoots out his nose, raising it as high as his ears, and tossing it in the wind.

BOARD, Sax. Germ. Sw. *bord*. 1. In nautical language, the line over which a ship runs between tack and tack.—To make a good board, is to sail in a straight line when close hauled.—To make short boards, is to tack frequently.—To board, is to enter a ship by force in combat.—2. A body of men constituting a quorum in session; a court; a council; e. g. a board of trustees; a board of officers; a board of commissioners.—3. In carpentry. See *DEAL*.

BOARDING-JOISTS, joists in naked flooring to which the boards are fixed.

BOARDING-PIKE, a pike used by sailors in boarding an enemy's vessel.

BOASTING, in *stone-cutting*, the paring of a stone with a broad chisel and mallet.

BOAT, Sax. Sw. *bat*, Germ. *bot*, Sp. *bote*. A vessel propelled by oars, or rowing. Boats differ in construction and name according to the services in which they are

employed; e. g. the *barge* is a long, light, narrow boat, employed in harbours but unfit for sea: it never has less than ten oars.—The *pinnace* resembles a barge, but is smaller, having only eight oars.—The *long-boat* is the largest boat belonging to a ship, generally furnished with a mast and sails, and may be armed and equipped for cruising short distances.—The *launch* is more flat-bottomed than the long-boat, which it has generally superseded.—The *cutters* of a ship are broader and deeper than the barge or pinnace, and are fitter for sailing: they have usually six oars.—*Faols* are smaller than cutters, but have the same number of oars.—The *jolly-boat* is more flat-bottomed than the long-boat, used for expedition, and rowed by six or eight oars.—A *scherry* is a light sharp boat used in rivers and harbours.—A *skiff* is a small boat like a yawl, used for passing rivers.—A *punt* is a small flat-bottomed boat, usually propelled by one person.—A *moses* is a flat-bottomed boat used in the West Indies for carrying hogsheads from the shore to ships in the roads.—A *felucca* is a strong passage-boat used in the Mediterranean with from ten to sixteen banks of oars.—A *scow* is a large flat-bottomed heavy boat. In some parts of America it is called a *gondola*, in imitation of the gondola used at Venice, in Italy, on the canals: it is about 30 ft. long, and 12 wide. There are also *canoes*, *perogues*, *galleys*, *ferry-boats*, *packet-boats*, *passage-boats*, *advice-boats*, *canal-boats*, *steam-boats*, *towing-boats*, &c., &c.

BOAT-BILL, the *caneroma cochlearia*, Lin. A bird of the grallæ order: size of a hen: whitish, grey, or brown back, red belly, white forehead followed by a black calotte; bill four inches in length, and not unlike a boat with the keel turned uppermost: inhabits the hot and marshy parts of South America. The boat-bill bears a close resemblance to the heron.

BOAT-FLY, } a genus of hemipterous

BOAT-INSECT, } insects known in entomology by the generic name *notonecta*. Their posterior legs are densely ciliated, and resemble oars. They swim or rather row with great swiftness, and frequently while on their back.

BOATSWAIN, pron. *bos-n*; *boat*, and Sax. *swēin*, a servant. An officer on board of ships who has charge of the boats, sails, rigging, colours, anchors, cables, and cordage. His office is also to summon the crew to their duty, to relieve the watch, assist in the necessary business of the ship, seizing and punishing offenders, &c. The *boatswain's mate* has charge of the long-boat, for setting forth and weighing anchors, warping, towing, and mooring.

BOB. 1. The ball of a pendulum: the

metallic weight which is attached to the lower extremity of a pendulum-rod.—2. A knot of worms on a string used in fishing for eels.

BOB'STATS, ropes to confine the bowsprit of a ship downward to the stem.

BOCAR'DO, an arbitrary name in logic for the fifth mode of the third figure of syllogism. The middle proposition is universal and affirmative, and the other two particular and negative.

Boc'CONIA, the *tree celandine*. A genus of arborescent plants of two species—*Dodecandria*—*Monogynia*. Natives of the West Indies and Peru.

BOCKLANDS, that is *booklands*. In ancient times lands held by charter or deed in writing, under certain rents and free services. This species of tenure has given rise to the modern freehold.

BOD'Y, from Sax. *bodig*, that which is set or fixed. 1. In *physics*, the term *body* is often read in the same sense as *matter*, that is, to designate a substance which has length, breadth, and thickness; is divisible, impenetrable, and moveable. Bodies are called *ponderable* when they may act upon several of the senses, and when their materiality is thereby sufficiently established: of this kind are solids, fluids, and gases. They are called *imponderable* when they give rise to phenomena which may be regarded merely as particular states or affections of ordinary matter, without being otherwise cognisable by the senses: of this sort are caloric, light, electricity, and magnetism. Besides the common properties of matter, extension, divisibility, impenetrability, and mobility ponderable bodies possess secondary properties which are variable, as hardness, porosity, elasticity, density, &c., by which their condition or state is infinitely modified. Bodies are also *simple* and *compound*, simple when they consist of one element, and compound when they are composed of two or more elements. Animal bodies are composed of eight or ten elements, and have nitrogen for their base; vegetables consist of only four or five elements, and have carbon for their base.—2. In *geometry*, the word *body* is used in the same sense as *solid*, that is, which has the three dimensions, length, breadth, and thickness. A *regular* or *platonian body* is one which has all its sides, angles, and planes, similar and equal. There are only five bodies such, viz.: (1.) Tetrahedron contained under 4 equilateral triangles; (2.) Hexahedron, 6 squares; (3.) Octahedron, 8 triangles; (4.) Dodecahedron, 12 pentagons; (5.) Icosahedron, 20 triangles. Bodies are said to be *irregular* when they are not bounded by equal and like surfaces.—3. Among *painters*, the phrase "to bear a body," is applied to any colour when

capable of being ground so fine, and to mix with the oil so entirely as to seem one thick oil of the same colour.—The word *body* is frequently used to denote the main or principal part; e. g. the *body* of a pump, which is the thickest part of the barrel or pipe; the *body* of a coach, &c. It is also used to designate a number of individuals or particulars united; e. g. the *legislative body*. We also speak of *bodies* corporate, *bodies* politic, &c.

BODY PLAN, in the language of naval draftsmen, an end view, showing the contour of the sides of the ship at certain points of her length; and since the sides are exactly alike, the left half is made to represent the vertical sections of the after-part of the body, and the right half those of the forepart. The base of the projection is the midship section, called the *dead-flat*, and within this the other sections are delineated.

Boo, an Irish word signifying *soft*, and applied to a quagmire covered with herbage. It is defined by *marsh* and *morass*; but differs from a marsh, as a part from a whole. *Bogs* are too soft to bear a man's weight: *marshes* are less soft, but very wet; *swamps* are spongy grounds which are often mowed.

Boo'-BERRY, the cranberry or marsh whortleberry (*vacinium oxycoccus*) which is common in peat-bogs.

Boo'-IRON-ORE, } an iron ore peculiar to
Boo'-ORE, } boggy land. "At the bottom of peat mosses there is sometimes found a cake or pan of oxide of iron," to which this name is given. It is probably derived from the decayed vegetables, of which most of the moss is composed.

Boo'-RUSH. 1. A name common to all the plants of the genus *Schenus*, most of which inhabit spongy grounds. Donn enumerates three British species.—2. A bird, a species of warbler of the size of a wren, common among the bog-rushes of Schonen in Sweden.

BOG-SPAY'IN. In *farriery*, an encysted tumour on the inside of the hough, containing a gelatinous matter.

Boo'-WHORT, the bilberry or whortleberry, common in boggy grounds.

BOH'-A, a species of black tea (see *TEA*), named, according to Grosier, from a mountain in China, called *You-y* or *Foo-y*.

BOIL, an inflammatory, circumscribed, and very painful swelling immediately under the skin, which always suppurates, and sooner or later discharges its contents. The word is perhaps from the

Goth. *buila*, rage, madness, as its Latin synonym, *furunculus*, is from the verb *furo*, to rage.

Boil'er, a large pan or vessel of iron, copper, or brass, used in distilleries, pot-ash works, and the like, for boiling large quantities of liquor at once. The same name is given to the vessel in which steam is generated for the supply of a steam-engine. This boiler is usually formed of plates of copper or malleable iron rivetted together, so as to be perfectly air-tight, and in shape oblong, its sides and bottom arched inwards, but its top curved outwards. The figure is a longitudinal section: *aa* is the boiler, *bb* the flues, *c*, the chimney, *d*, the ash-pit, *e*, an opening to receive any ashes which

may be carried over the furnace bars, *f*, the fire-place, *g*, the man-hole, in the cover of which there is a valve which opens inwards, *h*, steam-pipe leading to the engine, *i, j, k*, the safety-valve, with its lever and weight, *l*, a stone-float balance by the weight *m*, both being attached to the lever *n, o, p*, the fulcrum of which is at *o*. To the centre of this lever is also attached the small rod which works the small valve fixed in the bottom of the top part of the feed-pipe, *g, r, s*. The force of the steam in the boiler causes the water to rise in the pipe and act upon the float opposite *t*, connected by a chain passing over the pulleys, *u, v*, to the damper *w*, which is capable of moving up and down in guides, and of closing and opening the passage, where the flue enters the chimney, *x, y*, are the gauge-cocks for ascertaining the height of the water in the boiler.

Boil'ing Point, the temperature at which a fluid begins to boil and assume the gaseous state in contradistinction to *freezing-point*. Both points are different in different fluids, but constant in each

provided the pressure of the atmosphere be the same. The boiling point of water is 212° , of mercury, 656° .

BOIT'ARO, a Brazilian serpent of the most venomous kind, about eight feet long, covered with scales of a yellowish colour.

BOLÉ, from Lat. *bolus*, a mass. An argillaceous mineral, having a conchoidal fracture, a glimmering internal lustre, and a shining streak. Its colours vary from white through all the shades of yellow and brown to black. The *terre sigillata* (sealed earths) were little cakes of bole stamped with certain impressions, and formerly in high repute as medicine. The *Armenian bole* of the shops is a red variety, the colour is due to an impregnation of peroxide of iron. It is used as a tooth powder. *Bole of Blois* is yellow; *Bohemian bole* is orange; *French bole* is pale red, variegated by white and yellow specks; *Lemnian bole* is pale red; *Silesian bole* is pale yellow.

BOLERO, a peculiar dance very popular in Spain, and so called after its inventor.

BOLÉ'IC, pertaining to the *boletus*. The *boletic acid* is obtained from the juice of the *boletus pseudo-ignarius*, a species of fungi.

BOLÉ'TUS, *βωλιτης*. 1. A fungus referred to the genus *Lycoperdon*.—2. A genus of mushrooms of the order *Fungi*. Many of the species are poisonous, two of them afford *amadou* (q. v.), and the *boletus sulphureus*, on drying, evolves crystals of pure oxalic acid.

BOLIS, Lat. from *βολις*, a dart, a fire-ball: a meteor seen darting through the air, followed by a train of light or sparks.

BOLL. 1. The pod or capsule of a plant, a pericarp.—2. A measure of six bushels.

BOL'LARDS, large pots set in the ground at each side of docks; to them are lashed large blocks through which are reeved the transporting hawsers for docking and undocking ships.

BOL'LARD TIMBERS, in a *ship*, are two timbers rising just within the stem, one on each side of the bowsprit, to secure its end. They are also called *knight-heads*.

BOLOGNESE SCHOOL. In *painting*, sometimes called the *Lombard school*, and the eclectic school. It was founded by the Caracci, and its object was to unite the excellencies of the preceding schools.

BOLOG'NIAN STONE, } a pyropho-
BOLOG'NIAN PHOSPHORUS, } rus obtained from sulphate of baryta by calcination and exposure to the sun's rays. This substance shines in the dark, a circumstance which was accidentally discovered by one Vincenzo Casciarolo, a shoemaker of Bologna, about the middle of the seventeenth century.

BOL'STERS. 1. In *nautical language*,

small bags filled with tarred canvas, rope-yarn, &c., to place under the shrouds and stays to prevent their chafing against the trestle-tree, by the motion of the mast, when the ship rocks.—2. In *saddlery*, the parts of a saddle raised upon the bows to hold the rider's thighs.

BOLT, a strong cylindrical pin of iron or other metal, used to fasten a door, plank, &c. Those used for fastening doors and windows, are plate-bolts, spring-bolts, and flush-bolts. In *ships*, bolts are used in the sides and decks, and have different names, as rag-bolts, eye-bolts, ring-bolts, chain-bolts, &c. In *gunnery*, there are prize-bolts, transom-bolts, traverse-bolts, and bracket-bolts. A *thunder-bolt* is a stream of lightning. A *bolt of canvas* is 28 yards.

BOLT-AUGER, an auger of a large size used in ship-building.

BOLT'EL. See *BOULTINE*.

BOLT-HEAD, a long, narrow-necked, chemical glass vessel, usually employed for digestions. It is otherwise called a *matrass*.

BOLTING-CLOTH, a linen or hair cloth of which bolters are made for sifting flour.

BOLT-ROPE, the rope to which the edges of sails are sewed to strengthen them. That part of it on the perpendicular side is called the *luck-rope*; that at the bottom, the *foot-rope*; that at the top, *head-rope*.

BOM, an American serpent of a harmless nature, and remarkable for uttering a sound like *bom*.

BOMB, from *bombus*, a great noise. A large hollow iron-ball or shell with a hole in which a wooden fusee is cemented, and furnished with two handles. It is filled with powder and combustible matter, and the fusee being inserted, it is discharged from a mortar, in such a direction as to fall into a fort, city, or enemy's camp, when it bursts with great violence, and often with terrible effect. *Bombs* are used in sieges; *grenades* in the field; the first are thrown from mortars, the latter from howitzers.

BOM'BARD, a piece of short thick ordnance with a large bore formerly used; called also a *basilisk*, and by the Dutch a *donderbuss* or thunder-gun. Some bombards carried balls of 300 lbs. The name is found in the French, Spanish, and Italian languages, and is composed of *bomb* and *ard*, kind, but such guns are no longer used.

BOMBARDIERS. 1. Those who manage the mortars, which throw bombs.—2. A genus (*Carabus*) of the beetle tribe of insects.

BOMBAR'DO, a musical instrument of the wind kind; it resembles the bassoon, and is used as a base to the hautboy.

BOM'BAST, a stuff of a loose texture for

merly used to swell garments. The word is now used to designate a *fustian* style of writing.

BOM'BAX, the *silk cotton-tree*, a genus of arborescent plants of several species, natives of hot climates. *Monadelphica-Polyandria*. Named from *Βομβάξ*.

BOMBAZI'NE, a worsted stuff sometimes mixed with silk, and sometimes crossed with cotton.

BOMB'-CHEST, a chest filled with combustible matter, placed under ground to do mischief by its disposition.

BOM'IC ACID, acid of the silk-worm, *bombyx*, contained in a reservoir near the anus.

BOMB'-KETCH, } a strong vessel built for
BOMB'-VESSEL, } the purposes of bombardment. The modern bomb-vessels carry two 10-inch mortars, four sixty-eight pounders, and eighteen pound caronades, and are generally from 60 to 70 feet from stem to stern.

BOM'BUS, Lat. from *Βομβος*, a humming noise, the name of a genus of aculeated hymenoptera, the species of which are recognised in this country as *humble-bees* or *humming-bees*. This name, however, is common also to the *xylocopa*, which include the larger species. Both genera belong to the great genus *Apis*.

BOM'BYCUL'A, a genus of omnivorous passerine birds.

BOM'BYCITES, a tribe of nocturnal lepidoptera. The caterpillars live in the open air, feed on the tender parts of plants, and in general form a cocoon of pure silk. The genus *Bombyx* gives name to this tribe.

BOMBYL'ERS, Latr. } A genus of dipte-
BOMBYL'US, Linn. } rous insects placed by Cuvier among the *tanytoma*, and by Wilson among the *proboscides*, named from *Βομβος*, in allusion to the sharp humming sound which they make in flying. Fifty European species are described.

BOM'BYX, a genus of nocturnal lepidoptera, the caterpillar of which is the *silk-worm*. The true silk-worm moth, *B. mori*, Linn., is whitish, has a few transverse streaks, and a lunar spot on the superior wings. It feeds on the leaves of the mulberry, and spins an oval cocoon of a close tissue, with very fine silk, usually yellow, but sometimes white. The variety which produces the latter are now preferred. The name *Βομβύξ* is derived from *Βομβος*, a humming sound.

BON, the Egyptian name of the coffee-tree.

BONA-FI'DE, that is, *good faith*, meaning without fraud or subterfuge. Lat.

BONAS'US, } a species of the bovine ge-
BONA'SUS, } nus of quadrupeds common to Asia and Africa.

BOND. Sax. bond from the same

root as *band*. In *law*, an obligation or deed by which a person binds himself, his heirs, executors, and administrators, to pay a certain sum on or before a future day appointed. This is a *single bond*, but usually a condition is added, that if the obligor shall do a certain act, or pay a certain sum of money, on or before a future time specified, the obligation shall be void, otherwise it shall remain in full force. If the condition is not performed, the bond is forfeited, and the obligor and his heirs are liable to the payment of the whole sum. In *carpentry*, the binding of any two pieces together by tenanting, morticing, &c. In *masonry*, the disposition of stones or bricks in building, so that they most aptly fit together. Stones which have their length placed in the thickness of the wall are called *headers*, and those which have their length extended along in the length of the wall are called *stretchers*. English bond is that disposition of bricks in a wall where the courses are alternately composed of headers and stretchers. Flemish bond is that in which the bricks in each course have headers and stretchers alternately.

BOND'-STONES, stones used in uncoursed rubble-walls, having their length placed in the thickness of the wall. When the length of a stone is equal to the whole thickness of the wall, it is called a *perpend*.

BOND-TIMBERS, the horizontal timbers bedded in stone or brick walls to strengthen the masonry.

BONDS. In *building*, includes all timbers disposed in the walls of a building, as bond-timbers, wall-plates, lentels, and emplets.

BONDED GOODS, those for the duties on which bonds are given at the Custom-house.

BON'DUC. 1. The *nickar-tree*, a name common to both species of the genus *Guilandina*, but especially to the yellow-seeded species common to both Indies. —2. The *gymnocladus canadensis*, a Canadian tree recently separated from the genus *Guilandina*.

BONE, Lat. *os*, the substance of which the frame-work of animals is composed from Sax. *binnan*, to bind. Bone is composed of 33·3 cartilage; 55·35 phosphate of lime; 3 fluete of lime; 3·85 carbonate of lime; 2·05 phosphate of magnesia, and 2·45 soda, with a little common salt.

BONE'-ACE, a game at cards in which he who has the highest card turned up to him wins the *bone*, that is, one half the stake.

BONE-BLACK, the black carbonaceous matter into which bones are converted by calcination in close vessels. It is also

animal charcoal, and is used as a black pigment, and to deprive various solutions, particularly syrups, of their colouring matters.

BONE-LACE, a lace made of linen thread, so named from its being made with bobbins of bone, or more probably in allusion to its stiffness.

BONE-SPAVIN, a bony excrescence or hard swelling on the inside of the hock of a horse's leg, usually cured by caustic blisters. See **SPAVIN**.

BON'GRACE. 1. A large bonnet formerly worn by females to protect them from the sun.—2. A fence of old ropes, canvas, &c., laid at the bows, stern, and sides of a vessel sailing in high latitudes, to protect the mariners against flakes of ice, winds, &c.

BON'ING, the act of judging of or making a plane surface by the direction of the eye. This term is of frequent use among surveyors and architects, who perform the operation of boning by means of poles set up at certain distances; these are adjusted to the required line by looking along their vertical surfaces. Joiners, &c., bone their work with two straight edges.

BON'TO, a fish of the tunny tribe found on the American coast, and in tropical climates. It grows to three feet, has a greenish back and a silvery white belly.

BON'NET, Fr. *bonnette*, Sp. *bonete*. 1. In fortification, an elevation of the parapet in the salient angles of a field retrenchment, or of a fortification designed to prevent the enfilading of the front of the work, at the end of which it is situated. The *bonnet à pêtre*, or priest's bonnet, is an outwork having at the head three salient angles, and two inwards.—2. In nautical language, an addition to a sail, or an additional part laced to the foot of a sail, in small vessels and in moderate winds.

BON'NIAN-STONE. See **BOLOGNIAN-STONE**.

BONO'NIAN-JARS, } small thick jars of
BONO'NIAN-BOTTLES, } unannealed glass, which break into a thousand pieces by the impulse of a single grain of sand.

BON'TIA, the generic name of the wild olive of Barbadoes. *Didynamia—Angiospermia*. The tree is named in honour of James Bontius of Leyden, a distinguished physician and naturalist.

BO'NUS, a Latin word meaning *good*, used to denote a premium given for a loan, right, or privilege, above its prime or original cost.

BON'ZES, a name given in oriental countries to the priests and devotees of the god Fo. They are distinguished by different names in the different countries where their superstition prevails. In Siam they are called *Talapouts*: in Tar-

tary, *Lamas*; in China, *Ho-chang*; in Japan, *Bonzes*, in which name all the others are comprehended among Europeans.

BOO'BY, a bird of the Pelican tribe. The boobies constitute the sub-genus *Sula* of Brisson, and take their name from the excessive stupidity with which they allow themselves to be attacked by other birds, particularly the frigate birds, which force them to yield up the fish they have captured. The common booby (*Pelecanus basanus*, Linn.), is found from the Tagus to the Gulf of Bothnia, and in great numbers on the Bass Rock in the Frith of Forth. It is white, but the primary feathers of the wings and the feet are black; the bill is six inches long, and of a beautiful bluish grey.

Book, the general name given to a printed volume in contradistinction to pamphlet. Among printers five sheets and upwards make a book; less than five sheets is a pamphlet. A quantity of unprinted paper, bound up or sewed in the manner of a printed volume, is oddly enough called a *paper-book*, sometimes more correctly a *blank book*.

Books are divided into the following classes according to the mode in which the sheets of the paper on which they are printed or written are folded; viz., *folio*, when the sheet is folded into two leaves; *quarto*, when folded into four; *octavo*, when folded into eight; *duodecimo*, when folded into twelve; *18mo*, when folded into eighteen; and *24mo*, when folded into twenty-four. These classifications have no reference to the size of the sheet. The word *book* is derived from the Saxon *boc*, the root of which is the Gothic *boka*, a beech or service-tree, or more strictly the bark of such tree. This was the first material of which books were made.

BOOK-KEEPING, a mercantile term used to denote the method of keeping commercial accounts of all kinds, in such a systematic manner, that the true state of any individual account, or of the whole affairs of the concern, may be ascertained with clearness and expedition. Book-keeping is practised by *single* and *double* entry. In the first the posts of debtor and creditor are separate, and entered in such a way that each one appears singly; while in the latter, creditor and debtor are in continual mutual connexion, to which end all the posts are entered doubly, once on the debtor and once on the creditor side. This mode was first practised in Spain, but was introduced into this country from Italy; hence it is with us called the *Italian method*.

The books principally wanted are a *waste-book* or *blotter*, in which all dealings are recorded without particular

order; a *journal*, in which the contents of the waste-book are technically entered on the debtor and creditor sides; and the *ledger*, in which the posts entered in the journal are placed under particular accounts. Besides these, some merchants use a chase-book, a bill-book, a receipt-book, a sales-book, an invoice-book, a letter-book, a stock-book, besides books of charges, household expenses, &c. These are called *subsidiary books*.

BOOM, from Sax. *boeme*, a beam, a bar. In *nautical language*: 1. A long pole or spar run out from various parts of a ship or other vessel, for the purpose of extending the bottom of particular sails, as the *jib-boom*, *studding-sail boom*, *main-boom*, *square-sail boom*, &c.—2. A strong iron chain fastened to spars and extended across a river or the mouth of a harbour to prevent an enemy's ships from passing.—3. A pole set up as a mark to direct seamen to keep the channel in shallow water.—4. To *boom*, to rush with violence, as a ship under a press of sail. In this sense the word is, Dut. *bom*, the sound given by an empty barrel when struck; hence *bomme*, a drum, and *bommen*, to drum.

BOOM'KIN, dim. of *boom*, a short spar projecting from the bow of a ship to extend one edge of the foresail to the windward.

BOORS, the pike-headed whale, so named from its sharp-pointed nose. It has a double pipe in its snout, and a bony ridge on its back.

BOOR, a peasant (*D. boer*, a rustic), particularly applied to the peasantry of Russia. These are divided into two classes, *free boors* and *vassal boors*. The former cannot be sold; the latter are mere slaves entirely at the disposal of their lords. The *croten-boors*, the *mine-boors*, and the *private-boors*, are all of this latter description.

BOOT, a covering for the leg, made of leather, and united to a shoe. In *old law*, the *boot* was a kind of rack for the leg, used for the purposes of torture. It was made of boards bound fast to the legs by cords. Another kind was a small boot made of strong leather, which being made thoroughly wet and soft was drawn upon the leg, and then dried by the fire so as to contract and squeeze the leg. The *boot of a coach* is the space underneath, between the coachman and the body of the coach, in which the luggage is stowed. The apron of a gig is also sometimes called, very improperly, the *boot*.

BOOTES, a northern constellation, called by the Greeks *Arctophylax*, and by the English *Charles's Wain*. Arcturus was placed by the ancients on his breast, and

by the moderns on the skirt of his coat. Fable relates that Ceres, as the reward of Philomelus for his invention of the art of ploughing, transferred him and his oxen to the heavens, under the name of *Boötes* (*Boarins*, a husbandman). In the Berlin tables this constellation contains 64 stars.

BOOT-TOPPING, the operation of cleaning a ship's bottom near the surface of the water, by scraping off the grass, shells, slime, &c., and daubing it over with a mixture of tallow, rosin, and sulphur.

BORACIC, pertaining to borax. *Boracic acid* is obtained from borax by dissolving the salt in hot water, filtering the solution, adding sulphuric acid till the liquid has become sensibly sour; then setting aside to cool, the boracic acid will be deposited in small white shining scaly crystals. It is composed of boron and oxygen, in the proportion of eight parts of the former to sixteen of the latter. Its salts are called *borates*.

BORACITE, a native borate of magnesia found embedded in gypsum in Hanover and Holstein. Its colours are white and greyish; it is generally of a cubic form, and possesses, when heated, strong electrical properties.

BOR'AGE, a name common to all the plants of the genus *Borago*, but especially applied to the *B. officinalis*, an indigenous annual, much used as an ingredient in the summer beverage called *cool tankard*. It contains much nitrate of potash.

BORAGIN'EE, a tribe of dicotyledonous plants, of which the genus *Borago* is the type.

BOR'ATE, a salt formed by the combination of the boracic acid with a salifiable base.

BOR'AX, a biborate of soda which, in an impure state, is called *tinca*. This salt is found crystallised in certain lakes in Thibet; in solution in many springs in Persia; and may be procured of superior quality from China. It is purified by calcination, solution, and crystallisation. Its composition, according to Bergman, is boracic acid, 34; soda, 17; water, 49. It is highly important in the arts as a flux. The word *borax* is latinised from the Persian word *bourakon*, from *borāka*, to shine, glisten.

BOR'ONITES, a sect of Gnostics of the second century. They denied the last judgment, and take their name from *Boēlogos*, in allusion to their daubing themselves with filth.

BORBORO'MUS, the name given by medical practitioners to the rumbling noise occasioned by flatus in the intestines, from *Boē*, *ρυγμος*, intestinal noise.

BOR'DER. The term is from the same

root as *board*. In *heraldry*, it is an honourable ordinary, according to French heralds, which should occupy a third part of the shield. It surrounds the field, is of equal breadth on every part, and in English blazonry, it occupies one-fifth of the field.

BORD'LAND, in *old law*, the domain land which the lord kept in his own hand for the maintenance of his *bord* (board) or table; sometimes called *bordage*.

BORD'-LODE, that is, *board-load*, the service required of a tenant to carry timber from the woods to his lord's house; also the quantity of provisions paid by a *bord-man* for *bordland*.

BORD'-MAN, the tenant of *bordland*, who supplied his lord with provisions.

BORD'-SERVICE, the tenure by which *bordland* was held, which was the payment of a certain quantity of provisions to the lord. In lieu of this the tenant now pays sixpence an acre.

BOR'DURE. In *heraldry*, a tract or compass of metal, colour or fur, within the escutcheon, and around it.

BORE, from Sax. *boþian*, to perforate, expresses the sudden rise of the tide in certain estuaries. To *bore*: in the *manège*, a horse is said to *bore* when he carries his nose to the ground.

BORÉE', the French name of a dance, in common time of four crotchets in a bar, always beginning in the last quaver or last crotchet of the measure.

BOR'ING, a species of circular cutting in which a cylindrical portion of the substance is removed. Among *miners*, boring is performed for the purpose of ascertaining the nature of the subjacent strata without digging. The instruments used are scooping irons, which, being withdrawn from time to time, bring up samples of the strata through which they have passed.

BO'RON, the basis of boracic acid. It may be obtained by heating in a copper tube two parts of potassium and one of boracic acid, previously fused and powdered. It is classed among the metals by chemists.

BOR'OUGH, from Sax. *boþhœ*, surety. In Saxon times this word denoted a *man-pledge* (hand-pledge) or association of men, who were sureties or free pledges to the king for the good behaviour of each other, and if any offence was committed in their district, they were bound to have the offenders forthcoming. The associating of ten men was called a *tything* or *decenary*; the head man was called the *tything-man*, or *head-borough*, and in some places *boreholder* and *borough's calder*, and the society *friburg*, that is, free-burgh or frank-pledge. Ten tythings formed an *hundred*, a denomination still retained to

the districts comprehended in the association. It is probable that the application of the word *borough* to towns sprung from these associations, when their primary objects were somewhat merged in the rights and privileges of the *burghs*, which denoted originally fortified towns. This name, however, was early restricted to those towns which sent burgesses to parliament. In this sense the term is Sax.

BOUR'G, a fortified place. Some boroughs are incorporated, but others are not. In *Scotland*, the term is applied to a body corporate, erected by charter of the Sovereign, having a certain jurisdiction. Boroughs, when erected to be held of the Sovereign, are called *royal boroughs*; when erected to be held of the Sovereign simply as superior of the land, they are called *boroughs of regality*; when erected to be held of the lord baron, they are called *boroughs of barony*.

BOR'OUGH-COURTS, certain courts of private and special jurisdiction, held in different cities, boroughs, and corporations, throughout the kingdom, by prescription, charter, or act of parliament. Of this character are the Sheriff's court and court of Hustings in London.

BOR'OUGH-ENGLISH, a customary descent of lands and tenements to the youngest son instead of the eldest; or, there being no sons, to the youngest brother.

BOR'RELISTS, a sect of Christians in Holland, so called from *Borrel*, their founder. They reject the use of the Sacraments and all external worship, but lead an austere life.

Bos, the ox: a well-known genus of ruminant animals of the tribe of Bovidae. The name is Lat. from *bovis*, an ox. The chief species are the common ox, the aurochs, bison, buffalo, yack, and musk ox.

Bo'sa, an inebriating preparation used by the Egyptians, made of the meal of darnel, hempseed, and water.

BO'SCAGE, a French term, now written *bocage*, a grove. 1. Underwood and sometimes lands covered with underwood.—2. In *painting*, a landscape representing thickets and woodlands.—3. In *old law*, food for cattle which is yielded by bushes and trees.

BO'SKET, Eng. } Ital. *boschetto*, a grove,
BO'SQUET, Fr. } from *bosco*. In *garden- ing*, a compartment formed by branches of trees, disposed according to fancy.

BOSSAGE, from *boss*. In *architecture*:—1. A projecting stone laid rough in building, to be afterwards carved into mouldings, capitals, arms, &c.—2. Rustic work used chiefly in the corners of buildings, and thence called *rustic quoins*.

BOSWEL'IA, a genus of plants. *Decandria—Monogynia*. The *B. serrata* is supposed to yield the oilbannum of commerce

BOTANOGRAPHY, *βοτανή*, a plant, and *γραφία*, description. Description of plants, their habits and geographical distribution.

BOT'ANY, from *βοτανή*, a plant. That branch of natural history which relates to the vegetable kingdom. It has been divided into the following heads:—1. *Organography*, or the organization of plants; 2. *Physiology*, or the department which treats of the vital actions of plants; 3. *Taxonomy*, or the principles of classification; 4. *Terminology*, or the terms employed in the science; 5. *Phytography*, or the rules to be observed in describing and naming plants; and, 6, the *Practice of Botany*, or, the application of the preceding subjects to the art of discriminating species.

The only two botanical arrangements now in use are the Linnæan and the Natural. The former is a classification of plants according to their agreement in some single characters; the latter is a scheme for placing next to each other all those plants which have the greatest resemblance. For a more full explanation of these two kinds of classification, the reader is referred to the various works that have been published on the subject, as space can only be afforded here for a very general account of these. As the Linnæan system is rapidly falling into disuse, and has been already so often explained, a very brief description of the combination of the stamens and styles may suffice in this place. Class I. (stamens, 1), Monandria; II. (stamens, 2), Diandria; III. (stamens, 3), Triandria; IV. (stamens, 4), Tetrandria; V. (stamens, 5), Pentandria; VI. (stamens, 6), Hexandria; VII. (stamens, 7), Heptandria; VIII. (stamens, 8), Octandria; IX. (stamens, 9), Enneandria; X. (stamens, 10), Decandria; XI. (stamens, 12—19), Dodecandria; XII. (stamens, 20 or more, inserted into the calyx), Icosandria; XIII. (stamens, 20 or more, inserted into the receptacle), Polyandria; XIV. (stamens, 2 long and 2 short), Didynamia; XV. (stamens, 4 long and 2 short), Tetradynamia; XVI. (stamens united by their filaments into a tube), Monadelphia; XVII. (stamens united by their filaments into two parcels), Diadelphia; XVIII. (stamens united by their filaments into several parcels), Polyadelphia; XIX. (stamens united by their anthers into a tube), Syngenesia; XX. (stamens united with the pistil), Gynandria; XXI. (stamens and pistils in separate flowers, but both growing on the same plant), Monœcia; XXII. (stamens and pistils not only in separate flowers, but those flowers situated upon two different plants), Diœcia; XXIII. (stamens and pistils separate in

some flowers, united in others, either on the same plant, or two or three different ones), Polygamia; XXIV. (stamens and pistils, either not ascertained, or not to be discovered, with any certainty, inasmuch that the plants cannot be referred to any of the foregoing classes), Cryptogamia. The number of styles, or stigmas if there be no styles, characterises the orders of the first thirteen classes, which are thus named:—Monogynia, style 1; Digynia, 2; Trigynia, 3; Tetragynia, 4; Pentagynia, 5; Hexagynia, 6; Heptagynia, 7; Octogynia, 8; Enneagynia, 9; Decagynia, 10; Dodecagynia, 12; Polygynia, more than 12. In the 14th class, Didynamia, the orders depend upon the ovary; in the 16th class, Tetradynamia, the orders are characterised by the form of the fruit. The orders of the 16th, 17th, and 18th classes, Monadelphia, Diadelphia, and Polyadelphia, depend upon the number of stamens, and have the same nomenclature as the first thirteen classes. Syngenesiæ are determined by the arrangement of their flowers, and by the sex of their florets. Polygamia has flowers crowded together in heads. Monogamia has the flowers separate, not crowded in heads; and the last class, Cryptogamia, is divided into orders according to the principles of the Natural System, viz. Filices, Musci, Hepaticæ, Algæ, Fungi.

The Natural System of botany is based upon that formed by Jussieu out of the views of Ray, Tournefort, and others, in combination with numerous observations of his own, and may be thus classified:—*Divisions formed by the Organs of Fructification or of Nutrition*.—I. PHANEROGAMOUS OR VASCULAR. Class 1. Dicotyledons or EXOGENS; 2. Monocotyledons or Endogens. II. CRYPTOGAMOUS OR CELLULAR. 3. Ætheogamous or Semivascular; 4. Amphigamous or Cellular. Or thus:—I. SEXUAL, being furnished with sexual organs, or having vessels and stomates at some period of their existence. Class 1. Dicotyledons or EXOGENS; 2. Monocotyledons or Endogens; 3. Ætheogamous or Semivascular. II. Without distinct sexes, or without either vessels or stomates at any age. 4. Amphigamous or Cellular.

A more recent author has, however, proposed a material modification, which may be expressed as follows:—*PLANTS*.—According to their *Fructification*. I. Having flowers and sexes (Phanerogamous), or According to their *Vegetation*. 1. Their axis increasing symmetrically in density and breadth, as well as length (Pleurogens). (a) Minimum of Cotyledons, 2, or (a) Stem in concentric layers (Exogens). Class 1. Dicotyledons, or veins of leaves netted; Class 2. Gymnosperms, or veins of leaves netted or forked. (b) Minimum of Cotyledons, 1, or (b) Stem, a confused

mass of wood and cellular tissue. Class 3. *Monocotyledons*, or *veins of leaves parallel, and not netted*. (c) *Acotyledons*, or (c) *Vegetation fungoid*. Class 4. *Rhizantha*.—II. *Having neither flowers nor sexes*, or II. Their axis increasing by simple elongation, or irregular expansion. Class 5. *Cryptogamic plants*, or Class 5. *Acrogens*.

BOTAR'GO, a sausage made of the roe of the mullet, on the shores of the Mediterranean and Black Sea. It is called *bonargues* in Provence.

BOTE, a Saxon word meaning reparation, compensation, allowance, and the like, and retained in law in composition. Thus, *manbote*, compensation for killing a man; *fire-bote*, allowance of wood for fuel.

BOTEL'TO, a small Mexican fish, the liver of which is a deadly poison. It is about eight inches long, has a flat belly and a convex back.

BOTHA'GIUM, duty paid to the lord of the manor for pitching booths. Latin from Celtic (*bothag*, a cot, a booth, *botha*).

BOTHRIOCEPHAL'US, the tape-worm (see *TÆNIA*), thus named from *βόθρος*, a little pit, and *κεφαλή* a head; there being certain depressions about the head.

BOTRYCHIUM, the *moon-wort*, a genus of hardy perennials. *Cryptogamea*—*Filices*. Named from *βοτρυς*, a bunch of grapes, in allusion to the appearance of the branched clusters of capsules. There is only one British species, the *B. lunaria*, Sw., or *Osmunda lunaria*, Lin. & E. Bot., found in dry mountain pastures.

BOTRYLLARIANS, } In *geology*, a family
BOTRYLLAR'IE. } of compound unicar-
naries, in which several individuals are
arranged in a ring round a central aper-
ture common to the rectum of each, the
mouths being at the circumference.

BOTRYOID, } from *βοτρυς*, a bunch of
BOTRYOIDAL, } grapes, and *ειδός*, form;
having the form of a bunch of grapes;
clustered; applied to minerals, &c.

BOTRYOLITE, grape-stone, a variety of prismatic datolite occurring in mamillary concretions, from *βοτρυς*, a bunch of grapes, and *λίθος*, a stone. It occurs plentifully in Norway.

BOTS, a species of worms found chiefly in the intestines of horses. They are the larvæ of a species of breeze or gad-fly (the *Gastrophilus*, Meig.), which deposits its eggs on the tips of the hairs, generally of the fore-leg and mane, whence they are taken into the mouth and swallowed. The same name is also given to the larvæ of other species of the *Gastrophilus* (Lin.), found under the hides of most animals of the bovine genus, and sometimes in the nostrils of sheep, deer, &c.

BOT'TLE. Sp. *botella*, dim. of *bota*, a leathern bag for wine. The bottles of the ancients were made of skins and leather.

In modern times they are made chiefly of thick glass of the cheapest sorts.

BOT'TLE-GLASS is composed of sand and lime, and sometimes clay and alkaline ashes of any kind, such as kelp, barilla, soap-boilers' waste, and even wood ashes. The green colour is in part owing to the impurities of the ashes, but chiefly to oxide of iron contained in the sand.

BOT'TOM. 1. In *commercial language*, a ship; e.g. "The goods were imported in British bottoms."—2. In the *language of jockeys*, stamina, native strength; e.g. "The horse has good bottom."

BOTTOM-HEAT, applied to the artificial temperature produced in hot-houses.

BOT'TOMMY, in *commercial affairs*, is the hypothecation or pledge of a ship for the payment of a debt. The owner of a ship and the captain, under certain circumstances, is authorised to borrow money, either to fit her out so as to enable her to proceed on her voyage, or to purchase a cargo for the voyage, pledging the keel or bottom of the ship (a part for the whole) in security for payment. If the ship is lost, the lender loses his money; but if she arrives in safety at her destination, the lender is then entitled to get back his principal and the interest agreed on, however much that interest may exceed the legal rate.

BOT'TONY. In *heraldry*, a cross bottony terminates at each end in three buds, knots, or buttons, resembling in some measure the trefoil; hence called *croix trefflé*. The term *bottony* is from the same root as *button*.

BOUCHE, a French word signifying mouth, used anciently to denote the privilege of having meat and drink at court "scot free." The word is also written *bouge*, *bouge*, and *budge*.

BOU'DOIR, a small room destined for retirement. The name is Fr., from *bouder*, to be sulky.

BOU'GET, Water Budget, or Dosser. In *heraldry*, the representation of a vessel for carrying water.

BOU'GIE, a French term for a wax candle (*candela cerea*), and used as the name of a smooth, flexible, elastic, slender cylinder, introduced into the urethra, rectum, or œsophagus, for opening or dilating it in cases of stricture or other diseases. Some are solid and some hollow, some corrosive and some mollifying. When the bougie has some escharotic substance attached to the end of it, it is said to be *armed*.

BOT'I'LLON. In the *manège*, an excrescence of flesh causing the frush to shoot out, which makes the horse to halt. The word is Fr., from *bouillir*, to boil.

BOUL'D'ER, from Fr. *boule*, } A bale.
BOWLD'ER, from Eng. *bowl*. } This name is used to designate those masses of rocks found lying on the surface, or imbedded

in the soil, and differing from the rocks about where they are found. These fragments or outlying boulders are of no determinate size; they are supposed to have been transported by water, and are occasionally found at great distances from their parent rocks.

BOULDER-WALLS are those built of boulders or rounded fragments of rocks, laid in strong mortar, used where the sea has a beach cast up.

BOULIMY, Lat. *boulimia*, voracious appetite, from *βους*, great, and *λιμος*, hunger.

BOUL'TINE. In *architecture*, the workman's term for a convex moulding, whose periphery is just a quarter of a circle, next below the plinth in the Tuscan and Doric capitals. It is called also a *bottel*, but is not at present in use.

BOUND. In *dancing*, a spring from one foot to the other, in distinction from *hop*, which is a spring from one foot to the same. Bound is used in composition, as in *ice-bound*, *wind-bound*, when a ship is prevented from sailing by ice or contrary winds; and in the sense of *destined*, when we say that a ship is *bound* for Cadiz.

BOUN'TY, Lat. *bonitas*, Fr. *bonté*. A term used in commerce and the arts, to signify a premium paid by government, 1. To producers, exporters, and importers of certain articles;—2. To owners of vessels engaged in certain trades. Most of the bounties have now happily ceased. The term is still retained to designate the premium offered to induce men to enlist in the public service.

BOUN'DONE. In *heraldry*, the same with *pomée* (q. v.).

BOU'ROIS, the name used to designate that sort of printing types in size between long-primer and brevier. The word is French.

BOUSTROPHE'DON, a sort of writing found on Greek coins and inscriptions of the remotest antiquity; so called from *βους* and *στραφία*, because the lines are so disposed as to succeed each other like furrows in a ploughed field.

BOUT, in *agriculture*, is one turn or course of a plough in ploughing a ridge.

BOU'TANT. In *architecture*, an arc bount is an arch or buttress serving to sustain a vault, and which is itself sustained by some strong wall or massive pile. The word is Fr., from *bouter*, to abut. A *pillar bount* is a large chain or pile of stone made to support a wall, terrace, or vault.

BOU'TÉ, Fr. for *bouted* or *abuted*. In the *manège*, a horse is said to be *bouté*, when his legs are in a straight line from the knee to the coronet.

BOU'VATE, an ox-gate, or as much land as an ox can plough in a year (Cowell says 28 acres). Written in law Latin, *bovata*, from *bos*, *bovis*, an ox.

BOVEY-COAL, a name given to wood-coal, from its having been found abundantly at Bovey Heathfield, near Exeter. It is also called brown coal and brown lignite.

BOV'DÆ, a tribe of ruminantia, of which the genus *Bos* is the type.

BO'VINE, Lat. *bovinus*, pertaining to oxen, cows, &c. The epithet is applied to all the quadrupeds of the genus *Bos*, called accordingly the *bovine genus*.

Bow, from Teut. *boghen*, to bend. 1. An ancient instrument of war and hunting, made of wood or other elastic matter, with a string fastened to each end. It is of two kinds: the *long-bow* and the *cross-bow*, arbalet or arbalet. The use of the bow is called *archery*.—2. A well-known implement, by means of which the tone is produced from viols, violins, and other musical instruments of that sort. It is made of a thin staff of elastic wood, tapering slightly till it reaches the lower end, to which from 50 to 100 horse-hairs are fastened, and with which the bow is strung. At the upper end is an ornamented piece of wood or ivory, called the *nut*, fastened with a screw, which serves to regulate the tension of the hairs.—

3. A beam of wood or brass, with three screws, that governs or directs a lath of wood or steel to any arc; chiefly used wherever it is requisite to draw large arcs.—4. An instrument formerly in use for taking the sun's altitude at sea.—5. An instrument used: 1. By smiths to turn a drill; 2. By turners for turning small articles of wood; 3. By hatters, &c. for breaking fur, wool, and cotton. It resembles the archer's bow. (See *DRILL-BOW*).—6. The rounded part of a ship's side forward, beginning where the planks arch inwards, and terminating where they close at the stem or prow. Hence, among seamen, that arc of the horizon (not exceeding 45°) intercepted between some distant object and that point of the compass which is right ahead is said to be *on the bow*. This is applicable to any object within that arc.—7. The *bows* of a saddle are the two pieces of wood laid arch-wise to receive the upper part of a horse's back, to give the saddle its due form, and keep it tight.—8. That part of some buildings which projects from a straight wall, most commonly of the form of a segment of a cylinder, though it has sometimes three, four, or five vertical sides, raised from a polygonal plan, or a prism so disposed, when it is called a *canted bow*.

BOW-COMASSES are used for drawing small circles with great exactness.

Bow'ER, in *nautical language*, an anchor carried at the *bow* of a ship. There are generally two bowers, called the *first* and *second*, great and little, or *best* and *small*. See *ANCHOR*.

BOW'-GRACE, in *nautical language*, a frame or composition of junk laid out at the sides, stems, or bows of ships, to secure them from injury by ice.

BOW'LINE, in *nautical language*, a rope fastened near the middle of the leech or perpendicular edge of the square-sails, by subordinate parts called *bridles*, and used to keep the weather edge of the sail tight forward when the ship is close-hauled. The term may be *Armoric bouline*, "a slanting sail to receive a side wind;" or *Fr. bouline*, a tack, from *bouliner*.

BOW'LINE-BRIDLES, the ropes by which the bowline is fastened to the leech of the sail.

BOW'-NET, a machine for catching lobsters and crawfish, called also a *bow-wheel*. It consists of two round wicker baskets, pointed at the end, one of which is thrust into the other, and at the mouth is a little rim bent inwards.

BOW'SPRIT (*bow and sprit*, q. v.), *D. boeg-spruit*, *Dan. boeg-sprid*. A large spar which projects over the stem of a ship to carry forward. It rests obliquely on the head of the main-stem, and has its lower end fastened to the partners of the foremast.

BOX'-DRAIN, an underground drain built of brick and stone, and possessing a rectangular section.

BOX'-HAUL, to veer a ship in a particular manner when it is impossible to tack.

BOXING-OFF, throwing the head sails aback, to force the ship's head rapidly off the wind.

BOXING THE COMPASS, repeating all the points in their regular order.

BOX-TREE, the *Buxus sempervirens*, which grows wild in several parts of Britain. The wood is yellow, close-grained, very hard, and heavy; it cuts better than any other wood, and is susceptible of a very fine polish. Wood-cuts are engraved on it. It is mostly imported at a duty of 5*l.* per ton.

BOX-WOOD, properly the wood of the *box-tree* (q. v.), but applied popularly as a name for all the species of the genus *Buxus*. There is properly only one species native of Britain, but there are at least six varieties of that species. See *Buxus*.

BOYAU', in *fortification*, a ditch covered with a parapet, serving as a communication between two trenches. The term is *Fr., boyau*, a gut.

BOYUNA, a large but harmless American serpent. It is black and slender, and has an intolerable smell.

Br., an abbreviation of the word *bishop*.

B QUADRO, a figure in written music called in French *B quarrré*, from its figure ♯, and in English *B natural* or *sharp*, in distinction from *B mol.* or *flat*.

B. R., an abbreviation of the words

Bancus Reginæ, the Court of Queen's Bench.

BRAC'CATE (*bracca*, breeches), when the feet of birds are concealed by long feathers descending from the tibiae.

BRACE, from *Cel. braic*, *brac*, the arm. 1. In *architecture*, a piece of wood framed in with bevel joints, serving to keep the building from swerving either way. It extends like an arm from the post or main timber.—2. In *music*, a double curve at the beginning of a stave.—3. A thick strap which supports a carriage on wheels.

—4. A crooked line in printing, connecting two or more lines or words. It is used to connect triplets } in poetry.—5. In *nautical language*, to *brace about* is to turn the yards round for the contrary tack; to *brace sharp* is to cause the yards to have the smallest possible angle with the keel; to *brace to* is to check or ease off the lee braces, and round in the weather ones, to assist in tacking.

BRACES, plural of *brace* (q. v.). 1. Narrow fillets or bands of leather, or textile fabric, which pass over the shoulders, and support the pantaloons.—2. In *nautical language*, ropes belonging to all the yards of a ship, except the mizzen, two to each yard, reeved through blocks which are fastened to pendants, seized to the yard-arms, to square or traverse the yards. The name is also given to pieces of iron which are used as supports, such as of the poop-lanterns, &c.—3. The *braces* of a drum are the cords on the sides of it, for tightening the heads and snares.

BRACHELY'TRA, a family of pentamerous coleoptera, having only a single palpus on each maxilla, or four in all, including the labial pair. The name is composed of *βραχὺς*, short, and *εὐτερον*, a sheath.

BRACH'iate, *Lat. brachiatus*, four-ranked, applied to stems, &c. of plants when they divide and spread in four directions, crossing each other alternately in pairs.

BRA'CHIO is used in compounding the names of muscles, &c. of the arm (*brachium*).

BRA'CHIOLUM, a member of an instrument used upon astrolabes, &c., sometimes called the *creeping index*. It is usually made of brass, with several joints, that the end or point may be set to any degree of the astrolabe.

BRACHIOPO'DA, a class of mollusca provided with two fleshy arms instead of feet; hence the name, *βραχίον*, an arm, and *ποὺς*, a foot. The brachiopoda are all bivalves, and, like the acephala, have an open bilobe mantle.

BRA'CHMANS, a sect of ancient Indian philosophers. The brachmans were a branch of the gymnosophists. The word is also written *Brachmins* and *Brahmins*. They took their title from *Abraham*, whom

they called *Brachma* and *Brama*, and pretended to imitate the life of the patriarch by living in deserts.

BRACHYCATALEPTIC, *βραχυς*, short, and *καταληπτικός*, deficient. In Greek and Latin poetry, a verse wanting two syllables to complete its length.

BRACHYGRAPHY, stenography, *βραχυς*, short, and *γραφω*, to write.

BRACHYPODIUM, the false brome-grass, a genus of plants. *Triandria—Digynia*. Named from *βραχυς*, short, and *πούς*, a foot, from the sessile, or nearly sessile, spikelets, which, with the terminal awn, distinguish this genus from *Bromus*, where the two British plants of this genus had been placed.

BRACHYPTERÆ, a family of birds of the Palmipede order, having the legs placed farther back than in any other birds, which renders walking painful to them; and having but feeble powers of flight, which renders them almost exclusively attached to the surface of the water. The divers, auks, and penguins are examples. The name is from *βραχυς*, short, and *πτερον*, a wing.

BRACHYPTEROUS, short-winged, belonging to the *Brachyptera* family of birds.

BRACHYSTOCHRONÆ, *βραχυς*, short, and *χρονος*, time. The name given by John Bernoulli to the curve which possesses this property, that a body setting out from a given point, and impelled merely by the force of gravity, will arrive at another point in a shorter time by moving in this curve, than if it followed any other direction. It was first proposed by Bernoulli as a challenge to other mathematicians in 1696. The brachystochrone, or curve of quickest descent, as it is otherwise termed, is found to be the common cycloid.

BRACHYURA, a family of crustaceans, placed by Cuvier in the order *Decapoda*, and constituting the genus *Cancer*, Lin. Name from *βραχυς*, short, and *ουρα*, a tail, the tail being shorter than the trunk, in which the *Brachyura* differ from the *Macroura*.

BRACTEA, a Latin word meaning a leaf of gold or other metal, and used in botany to denote a little leaf-like appendage in some flowers, lying under or interspersed in the flower, but generally different in colour from the true leaves of the plant. It is otherwise called a floral leaf. The term is sometimes anglicised, and written *bract*.

BRACTEATE, furnished with bractee, bracted.

BRACTEATES, thin coins of gold or silver, and latterly of copper, with irregular figures stamped upon one surface, so that the impression is raised upon one

side and depressed on the other. They were circulated in great quantities under Otho I. of Germany. The real names at the time they were in circulation were, *denarius*, *moneta*, *obolus*, *panningus*.

BRAD, a slender sort of nail, used in joinery, having no spreading head, as other nails have, but a small projection on one side. Of this sort are *joiners' brads*, used for hard wainscots, *batten-brads*, for soft wainscots; *bill-brads*, or *quarter brads*, used in floors. When brads are used, it is customary to drive them beneath the surface of the wood with a punch and hammer, and fill up the hole with putty, that the nailing may not be visible. The term is from Sax. *bteban*, to join, knit.

BRAD-AWL, that is, a broad-awl. (See AWL.) This awl is used chiefly for piercing holes for brads.

BRADYPODA, an order of slow-moving animals of class *Mammalia*, and including the *Bradypus* (sloth), *Mermecophaga* (anteaters), *Manis* (scaly-lizard or bingolin), *Dasypus* (armadillo), *Ornithorhynchus* (duck-bill). Name from *βραδύς*, slow, and *πούς*, foot. The *Bradypoda*, Lin. are mostly comprehended among the *Edentata*, Cuv.

BRADYPUS, the sloth. An American genus of animals of the order *Bradypoda* and class *Mammalia*. Named from *βραδύς*, slow, and *πούς*, a foot. They are placed by Cuvier in his order *Edentata* and division *tardigrada*. There are several species, of which the *al* (*B. tridactylus*, Lin.) is the most celebrated; F. Cuvier applies the name *bradypus* to those species only which have two nails to the fore-feet: the *Cholapus*, Illig., of which there is only one species known, the *unau* (*B. didactylus*, Lin.), larger than the *al*.

BRAHMANS, the highest of the four castes of Hindoos: they form the learned or sacerdotal class. Their chief privileges are, reading the Vedas or sacred writings, instituting sacrifices, imparting religious instruction, asking alms, and exemption from capital punishment.

BRAID, a sort of narrow textile band or tape formed by plaiting (Sax. *bteban*, to plait) several strands together. There must be at least 3 strands, but as many as 29 (and perhaps more) are sometimes employed. Braid, stay-laces, and upholsterers' cord are worked by means of a machine of very ingenious construction, called the *braiding-machine* or *frame*.

BRAIK, } An instrument used in flax-
BRAKE, } dressing, to brake (break) the wood or boon of the stems, and loosen it from the harl. The *bott-hammer* (q. v.) is generally employed on the Continent instead of the brake, and the *brake-machine* has in Britain superseded the

hand-brake. The essential part of such machine consists in several deeply fluted rollers of wood or iron, whose teeth work into each other, and while they stretch out the flaxen stalks between them, they comminate the woody parts, and effectually loosen the harl.

BRAIL, Fr. *brayer*, a truss. In navigation, brails are ropes passing through pulleys on the mizzen-mast and yard, and fastened to the aftmost leech of the sail in different places, to truss it up close. Also, all ropes employed to haul up the bottoms, lower corners, and skirts of the other great sails, for the more ready furling of them. *To brail up* is to haul up into the brails, or to truss up with the brails.

BRAIN, from Sax. *bryene*, fervour. The soft whitish mass or viscus inclosed in the cranium. It is composed of a cortical substance, which is external, and a medullary substance, which is internal. The first is reddish, the latter white. It is divided below into six lobes, and above into two hemispheres, whose volumes are in proportion to the extent of the intelligence. It is moreover divided by anatomists into two principal parts—the *cerebrum*, which occupies in man the higher part of the head, and is seven or eight times larger than the *cerebellum*, lying behind and below it.

BRAKE. 1. A machine used in dressing flax. (See **BRALK**.)—2. A name common to all the plants of the genus *Pteris* (q. v.)—3. A baker's kneading-trough.—4. A sharp bit or snaffle.—5. A machine for confining refractory horses while the smith is shoeing them.—6. A heavy harrow, called also a *drag*, and used only on rough ground.—7. That part of the carriage of a moveable battery or engine which enables it to turn (*Fairfax*).—8. The handle of a pump: in this sense, from Celtic, *braic*, the arm.

BRA'MA, a genus of acanthopterygious fishes, placed by Cuvier among the squamipennes. There is only one species known, the *Sparus raii*, Bl., which inhabits the Mediterranean. It attains a large size, is of a burnished steel colour, and is excellent food.

BRA'MAH, the first person in the Trinity (*Trimurti*) of the Hindus.—*Bramah*, the creator, *Vishnu*, the redeemer, and *Siva*, the destroyer. *Bramah* means "knowledge of laws."

BRA'MAH'S PRESS. See **HYDROSTATIC PRESS**.

BRAM'BLE, Sax. *bryæmbel*, a name common to all the species of the genus *Rubus*. There are 13 British species, of which the blackberry or common bramble, raspberry, dewberry, stone-bramble and cloud-berry, are well known.

BRANCH, from Celtic, *braic*, the arm, a shoot. 1. A shoot of a tree.—2. Any part extending from the main body of a thing, as a *branch* of an artery.—3. The *branches* of a *bridle* are the two pieces of bent iron which bear the bit, the cross chains and the curb.—4. The *branches* of *ogives* are the arches of Gothic vaults traversing from one angle to another diagonally, and forming a cross between the other arches, which makes the sides of the square of which these arches are diagonals.

BRANCH'ER, in *falconry*, a young hawk when it begins to leave the nest and take to the branches.

BRANCH'IA, the gill of a fish (*βραγχία*). The branchiæ of fishes are filamentous organs for breathing in water. The term is generally used in the plural, like *lungs*.

BRANCHIOS'TEGI, an order of fishes in some systems of ichthyology, the characteristic of which is that the rays of the fins are of a bony substance. Name from *βραγχία*, gills, and *στεγος*, to cover. The pipe-fish and sucker are examples.

BRANCHIOS'TEGI, gill-covered, belonging to the order Branchiostegi.

BRANCH'IPUS, the *Cancer stagnalis*, Lin., an animal belonging to the crustaceans, having the legs reduced to soft paddles, which perform the double office of lungs and feet; hence the name, from *βραγχία*, gills, and *πούς*, a foot.

BRAN'DY, an ardent spirit distilled from wine and the husks of grapes, hence called by the Germans *brantewein*, by the French, *brandevin*, by the Dutch, *brandewyn*, the root of which words is Teut. *branden*, to boil, distil. Brandy is prepared in most of the wine countries, but the French brandy is the best.

BRANKUR'SINE, the herb bear's breech. The name is applicable to all the species of the genus *Acanthus*.

BRAN'LIN, a species of fish of the salmon tribe, called in some places the *fingry*, from certain black marks on each side resembling fingers.

BRANT, a bird, the *Anas bernicla*, Gm., distinguished from the common geese by a shorter and slenderer bill, the edges of which conceal the extremities of the laminae. It is thus named from the colour of the mantle, which is brownish grey, as if *brant*, *brent*, or *brint* (Sax. *bryennan*, to burn.)

BRASS, an alloy of copper and zinc. Fine brass is nearly two parts of copper to one of zinc; but the proportions are variable. The varieties are Prince's or Prince Rupert's metal, Mosaic gold, Bath metal, button metal (platin), red brass (the Tombak of some), Dutch foil, pinchbeck, similor, Manheim gold. The term

as Sax. *bpaef*, but the root is uncertain.

BRASS COLOUR, for staining glass, is prepared by exposing thin plates of brass upon tiles in the annealing arch (*leer*) of a glass-house, till they be thoroughly oxidised into a black powder. This powder being mixed with glass in fusion, communicates to it greens of various tints, passing into turquoise. Glass-maker's red colour is similarly prepared in a reverberatory furnace, and the yellow by interstratifying the plates with sulphur. Colourmen use a powdered brass imported from Germany, to imitate clear or gilt brass; and mix copper filings with red ochre or bole, to produce their bronze tint.

BRASSAGE, anciently a sum levied to defray the expense of coinage, taken from the real value of the coin.

BRAS'ART, the piece of metal which protected the upper arm, between the shoulder-piece and elbow.

BRASSED. Copper plates and rods are often *brassed* externally by exposure at a high temperature to the fumes of zinc, and afterwards laminated or drawn.

BRASS FOIL, Dutch leaf, called *knitter* and *rauschgold* in Germany, is made from very thin sheet-brass (rather thin plates of copper *brassed*) beat out under a hammer, worked by water power at the rate of from 300 to 400 strokes per minute, from 40 to 80 leaves being laid over each other.

BRASSICA, a genus of plants, mostly biennials, but some annuals. *Tetradymia*—*Siliquosa*. Name latinized from Celtic *bresic*, a cabbage. There are six British species, of which the Navew, rape or cole-seed, turnip, Savoy, and garden cabbage, are well known. The *B. oleracea*, found on cliffs by the sea, in many parts of England and Scotland, is the origin of our garden cabbage.

BRAYURA AIR, an air composed to enable the singer to show his skill in execution by additional embellishments. *Brayura* is sometimes used for the style of execution.

BRAZED, a term used in heraldry to denote three cheverons clasping one another.

BRA'ZEN-DISH, among *miners*, the standard by which the other dishes are gauged.

BRAZILET'TO, an inferior species of Brazil wood brought from Jamaica.

BRAZIL'-NUTS, or chestnuts of Brazil, the fruit of the *Juvia* (*Bertholletia excelsa*), a majestic tree abounding on the banks of the Oronoco, and in the northern parts of Brazil. The nuts are triangular, the shell rough and hard, and of a brownish ash colour. The kernel resembles the almond, but tastes like the common hazel nut, and contains much oil, which may be ob-

tained by mere expression. The nuts grow in clusters of from 20 to 50, in great ligneous pericarps, generally of the size of a child's head.

BRAZIL'-WOOD. This name is common to the wood of every species of the genus *Cesalpinia*. The best is that afforded by the *C. echinata*, called Pernambuco-wood. It grows in the Brazils, the Isle of France, Japan, and elsewhere. The *C. cristata* affords wood of the second quality, and the *C. sappan*, of the third. This last is found in Siam and Amboyna. The wood of all the species is hard, crooked, and full of knots; susceptible of a fine polish, and sinks in water. It is pale when newly cut, but becomes red by exposure to the air. It is valuable in dyeing. Its price in London, exclusive of duty, 5*l.*, is from 35*l.* to 40*l.* per ton.

It has been commonly supposed that this wood derived its name from the country in which it is chiefly produced; but Dr. Bancroft (*Philosophy of Colours*, vol. ii., p. 316), has shown that woods yielding a *red dye* were called Brazil woods long previous to the discovery of America, and that the early voyagers gave the name of Brazil to that part of that continent, to which it is still applied, from their having ascertained that it abounded in such woods.

BRAZ'ING, the soldering together of edges of iron, copper, brass, &c. with an alloy consisting of brass and zinc; sometimes with a little tin or silver.

BREACH-BATTERY. (The term breach is from Sax. *brecan*, to break.) A battery raised against a face or salient angle of a bastion or ravelin, for the purpose of making an accessible breach. See **BATTERY**.

BREAD, the principal article in the food of most civilised nations. It is a spongy mass, formed of the flour or meal of different sorts of grain, mixed with water and yeast, and baked. Dough baked without being fermented constitutes cakes or biscuits, or *unleavened bread*. The term is Sax. *brecob*, from *brecan*, to feed.

BREAD'-FRUIT, the fruit of the *Artocarpus incisa*, a large tree which grows wild in Otaheite and other South-Sea Islands. The fruit is a globular berry, of a pale green colour, about the size of a child's head. It contains a white fibrous pulp, which is baked by the natives, and eaten as bread. See **ARTOCARPUS**.

BREAK, from Sax. *brecan*, *frango*. 1. In *nautical language*, when a ship at anchor is in a position to keep clear of the anchor, but is forced by wind or current out of that position, she is said to *break her sheer*. The *break of a deck* is the part where it terminates, and the de-

ascent to the next deck below commences.

—2. *Break* is the name given to a light but strong-built carriage, used for training horses to gentle draught.—3. In *architecture*, a *break* is a recess or shrinking back of a part behind its ordinary range.—4. In *printing*, the short lines which end paragraphs are called breaks.

BREAK'ERS. In *marine language*, rocks which lie immediately under the surface, and break the waves as they pass over them; also the billows which break against the rocks.

BREAKING BULK, the act of beginning to unlade a vessel, or of discharging the first part of the cargo.

BREAKING GROUND, a military term for opening the trenches, and beginning the works for a siege.

BREAK-JOINT. Among *masons*, one stone placed on the joint of two stones in the course below, to bind the work.

BREAKING THE LINE. A naval manoeuvre, by which the assailant cuts asunder the enemy's order of battle, and places one part of the hostile fleet between two fires.

BREAK'WATER. 1. A mole at the entrance of a harbour, to diminish the force of the waves; it is often formed by sinking the hull of an old vessel.—2. A small buoy fastened to a large one, when the rope of the latter is not long enough to reach the surface of the water.

BREAS'ING, burning off the filth, such as grass, ooze, shells, and sea-weed, from a ship's bottom. It is performed by kindling furze, &c. under the bottom, which loosens and melts the pitch, and brings it off, with whatever filth may be adhering.

BREAST-CASKET, one of the largest and longest of the caskets or strings on the middle of the yard of a ship.

BREAST'FAST, a large rope to confine a ship sidewise to a wharf or quay.

BREAST-HOOKS, thick pieces of timber placed directly across the stem of a ship, to strengthen the fore part, and unite the bows on each side.

BREAST'PLATE. 1. A strap that runs across a horse's breast, from one side of the saddle to the other.—2. Armour for the breast.—3. A part of the vestment of the Jewish high-priest, consisting of a folded piece of richly embroidered stuff, of which the ephod was made.

BREAST-FLOUGH, a turf-spade driven forward by the hands, placed opposite the breast.

BREAST-ROPPES. In *ships*, those ropes used to fasten the yards to the parrels, and with the parrels to hold the yards fast to the mast; more commonly called *parrel-roppes*.

BREAST-SUMMER. See **BRESSUMMER**.

BREAST-WHEEL, a water-wheel which

receives the water at about half its height, or at the level of the axis.

BREAST-WORK, a military term for works thrown up to afford protection against the shot of the enemy. Breast-works are usually made of earth.

BRECCIA, an Italian term used by mineralogists, &c. to designate such rocky masses as consist of angular fragments united by a common cement. When the fragments are rounded, the conglomerate is called *pudding-stone*, from a fancied resemblance to plum-pudding. *Concrete* is a factitious breccia or pudding-stone.

BREECH. 1. The hinder part of a gun, from the cascabel to the bore.—2. The knee-timber in a ship.

BREECH'ING, a rope used to secure the cannon of a ship-of-war, and prevent them from recoiling too much when discharged. Named from its being passed round the breech or hinder part of the gun.

BREEZE, Fr. *brise*, Bel. *breeze*. 1. A shifting wind that blows from the sea and land alternately for a certain time, and is in some degree regular in its alternations. The wind from the sea is called a *sea-breeze*, that from the land is a *land-breeze*. The first blows during day, and the latter during night.—2. Small ashes and cinders made use of instead of coals in the burning of bricks.—3. The name of the horse, gad, or breeze fly. The latter has been supposed to arise from the sound made by its wings. It is from Sax. *brise*, from Gothic *bry*, a point or sting.

BRE'HON, an ancient Irish magistrate. Each tribe had one *brehon*, whose judgments were given in the open air on the tops of hills. This accounts for the many *brehon-chairs* throughout the country. The office was abolished under Edward III.

BRE'HON-LAWS, the ancient unwritten laws of Ireland, administered by the *brehons*.

BREN'NAGE, from *bran*. In *old law*, a tribute paid by tenants in lieu of bran, which they were required to furnish for their lords' hounds.

BRES'SUMMER, } A lintel beam in the
BREST'-SUMMER, } exterior wall of a building, principally over shop-windows, to sustain the superincumbent part of the wall. Bressummers are commonly supported by iron or wooden pillars. See **SUMMER**.

BRETES'SE, in *heraldry*, a line embattled on both sides.

BRET'TICES, in *coal mines*, wooden planks to prevent the falling in of the strata.

BREVE, from *brevis*, short. The name of a note in music of the third degree of length, and formerly of a square form, as ; but now of an oval form, with a perpendicular line on each side to the staff, thus, . The breve without a dot

after it is equal to 4 minims and is called *imperfect*; but when dotted, it is equal to 6 minims, and is called *perfect*, this being three-eighths of a large, and the greatest length it can assume.

BREV'ET, a term borrowed from the French, in which it signifies a royal act granting some favour or privilege, and applied in Britain and America to nominal rank in the army higher than that for which pay is received.

BREVIARY, the book containing the daily service of the Romish Church; matins, lauds, prime, third, sixth, nones, and vespers. Named *breuiarium*, of *brevis*, short.

BREVIATOR. See **ABBREVIATOR**.

BREVI'ER, a size of types for letter-press printing, smaller than bourgeois and larger than minion.

BREV'IFED, a fowl having short legs—*brevis* and *pes*. The martinet is an example.

BREVIPEN'NES (*brevis* and *penna*). The name given by Cuvier to a family of birds of the grallie order, distinguished by the shortness of the wings which renders flight impossible. The ostrich and cassowary are examples.

BRICIA'NI, a military order instituted by St. Bridget, Queen of Sweden; also the members of this order.

BRICK, Teut. *bricke*. A sort of factitious stone, composed of an argillaceous earth tempered and formed in moulds, dried in the sun, and finally burnt to a proper degree of hardness in a clamp or kiln. The different kinds of bricks made in England are principally place bricks and stocks, gray and red bricks, marl-facing bricks, and cutting bricks. The place bricks and stocks are used in common walling. The marls, which are superior to the stocks, are of a fine yellow colour, and are used in the outside of buildings. The cutting bricks are the finest kind of the marl and red bricks, and are used in arches over windows and doors, being rubbed to a centre and gauged to a height.

BRICK-NOG'GING, brick-work carried up and filled in between timber-framing.

BRICK-TRIMMER, an arch abutting against the wooden-trimmer in front of a fire-place, to guard against accidents by fire.

BRIDGE, Sax. *brigge*. A structure of masonry, carpentry, or iron-work, built over a river, canal, or valley, for the convenience of passing from one side to the other. The extreme supports of a bridge, whether it have one arch or a series of arches (see **ARCH**), are called *abutments* or *butments*; the parts between the arches are called *piers* or *pillars*; and the fences on the side of the bridge-way, for preventing the passengers from falling over

the bridge, are called *parapets*. Bridges have various names according to the mode of structure, materials composing them, and the particular uses for which they are designed. A *draw-bridge* is one made with hinges, and may be raised, or opened and lowered, or shut at pleasure. A *fly-bridge* is made of pontoons, light-boats, hollow-beams, empty casks, and the like, for the passage of armies. This name is also given to a kind of ferry-boat constructed so as to resemble above the roadway of a bridge, and in such a manner as to be readily moved from one side of a river to the other by means of a chain-cable. *Pendent-bridges* or *suspension-bridges*, are supported on strong iron chains or rods, hanging in the form of an inverted arch from one point of support to another. *Floating-bridges* are stationary rafts of timber extending from one shore to the other, and may either be permanent, or, like the military fly-bridge, may be erected for the special occasion.—*Bridge* is also the name of several things similar in figure to a bridge, as the *bridge of the nose*, the cartilage which separates the nostrils; the *bridge of a violin*, the perpendicular piece of board which supports the strings. Gunners also use the word *bridge*, to denote the two pieces of wood which go between the transoms of a gun-carriage, on which the bed rests.

BRIDGE-OVER, in *carpentry*, when any number of parallel timbers have another piece of timber fixed over them in a transverse direction, then the transverse piece is said to *bridge-over* the pieces which are parallel; e. g. the common rafters, in framed roofing, bridge-over the purlins.

BRIDGE-STONE, a stone laid in a horizontal direction over an area, extending from the pavement to the entrance-door of a house, and not supported by an arch.

BRIDG'ING-FLOORS, floors in which bridging-joists are used. See **NAKED-FLOORING**.

BRIDG'ING-JOISTS, pieces of timber or joists in naked-flooring, extending in a direction parallel to the girder, and supported by beams called binding-joists. It is so to the bridging-joists that the flooring is nailed.

BRIDG'ING-PIECES. See **STRAINING-PIECES** and **STRUTTING-PIECES**.

BR'DLE, Sax. *bridel*. 1. That part of the furniture of a horse's head which serves to guide the animal. The principal parts are the *bit* or *snaffle* which goes into the horse's mouth; the *headstall*, which is the leather that goes round the head; the *fillet*, that lies over the forehead; the *throat-band*, which buttons under the throat; the *reins* which the rider holds; the *nose-band*, buckled under the cheeks; the *trench*, the *crupper*, the *martingal*, and the *chaff-halter*.—2. A short piece of

cable well served attached to a swivel or a chain, laid in a harbour, and the upper end drawn into a ship and secured to the bits. The use is to enable a ship when moored to veer with the wind and tide.

BRIEF, *Fr. bref*, from *Lat. brevis*, short. In law, a client's case made out for the instruction of counsel on a trial. Also a writ summoning a person to answer to an action.—In *Scots law*, a writ from the Chancery, directed to any judge ordinary, commanding and authorising that judge to call a jury to inquire, and upon their verdict to pronounce sentence.—An *apostolical brief* is a written message of the Pope addressed to a prince or other magistrate respecting matters of public concern. Such briefs (*brevia*) are written on paper, and sealed with the fisher's ring in red wax. A *bull* is more formal, being written on parchment, and sealed with lead or green wax, and subscribed with the Pope's name, whereas the name of the secretary only is appended to the brief.

BRIG, **BRIG'ANTINE**, a square-rigged vessel with two masts. The term is differently applied by the mariners of different countries. The uncontracted term *brigantine* is used, especially in the Mediterranean, to denote a light, flat, open vessel, with 10 or 15 oars on a side, having also sails, and carrying upwards of 100 men. Such vessels have been much used for piracy; whence the name, from *brigand*, a freebooter.

BRIG'ADE, a division of troops of any kind, commanded by a brigadier. A brigade of horse consists of eight or ten squadrons; a brigade of infantry of four, five, or six battalions. The term appears to have been introduced into Europe by the Moors, but the root is not ascertained.

BRIGADE'-MA'JOR, an officer appointed by a brigadier to assist in the management of his brigade.

BRIGADIER, the general officer who has command of a brigade. He is in rank next below a major-general.

BRIG'ANDINE, a kind of defensive armour, consisting of thin, jointed scales of plate, pliant and easy to the body. It is not now used.

BRIL'ANTE, an Italian term, from *brillare*. Used in musical compositions, to signify that the notes are to be played in a lively or sprightly manner.

BRIL'LIANT, a diamond cut so as to reflect the light, and display great brilliancy. *Fr. from brillier*, to sparkle.

BRINED. In *conchology*, streaked.

BRING-TO. In *nautical language*, to check a vessel's course when advancing, by arranging the sails so that they shall counteract each other, and keep her nearly stationary. She is then said to *lie-to*.

BRIS'TLE-GRASS, a name common to all the grasses of the genus *Setaria*.

BRIS'TLES, the strong hairs growing on the back of the boar, extensively used by brushmakers, shoemakers, &c. The term is *Sax. bristl* or *byrst*, primarily a shoot.

BRIS'TOL-STONE, } rock-crystal, fine
BRIS'TOL-DI'AMOND, } specimens of which are found in the rocks near Bristol. They are pure silica, crystallised in six-sided prisms, and terminated by six-sided pyramids.

BRIS'TOL-WATER, the water of a thermal and slightly acidulous spring situated about a mile below Bristol.

BRIT'ISH GUM, starch altered by a slight calcination, whereby it assumes the appearance, and acquires the properties of gum. Made into a paste with water, it is used by calico-printers to thicken their colours.

BRU'ZA, the quaking-grass. A genus of European grasses. *Triandria—Digynia*. Name, *βρύζα*, some kind of corn somewhat like spelt. There are two British species, the great and small.

BRIZE, an agricultural name for ground that has been long untilld.

BROACH. To *broach*, among masons, means to rough-hew. *Broached-stones* are thus distinguished from ashlar or polished work.

BROACH-TO. In *navigation*, to incline suddenly to windward of the ship's course, when she sails with a large wind: or, when she sails directly before the wind, to deviate suddenly from the ship's line of course, and bring her side to windward, and thereby expose her to the danger of oversetting.

BROAD-CAST. Among *farmers*, when seed is sown by casting it athwart the ridges or grounds, it is said to be sown *broad-cast*, in distinction from the mode of sowing in drills.

BROAD'PIECE, a denomination of some English gold pieces, broader than a guinea, especially Caroluses and Jacobuses.

BROAD'-SEAL, the Great Seal of England.

BROAD'-SIDE. 1. In a *naval engagement*, a discharge of all the guns of one side of a ship, above and below, at the same instant.—2. The side of a ship above the water, from the bow to the quarter.—3. In *printing*, a sheet of paper printed on one side only, and that side making a single page.

BROCA'DE, a silk stuff variegated with gold and silver, or raised and enriched with flowers, foliage, and other ornaments. The name is Spanish, *brocado*, as the manufacture originally was. The root is probably *broche*, the instrument used in embroidery.

BROC'ARD, an old Scotch forensic term, denoting the first elements or maxims of the law. Sp. *brocardico*, a maxim of law.

BROC'COLI, a species of cabbage (*Brassica Italica*). The name is Fr., from Ital. *broccolo*, sprout.

BROCHE, a narrow-pointed chisel, used by masons in hewing stones. The term is usually written *broach*.—2. A fish, a species of lutjan.

BROCK'ER, a hart of the third year. a hind of the same year is termed a *brocket's sister*. The word is dim. of Sax. *broc*, wildling, and is sometimes written *brock*. The French write *brocard*.

BROG, a pointed steel instrument fixed into a handle, used by joiners to make holes for nails in soft wood. Root, *brug*, to pierce.

BRO'KENBACKED, the state of a ship when so weakened in her frame as to droop at each end.

BRO'KEN-WIND'ED, a disease in horses often accompanied with a preternatural enlargement of the lungs and heart.

BRO'KER, a person employed as a middleman to transact business between merchants or individuals. Brokers are divided into classes; as bill or exchange brokers, stock-brokers, ship and insurance brokers, pawn-brokers, and brokers simply so called, or those who sell or appraise household furniture distrained for rent. The term is from Sax. *brucan*, Germ. *brauchen*, to employ.

BROK'ERAGE, the commission, reward, or per centage paid to brokers on the sale or purchase of bills, stock, merchandise, for effecting insurance, or doing other business.

BROMF-GRASS, a name common to all the plants of the genus *Bromus*.

BROME'LIA, a genus of American perennials. *Hexandria—Monogynia*. Named in honour of O. Bromel. The pine-apple was formerly placed in this genus under the name of *B. ananas*, but it is now referred to the new genus *Ananassa*.

BROMELIA'CEÆ, a natural family of monocotyledonous plants, of which the genus *Bromelia* is the type.

BRO'MIC ACID, an acid analogous to the chloric and iodic acids.

BROMIDE, a combination of bromine with a metallic base; e. g., bromide of potassium.

BRO'MINE, one of the archæal elements, which being developed from its combinations at the positive pole of the voltaic circle, has been therefore deemed to be idio-electro-positive, like oxygen and chlorine, which last it somewhat resembles in smell, hence its name from *βρωμος*, fetid. At ordinary temperatures it is a liquid of a dark brown colour in mass.

but of a hyacinth red in layers. It occurs in various saline springs on the continent of Europe, but is usually prepared from bittern. It congeals at 4° Fahrenheit.

BRO'MUS, the brome-grass, a genus, *Triandria—Digynia*. Name, *βρωμος*, a species of oat (*βρωμος*, food). There are 12 British species of Brome-grass.

BRON'CHIA, the tubes of the throat into which the trachea divides. *βρονχος*, the throat.

BRONCHI'TIS, inflammation of the mucous lining of the *bronchi* (bronchial tubes).

BRON'CHIUS MU'SCULUS, the sterno-thyroides muscle.

BRONCHOC'ELE, goitre, Derbyshire-neck; called also tracheocele and bronchial hernia; a tumour on the fore part of the neck, formed by an indolent enlargement of the thyroid gland; *βρονχος*, the wind-pipe, and *κλη*, a tumour.

BRONCOPH'ONY, from *βρονχος*, the wind-pipe, and *φωνη*, the voice; the sound of the voice as heard by applying the stethoscope over a large bronchial tube.

BRON'CHO-PNEUMON'IA, a form of inflammation of the lungs which commences in the bronchial membrane, and afterwards involves the parenchyma of the lungs.

BRONCHOT'OMY, from *βρονχος*, the wind-pipe, and *τομω*, to cut. A surgical operation, in which an incision is made into the larynx or trachea, to afford a passage for the air into and out of the lungs, when any obstruction is offered to the same of passing by the mouth and nostrils, as when any foreign body has fallen into the trachea. The operation is called *Tracheotomy* when the opening is made into the trachea, and *Laryngotomy* when the opening is made into the larynx.

BRON'TOLITE, thunder-stone (*βροντη*, thunder, and *λιθος*, stone).

BRONZE, an alloy of copper, with a small proportion of tin: a little zinc and lead are sometimes added. It is harder than copper, and is chiefly used for statues, cannon, bells, and other articles, in all of which the proportions of the ingredients vary. The primary meaning of the word is *browned*.—2. A colour prepared for the purpose of imitating bronze.—3. Among *archæologists*, a *bronze* is any work of art cast in bronze; at present, any bronze statue.—4. Among *medallists*, any copper medal.

BRON'ZING, the art of giving to objects of wood, plaster, &c., such a surface as makes them appear as if made of bronze. The term is sometimes extended to the production of a metallic appearance of any kind upon such objects.

BRON'ZING SALT, chloride or butter of antimony, is so called from its being employed in the process of *browning*.

BROOCH, a painting all of one colour.
BROOM. The *common broom*, a well-known shrub in Britain, is the *Cytisus scoparius*, De Cand., or the *Spartium scoparium*, Eng. Bot. The *Spanish broom*, an ornamental flowering shrub, common in English gardens, and exceedingly plentiful in some parts of Spain, where many articles are manufactured from its twigs and bark, is the *Spartium junceum* of botanists. The word *broom* is Sax. *brum*, the root of bramble, and is now the name of a besom for sweeping floors; besoms being originally made, as they still are for various coarser uses, of the broom-plant, though heath is now often used for the purpose.

BROOM-COON, the yellow-seeded Indian millet (*Holcus saccharatus*), an annual plant peculiar to warm climates. It bears a head of which brooms are made.

BROOM-RAPE, a name common to all the plants of the genus *Orobanche*, because the roots, being often attached to broom and furze, and other leguminosæ, are supposed to injure them.

BROSIMUM, a genus of arborescent plants common in the West Indies and South America. *Diæcia*—*Monandria*. Named from *βρωσιμος*, eatable. The Bread-nut tree, the Milk-wood tree, and the Cow-tree are species of this genus.

BROTHERHOOD OF GOD, an association formed in the 12th century in Guienne, for the purpose of abolishing war. The members took an oath to be reconciled to their enemies, and to attack all who should refuse to lay down their arms.

BROW-ANTLER. 1. The first start that grows on a deer's head.—2. The branch of a deer's horn next the tail.

BROWN, Sax. *brun*. A dusky colour inclining to redness; but the shades are various, as Spanish-brown, London-brown, clove-brown, and tawny-brown. Brown is obtained by admixture of red, black, and yellow.

BROWN-BILL, a weapon formerly used by English foot soldiers.

BROWN'EA, a genus of plants. *Monadelphæa*—*Decandria*.

BROWNING, a process by which the surface of several articles of iron acquires a shining brown lustre. It is chiefly employed for the barrels of fowling-pieces and soldiers' rifles, to conceal the fire-arms from the game and the enemy. The material commonly employed to produce this colour is the chloride (*butter*) of antimony, called, from its uses in purposes of this kind, *bronzing salt*.

BROWNISTS, a religious sect, the *Independents*, so called from their founder Robert Brown.

BROWN-SPAR, a magnesian carbonate of lime, tinged by oxide of iron and manganese.

BROW-POST, a name given by builders to a beam that goes across a building.

BRUCEA, a genus of shrubby trees. *Diæcia*—*Tetrandria*. There are two species, natives of Abyssinia and Sumatra. The genus is named in honour of Mr. Bruce, the traveller in Abyssinia, who first brought the seeds of the Abyssinian species (*B. ferruginea*) into Europe.

BRUCIA, } a vegetable alkali obtained
BRUCINE, } from the false *Angustura*
 bark (the bark of the *Brucea pseudo-ferruginea*); hence its name.

BRUCITE, a mineral of a pale brown colour (often), and called also chondrodite and hemiprismatic chrysolite. It was named Brucite, after Mr. Bruce, an American mineralogist. It consists chiefly of magnesia and silica, coloured with oxide of iron.

BRUIS'ER, a concave tool used in grinding the specula of telescopes.

BRUIS'WORT, a species of soapwort, the *Saponaria officinalis*, supposed to be beneficial in the cure of bruises of the flesh.

BRUMAIRE, in the French revolutionary calendar, the foggy month (November);—*brume*, fog.

BRUNSWICK-GREEN, a pigment composed of carbonate of copper, with chalk or lime, and sometimes a little magnesia or ammonia. It may be prepared by adding ammonia to sulphate of copper and alum. It is called also *Bremen*.

BRUSH'-WHEELS, wheels sometimes used in light machinery, to turn each other by means of bristles or brushes fixed to their circumference.

BRUTA, the second order of Mammalia in the Linnæan system of zoology, comprehending those animals which have no front teeth in either jaw, as the elephant, rhinoceros, walrus, sloth, &c.

BRUTE'-WEIGHT, gross-weight, in contradistinction to net-weight.

BRYONIA, the *Bryony*: an extensive genus of plants. *Monæcia*—*Syngenesia*. Name from *βρω* to shoot, in allusion to its rapid growth. The *B. dioica*, Jacq., a perennial found in thickets, is the only English species. Flowers dioecious; berries red.

BU'BO, a swelling of a lymphatic gland, particularly of the groin (*βουβων*) or axilla. The root of the word is Heb. *bobo*, which is a reduplicate of the verb *boe*, to swell.

BU'BON, a genus of umbelliferous plants. *Pentandria*—*Digynia*. Name from *βουβων*, the groin, because one of its species, the Macedonian parsley (*B. macedonicum*), was supposed to cure swellings (*bubos*) there.

BUBONOC'LE, inguinal hernia, from *βουβων*, the groin, and *κλη*, a tumour.

BUBONOREX'IS, } from *βουβων*, the groin,
BUBONORIX'IS, } and *ρηξις*, a rupture.

A bubonocoele, accompanied with a division of the peritoneum.

BUCCO, a species of owl of the Philippine isles. It resembles the peacock in size, has beautiful plumage, and utters a hideous nocturnal scream.

BUCCEA LORICATA, *mailed-cheeks*. A family of Acanthopterygious fishes, to which the singular appearance of the head, variously mailed and protected, gives a peculiar aspect, that has always caused them to be arranged in special genera, although they have many close affinities with the perches. The *flying-fishes* are examples of this tribe.

BUCCANEE'RS, Fr. *boucanier*. The pirates who infested the coasts of the West Indies and South America in the 17th and 18th centuries.

BUCCELLA, an old name for a polypus in the nose, formerly believed to grow from the cheek (*bucca*).

BUCCELLATION, *buccellatio*. A mode of stopping hæmorrhage, by applying lint upon the vein or artery.

BUCINA, an ancient musical instrument of the trumpet kind, the sound of which was called *buccinus*, and the player *buccinator*.

BUCINATOR, a trumpeter (*Βουκανος*, a trumpet). The Latin name of the trumpeter's muscle; a large flat muscle, which forms, in a manner, the walls of the cheeks.

BUCININÆ, the whelks. A sub-family of Testacea, of the order *Gastropoda*. Type, *Buccinum*.

BUCINITES, fossil remains of the whelk-genus of shells (*buccinum*).

BUCINUM, the whelk. A genus of Testacea, of the Buccinoid family, Cuv. This genus comprises all the shells furnished with an emargination, and in which the columella is destitute of plicæ. Brugneir has divided them into four genera; the *Buccinum*, the *Purpura*, the *Cassia*, and the *Terebra*; and Lamarck has divided the latter two into the five genera, *Nassa*, *Eburna*, *Ancillaria*, *Dolium*, and *Harpa*.

BUC'CO, the barbet. A genus of birds of the order *Scansoria*. The barbets have a thick conical beak, inflated on the sides of its base, from which they take their generic name (*bucco*, to inflate the cheeks). They are natives of hot climates, live on insects, and build in the hollows of trees.

BUCENTA'UR, the great-centaur (*Βου, great, and κενταυρος, centaur*). The splendid galley in which the Doge of Venice annually sailed on Ascension-day, to wed the Adriatic, by dropping a ring into it, was thus named.

BUCPH'ALON, a plant (the *Trophis Americana*), which produces a red, coarse, edible fruit, eaten in Jamaica. Named from *Βου, great, and κεφαλη, head*.

BUCPH'ALUS, the famous horse of Alexander the Great, which cost 25000. Named from *Βου, great, and κεφαλη, head*, in allusion to the great size of his head. The name is now given to an animal of the gazelle tribe, of the size of a hind.

BUC'CEOS, the horn-bill. A genus of omnivorous birds of Africa and India, whose enormous dentated beak is studded with excrescences which sometimes equal in size the beak itself. This allies them to the Toucans, but their habits approximate them to the Crows, and their feet to the Bee-eaters and Kingfishers. The Hornbills are placed by Cuvier in the order *Passerina*, and family *Tenuirostres*. Name, *Βουκκιος*, of *Βου*, an ox, and *κερας*, a horn.

BUCH'ANITES, a set of enthusiasts who sprung up at Irvine, in the West of Scotland, about 1783. They take their name from Elizabeth Buchan, the wife of a painter near Glasgow, who styled herself the woman of the 12th of Revelation!

BUCHU, the name given by the natives of the Cape of Good Hope to the *Diosma crenata*, a shrubby plant, the leaves of which are much used in medicine.

BUC'KA, a medicinal leaf imported from the Cape of Good Hope, and used as an antispasmodic.

BUCK'BEAN, a corruption of *bog-bean*. The *Menyanthes trifoliata*, which grows not unlike a bean, and in boggy places.

BUCKETS, in water-wheels, are a series of cavities placed on the circumference of the wheel, into which the water is delivered to set the wheel in motion. By the revolution of the wheel, the buckets are alternately placed so as to receive the water, and inverted so as to discharge it, the loaded side always descending. See WATER-WHEEL.

BUC'KETTY, paste used by weavers to dress their webs. Corrupted from *Buck-sheat*.

BUC'KING, the process of soaking cloth in ley (*buck*) for the purpose of bleaching.

BUC'LE, Fr. *boucle*. In coats of arms buckles are tokens of surety, faith, and service of the bearer.

BUC'LER, Fr. *bouclier*. A kind of shield or defensive piece of armour, anciently used in war. It was often made of wicker-work, fortified with plates of brass or other metal, and borne on the left arm.

BUC'MAST, the mast or fruit of the beech-tree.—*Buck*, beech, and *mast*.

BUC'RAM, Fr. *bougram*. A sort of coarse cloth, made of hemp, gummed, calendered, and dyed several colours. It is used to stiffen garments, &c.

BUC'S-HORN. 1. the *Plantago coronopus*, a British annual plant.—2. The *Cotula coronopifolia*, an annual of the Cape of Good Hope.—3. The warted *buck's*

horu is a species of *Cochlearia* or scurvy-grass.

BUCK-STALL, a toil or net to take deer.

BUCK-THORN, a name common to all the plants of the genus *Rhamnus*. The buck-thorn of the shops is the expressed juice of the berries of the *R. catharticus*, or purging buckthorn, a shrub common in Britain. It is employed as a drastic purgative. The berries of the common alder (*R. frangula*) are often used for the same purpose. A decoction of this tree (alder) is extensively used in medicine. It is most astringent.

BUCK-WHEAT, the *Polygonum fagopyrum*, an annual plant which grows well in all parts of Britain. It is extensively cultivated, in order that it may, when young and green, be employed as fodder for cattle: when allowed to ripen, the grain is chiefly employed to feed poultry. It is known in some parts by the names of *French-wheat* and *brank*. Its native place is supposed to be Asia. The Eastern buck-wheat is the *Polygonum divaricatum*, a perennial of Siberia.

BUCNEMIA, from *βου*, great, and *νημιν*, the leg. The generic name of a disease characterised by a tense, diffuse, inflammatory swelling of a lower extremity, usually commencing at the inguinal glands, and extending in the course of the lymphatics. The pæriperal swelled leg, and the Barbadoes leg, are species of this genus.

BUCRA'NION, the snap-dragon plant, a species of *Antirrhinum*, so named from *βου*, an ox, and *κρανιον*, the head, in allusion to a supposed resemblance of its flower to the head of an ox.

BUD, from Sax. *budan* or *boudan*, to proffer. 1. In *botany*, a small protuberance on the stem or branches of a plant, containing the rudiments of future leaves or a flower. Shrubs in general have no buds, neither have the trees of hot climates. See GEMMA.—2. In *horticulture*, to *bud* is to inoculate a plant, that is, to insert the bud of a plant under the bark of another tree, for the purpose of raising upon any stock a species of fruit different from that of the stock.

BUDD'HISM, the doctrine of the Buddhists in Asia.

BUD'DLE, in *mining*, a large square frame of boards, in which tin ores are washed; hence to *buddle* is to wash ores.

BUDGE BACHELORS, a company of men dressed in long gowns lined with lamb's fur, who accompany the Lord Mayor of London at his inauguration.

BUDGE-BARREL, a small barrel with only one head, and on the other end a piece of leather is nailed, which is drawn together with strings like a purse. It is used for carrying powder with a gun or mortar.

BUD'GET, Fr. *bougette*, from Norm. *bouge*, a bag. The budget, in the parliamentary language of Britain, means the Ministers' proposed plan of taxation for the ensuing year, and comprehends a general view of the national debt, income, and expenditure, ways and means, &c., with a general view of the actual product of the preceding budget. It is brought forward in parliament by the Chancellor of the Exchequer.

BUFF, contracted from Buffalo. 1. Buff-skin, a sort of leather prepared from the skin of the buffalo, dressed with oil, like shammy. It is used for making bandoliers, belts, pouches, gloves, and other similar articles. The skins of oxen, elks, and other animals, dressed in like manner, are also called *buffs*.—2. The colour of buff; a light yellow, with a slight reddish shade.—3. A yellow viscid substance formed on the surface of blood drawn in inflammatory diseases.

BUFFALO, the *bos bubalus*, Linn. A ruminant animal, originally of India. It is larger and less docile than the common ox, and inhabits marshy places, and eats coarse plants on which the ox could not live. Its milk is good, its hide strong, but its flesh is not esteemed. The name is also applied to wild oxen, generally and especially to the Bison of America (*Bos bison*, Linn.) See Bison.

BU'RON, the Numidian crane, an African fowl, named in honour of Count Buffon, the naturalist.

BU'FONIA, the generic name of a British biennial. *Tetrandria—Digynia*. Named in honour of Count Buffon.

BU'FO, the toad, a well-known genus of Batrachian animals. Their bite, saliva, &c., are erroneously considered poisonous; but their appearance is against them.

BU'FONITES, from *bufo*. The *Bufonis lapis*, or toad-stone. The teeth of several species of fossil fish, which appear to belong chiefly to the genera *Anarrhicas* and *Sparus*, got the name of *bufonites* because they were formerly believed to have been generated in the head of the toad, or vomited by that animal; *chelonites*, because they were believed to be petrified tortoises' eggs, and various other names for equally good reasons, as serpents' eyes, Batrachites, Crapaudines, &c. They were formerly believed to possess great alexipharmic virtues, and changed colour on the approach of poison. They occur in great abundance throughout the oolite formation.

BUG, in common language, the name of a vast number of insects which infest houses and plants. By entomologists the word is applied to those insects arranged in the genus *Cimex*. They are furnished with a rostrum or beak, with

antennæ longer than the thorax, and the wings are folded together crosswise, but some species have no wings, as the house-bug or bed-bug, which is a troublesome and disgusting insect.

Bu'GLE. Probably from *Fr. beugler*, whence *bigle*, a beagle. 1. Originally the hunter's horn; now used to denote a military musical instrument of the horn kind (See *HORN*).—2. A name common to all the plants of the genus *Ajuga*, in allusion to the form of the flower of most species.—3. The *Prunella vulgaris*, or common self-heal, a British perennial.

Bu'GLOSS, a name common to all the plants of the genus *Anchusa*, from *Lat. buglossus*, of *βουγ*, an ox, and *γλωσσα*, tongue.

Buo'-WORT, a name common to all the plants of the genus *Cimicifuga*.

Buhl, ornamented furniture, in which tortoise-shell and various woods are inlaid with brass. The name is derived from the inventor.

BUILD'ING, a mass formed by the junction of materials arranged according to some plan. In *common language*, an edifice of large dimensions; *technically*, a piece of masonry; also the art of connecting stones, &c. together, either with or without cement. The *building of beams* is the uniting of several pieces of timber together by means of bolts, so as to form a beam of greater length or thickness than could be obtained from a single piece of timber.

BULB, from *Lat. bulbus*, a globular body. This name is given to many objects because of their shape; but the term is especially used in botany to denote a pyriform coated body, solid or formed of fleshy scales or layers, constituting the lower part of some plants, and frequently giving off radicals from the circumference of the flattened basis. A bulb differs from a *tuber*, which is a farinaceous root and sends off radicals in every direction.

BULBIFEROUS, *Lat. bulbiferus*, bulb-bearing; having one or more bulbs.

BULBOCASP'TANUM, the earth-chestnut or pig-nut, a species of *Bunium*. Named from *βολβος*, a bulb, and *καστανειν*, a chestnut, because of its bulbous root, which has somewhat the flavour of the chestnut.

BULBOCAVERNOSUS. The accelerator urinæ muscle is so called from its origin and insertion.

BULBOC'DIUM, the *mountain saffron*; a genus of plants of one species common in Spain. *Hexandria—Monogymia*. Named from *βολβος*, a bulb, and *κεφαλη*, a head, in allusion to the form of its flower.

BULBOGEN'IA, bulbs which grow on the stems of plants.

BUL'ROSE, } *Lat. bulbosus* (from *bulbus*);
BUL'BOUS, } applied in botany, to the roots of plants which are bulbed, and in *anatomy*, to soft parts that are naturally enlarged, as the bulbosæ part of the urethra.

BULBOT'BER, a round, solid, underground stem, producing buds on its surface, and clothed with the decayed remains of leaves.

BUL'BLUE, *Lat. bulbulus*, a little bulb.

BULE, *βουλη*, a council; the Athenian senate.

Bu'LMY, *Lat. bulimia*, insatiable hunger (*βου*, great, and *λιμος*, hunger). This is a vice rather than a disease; but there is a morbid state of the system, in which the appetite becomes so excessive that it is no longer under the moral control of the individual, and the quantity eaten is in some cases so great as to be scarcely credible.

BULK, the whole contents of a ship's hold.

BULK'HEADS, partitions built up in several places of a ship between two decks, either lengthwise or across, to form and separate the various apartments. *Bulk* in this word has the sense of *bulker* or *beam*. *Dan. bielcher*.

BULL. 1. The male of the bovine genus of quadrupeds, of which *cow* is the female. *Feel baula*, to bellow. By the custom of some places the parson is required to keep a *bull* and a *boar* for the use of his parishioners.—2. A letter, edict, or rescript of the Pope, published or transmitted to the churches over which he is head, containing a decree, order, or decision. The bull is written on parchment, and provided with a leaden seal. The word was originally the name of the seal. A collection of bulls is called *bullary*. Certain ordinances of the German emperors are also called *bulls*. The *golden bull*, emphatically so called from the seal attached to it being in a gold box, is that fundamental law of the German empire enacted by the Emperor Charles IV. in two diets held in succession, in 1356, at Nuremberg and Metz. Its chief object was to fix the manner of electing the emperor. *Leaden bulls* were sent by the emperors of Constantinople to patriarchs and princes; and by the grantees of France, Sicily, &c.; and by patriarchs and bishops. *Waxen bulls* were in frequent use with the Greek emperors, who thus sealed letters to their relations, and persons in high favour.

BUL'LA, a bubble. 1. In *surgery*, a *bleb*; a vesicle containing a watery humour, which arises from burns, scalds, or other causes.—2. In *malacology*, a sub-genus of *Bullina*. Example, *B. lignaria*, Sow., a cylindrical univalve. The *Bulla*, Lam. corresponds with *B. asperata*, Sow. The

bulle take their name from the form of the shell, which is ovate and gibbose. The shell occurs fossil in the tertiary formations.

BULLÆ, in Roman archaeology, little hollow ornaments of gold made in the form of a heart, and suspended round the necks of the children of the nobles until they attained the age of 14 years, when they were taken off and hung up as sacred to the *Lares*.

BULLAN'TIC, a term designating certain ornamental capital letters used in apostolic bulls (*bulle*).

BULLATE, Lat. *bullatus*, blistered; applied to the leaves of plants when the veins are so tight that the intermediate space appears blistered; e.g. cabbage.

BULL-DOG, a variety of the common dog. The *canis molossus* of naturalists, remarkable for its short broad muzzle and the projecture of its under jaw, which causes the lower teeth to protrude beyond the upper.

BULLEN NAILS, nails with round heads and short shanks, tinned and lackered. These nails are principally used in the hangings of rooms.

BUL'LETIN, in France, an official report giving an account of the actual condition of some important affair; e.g. bulletin of the army. *Le Bulletin des Sciences et de l'Industrie* is published monthly at Paris by the French Society for the Promotion of Useful Knowledge. The term *bulletin* is dim. of *bulle*, a bull or written instrument.

BULL-FIGHTS, one of the favourite diversions of the Spaniards, exhibited at Madrid twice a week, for the benefit of the general hospital! At those disgraceful exhibitions all the spectators are dressed in their best; the combatants, who make bull-fighting their business, march into the arena with some magistrate at their head: the corregidor gives the signal, and the bull is let in, and the attack is commenced. If the bull is too inactive, dogs are set upon him; if he is too active, he kills a few horses before he is himself killed by the sword of the *matador* (killer).

BULL-FINCH, the *Loxia pyrrhola*, a well-known European bird which has a short, rounded, robust bill, a black-cap (hence called *black-cap*), and plumage on the back of a dark blue-gray colour: the inferior parts of the body are reddish.

BULL-FROG, the *Rana ocellata*, a large species of frog found in North America, of a dusky brown colour, mixed with yellowish green, and spotted black.

BULL-HEAD. 1. The *Cottus*, a genus of fishes with a head broader than the body, whence the name. This fish is known in some places by the name of the *Miller's turnip*.—2. A small black water-insect.

BULLINÆ, a sub-family of Mollusca, of which the genus *bulle* is the type.

BULL'ION, uncoined gold or silver in the mass. The precious metals are called bullion when smelted and not perfectly refined, or when refined and cast into bars, ingots, or plates. Foreign coin is bought and sold under the name of bullion in this country.

BULL'S-EYE, a little skylight in the covering or roof, designed to admit light to a granary or the like. The centre of a target, when used as a mark to shoot at.

BULL'S NOSE, the external angle of a polygon, or of two lines meeting at an obtuse angle.

BULL-TROUT, the sea-trout or salmon-trout; a large species of trout thicker in its proportions than the common trout. Weight 3 lbs.

BULL'RUSH, a large species of rush. The *Juncus globulosus*, a native of Egypt. The name is applied popularly to any large species of rush.

BUL'WARK, in ancient fortifications, is nearly the same with *bastion* in the modern. The term is Teut. *bolle*, round, and *werk*, work, i. e. a round or spherical fabric. See RAMPART and TORUS.

BUM'BAILIFF, an under bailiff, or subordinate civil officer, appointed to serve writs, and to make arrests and executions, and bound with sureties for a faithful discharge of his trust. The term is a corruption of *bound-bailiff*. See BAILIFF.

BUM-BEE. } These popular names
BUM'BLE-BEE. } are common to all the species. The genera *Xylocopa* and *Bombus*, Latr. and Fabr., the humble-bee, which are large and particularly characterised by the humming sound which they make.

BUM'BOAT, a small boat used to carry provisions to vessels lying at a distance from shore. *Bum* is Welsh, *bon*, mean, insignificant.

BUMEL'IA, the bastard bully tree. A genus of eight species, trees and shrubs: natives of America and the West Indies. *Pentandria—Monogynia*. Name *βαυμάλια*, a species of ash-tree, mentioned by Pliny, lib. 16. c. 13.

BUNCH'OSIA, a genus comprehending six species, trees, and shrubs: natives of America and West Indies. *Decandria—Trigynia*.

BUNGALOW', an East Indian term for a house with a thatched roof.

BU'NIAS, a genus of European plants of three species. *Tetradynamia—Siliculosæ*. The name was anciently applied to the turnip (Plin. 20. 4).

BU'NIUM, the earth-nut, pig-nut, kipper-nut, hawk-nut, &c. A genus of perennial plants of two species, both found in Britain. *Pentandria—Digynia*. The name was applied by the ancients to the turnip (*βουιον*), but it has been used at different times to denote different plants. The

1 bulbocastanum, to which the popular names above noted are particularly applied, has a tuberous and whitish root of the size of a nutmeg. It is nutritious, and has a sweetish taste and flavour not unlike the chesnut, especially when roasted: hence called the *earth-chesnut*.

BUN'DLE-PILLAR, in *Gothic architecture*, a column consisting of a number of small pillars round its circumference: it is thus the reverse of *fluted*.

BUN'DER. In *Scotland*, a seat in a window, which also serves for a chest, opening with a hinged lid. Dan. *bunker*; Goth. *benck*, a bench.

BUNN. In *Scotland*, a loaf; Ir. *bunna*, a mass.

BUN'SING, an animal peculiar to the Cape of Good Hope, resembling the ferret in its proportions, but twice as large. When pursued it emits an intolerable stench.

BUT. *1* In *nautical language*, the middle part or cavity of the principal square sails, as the mainsail, foresail, &c.

—*2*. In *conchology*, an increasing cavity, a tunnel.

The term *bunt* is also used as a verb, meaning to *swell out* or *bilge*, and in popular language it has sometimes the sense of *butt*.

BUNTING. *1*. A thin woollen stuff, of which the colours and signals of a ship are usually formed.—*2*. In *ornithology*, a name common to all the species of the genus *Emberiza*, Lin. Also a common name of the *Alauda calandra*, Lin.

BUNTLINS. In *ships*, small lines made fast to the bottoms of square sails, to draw them up to their yards. They are fastened to the middle of the bolt-rope.

BUOY, Fr. *bouée*. A piece of wood, cork, or other light substance, moored and floating on the surface of the water. Buoys of wood are sometimes solid, and sometimes hollow like a cask, and strongly hooped. They are made of various shapes and sizes, and are either private or public. The private buoys are such as belong to private individuals, and are chiefly employed to mark the place of a ship's anchor. The public buoys are stationed by the competent authorities. They are usually of a large size, and painted so as to be readily recognised by the descriptions of them in the charts. Their uses are to point out dangers, and to direct navigators into the safest channels. The *life* or *safety buoy* is suspended from the stern of the ship, and ready to be let go (with a light attached to it at night) in the event of any person falling overboard. Its use is to keep the person afloat till taken out of the water. To *stream the buoy*, is a nautical phrase meaning to let the buoy fall from the side of the ship into the water before letting go the anchor.

BUOY-ROPE, the rope which fastens the buoy to the anchor. It should be strong enough to raise the anchor by in case the cable should break.

BU'PHAGA, the ox-eater, or beef-eater. A genus of African birds of one species (*B. Africana*), belonging to the order *Passerina*, and family *Coraciiformes*. Named from *βους*, an ox, and *φαγεω* to eat. This bird is about the size of a thrush, and has obtained the alarming names which it bears, from its lighting on the backs of cattle, and compressing the skin with its inflated and blunt pointed mandibles, to force out the larvae of the ostrus or gad-fly, lodged in it, and on which it feeds.

BUPHONIA, an Athenian festival in honour of Jupiter, from *βους*, an ox, and *φῶν*, slaughter, an ox being immolated with much quaint ceremony.

BUTYRUM, the hare's-ear, or thorough-wax. A genus of plants of many species. *Pentandria* — *Dignia*. Name from *βου*, great, and *τυγος*, a rib, in allusion to the large ribs or veins upon its leaves. The three British species are annuals.

BUTYRIS, a genus of coleopterous insects of the *Scirricorne* family, remarkable for their brilliant colours; some species having a brilliant polished gold colour on an emerald ground; in others, an azure blue glistens over the gold, and in many species there is a union of several metallic colours. The generic appellation *Rienard* was given to these insects by Geoffroy, to denote the richness of their livery. The name, *βουτῆρις*, was given anciently (Pl. 30, 4,) to an insect noxious to cattle. *βους*, a cow, and *τῆρ*, to inflame; perhaps the *Burn-cow*, which causes inflammation in the mouths of cattle when feeding.

BUTYRAXIA, } the ox-eye, *βους*, an ox.

BUTYRAXUS, } and *οφθαλμος*, an eye. A disease regarded by most writers as the first stage of hydrophthalmia, or dropsy of the eye.

BUTYRIMUM, the ox-eye. A genus of plants of 13 species; some shrubs, some annuals, and some perennials. *Syngenesia* — *Pol. superflua*. Named from *βους*, an ox, and *οφθαλμος*, an eye, from a supposed resemblance of the flowers of some of the species to an ox's-eye.

BUTTOR, the *Oadus lola* a fish shaped like an eel, but shorter in its proportions, with a broad head, and in its nose two small beards, and another on its chin. It is disgusting in its appearance but is excellent food. In some localities it has the name of *eel-pout*.

BUTCA, a term among the Turks for the rich covering of the door of the houses at Mecca. It is 10 feet long, and 5 feet wide.

and has several figures and Arabic characters on it, richly embroidered in gold. This is carried round in their solemn processions, and is often made to stop that the people may touch it.

BURDEN OF A SONG, the return of the theme at the end of each verse. In this sense the word is Fr. *bourdon*, a drone or base. A chord which is to be divided to perform the intervals of music, when open and undivided is also called the *burden*.

BUR'DOCK, or *Clot-Bur*, names common to both species of the genus *Arctium*. They are troublesome weeds, but have their uses in medicine. The name is *bur* and *dock* (*bur* is Goth. *biorn*, a bear), in allusion to the shaggy roughness of the involucres of the plant.

BUR'DON, a pilgrim's staff which was commonly of an inconveniently large size.

BUREAU, a French word from *bure*, cloth, used first to denote a desk, afterwards the chamber of an officer of government, and later, the body of subordinate officers who act under the direction of a chief. In Spanish this word *bureo* is a court of justice for the trial of persons belonging to the royal household.

BUREAU SYSTEM, } terms designating
BUREAU CRACY, } governments in which the business of administration is carried on in departments, each under the control of a chief, and is opposed to those in which the officers of government have a co-ordinate authority. According to the parliamentary usage of France, the Chamber of Deputies is divided into nine *bureaus* or committees, composed of an equal number of deputies, designated by lot. Each bureau appoints its own president, and discusses separately all matters referred to it by the chamber.

BURETTE, an instrument of measure for dividing a given portion of any liquid into 100 or 1000 equal parts.

BUR'GAGE. In *English law*, tenure in burgage, or burgage tenure, is tenure in socage, applied to towns and cities, or where houses or lands which were formerly the sites of houses in an ancient borough, are held in common socage by a certain established rent; a remnant of Saxon liberty.

BURGANET, } a kind of helmet; the
BURGONET, } Spanish murrion. The word is Fr. *bourguignote*, from *burg* in the sense of *guarding* or *cotering*.

BURGOIS, a French word meaning *burgess*, and pronounced *doorzhwa*, from *bourg*, a borough. The same word is used in Britain to denote a species of type or printing letter, smaller than long primer and larger than brevier; in this sense pronounced sometimes *burjois* and sometimes *burjo*.

BUR'GON, in Fr. *bourgeon*; a term used

to denote the button or bud put forth by the branch of a tree in spring.

BUR'GESS, in *England*, the holder of a tenement in a borough; in a parliamentary sense, the representative of a borough; in *Scotland*, a member of the corporation of a borough.

BUR'GRAVE. } In some countries, espe-
BURGRAVE. } cially Germany, the hereditary governor of a castle, from *burg* and *grave* or *graf*, a governor.

BURGH, a borough. Originally a fortified town. See **BOROUGH**.

BURGH-BOTE, in *ancient times*, a contribution (*bote*) towards the building or repairing of castles, walls, &c., for the defence of the burgh.

BURGHES AND **ANTI-BURGHES**, a body of seceders from the Church of Scotland, who separated in the year 1733, in consequence of an undue exercise of patronage in the church. They preserved a distinct existence till 1820, when they joined in one. Out of their body sprung a large and respectable denomination of Christians, distinguished by their hostility to the church, and in favour of what is now termed voluntarism.

BURGH-MAIL, formerly a yearly payment to the crown in Scotland, resembling the fee-farm-rent of English boroughs.

BURGH-MOTE, the court of a burgh, *mote*, a court.

BURGLARY, from Ger. *burg*, a house, and Arm. *laer*, a thief (whence Fr. *larron*). The breaking and entering the house of another by night with the intent to commit some felony, whether such felonious intention be executed or not. To constitute this crime, the act must be committed in the night, and in a dwelling-house or in an adjoining building which is part and parcel of the same. There must be an actual breaking and an entry; but the opening of a door or window, picking a lock or unlocking it with a key, raising a latch or loosing any fastenings, constitutes a *breaking*; and a putting in of the hand after such breaking, is an entry.

BURGO MASTER, } a magistrate, or one

BURGHMASTER, } employed in the government of a city. The *burgomasters* are the chief magistrates of the great towns of Holland, Flanders, and Germany. The same officer in France is called *maire*; in England and North America, *mayor*; and in Scotland, *provost*.

BURGOUT (pron. *burgoo*), the French name of a dish much cooked at sea. It consists of *groats* boiled in water till they burst, with a little butter.

BURGUNDY, a province of France, in which the wine so called is made. In richness of flavour and perfume, and in all the more delicate qualities of the juice of the grape, the wines of Burgundy un-

questionably rank as the first in the world.

BURGUNDY PITCH, a resin, the produce of the *Pinus abies*, or spruce fir. It takes its name from Burgundy in France, where it was first prepared. A fictitious resin is made in England under the name of *common Burgundy pitch*, and the Norway spruce fir yields a resin which is often called Burgundy pitch; it is the *Abietas resina* or *thus* (common frankincense) of the London pharmacopœias.

BURGO'WARD, a bulwark, Latinised by the writers of the middle ages, *burgwardus* or *burgwardium*. The name has been used to designate the town, and even the country about such a fortress.

BURIN (Fr. *burin*), a graver. An instrument of tempered steel used for engraving on copper, &c. It is of a prismatic form, having one end inserted in a short wooden handle, and the other ground off obliquely so as to produce a point.

BURLE'R, a dresser of cloth.

BURLESQUE, Fr. from It. *burlesco*, from *burlare*, to ridicule, *burla*, mockery. *Burlesque* signifies the low comic arising from a ludicrous mixture of things high and low, as when Hudibras describes the glorious sun rising from his bed in the morning like a boiled lobster. In good burlesque composition there is a well maintained contrast between the manner and the subject.

BURLE'TA, a light, comic species of musical drama, which derives its name from It. *burla*, raillery. It originated in Italy.

BUR'NET, a name common to all the plants of the genus *Poterium*, from Celtic *burne*, moist, the only British species, *P. sanguisorba*, or common burnet, inhabiting moist places.

BUR'NET-SAXIFRAGE, a name common to all the plants of the genus *Pimpinella*, of which there are four British species, all perennials.

BURN'ING-GLASS. } A glass lens, which

BURN'ING-MIR'ROR. } being exposed directly to the sun, refracts the rays which fall upon it into a focus, is called a *burning-glass*. If the solar rays be similarly collected by reflection from the surface of a concave mirror, this is then called a *burning-mirror*. The burning glass is the most convenient instrument, but its power is only about a fourth of that of a concave mirror or reflector of equal extent and curvature. This reflects more heat than the glass allows to pass through it, has a less focal distance, and is free from the dissipation of rays which takes place in the burning-glass, since it reflects them all nearly to the same point, whereas the burning-glass refracts them to different points.

BUR'NISHER, a blunt, smooth tool used for smoothing and polishing a rough sur-

face by pressure, and not by removing any part of the body. Agates, polished steel, ivory, dogs' teeth, &c., are used for burnishing.

BURR. 1. The lobe of the ear:—2. The round knob of a deer's horn, next the head.—3. The sweetbread.

BUR'REL-FLY, the ox-fly, gad-bee or breeze. Fr. *bourreler*, to torment.

BUR'REL-SHOT, small shot, nails, pieces of old iron, small stones, &c., put into cases to be discharged among the enemy. Fr. *bourreler*, to torment.

BURR'N-STONE, mill-stone which is almost pure siliceous: it has generally a reddish or yellowish tinge, but the best is nearly white. It is full of pores and cavities, which give it a corroded and cellular appearance. The name is sometimes written *buhr-stone*.

BUR'ROCK, a small weir or dam where wheels are laid in a river for catching fish.

BURR-PUMP, a *bilge-pump* (q. v.). This term is a corruption of *bar-pump*, this kind of pump having a staff of six or eight feet long, with a bar of wood, to which the leather which serves instead of a box is nailed. This staff is worked by men, who pull it up and down by a rope fastened to the middle of it.

BUR'SA, Lat. from *βύρα*, a bag, a purse. Used by writers of the middle ages to denote a little college or hall in a university for the residence of students.

BURSAL'OGY, Lat. *bursalogia*. The doctrine of the *bursæ mucosæ*.

BUR'SA MUCOSA, in *anatomy*, a small sac lined with synovial membrane, which secretes an oily fluid to lubricate the surfaces over which the tendons of muscles play. The *bursæ mucosæ* are of different sizes, and are situated near the joints, particularly the large joints of the extremities.

BUR'SAR a student to whom a stipend is paid out of a *bursa* or fund appropriated for the maintenance of poor students. The exhibitioners sent to the universities of Scotland by the presbyteries are *bursars*, and the annual stipend paid to each is a *bursary*.

BURSARY. 1. The treasury of a college.—2. In *Scotland*, an exhibition or foundation for the maintenance of poor students (*bursarii*).

BURSE, a public edifice in some cities for the meeting of merchants to consult on matters of trade and money, and to negotiate bills of exchange. This is the name used in many cities of Europe, but in Britain and America the building is called an Exchange. The term is a modern application of the word *bursa* (q. v.).

BUR'SCHEN, the name given to one another by the students of the German universities; from *bursarii*, the name which

the students bore in the middle ages, from the buildings (*bursæ*) in which they lived in common.

BUR'SCHENSCHAFT, a secret association of students, formed in 1815, for the political reformation of Germany; afterwards suppressed by government order.

BURSCHEN COMMENT, the code of laws adopted by the students for their internal regulation.

BURSE'RA, a genus of West India plants of two species, one of which is the Jamaica birch (*B. gummifera*), which yields the gum elemi. *Hexandria—Monogynia*. Named from *Bursa*, and *sursum*, to drain.

BUR'TON, in a ship, a small tackle consisting of two single blocks. Named from the inventor.

BUSH, a circular piece of iron or other metal let into the sheaves of such blocks as have iron pins, to prevent their wearing. In America, the bush in the nave of a cart or coach-wheel is called a *box*.

BUSH'EL, an English dry measure of 8 gallons or 4 pecks. The standard English bushel (12 Henry VII.), contains 8 galls. wheat, each 8 lbs. troy, each of 12 oz., each of 20 dwts., each of 32 corns of wheat that grew in the middle of the ear. In 1696 the capacity of the Winchester bushel was fixed at 2151.7 cubic inches of pure water, equivalent to 1131 oz., 13 dwts. troy. The capacity of the imperial bushel, prescribed by act of uniformity (5 Geo. IV., c. 74), is for coal, potatoes, fruits, and other goods sold by heaped measure, 2815 cubic inches, the goods to be heaped up in the form of a cone, to a height above the brim of the measure of at least three-fourths its depth. The Irish bushel for all liquids, and for corn and other dry goods, not heaped, contains 2218.2 cubic inches, and holds 60 lbs. avoirdupois of pure water.—The word bushel is low Lat. *bussellus*, dim. of *bursa*.

BUSH-HARROW, an implement of husbandry for harrowing grass-lands and covering grass and clover-seeds. It consists of a frame with three or more bars, among which bushes are interwoven. A light harrow with small tines serves better.

BUSH'MEN, Dut. *bojesmannen*, men of the wood. A name given by the Dutch colonists to some roaming tribes akin to the Hottentots, in the vicinity of the Cape of Good Hope.

BUS'KIN, in Lat. *cothurnus*. A kind of high shoe or boot worn by the ancient tragedians upon the stage, to give them a more heroic appearance. In classic authors the word is used for tragedy, and for a lofty and elevated style. The buskin was also worn by both sexes, especially by the ladies, for ornament. Hunters and soldiers use a buskin much resembling a half boot.

BUSS, Dut. *buis*, Ger. *büse*, Russ. *buz.* A small sea-vessel used by the English and Dutch in the herring fishery, commonly from 50 to 60 tons burden, and sometimes more. A buss has two small sheds or cabins, one at the prow and the other at the stern: that at the prow serves for a kitchen.

BUST, that part of the human figure which comprises the head, neck, breast, and shoulders. By this term, *busto* is applied to the human figure as low as the hips, with or without the head and arms; which definition agrees with that species of sculpture which represents the portraits of illustrious Romans, either entirely round and mounted on pedestals, or in alto relievo on the sides of sarcophagi or other sepulchral monuments. The Italian *busto* is probably from Lat. *bustum*, a figurative expression for any kind of tomb, but originally applied to the pile on which a dead body had been burned, as the *bustum* in the Campus Martius, on which the bodies of the emperor Augustus and his successors were burned.

BUST'ARD, a name common to all the birds of the genus *Otis*, Lin. The great bustard (*O. tarda*, Lin.), is the largest of European land birds, the male weighing on an average 25 lbs. It is 4 feet in length, and sometimes measures 9 feet from tip to tip of the wings.

BUTCHER-BIRD, a species of *shrike*. The *Lanius collurio*, Germ., which destroys small birds, young frogs, and great numbers of insects, which it, butcher-like, sticks upon the thorns of bushes in order to devour them at leisure, or to find them again when wanted.

BUTCH'ERSBROOM, a name common to all the plants of the genus *Ruscus*, but particularly applied to the *R. aculeatus*, an evergreen shrub which grows in woods and thickets in this country, and is known also by the names knee-holly, Alexandrian laurel, and wild myrtle. It is used by butchers for brooms to sweep their blocks.

BUTEO, the *buzzard*: a subgenus of birds of the order *Accipitres* and family *Diurnæ*. The buzzard is ranked among the ignoble birds of prey, and is called in some parts of America the *hen-hawk*, from its depredations among the poultry. Name originally applied to a species of the falco tribe (Pliny 10. 8).

BUT'MENTS, supports or props by which the feet of arches or any other bodies pressing in an oblique direction to the horizon are sustained in their places. See ABUTMENTS.

BUT'MENT-CHEEKS, in carpentry, the two solid parts on each side of a mortise: the thickness of each cheek is commonly equal to the thickness of the mortise.

BUTT. 1. Fr. *bout*, extremity. The *butt end* of a piece of timber is that end of a plant which was nearest the root of the tree; a *butt-joint* in a hand-rail is a joint at right-angles to the curve of the rail. A *butt*, among ploughmen in Scotland, is a piece of ground which does not form a proper ridge. In *archery*, a mark to be shot at.

—2. Sax. *butle*, a measure, a vessel or measure of wine containing two hogs-heads or 126 wine gallons, that is 106 imperial gallons. Etymon, *Butris*, a vessel for holding wine.

BUTTER, from Sax. *buter*. An oily, inflammable part of milk, separated by churning, and used as an article of diet in most civilised countries. Butter differs from the common animal fats in containing a peculiar fluid oleaginous matter, called *butyrine*. This substance, when saponified, yields in addition to the usual products, three volatile odoriferous substances, called the *butyric*, *caproic*, and *capric* acids. The Latin etymon of the term butter is *butyrum*, from *Butrugov*, of which *βους*, a cow, is the root.

BUTTER OF ANTIMONY, the sesquichloride of antimony.

BUTTER OF ARSENIC, a sublimated chloride of arsenic.

BUTTER OF BISMUTH, a sublimated chloride of bismuth.

BUTTER OF CACAO, an oily, concrete matter, obtained from the cacao nut by bruising and boiling it in water, when the uncombined oil is liquefied, and rises to the surface, where it swims.

BUTTER OF TIN, a sublimated chloride of tin.

BUTTER OF WAX, the oleaginous part of wax, obtained by distillation.

BUTTER OF ZINC, chloride of zinc, obtained by burning zinc in chlorine gas. It is called also *muriate of zinc*.

BUTTER-FLY, a name common to all those lepidopterous insects of the genus *Papilio*, from the yellow colour of a common species. That which seems to be a powder upon the wings of the butterfly tribe, is an innumerable quantity of plumes, which are only to be observed distinctly with a good microscope. The insect appears in the state of a caterpillar, and afterwards in that of a chrysalis, from which it comes forth perfect.

BUTTERFLY-SHAPED, papilionaceous. Applied to the corolla of plants, when they are irregular and spreading.

BUTTERIS, an instrument of steel set in a wooden handle, used by farriers for paring the hoof of a horse.

BUTTER-NUT, the fruit of the *Juglans cinerea*, an American tree. The fruit bears a resemblance to the black walnut, and is named from the oil it contains.

BUTTERS, mineral. A name formerly

given to some of the *chlorides*, on account of their soft butyraceous texture, when recently prepared; such as *butter of antimony*.

BUTTERS, vegetable. The concrete fixed oils, solid at the ordinary temperature, such as those of the cocoa and chocolate nuts.

BUTTER-TREE, a remarkable plant found by Park in the interior of Africa, yielding from its kernels, by pressure, a white, firm, rich butter, which kept well for a year without salt.

BUTTER-WORT, a name common to all the plants of the genus *Pinguicula*, but especially applied to the Yorkshire sanicle (*P. vulgaris*), which grows in soft grounds. Its leaves are covered with soft, pellucid prickles, which secrete an unctuous fluid, to such a degree as causes them to be applied to chaps, and as a pomatum for the hair.

BUTTERY, a store-room for provisions. The name is given, in some colleges, to a room where refreshments are kept for sale to the students.

BUTTING-JOINT, a joint formed by the surfaces of two pieces of wood, the surface of one piece being parallel with the fibres, and that of the other, either in the same or in an oblique direction to them. The joints which the struts and braces form with the truss-posts, in carpentry, are of this description.

BUTTON, from the same root as *bud*. Buttons are manufactured of an endless variety of forms and materials—wood, horn, bone, steel, copper, brass, &c. The non-metallic buttons, called also *moulds*, are made of the substances first mentioned, by sawing them into little slips of the thickness of the button to be made; these slips are then cut into the form required by an instrument adapted to the purpose. Metallic buttons are cast in moulds, or cut with a fly-press.—2. The *button of the reins of a bridle* is a ring of leather, with the reins passed through, and which runs along the length of the reins.—3. A small piece of wood or metal, turning on a centre (usually a round nail with a smooth head), for fastening a door, window, or other closure. The *button of a lock* is a round head serving to move the bolt.—4. The round mass of metal collected at the bottom of a crucible after fusion.

BUTTON-WOOD. 1. The *Cephalanthus occidentalis*, an American shrub.—2. The *Platanus occidentalis*, or western plane-tree, a large American tree, the wood of which is very hard, and is highly valuable in turnery.—3. The *button-tree*.

BUTRESS, *butt* and *truss*. A mass of masonry, to support the side of a wall that is very high, or that is pressed on the

opposite side by an adventitious force, as a bank of earth, or body of water. In those structures improperly called Gothic, buttresses are placed around the exterior sides of the building, one in the intermediate space between every two windows, and one or two at each of the angles, in order to support the vaulting. In pointed architecture two kinds of buttresses are used; the one formed of vertical planes, and attached to the walls, is called *pillared buttresses*; the other, which arises from the pillared buttresses upon the sides of the aisle, with an arch-formed intrados or top, is called *flying-buttresses* or *arc-boutants*.

BUTYRÆOUS, having the appearance or properties of butter (*butyrum*.)

BUTYRIC ACID, a volatile odoriferous substance having acid properties, obtained from butter. See **BUTTER**.

BUTYRINE, a substance which exists in butter (*butyrum*), combined with oleine, stearine, and a very small quantity of butyric acid; Sp. Gr. 0.822. Butyrine saponifies easily, and is then transformed into butyric, caproic and capric acids; into glycerine, and margaric and oleic acids.

BUXINE, an alkaline substance discovered by M. Faure in the *Buxus sempervirens*.

BUXUS, the *box-tree*, a genus of plants. *Monoclea-Triandra*. Name from *βυζαζω*, to become hard. Of this plant there is only one British species, but of this there are several varieties, the extremes of which are the tree and the dwarf-edging, common in forming the edging of garden walks.

BUZZARD. 1. The *Vultur aura*, Wils.; *Cathartes aura*, Illig.; commonly called *turkey-buzzard* and *turkey-vulture*, a bird found over a vast extent of territory on the American continent, in the West India Islands, and in the southern parts of Europe and Asia (See **VULTURE**).—2. A name common to two sub-genera of the kite tribe. See **BUTEO** and **PERNIS**.

BUZZARDET', a species of kite resembling the buzzard in most respects, except that its legs are in proportion rather longer.

BY'ARD, a piece of leather across the breast, used by those who drag the sledges in coal-pits.

BY'ARUS, a plexus of blood-vessels in the brain.

BY-LAW, a particular law made by a corporation, or by any other distinct portion of the community, for the regulation of the affairs of its members in such of their relations as are not reached by the general law of the land. By-laws must not involve the infraction of any public law.

BYSSIFERS, *Byssifera*, a fam. of Lamellibranchiate acephalous molluscs.

BYSSOLITE, from *βύσσω*, flax, and *λίθος*, stone, a rare massive mineral, in short and somewhat stiff filaments, of an olive-green colour, implanted perpendicularly like moss on the surface of certain stones. It has been found at the foot of Mont Blanc, and also near Oisons.

BYSSUS, *βύσσω*. 1. A variety of fine flax much prized by the ancients (Orig. l. xix., c. 27), also the cloth manufactured from this flax, Egyptian linen.—2. A genus of lichens.—3. A name of *Asbestos*.—4. The hairy appendage by which some of the bivalve mollusca attach themselves to rocks and other objects; the byssus or silky beard of the *Pinna marina* is used in Sicily to make stockings and gloves, but only as objects of curiosity.

BYZANT', a gold coin of the value of 15*l.* sterling, so called from its being struck at Byzantium, the present Constantinople.

C.

C, the third letter of the alphabet in most European dialects. It is probably the Hebrew Caph (כ) inverted for the facility of writing, or the Greek kappa (κ) with the upright stroke, left out for the same reason. Some suppose that it was originally the Greek *gamma* (γ), as the earlier Romans used it in many words which at a later date were written with a g, as *legiones* for *legiones*. Q and C are often interchanged on old monuments; thus *qom* for *com*. In the Roman calendars and fasti, C denoted the days on which the comitia might be held. In trials the unfavourable opinions of the judges were given by writing on a little tube (*tessera*) the initial letter C for *condemno*, as A was written for *absolvo*, or N. L. for *non liquet*. On medals C stands for many names of persons, as *Cæsar*, *Caius*, *Cassius*, &c.; of offices, as *Censor*, *Consul*; of cities, as *Carthage*. As an abbreviation, it stands for Christ, as A.C. for *Anno Christi* or *ante Christum*, and for companion, as C.B., Companion of the Bath. As a numeral it denotes 100, being the initial letter of *centum*. C, in music, the name of the note in the natural major mode to which Guido applied the syllable *ut*, but which the Italians have since relinquished for *do*, as softer and more vocal. When placed at the clef, it stands for common time, and with a line run through it perpendicularly, for cut-time or a quicker kind of movement. In Italian music C is sometimes written for *canto*, as C 1. *Canto primo*.

CA'A-A'PIA, the Brazilian name of the *Dorstenia brasiliensis*, the root of which is chewed by the natives; it has the same effect as ipecacuanha.

CA'ABA, a square stone edifice in the temple of Mecca, being the part principally revered by the Mohammedans, and to which they always direct themselves in prayer. The direction is ascertained in distant parts by a little pocket compass called a *kiblet* or director.

CA'A-EO, the Brazilian name of two species of acacia, viz., the *Mimosa sensitiva*, and *Mimosa pudica*.

CAAFI'BA, the Brazilian name of the *Parreira brava*, called by the Portuguese *Cipodas cobras*.

CAB. 1. A Hebrew measure (כב) kab, equal to the sixth part of a seah or satum, and containing about $2\frac{1}{2}$ imperial pints.—2. An alchemical name of gold.—

3. An abbreviation of the word *cabriolet*.

CABA'L. 1. In *British history*, one of the cabinets of Charles II., which consisted of five men famous for their intrigues:—Clifford, Ashley, Buckingham, Arlington, and Lauderdale; the initial letters of whose names form this word.—2. A beverage made in Portugal by bruising 20 lbs. of raisins, and saturating them with white wine during three months. The mixture is rich, clear, and agreeable.

CAB'ALA, } Terms derived from the
CAB'BALA, } oriental word *kibet*, which
CAB'ALIA, } in Hebrew means to re-
CAB'AL'LA, } ceite; Chal. to *obscure*; in
CAB'ULA, } Syr. to *accuse*; and applied
to a mystical interpretation of the Pentateuch, alleged to have been received from the Deity by Moses, and transmitted by an uninterrupted tradition through Joshua and the seventy elders to the Rabbinical doctors. In a general way the term *cabala* is applied to the whole system of occult philosophy of the Rabbins, which chiefly consisted in understanding the combinations of certain letters, words, and numbers. Every letter, word, number, and accent of the law is supposed to contain a mystery, and the cabalists pretended to foretell events by the study of this science.

CAB'ALIST. 1. One who professes the study of the cabala.—2. In *French commerce*, a factor or agent.

CAB'ALLINE ALOES, horse-aloes; a coarse sort of aloes, so called because it is given only to horses.

CAB'BAOE, a name common to all the plants of the genus *Brassica* (q. v.). Of the garden cabbage there are many varieties: the chief are the *drumhead*, the *savoy*, the *cauliflower*, the *broccoli*, the *Brussels-sprouts*, the *sugar-loaf*, the *cole-wort*, and the *early-market*.

CAB'BAOE-TREE. 1. The *Cacalia Kleinia*, which has a compound shrubby stalk re-

sembling that of a cabbage. It grows naturally in the Canary Islands, and has long been cultivated in English gardens, where it is more commonly called the *carnation-tree*, from the shape of its leaves and the colour of its flowers.—2. The *Andira inermis* or *Geoffroya inermis*, Lin., a lofty tree (from 170 to 200 feet) of the East and West Indies, and other hot climates. It bears on the top a substance called *cabbage*, lying in thin, snow-white, brittle flakes, in taste resembling an almond, but sweeter: this is boiled and eaten with flesh like other vegetables. The fibres of the leaves, which somewhat resemble those of our common garden-cabbage, are used to make cordage and nets; and the internal bark of the tree is much used in this country in medicine. The tree is also called the *cabbage-palm*.

CAB'BALA. See CABALA.

CAB'ECA, a name given to the finest silks of the East Indies: the inferior qualities are called *barina*.

CAB'EZON, in *Spain*, a register of the different taxes paid to government, and of the names of the contributors: *cabeza*, head, person.

CAB'IN, an apartment in a ship for officers and passengers. The bed-places in ships are sometimes also called *cabins*, but more commonly *berths*. *Berth* is used likewise for the room where a number of men mess and reside. The same name is also applied to the huts and cottages of poor people and savager, from the Celtic word *cab*, a hut or booth.

CAB'INET, dim. of *cabin*. 1. A small apartment adjoining a larger one.—2. The most retired part of a private dwelling, designed for work, study, amusement, or for collections of valuable articles.—3. In the abode of a prince, the cabinet is a room set apart for the ruler's particular use; also the apartment where he transacts government business, advises with his counsellors, and issues his decrees: hence, in political language, the cabinet is put for the government, as the Cabinet of London, &c. &c.—4. A cabinet is any part of a building, or one or more whole buildings, where are preserved valuable collections of paintings and other curiosities, making up the contents of a museum, and by metonymy, the name is applied to the collections themselves.—5. A little insulated building in a garden, serving as a place of retirement, and to enjoy the fresh air under cover.

CAB'INET-COUNCIL, the confidential council of a prince or executive magistrate.

CAB'IRI (καβίρη). Sacred priests or deified heroes, venerated by the Pagans as the authors of religion and the founders of the human race. The name literally

signifies the *mighty ones*, and seems to have been applied to the supposed beings that preside over the striking operations of nature.

CABIRIA, the mysteries of the Cabiri: those celebrated at Samothrace were the chief.

CA'BLE, Fr. and Sp. *cable*, Tent. *kabel*.

1. A large rope or chain used to retain a vessel at anchor. Rope cables are principally manufactured of hemp: each cable has three strands, every strand has three ropes, and every rope consists of three twists. The twists have more or fewer threads according to the greater or less thickness of the cable. All vessels have ready for service three cables: the *sheet* cable, the *best bower* cable, and the *small bower* cable. Iron cables are strong iron chains constructed in various ways: they have in a great measure, and deservedly, replaced the hempen cables.—2. In *architecture*, wreathed circular mouldings resembling a rope; also the staff which is left in the lower part of the flutings of some examples of the Corinthian and Composite orders.

CA'BL'D, tied with a cable. A heraldic term applied to a cross formed of the ends of a cable in representation.

CA'BL'D COLUMNS are such as have the flutings of the shaft filled with astragals to about one-third of the height: called also *rudented columns*.

CA'BL'D FLUTES, in *architecture*, are such flutes as are filled with cables.

CA'BLE'S-LENGTH, the measure of 120 fathoms, the usual length of a ship's cable.

CA'BLE-TIER, the place where the cables are coiled away.

CA'BLING, the filling of the flutes of columns with cables, or the cables so disposed.

CABO'CHED, } Fr. *cabochée*. In *heraldry*, CABO'SHED, } having the head cut close so as to have no part of the neck left.

CABOM'BEE. In *botany*, the name given to the order now called *Hydrophittideæ*.

CABOO'SE, Ger. *kabuse*, a little room. The cook-room or kitchen of a ship. In smaller vessels it is an inclosed fireplace, hearth or stove, for cooking on the main-deck. In a ship of war, the cook-room is called the *galley*. Caboose also signifies the box that covers the chimney in a ship. The term appears to be formed of *cabin* and *house*.

CAB'RIOLET, a two-wheeled vehicle drawn by one horse, and carrying two passengers and a driver; frequently contracted *cab*. The word is French, from *cabriols*, a goat-leap. Lat. *capra*, a goat.

CAB'ANS, small lines made of spun yarn, to bind cables, seize tackles, and the like.

CACA'LIA κακαλία. A genus of plants.

Syngenesia—Polyg. *æqualis*. There is no British species. The cabbage or carnation-tree, sow-thistle, &c. are, however, cultivated in our gardens, and several of the species are used in medicine.

CA'CAO. 1. Chocolate, a kind of hard CA'COA.) paste formed into a cake, the basis of which is the pulp of the cacao or chocolate nut, a production of the West Indies and South America.—2. The seed or nuts of the cacao tree.—3. The cacao tree.

CA'CAO-NUT, the fruit of the cacao-tree. It somewhat resembles a cucumber in shape, but is furrowed deeper on the sides. Its colour while growing is green, but as it ripens this changes to a fine bluish-red, almost purple, with pink veins; or, in some varieties, to a fine yellow or lemon colour. Each pod contains from 20 to 30 nuts or kernels, which in shape are not unlike almonds, and consist of a white and sweetish pulpy-like substance, enveloped in a parchment-like shell.

CA'CAO-TREE, the *Theobroma cacao*, which both in shape and size somewhat resembles a young cherry-tree, but separates, near the ground, into four or five stems. The leaves are about four inches long, of a dull green colour; the flowers are saffron coloured, and very beautiful. The fruit is the *cacao-nut*. The cacao-tree grows plentifully in the West Indies and South America.

CAC'ATORY FEVER, a species of intermittent fever, accompanied with diarrhoea, and sometimes with tormina. *Cacare*, to go to stool.

CA'CHALOT, the physeter or spermaceti whale. *Physeter*, as well as *physalus*, signifies blower. *Cachalot* is the name used by the Biscayans, from *cachau*, which in the Cantabrian dialect means tooth. The head of the cachalot is enormously large; the under-jaw is armed with a range of cylindrical teeth; the superior portion of the head consists of large cavities, filled with an oil which becomes fixed as it cools, and is known in commerce by the name *spermaceti*, a substance for which the cachalot is principally sought. The odorous substance *ambergis* is a concretion formed in the intestines of the cachalot.

CACHE'T, LETTRES DE, under the ancient French government, letters signed with the king's private seal, for the detention of private citizens. Previous to the 17th century they were seldom employed, but in the reign of Louis XIV. they were very common. In the reigns of Louis XV. and XVI. 69 were issued against the Mirabeau family. They were finally abolished in 1790.

CA'CHOLONG, a milk-white variety of quartz, having a pearly or glistening

lustre, a flat, conchoidal fracture, and perfect opacity. It is found in the river *Cach*, in Bucharia, and obtains its name from that river, and *cholong*, the Calmuc word for stone.

CACHU'NDE, a medicine highly celebrated among the Chinese and Indians. It is made of several aromatic ingredients, perfumes, medicinal earths, and precious stones, formed into a stiff paste, fashioned into various fantastic forms, and dried for use. It is reckoned a pro-longer of life, and a provocative to venery, the two great intentions of most of the medicines used in the East.

CA'CIQUE, a title borne by some of the native chiefs of America at the time of the Spanish conquest. This is a French form of the word: it was pronounced *casic* or *kasik*, and denoted the dignity of a ruler.

CACOCOLY, in Lat. *cacocholia*, a vitiated state of the bile; *κακος*, bad, and *χολη*, bile.

CACOCYLY'X, in Lat. *cacochylia*, depraved chylication; *κακος*, bad, and *χυλος*, chyle.

CACOE'THES, *κακοηθης*. Bad custom, condition, or habit; e. g. *cacoethes scribendi*.

CACOL'OGY, in Lat. *cacologia*, bad choice of words in writing or speaking. *κακος*, bad, and *λογος*, word.

CACOP'ATHY, in Lat. *cacopathia*, ill-feeling, whether physical or moral; *κακος*, bad, and *παθος*, feeling.

CACOPH'ONY, in Lat. *cacophonia*, disagreeable utterance; *κακος*, bad, and *φωνη*, sound. 1. Defective articulation of words.—2. A fault of style consisting in harsh and disagreeable sound produced by the meeting of two letters or two syllables, or by the too frequent repetition of the same letters or syllables.

CACOP'RAGY, in Lat. *cacopragia*, a disease of those viscera which minister to nutrition; *κακος*, ill, and *πραττω*, to act.

CA'COSPHEXY, in Lat. *cacosphexia*, a disordered state of the pulse; *κακος*, bad, and *σφυξίς*, pulse.

CACOSY'NTHETON. In rhetoric, a figure of speech improperly introduced, an ill arrangement of words in a sentence: *κακος*, ill, and *συνθετος*, composed.

CACOTH'YMY, in Lat. *cacothymia*, a disordered state of mind: *κακος*, bad, and *θωμος*, mind.

CACOT'ROPHY, in Lat. *cacatrophia*, consumption from defect of nourishment; *κακος*, bad, and *τροφη*, nourishment.

CACTA'CEE, a natural order of exogens, of which Cactus is the type, remarkable for their gay and large flowers.

CAC'TUS, a genus of succulent plants of

about 90 species, permanent in duration, generally without leaves, having the stem and branches jointed, for the most part armed with spines in bundles, with which, in many species, bristles are intermixed. Class *Icosandria*; order *Monogynia*. Name *κακτος*, anciently applied to the artichoke. They are natives of the West Indies and South America, and are only cultivated in this country for curiosity in green-houses. Gardeners call those species which are of a roundish form *melon-thistles*; those which are erect and support themselves are *torch-thistles*; those which have creeping roots are *cereuses*; the compressed and proliferous jointed are *prickly pears* or *Indian figs*.

CADAVER'IC, appertaining to a dead body; e. g. the changes induced in a corpse by putrefaction, are called cadaveric phenomena.

CAD'DIS. 1. Lint for dressing a wound.

—2. A kind of tape.—3. A water-insect sometimes called the *case-worm*, and often contracted *cad*.

CAD'DO, the jack-daw, or *corvus monedula*, Linn.

CADe, from Lat. *cadus*, a cask. A cade of herrings is the quantity of 500; of sprats, 1000.

CADe'-OIL, a medicinal oil prepared in Germany and France from the fruit of the *oxycedrus*, called in those countries *cadu*.

CADe'-WORM, the case-worm or caddis.

CA'DENCE, from Lat. *cadens*, falling, *cado*, to fall. In music, a pause or suspension at the end of an air, to afford the performer an opportunity of introducing a graceful extempore close, called also *reprise*. The word *cadence* is also frequently applied to the embellishment itself. In reading or speaking a certain tone is taken, which is the key-note on which most of the words are pronounced, and the fall of the voice below this is called *cadence*. The term is also used in horsemanship, to denote a just proportion observed by a horse in his movements.

CADEN'ZA (*Italian*), the modulation of the voice in singing.

CADET' (*French*). 1. A younger brother.

—2. A gentleman who has served in the army without pay, for the purpose of learning the art of war.—3. The term *cadet* is now applied, in Britain and the United States of America, to the pupils of a military academy.

CADeW', the case-worm or caddis.

CA'DI, in Arabic, a judge. Among the Turks, *cadi* signifies an inferior judge, in distinction to *molla*, a superior judge. They belong to the higher clergy.

CADILES'KER, the chief judge in the Turkish empire. The name is compounded of *cadi* (q. v.), and *leskar*, army, because his office originally extended to the try-

ing of soldiers, who are now tried only by their own officers.

CADME'AN, } relating to Cadmus, a re-
CAD'MIAN, } puted prince of Thebes,
who introduced into Greece the 16
simple letters of the alphabet; α, β, γ,
δ, ε, ζ, η, θ, ι, κ, λ, μ, ν, ξ, ο, π, ρ, σ, τ, υ. These
are called Cadmean letters.

CAD'MIA, καδμία. A name which has
been given to a variety of substances, but
is now chiefly used to denote an oxide of
zinc which collects on the sides of fur-
naces where zinc is sublimed, as in
brass founderies. This is more commonly
called *tutty*. Cobalt has been called *me-
tallic cadmia* and *native cadmia*; and *cala-
mine* is named *fossil cadmia* in some old
books.

CAD'MIUM, a metal discovered about the
beginning of 1818 by M. Stromeyer in an
oxide of zinc (*cadmia* or *tutty*). It has
since been found in several of the ores of
that metal, especially in the Silesian na-
tive oxide, which contains from 1½ to 11
per cent. of cadmium. It has the colour
and lustre of tin, but is harder and more te-
nacious, and is susceptible of a fine polish.
It is very ductile and malleable, melts at
about the same temperature as tin, and is
nearly as volatile as mercury, condensing
like it into globules which have a metallic
lustre: its vapours have no smell. Sp.
gr. 8·6.

CADU'CA-BO'NA, an old law term, signi-
fying goods (*bona*) forfeited (*caduca*) to
the treasury of the prince.

CADU'CEUS (*Latin*), Mercury's rod. A
white rod carried by the Roman heralds
(*caduceatorii*) when they went to treat of
peace: thus named *a cadendo, quid cadere
faciat contentiones*. The rod was of laurel
or olive, with two little wings on the
upper end, two serpents twined about it,
with their heads turned towards each
other, and their crests not bristled, em-
blematic of peace. Among the moderns
the caduceus is an emblem of commerce.

CADU'CIBRANCHIA'TES, Lat. *caducus*,
fading, and *branchiæ*, gills. Batrachians
which lose their branchial apparatus be-
fore reaching maturity, as the frog, toad,
&c.

CADU'COUS, in Lat. *caducus*, falling off.
Applied in botany to leaves which fall
before the end of summer; to a calyx
which drops at the first opening of the
petals, or even before, as in the poppy; to
petals which are scarcely unfolded before
they fall off, as in *thalictum*, and to parts
which fall off before the unfolding of the
flower or leaf, as the *perianth* of the *pa-
paver*, and the *stipules* of the *prunus avium*.

CÆCA, Lat. *cæcus*, blind. In comparative
anatomy, the blind processes of the alimen-
tary canal.

CÆ'cum (*Latin*), the blind gut. The first

portion of the large intestine, situated in
the right iliac region. It is so named
from *cæcus*, blind, because it is perforated
at one end only.

CÆR, in *British antiquity*, a term which,
like the Saxon *chester*, denotes castle, and
is prefixed to the names of places fortified
by the Romans.

CÆSALPI'NIA, the *brasiletto*. A genus of
arborescent plants, all natives of hot cli-
mates. *Decandria—Monogynia*. Named
in honour of A. Cæsalpinus, chief physi-
cian to Pope Clement VIII. All the plants
of this genus afford wood which is used
in dyeing: these woods are known in
commerce under the names of Brazil
woods.

CÆS'RIAN OPERATION, } the operation
CÆSARE'AN SECTION, } of making an
incision into the uterus, to extract the
child, either after the death of the mother,
or when the obstacles to delivery are so
great as to leave no other alternative. It
is so named, because Julius Cæsar is said
to have been brought into the world in
this manner.

CÆSTUS, the boxing-glove of the Gre-
cian and Roman pugilists.

CÆS'URA, in *Latin verse*, the separation
of the last syllable of any word from those
which precede it, and the carrying it for-
ward into another foot. It always ren-
ders the syllable on which it falls long,
and is accompanied with a slight pause,
called the *cæsural pause*, as in the follow-
ing line:—

Ille la | tus nive | um mol | li ful | tus
hyacintho.

In *English verse* the cæsura is equivalent
to a pause.

CETERIS PARIBUS, a Latin phrase, used
by writers on physical science, to signify
other things being equal; e. g. the heavier
the bullet, *ceteris paribus*, the greater the
range; i. e. the heavier the bullet, the
length and diameter of the piece, and the
strength of the powder being the same, the
greater will be the range of the piece of
ordnance.

CAFFEIN', } a chemical principle dis-
CAFEINE', } covered in coffee (*café*), by
Robiquet. It is a white volatile matter,
sparingly soluble in cold water, but
readily dissolved by boiling water or
alcohol, from which it is again deposited
on cooling in silky filaments. It contains
more nitrogen than most animal matters,
but never undergoes putrefaction.

CAFFILA, in *oriental countries*, a company
of travellers or merchants. It differs from
a caravan by being in the employ of some
sovereign or company. The root of the
word is Arabic, *kaf*, a companion.

CÆT'AN, the national dress of the Turks,
in the form of a night-gown, and gene-
rally white, with pale yellow flowers. It

is made of wool or silk, and sometimes lined with fur.

CAG, a small cask, differing from a barrel only in being of smaller size. The root is usually written *keg*: the root is *Dan. keg*.

CAGE, from Lat. *cagia*. The term *cage* is used in *carpentry*, to denote an outer work of timber, inclosing another within it. In this sense the cage of a staircase is the wooden sides or walls which inclose it.

CA'GIZ (Persian), a charter or patent, granted by the Persian kings to those whom they mean to honour, and by virtue of which the governor of every district of the kingdom, through which the *Caghizar* travels, must supply him with every necessary and accommodation.

CA'GUI, a monkey of Brazil, of two species, one of which is the Pongi; the other is not more than six inches long. They are called also *Jacchus* and *Edipus*.

The name *cagui*, pronounced by the natives *sagui*, is common in Brazil to a great number of quadrupeds.

CA'GAG, a name given to old geese sent to London market for sale. The same name is given to the worst kind of meat.

CA'GIZ (Spanish). An imaginary measure of about 12 imperial bushels: hence *cahazada*, a tract of land on which a *cahiz* of wheat may be sown.

CA'ic, CA'IQUE, a skiff of a galley. It went out of use with the galley; but the name is still applied in the Levant and Black Sea to small barks; and in the French navy it is used to designate any small vessel.

CAI'MACAN, Lieutenant. A title of the Grand Signior, the Grand Vizier, and Governor of Constantinople.

CAI'NITES, a strange sect of heretics, who appeared about 159 A.D., who asserted that the power which created heaven and earth was the evil principle.

CAIRN, a name given to heaps of stones, common in Great Britain, particularly in Scotland and Wales; generally of a conical form, and covered with a flat stone.

CAIRNGORM, a species of quartz, of various colours and sizes, on *Cairngorm*, a mountain of Scotland, belonging to the Grampian hills. The *cairngorms*, called also *Scotch pebbles*, are used for seals and other trinkets.

CAI'SSON, from Fr. *caisse*, a chest. 1. In *military affairs*, a wooden chest into which several bombs are put, and sometimes gunpowder, and buried under ground, in order to explode at a particular time. The name is also applied to a covered waggon for the provisions and ammunition of an army.—2. In *architecture*, a kind of case or flat-bottomed boat, used in the construction of bridges, large enough to contain an entire pier,

which is built in it; the caisson is then sunk to the bed of the river, and the sides removed from the bottom, which is left as a foundation for the pier. Floating vessels, under the same name, are used to close the entrances of docks and basins.

CA'JEPUT-OIL, the volatile oil obtained from the leaves of the cajeput-tree, the *Cajeputa officinarum* (the *Melaleuca leucadendron*, Lin.). The name is a corruption of the native term, *cayu-puti*, i. e. white-wood oil, because the bark of the tree has a whitish appearance, like our birch.

CA'JEPUT-TREE, the tree which affords the *cajeput-oil* (q. v.). It is common in Amboyna and other Eastern islands.

CAL'ABA, a tropical plant; the species of *Calophyllum* which affords the oil called *Oleum Sanctæ Mariæ*.

CAL'ABAR-SKIN, the Siberian squirrel-skin, of various colours. It is used in making muffs, tippets, and trimming for clothes, and is called by the French *petit-gris*.

CAL'ABASH, a light vessel, formed of the shell of the fruit of the calabash-tree, emptied and dried. So hard and close-grained are these shells, that they retain all kinds of liquids, and may be put over the fire, like kettles, without sustaining any injury. The name is also used to designate the calabash-tree.

CAL'ABASH-NUT, the fruit of the calabash-tree. It contains a pale yellow juicy pulp, of an unpleasant taste, which is esteemed a valuable remedy for several disorders, both external and internal.

CAL'ABASH-TREE, a name common to all the species of the genus *Crescentia*, but especially applied to the *C. cujete*, a production of the West Indies and the continent of America, about the height and dimensions of an apple-tree.

CAL'AITE, mineral turquois.

CALAMAN'CO, a sort of woollen stuff manufactured in England and the Netherlands; it has a fine gloss, and being chequered in the warp, the checks appear only on the one side.

CALAMAN'DER-WOOD, a beautiful species of hard wood, brought from Ceylon.

CAL'AMAR (Spanish), a name given to the cuttle-fish or sea-sleeve. The name means an *ink-horn*, the fish having on the belly two bladders containing a black fluid which it emits when pursued.

CAL'AMBAC (Indian), the lignum aloes, xylo-aloes or aloes-wood.

CALAMBO'UR, a species of aloes-wood or calambac used by cabinet-makers.

CAL'AMINE, the *lapis calaminaris*, a native carbonate of zinc. Name, *calamina*, from *calamus*, in allusion to its reed-like appearance.

CAL'AMITE. 1. From *calamus*, a reed: a genus of fossil equisetaceæ, abounding in the most ancient coal formations, and

characterised by large and simple cylindrical stems, articulated at intervals, but without sheaths.—2. From Ital. *calamita*, loadstone; a mineral variety of hornblende, found in serpentine with magnetic iron and calcareous spar. It is more generally called Actinolite, (q. v.)

CALAMUS (Latin), a reed: in *Roman archaeology*. 1. The *C. pastoralis* was a simple reed, used as a musical instrument.

—2. The *C. scriptorius*, or *C. chartarius*, was split like our pens, and sharpened with a knife: it was used to write on materials which the style would injure.

—3. *Calamus* is now applied as the generic name of the true Indian reed or rotang. *Hexandria—Monogynia*. There are several species, one of which the *C. rotang* affords the rattan canes used as walking-sticks; and another, the *C. aromaticus*, the sweet flag or *Acorus calamus*, Linn., is used by the distillers of Dantzic to correct the empyreumatic odour of spirits.

CALAN'DRA (Latin), the lark; applied as the name of a genus of coleopterous insects, of the family *Rhynchophora*. The species are all destructive: the well-known weevil, the destroyer of our granaries, is the larva of the *C. granaria*. The larva of the *C. palmorum*, called *ver palmiste*, is considered a great delicacy by the inhabitants of South America.

CALATHIUM, } *χαλαθος*, a cup. A
CALATHIDIUM, } botanical term denoting an umbel with all the flowers sessile.

CAL'ATOR, in *Roman archaeology*; an apparitor or officer who attends courts to summon the parties: *καληταρς*, a crier.

CALATRA'VA, a Spanish military order, instituted by Sancho III., in memory of his taking Calatrava from the Moors.

CALCAI'RE GROSSIER (French), a coarse limestone often passing into sand, and abounding in marine shells: it belongs to the eocene tertiary period.

CALCAI'RE SILICEUX (French), a compact silicious limestone, belonging, like the calcaire grossier, to the eocene tertiary period.

CAL'CAR (Latin), a spur; applied, 1. In *anatomy*, to the os calcis or heel-bone.—2. In *botany*, to a tube forming a sac at the side of the receptacle.—3. The name of a small reverberatory furnace, in which the first calcination of sand and potash is made for the purpose of converting them into frit, from which glass is ultimately made. The calcar is 10 ft. long, 7 wide, and 2 deep.

CAL'CARATE, Lat. *calcaratus*, spurred; applied to corols and nectaries of plants.

CALCA'REOUS EARTH, commonly denotes lime in any form, but properly it is pure lime.

CALCA'REOUS ROCK, limestone

CALCA'REOUS SPAR, crystallised native carbonate of lime; it is found in veins in all rocks from granite to alluvial strata. The most beautiful crystals are found in Derbyshire, but the purest variety is the *Iceland spar*. Its optical effects are well known.

CALCA'REOUS TUFFA, calcareous incrustations of carbonate of lime, sometime, found so thick and hard as to be used for architectural purposes. This tufa appears to be formed generally by springs, which issuing through limestone strata, hold in solution a portion of calcareous earth; this they deposit on coming in contact with air and light.

CALCEDON. With jewellers, a fowl vein like calcedony in some precious stones.

CALCED'ONY, a simple silicious uncrystallised mineral, semi-transparent and translucent, thus named from its being formerly found at Calcedon. There are several sub-species: common calcedony occurs in various shades of white, grey, yellow, brown, green and blue; the grass-green varieties are called *Plasma*; the apple-green is *Chrysoprass*; those with red, brown, and yellow tints are *Carnelian*; others are known as heliotrope, jasper, onyx, sard, &c.

CAL'CIFRAGA, breakstone (*calx*, a stone, and *frango*, to break), a plant so named from its supposed property of breaking the stone in the bladder. By some writers the term *calcifraga* is used synonymously with *saxifraga*.

CALCINA'TION, the process of subjecting a body to the action of fire to drive off the volatile parts, whereby it is reduced to a condition that it may be converted into a powder (*calx*). Thus marble is converted into lime by driving off the carbonic acid and water: and gypsum, alum, borax, and other saline bodies, are said to be calcined when they are deprived of their water of crystallisation. In a narrower sense, calcination consists in subjecting metallic bodies to a roasting heat, whereby they are changed into a metallic calx or earth.

CALCITRAFOI'DES, fossil shells, so named from their having four lobes disposed in a triangular form, like the four iron points of a caltrop.

CAL'CIIUM, the metallic basis of lime. See **LIME**.

CALCO'GRAPHY, from *calx*, chalk, and *γραφω*, to write, engrave. See **ENGRAVING**.

CALC-SINTER, stalactitical or stalagmitical carbonate of lime, so called from German *kalk*, lime, and *sintern*, to drop. Calc-sinter is often formed by the infiltration of carbonated lime-water through the crevices of the roofs of caverns, &c. When it hangs from the roof it is called *Stalactites*, when found on the floor, the irregular masses are termed *Stalagmites*.

CALC SPAR, calcareous spar, which see.

CALC TUFF, a deposit of carbonate of lime from calcareous springs. See CALCAREOUS TUFF and TUFF.

CALCULUS (Latin), a stone; dim. of *calc.* 1. In medicine, a general name for all hard concretions (not bony) formed in the bodies of animals. Those concretions formed in the gall-bladder are called *biliary calculi*, or gall-stones: these usually consist of cholesterine blended with various proportions of colouring matter, inspissated bile, albumen, &c. *Urinary calculi* are formed by a morbid deposition from the urine in the kidney or bladder, and are therefore *renal* or *vesical*. Their usual constituents are lithate of ammonia, oxalate of lime, and mixed phosphates. There are also gouty concretions, called *arthritic calculi*, and *lacrimal* and *pancreatic calculi*, the first formed in the lacrimal passages, and the latter in the pancreas. *Pulmonary calculi* are found in the substance of the lungs, or in the ramifications of the bronchi; and *salivary calculi*, in the salivary glands or their ducts. There are likewise *calculi of the ears* (indurate wax), of the pineal and prostate glands, and *spermatic calculi*.—2. In mathematics, the higher analysis applicable to variable magnitudes, or to quantities which may be considered as having arrived at a given state of magnitude by successive variations. This gives rise to two departments of analysis; first, the method of descending from quantities to their elements, called the *differential calculus*; second, the method of ascending from the elements of the quantities to the quantities themselves, constituting the *integral calculus*. Both of these methods are included in the general name, *infinitesimal analysis*. Every variable quantity expressed algebraically may be differentiated, but there are differential quantities which we cannot integrate; some because they could not have resulted from differentiation, and others because means have not yet been discovered of integrating them.

CALDA'RUM. In ancient architecture, an apartment in the baths, heated for causing perspiration.

CAL'EBASH, the *Cucurbita lagenaria*, an annual plant of both Indies.

CALEFA'CIENT, Lat. *calefaciens*, making warm; applied in medicine to substances which cause warmth in the parts to which they are applied.

CAL'EMBOURG, a sort of *pun* in which a word is employed in an unusual sense; it takes its name from a Westphalian Count Calenberg, who, in the reign of Louis XV., amused the Parisians by his blunders in speaking.

CAL'ENDAR, the division of time into

years, months, weeks, and days; also a register of these divisions. Among the old Romans, for want of such a register, it was the custom for the *pontifex maximus*, on the first day of the month, to proclaim (*calare*) the month with the festivals occurring in it, and the time of new moon, hence *calendæ* and *calendar*.

CAL'ENDAR MONTH, a solar month as it stands in almanacs.

CAL'ENDER, from *καλινδρος*, a cylinder. A machine consisting essentially of two cylinders, revolving so nearly in contact with each other, that cloth passed through betwixt them is smoothed, and even glazed, by their powerful pressura. The machine is employed either to finish goods for the market, or to prepare cotton and linen webs for the calico-printer, by rendering their surfaces level and compact.

CAL'ENDERS, a sect of dervises in Turkey and Persia: named from their founder.

CAL'ENDS, with the Romans, the first days of the month, so called because the *pontifex maximus* then proclaimed (*calavit*) whether the *nones* would be on the 5th or on the 7th. This was the custom till 450 U. C., when the *fasti calendares* were affixed to the wall in public places.—In ecclesiastical history, the conferences regarding their duty and conduct, anciently held by the clergy of each deanery, are called *calends*.

CALEN'DULA, the *Marygold*: an extensive genus of plants. *Syngenesia—Polyg. necessaria*. Named *quod singulis calendis*, i. e. *mensibus florescat*, because it flowers every month. The annual species are all hardy; the permanent ones are cultivated in this country as green-house plants. A mucilaginous substance obtained from the plant is called *calendulin*.

CAL'ENTURE, Lat. *calentura*, a form of phrenitis, alleged formerly to have been common among seamen in tropical latitudes. It was attended with delirium, in which the patient fancied the sea to be green fields, and would leap into it if not restrained. There appears to be no such disease known at present.

CAL'IBER, Fr. *calibre*. 1. The diameter of the bore of any piece of ordnance.—2. The diameter of any body, as a column, a shot, a shell.

CAL'IBER COMPASSES, { a sort of com-
CAL'IPER COMPASSES, } passes, with
arched legs, used by gunners to take the diameter of shots, shells, &c., and by turners to find the diameter of the object in the lathe: called often for shortness *calibers* or *caltipers*. The gunner's calibers, called also *caliber rule*, consist of two thin pieces of brass jointed by a rivet, so as to move quite round each other. The instrument contains a number of rules, tables, &c., connected with the artillery practice.

CALICO, a species of cotton cloth, named from *Calicut*, in India, where it was first manufactured. In England, unprinted cotton cloth is called calico; in America, the cloth is called calico after it is printed; in Scotland, white cotton cloth or calico is called *blank*.

CALICO-PRINTING, the art of applying colours to cloth after it has come from the hand of the weaver, in such a manner as to form patterns or figures. This art is sometimes practised upon silks, linens, and woollens, but most frequently upon that species of cotton cloth called calico: whence the name.

CALIDRIS, the name given by Cuvier to the sandpipers, and by Vigors to the *sanderlings* (the *arenaria* of Bechstein). Both of the subgenera of birds are comprehended in the genus *Scolopax*, Lin. The name was originally applied to some bird of this genus.

CALIGO (Latin), darkness: appropriately, a disease of the eye, causing dimness of sight or blindness. Its cause is the interposition of some opaque body between the object and the retina: hence there are many species.

CALIPH, the name assumed by the successors of Mohammed in the government of the faithful, and in the high priesthood. The term is Arabic, and means *vicegerent*. The title is borne by the grand signior in Turkey, and the sopher in Persia.—**Caliphate** is the government or jurisdiction of a caliph.

CALIPIC PERIOD, in *chronology*, a period of 76 years continually recurring, after which it was supposed by Calippus, that the lunations, &c., of the moon would return again in the same order (which is not exact, as it brings them too late by a day in 225 years).

CALIXTINS, a sect of Hussites in Bohemia, who differed from the Catholics chiefly in giving the communion cup to laymen. They are called also *Utraquists*.

CALK, to drive oakum into the seams of planks to prevent the entrance of water. After the oakum is driven in, it is covered with melted pitch or resin to preserve it from the action of the water. In some parts of America the term *calk* is used substantively in the same sense as *calkin* in England and *calker* in Scotland; and, as a verb, to set *calks* upon horses' shoes.

CALK'ERS, in Scotland, the sharp pointed armature of a horse's shoes, put on to prevent the animal's feet from slipping on ice, &c. The word is properly *chalkers*, and has reference in its etymology to the white lines which the chalkers make on the ice: hence the term is often used to designate such lines.

CALK'ING. 1. Stopping the seams of a

ship with oakum.—2. Arming a horse's shoes with calkins.—3. Covering the back of a design with black lead or red chalk, and, with a sharp point, tracing lines through on a wax plate or other prepared surface, which leaves an outline impression on the plate or other surface. This is more commonly called *tracing*.

CALK'ING-IRON, an iron instrument like a chisel, to force the oakum into the seams of ships.

CALK'INS, in England, the sharp pointed armature of a horse's shoes. See **CALKERS**.

CALL. 1. The cry of a bird to its young or to its mate at coupling time.—2. A sort of pipe used by fowlers to catch birds by imitating their notes.—3. Among sportsmen, a lesson blown on the horn of the keeper to encourage the dogs in their search of game.—4. Among seamen, the boatswain's whistle.—5. The invitation of a Scotch congregation to a preacher to become its pastor.—6. A short visit.

CALLICHTYS, a genus of Malacopterygious abdominal fish, related to the salmon-tribe. Name from *καλλος*, beautiful, and *ιχθυς*, a fish.

CALLICOC'CA, a genus of plants, *Pentandria—Monogynia*. Name from *καλλος*, beautiful, and *κοκκος*, berry. *Ipecacuanha* is afforded by a Peruvian species of this genus, *C. Ipecacuanha*.

CALLIGRAPHY, Gr. from *καλλος*, beauty, and *γραφω*, I write. The art of beautiful writing.

CALLIONYMUS. 1. A genus of Acanthopterygious fishes, placed among the Gobioides by Cuvier. The dragonet is a species. Name, *καλλιονυμος*, given by Pliny to an undetermined species.—2. The lily of the valley, a species of *Convallaria*.

CALLIOPE, one of the Muses (q. v.); daughter of Jupiter and Mnemosyne. She presided over eloquence and heroic poetry. *Καλλος* and *οψ*.

CALLISTHENICS. See **GYMNASTICS**.

CAL'LOUS, from *callus*, hard. Indurated. Applied to parts of organized bodies which are morbidly hard. When there is a thickening of enamel upon any particular part of a shell, resembling a tumor, it is termed *callous* or a *callosity*, this is observed among spiral shells, in the inner lip of the Olives, Naticæ, and many others; and is very common near the hinge of certain bivalves.

CAL'UNA, the common heath or *ling*, *Erica vulgaris*, of which there are many varieties known in Britain. Name from *καλλω*, to adorn, which is peculiarly applicable, whether we consider the beauty of its flowers or the circumstance that brooms are made of its twigs. It is the badge of the clan Macdonell.

CAL'VUS (Latin), a preternatural hardness of any part, whether carneous or osseous. Corns produced by pressure and friction on the hands and feet of labourers are examples of the first, and the new growth of bony substance between the extremities of fractured bones, by which they are united, is an instance of the latter.

CALOCAT'ANUS a name of the wild poppy, *Papaver rhæas*; from *καλος*, beautiful, and *κατανου*, a cup, in allusion to the beauty of its flower and shape.

CAL'OMEL, from *καλος*, good, and *μελας*, black. This name was originally applied to the black sulphuret of mercury, *æthiops mineral*, it was afterwards very inappropriately applied to the protochloride of mercury, which is the only substance now known under the name of calomel. It is a highly important and highly abused medicine.

CALOPHYLLUM, the calaba-tree of the E. Indies, of which there are two species. *Polyandria—Monogynia*. Name from *καλος*, beauty, and *φυλλον*, a leaf; the species being distinguished by the beauty of their leaves. All the species afford a kind of tacamahaca, and an oil used for burning.

CALOR'IC, from *calor*, heat; applied in philosophical language as the name of that agency which produces the phenomena of heat and combustion. There are two theories regarding it: 1. That it is a subtle fluid, the particles of which mutually repel one another, and are attracted by all other substances.—2. That it is not a separate entity, but is merely, like gravity, a property of matter referable to a vibratory motion among the ultimate particles of common matter. The arguments in favour of the first theory are founded on the evolution and absorption of heat during chemical combination, and the existence of calorific rays along with those of light in the solar beam; those of the latter are chiefly founded on the production of heat by friction, and other mechanical processes, producing motion among the particles of matter.

CALORIMETER, from *caloric* and *metrum*, a measure. An apparatus invented by Lavoisier and Laplace to measure the quantity of heat which a body gives out in cooling, by the quantity of ice which it melts. It consists of three similar metallic vessels, the one containing the other, and kept separate by small pieces of wood. The intervals between the vessels are filled with pounded ice, and the body to be cooled is placed in the inner vessel which is formed of iron net-work. The quantity of water produced by the cooling of the body is the measure of its specific caloric. In the calorimeter of Count Rumford water is used, and the

capacity of the body is determined by the number of degrees which the temperature of the water is raised in cooling the body a given number of degrees. The sources of fallacy in both kinds are such as render the results doubtful.

CALORIMO'TOR, from *caloric* and *motor*, a mover, a galvanic instrument, in which the calorific influence or effects are attended with scarcely any electrical power.

CALOSO'MA, Gr., from *καλος*, beautiful, and *σωμα*, body. Carabidæ or ground beetles, a genus of most beautiful coleopterous insects.

CALOSTEM'MA, a genus of perennial plants of New Holland. *Hexandria—Monogynia*. Name from *καλος*, beautiful, and *στιμμα*, a wreath.

CALOTHAM'NUS, a genus of plants (trees) of New Holland. *Polyadelphia—icosandria*. Name from *καλος*, beautiful, and *ταμνος*, tree.

CALOTTÉ' (French), a cap; applied in architecture to a concavity in the form of a cup or niche, lathed and plastered, to diminish the height of a chapel, cabinet, alcove or the like, which otherwise would be too high for the breadth.

CAL'OTERS, Greek monks, who chiefly resided in Mount Athos, and became celebrated for their solitary and austere life. The Turks sometimes call their dervishes by this name.

CALP, *καλπη*, a sub-species of carbonate of lime containing argill and oxide of iron.

CAL'THA, the marsh marigold, a genus of British perennials. *Polyandria—Polygynia*. Greek name *καλθα*, caltha, probably a corruption of *χαλχα*, yellow, whence its other names, *καλθουλα*, calthula; *καλδυλα*, caldula; *καλειδυλα*, calendula.

CAL'TROPS, a name common to all the species of the genus *Tribulus*, but especially applied to the *T. terrestris*, a thistle, with a roundish prickly pericarp on the one side, gibbose and armed with three or four daggers; and on the other angular and converging with transverse cells. It is found in the south of Europe, among corn, &c., and is peculiarly dangerous to the feet of cattle. Name, *calyx*, the heel, and *tribolo*, a thistle. The name *water-caltrops* is applied to the plants of the genus *Trapa*.

CALTROP. In military affairs, an instrument with four iron points disposed in a triangular form, so that three of them being on the ground the other point is upwards. Caltrops are scattered on the ground where an enemy's cavalry are to pass, to impede their progress by endangering the feet of the horses. The instrument takes its name from its resemblance to the caltrops thistle.

CALUM'BA, the root of the *Cocculus palmatus*, imported from Colombia in Ceylon. Synonyms, *Colombo*, *Calomba*, *Columbia*.

CAL'UMET, the Indian pipe of peace, corresponding in some measure to the European flag of truce. The bowl of the pipe is usually made of a red soft marble, and the tube of reed ornamented with feathers. From this instrument the *calumet dance*, the least hideous of the Indian dances, has its name.

CAL'VARY, from *calcaria*, a skull. In *heraldry*, a cross set upon steps in imitation of that on which Christ was crucified on Mount Calvary.

CAL'VES-SNOUT, the herb snap-dragon. See **ANTIRRHINUM**.

CAL'VINISM, that system of religious doctrine taught by John Calvin, the distinguishing features of which are embraced in the *five points*,—predestination, particular redemption, total depravity, irresistible grace, and the certain perseverance of the saints. The doctrines of the trinity and original sin, are common to other protestant sects besides Calvinists.

CALX (Latin), properly lime or chalk, but the term is now more generally applied to the *residuum* of a metal or mineral which has been subjected to a violent heat, burning or calcination, and which is or may be reduced to a fine powder. Metallic calces are now generally called *oxides*.

CALX NATI'VA (Latin), native calx: a kind of marly earth which, without burning, will make with water a sort of calcareous cement.

CALY'BO, *χαλύβη*, a cottage. A one-celled, inferior, or few-seeded fruit, enclosed in a capsule, as the acorn of the oak.

CALY'CAN'THA'CEÆ. Calycanthus the type. A natural order of plants related to *Rosaceæ*.

CALYCAN'THEMÆ, an order of plants in Linnaeus' fragments of a natural method, consisting of plants which have the corolla and stamina inserted in the calyx; hence the name from *calyx* and *ανθος*, a flower.

CALYCAN'THUS, the *all-spice*, a genus of American trees. *Icosandria*—*Polygynia*. Name from *καλύξ*, a calyx, and *ανθος*, a flower; the corolla consisting of leaves on the calyx.

CALY'CERA, the *wax-cup*, a genus of syn-genesious plants of the order *Polygamia segregata*. Name from *calyx* and *cera*, wax.

CALY'CERA'CEÆ. Calycera the type. A natural order of plants related to *Compositæ*.

CALY'CIFLO'RÆ, an order of plants in Linnaeus' fragments of a natural method. Name from *calyx* and *flos*, the order con-

sisting of plants which have the stamina inserted in the calyx.

CALY'CINAL, Lat. *calycinalis*, belonging to the calyx of a flower. Applied to the nectary when it is a production of the calyx.

CALY'CULATE, Lat. *calyculatus*, having a double calyx, or several successively diminishing in size. Applied to a *perianth*, when there are smaller ones like scales about its base: six seeds are inclosed in a hard bone-like calyx.

CALY'CuLE, Lat. *calyculus*, a little calyx. Used to designate, 1. The membranaceous border surrounding the apex of a seed.

—2. A little calyx exterior to another proper one.

CALY'M'ENE, a genus of Trilobites, long confounded with insects under the name of *Entomolithus paradoxus*. This genus appears to have been extinguished with the termination of the carboniferous strata. The name is from *καλυμμένη*, concealed, in reference to the dubious characters of these fossils.

CALY'PSO. 1. In *mythology*, a daughter of Atlas. She inhabited the woody island Ogygia, situated deep in the ocean, remote from all intercourse with men and gods. She died of love for Ulysses.—2. The generic name of a perennial plant (*C. borealis*) of North America and Europe.

CALY'PTER, *καλυπττήρ*, a covering. Used in anatomy to designate a carnosous excrescence covering the hæmorrhoidal vein.

CALY'PTRA, Lat. from *καλυπτα*, to cover. In *botany*, 1. The veil or covering of mosses; a kind of membranaceous hood placed on a thin capsule or fructification, like an extinguisher on a candle.—2. The proper exterior covering or coat of the seed, which falls off spontaneously.

CALYPTEREA, a genus of Mollusca, having a conical shell; placed in the Capuloid family by Cuvier, and among the Halio-lidæ or ear-shells by Swainson. Name from *καλυπτα*, to cover, there being found in the hollow of the shell a little lamina that projects inwards, and interposes itself between a fold of the abdominal sac.

CALY'PTRATE, Lat. *calypttratus*. Having a covering like the calyptra of mosses.

CALYSTE'GIA, the bearbind. A genus of plants mostly perennials. *Pentanaria*—*Monogynia*. Name from *calyx* and *επιγαζω*, to conceal.

CAL'LYX, from *καλύξ*, the flower-cup—*καλυπτα*, to cover. Used in botany to designate the external covering of a flower, generally resembling the leaves in colour and texture. There are seven kinds of calyces, viz. perianthium, amentum, spathe, gluma, involucre, perichæthium, volva.

CAME'A, a semi-pellucid gem, approaching to the onyx in structure, being composed of zones, and formed on a crystalline basis.

CAMAIEU, a variety of onyx, or any gem whereon there are various natural figures. From *camahuia*, an oriental name of the onyx. This name has also been generally given to all precious stones whereon lapidaries employ their art, to perfect their natural beauty. Camaieu is also used synonymously with *cameo* (q.v.), and to designate a painting wherein there is only one colour, and where the lights and shades are of gold, wrought on a golden or azure ground. When the ground is yellow, the French call it *cirage*; when gray, *grisaille*. The Greeks called pieces of this sort *μορεχομαατα*.

CAMAL'DOLITES, } an order of hermits
CAMALDU'LIANS, } and monks, founded in 1012, by St. Romuald, in the valley of Camaldoli, near Arezzo, in the Apennines, and confirmed by Pope Alexander III.

CAM'ANDAG, } a tree of the Philippine
CAM'ANDANG, } islands, which has not been classed botanically. Its juice, called *tagne*, is used by the natives to poison their arrows.

CAMARILLA, Span. The *little* or private chamber of the Sovereign of Spain. The term is generally applied to his immediate confidants, and is then synonymous with *clique*.

CAMARO'MA, } *camaration*, a species of
CAMARO'SIS, } fracture of the skull where the bones present the appearance of an arch or vault (*καμαρα*). *Camariosis* has also been used by architects to denote an elevation terminating with an arched or vaulted head.

CAM'BER, in *architecture*, an arch on the top of an aperture, or on the top of a beam. The term is from Fr. *cambrer*, to arch, probably from *καμαρα*, an arch.

CAM'BER-BEAM, a piece of timber cut with an obtuse angle on the upper edge, so as to form a declivity on each side from the middle of their length. Beams of this description are used in truncated roofs, being covered with boards and the boards covered with lead, to discharge the rain-water towards each end of the platform.

CAMBERED-DECK, an arched deck declining towards the stem and stern.

CAMBER-WINDOWS, windows which are arched above.

CAMBERING, arching, as the deck lies *cambering*.

CAM'BIUM, Lat. from *cambio*, to exchange. In *physiology*. 1. The nutritious humour which is changed into the materials of which the body is composed. — 2. The gelatinous substance or matter of organisation supposed to pro-

duce the young bark and new wood of plants.

CAMB'ODIA, } Gamboge: thus named from
CAMB'OGIA, } a river in Transgangetic India, on the banks of which the tree that affords the gum is produced. See GAMB'OGIE.

CAM'BRASINE, a species of fine linen made in Egypt, and named from its resemblance to cambric.

CAM'BRIAN ROCKS, the name given by Sedgwick to a group of rocks placed below the Silurian rocks, from their being extensively developed in North Wales, the ancient name of which is *Cambria*.

CAM'BRIC, a sort of fine linen, thus named from its being first made at Cambray, in French Flanders. A good imitation is now produced extensively in this country from fine cotton yarn hard twisted.

CAM'E, a slender rod of cast lead, of which glaziers make their turned or milled lead for joining the panes or quarrels of glass.

CAM'EL, Lat. *camelus*. 1. The English name of the camel-genus of quadrupeds. — 2. A machine used first by the Dutch for lifting ships over the Pampas, at the mouth of the river Y, or over other bars. It consists of two half ships so constructed that they can be applied below water, on each side of the hull of a vessel. On the camel's deck are a great many horizontal windlasses, from which ropes proceed through apertures in the one half, and being carried under the keel of the vessel, enter similar apertures in the other half, from which they are conveyed to the windlasses on its deck. When the apparatus is to be used, as much water as may be necessary is suffered to run into the parts: all the ropes are cast loose, the vessel is conducted between the divisions of the camel, and the ropes are then made fast, so that the ship is secured in its place. The water is then pumped out of the parts of the camel, by which they rise and float the ship between them. Thus, ships of 100 guns can be raised to pass without grounding the shallow banks of the Zuyder-Zee. The Russians use similar machines to float vessels built in the Neva, over the bar at Cronstadt. The machine takes its name from its supposed resemblance to a camel, called *kameel* by the Dutch.

CAM'ELEON. See CHAMELEON.

CAMEL'IDÆ, the camel-tribe of quadruped; *καμηλος*, a camel, and *ιδος*, like. The camel is the type.

CAMEL'INA, the *gold-of-pleasure*: a genus of European annuals. *Tetradynamia-Siliculosa*. Named from *camelus*, because camels are supposed to be fond of it. (The name *gold-of-pleasure*, is by some given to

the plants of the genus *Myagrum*, and perhaps more correctly.)

CAMEL'IA, a very extensive genus of Asiatic plants (trees and shrubs), all treated in this country as green-house plants. *Monadelphia*—*Polyandria*. Name from *καμηλια*, an undetermined plant.

CAMEL'IDÆ, a natural order of plants, CAMELLI'ÆÆ, including the genera *camellia* and *thea*.

CAM'ELOPARD, the *giraffe*: an African quadruped forming the genus *Camelopardalis* of Linnaeus. It is the tallest of animals; its head being often 18 feet from the ground. Its hair is short and gray, intermixed with fawn brown angular spots. It lives on leaves, and is of a gentle disposition.

CAMELOPARDALIS, the generic name of the *camelopard* (q. v.) or *giraffe*. Characterised in both sexes by conical horns covered with a hairy skin; from *καμηλος*, a camel, and *παρδαλις*, a panther, the animal being supposed by the ancients to partake of the characteristics of both these animals.

CAMEL'S HAIR, the hair of the camel, imported into this country chiefly for the manufacture of fine pencils for drawing and painting. It is divided into three sorts, the black, the red, and the grey. The black is the dearest, and the grey is only worth half the red.

CAMEL'S HAY, the sweet rush (*andropogon schæenanthus*). The dried plant is imported into this country from Turkey and Arabia, and used as a stomachic.

CAM'ELUS, the Latin generic name of the camel: there are only two species known, the two-humped or Bactrian camel (so called from its inhabiting Turkestan, the ancient Bactria), and the one-humped camel or dromedary, both large animals of the Eastern Continent. (The *lamas* are by some placed in this genus). The camel belongs to the ruminant order of mammiferous animals, and is the only animal of that order which has cutting teeth in the upper jaw. Name *καμηλος*, from *καμνω*, to toil.

CAM'ELOT. See CAMLET.

CAM'EO, in the proper sense, a gem engraved in *relievo*. At first the onyx (see CAMAIEU) only was used for this purpose, but afterwards any gem which was carved in relief was called a *cameo*. They were carved according to the layers of the stone, so that the ground should be of a different colour from the figure in relief. The most famous cameo is the *Apotheosis of Augustus*, at Paris; it is 12 inches high, and 10 inches wide.

CAMERA ÆOLIA (*Chamber of Æolus*), a contrivance for blowing the fire. It is simply a large *æolopile* (q. v.).

CAM'ERA CLARA (*Clear chamber*), an

optical instrument on the principle of the *Camera obscura*, and has this advantage over that instrument, that it may be used equally well in clear and dark weather.

CAM'ERA LUCIDA (*Light chamber*), an instrument employed for delineating views from nature and copying drawings. It consists essentially of a four-sided glass prism,

a section of which is shewn in the cut, in which O is the object, and O' its reflected image, P the prism, and E the eye of the observer, who is thus led to suppose that he sees the object delineated on a sheet of white paper placed at O'. This instrument was invented by Dr. Wollaston, but the name was originally given to an instrument invented by Dr. Hooke, analogous to the solar-microscope.

CAM'ERA OBSCU'RA (*Dark chamber*), an optical instrument, employed for exhibiting the images and colours of external objects, so that they may be traced on paper. The simplest form of it is a darkened room, into which no light is admitted except by a small hole in the window-shutter. A picture of the opposite objects will then be seen on the wall or on a white screen placed so as to receive the light from the aperture. A very simple portable camera obscura is represented in

the annexed cut. ABCD is a small rectangular box, closed on all sides except the space EFGD, which is covered with a piece of ground glass. In the other end is a moveable tube T, with a proper lens, and in the body of the box is a mirror EIH D, set to an angle of 45°. Upon this mirror the image of the object PQ falls, and is reflected upon the ground glass plate EFGD.

CAMERALISTICS, the science of finance, German *cameralist*, a financier. The root

of the word seems to be Spanish *camerilla*, a chamber.

CAMERA'RIA, the *bastard manchinel*; a genus of plants, natives of warm climates. *Pentandria—Monogynia*. Name *camararia*, a waiting-maid, in allusion to the light and gaudy appearance of the plants when in bloom.

CAM'ERATED, vaulted or arched. *Camera*, an arch or vault.

CAM'ERLINGO, in *Italy*; originally the pope's treasurer, at present the highest officer in the ecclesiastical states, under the pope.

CAMER'ONIANS, a sect of Christians who trace their descent from the martyrs of the Scottish church, and hold by the principles of that church as settled at what is called the second Reformation (1649). They take this designation from Richard Cameron, who was killed in a skirmish at Airmoss, Ayrshire, where he and his followers were attacked by Bruce of Earlsball, on the 20th July, 1680.

CAM'ERY, that disease of horses called *founder* (q. v.).

CAM'ISADE, in *military affairs*, an attack by surprise at a time when the enemy is supposed to be in bed; hence the derivation, Ital. *camicia*, Sp. *camisa*, a shirt.

CAM'ISARDS, persecuted Calvinists, inhabiting the Cevennes, in France, who, in the beginning of the 18th century attacked the tax-collectors, dragged them out of bed and hanged them with the tax-rolls about their necks. To disguise themselves, they appeared in their shirts, whence the name.

CAM'LET, } A light stuff manufactured
CAM'BLET. } on a loom with two treadles, and so named from its being originally made of camel's hair. There are camlets of different kinds, as goat's hair, hair and wool, wool and silk, wool and linen or cotton yarn. Some are watered, others figured, and some striped.

CAM'OMILE, the *anthemis nobilis*, a well-known plant, the dried daisy-like flowers of which are much used in medicine. Latin name *Chamonilla*.

CAMP, from Lat. *Campus*, 1. The place and order of tents for soldiers in the field, in contradistinction to *bicouac*, which denotes the situation of an army which remains in the open air.—2. In *agriculture*, a heap of turnips, potatoes, or other roots, laid up for preserving through the winter.

CAMPA'NA (Latin), a bell; used to denote, 1. In *chemistry*, a receptacle like a bell used for making sulphuric acid; whence the old name *oleum sulphuris per campanum*.—2. In *architecture*, the body of the Corinthian pillar, thus named from its figure.

CAMPANA'CEE, bell-shaped flowers; an order of plants in Linnaeus's natural method—*Campana*, a bell.

CAMPAN'ILE, in *architecture*, a tower appropriated to bells, from Ital. *campana*, a bell. In Italy bell-towers are built apart from the churches.

CAMPAN'ULA, the *bell-flower*, an extensive genus of plants mostly perennials. *Pentandria—Monogynia*. Name, dim. of *campana*, a bell. There are several British species of this plant, of which the throat-wort is among the best known. It is used in medicine for sore-throat.

CAMPANULA'CEE, bell-shaped flowers; a natural order of plants of which the genus *campanula* is the type.

CAMPANULA'RIA, a genus of coralliferous polypi placed among the *Tubularii* by Cuvier. Name from *campanula*, a little bell. The extremities of the branches through which the polypi pass are widened and bell-shaped.

CAMPAN'ULATE, Lat. *campanulatus*, bell-shaped, applied to many parts of plants, especially the corolla and nectary.

CAMP-CEILING. A roof is said to be *camp* or *tent* ceiled, which has the ceiling under the rafters.

CAMPEACHY-WOOD, the wood of the *Hæmatoxylon campeachianum*, known better by the name *logwood*, which is said to attain the greatest perfection at Campeachy in America.

CAMPESTRAL, } Lat. *campestris*, per-
CAMPESTRIAN, } taining to the open fields, applied as the specific name of many plants.

CAMP-FIGHT. In *old law writings*, a trial by duel, or the legal combat of two champions for the decision of a controversy.

CAMP-MEETINGS, religious meetings among the Methodists held in the open air (*campus*) in Britain and America. In the latter country sometimes 20,000 attend.

CAMPH'ENE. In *chemistry*, a hydro-carbon, identical with pure oil of turpentine.

CAM'PHIRE, } a peculiar substance which

CAM'PHOR, } exists in several plants, but is obtained chiefly from two trees: the *Laurus camphora*, found in the forests of Fokein in China and of North America, and the *Dryobalanops camphora*, which grows in the forests of Sumatra and Borneo. From the first-named tree the camphor is obtained by boiling the wood; from the second it is obtained by making incisions into the tree when growing, into which incision the camphor concretes; the tree is then cut down and the camphor extracted. After extraction it is purified by mixing it in a crude state with a twentieth part of its weight of quick lime and subliming it. When pure it has a strong and peculiar fragrance, and a bitter pungent taste. It is white, semi-transparent, unctuous to the touch, brittle, and of irregular crystalline texture. It is volatile, melts at

88° Fahr., and boils at 400°, burns with a bright flame and much smoke at higher temperatures. Sp. gr. 984; constituents—carbon, 8, hydrogen, 1, oxygen, 1. It was introduced into Europe by the Arabians, under the names *camper* and *cafoor*. Latinised *camphora*, whence *camphor*.

CAMPHORATE, a salt formed by the union of the camphoric acid with a base.

CAMPHORATED, containing camphor; e. g. camphorated spirit of wine.

CAMPHORIC ACID, an acid obtained by repeated distillations of nitric acid from camphor. It combines with the earthy, alkaline, and metallic bases, and forms salts called *camphorates*.

CAMPHOR OIL, a fragrant essential oil, obtained in large quantities by heating the wood of the *Dryobalanops camphora*. It is cheap and forms a good substitute for spirit of turpentine in the arts.

CAMPITUM, a name given to the Donatists, from their meeting in fields (*campi*) for want of churches.

CAMPULIROFUS, Gr. from *καμπτη*, I curve, and *ροφη*, I turn. In botany such ovules as bend down upon themselves till their apex touches the base.

CAMWOOD, a red dye-wood, the colouring matter of which seems to differ little from that of the common Nicaragua wood, either in quality or quantity. It is principally obtained from the vicinity of Sierra Leone.

CAN-BUOY, a buoy of the form of a cone, made large and sometimes painted.

CAN-HOOK, in ships, an instrument to sling a cask by the ends of the staves, formed by reeveing a piece of rope through two flat hooks, and splicing the ends together.

CANADA BALSAM, one of the purest turpentines. It is obtained from the *Pinus balsamea*, a tree found in Canada.

CANADA RICE, a name common to all the species of the genus *Zizania*, but especially applied to the *Z. aquatica*, a Canadian perennial.

CANAILL, the coarser part of meal. The term is Fr. *canaille*, refuse, dregs.

CANA'L, Lat. *canalis*, a pipe .1. An artificial channel filled with water, kept at the desired level by means of locks or sluices, and forming a communication between two or more places.—2. In architecture this word is sometimes used for the flutings of a column or pilaster. The canal of the volute is a spiral channel commencing at the eye of the Ionic capital, and expanding in width until the whole number of revolutions are completed. The canal of the Larmier is a groove recessed on the soffit of the larmier upwards, to prevent the rain-water from running down the bed of the cornice.—3. In conchology, the groove or gutter observable

in different parts of certain spiral shells, belonging to the carnivorous tribe (*Zoophaga*), is called the canal.—4. In physiology, any duct or passage in the body, through which any of the fluids or juices flow, or other substances pass.

CANALICULATE, Lat. *canaliculatus*, channelled; furrowed.

CANALIFERA, Lat. *canalis*, a canal, and *fero*, I bear. Zoophagous univalves, the shell of which is characterised by a long straight canal terminating its mouth.

CANARDIERE, a small turret or sentry-box, sometimes erected on the salient angles of works to serve as a shelter to a sentinel. Formerly canardieres were constructed on castles to shelter the warriors when they discharged their missiles.

CANARY-GRASS, a name common to all the species of the genus *phalaris*, but especially applied to the *P. canariensis*, brought from the Canary Islands, but now naturalised in Britain. It affords the canary-seed.

CANASTER, the rush basket in which tobacco is packed in South America.

CANCELLARIA, a genus of shell, comprising many species, some of which are found in a fossil state in the London clay and calc-grossier of Paris. This genus is placed among the Scolyminae by Swainson. Name from *cancelli*, lattice-work, the shell being generally reticulated and scabrous.

CANCELLED, Lat. *cancellatus*, reticulated; having the appearance of *cancelli*.

CANCELLI (Latin), lattice-work: the divisional lines crossing each other at right angles.

CANCER (Latin), a crab. 1. The crab, a genus of malacostraceous crustaceans of the order Decapoda, and family Brachyura, Cuv. Naturalists have now divided the crabs into swimmers, arcuated, quadrilateral, orbicular, triangular, &c., differing in shape, the number and form of the spines or teeth, the relative proportion of the eyes and their pedicles, &c. Each of these sections is again divided into numerous genera.—2. The crab, one of the signs of the zodiac, being the sign of the summer solstice, and represented upon the globe by the figure of a crab. In books it is marked ♋. A lesser circle of the sphere parallel to the equator, and passing through the beginning of the sign cancer, is called the tropic of cancer.—3. The cancer, a malignant disease, thus named from the parts affected being raised into a tumour, and surrounded by dilated veins, thereby presenting somewhat the appearance of a crab. In the first stage of the disease it is called *scirrhus*, or *occuli cancer*.

CANCERITE, a petrified crab (*cancer*).

CANCERIZ'ATO, } Musical terms, de-
CANCERIZAN'TE, } noting a retrograde
 motion from the end to the beginning of
 a piece. The terms are Italian, from *canc-*
chero, a crab, the motions of which are
 reckoned backwards.

CANCRO'MA, the *boat-bill*: a genus of bird
 inhabiting the hot and marshy parts of
 South America. Order *Grallatoræ*, and
 family *Cultrirostres*, Cuvier. It much re-
 sembles the heron in habits and form,
 except in the form of the bill. Name,
cancer, a crab, and *roma*, food, from its
 being thought to live on crabs.

CANDELA'BRA (Latin), the stands on
 which the ancients supported their lamps.

CANDELA'RIA, the herb mullein, from
candela, its stalk being supposed to re-
 semble a candle.

CANDIDA'TI, Lat. *candidus*, white. In
 Roman antiquities, so called from their
 being arrayed in white garments, were
 the aspirants for public offices.

CANDLE, from Lat. *candela*. A long roll
 made of tallow, wax, or spermaceti.

CANDLEST'RY MYRTLE, a name common
 to all the plants of the genus *Myrtica*.

CAN'DLEBERRY TREE, the *Myrtica ceri-*
fera, or wax-bearing myrtle of N. America.

CAN'DLE-BOMB, a small glass bubble
 containing a drop of water and hermetically
 sealed. It is placed in the wick of a can-
 dle, which, being lighted, the water ex-
 pands, and the bomb loudly explodes. It
 is a dangerous plaything.

CAN'DLE-COAL, } A species of coal which
CAN'NEL-COAL, } has obtained its name
 from the bright flame, unmixed with
 smoke, which it yields during combustion.
Candle being provincially pronounced
cannel. It is black, opaque, compact and
 brittle, and breaks with a conchoidal
 fracture. It does not soil the fingers,
 and, like jet, is capable of a high polish,
 and of being worked into trinkets and
 ornaments. It appears indeed to differ
 from jet only in containing foreign earthy
 matters, which give it a greater specific
 gravity.

CANDLE-FIR, moss-fallen fir; fir that has
 been buried in moss for a length of
 time, split up and used in some parts
 instead of candles.

CAN'DLEMAS (comp. of *Candle* and *mass*);
 a Roman catholic festival, celebrated on
 the 2nd of February, in honour of the
 purification of the Virgin Mary, and so
 called from the great number of lights
 used on that occasion. On this day the
 Catholics consecrate all the candles and
 tapers which are to be used in their
 churches during the whole year. In Rome,
 the pope performs the ceremony himself,
 and distributes wax candles to the car-
 dinals and others, who carry them in pro-
 cession through the hall of the pope's
 palace. The ceremony was prohibited

in England by an order of council in 1544
 but it has given name to one of the *four*
 terms for paying and receiving rents and
 interest, and to a law term beginning 15th
 Jan., and ending 3rd Feb. Candlemas-
 day is the 2nd Feb.

CAN'DY, a preparation of sugar, made by
 crystallizing it several times to render it
 hard and transparent. The name and art
 was introduced into Europe by the Arabs.

CANE, Lat. *canna*. 1. In botany, this
 term is applied to several plants belonging
 to different genera, as *Arundo*, *Calamus*,
Saccharum, &c. Among them is the *bamboe*
 of the E. Indies, and the *sugar-cane* of Asia,
 Africa and America.—2. A measure or
 length in several countries of Europe; at
 Naples = 7'292 ft.: at Toulouse, in Upper
 Languedoc = 5'708 ft.; in Lower Languedoc
 = 6'458 ft., and the same at Montpel-
 lier, and in Provence and Dauphiny.—

3. In Scotland, a duty formerly paid in
 produce by a tenant to his landlord.
 Skene derives the term, taken in this
 sense, from Gaelic *Cean*, the head, and
 supposes that the cane was originally a
 capitation tax.

CAN'E-BRAKE. 1. A cane-thicket.—2.
 A plant, the *Arundinaria microsperma* of
 N. America.

CAN'E-HOLE, a trench for planting the
 cuttings of cane on sugar plantations.

CANEL'LA, the generic name of a tree of
 the W. Indies and S. America. *Dodecan-*
dria—Monogynia. Name, dim. of *canna*,
 because the bark is brought into this
 country in the form of reeds. This tree
 affords the bark called *Canella alba* or false
 Winter's bark, often confounded with the
 true Winter's bark, which is the produce
 of another tree, the *Drimys winteri*.

CANEL'LA AL'BA. 1. The specific name of
 the canella tree.—2. The false Winter's
 bark, *Canella cubana*, which is the inner
 bark of the branches of the Canella-tree.
 It is brought into this country packed in
 casks and cases, in long pieces, some rolled
 in quills and others flat. The odour, when
 newly broken, is aromatic, something
 like a mixture of cloves and cinnamon;
 and the taste slightly bitter, and ex-
 tremely warm and pungent.

CANEL'LA CELYAN'ICA, Cinnamon, the
 bark of the *Laurus cinnamomum*.

CANEL'LEE, canella being the type, a
 natural order of plants, consisting of S.
 American shrubs.

CANE-MILL, a mill on sugar plantations,
 for expressing the juice of the sugar-cane.

CANEPHO'RIA, in Grecian archaeology, 1.
 A ceremony which formed part of a fes-
 tival celebrated by the Athenian ladies on
 their marriage-eve: it consisted in pre-
 senting a basket of offerings to Minerva,
 to obtain leave to marry.—2. A festival,
 in honour of Bacchus, in which a train of
 virgins carried covered baskets. The term

is compounded of *καλὸν*, a basket, and *φοῖον*, to carry: hence also a bride was called *καλὴφοῖα*.

CANES VENATICI (Latin), the greyhounds, two constellations (*asterion* and *chara*,) between the tail of the great bear, *ursa major*, and Boötes' arms, above Coma Berenices.

CANE-TRASH, refuse of the sugar-cane reserved as fuel to boil the sugar-juice.

CANICULA (Latin), a little dog; a star of *canis major*, called also the dog-star or Sirius. It is the largest and brightest of all the fixed stars. The ancients reckoned their canicular or dog-days from the heliacal rising of this star.

CANINE, Lat. *caninus*, appertaining to or partaking of the nature of a dog, as—(1). *Canine appetite*, see **BULIMIA**. (2). *Canine madness*, see **HYDROPHOBIA**. (3). *Canine teeth*; the four eye-teeth are thus named from their resemblance to those of a dog. (4). *Canine muscle*, the levator anguli oris. (5). *Canine spasm*, the sardonic laugh; a kind of convulsive grin observed chiefly in cases of tetanus and inflammation of the diaphragm.

CANIS MAJOR (Latin), the Great Dog, a constellation of the southern hemisphere, having 64 stars, among which is the brilliant Sirius of the first magnitude. The *Canis Major* is fabled to have been one of Orion's hounds, but it more probably represents the Egyptian god Anubis. Sirius (*latrator anubis*) is vertical on the 30th June, when the Nile overflows. The Egyptians regarded the Nile as under the influence of this star, and hence gave the constellation of which it is the ornament, the figure of a dog, the most watchful and faithful of the brute creation.

CANIS MINOR (Latin), the Little Dog; a constellation of the southern hemisphere, said to be the type of one of the beagles of Orion's pack, or from the kennel of Boötes, or it is the sagacious cur Mæra; but it is more probably the symbolical companion of Anubis (the Egyptians introducing all their astronomical symbols in pairs). The constellation has 14 stars, of which the chief is Procyon, which comes to the meridian about 50 minutes later than Sirius.

CAN'KEE, Lat. *canerum*. 1. A cancerous affection which occurs frequently in fruit-trees.—2. A fungous excrescence in the feet of horses discharging a fetid matter from the cliff in the middle of the frog.—3. Small eroding ulcers in the mouth, particularly of children, generally covered with a whitish slough.—4. Any virulent ulcer.

CANKEE-FLY, a name common to all flies which prey on and destroy green fruit.

CAN'KEE-WORM, a worm that destroys the leaves of fruit-trees.

CAN'NA (Latin). 1. a reed or hollow cane.—2. A genus of perennial plants. *Monandria*—*Monogynia*. There are 25 species all natives of hot climates; popular name *Indian shot*.

CAN'NABIS, hemp; a genus of plants. *Diœcia*—*Pentandria*. Name *κannabis*, supposed to be from *κanna*, a reed. There is properly only one species of this important plant, the *C. sativa*, a native of India and Persia, but now naturalised in the south of Europe. The *C. Indica* is a variety of the same plant; its leaves are used as those of tobacco, and an intoxicating liquor is prepared from them in many parts of Asia.

CAN'NEL COAL. See **CANDLE COAL**.

CAN'NIBALS, or anthropophagi; man-eaters, a custom attributed especially to the Caribee or people of Cariba, whence this term is derived.

CAN'NON, a long hollow engine for throwing iron, lead, or stone balls by the force of gunpowder. Cannons are commonly made of iron, but frequently also of a mixture of copper, tin, and brass. They are either cast hollow or solid, and then bored; the latter kind are superior. The Moors appear to have used cannon in Spain in 1312. The origin of the term is doubtful; probably it is Lat. *canna*, a tube. The parts of a cannon are as follow; namely,—The *reinforce*, that part of a gun next the breech, which is made stronger to resist the force of powder. This is divided into the first and second reinforce, which differ in size.—The *chase*, the whole space from the trunnions to the muzzle.—The *muzzle*, properly so called, is that part comprehended between the muzzle, astragal, and the end.—The *casable*, the hindmost part of the breech, from the base-ring to the end of the button.—The *casable-astragal*, the diminishing part between the two breech-mouldings.—The *neck of the casable*, the narrow space between the breech-moulding and the button.—The *breech* is the solid piece behind, between the vent and the extremity of the base-ring, which terminates the hind part of the gun, exclusive of the casable.—The *breech-mouldings*, the eminent parts, as squares or rounds, which serve only for ornaments to the piece, &c.—The *base-ring* and *ogee* are ornamental mouldings; the latter of which is always in the shape of the letter S, after the manner of the ogee in architecture.—The *vent-field* is the part from the vent to the first reinforce-astragal.—The *vent-astragal* and *fillets* are the mouldings and fillets at or near the vent.—The *charging cylinder* is all the space from the chase-astragal to the muzzle-astragal.—The *first reinforce-ring* and *ogee* are the ornaments

on the second reinforce.—The *first reinforce-astragal* is the ornament between the first and second reinforce.—The *chase girdle* is the ornament close to the trunnions.—*Trunnions*, two solid cylindrical pieces of metal in every gun, which project from the piece, and by which it is supported upon its carriage.—*Dolphins*, two handles placed on the second reinforce-ring of brass cannons, resembling the fish of that name; they serve for mounting and dismounting the guns.—The *second reinforce-ring* and *ogee* are the two ornaments joining the trunnions.—The *chase-astragal* and *fillets*, the two last-mentioned ornaments jointly.—The *muzzle-astragal* and *fillets*, the joint ornaments nearest the muzzle.—The *muzzle mouldings*, the ornaments at the muzzle of a piece.—The *swelling of the muzzle*, the projected part behind the muzzle mouldings.—The *mouth of a cannon*, the entrance of the bore, or the hollow part which receives the charge.—The *vent*, that which, in small fire-arms, is called the *touch-hole*, a small hole pierced at the end, or near the end, of the bore or chamber, for the purpose of priming the piece with powder, or to introduce the tube in order when lighted to set fire to the charge.—The *chamber* is the place where the powder is lodged which forms the charge. The tools employed in the use of cannon are as follow:—*Quoins*, or *wedges*, to lay under the breech of the gun in order to elevate or depress it.—*Handspikes*, which serve as levers to move and lay the gun.—*Ladies*, which serve to load the gun with loose powder. *Rammers*, which serve to ram home the wads put upon the powder and shot.—The *sponge* is fixed at the opposite end of the rammer, and serves to clean the gun after it has been fired.—*Screws* are used to field-pieces instead of quoins, by which the gun is kept to the same elevation.—The *searcher* is an iron hollow, at one end, to receive a wooden handle, and, on the other end, has from four to eight flat springs pointed and turned outwards at the ends.—The *reliever* is an iron flat ring with a wooden handle at right angles to it: it is so called because it serves to relieve or disentangle the searcher, when any one of its springs is caught in a hole, on its being introduced into the piece to search it after it is fired.

CANNON BOX. In *farriery*, is the single metacarpal or metatarsal bone of the horse.

CANNON METAL consists of about 90 of copper and 10 of tin.

CANNULA, Lat. dim. of *canna*, a reed. A metallic tube used by surgeons for various purposes. It is often adapted to a sharp instrument, along with which it is thrust into a cavity containing a fluid; the perforation being made, the sharp

instrument is withdrawn and the cannula left, in order that the fluid may pass through it.

CANOE, a boat used by rude nations, made usually by excavating the trunk of a tree, but sometimes by making a rude framework, and covering it with skins or bark. The word is said to be of Indian origin.

CANON, Lat. from *kanon*, that which is established; a law or rule in general; e.g. In *ecclesiastical affairs*; (1.) A law or rule of doctrine or discipline, enacted by a council and confirmed by the sovereign. (2.) A person who possesses a prebend or revenue allotted for the performance of divine service in a cathedral or collegiate church. A *cardinal canon* is one attached to a church (*incardinatus*) as a priest to a parish. *Domiciliary canons* are not in orders, and have no right to any particular chapters. *Expectative canons* have no revenue, but have the titles and dignities of canons, a voice in the chapter, and a place in the choir, till a prebend shall fall. *Foreign canons* do not officiate in their canonries, in contradistinction to *mansionary* or *residential canons*.—2. In *mathematics*, a general rule for resolving all cases of the same kind. The word is seldom used in this sense; instead of it we use the term *formula*.—3. In *music*, (1.) A rule for determining the intervals of notes, invented by Ptolemy; (2.) A kind of perpetual fugue, in which the different parts, beginning one after another, repeat incessantly the same air.

CANON-BIT, a large bit for a horse's mouth.

CANONESS, a description of religious women in France and Germany.

CANON-LAW, a body of law which was, at different times and in different portions, promulgated under the authority of the see of Rome, for regulating the consciences, and fixing the property, as well civil as ecclesiastical, of all the inhabitants of popish christendom.

CANONICAL BOOKS, } The genuine

CANONICAL SCRIPTURES, } books of the Holy Scriptures, called also the *sacred canon*.

CANONICAL HOURS, certain stated times fixed by the ecclesiastical law for prayer and devotion. These hours are from 8 to 12 forenoon, before and after which marriage cannot be lawfully performed in the church.

CANONICALS, the dress worn by the clergy when they officiate.

CANONIST, a doctor of canon-law. Canonists and civilians are usually combined in the same person. Hence the titles, *Doctor juris utriusque et legum doctum*, contracted LL.D. and I.U.D.

CANONIZATION, the act of enrolling a

person deceased in the catalogue of saints, which is the practice of the Romish church, and performed by the pope.

CANONRY, an ecclesiastical benefice in a cathedral or collegiate church, which has a prebend or stated allowance out of the revenues of the church; the benefice filled by a canon.

CANOPUS, a bright star of the first magnitude, in the rudder of Argo. *Canopus* was the pilot of the ship Argo.

CANOPY, a magnificent covering for an altar, throne, tribunal, pulpit, chair, or the like; also the label or projecting moulding that surrounds the arches and heads of gothic niches. The term is Greek, *κανασιον*, a pavilion or net spread over the head to keep off gnats, from *καναλ*, a gnat.

CANT (D. *kant*, a corner). An external angle. To cant signifies to toss or turn over, from Lat. *cano*. Cant signifies also a piece of wood laid on deck for the support of a bulk-head.

CANTALIVERS, *cantile* and *eaves*. Blocks of wood or iron, which are placed at regular distances, projecting at right angles to the surface of a wall, to support the eaves of a house or the upper mouldings of a cornice. Cantaliver is, therefore, essentially the same as modillion, but the latter word is confined to the description of regular architecture, while the former has a general and trivial use.

CANTARO, a weight at Acra = 603 lbs.; at Tunis and Tripoli = 100 rottoli, or 111.05 lbs. At Alexandria it is also = 100 rottoli, but the rottolo has different names and weights. At Genoa, the cantaro of 100 lbs. peso sottile, = 69.89 lbs. avoird., and the cantaro of 100 lbs. peso grosso, = 76.875 lbs. avoird. At Leghorn the cantaro is generally 150 lbs.; but a cantaro of sugar is 151 lbs., of oil 88 lbs., of brandy 120 lbs., of stock-fish 160 lbs. At Naples the cantaro grosso = 169 lbs.; the cantaro piccolo = 106 lbs. avoird. At Alicant, in Spain, the cantaro is a liquid measure of eight medios = 3.05 English wine gallons.

CANTA'TA a poem set to music. A composition or song intermixed with recitatives and airs, chiefly intended for a single voice. The term is Italian, from *cantare*, to sing.

CANTEEN, a tin or wooden vessel, used by soldiers to carry liquors for drink: it holds three pints.

CANTERBURY-BELLS, a biennial species of the bell-flower, the *Capnula medium* of botanists.

CANT-BODY, in *shipbuilding*. See FRAME.

CANT-FRAME, in *shipbuilding*. See FRAME.

CANTHARIDÆ, a tribe of coleopterous insects of the trachelide family. The cantharis gives name to this tribe, and all

the species possess, in a greater or less degree, epispastic powers.

CANTHARIDIN, the peculiar principle of the cantharides, which causes vesication.

CANTHARIS (plural *Cantharides*), the blister-fly or Spanish-fly, common in Spain, Italy, and France, and well known for its medical uses. Synonyms, *Cantharis vesicatoris*, Geoff.; *Meloe vesicatoria*, Lin.; *Lytta vesicatoria*, Fabr. The insect is about the third of an inch in length, of a golden glossy green, with simple, regular, black antennæ. Name *κανθαρις*, from *κανθαρος*, a beetle.

CANTHARUS. 1. In *archæology*, a cistern in the middle of the atrium, before the ancient churches, wherein persons washed their hands and faces, before they entered. The cantharus of a Roman fountain was the apparatus out of which the water issued, made of many different forms.—2. A genus of acanthopterygious fishes of the sparoid-family. The body is thick and round, not unlike a jug (the literal meaning of *cantharus*). There are two species found in the Atlantic and Mediterranean.

CANTHUS, Lat. from *κανθος*, the angle or corner of the eye, where the upper and under eyelids meet. That nearest the nose is called the greater, and the other the lesser canthus. Plural *canthi*.

CANTICLE, a song, from Lat. *canticum*. In the plural *canticles*, the Song of Solomon, one of the books of the Old Testament, called by the Jews the Song of Songs (*canticum canticorum*), and generally supposed to be an epithalamium composed by Solomon on the occasion of his marriage with the King of Egypt's daughter.

CANTING, see CANT. The cutting away a part of an angular body at one of its angles, that the section may form a parallelogram, whose edges are parallel from the intersection of the adjoining planes.

CANTLE, a fragment or small portion. This is the root of the word *Scantling*.

CANT-MOULDING, a moulding with a bevelled surface.

CANTO, Italian, a song. Used to denote a division of a poem, otherwise called a book. The word is also used to denote the treble part of a song, and with *secundo* added it means the second treble. *Canto-fermo* means the subject song.

CANTON, a word found in most European languages, and signifying primarily a corner. 1. In *geography*, a division or small parcel of a country, constituting a distinct state or government, as the cantons of Switzerland.—2. In *heraldry*, an ordinary, so called because it occupies only a cantle or corner of the escutcheon.

CANTONED. When the angles of a building are adorned with columns, pa-

asters, rustic quoins, or anything which projects beyond the naked wall, it is called a *canted* building.

CANTONING. In *military affairs*, the allotting of separate quarters to each regiment, the town being divided into as many cantons as there are regiments: the separate quarters thus assigned are called *cantonments*.

CAN'TON'S PHOSPHORUS, a composition made by mixing three parts of calcined oyster-shells, with one of flowers of sulphur, and subjecting them for an hour to a strong heat in a covered crucible. The resulting substance is luminous in the dark.

CAN'TREED, } an old British compound
CAN'TRETH, } of *cant*, hundred, and *treth*,
CAN'TREE, } village, and signifying a district of 100 villages. In Wales, *cantreths* answer to *hundreds* in England.

CANT-TIMBERS, those timbers which are situated at the two ends of a ship. They derive their name from being canted or raised obliquely from the keel, in contradistinction to those whose planes are perpendicular to it.

CANVAS, a coarse, unbleached cloth of hemp or flax, used for tents, sails of ships, painting, and other purposes. Among sailors, sails in general are called canvas. The word is from Lat. *cannabis*, hemp.

CANZO'NE, Italian, a song or air in two or three parts, with passages of fugue and imitation; or a poem to which music may be set in the style of a cantata. When set to a piece of instrumental music, it signifies much the same as cantata; and when set to a sonata it signifies allegro.

CANZONET, Ital. *canzonetta*, a little song, in one, two, or three parts. It sometimes consists of two parts, each of which is sung twice. Sometimes it is a species of jig.

CAOUTCH'OUN. 1. The vegetable substance commonly called *India rubber* and *gum elastic*. It is the concrete juice of the *Hevea caoutchouc* and *Iatropa elastica*, natives of South America, and of the *Ficus Indica* and *Artocarpus integrifolia*, which grow in the East Indies. It is a soft yielding solid, of a whitish colour when not blackened by smoke, possesses considerable tenacity, and is particularly remarkable for its elasticity. It is inflammable, and burns with a bright flame; is insoluble in water and alcohol, but is soluble in the essential oils, in petroleum and cajeput oil, and readily in the naphtha purified from coal-tar, which is the solvent used in the arts. Its constituents are carbon 90, hydrogen 10.—2 *Mineral caoutchouc* is a bituminous substance, elastic when soft, but brittle when hard. In its appearance it much resembles vegetable caoutchouc: whence its name.

CAOUTCH'OUNINE, a peculiar substance

obtained by exposing caoutchouc to a temperature of about 600° Fah., when it is resolved into vapour, which, by proper refrigeratory methods, is condensed into an extremely volatile liquid. This liquid has the smallest sp. gr. of any liquid known, whereas in a state of vapour it is heavier than the most ponderous of the gases. It is a solvent (when mixed with alcohol) of all the resins, and mixes readily with oils.

CAP. In *architecture*, the uppermost part of an assemblage of parts, or that which crowns the whole. In this sense the term is applied to the capital of a column, cornice of a door, &c.—In *carpentry*, a thick strong block of wood, used to confine two masts together, when one is erected at the head of the other.

CAP OF MAINTENANCE, an ornament of state carried before the Sovereigns of England at the coronation. It is also carried before the mayors of some cities.

CAP-A-PIE (French), from head to foot; as, armed *cap-à-pie*.

CAP-PA'PER, a coarse paper, so called from being used to make caps to hold commodities.

CAP'-SHEAF, the crowning sheaf of a stack.

CAPA'CITY, in *geometry*, the solid contents of a body. In *natural philosophy*, the *capacity for heat* of bodies denotes their power of absorption of heat. Different bodies require different amounts of heat to raise them to the same temperature, and they have therefore different capacities for heat.

CAPA'BA, CAPAIVA. See **COPAIBA**.

CAPAR'ISON, anciently a sort of iron armour with which war-horses were covered; latterly, a covering laid over the furniture of a horse, especially a sumpter horse.

CAP'ELAN, a small fish about six inches long, shoals of which appear off the coasts of Greenland, Iceland, and Newfoundland. It constitutes a large portion of the food of the Greenlanders.

CAPEL'LA, a bright star in the left shoulder of the constellation Auriga.

CAPEL'LETS, a disease of horses called vulgarly *chaplets*. It is a kind of swelling like a wen, growing on the heel of the hock of the horse.

CAP'ERS, the pickled buds of the *capparis spinosa*, a low shrub, generally growing out of the joints of old walls and fissures of rocks in most of the warm countries of Europe.

CAPH, a Jewish measure of capacity equal to five-eighths of an English pint.

CAP'I-AGA, a Turkish officer who is grand-master of the seraglio.

CAP'IAS, from *capiō*, to take. In *law*, a writ of two sorts: one before judgment, called *capias ad respondendum*, where an

original is issued to take the defendant and make him answer to the plaintiff: the other, which issues after judgment, is of divers kinds, as a *capias ad satisfaciendum*, or writ of execution; a *capias pro fine*; a *capias utlagatum*; a *capias in withernam*.

CAPILLAIRE (French), a kind of syrup obtained from maiden-hair.

CAPIL'LAMENT, a filament; from *capillus*, a hair. A chive.

CAP'ILLARY, Lat. *capillaris*, from *capillus*, a hair. 1. In *natural philosophy*, capillary attraction is properly that force by which water or any other fluid is raised above its level in glass tubes, whose diameters are of the smallness of hairs; but the term is now employed, in a more general sense, to denote that force with which solids act upon fluids, either in raising them above or depressing them beneath their natural level, when the solid is simply immersed in the fluid, or when the fluid is inclosed in a tube or between two plates, nearly, but not in actual contact.—2. In *anatomy*, the capillary vessels are those minute vessels by which the terminal arteries and veins communicate with one another.—3. In *botany*, capillary plants are hair-shaped, as the ferns: this class of plants corresponds to the order Filices of the sexual method. The term *capillary* is also applied to parts of plants which resemble hairs: thus a capillary root is one which consists of many very fine fibres.—4. In *surgery*, the term *capillary* is applied to a linear fracture of the skull, unattended with any separation of the parts of the injured bone.

CAPILLI'TUM, Lat. *capillus*, a hair. A kind of purse or net in which the spores of trichia and similar fungi are retained.

CAPILLUS VEN'ERIS, the true maiden-hair; a British species of adiantum.

CAPITAL, Lat. *capitalis*, appertaining to the head (*caput*): used substantively. 1. In *geography*, the principal town or city of a state or kingdom.—2. In *architecture*, the head or uppermost part of a column, pillar, or pilaster, serving as the crowning, and placed immediately over the shaft, and under the entablature.—3. In *letter-press printing*, the large letters serving as initials of proper names, &c., are called *capitals*.—4. In *trade*, capital is that sum of money which a merchant, banker, or trader, adventures in any undertaking, or which he contributes to the common stock of a partnership. It signifies likewise the fund of a trading company or corporation; but in this sense the word *stock* is commonly added: thus we say the *capital stock* of the bank, &c.

CAPITATION-TAX, a poll-tax, or imposition upon each head or person.

CAP'TE, in *English law*, a tenant in

capite, or in chief, is one who holds by knight's service or by soccage, the land immediately of the sovereign, *caput*, the head or lord paramount of all the lands in the kingdom. This tenure was abolished by 12 Charles II.

CAP'ITE CENSI, anciently, the lowest rank of Roman citizens, who were counted rather by their heads than by their estates.

CAP'ITOL, Lat. *capitolium*, the temple of Jupiter at Rome, and a fort or castle on the Mons Capitolinus. In this the senate of Rome anciently met, and on the same site is still the city-hall or town-house, where the conservators of the Romans hold their meetings.

CAP'ITOLINE GAMES, annual games, instituted by Camillus, in honour of Jupiter Capitolinus, and to commemorate the preservation of the Capitol from the Gauls; and other games instituted by Domitian, and celebrated every five years.

CAPIT'ULAR, an act passed in a chapter (*capitulum*) either of knights, canons, or religious.

CAPIT'ULARY, the body of laws or statutes of a chapter (*capitulum*), or of an ecclesiastical council.

CAPIT'ULUM (dim. of *caput*). 1. A small head or knob.—2. A protuberance of a bone received into the cavity of another bone.—3. An alembic.—4. A species of inflorescence called a head or tuft, formed of many flowers arranged in a globular form, upon a common peduncle.

CAP'NION, chimney-money; a tax levied by the Roman emperors on smoke, *καπνός*.

CAP'NOMANCY, Gr. *καπνός*, smoke, and *μαντία*, prophecy; divination by smoke.

CAP'NOMOR, Gr. *καπνός*, smoke, and *μοίρα*, part; an oily substance obtained from the tar of wood.

CAP'OC, a very fine short cotton of the E. Indies, used chiefly to line palanquins, stuff cushions, &c.

CAPONNIE'RE, in *fortification* a covered lodgement made four or five feet deep in the ground, encompassed with a parapet about two feet high, serving to support several planks laden with earth. It is usually large enough to contain 20 men, and is placed in the glacis, at the extremity of the counterscarp, and in dry moats with embrasures or loop-holes through which the soldiers may fire.

CAPOT, a term used at the game of piquet, when all the tricks of cards are won.

CAPPAR'IDACEÆ. Capparis the type. A natural order of exogenous plants.

CAP'FARIS, the *caper-plant*, a genus of plants, mostly shrubs, of 12 species, natives of warm climates. *Polyandria—Monogynia*.

Name, *καταρσις*, perhaps *ταρα το καταρσις* *ακαν*, from its supposed efficacy in curing melancholy. The pickled buds of the *C. spinosa* are well known under the name of *capers*.

CAPRA, the goat: a genus of ruminant mammalia, of which the wild goat (the stock of all the varieties of our domestic goat) and the ibex are species. The name *capra* is the Latin word for a she-goat.

CAPRA'RIA, a genus of tropical plants. *Didynamia*—*Angiospermia*. The sweet-wood or Mexican tea is the *C. biflora*. Name, *Capraria*, a kind of seagreen good against hemorrhoids.

CAPRE'OLET, Lat. *capreolatus*, resembling the tendrils of a vine, tendril-like.

CAP'REOL, Lat. *capreolus*, a tendril.

CAP'REOLS, the struts or braces of a trussed roof.

CAP'RIC ACID, a peculiar acid discovered by M. Chevreull in the butter of goats' and cows' milk.

CAPRICCIO (Ital.), *fancy*. In music, applied to passages where the composer indulges his fancy without being bound to keys or moods: called also *Fantasia*.

CAPRICORN, from *capra*, a goat, and *cornu*, a horn. 1. The name of one of the three divisions of tetramorous beetles.—

2. In astronomy, one of the twelve signs of the zodiac represented on globes by the figure of a goat, and symbolised by ♄, originally intended to represent the horns of a goat. The sun enters capricorn on the 21st Dec., which is the time of the winter solstice, and as he then ascends towards the north, like the goat when it climbs the sides of mountains, some have ascribed the origin of the name to this fanciful resemblance. This constellation gives name to one of the small circles of the sphere. See *TROPIC*.

CAP'RIDE, a tribe of mammalia of which the genus *Capra* is the type.

CAPRIFIC'ATION, a method of ripening the fruit of the domestic fig-tree, by means of the *cynips* or fig-fly, practised in the islands of the Grecian Archipelago. These insects, which are produced from the winter figs of the *caprificus* or wild fig-tree, are gathered and deposited on the fruit of the garden fig-trees. They enter the fruit by the eye, and the worms produced from the eggs which they lay puncture the fruit, and, it is said, not only accelerate its maturity but render it larger.

CAPRIFOLIA'CEÆ, a family of plants in the natural system of Jussieu; the genus *Caprifolium* is the type.

CAPRIMUL'GUS, the goat-sucker; *capra* and *mulgeo*, to suck; a genus of passerine birds of the family *Fissirostres*. The goat-suckers are allied to the swallows, live solitary, and never venture abroad ex-

cept at twilight and at night in fine weather, when they hunt phalane and other nocturnal insects. The whip-poor-will of America, and the night-swallow, or night-jar of Europe, are species. The generic names, (*caprimulgus*, goat-sucker, *agothelus*,) derive their origin from the whimsical idea entertained by the people of their sucking goats and even cows.

CAP'RIOLE, in the *manège*; the goat-leap, *capriolus*; the leap which a horse makes in the same place without advancing, in such a manner that, when he is at the height of his leap, he jerks out his hind legs, even and near. The common name of this exercise is the *pillared horse*, because the animal to work well upon caprioles is put between two pillars and taught to raise first his forequarters, and when these are yet in the air to raise his hind quarters.

CAP'ROIC ACID, a peculiar acid discovered in butter by M. Chevreull.

CAP'ROMYS, a genus of mammalia of the order *Rodentia*, belonging to the rat-tribe. The shape is that of a rat, but the size is that of a rabbit or hare. There are two species, the *C. fourmieri*, Desmar, and *C. prehensilis*, Pessig; both inhabit the island of Cuba, where they are known by the name of *Houtias*. Name *καρκος*, a boar, and *μυς*, rat, the boar-rat.

CAP'SA, a genus of mollusca named from the capsular form of the shell.

CAPSEL'LA, (dim. of *capsa*, a box). 1. The herb shepherd's-purse, a British annual.—2. The *echium*, or viper's bugloss.—3. A genus of plants recently detached from the genus *Thlaspi*.

CAP'SICUM, a genus of plants, natives of warm climates. *Pentandria*—*Monogyma*. Name from *καττι*, to bite; some of the most pungent peppers, as the cayenne, bird, bell, and cherry peppers, being produced by species of this genus.

CAP'SQUARES, the plates of iron which come over the trunnions of a gun to keep it on the carriage.

CAP'STAN, } If a windlass have its axis
CAP'STERN, } placed vertically, it becomes a capstan. The power is applied

to the capstan by means of a series of levers, placed at equal distances round it,

in the direction of the radii. To each of these the force of one or more individuals is applied at the same time. The machine is principally used for raising the anchors of ships. A few turns of the cable are put upon the cylinder; these are sufficient to prevent it from slipping; and as one extremity coils itself, the other rolls off and is stowed away. A conical form is given to the cylinder, to counteract the tendency of the cable to move continually from one end to the other, as by this means the coil, when it approaches the lower end, is made to slide up the inclined plane of the sides of the cone.

CAPSTONE, a fossil ennerinite, or that genus of ennerinite known as *conulus*, thus named from its supposed resemblance to a cap, rising from a circular base into a cone.

CAP'SULAR, Lat. *capsularis*. 1. Relating to or resembling a capsule.—2. Surrounding a part like a bag: applied thus, in anatomy, to a ligament which surrounds every moveable articulation, and contains the synovia in a bag.

CAP'SULATED, Lat. *capsulatus*, inclosed in a capsule.

CAP'SULE, Lat. *capsula*, (dim. of *capsa*, a bag). 1. In botany, a membranous or woody seed-vessel, internally consisting of one or more cells splitting into several valves, and sometimes discharging its contents through pores or orifices, or falling off entire with the seed. From the number of its valves, a capsule is said to be one, two, three, four, five, or many-valved; from the number of cells, it is unilocular, bilocular, trilocular, quinquelocular, novemlocular, or submultilocular; from the appearance of the external surface, it is glabrous, aculeate, or muricate; from the number of tubercles on the external surface, it is dicoccal or didymous, tricoccal or tetracoccal; from the number of contiguous capsules, it is simple, duplex, triplex, quintuplex, or multiplex; from its substance, a capsule is called membranaceous, corticate, woody, baccate, or spurious; from the number of seed, it is monosperm, disperm, trisperm, or polysperm. The parts are the valves, sutures, dissepiments, loculaments and columella.—2. In anatomy, a membranous production inclosing a part like a bag; as the capsular ligaments, the capsule of the crystalline lens, &c.—3. In chemistry, a small basin or cup, commonly of porcelain, but sometimes of platinum or silver, used chiefly for subjecting minute portions of substances to heat.

CAP'TAIN, the military officer who commands a company, whether of infantry, cavalry, or artillery. In the feudal laws of Europe the title was given to tenants in capite, who were bound to attend their prince in the wars, at the head of soldiers; and from this practice the name had its

origin. The title of Captain is appropriately given to commanders of ships.

CAP'TAIN-LIEUTENANT, an officer who, with the rank of captain and pay of lieutenant, commands a company or troop.

CAP'TION. 1. In English law, a certificate subscribed by commissioners in Chancery declaring when and where the commission was executed.—2. In Scotch law, a writ issued under her Majesty's signet, commanding the apprehension of a debtor who has disobeyed the charge given him on letters of horning. Peers and married women are by law secured against personal execution by caption upon civil debts, and pupils by special statute 1696, c. 41.

CAPUCHI'N. 1. A garment for females, consisting of a cloak and hood made in imitation of the dress of Capuchin monks.—2. A pigeon, the head of which is covered with feathers.

CAPUCHI'NS, monks of the order of St. Francis, who cover their heads with a capuce, *capuchon*, a stuff cap or cowl. They are clothed in brown or gray, go barefooted, and never shave.

CAPULO'IDÆ, a family of mollusca; class, *Gasteropoda*; order, *Pectinibranchiata*, Cuvier. This family of shells contains five genera, four of which are taken from the patellæ.

CAP'UT MOR'TUUM, a fanciful term formerly used to denote the inert residuum of a distillation or sublimation.

CAR (Welsh), a small carriage of burden drawn usually by one horse; also a name of the constellation called Charles's Wain or the Bear.

CARABINE, a short gun, carrying a ball of 24 to the pound, borne by light horsemen. The name is French, *carabine*.

CARABUS, Lat. from *καράβος*. A genus of coleopterous insects; family, *Carnivora*. Cuv. The ancients designated Carabici under the name of *Buprestis*. The carabici are now variously subdivided, each section consisting of numerous genera. There are the TRUNCATIPENNES, consisting of *Anthia*, *Graphipterus*, *Aptinus*, *Brachinus*, *Casnonia*, &c.; the BIFERRITI, consisting of *Encladus*, *Siaquona*, *Pasimachus*, *Scarites*, &c.; the QUADRIMANI, the genera of which are the *Acinopus*, *Daptus*, *Harpalus*, &c.; the SIMPLICIMANI, consisting of *Trabrus*, *Pogonus*, *Feronia*, &c.; the PATELIMANI, consisting of *Dolichus*, *Agonus*, *Chlenius*, *Dicelus*, &c.; and the GRANDIPALPI, in which we have the *Pamborus*, *Cychrus*, *Scaphinotus*, *Procerus*, *Cylasoma* and *Carabus proper*, of which 124 species are described.

CAR'ACOL, Fr. *caracole*, a wheeling round.

1. A semi-round which a horseman makes either to the right or left. Cavalry make a caracol after each discharge, in order to

pass to the rear of the squadron.—2. A stair-case in a helix or spiral form.

CAR'ACOLY, an alloy of gold, silver, and copper, of which inferior jewellery is made.

CAR'AMEL (French), sugar partially decomposed by the action of heat.

CARAN'NA (Spanish), a resin called also *caragua* and *caranna-gum*. It exudes from a large tree of New Spain, the botanical characters of which are not well ascertained.

CAR'APA'CE, Lat. *clipeus*, the hard covering or shell which protects the upper part of the body of the Chelonian reptiles.

CAR'ASSE, the bony vault or shell which protects the upper part of the turtle and tortoise; also the analogous part in the crab.

CAR'AT (Arabic). 1. A weight used in Mecca, equal to the twenty-fourth part of a denarius or denier.—2. A weight of four grains, used in weighing diamonds.—3. A term used in expressing the fineness of alloys of gold. The whole mass is supposed to be divided into 24 equal parts, and as many of these parts as it contains of pure gold, are taken as the number of carats. Thus if a mass contain 22 parts of pure gold out of every 24, it is gold of 22 carats. The term *carat* is by some derived from the name of a bean, the produce of a species of *Erythina*, a native of Shangallas, in Africa, a famous mart of gold-dust. The tree is called *kuara*. As the dry seeds are nearly of uniform weight, the savages have used them from time immemorial to weigh gold. The beans were anciently transported to India, and have been long used there to weigh diamonds.

CAR'AVAN, an organised company of merchants or pilgrims, or both, who associate together in many parts of Asia and Africa, that they may travel with greater security through deserts and other places infested by robbers, or where the road is naturally dangerous. The word is derived from Persian, *kárvan*, a trader.

CARAVAN'SERA, a large public building in oriental countries, appropriated to the reception and lodgement of the caravans. The traveller must take his provisions and all necessities with him to the caravan-sera, where nothing is provided but lodging and water.

CAR'AVIL, Fr. *caravelle*, a small vessel of 25 or 30 tons' burden, used on the coast of France in the herring fisheries; written also *carvel*.

CAR'AWAY, a small biennial plant (the *carum carui*) much cultivated in Essex for its seeds (*caraway-seed*), which are small, oblong, pointed at both ends, and curved. These seeds are chiefly used by confectioners. In Scotland they are

called *carry*; in France and Italy, *carvi*. The term *caraway* is Arabic, *kárawia*.

CARBAZOT'IC ACID, a peculiar acid formed by the action of nitric acid on indigo, and thus named by Liebig, from *carbon* and *azote*. It is a powerful narcotic poison. Its salts are named *carbazonates*.

CAR'BON, from Lat. *carbo*, coal. *Charcoal*, a peculiar substance, which may be obtained from most organic substances by ignition in close vessels. It is commonly prepared from wood. Diamond is pure carbon.

CARBONATE, a salt formed by the union of the carbonic acid with a base. When the base is imperfectly saturated with the acid, the salt formed is called a *subcarbonate*; when there is an excess of acid, a *bicarbonate*.

CARBONATED WATER, water either pure or holding various saline matters in solution, impregnated with carbonic acid. The carbonated water made for sale, contains usually a little soda, which being charged with the gas, is called *soda-water*.

CARBON'IC ACID, called also fixed air, carbonaceous acid, calcareous acid, and aerial acid, is a compound of carbon and oxygen, and is formed during the combustion of charcoal. It is gaseous, colourless, and cannot support respiration or combustion. It composes 44 of the weight of limestone, marble, &c., and is readily disengaged by any of the strong acids. It is much heavier than common air, and therefore occupies the lower part of mines, caverns, &c., and for this reason it is called by miners *choke-damp*. Sym. C.

CARBON'IC OXIDE, called also oxide of carbon; a gaseous compound of carbon and oxygen; transparent, inodorous, inflammable, burning with a pale blue flame. It does not support respiration or combustion. It differs from carbonic acid in having only one equivalent of oxygen. Symb. C.

CARBONIF'EROUS (*carbon* and *fero*); containing or yielding carbon.

CAR'ONISED, converted into charcoal (carbon).

CARBOY, a large globular bottle of green glass protected by basket-work.

CAR'BUNCLE, Lat. *carbunculus*. 1. The name of a gem highly prized by the ancients. It is a species of the ruby, of a very rich glowing blood-red colour.—2. A disease. See ANTHRAX.

CARBUN'CLATE, Lat. *carbunculatus*; applied, 1. To the nose and face when affected with the disease called *acne rosacea*.—2. To small protuberances on any part of animals, vegetables, or minerals.

CARBUNCULA'TION, the blasting of the buds and leaves of trees, &c., by excess of heat or cold: from *carbunculo*, to blast.

CAR'BURET, a compound formed by the chemical combination of carbon with

some other substance, as the carburet of iron (steel).

CARBURET OF SULPHUR, called also *sulphuret of carbon and alcohol of sulphur*; a volatile liquid, possessing a penetrating fetid smell, and acrid burning taste. It is valuable for producing great degrees of cold by its rapid evaporation. Symb. CS₂.

CARBURETTED HYDROGEN. There are two gases to which this name has been applied: 1. Light carburetted hydrogen, or subcarburetted hydrogen, or bihyduret of carbon, the fire-damp of miners: symb. H² C.—2. Heavy carburetted hydrogen, or hyduret of carbon, or olefant gas: H₂ C₂. Both are inflammable but do not support respiration or combustion. In oil-gas the last, and in coal-gas the first, predominates. In the process of compressing oil-gas into portable gas-lamps, Mr. Faraday discovered two liquid carburets of hydrogen: a *bicarburet of hydrogen* (C₂ H), and *quadro-carburetted hydrogen* (C₄ H₄), which is isomeric with olefant gas. Strictly all such substances as naphtha, oil of turpentine, oil of wine, caoutchoucine, otto of roses, &c., which contain only carbon and hydrogen, are *carburets of hydrogen*, but perhaps more appropriately *hydruets of carbon*.

CARCASS. 1. The frame-work of some structure unfinished and without ornament; e. g. a house before it is lathed and plastered or the boards are laid, is called *a carcass*.—2. An iron case about the size of a bomb, filled with combustible materials, to be thrown from a mortar to set fire to buildings or ships. It has apertures through which the fire blazes, and the light afforded sometimes serves as a direction in throwing shells. It is named, perhaps, from the ribs of iron that form it, which resemble the ribs of an animal carcass.

CARCERULUS (Lat.), a little prison. A name applied to fruits consisting of a small number of dry indehiscent few-seeded cells, coherent round a single axis.

CARCINO'MA, cancer (*καρκινος*). See **CANCER**.

CARCINOM'ATOUS, of the nature of carcinoma or cancer.

CARD, a small letter of intimation, called also when it regards business, a *note*. There are also *call-cards*, containing merely the address of the *caller*; and *notice-cards*, which give some intimation, as of the sailing of a vessel. In these senses the word is from Lat. *charta*, paper. For other significations see **CARDS**.

CARDAMINE, the *Lady's-smock*: a genus of hardy plants. *Tetradynamia-Silicquosa*. Name from *καρδια*, the heart, which it was supposed to strengthen. One of the British species (*C. pratensis*), is called

cuckoo-flower, and others have other local names, as meadow-cross, &c.

CARDAMOMUM, a perennial plant of the East Indies. This is the true cardamom, but the name is given to various other plants. See **CARDAMOMS**.

CARDAMOMS, the seed capsules produced by the cardamom plants, of which there are various species growing in India, Cochinchina, Siam, and Ceylon. The lesser cardamoms are the capsules of the *Matonia cardamomum*; the greater cardamoms, called also seeds of paradise, are produced by the *Anomum granum paradisi*. Both kinds are highly aromatic, have a piercing smell, and a bitterish though not unpleasant taste. The best are brought from the coast of Malabar.

CARDIAC ARTERIES, the coronary arteries of the heart.

CARDIAC CONFECTION, a medicine possessing stimulant and antispasmodic virtues, prepared from a mixture of cinnamon bark, nutmegs, cloves, cardamom seeds, saffron, &c.

CARDIAC PASSION, an old name for heartburn.

CARDIAC PLEXUS, the plexus of nerves which supplies the heart.

CARDIAC VEINS, the coronary veins of the heart.

CARDIAL'GIA, from *καρδια*, and *αλγος*: an uneasy sensation in the stomach, with heat more or less violent; frequently a symptom of other diseases, as dyspepsia, &c. *Heartburn* and *black-water* (Scotland, *water-brash*), are species of this disease.

CARDINAL, Lat. *cardinalis*, fundamental. Taken substantively, *cardinal* is the title of an ecclesiastical prince in the Romish church, who has a voice in the conclave at the election of a pope: the pope is taken from the number of cardinals. The rank of cardinal was originally inferior to that of bishop, but these dignitaries have now changed places.

CARDINAL NUMBERS, the numbers *one*, *two*, *three*, &c., in distinction from *first*, *second*, *third*, &c., which are *ordinal numbers*.

CARDINAL POINTS, the four intersections of the horizon, North, South, East, and West. In *astrology*, the cardinal points are the rising and setting of the sun, the zenith and the nadir.

CARDINAL SIGNS, Aries, Libra, Cancer, and Capricorn.

CARDINAL VIRTUES, prudence, temperance, justice, and fortitude.

CARDINAL WINDS, those winds which blow from the cardinal points.

CARDINAL'S CAP, a cap or hat of a peculiar form worn by cardinals.

CARDING MACHINE, a machine for combing, cleaning, and breaking wool and cotton. It consists of cylinders thickly

set with teeth, and is moved by water-power or steam.

CARDIOID (from *καρδια*, and *ειδος*); an algebraical curve, so called from its resemblance to a heart.

$$PQ = AB.$$

$$CQ = QQ = 2AB.$$

$$AQ = AB = AP.$$

P always bisects QQ.

CARDITA, an inequilateral bivalve, found fossil at various depths in mud and sand. It belongs to the genus *cardium*.

CARDIUM, the cockle. A genus of bivalve shell, characterised by the teeth of the hinge, and the projection of the beaks: the latter gives the shells a cordiform appearance: 52 species are described. Name *cardium*, from *καρδια*, the heart.

CARDOO'N, the *Cynara cardunculus*, a hardy perennial plant of Crete. It resembles the artichoke, but is larger. Name, from Lat. *carduus*.

CARDS, plural of *Card* (q.v.). 1. Instruments which serve to disentangle the fibres of wool, cotton, or other analogous bodies, to arrange them in an orderly lap or fleece, and thereby prepare them for being spun into uniform threads. Cards are either fastened to a flat piece of wood, and worked by the hand, or to a cylinder, and worked by machinery. The card consists of teeth of wire inserted into a thick leather, the leather being afterwards attached to the wood. In this sense the term *card* is from the Latin *carduus*.—2. *Playing Cards*: these are too well known to need description. They are said to have been introduced in the 14th century, to divert Charles VI. of France. By the hearts were meant choirmen or ecclesiastics; the spades (Spanish, *espadas*, swords) represented the nobility, who wore swords, or carried pikes. The diamonds (*carreaux*) denoted the citizens or merchants; the trefoil-leaf or clovergrass was an emblem of the husbandman; this is called *clubs* with us, because the Spaniards have *bastos* on their cards. The knaves were the servants of knights; the kings were David, Alexander, Cæsar, and Charlemagne, who established the four great monarchies, the Jews, Greeks, Romans, and Franks. The four queens

were Argine (i.e. regina or queen by descent), Esther, Judith, and Pallas.

CAREENING, the process of heaving a ship on one side, for the purpose of cleaning or caulking the other. The term is from Fr. *carène*, the side and keel of a ship.

CAREER. 1. In the *manège*, a place inclosed with a barrier in which the ring is run.—2. In *falconry*, the flight of a hawk, or about 120 yards.

CA'RET, Lat. A mark in writing, a, showing that something omitted in the line is written above, or inserted in the margin, and should be read in that place: *careo*, to want.

CAR'GOOSE, a fowl belonging to the genus *Colymbus*, called also the crested diver.

CAR'ICA. 1. The fig, *Ficus carica*.—2. The *Papaw-tree*, of which there are six species, natives of hot climates; *Diacia*—*Decandria*. Name, *carica*, a load.

CARICATU'RE, Ital. *caricare*, to charge. An exaggerated representation of an object, in which natural defects are overcharged, so as to cause it to appear ridiculous.

CA'RIES, a Latin word for rottenness, applied in medical language to the ulceration of a bone.

CAR'ILLON, Fr. 1. A little bell: a small instrument furnished with bells, properly tuned, and furnished with finger-keys, like those of the piano-forte.—2. A simple air, adapted to be played by musical bells.

CAR'INA, Lat. 1. The keel of a ship.—2. The back-bone.—3. The keel, or that part of a papilionaceous flower, consisting of two petals, separate or united, which incloses the parts of fructification.

CARINARIA, a very thin univalve, placed by De Blainville in the family *Nectopoda*. It derives its name from its dorsal keel; its inhabitant is unknown.

CAR'INATED, Lat. *carinatus*, keeled or boat-shaped. Applied to leaves and petals when the back is longitudinally prominent; and to shells when furnished with an elevated ridge, either on the surface or margin.

CARIN'THINE, a variety of augite, of a dark green or black colour. It obtains its name from being found in Carinthia.

CARL'NA, the carline-thistle. A genus of plants, *Syngenesia*—*Polyg.* *equalis*. Name from *Carolus Magnus*, Charles the Great, or Charlemagne; because, as the story goes, an angel showed him the carline thistle, and by the use of it his army was preserved from the plague.

CAR'LINE, Caroline, a silver coin of Naples.

CAR'LINE, a piece of timber in a ship, **CAR'LING**, ranging fore and aft, from one deck-beam to another, directly over

the keel, serving as a foundation for the ship. On these rest ledges, on which the planks of the deck are made fast.

CAR'LINE-KNEES, timbers in a ship lying across from the sides to the hatchway, and serving to sustain the deck.

CAR'LINE-THISTLE, a name common to all the plants of the genus *Carlina*, but especially applied to the *C. acaulis* of Italy, and the *C. vulgaris* of Britain.

CAR'LOCK, a sort of isinglass, from Russia, made from the sturgeon's bladder, and used in clarifying wine.

CARLOVIN'GIAN, pertaining to, or descended from, Charlemagne.

CAR'MELITE. 1. A mendicant friar, named from Mount Carmel, because the order was founded there.—2. A sort of pear.

CAR'MEN, Carters. The carmen of the city of London are constituted a fellowship, by act of Common Council. They are subject to the president and governors of Christ's Hospital.

CAR'MINE, a beautiful red pigment, formed of the colouring matter of cochineal. It is a species of lake. The name is French, perhaps from Arabic *kirmón*, cochineal.

CARNA'RIA, flesh-eating animals. In Cuvier's arrangement, the third order of Mammalia. The families are *Cheiroptera*, *Insectivora*, and *Carnivora*.

CARNA'TION. 1. *Flesh-colour*; the naked parts of a picture, exhibiting the colour of the flesh.—2. A beautiful species of the *Dianthus* (the *D. caryophyllus*), having its colours equally marked all over the flowers. It is a British perennial.

CARNA'TION-GRASS, Lat. *caro*, flesh. Any coarse species of *carex* is so named in the north of England and Scotland.

CARNE'LIAN, } a precious stone of va-
CARNE'LION, } rious colours; as red, brown, yellow, and white. It is a variety of rhombohedral quartz. The finest specimens are brought from India.

CAR'NEL-WORK, the putting together the timbers, beams, and planks of a ship, as distinguished from *clinch-work*.

CAR'NEOUS, fleshy. Applied, 1. In *anatomy*, to some muscles of the heart.—2. In *natural history*, the term designates (usually) flesh-colour.

CAR'NEY, a disease of horses, in which the mouth is so furred that they cannot eat.

CARNIVAL, the season of rejoicing observed before Lent, in Catholic countries, with feasts, balls, &c.

CARNIV'ORA, from *carnis* and *vora*. 1. Animals which subsist wholly on flesh: they form a family in the order *Carnaria*, Cuv.—2. A family of coleopterous insects which pursue and devour others.

CARNO'I, an order of *polypti*, consisting

of fleshy animals which usually fix themselves by their base.

CARNOS'ITY, a little fleshy excrescence in the urethra, neck of the bladder, &c.

CAROB-TREE, St. John's Bread (*Cavatoria siliqua*), a native of the South of Europe.

CAROCHE', Fr. A carriage of pleasure.

CAROCOL'LA, Lat. *caro*, flesh, and Gr. *κόλλη*, glue. A genus of land-snails, so called from the tenacity with which their glutinous fleshy foot adheres to limestone rocks.

CAR'OMEL, the smell emitted by sugar at a calcining heat. See *CARAMEL*.

CAR'OTID, the name of an artery on each side of the neck, from *καρσ*, to cause to sleep; because the carotids supply the head with blood, and the ancients believed sleep to be caused by an increased flow of blood to the head.

CARP, a fish, the *Cyprinus carpio*, Lin. The name is in some measure common to all the *Cyprinidæ*, amongst which are the Breams, Gudgeons, Tenches, Suckers, &c.

CARPATHIAN BALSAM, an essential oil, distilled from the fresh cones of the trees which yield the common turpentine.

CARPE'LUM, Lat. from *καρπός*, a leaf in a particular state of modification. Thus the modified leaves forming the pistil are called *carpella*, and have their under sides turned outwards, and their upper towards the centre of the flower. These leaves are also so folded that their margins are next to the axis; from these a kind of bud is produced.

CAR'PENTER, one whose business is to cut, fashion, and join timber for building. Those who do the work of houses are *house-carpenters*; those who build ships are *ship-carpenters*. Correctly, the framer is a *carpenter*, but the finisher is a *joiner*. The word is French, *charpentier*, from *charpente*, timber.

CAR'PENTER'S RULE, a graduated scale, fitted with slides (hence called the *sliding-rule*), to take the dimensions of timber, and cast up the content of artificers' work.

CAR'PENTER'S SQUARE. See *SQUARE*.

CAR'PENTRY, the art of employing timber in constructing edifices. It is divided into *house-carpentry* and *ship-carpentry*.

CAR'PET, a thick woollen fabric, of variegated colours, for covering floors. This manufacture took its origin in Persia and Turkey. The Axminster carpets are not inferior to those of oriental fabric.

CARPET-WAX, a border of green sward left round the margin of a ploughed field.

CARPHOLO'GIA, } from *καρρος*, chaff, and
CARFOLO'GIA, } *λεγω*, to pick. A disposition to pick minute objects, which accompanies the delirium of low fever.

It is often witnessed in individuals picking the bed-clothes: it is a very unfavourable symptom.

CARPENUS, the hornbeam-tree. A genus of which three species are described, besides several British varieties. *Monacra*—*Polyandria*.

CARPOBAL'SAMUM, Gr. from *καρτος*, fruit, and *βαλσαμον*, balsam. The exudation of the fruit of the *Amysis Gileadensis*.

CARPOLOGY, that branch of botany which treats of fruits; *καρτος*, fruit, and *λογος*, doctrine.

CARRAGEEN, } marine pearl moss,
CARRAGAHEEN, } found in the West of Ireland. The jelly formed from it is more firm than that deduced from the Iceland moss, or Indian arrow-root.

CARRARA MARBLE, a species of white marble, called *marmor lunense* and *ligustrum*, by the ancients. It is distinguished from the Parian or statuary marble, by being harder and less bright. It takes its name from Carrara, in Italy.

CARREL, an apartment for privacy; a cross-bow bolt; the arrow used in cross-bows.

CARRIAGE, from the root of *carry*. A general term for a coach, or other vehicle on wheels; as a *cannon-carriage* on trucks; a *block-carriage* for mortars; and a *truck-carriage*. In *architecture*, the term denotes the framework which supports the steps of a wooden stair.

CARRICK-BEND, a particular kind of knot.

CARRICK-BITTS, the bitts which support the windlass in a ship.

CARRONADE, a short piece of ordnance, having a large calibre, and a chamber for the powder, like a mortar. This species of cannon is carried on the upper works of ships, as the poop and forecastle. It takes its name from Carron, in Scotland, where it was first cast.

CARROO'N. 1. In *London*, a rent received for the privilege of driving a cart.—2. A variety of cherry.

CARRYING TRADE, the trade which consists in transporting goods by water from country to country.

CARRYING WIND. In the *manège*, a tossing of the nose as high as the ears.

CARSE LAND, alluvial soil in a state of aration.

CART BOTE, timber to which a tenant is entitled for repairing carts, &c.

CART TIRE, the bands of iron, used to bind the wheels of a cart.

CARTE-BLANCHE (French), white paper; a blank paper signed at the bottom by a person, and given to another, with permission to insert what conditions he pleases; applied usually in the sense of unlimited terms granted to a person.

CARTEL, from Lat. *chartula*. 1. A writing or agreement between states at war for exchange of prisoners or other mutual advantage; also the vessel employed to convey the messenger on this occasion.—2. A letter of defiance, a challenge.

CARTEL SHIP, a ship employed in the exchange of prisoners, or in carrying propositions to an enemy.

CARTHAMUS, a genus of plants mostly European. *Syngenesia*—*Polyg. æqualis*. Name from *καθαίρω*, to purge. The well-known saffron-flower or bastard saffron, used in dyeing, is the flower of the *C. tinctorius*, an annual much cultivated in Egypt. A variety is cultivated in Spain and the Levant.

CARTHUSIANS, an order of monks so called from Chartreuse, the place of their institution. They are remarkable for their austerity.

CARTILAGE, Lat. *cartilago*, gristle; smooth, solid, animal matter, softer than bone, and harder than ligament. It forms the nidus in which the earthy matter of most bones is deposited.

CARTILAGINOUS, Lat. *cartilagineus*, gristly. 1. In *ichthyology*, fishes form two distinct series, that of fishes properly so styled, and that of the *chondropterygii*, otherwise called *cartilaginous fishes*. The skeleton of these contains no osseous fibres, the calcareous matter being deposited in small grains and not in filaments.

—2. In *botany*, the margins of leaves are said to be cartilaginous when they are of a hard or strong consistence.

CARTOON, Ital. *cartone*, pasteboard; a design made on strong paper, to be afterwards chalked through and transferred to the fresh plaster of a wall, to be afterwards painted in fresco; also a coloured design for working in mosaic, tapestry, &c.

CARTOUCH, Fr. *cartouche*, from *carte*, paper. 1. An ornament in architecture resembling a scroll of paper, being usually in the form of a table or flat member with wavings, whereon is some inscription or device. It is nearly akin to a modillon, and is called by some workmen a *dentil*.—2. A case holding about 400 musket-balls, and six or eight iron balls of a pound weight, to be fired out of a howitzer for defending a pass.—3. A cartridge-box.

CARTRIDGE (corrupted from *cartouch*), a case of pasteboard or strong paper, holding the charge of powder or powder and ball for a cannon, mortar, musket, or pistol. They are carried in a cartridge-box.

CARTULARY, Sp. *cartulario*, from *carta*, paper, a register-book or record of a monastery. Blackstone writes the word *chartulary*.

CARUCATE, Lat. *caruca*, as much land as one team can plough in a year.

CA'RUN, the *caraway*, a genus of plants. *Pentandria*—*Monogynia*. Named from *Caria*, a province in Asia, where it grows abundantly.

CARUN'CULE, Lat. *caruncula*, dim. of *caro*, flesh, a little fleshy excrescence, applied, 1, to healthy and natural parts, as the *lachrymal caruncula*; and 2, to little soft fleshy excrescences which are the product of disease.

CARVING, the art of cutting figures in wood, or more generally, it is the art of fashioning by cutting any hard body, in which sense it includes statuary and engraving as well as cutting in wood.

CARYAT'IC ORDER, an order of architecture wherein the entablature is supported by female figures clothed in long garments, instead of columns, the figures supporting the columns being called caryatides, caryates, or carians.

CARYAT'IDES, columns shaped like female figures, and in the dress of the Caryan women, who were taken captive by the Athenians (the males being put to the sword) and condemned to wear their national robes as a mark of ignominy, and to perpetuate the disgrace of the vanquished Caryates, the architects of the time employed the representation of these women to support the entablatures of their public buildings.

CARYOPHILLA'CEOUS is sometimes said of corollas, consisting of petals having long claws dilating into a broad limb.

CARYOPHYLL'EE, a natural family of plants: type, genus *Caryophyllus*.

CARYOPHYLL'UM, the clove (*Eugenia caryophyllata*.)

CARYOPHYLLUS, the *clove-tree*, a genus *Polyandria*—*Monogynia*. Named from *καρυον*, a nut, and *φυλλον*, a leaf. The *C. aromaticus*, an Indian tree which affords the clove, is by some botanists placed in the genus *Eugenia*.

CARYO'SIS, Gr., from *καρυον*, a nut, and *οψις*, resemblance, the technical name of the grain of corn.

CAS'CABEL (Spanish), the knob or pummelion of a cannon.

CASCA'HO (Portuguese), a deposit of debris, in which the Brazilian diamond is found.

CASCARIL'LA, a name given originally to some specimens of cinchona, but now applied to another bark, the *croton cascavilla*. The term is a Spanish diminutive of *cascara*, bark or rind.

CASE, a covering or box: Fr. *caisse*, Sp. *caja*. 1. Any outside covering which serves to inclose a thing entirely.—2. In architecture, the case of a door is the wooden frame in which the door is hung. The case of a stair is the wall which surrounds the staircase.—3. In grammar (Lat. *casus*, from *cado*), an inflection of

nouns, or a change of termination, to express a difference of relation in that word to others, or to the thing represented. The variation of nouns and adjectives is called declension: both *case* and declension signifying falling or descending from the first state of the word.—4. In law, an action on the case is an action where the whole cause of complaint is set forth in the writ.—5. In printing, is the receptacle for the types. There is always a pair of cases, the upper case and the lower case, which are subdivided into compartments for the different types.

CASE-BAGS, joists which are framed between a pair of girders in naked flooring.

CASED, covered. A brick wall faced with stone is said to be *cased*. Cased sash frames are such as have their interior vertical sides hollow to conceal the weights by which the sashes are hung.

CASE-HARDENING, a method by which articles of iron have their surfaces converted into steel. The piece of iron, after being properly polished, is brought to a red-heat, and is then rubbed over with prussiate (ferrocyanate) of potash in fine powder, and quenched in cold water: the process is then complete.

CASE'IC ACID, an acid obtained from cheese (*caseum*): its existence is doubtful.

CASE'MATE, from *casa*, a house. 1. A hollow moulding, which some architects make one-sixth, and others one-fourth of a circle.—2. A vault of mason work in the flank of a bastion, next to the curtain, serving as a battery to defend the face of the opposite bastion and the moat.—3. A well, with its subterranean branches, dug in the passage of a bastion till the miner is heard at work and air given to the mine.

CASE'RN, Fr. *caserne*, from *casa*, a house. A lodging for soldiers in garrison towns, usually near the rampart.

CASE'Z-SHOT, or **CANISTER-SHOT**, musket balls, stones, scraps of iron, &c., put into cases and shot out of mortars, &c.

CASE'UM, the basis of cheese: the purified curd of milk.

CASH, in trade, the ready-money, bills, drafts, bonds, and all immediately negotiable paper, in an individual's or company's possession.

CASH-ACCOUNT. 1. In book-keeping, an account to which nothing but cash is carried on the one hand, and from which all the disbursements of the concern are drawn on the other. The balance is the *cash in hand*.—2. In banking, the name given to the account of the advances made by Scottish bankers to an individual, who has given security for their repayment.

CASHEW'-NUTS, the produce of the *Anacardium occidentale*, a tree of the West Indies. The kernels are used in cooking

and in the preparation of chocolate. See *MACARDIUM*.

CASHMERE, a peculiar woollen fabric, first imported from the kingdom of Cashmere, and now well imitated in France and Great Britain. The material of the Cashmere shawls is the downy wool found about the roots of the hair of the Thibet goat.

CASING, the operation of plastering a house with mortar on the outside, and marking it while wet with lines, so as to make it resemble a building of polished freestone.

CASNET, in nautical language, a small rope fastened to gromets or little rings upon the yards, used to fasten the sail to the yard in furling. This word is usually written *gasket*.—2. A small jewel-box.

CASSATION, COURT OF, the highest judicial court in France: so called from its power to quash (casser) the decrees of inferior courts. It is a court of appeal in all cases.

CASSAVA, the starch of the root of the Manioc (*Jatropha Manihot*), a tree belonging to the natural family *Euphorbiaceæ*, and found in the West Indies, the tropical regions of America, and upon the African coast. Cassava flour can with difficulty be distinguished from arrow-root. See *TAPIOCA*.

CASSIA, a genus of plants, of which about 70 species are described, nearly all natives of warm climates. *Decandria—Monogynia*. Name Arabic, *katsia*, from *katsa*, to tear off. The Senna fistula and Egyptian lotus are species.

CASSIA-BARK, } the bark of the *Laurus*
CASSIA-LIGNEA, } *cassia*, the Malabar or wild cinnamon-tree.

CASSIA-BUDS, the dried berry of the *Laurus cassia*, a tropical tree. The cassia-buds are chiefly the produce of China.

CASSIA FISTULA, the purging cassia: the fruit of the *Cassia Fistula*, a tropical plant.

CASSIA SENNA, one of the plants which produce senna. See *SENNA*.

CASSINE. 1. A house surrounded by a ditch, like those of the feudal lords or barons.—2. A genus of greenhouse arborescent plants. *Pentandria—Trigynia*.

CASSINO, a game at cards, in which the ten of diamonds, the deuce of spades, and the aces, are the highest cards.

CASSIOPEIA, one of the northern constellations, representing the wife of Cepheus and mother of Andromeda. It is situated between 45° and 75° N. declination, and lies between 47° and 55° right ascension. It contains 55 stars.

CASSIS. 1. The black currant (*Ribes nigra*).—2. The helmet-stone, an encinite belonging to the *catocysti*.—3. A genus of ventricose univalves. Order *Gastropoda*, family *Muricidae*, sub-family *Cassina*, Sw.

CASSIUS PRECIPITATE, a purple oxide (?) of gold precipitated by tin. It is properly a compound of peroxide of tin and protoxide of gold. It is used in enamel painting, and for tinging glass of a fine red colour. It is soluble in ammonia.

CASSOWARY, a bird allied to the ostrich. There are two species forming the genus *Cassarius*, Bris., the one inhabiting the islands of the Indian Archipelago, and the other peculiar to New Holland. The feathers of this bird resemble hairs, and the wings are so short as to be entirely useless even in running. It runs, however, with great velocity, outstripping the swiftest racer. The name is Spanish, *casuel*.

CASSUMUNIA (Indian). A medicinal root brought from India in irregular slices of various forms. It possesses warm, bitter, and aromatic qualities, and a smell like ginger.

CAST. 1. In sculpture, an impression of any figure taken in bronze, plaster, wax, or other fusible material.—2. A tube of wax fitted into a mould, to give shape to metal.—3. A cylindrical piece of brass or copper slit in two lengthwise, to form a canal or conduit in a mould for conveying metal.—4. A little brazen funnel at one end of a mould for casting pipes, by means of which the melted metal is poured into the mould.

CASTANEA, the chestnut-tree. A genus. *Monacia—Polyandria*. Named from Castana, a city in Thessaly, where it was abundant.

CASTANET, a musical instrument, formed of small shells of ivory or hard wood, shaped like spoons, placed together, fastened to the thumbs, and beat with the middle finger. This instrument, named from Spanish *castana*, a chestnut, from its resemblance to two chestnuts, is used by the Moors and Spaniards, as an accompaniment to their dances, sarabands, and guitars.

CASTE. In India, &c., a class or tribe of the same profession. The four castes of hindoos are the *Brahmins*, or sacred order; the *Chehterce*, or soldiers and rulers; the *Vaissya*, or *Bice*, or husbandmen and merchants; and the *Sooders* or *Sudras*, or labourers and mechanics.

CASTELLAN, the governor of a castle. Applied in some parts of the continent to a dignity or charge.

CAST'EE, a small wheel on a swivel, attached to the supports of heavy furniture, that it may be readily moved on the floor.

CASTIGATORY, an engine formerly used to punish and correct arrant scolds; called also a *ducking-stool* and a *trebucket*.

CASTING. 1. Whatever is cast in a mould.—2. The process of taking casts and impressions of figures.—3. Among

carpenters and joiners, a term analogous to *warping* (q. v.).—4. Casting of draperies, in *painting*, is the disposition of the folds of the garments, with which the figures in the picture are clothed.—5. Casting off copy, in *printing*, is to ascertain accurately how many pages in print a given quantity of manuscript will occupy; or how many pages of a larger type a given quantity of print in a smaller type will occupy.

CASTING-NET, a net which is cast and drawn in; in distinction from a net that is set and left.

CASTING-VOTE, the vote of a person who presides in an assembly or council, and which, there being a parity of the other votes, decides the matter at issue.

CAST-IRON, the iron as it is extracted from the ores, being cast in a species of moulds; called also *pig-iron* and *cast-metal*.

CASTLE, Sax. *castel*. 1. A fortified house.—2. In *ships*, there are two parts called by this name; the *forecastle*, which is a short deck in the fore part of the ship, above the upper deck; and the *hindercastle* at the stern.

CASTLE-GUARD, a feudal tenure, or knight's service, which obliged the tenant to perform service within the realm without limitation.

CASTLE-WARD, an imposition laid upon subjects dwelling within a certain distance of a castle, for the purpose of maintaining watch and ward in the castle.

CASTOR, Lat. from *castor*. 1. The systematic name of the beaver, a genus of Mammalia, of the order *Rodentia*. See *BEAVER*.—2. The English name of the *castoreum* of the pharmacopœias; a peculiar odorous concrete substance, obtained from the *Castor fiber* (common beaver). The castor is contained in two bags, situated in the inguinal region. The best comes from Russia.

CASTOR AND POLLUX, a fiery meteor which, at sea, appears sometimes adhering to a part of a ship, in the form of one, two, or even more balls. When one only appears it is called *Helena*; two are called *Castor* and *Pollux*, or *Tyndarides*.

CASTOR-OIL, is obtained chiefly from the seeds of the *Ricinus communis*, or *Palma Christi*, an annual plant found in most tropical countries. The oil is separated from the seeds, either by boiling them in water, or by subjecting them to strong pressure.

CASTRATION. 1. In *surgery*, the removal of a testicle from the body.—2. In *botany*, the removal of the anther of a flower.

CASTRATO (Italian). A male person emasculated for the purpose of improving his voice for singing.

CASUISTRY, the doctrine or science of conscience, or the science of resolving cases of doubtful propriety, or of determining the lawfulness or unlawfulness of what a man may do, by rules and principles drawn from the Scriptures, from the laws of society, or from equity and natural reason.

CASUS FÆDERIS (Lat.), the case stipulated by treaty. That which comes within the terms of compact.

CAT. 1. The domestic cat is the *Felis catus*, Lin., originally from the forests of Europe. See *FELIS*.—2. A vessel formed on the Norwegian model, of about 600 tons burthen, carrying from 20 to 30 keels of coals.—3. A tackle, or combination of pulleys, to suspend the anchor at the *cat's-head* of a ship.—4. A double tripod, having six feet.

CATABASION, a place under the altar, in the Greek church, where the relics are kept.

CATACHRESIS, *καταχρησις*, a rhetorical figure, wherein the name of one thing is borrowed to express another thing, as "the blood of the grape."

CATABAPTISTS, *κατα*, against, and *βαπτίζω*, I baptise. Those who oppose infant baptism, or deny the necessity of baptism at all.

CATACAUSTICS, *κατακαυσ*, I burn, in *Optics* or *Geometry*, are the *caustic* curves formed by the reflection of light, in contradistinction to *diacaustic* curves, which are formed by refraction.

CATACLYSM, a deluge, *κατακλυσμος*. Applied to describe the Noachian deluge.

CATACOMBS, subterranean places for burying the dead, from *κατακοιμωμαι*, I sleep away. The term is said to have been first applied to the chapel of St. Sebastian in Rome, where St. Peter was deposited. It is now applied to a vast number of sepulchres on the Appian Way, about three miles from Rome. These are supposed to have been the cells and caves in which were deposited the bodies of the primitive Christians. The Egyptian catacombs extend over a wide tract of country in the neighbourhood of Grand Cairo; and those of Paris under a considerable part of the city.

CATACOUTISTICS, from *κατακουω*, to hear. That part of acoustics which treats of reflected sounds.

CATADIOPTRICS, from *κατα* and *διόπτωμαι*, to see through. The branch of optics which treats of reflected light.

CATAPALCO (It.), a scaffold. A temporary structure of carpentry, decorated with painting and sculpture, representing a tomb, and used in funeral ceremonies.

CATALAN, a sort of smelting furnace in use in the Pyrenees, where malleable iron

is obtained directly from the ores by one fusion. It is not suited to the reduction of the clayey iron ores of this country.

CATALECTIC VERSES are such as want either feet or syllables, from *κατα* and *λεγω*.

CATALECTIC, } from *καταλαμβάνω*, to
CATALECTIC, } seize. A trance: a disease
CATALECTIC, } which consists in a total
suspension of sensibility and voluntary motion, and generally also of mental power; the pulsation of the heart and breathing continuing, the muscles remaining flexible, the body yielding to and retaining any position, in which respect it differs chiefly from ecstasy.

CATALOGUE RAISONNÉ, a catalogue of books, classed under heads.

CATALPA, a genus of American trees: *Diandra—Monogynia*.

CATALYSIS, *καταλυσις*, dissolution. An imaginary force which is supposed to assist in the decomposition of some bodies, and the composition of others. Thus the conversion of sugar into alcohol by yeast, which itself is not changed, is cited as an instance of catalysis.

CATAMARAN, a sort of raft, originally used in China as a fishing-boat. The name was applied to explosive vessels, intended to destroy the French flotilla at Boulogne, early in this century.

CATAMENIA, the monthly discharge of females, *κατα*, and *μην*, a month.

CATAPHONICS, the doctrine of reflected sounds, *κατα*, and *φωνη*, sound.

CATAPHOR, from *καταφέρειν*, to fall down, a term used by some to designate a state of coma, and by others an unusually sound sleep.

CATAPULT, a military engine used by the ancient Greeks and Romans for throwing stones, darts, and arrows upon the enemy; from *κατα*, and *παλλω*, to throw.

CATARACT, from *καταρσσω*, to fall with violence. 1. A great fall of water over a precipice; a cascade upon a great scale. That of Niagara is the largest in the world.—2. An interruption of sight produced by opacity, either of the crystalline lens or its capsule, or the fluid of Morgagni, or more generally any perceptible obstacle to vision, situated between the vitreous humour and the urea and pupil. The first species is called *true cataract*, and when the disease consists of opaque matter situated before the lens, it is denominated *false cataract*.

CATARH, from *καταρχειν*, to flow from; a cold in the head or on the chest; it develops itself by inflammation of the lining membrane of the air passages. Common *catarrh* is called a *cold*, and *epidemic catarrh* is *influenza*.

CATAS'TASIS, *καταστασις*. 1. The con-

stitution or state of anything, as of the atmosphere.—2. The restoration of a thing to its natural condition, state, or position.

CATAS'TROPHE, *καταστροφή*, from *κατα* and *στρέφω*. The change or revolution of events which produces the final event of a dramatic piece, or the unfolding of the plot. The ancients divided their plays into *prostasis*, *epitasis*, *catastasis*, and *catastrophé*; the introduction, continuance, heightening, and development.

CAT-BLOCK, a two or three-fold block, with an iron strap and large hook, used on board ships to draw up anchors to the cat's-head.

CAT-CALL, a squeaking instrument, used in play-houses to condemn plays.

CATCH'DRAINS, the feeders of reservoirs. In the constructing of canals, the same as *counter-drains*.

CATCH-WORD, a word at the bottom of a page which begins the next page. Catchwords are not now inserted.

CATCH-WORK MEADOWS, grass lands with very regular surfaces, subject to irrigation, the water as it descends being intercepted by drains.

CATECHU', the *Terra japonica*, an extract of an astringent nature obtained from two plants; viz., the *acacia catechu*, a tree of great abundance in many of the forests of India, and the *nauclea gambir*, a scandent shrub, extensively cultivated in the countries lying on both sides of the straits of Malacca. From the first-named plant the catechu is obtained by boiling the chips of the interior of the trunk; from the latter it is obtained by boiling the leaves. Catechu has long been employed in India for tanning hides, in this country it is chiefly used in dyeing browns.

CATECHUMEN, an adult who is receiving instruction and preparing himself for baptism. The name, from *κατηχουμηνος*, the place where the catechist taught, is commonly applied to *pagans* not fully instructed in the Christian religion.

CATEGORICAL PROPOSITION, *κατηγορημα*, I declare something of another. A proposition which affirms or denies that the subject does not agree with the predicate.

CAT'EGORY, *κατηγορημα*. In *logic*, an enumeration of all the attributes contained under a genus. In the *logic* of Aristotle there are ten categories: substance, quantity, quality, relation, action, passion, time, place, situation, and habit.

CATEN'ARY, Lat. *catenarius*, appertaining to a chain (*catena*), used to denote the curve which a chain forms itself into by its own weight when hung freely between two points of suspension, whether those points be in the same horizontal plane or not.

CATENULATE, when a surface presents a series of ridges like the links of a chain.

CATERPILLAR, a female papilio or butterfly lays her eggs, from which they are hatched, not as butterflies, but animals with an elongated body, divided into rings, and a head furnished with jaws and several small eyes, having very short feet, six of which are inferior, scaly, and pointed, the rest, varying in number and membranes, being attached to the posterior annuli. These animals are *caterpillars*. They live in this state for a certain period, and repeatedly change their skin. An epoch, however, arrives when from the skin of a caterpillar issues a totally different being, of an oblong form and without distinct limbs, which soon ceases to move, and remains a long time apparently dead and desiccated, under the name of a *chrysalis*. After a time the skin of the chrysalis splits, and the butterfly issues forth, with humid and soft flabby wings, which in a few moments enlarge and become firm, and the animal is ready for flight. This is what is called the *metamorphosis* of insects. — 2. A name common to all the plants of the genus *Scorpiurus*, which are hardy European annuals.

CAT-FISH. 1. A species of *squalus* or shark. — 2. A species of *cottus* found in the North American rivers.

CAT-FALL. See CAT'S-HEAD.

CAT-GUT, the name given very absurdly to cords made of the twisted intestines of sheep. Whip-cord, hatter's cords, bow-strings, clockmaker's cord, and fiddle and harp strings are all made of cat-gut variously prepared.

CATH'AN, *καθαρος*, pure. An oriental sect of Christians.

CATH'ARINE-WHEEL. 1. An ornamental window or compartment of a window in ancient buildings, of a circular form, with rosettes or radiating divisions of various colours. — 2. A sort of firework constructed in the form of a wheel, which is made to turn round when it is let off.

CATH'ARIST, one who pretends to more purity than others possess; from *καθαρος*, pure.

CATHAR'TINE, a substance of a reddish colour, peculiar smell, and bitter nauseous taste, obtained from the leaves of senna.

CATHARTOCARPUS, a genus of plants separated from the Linnaean genus *Cassia*. The *Cassia fistula* is placed in this genus, and named *C. fistula*.

CATHEDRAL, Lat. *cathedra*, from *καθίζω*, a chair; used to designate the head church of a diocese, sometimes called *ecclesia matrix*, or mother church.

CAT'ETER, Lat. from *καθίζω*, a long

hollow tube introduced by surgeons into the urinary bladder, to draw off urine when the patient is unable to pass it naturally. Catheters are made of silver, of mixed metals, and of elastic gum.

CATH'ETUS, Lat. from *καθίω*, a line or radius falling perpendicularly on another line or surface: thus, in *optics*, (1). The *cathetus of incidence*, is a right line drawn from a point of the object perpendicular to the reflecting plane. (2). The *cathetus of reflection* is a right line drawn from the eye, perpendicular to the reflecting plane. (3). The *cathetus of obliquation* is a right line drawn perpendicular to the speculum in the point of incidence or reflection. In *architecture*, a cathetus is, (1). A perpendicular line passing through a cylindrical body, as a column or baluster. (2). A line falling perpendicularly, and passing through the centre eye of the volute of the Ionic chapter.

CATHOLICON, from *καθολικον*, a universal remedy: a medicine which was supposed to purge away all vitiated humours.

CATH'ODE, from *κατά*, downwards, and *ὁδός*, a way. The way which the sun sets; the surface at which electricity passes out of a body, supposing the current to move in the apparent direction of the sun.

CAT-HOOK, the strong hook attached to a cat-block.

CATION, from *κατά*, downwards, and *ίμις*, to go. That which goes down; a substance which in electrolysis passes to the cathode.

CAT'KIN. See AMENTUM.

CAT'LING, a long, narrow, double-edged, sharp-pointed knife, used by surgeons chiefly in amputations.

CAT-MINT, a name common to all the plants of the genus *Nepeta*, but especially applied to the *N. cataria*, a British perennial: cats are said to be fond of it.

CATOCT'STI, in *malacology*, the second great division of the Echini. They have the opening for the vent in the base of the shell, and are divided into fibulae, cassides, scuta, and placentae.

CATOP'TRICKS, from *κατοπτρον*, a mirror. The science of reflex vision, or that part of optics which explains the properties of reflected light, particularly that reflected from polished surfaces, whether plain or curved.

CAT'S-EYE, a beautiful variety of rhombohedral quartz, having an opalescence resembling the light from the eye of the cat: whence its name. The finest specimens of this stone are brought from Ceylon.

CAT'S-HEADS, two strong short beams of timber, projecting almost horizontally over a ship's bows, one on each side of the bowsprit: called also *cat-heads*. These

beams carry two or three sheaves, about which a rope, called the *cat-fall* or *cat-dole*, passes and communicates with the *cat-block*.

CAT'S-PAW, among *seamen*, 1. A light air perceived in a calm by a rippling on the surface of the water.—2. A particular turn in the bight of a rope, made to hook a tackle on.

CAT'SALT, a beautifully granulated salt obtained from the bittern or leach-brine that runs from the salt when taken from the pans at salt-works. This salt is used in the making of hard soap and for curing fish. It is very pure.

CAT'S-TAIL, a name common to all the plants, 1. of the genus *Phileum*; 2. of the genus *Typha*. This last has more commonly the name *Reed-mace*. There are several native species of both genera.

CAT-THYME, the Syrian herb mastich (*Teucrium marum*), a shrub which grows plentifully in Greece, Egypt, Crete, and Syria. The dried and powdered leaves are used in medicine, but chiefly as an emmenagogue.

CATTLE, beasts in general serving for tillage or other labour, or for food to man. In the primary sense, the term includes camels, horses, asses, all the varieties of domesticated horned beasts or the bovine genus, sheep, goats, and perhaps swine. Animals of the bovine genus are usually distinguished by the name of *neat*, *horned*, or *black cattle*, while sheep of all kinds, goats, swine, &c., are denominated *small cattle*. The origin of the term *cattle* is doubtful—it may be Norm. *cetal*, goods, or Arm. *chetai*, beasts, or some cognate root.

CAUCUS, a word used in America to denote a meeting of citizens to agree upon candidates to be proposed for election to offices, or to concert measures for supporting a party. The origin of the word is not ascertained.

CAUDA (Latin), a tail: applied to parts resembling a tail, as the elongated base of the ventre, lip, or columella of shells.

CAUDEX (Latin), a stem: applied by some botanists to that part both of the root and stem of a plant which is not ramified.

CAUDICULA, a thin elastic process of the pollen masses of the orchidaceous plants.

CAUT, a chest with holes for keeping fish alive under water.

CAVE, } a name given by English miners
CAWK, } to sulphate of barytes or heavy spar.

CAUL, the English name of the *omentum* (q. v.). A detached portion of the membrane is sometimes found covering the face of a newly born child: this in popular language is named the *caul*. The superstitious believe that this species of membrane, borne about the person, will prevent an individual from ever being drowned.

CAULICULES, the slender stems or stalks of the leaves of the abacus in the Corinthian capital.

CAULICULUS, the slender part which connects the cotyledon of a seed with the radicle.

CAULINE, Lat. *caulinus*, appertaining to the stem: applied to leaves and peduncles which come immediately from the stem.

CAULIS (Latin), a stem which bears the leaves as well as the flowers.

CAULK'ING. 1. In nautical language, see **CAULKING**.—2. In architecture, the old mode of fixing the binding joists of a floor, or the tie-beams of a roof, by dovetailing into the wall plates: called also *cocking*.

CAULOCARPOUS, *καυλος*, stem, and *καρπος*, fruit. Perennial plants which yield flowers and fruit.

CAUSTIC, from *καω*, to burn. A substance which has so great a tendency to combine with organised substances as to destroy their texture. The common caustics are lunar caustic, or nitrate of silver, and caustic potash.

CAUSTIC BARLEY, the seeds of the *Verrucaria sabadilla*, a plant of Senegal. They are powerfully caustic.

CAUSTIC CURVE, the curve formed by the collected rays of light issuing from a curved reflector: called also the *catocaustic curve*.

CAUTERY, from *καω*, to burn. The application of a red-hot iron is an *actual cautery*; the application of a caustic is a *potential cautery*.

CAUTIONER, in *Scots law*, a security or person bound by obligation for another.

CAUTIONRY, in *Scots law*, the obligation by which one person becomes security for another, that he shall pay a sum of money, &c.

CAVE'DIUM, Lat. in *ancient architecture*, an open quadrangle within a house.

CAVALIER, in *fortification*, an elevation of earth, situated ordinarily in the gorge of a bastion, and bordered with a parapet with embrasures.

CAVALIERS, in *history*, the party of Charles I.

CAVATINA (Italian), a short air without a return or second part, which is sometimes relieved by recitative.

CAVA'ZION, } from Lat. *cavo*, to hollow,
CAVA'SION, } the foundation plan for the walls of a building, which may be as deep as one-sixth part of its height.

CAVEA, in *ancient architecture*, the subterranean cells in amphitheatres, in which wild beasts were confined, in readiness for the fights of the arena.

CAVEAT, a Latin word meaning "*let him beware*," used in courts of law to denote a process to stop proceedings, also to denote a notice of intention to apply for a patent for some invention.

CAVEATING (See **CAVEAT**), a term in fencing applied to the shifting of the sword from one side of an adversary to the other.

CAVETTO, Ital. dim. of Lat. *cavus*, an architectural term used to denote a concave ornamental moulding, opposed in effect to the *ovolo*; the concavity of the

one and the convexity of the other are not to exceed the quarter of a circle. The projection of the cavetto is equal to its altitude.

CAVEZON } (French), a sort of nose-
CAVESSON } band of iron, leather, or wood, sometimes flat and sometimes hollow, put on the nose of a horse to wring it, and thus to forward the suppling and breaking of him.

CA'VIA, the guinea-pig or *cobay*, a genus of quadrupeds of the order *Rodentia*, Cuv. The best known species is the *mus porcellus*, Lin. The word *Cavia* is Brazilian.

CAVIAR (French), a substance prepared chiefly in Russia, consisting of salted roes of large fish, especially the sturgeon, caught in the Wolga. The Italians first brought it to Europe, under the name of *caviale*. The root of the word is perhaps Arabic, *gabiâr*.

CAVOLINITE, a Vesuvian mineral of a hexahedral form, occurring in the interior of calcareous balls, accompanied by garnets, idocrase, mica, and granular pyroxene, lining the cavity of geode, &c. Named in honour of Cavolini, a Neapolitan naturalist.

CAYENNE, a species of very pungent pepper, called *Cayenne pepper* and *Guinea pepper*. It is prepared from the pods of several species of the capsicum, which originally came from Cayenne, but is now brought from both the Indies.

C. B., Companion of the Bath.

C. C., Caius College. C. C. C., Corpus Christi College.

CEANO'THUS, a genus of shrubby plants. *Pentandria*—*Monogynia*. Name, *καλαθος*, the *Serratula arenensis*. The New Jersey tea (*C. Americanus*) is perhaps the best known species of this genus.

CEBRIO, a genus of Pentamerous coleoptera; family *Serricornes*. This genus is the type of the cembrionite tribe, and is now subdivided into *Physoctylus*, *Anelastes*, *Sandalus*, *Rhaphicera*, &c. These insects are chiefly found on aquatic plants.

CE'DAR, the *Pinus cedrus*, Lin., by Tournefort evergreen, under *Larix*. It is a coniferous rank green, bearing large roundish cones of smooth scales, standing erect;

the leaves small, narrow, and thickly set. This tree is nowhere found native but on Mount Libanus, and is usually distinguished by the name of the *Cedar of Lebanon*. Few are now found on Lebanon, but those that remain are of immense size. The red cedar, so well known from its being used in the manufacture of black-lead pencils, is the wood of the Virginian cedar, a species of juniper (*Juniperus Virginiana*), a large tree of America, West Indies, and Japan. Like the cedar of Lebanon it is not attacked by worms.

CE'DRA, the fruit of a species of orange, citron, or lemon, a tree which bears the same name. Its peel contains a highly prized essential oil used to flavour preserves.

CE'DRE'LA, the *bastard-cedar*, the generic name of a tree of Iarbadocæ. *Pentandria*—*Monogynia*. It is the type of the natural order *Cedrelacæ*. Name dim. of *cedrus*, the cedar-tree.

CEL'ANDINE, a name common to all the plants of the genus *Chelidonium*, two species of which are British. The greater celandine, called also *tetterwort*; the lesser celandine is called also *pilewort*. The great tree celandine is a species of *bocconia* found in the West Indies.

CELA'STRUS, the *staff-tree*, a genus. *Pentandria*—*Monogynia*. Name from *celastrum*, a shepherd's cup. It is the type of the *Celastricæ*, a natural order of shrubby exogens.

CEL'ATURE, Lat. *celatura*, from *celo*, to engrave; the art of engraving or embossing, or that which is engraved or embossed.

CE'LE. Κηλη. A tumour caused by the protrusion of any soft part; a hernia. This word is chiefly used in composition, as *en-cé-céle*, *epi-plocéle*, &c.

CELESTES, light horsemen instituted by Romulus when he settled the constitution of Rome.

CELESTINE, native sulphate of strontia, so named from its being frequently found of a blue colour, but it also occurs perfectly colourless and sometimes red.

CELES'TINS, a religious order named from Pope Celestin. They have about 100 convents in Italy and 20 in France.

CE'LIAC, Lat. *celiacus*, pertaining to the lower belly or intestines.

CEL'LARIST. } 1. An officer in a monas-
CEL'LAREE. } tery who has the charge of procuring and keeping provisions.—
2. An officer in chapters who has the care of the temporals, and particularly of distributing bread, wine, and money, to canons on account of their attendance in the choir.

CELLULA'RIA, a genus of coralliferous polypi, forming the type of Cuvier's family of *cellularii*.

CELLUL'RII, a family of coralliferous polypiers, bearing a general resemblance to the hydra. Each polypus is adherent in a calcareous cell, and only communicates with the others by an extremely tenuous external tunic, or by the minute pores which traverse the parieties of the cells.

CELLULAR INTEGUMENT, the succulent pulpy substance situated immediately under the cuticle of plants. Thus leaves consist chiefly of this substance, and the stems and branches are surrounded by it. It is the seat of colour, mostly green, but is itself colourless, the colouring matter being contained in its vesicles.

CEN'LULAR MEMBRANE, that tissue of filmy meshes which connects the minute component parts of most of the structures of the animal body.

CELO'SIA, a genus of tropical plants. *Pentandria—Monogynia*. There are many species, all producing fine flowers, from which the genus has obtained the name *cozcomb*.

CEM'ENT, Lat. *cementum*. Chemists give this name to all sorts of lutes, and builders use it to denote a stronger kind of mortar than that commonly employed.

CEMENTA'TION, a chemical process, which consists in surrounding a body in the solid state with the powder of some other bodies, and exposing the whole for a time, in a close vessel, to a degree of heat not sufficient to fuse the contents. Thus iron is converted into steel by cementation with charcoal; green bottle-glass is converted into porcelain by cementation with sand, &c. The term is also used for the act of cementing.

CEN'OBITES, a religious order who live in community: opposed to *anchors*. The term is Gr. *κοινοβιτης*, a community, from *κοινος*, common, and *βίος*, to live.

CENSE, Lat. *census*, a valuation, a registering, a tax: *censeo*, to enrol, to tax.

CEN'SER, a vase or pan in which incense is burned (see *INCENSE*). The Jewish censer is a sort of chaffing-dish, covered by a dome, and suspended by a chain, used to offer perfumes in sacrificing.

CEN'SOR, Latin. An officer at ancient Rome, whose business was to register the effects of the citizens, to impose taxes according to the property which each man possessed, and to inspect the manners of the citizens, with power to censure vice by inflicting a public mark of ignominy on the offender. (See *CENSE*.) The term is now used to designate one empowered to examine manuscripts and books, before they are committed to the press, to see that they contain nothing immoral or heretical.

CENSURE, Lat. *censura*. (See *CENSOR*.) Among ecclesiastics, this term is used to denote a sentence of condemnation on a

member of a church for mal-conduct, by which he is deprived of the communion of the church, or prohibited from performing the sacerdotal office.

CEN'SUS, Latin. The declaration made in ancient Rome by the citizens before the censors. (See *CENSOR*.) This declaration was registered, and contained an enumeration of all their lands and estates, their quantity and quality, with the wives, children, domestics, tenants, and slaves of each citizen. In modern times the word is used to denote the enumeration of the inhabitants of a country. Thus a *census* of the population of Great Britain is made every 10 years.

CENT, contracted from Lat. *centum*, a hundred. Hence, *per cent.* means per hundred, as *five per cent.*, meaning five in the hundred. *Cent* is also the name of a copper coin of the United States of America, of which 100 = one dollar.

CEN'TAUR, Lat. *centaurus*, a fabulous being, supposed to be half man and half horse. The origin of the fable and name is not ascertained. This name is now given to part of a southern constellation (the Archer), in form of a centaur, usually joined with the wolf. It contains 35 stars.

CEN'TAU'REA, the centaur. A very extensive genus of plants, mostly perennials. *Syngenesia—Poly. frustranea*. Name, Lat. from *κένταυρος*. The knapweed, blue bottle, sultan, and star-thistle, are well-known British species.

CEN'TAURY. 1. A name common to all the plants of the genus *Centaurea* (q. v.). —2. The *Chironia centaurium*, a British annual plant.

CENTE'NES, the *tearic*. A genus of mammiferous animals of Madagascar, separated by Illiger from the genus *Erinaceus*, Lin. There are three species, all covered with spines, like the hedgehog, but they are somewhat larger. Order *Carnaria*, family *Insectivora*, Cuv.

CEN'TERING OF CENTRE. The temporary woodwork on which any vaulted work is constructed.

CENTES'IMAL, in *arithmetic*, the next step of progression after decimal, answering to the English word hundredth (*centesimus*, from *centum*).

CENTESIMATION, a military mode of punishing for desertion, mutiny, or the like, where one person in a hundred (*centum*) is selected for execution.

CEN'TIARE, from *cent* and *are*, a French superficial measure, the hundredth part of an *are*, or 1-196 square yards.

CENTIFO'LIOS, from *centum* and *folium*, having a hundred leaves.

CEN'TIGRADE, from *centum* and *gradus*, a degree, divided into a hundred degrees. Graduated into a hundred divisions or equal parts, as a *centigrade thermometer*. See *THERMOMETER*.

CENTIGRAMME, from *cent* and *gramme*. A French weight, the hundredth part of a *gramme*, or 0.1543 grains. See **GRAMME**.

CENTILITER, from *cent* and *litre*. A French measure of capacity; the hundredth part of a *litre*, or 0.6103 cub. inch.

CENTIMETRE, from *cent* and *metre*. A French long measure; the hundredth part of a *metre*, or 0.3937 inches.

CENTIPED, Lat. *centipeda*, an animal (insect) having a hundred feet (*centum* and *pes*). The term is commonly applied to insects which have many feet.

CENTNER, in *metallurgy* and *assaying*, a decimastic hundred (*centum*). Metallurgists use a weight divided into a hundred equal parts, each one pound: The whole they call a *centner*. The pound is divided into 32 equal parts or half ounces; the half-ounce into two quarters; and these into two drams. Assayers use different weights: with them a *centner* is a dram, to which the other parts are proportionate.

CEN'TO, Lat. a patched cloth. Used to designate a composition formed of verses or passages from other authors, disposed in a new order.

CENTRAL, Lat. *centralis*, relating to the centre, e.g. the *central forces*, which is the name given in mechanics to those powers which cause a moving body to recede from, or tend towards, the centre of motion.

CENTRE, Lat. *centrum*, from *κέντρον*, a point. Popularly, a point equally distant from the extremities of a line, figure, or body. In the geometry of curves, any point in which two or more diameters concur, is called a *centre*. In mechanical philosophy there is, 1. *Centre of gravity*, that point about which the parts of a body, in any situation, balance each other.—2. *Centre of motion*, the point about which all the other parts of a body move, when that body is put in motion: this is more correctly the axis, and passes through the centre of gravity, if the body be not under constraint.—3. *Centre of oscillation*, that point in a pendulum, in which, if the weight of the several parts were collected, each vibration would be performed in the same time as when those weights were separate. This is the point whence the length of the pendulum is measured.—4. *Centre of suspension*, that point in a moving body wherein the percussive force is greatest, or that point with which, if the body strike against any obstacle, no shock will be felt at the point of suspension. The *centre of a dial* is a point in which the axis of the world intersects the plane of the dial, and therefore, in dials which have two centres, it is the point wherein all the hour-lines intersect. The *centre of a bastion* is the point in the middle of the gorge where

the capital line commences, which is generally at the angle of the inner polygon.

CENTREBIT, a carpenter's tool, which makes a cylindrical hole, and turns on an axis or centre when used in boring.

CENTRIFUGAL, from *centrum*, centre, and *fugio*, to flee, tending to recede from the centre. The *centrifugal force* of a body is that force by which any body moving in a curve tends to fly off from the axis of its motion, in a tangent to the periphery of the curve. Thus the centrifugal force arising from the velocity of the earth in its orbit, balances the attraction of the sun, and that arising from the earth's rotation on its axis, is 1-289th of that force with which bodies tend to fall towards its centre. In the centrifugal pump, which has the form of the letter T, and revolves on an axis, this force has been applied to the raising of water.

CENTRIPETAL, from *centrum*, centre, and *peto*, to seek; tending towards the centre. The *centripetal force* of a body is that force, whatever it may be, which impels it from a right line towards a point as a centre, as in the case of a planet revolving round the sun as the centre of the system.

CENTRONOTUS, a genus of Scombroides, characterised by the spines, which, in acanthopterygious fishes, generally form the anterior portion of the dorsal or a first separate dorsal, but in them are free and unconnected by a common membrane; they all have ventrals. The pilot-fish is a species, or rather subgenus (*Naucrates*, Rafinesque) of this genus.

CENTUMVIR (Latin), one of the 105 judges in ancient Rome, appointed to decide common causes among the people. The word is compounded of *centum*, a hundred, and *vir*, a man.

CENTUMVIRI, Roman judges who were chosen three from each of the 35 tribes, making in all 105, though they were designated in round numbers 100 men.

CENTURION (from *centum*); a military officer among the Romans, who commanded 100 men, answering to a captain in modern times.

CENTURY, a hundred years (*centum*, hundred); generally anything consisting of a hundred parts. The *centuries of Magdeburg*, is a title given to an ecclesiastical history, arranged in 13 centuries. It is the work of a great number of protestants of Magdeburg.

CEPHALANTHUS, the button-wood tree of North America, constituting a genus *Triandria* — *Monogynia*. Name from *κεφαλη*, a head, and *ανθος*, a flower.

CEPHALASPIS, a fossil fish of the carboniferous series, named from its head (*κεφαλη*) being covered by a sort of shield

ᾠσσις), having the bones united into one osseous case.

CEPHAL'IC, from κεφαλή, the head; pertaining to the head. In *pharmacy*, a variety of medicines are called *cephalics*, as being adapted for the cure of disorders of the head: of this class is *cephalic snuff*, the active ingredient of which is asarabacca.—In *anatomy*, the term is applied to a vein of the arm anciently supposed to have some particular connexion with the head. The jugular vein is also called the *cephalic vein*, and the *carotid artery* is sometimes termed the *cephalic artery*.

CEPHALO'DIUM, in *botany*, a figure resembling a convex shield without an elevated rim.

CEPHALOM'ETER, from κεφαλή, the head, and μέτρον, measure; an instrument formerly used to estimate the size of the foetal head during parturition.

CEPHALO'PHORA, κεφαλή, the head, and φέρω, I bear. 1. A name substituted by De Blainville for the Cephalopoda (q. v.) of Cuvier.—2. A genus of South American plants of one species (a perennial), formerly called *Græmia aromatica*, from the name of the discoverer, and the aromatic flavour of the dried leaves.

CEPHALOP'ODA, a class of mollusks comprising only a single order, divided into genera according to the nature of the shell: those which have no shell are arranged by Linnaeus in the genus *Sepia* or cuttle-fish. The *Sepia*, *Nautilus*, *Belemnites*, *Ammonites*, and *Nummulites*, are the genera included in this tribe according to Cuvier. The feet of the voracious animals are placed round their heads (whence the name, from κεφαλή, a head, and ποδά, feet), and they walk in consequence with their heads downwards. Between the base of the feet is situated the mouth, armed with two stout horny jaws, resembling the beak of a parrot. Their flesh is eaten, and their *ink*, a peculiar and intensely black excretion, with which they darken the surrounding water when they want to conceal themselves, is used in painting: the China or Indian inks are supposed to be made of it.

CER'ALUS, a genus of Gymnodontes found in the European seas: the short sunfish is a species. Name from κεφαλή, a head; the tail being so short and high, that this fish resembles one whose posterior portion has been truncated. The species named is about four feet in length, and weighs upwards of 300 lbs.

CER'NEUS, a constellation in the northern hemisphere containing 35 stars, named in memory of an ancient king of Ethiopia, said to be the father of Andromeda, and husband of Cassiopeia.

CER'AMINE. By the saponification of

cerine, margarate of potash is obtained, and a substance resembling wax. This is named *Cerline* by Boudet and Boissonnet. It cannot be converted into soap, fuses at 160°, and may be distilled without alteration.

CER'ASIN (from *cerasus*); a name given by chemists to those gummy substances which swell in cold water, but do not readily dissolve in it: the best example of this species of vegetable product is gum tragacanth.

CERAS'TES (κεράστis, from κέρασ, a horn). A serpent, a species of Coluber which the ancients supposed to be furnished with horns. (Pliny 8. 23.)

CERAS'TIUM, the mouse-ear chickweed; a numerous genus of small hardy plants. *Decandria—Pentagynia*. There are many British species.

CER'ATE, Lat. *ceratum*, from *cera*; a composition of wax, oil, or lard, with or without other ingredients. Many cerates are used in medicine. Their consistence is intermediate between that of plasters and that of ointments.

CERATO'NIA, the carob-tree, or *St. John's bread*; a genus of one species found in Europe and Asia. *Polygamia—Triecia*. This is the κεράτνια of Galen, and is so named from its horn-like pod.

CERATO'OME, from κέρασ, a horn, and τέμνω, to cut; a knife used by surgeons for dividing the cornea of the eye.

CERATOPHY'TA, a tribe of coralliferous polypi of two genera, the *Antipathes* and the *Gorgonia*. They have a horny axis (whence the name from κέρασ, horn, and φυτός, a plant); this is covered by a fleshy substance, from the cavities of which polypi occasionally appear.

CERAU'NIA, or CERAU'NIA LAPIDES, } names formerly given to the fossil echinites, from a supposition that they were formed in the air. (Pliny 37, 9 and 10.)

CER'ATRIK, the bitter principle of Iceland moss.

CER'BERUS, in *ancient mythology*, a monster who guarded the entrance of the infernal regions, who had from 3 to 100 heads, according to the whims of the authors.

CERCOPITH'ECUS, a genus of quadrupeds, comprehending the long-tailed monkeys—κίρκος, a tail, and πίθηκος, a monkey. Numerous species, of every variety of size and colour, abound in Africa: they live in troops, and do much damage to the gardens and fields under cultivation.

CERC'OSIS, from κίρκος, a tail. 1. A polyusus of the uterus.—2. An enlargement of the clitoris.

CERZ. the naked skin which covers the base of a hawk's bill.

CEREBEL'UM, Lat. dim. of *cerebrum*; the little brain, situate behind the *cerebrum*. See **ENCEPHALOS**.

CER'EMONIES, MASTER OF THE, an officer of the king's household, instituted for the more honourable reception of strangers of quality.

CER'EOLITE, WAX-stone (*cera* and *λίθος*), a substance resembling steatite.

CEREOP'SIS, the generic name of an Australian goose, characterised by a green cere-like naked membrane, covering the upper portion of the base of the bill.

CER'ES. 1. The mythological goddess of corn and tillage, the daughter of Saturn and Ops.—2. The name of a planet discovered by M. Piazz, at Palermo in Sicily, in 1801. It is situated between Mars and Jupiter.

CER'EUS, in *botany*, a colour, surface, or texture, resembling that of wax.

CER'INE, one of the constituents of wax (*cera*). Wax, like the oils and fats, has been found to be composed of two substances, which differ from each other only in their fusibility, and their solubility in alcohol, and which are called *Cerine* and *Myricine*. The first is analogous to *elaine*, and the myricine corresponds to *stearine*. Sp. gr. of cerine 969, melting pt. 138°; soluble in 16 times its weight of boiling alcohol.

CERIN'THIANs, an early sect of heretics who denied the Divinity of Christ. Named from Cerinthus, the founder of the sect.

CER'ITE, the silicious oxide of cerium; a rare mineral of a rose-red colour, found in the Swedish mine of Bastnäs, and long known to the German mineralogists, under the name of *Bastnäs Schwerstein*, i. e. heavy stone of Bastnäs. It is named Cerite from the metal it contains.

CERITH'IUM, the name given by Brugueir to a turretted or turriculated spiral shell, of which Lamarck has discovered upwards of 60 species in the neighbourhood of Paris. Class *Gasteropoda*; order *Pectinibranchiata*; family *Buccinoida*.

CER'ITUM, a metal discovered in 1803, by Hisinger and Berzelius, in cerite (q. v.), and named by them after the planet Ceres. It is brittle, white, and volatile in a very intense heat; is not acted upon by nitric acid, but is dissolved in aqua-regia, nitro-hydrochloric acid.

CER'OMA, In *ancient architecture*, the apartment in a bath or gymnasium in which persons anointed themselves with wax and oil.

CEROPLAS'TIC, the art of modelling in wax; it is of very high antiquity.

CEROSTO'TUM, *κερόσ*, wax, and *στρωτός*, spread. A species of encaustic painting executed on horn or ivory.

CER'THIA, the *creeper* or *ox-eye*, a genus of birds. Order *Passerina*; family *Tenui*

rostris, Cuv. About 50 species of this little bird are enumerated. They take their name from their habit of climbing trees like wood-peckers. The common ox-eye is well known.

CERTIFICATE, in a general sense, means any written testimony; but the word is used in a more practical sense to denote the written declaration of some public officer, to be used as evidence in a court or to substantiate a fact, and is considered as being given under the oath of the officer.

CERTIFICATE COCKET. In the *Customs*. See **COCKET**.

CERTIFICATES OF ORIGIN, written documents subscribed by the proper officers of the places where goods were shipped. These are required by the importers of sugar, coffee, cocoa, and spirits from any British plantation.

CERTIORA'RI, a writ issued out of Chancery or other superior court, to call up the records of an inferior court, or remove a cause there depending, that it may be tried in the superior court. This writ is obtained upon complaint of a party that he cannot in the inferior court receive justice, or that he is not certain (*certus*) of receiving it.

CERUSE, Lat. *cerussa*. Carbonate of lead, commonly called *white lead*.

CERVICAL, Lat. *cervicalis*, belonging to the neck (*cervix*) as the cervical vertebrae, muscles, and arteries.

CERVICOBRANCHIA'TA, the name of an order of shells, in the conchological system of De Blainville, comprising the two families Rotifera and Branchifera, and the genera Patella, Fissurella, Emarginata, and Parmophorus.

CER'VUS (Latin), a stag; a genus of Ruminant mammalia, which have heads armed with antlers; the females, however (the rein-deer alone excepted), are always without them. The elk or moose, roebuck, axis, fallow-deer, &c., are species. The flesh is used as food.

CER'PITOSE PLANTS are such as produce many stems from one root, and which have all their leaves radical, so as to resemble turfs. From *cespes*, a turf.

CESSA'VIT, a Latin word meaning *he hath ceased*, from *cesso*, to cease, used in law as the name of a writ given by statute to recover lands, when the tenant or occupier has ceased for two years to perform the service which constitutes the condition of his tenure, and has not sufficient goods or chattels to be distrained.

CES'SIO BONO'RUM, a Latin law phrase meaning the surrender by an insolvent debtor of his entire property to his creditors. This exempts him from all personal penalties.

CESSOR. In *law*, one who neglects *for*

two years to perform the service by which he holds lands, so that he incurs the danger of the writ of cessavit.

CESTOIDEÆ, a tribe of intestinal worms, comprising those without external suckers. Only one genus is known, the *Ligula*, inhabiting certain birds and fresh water fish.

CESTRACIONTS, a sub-family of sharks found fossil in all strata, from the carboniferous to the most recent chalk series. The *Cestracion Philippi*, or Port Jackson Shark, is the only living specimen of the tribe.

CETUS, κίτος. The marriage girdle or girdle of Venus among the Greeks and Romans.

CESURA. See **CESURA**.

CETACEA, } an order of marine mam-
CETACEANS, } miferous animals, including the whale, porpoise, dolphin, &c. They are warm-blooded and breathe air by means of lungs, and they bring forth young alive and suckle them.

CETACEA HERBIVORA, herbivorous cetacea. These constitute Cuvier's first family of Cetacea, and comprise the genera *Manatus*, *Halicore* (dugong, siren, sea-cow, &c.), and *Stellerus*. They frequently leave the water to seek pasture on shore. The teeth have flat crowns, they have two mammae on the breast, and hairy mustachios, two circumstances which, observed from a distance, as they raise the anterior part of the body vertically from the water, give them some resemblance to human beings, and have probably occasioned those fabulous accounts of tritons and sirens which some travellers pretend to have seen.

CETACEA ORDINARIA, ordinary Cetacea. These form Cuvier's second family of Cetacea, and comprise the genera *Delphinus* (dolphin); *Phocæna* (porpoise); *Monodon* (narwhal); *Physeter* (cachalot or spermaceti whale), and *Balaena* (true whale). The ordinary cetacea are distinguished from the preceding by the singular apparatus from which they have received the name of *Blowers*.

CETE, κίτος, a whale. The sixth order of Mammalia in the *Systema Natura* of Linnaeus.

CETIC ACID, a name given by Chevreuil to what he supposed to be a peculiar acid resulting from the saponification of cetine, but which he has since found to be merely a mixture of margaric acid and cetine.

CETINE, a name given by Chevreuil to spermaceti, from *cete*, a whale.

CETO'NIA, a genus of coleopterous insects commonly termed *gold-beaters*, from their brilliant golden green colours. They are common on flowers, and frequently on those of the rose and elder

CETUS (Latin), the *whale*. The name of a large constellation in the southern hemisphere containing 97 stars. The most brilliant is *Menkar*, situated in the upper mandible.

CET'ADIC ACID. By the action of potash on the fatty matter of the cevadilla, an acid is obtained which is called the *cevadic*.

CET'LANITE, a dark-green or black variety of dodecahedral corundum, which occurs in the sand of the rivers of Ceylon, from which island it is named.

CHAB'ASITE, rhombohedral zeolite; the *chabasic* of Haüy, and *schabasit* of Werner. The mineral is usually white, but has sometimes a rosy tinge. Silica forms about 50 per cent. of the whole.

CHA'ONE or **CIACONE** (Span.), a kind of dance resembling a saraband, of Moorish origin.

CHÆROPHYL'UM, a genus of small plants. *Pentandria—Digynia*. Name from *χαίρειν*, to gladden, and *φύλλον*, a leaf, in allusion to the luxuriance of its foliage. The common chervil or cow-parsley, sweet cicely, and bastard hemlock are species.

CHÆTODON a genus of fish abundant in the seas of hot climates, where they frequent rocky shores. They are adorned with the most beautiful colours, and are reckoned good eating. They take their name from their teeth, which in length and tenuity resemble hairs collected in close rows, like a brush.

CHÆTOPTERUS, a genus. Class *Articulata*, order *Dorsibranchiata*, Cuv. The mouth has neither jaws nor proboscis. The animal is provided with nine pair of feet, and a pair of long silky fasciculi, resembling wings. The only species known is about 1½ inches long, and inhabits a tube resembling parchment. It is found at the Antilles.

CHAF'ERY. In *iron-works*, a forge in which an ancony or square mass of iron, hammered into a bar in the middle, with its ends rough, is reduced to a complete bar, by hammering down the ends to the shape of the middle.

CHAFE-WAX, an officer belonging to the lord chancellor, who fits the wax for sealing writs.

CHAF'FER, a small portable furnace.

CHAFF-WEED, a plant, the bastard pimpinel (*Centunculus*); also cudweed, a species of *Gnaphalium*.

CHAF'FY PALEACEOUS, when a surface is covered with small, weak, erect, membranous scales, resembling the chaff of corn.

CHAIN. In *surveying*, a measure of length, composed of a certain number of links of iron wire, serving to take the distance between two places. Gunter's chain consists of 100 such links, each

7'92 inches, consequently equal to 66 feet or 4 poles.

CHAIN-BOAT, a large boat fitted for getting up mooring-chains, anchors, &c.

CHAIN-CABLE. *See* CABLE.

CHAIN-PUMP, a well-known hydraulic machine for raising water. It is usually made from 12 to 25 feet in length, and consists of two collateral square barrels, and an endless chain of pistons of the same form fixed at proper distances. The chain is moved round a coarse kind of wheel-work, the teeth of which are so contrived as to receive one half of the flat pistons and let them fold in, and they take hold of the links as they rise. Half the pistons are ascending when the machine is at work, and bring up a full bore of water in the pump.

CHAIN-SHOT, two balls chained together, used chiefly at sea, to be shot against vessels to damage the rigging.

CHAIN-TIMBER, a piece of timber in breadth equal to the length and breadth of a brick, used for strengthening brick-walls, by insertion in the middle of the height of the story.

CHAIN-WALES. In a *ship*, broad and thick planks projecting from a ship's sides, abreast and behind the masts, for the purpose of extending the shrouds, for better supporting the masts, and preventing the shrouds from damaging the gunwale by rubbing. Every mast has its chain-wales.

CHAIN'WORK, a peculiar style of textile fabric, to which hosiery and tambouring belong.

CHAIR, a moveable seat. This name is used to designate a pedestal or socket of cast-iron used upon railways, for receiving and securing the rails upon the blocks, to which they are fastened by oak tree-nails. The chair for receiving the ends of two rails is termed a *joint* or *double chair*, being larger than the *simple* or *intermediate chairs*.

CHAISE-*LONGUE* (French), a sort of sofa open at one end.

CHAL'AZA, *Χάλαζα*. A hailstone. 1. In *botany*, a point marked on the interior tunic of the seeds of some plants, which answers to the insertion of their umbilical cord. It is sometimes coloured, as in the lemon and orange.—2. The two white bodies attached to the membrane which covers the yolk of an egg, are called *chalazæ* or *grandines*.

CHALA'GÆ, a name applied to the two twisted cords attached to the yolk of an egg, to maintain it uppermost in every position of the egg.

CHALCEDO'NY, a sub-species of quartz, called also white agate, named from *Chalcedon*, a town in Asia Minor.

CHALCEDO'NIX, a variety of agate, in which white and grey layers alternate.

CHAL'CIDES, a genus of Scincoidæans. They are elongated lizards resembling serpents; but the scales are rectangular, forming transverse bands which do not encroach on each other.

CHALCID'LE, a tribe of hymenopterous insects, of which the genus *Chalcis* is the type.

CHALCI'DICUM. In *ancient architecture*, a large building for administering justice; sometimes the tribunal itself.

CHAL'CIS, a genus of hymenopterous insects so named from their being decorated with extremely brilliant metallic colours (*χαλκος*, brass).

CHALCOG'RAPHY, the art of engraving on brass; *χαλκος*, brass, and *γραφω*, to write.

CHAL'DRON, a dry English measure; 36 coal bushels make a chaldron, and 21 chaldrons make a score. The bushel contains 2217'6 cubic inches, but when heaped it contains 2815'5 cubic inches, making the chaldron 58'65 cubic feet. The Newcastle chaldron contains 53 cwt., and is just double of the London chaldron.

CHALK, a white earthy limestone, (carbonate of lime), Sp. gr. 2'3. It usually contains an inconsiderable portion of siliceous and iron.

CHALK FORMATION. This term is applied, in the nomenclature of geology, to a group of deposits very dissimilar in their compositions, but agreeing in the character of the organic remains which they contain, and referable to the same epoch of formation. These strata are distinguished into: 1. The Maestricht beds; 2. The upper chalk with flints; 3. The lower chalk without flints; 4. The upper green sand; 5. The gault; 6. The lower green sand. The whole of these are marine deposits, and their greatest aggregate thickness in England may be estimated at from 600 to 1000 feet.

CHALK-STONE, a calcareous concretion in the hands and feet of violently affected gouty persons.

CHAL'LENGE. In *law*, an exception to jurors; the claim of a party that certain jurors shall not sit in trial upon him or his cause. The right of challenge is given both in civil and criminal cases, for certain causes which are supposed to disqualify a juror to be an impartial judge. The word is Norm., *calenge*, an accusation. Among *sportsmen*, the opening cry of hounds at first finding the scent of the game, is called the *challenge*, and the same name is given to any invitation, verbal or written, of parties, to decide a controversy by duel.

CHA'MA, a genus of inequivalved adhering bivalves, forming the type of the family Chamacæa.

CHAMAC'ÆA, a family of bivalves placed by Lamarck in the order Dimyaria, and

by De Blainville in the order Lamelli-branchiata. It comprises the genera *chama*, *diceras*, *etheria*, *isocardium*, *trigonia*, &c. In the arrangement of Cuvier it forms the third family of testaceous acephala, and comprising only the genus *chama*, Lin.

CHAMA GIGAS, Lin., a species of *chama* inhabiting the Indian ocean; it is the largest and heaviest shell known, weighing sometimes between 300 and 400 lbs. Its occupant is so large as to furnish 120 men with a good meal.

CHAMBER, Lat. *camera*, from *καμαρα*, an arched roof, the vaulted room. This word has generally the signification of *apartment*, as the *chamber* of a mine, a place generally of a cubical form, where the powder is confined; the *chamber* of a mortar, which is that part of the chase where the powder lies. In a general sense the word is taken to mean the place where an assembly meets, and also the assembly itself. 1. The *star-chamber*, the authority of which was abolished by the statute 17 Car. 1. This hall was so called because the roof was painted with stars.

—2. *Chamber of Commerce*, an assembly of merchants to discuss the affairs of trade.—3. *Chamber of assurance*, usually a society of merchants and others for carrying on the business of insurance, but in Holland a court of justice where insurance causes are tried.—4. *Chamber of London*, an apartment in London where the city money is deposited.

CHAMBERED SHELLS, such shells as are divided into compartments by septa, usually called *multilocular*.

CHAMBERLAIN, an officer charged with the management of a chamber or chambers. The lord chamberlain of Great Britain is the sixth officer of the crown. His office is hereditary, and he is entitled to livery and lodging in the imperial court. He has the oversight of all officers belonging to the royal chambers, except the bed-chamber, wardrobe, &c., and administers the oath to all officers above stairs.—The chamberlains of the Exchequer of London, of Chester, of North Wales, &c., are commonly receivers of rents and revenues, and have certain rights and immunities attached to their situations.

CHAMBRANLE, an ornamental border on doors, windows, and fire places. This ornament is commonly taken from the architrave of the order of the building. In window frames, the sill is also ornamented, forming a fourth side. The top of the three sided chambranle is called the *transverse*, and the sides *ascendants*.

CHAMELEON, a name common to all the species (seven) of the genus *Chamaeleo*. The chameleon is particularly remarkable for the great size of its lungs, which when

fully dilated, make the body almost transparent. This circumstance enables it to change colour at pleasure, by enabling it to throw a greater or less quantity of blood upon the surface of the body, and perhaps also somewhat to change the hue of the blood itself, by varying the degree of its aëration.

CHAMELEON MINERAL. When peroxide of manganese is mixed with an equal weight of nitre or carbonate of potash, and the mixture fused at a red heat, a green coloured mass is obtained called *chameleon mineral*. When this substance is dissolved in water, the solution is at first green; it then becomes successively blue, purple, and red, and finally throws down a brown precipitate and becomes colourless: from these phenomena it derives its name.

CHAMFER, a small gutter or furrow

CHAMFRET, a cut in wood or other hard material, as in stones, pillars, or other ornamented parts of a building. The word is also used as a verb, meaning to *channel*.

CHAMOIS, a species of the antelope tribe of animals, whose skin is made into the soft leather called *shammy*. It inhabits the Alpine mountains.

CHAMOMILE, a name (from *chamæmilon*, from *χαμαι*, the ground, and *μηλον*, an apple), common to all the plants of the genus *Anthemis*, but especially applied to the *A. nobilis*, a well known perennial, cultivated for its medicinal properties.

CHAMPAIN, in *heraldry*, *champain*, or *point champain*, is a mark of dishonour in the coat of arms of an individual who has killed a prisoner of war after he has asked for quarter.

CHAMPAIN LINE In ornamental carved work formed of excavations, the line parallel to the continuous line, either ascending or descending, is called the *champain line*.

CHAMP DE MARS, in *French history*, the public assemblies of the Franks, which were held in the open air, and in the month of March, whence the name.

CHAMFERTY, Fr. *champart*, field-rent; a species of maintenance, being a bargain with a plaintiff or defendant, to divide the land or other matter in suit between them, if they prevail; whereupon the champertor is to carry on the party's suit at his own expense. This is equivalent to a purchase of the right of suing.

CHANCE-MEDLEY, in *law*, the killing of a person by chance, when the killer is doing a lawful act; if he be doing an unlawful act the killing is felony.

CHANCELLOR, Lat. *cancellarius*, a chief scribe or notary under the Roman emperors; but in England in later times, an officer invested with judicial powers, and particularly with the superintendence of

all charters, and other official writings that require to be solemnly authenticated. Hence this officer became the keeper of the great seal and keeper of the king's conscience. The *lord high chancellor of Great Britain* is at present the highest officer of the crown. He is privy counselor by his office, prolocutor of the house of lords by prescription, and judge of the court of Chancery.—From the Roman empire, the office of chancellor passed to the church, and hence every bishop has his chancellor; and there are chancellors of cathedrals who hear lessons, lecture in the church, hear causes, apply the seals, &c. The universities have also their chancellors, who seal diplomas or letters of degree, &c. The chancellors of military orders are officers who seal the commissions and mandates of the chapters and assembly of the knights, and deliver their acts under the seal of their order.

CHAN'CELLOR OF THE EXCHE'QUER, an officer who presides in that court, and takes care of the interests of the crown. He has power with the lord treasurer to lease the crown lands, and with others to compound for forfeitures on penal statutes. He is the British finance minister.

CHAN'CERY, the highest court of justice in Great Britain, next to Parliament, consisting of two distinct tribunals: one *ordinary*, being a court of common law, the other *extraordinary*, being a court of equity.

CHANDELIE'R (French). 1. A frame with branches to hold a number of candles to illuminate a large room.—2. In *fortification*, a moveable parapet serving to support fascines to cover pioneers.

CHAN'NEL, a part in the Ionic order of architecture, somewhat hollow under the abacus, after the listel; it lies upon the echinus, having its coulters 'or turning upon each, to make the volutes.

CHANKS, CHANK'SHELLS, common conch shells, chiefly fished up by divers in the Gulf of Manar, on the coast opposite Jaffnapatam, in Ceylon. They are of a spiral form, and constitute a considerable article of trade in India, where they are sawn into narrow rings, and worn as ornaments for the arms, legs, and fingers, by the Hindu women.

CHAN'TER. 1. The pipe which sounds the tenor or treble in a bagpipe.—2. The chief singer or priest of the chantry.

CHAN'TRY, Fr. *chanterie*. A chapel endowed for the maintenance of one or more priests, daily to say or sing mass for the soul of the endower, or such as he appoints.

CHAP'EAU (French). In *heraldry*, a cap.

CHAPE'L. 1. A house for public worship, of which there are several kinds, as *parochial chapels*, distinct from the mother church; *chapels of ease*, built in large

parishes for the accommodation of the inhabitants; *free chapels*, founded by wealthy individuals; *domestic chapels*, built by noblemen for the accommodation of their families. The name took its origin thus:—the kings of France, through superstitious notions, carried in times of war St. Martin's hat into the field, where it was kept in a tent as a precious relic. This tent took the name *capella*, a little hat, and the priest who had the charge of it was called *capellanus*, now *chaplain*, and hence the word *chapel* came to signify any private oratory.—2. A printer's work-room, said to be so called from printing being first carried on in a chapel.

CHAP'ELET, } Fr. *chapelet*. A pair of
CHAP'LET, } stirrup leathers, with stirrups made fast to the pommel of the saddle by a sort of leather buckle, after they have been adjusted to the length and bearing of the rider.

CHAP'ELLING, turning a ship round in a light breeze, when close hauled, so that she shall lay the same way as before.

CHAP'ERON (French), a cap worn by the knights of the garter in their habits. It was anciently worn by men, women, nobles, and populace; afterwards appropriated to doctors and licentiates in colleges. The name then passed to certain devices placed on the foreheads of horses which draw the hearse in pompous funerals.

CHAP'TER. 1. In *architecture*, a different word for *capital*.—2. The charge of a justice to an inquest.

CHAP'LAIN. See **CHAPEL**.

CHAP'LET, Fr. *chapelet*. Among *Catholics*, a chaplet is a string of beads, by which they count the number of their prayers, usually called a *paternoster*: hence the word is taken by architects to denote any ornamental fillet in the form of a string of beads.

CHAP'TER, Fr. *chapitre*, Lat. *caput*. 1. A division of a book or treatise.—2. A community of clergymen belonging to a cathedral or collegiate church.—3. A place where delinquents receive discipline and correction.—4. A decretal epistle.

CHAPTER-HOUSE, Lat. *capitulum*. The apartment of a cathedral in which the heads of the church transact business.

CHAR'ACTER, a mark or abbreviation used in certain arts and sciences: thus there are the *numeral characters*, 1, 2, 3, &c., used to express numbers; *algebraical characters* used to represent abstract quantity: these are usually the letters of the alphabet, with certain other symbols and signs to denote the operations of addition and subtraction, with their abbreviations, multiplication, and division. These characters of operation are + for addition, — for subtraction, X for multiplication, and ÷ for division. There are

also *astronomical characters* (see *SIGNS*), and *musical characters* (see *NOTES*).

CHARACTERISTIC, that which characterises. The characteristic of a *Logarithm* is its index or exponent; the characteristic triangle of a curve is a rectilinear right-angled triangle, whose hypothenuse makes a part of the curve, not sensibly different from a right line.

CHARADE (French), a species of riddle, the subject of which is a name or a word that is proposed for solution from an enigmatical description of its several syllables, and of the whole word. The following is a good example from the French:—"My first makes use of my second to eat my whole:" the solution being *chien-dent*, or dog's grass.

CHARADRIUS, the *Plover*: a genus of birds. Order *Grallatorie*, family *Pressirostres*, Cuv. It is now divided into two subgenera, viz. *Edicnemus*, Tem., and *Charadrius*, Cuv.

CHARCOAL, a black, brittle, and somewhat sonorous mass, obtained in large quantity by burning wood out of contact with the air. (See *CARBON*.) If bones be exposed to a red heat in a covered crucible, a black mass remains, which is charcoal mixed with earthy matter, and is called *animal charcoal*. Charcoal is used on particular occasions as fuel, as it gives a strong steady heat without smoke. It is used in destroying the smell, colour, and taste of various substances, in the manufacture of gunpowder, and in its finer states, as in ivory black, lamp black, &c. It forms the basis of black paints, printers' ink, &c.

CHARGE, Fr. *charge*, from the root of *cargo*.—In law, 1. The instructions given by a judge to a jury.—2. The instructions given by a bishop to the clergy of his diocese.—3. A notification to a debtor to make payment under pains and penalties on or before a certain day.—In *gunnery*, the powder and ball with which a gun is loaded.—In *heraldry*, whatever is borne on coats of arms.—In *painting*, an exaggerated representation of a person.—In *physics*, a quantity of electricity collected in a Leyden jar, &c.—In *farriery*, a preparation used as a remedy for sprains, &c.

CHARGE D'AFFAIRES, the third and lowest class of foreign ministers.

CHARGE OF LEAD, 36 pigs, each 6 stones all but 2 lbs.

CHARITY, SISTERS OF, an institution of females in France, whose office is to attend the sick.

CHARLES'S WAIN. In *astronomy*, seven stars—the constellation called *Ursa Major* or the Great Bear.

CHARR, a fish of the salmon tribe, the *Salmo umbla*, Cuv. Yarr. Jen.; *Salmo alpinus* Penn. This beautiful little fish,

found in our lakes of Westmoreland, Wales, and Scotland, has various names according to the intensity of its colours, as gold-fish, red charr, &c.

CHART, Lat. *charta*; a hydrographical map. The term is applied to a marine map, while the word *map* is applied to a draught of some portion of land. Charts are of several kinds, as plain, globular, and Mercator charts.

CHARTACEOUS, Lat. *charta*, paper; papery, the paper-like texture of most leaves.

CHARTER, Lat. *charta*; a written instrument executed with usual forms, given as evidence of a grant, contract, or whatever is done between man and man. In its most general sense, it is the instrument of a grant conferring powers, rights, and privileges, from some sovereign or party having power to grant such charters.

CHARTER-PARTY, a written contract between the owner or master of a ship and the freighter, by which the former lets his ship, or part of it, under certain conditions, for the conveyance of goods of the freighter.—Charter-party is in commercial law what an indenture is at common law.—The term is French, *charte-partie*, a divided charter.

CHARTULARY. See *CARTULARY*.

CHASE. In *printing*, an iron frame three-fifths of an inch thick, in which pages of letter are wedged up to prevent the types from getting displaced during the printing. Chases are of different sizes, to suit the pages to be wedged (technically, *locked*) in them.—2. A row of hedge or other plants; also an extent of waste or forest land.—3. *Chase of a gun*, the whole length of the bore.

CHASE GUNS, those ship guns which have their ports at the head or stern. A gun at the head is called a *bow-chase*; one at the stern is a *stern-chase*.

CHASING. (See *ENCHASING*.) In *operative mechanics*, screw-cutting is often termed *chasing*; the thread is said to be chased.

CHASTE-TREE, a name common to all the species of the genus *Vitex*, but especially applied to the *agnus castus*. It was anciently believed by the Roman ladies to promote chastity, for which reason they strewed their beds with its leaves.

CHATOYANT, a term used to describe a property of some metallic and other substances, of varying their colours according to the way in which they are held, as is the case with the feathers of some birds, which appear very different when viewed in different positions. The word is composed of *chat*, cat, and *œil*, eye.

CHAT, probably Fr. *chat*, met. small, as *Chat Potatoes*, small potatoes only fit for

feeding pigs, &c.; *Chat-wood*, small wood only fit for fuel.

CHAT'TELS. In *law*, all goods moveable or immovable, except such as have the nature of freehold. The term is only used in the plural form.

CHAT, CHAYA-ROOT, the root of the *Oldenlandia umbellata*, a biennial, which grows wild on the Coromandel coast, and is likewise cultivated there for the use of dyers, for the same purposes as madder is with us.

CHECK, } an order to some person,
CHEQUE, } usually a banker, to pay a specified sum to the bearer on demand, in which respect it differs from a bill of exchange.

CHECK-MATE, a movement in the game of chess which kills or hinders the adversary's king from moving. Mate is from Spanish *matar*, to kill.

CHECKY. In *heraldry*, a border that has more than two rows of checkers, or when the bordure is checkered after the manner of a chess-board.

CHEES. In *mechanics*, those pieces of a machine which form corresponding sides, or which are double and alike, and have the operative parts of the machine between them.

CHEESE, the curd of milk, coagulated by rennet, separated from the serum or whey, and pressed in a vat or mould to harden it. The principal varieties of cheese known in commerce are:—*Brickbat*, formed of new milk and cream, chiefly in Wiltshire, and sold in square pieces about the size of brickbats. *Cheeddar*, a rich, thick, and round variety, of a spongy appearance, weighing usually about 200 lbs. *Cheshire*, a rich, solid, and homogeneous quality, weighing from 100 lbs to 200 lbs. *Derbyshire*, a small, rich and white variety. *Dunlop*, a quality made in Scotland, very like the Derbyshire. *Gloucester*, a rich and mild variety, of two qualities, the *single* and *double*: the former contains half the cream of the milk, and the last the whole. *Sage* or *green* cheese is simply coloured by a decoction of sage and other leaves added to the milk. In Scotland seeds of lovage are added. *Lincolnshire*, a small and soft quality, made of new milk and cream. *Norfolk* is dyed yellow with annatto or saffron. *Slip-coat*, a small and very rich variety, not unlike butter, but white. *Stilton*, a solid, rich, buttery, and white sort, made in Leicestershire. It is seldom used till two years old, and is the dearest of English cheeses. *Cottenham*, this differs from the former chiefly in shape, being broad, while the Stilton is twice as high as it is broad. The Cottenham is also superiorly flavoured. *Suffolk*, a variety made from skim-milk, that is milk deprived of the whole cream. *Yorkshire* is the same as the slip-coat cheese.

CHEESE-PRESS, a machine for pressing curd in the making of cheese.

CHEESE REN'NET, a plant, ladies' bed straw (*Galium verum*). See **RENNET**.

CHEESE-VAT, the vat or case in which curd is placed to be pressed in the process of making cheese.

CHEETA, a Mahratta name common to the *Felis jubata* (the hunting leopard), and the *Felis leopardus*. In this country it is confined to the former species.

CHE'OOE, a tropical insect that enters the skin of the feet, and multiplies incredibly.

CHEIRAN'THUS, the *Stock wall-flower*, a genus of plants. *Tetradynamia*—*Siliquosa*. Name from *χαι*, the hand, and *ανθος*, a flower; a flower to be borne in the hand.

CHEIROPTERA, a family of mammiferous animals which have the fingers of the hand greatly elongated, and a production of the skin extending between the fingers and between the hands and the feet, so as to supply the place of wings, and enable the animals to fly small distances; e.g. the bats. This family stands first in Cuvier's order *Carnaria*. Name from *χαι*, a hand, and *πτερος*, a wing.

CHELIFER, the name given by Geoffroy to the *Obisium* of Illiger. The chelifers form a genus placed by Cuvier among the *pseudo-scorpions*. They closely resemble small scorpions destitute of tail, run swiftly, and frequently retrograde like crabs, whence the generic name chelifier.

CHELO'NIA, Chelonians. The tortoise tribe; *χιτών*, a tortoise. In the arrangement of Cuvier, *Chelonia* forms the first order of Reptilia. Linnæus includes *Chelonia* in the genus *Testudo*. The order is now divided in the genera *Testudo* or Land Tortoises; *Emys* or Fresh-water Tortoises; *Chelonia* or Sea Tortoises; *Chelys* or Batrachian Tortoises, and *Trionyx* or Soft-shelled Tortoises; and Merremi has distinguished by the name of *Sphargis* those chelonix whose shell is destitute of plates. Name from *χιτών*, testudo, a tortoise.

CHELSEA PENSIONER, the name of a nostrum for rheumatism, consisting of gum guaiac, rhubarb, cream of tartar, flowers of sulphur, nutmeg, and clarified honey. It is said to derive its name from a Chelsea pensioner having cured Lord Amherst with it.

CHEM'ISTRY, from *χημεία*, usually derived from *χίω*, to fuse or melt, but more probably the old name of Egypt (*Chemia*), where the art had its origin. The learned were long disagreed upon the most proper definition of chemistry. Boerhaave calls it an art; Macquer, Black, Fourcroy, and most modern chemists, call it a science. According to Brande, it is that branch of natural knowledge which teaches us the

properties of elementary substances, and of their mutual combinations; it inquires into the laws which affect, and into the powers which preside over their union; it examines the proportions in which they combine, and the modes of separating them when combined; and endeavours to apply such knowledge to the explication of natural phenomena, and to useful purposes in the arts. According to Turner, its object is to examine the relations which affinity establishes between bodies, ascertain with precision the nature and constitution of the compounds it produces, and determine the laws by which its actions are regulated. The objects to which the chemist's attention is directed, comprehend all material substances. It is, unquestionably, a *Science*.

CHEQUERS, stones in the facings of walls, of uniformly equal dimensions, so arranged that no interruption occurs in the joints, either horizontally or vertically.

CHE'QUY, Checky, or Chequered. In *heraldry*, when a field is divided by transverse lines into equal squares of different tinctures.

CHE'RRY, the well-known fruit of the *Prunus cerasus*. It was brought from Cerasus in Pontus to Italy, by Lucullus, A.R. 680, and was subsequently introduced into England by the Romans. There are other fruits known popularly by the name of cherries, which are produced by other plants than the *Prunus*, as the Barbadoes-cherry, Cornelian-cherry, Dwarf-cherry, Hottentot-cherry, Winter-cherry, &c.

CHE'RY-LAUREL, the *Prunus lauro-cerasus*; called also poison-laurel, bay-laurel, Alexandrian-laurel, &c. The poisonous quality of this laurel is prussic acid.

CHERT. In *mineralogy*, a sub-species of rhomboidal quartz, called also hornstone, petrosilex, and rock-flint. It is coarser, and less splintery than common flint, and fusible. It occurs in large masses in quarries of limestone.

CHER'UBIM. See SERAPHIM.

CHess, Fr. *échecs*. A game performed by two parties, with different pieces, upon a *checkered* board: that is a board divided into 64 squares called houses. Each player has eight dignified pieces—a king, queen, two knights, two bishops, and two rooks or castles, besides eight pawns or foot-soldiers. These are all moved according to certain rules, and the success of the game depends entirely upon skill.

CHess-TREE. In *ships*, a piece of wood bolted perpendicularly on the side, to confine the clews of the mainsail.

CHEST-FOUNDING, a disease in horses, like pleurisy in the human subject.

CHET'WERT a measure of corn in Russia, = 5.94 Win. bushels.

CHEV'AUX DE FRISE, Fr. the Friesland horse. A piece of timber transversed with wooden spikes, pointed with iron, five or six feet long: used to defend a passage, stop a breach, or make a retrenchment to stop cavalry.

CHEV'ERIL, leather made of kid-skin.

CHEV'RON, Fr. a rafter. Applied, in *heraldry*, as the name of one of the honourable ordinaries, representing two rafters of a house joined together in chief, such as carpenters set on the highest part of a house to support the roof. —2. An ornament in Gothic architecture, to which the name of *zigzag* is also given.

CHEV'RONEL, an ordinary similar to chevron, but only half the dimensions.

CHEVRETTE. In *artillery*, an engine for raising guns and mortars into their carriages.

CHIAN TURPENTINE, another name for the Cyprus turpentine, obtained from the *Pistachia terebinthus*.

CHIAS'OLITE, the Holspath of Werner, and the Macie of Haly, found in clay slate in Cumberland and Argyleshire. The crystals of this mineral are arranged in four-sided, nearly rectangular prisms. Silica, 68.49; alumina, 30.17; magnesia, 4.12; oxide of iron, 2.7; water 0.27. Name from *χίμαρος* and *λίθος*.

CHICA. 1. A fermented liquor used by the Peruvians, and obtained by them from the Indian corn. —2. A red colouring principle, made use of by many of the Indian tribes to stain their skins. It is extracted from the *Bignonia chica*.

CHICKEN-POX, an eruptive disease, called also *water-pox*. See VARICELLA.

CHICKLING-VETCH, a vetch or pea of the genus *Lathyrus*, used in Germany as food.

CHIEF. In *heraldry*, the head or upper part of the escutcheon, from side to side, occupying the third part of the field. Anything borne on this part is said to be in *chief*.

CHIL'DERMAS DAY, an anniversary observed by the Church of England, on the 28th of December, in commemoration of the children of Bethlehem, slain by Herod. Called also *Innocents' day*.

CHIL'IAD, *χίλια*, a thousand. The period of a thousand years.

CHIL'TAGON, a plain geometrical figure of a thousand equal angles. *χίλια*, a thousand, and *γωνία*, an angle.

CHILIANE'DRON, a figure of a thousand equal sides. *χίλια*, a thousand, and *ἕδρα*, a base.

CHIL'IARCH, a commander of a thousand men. *χίλια*, a thousand, and *αρχος*, a chief.

CHIL'IASTS, a sect; the millenarians. *χιλίας*, a thousand years.

CHIL'INE, the pods or fruit of the *Capricornium*, or Guinea pepper, and which, being ground, form *Cayenne pepper*.

CHIL'TEEN HUNDREDS. The tract anciently called by this name extends through parts of Buckingham and Oxford shires. The steward was an officer appointed to keep the peace there. Members of Parliament, by accepting a nominal office, such as this stewardship, under the Crown, do virtually abandon their seats.

CHIMÆRA, a genus of fishes closely allied to the sharks in their general form. Cuvier places the chimæra in the order *Sturiones*. Name from *χιμαιρα*, a monster with three heads, &c. "The chimæra is one of the most remarkable among living fishes, as a link in the family of Chondropterygians; and the discovery of a similar link in the geological epochs of the oolitic and cretaceous formation, shows that the duration of this curious genus has extended through a greater range of geological epochs than that of any other genus of fishes yet ascertained by Professor Agassiz."—2. A fabulous monster in mythology.

CHIM'INAGE. In *law*, a toll for passage through a forest. The word is Fr. *chemin*, a way.

CHIMNEY JAMES, the sides rising from the top of the grate to the entrance of the chimney, from the back of which the upper part extends forward under the mantel-piece.

CHIMNEY STALK, a tall upright chimney for carrying away smoke from a furnace, &c.

CHIMPANZÉ, a variety of the ourang-outang, regarded as a distinct species by Cuvier; the *Simia Troglodytes*, Linn., Common in Guinea and Congo. The chimpanzees live in troops, construct huts, arm themselves with clubs and stones, and thus repulse men and elephants. They are easily domesticated, and soon learn to walk, sit, and eat like human beings. In size this monkey is nearly equal to man.

CHINA ROSE, the *Hibiscus rosa-sinensis*, of which there are many varieties.

CHINCHILLA, an animal found in the valleys of Chili. Its fur is of an ash colour, crisped and tangled, and much valued in Europe.

CHINE. 1. The spine of an animal.—2. The chime of a cask, or the ridge formed by the ends of the staves.—3. A narrow ravine with vertical edges.

CHIN'SING, in *nautical affairs*, a temporary species of calking, the oakum being only tightly thrust into the chinks of the ship by means of a chisel or pointed knife.

CHINTZ, chints, fine printed calico first

manufactured in the East Indies, but now largely manufactured at home. The name is Hind. *chunt*, Per. *chinz*, spotted.

CHR'O, an orifice in the German refining forge, to allow the melted slag or cinder to flow off from the surface of the metal: called also the *floss-hole*.

CHIO'NIS, the *Sheath-bill*; a genus of birds; order *grallatorie*, family *macro-dactyli*. Only one species is known, and that is from N. Holland, about the size of a partridge, with entirely white plumage; whence the name from *χίονος*, *white*.

CHIF'FING-PIECES, the projecting pieces of iron cast on the faces of iron framing when intended to be rested against each other; the chippings form the points of contact.

CHIR'OGRAFH, from *χρη*, the *hand*, and *γραφω*, to *write*. 1. Anciently, a deed, which, requiring a counterpart, was engrossed twice on the same piece of parchment, with a space between, in which was written *chirograph*, through which the parchment was cut, and one part given to each party. It answers to what is now called a *charter-party*.—2. A fine, so called from the manner of engrossing, which is still retained in the chirographer's office in England.

CHIROG'RAPHER (of fines), an officer in the Common Pleas who engrosses fines acknowledged in the court, and delivers the indentures to the parties. See CHIROGRAPH.

CHIR'OMANCY, or PALMISTRY; *χρη* and *μαντια*, a *divination*. The art of divination by the hands. This practice, once defended and explained by "learned" authors, is now entirely in the hands of gipsies.

CHIRO'NIA, a genus of plants to which the centaury of Britain belongs. *Pentandria Monogynia*. Name from *Chiron*, the centaur, who discovered its use. The British species are annuals, but those of the Cape of Good Hope are shrubby plants.

CHIRON'OMY, *χρη* and *νομος*, *law*. The science of gesticulation, pantomime, and oratorical action.

CHIROTHE'RUM, from *χρη*, a *hand*, and *θηρον*, a *wild beast*, the name proposed to be given by professor Kaup to the great unknown animal, whose footsteps have been observed in beds of red sand-stone, on account of their resemblance to the impressions of a human hand.

CHIS'EL, a tool for cutting by the impulse of pressure or by the blows of a mallet. The *former* is used, first of all, after the work is scribed, with a mallet; the *paring-chisel*, with a fine smooth edge, is used without a mallet, to smooth the irregularities left by the *former*; the *skew-former* is used for cleaning acute angles; the *mortise-chisel* is narrow, and very thick

and strong, and is used to cut deep square holes for mortises; the *gouge* has a round or curved edge; *socket-chisels* have thin shanks with a hollow socket at top, to receive a strong wooden sprig, fitted in with a shoulder; the *ripping-chisel*, is a socket chisel of an inch broad, with a blunt edge, and no basil.

CHRIS'LEV, the ninth month of the Jewish year, answering to a part of November and December.

CHR'TON. *Xistis*. A genus of shells found both recent and fossil. They belong to Cuvier's order *Cyclobranchiata*. Twenty-eight species are described, seven of which have been found upon our own coasts. The larger species inhabit the S. Seas.

CHIV'ALRY, in *law*, a tenure of lands by knight's service, that is, by the condition of performing service on horseback, (*Chevalerie*), or of performing some noble or military service to his lord. When the tenant held only of the king, the tenure was *regal*, when held of any other person, it was *common*, and was usually called *escuage* or shield-service.

CHIVES, CIVES, in *botany*, 1. the small headed onion, (*Allium schænoprasum*).—2. See STAMEN.

CHLO'RAL. Liebig has lately described a new chemical substance under this name. It consists of chlorine, carbon, and oxygen, and may be called a chloride of carbon. It is a limpid colourless liquid, similar in odour and appearance to the oily fluid which chlorine forms with olefiant gas; but in density, volatility, and composition, it is very different. It is formed by passing *chlorine* into *alcohol*, from the first syllables of which words the name is formed.

CHLO'RATE, a salt formed by the union of the chloric acid with a salifiable base, as the chlorate of potash.

CHLO'RIC ACID. This acid, formerly called *hyperoxymuriatic acid*, is a compound of oxygen and chlorine, in the proportion of five equivalents of oxygen to two of chlorine. It has no sensible smell, reddens litmus, and its solution in water is perfectly colourless. It unites with the bases and forms chlorates.

CHLO'RIC OXIDE, the peroxide of chlorine.

CHLO'RIDE, a compound, not acid, of chlorine, with a base.

CHLO'RINE, a gaseous element discovered by Scheele in 1770, and named thus from *χλωρός*, green, on account of its colour. It is one of the most suffocating gases, possesses powerful bleaching qualities, and is highly valued as a disinfecting agent. It is soluble in water, forming *chlorine-water*, and is still more condensed by lime, forming *chloride of lime*, or *bleaching-powder*. Chlorine combines with hy-

drogen, forming hydrochloric or muriatic acid. It unites with oxygen in various proportions, forming the following list of compounds:—*Protoxide of chlorine*, 35'45 chl. + 8 oxy. by weight, or 2 chl. + 1 oxy. by measure; *peroxide of chlorine*, 35'45 chl. + 32 oxy. by wt., or 2 chl. + 4 oxy. by meas.; *chloric acid*, 35'45 chl. + 40 oxy. by wt., or 2 chl. + 5 oxy. by meas.; *perchloric acid*, 35'45 chl. + 56 oxy. by wt., or 2 chl. + 7 oxy. by meas. To these compounds some chemists add a fifth, under the name of *chlorous acid*. Those compounds of chlorine which are not acids, are termed *chlorides* and *chlorurets*.

CHLO'RIODATE, a compound of the chloriodic acid with a salifiable base.

CHLO'RIODIC ACID, a peculiar volatile substance possessing acid properties, obtained by subliming iodine in a great excess of chlorine.

CHLO'ORIS (*χλωρός*, green). 1. The greenfinch, a small bird.—2. A genus of exotic small plants. *Polygamia*—*Monœcia*. The species are mostly American.

CHLO'RITE, a mineral of a grass green colour (*χλωρός*), a variety of talc. Chlorite and talc pass, by insensible gradations, into each other, and in this state they supply the place of mica in most of the granitic rocks in the vicinity of Mont Blanc. There are several varieties.

CHLOROCARBON'IC ACID, a colourless gas, composed of 1 eq. of chlorine, and 1 eq. of carbonic oxide. It is better known by the name of *phosgene gas*.

CHLOROCY'ANIC ACID, an acid composed of hydrocyanic acid and chlorine, and formerly called *oxyprussic acid*. It consists of equal volumes of chlorine and cyanogen.

CHLOROM'ETRY, the name given to the process for testing the discolouring power of any combination of chlorine, but especially of the commercial articles, the chlorides of lime, potash, and soda.

CHLORONITROUS GAS, formed of equal volumes of chlorine and binoxide of nitrogen.

CHLOR'OPHANE, a variety of fluor-spar, found in Siberia, of a violet colour. Name from *χλωρός*, green, and *φαινω*, to show, from its transmitting only the green rays of light.

CHLOROPH'ÆITE, } a scarce mineral found in nodules, from the size of a radish seed to that of a pea. It is named from *χλωρός*, green, and *φαινω*, black, because its colour is green when newly broken, but it speedily becomes black.

CHLORO'SIS. 1. In *medicine*, the green sickness (*χλωρός*, green), a disease which principally affects young unmarried females.—2. In *botany*, constitutional debility, the plant being pale, weak, and

slender; supposed to arise from the want of sufficient light.

CHLOROXAL'IC ACID, a compound obtained by exposing acetic acid and chlorine to bright sunshine. It may be regarded as a compound of 1 of hydrochloric acid, and 1 of oxalic acid.

CHLORURETS, compounds of chlorine.

CHO'ANITE, a zoophyte of the chalk-formation, called the petrified sea-anemone by lapidaries: it bears a close resemblance to the recent *Alcyonia*. Named from *χαωνη*, a funnel, in allusion to its shape, which is sub-cylindrical, with root-like processes, and having a cavity or sac, which is deep and small in comparison to the bulk of the animal.

CHOCK, in *marine language*, a kind of wedge, for confining a cask or other body to prevent it from moving. The *chocks of the rudder* are pieces of timber kept in readiness to stop the motion of the rudder in case of an accident, &c. In the construction of framing a *chock* is an angular, commonly a triangular shaped piece, checked into the ends of the two pieces, to be joined and fastened by treenails to the ends forming the joint. See **COAK**.

CHOC'OLATE, an article of diet prepared from the cacao-nut, and thus named, according to Dr. Alston, from two Indian words, *choco*, sound, and *atte*, water, because of the noise made in its preparation. To prepare it, the nuts are first roasted like coffee; and being next reduced to powder, and mixed with water, the paste is put into moulds of the desired shape. It speedily hardens, and is then taken out, wrapped in paper, and sent to market. This alimentary preparation was first used in Mexico, from which country the Spaniards introduced it into Europe in the year 1520. It was by them long kept a secret from the rest of the world. The proper flavouring admixture is vanilla, but cinnamon and cloves are more commonly used because of their comparative cheapness. See **CACAO**.

CHOIR (*χορος*). In *architecture*, the part of a church in which the choristers sing divine service.

CHOKÉ-DAMP, a name given by miners to all irrespirable gases, especially carbonic acid gas.

CHOLE'DOCHUS (*χολη*, and *δοχος*, I receive): one of the ducts of the liver is called the *ductus communis choledochus*.

CHOL'E'RA, a word derived, according to Celsus, from *χολη*, bile, and *ερω*, to flow, thus signifying a flow of bile; according to Alexander of Tralles, it is derived from *χολη*, the intestine, and *ερω*, to flow, signifying intestinal fluid; others again derive it simply from *χολη*, bile. The name *cholera* is now applied to two diseases utterly dissimilar, viz., to a com-

mon bilious disease long known in this and most other countries, and to a malignant disease of recent origin which commenced in Hindustan, and has since diffused itself epidemically in various directions. The first is usually called *common*, and here *British cholera*, and the second is malignant, Asiatic, blue, and pestilential cholera, or cholera morbus.

CHOLESTER'IC ACID. When cholesterol is treated with nitric acid, a peculiar acid is formed called the *cholesteric*. It is in crystals of a yellowish white colour, little soluble in water, but abundantly so in boiling alcohol.

CHOLESTERINE, a pearly substance found abundantly in human biliary calculi, whence its name, from *χολη*, bile, and *στεγνος*, solid.

CHOLIAM'BI'IC, a verse having an iambic foot in the fifth place, and a spondee in the sixth or last. The word is *χολός*, (*claudus*), and *iambic* (q.v.).

CHONDRIL'LA, the gum-succory. A genus of perennial plants. *Syngenesia—Poly. æqualis*. Name from *χονδρον* a grain of corn, and so called because it emits small particles of gum-like grains.

CHONDROL'OGY, a description of the cartilages of the human body. *χονδρος* and *λογος*.

CHONDRO-PHARYNG'E'US, a muscle so named from *χονδρος* and *φαρυγξ*, because it rises in the cartilaginous part of the tongue, and is inserted in the pharynx.

CHONDRO-PTERY'GII, a class of fishes divided into two orders, *Chondropterygii branchiis liberis*, and *Chondropterygii branchiis fixis*. The skeleton of these fishes is essentially cartilaginous; hence the name from *χονδρος*, cartilage, and *πτέρον*, a fin, that is *cartilaginous-finned*. The sturgeon and shark are examples of this class, and of the orders composing it.

CHORAGIC MONUMENT, *χορος*. In *Grecian architecture*, a monument erected in honour of the Choragus who gained the prize by the exhibition of the best musical or theatrical entertainment at the festivals of Bacchus.

CHORD, Lat. *chorda*, an intestine of which strings were made. In *music*, 1. The string of a musical instrument.—2. The union of two or more sounds, forming an entire harmony; as a third, fifth, and eighth, which are *perfect chords*. The fourth and sixth are *imperfect chords*. In *geometry*, the right line which joins the two ends of an arc.

CHORE'A, St. Vitus's dance, *χορος*, a dance. A disease which chiefly attacks young people of weakly constitution, and which manifests itself in convulsive motions of the limbs, occasioning strange and involuntary gesticulations.

CHOR'EPISCOPI, *χωρεα*, a country place, and *επισκοπος*, a bishop. Country bishops, who were anciently appointed to rural districts.

CHORIAM'BUS. In *poetry*, a foot of four syllables, being a trochee (*χορμιος*), and iambus united.

CHORION. The external or involving membrane of the fœtus is thus named, from *χοριον*, meaning protection.

CHOROGRAPHY, *χωρα*, a district, and *γραφω*, I describe. The description of a district, in contradistinction to geography and topography.

CHOROID, resembling the chorion. Applied to the second tunic of the eye, lying immediately under the sclerotica; and to a plexus of blood-vessels situated in the lateral ventricles of the brain.

CHORUS, *χορος*. A band of singers and dancers, who performed in honour of the gods, particularly Bacchus. In modern times, it signifies the joint performance of music by the whole orchestra.

CHOW'DER-BEER, a drink prepared by boiling black spruce in water, and adding molasses to the liquor obtained.

CHREMATISTICS, *χρημαστικα*. wealth, the science of wealth. A continental appellation.

CHRESTOM'ATHY, *χρηστος*, useful, and *μαθων*, I learn. Applied to books of extracts, chosen with a view to utility.

CHRISM, an oil consecrated by the priests of the Greek and Roman Churches, upon Holy Thursday, to be used in the administration of baptism, confirmation, extreme unction, &c.

CHRISTENDOM comprehends all realms under Christian sovereigns and institutions.

CHRISTIAN KNOWLEDGE, Society for promoting, founded in the year 1699. It has circulated vast quantities of the Bible and Testament, and of the Book of Common Prayer. It is a powerful engine of the Established Church.

CHROAS'TACES, from *χρεια*, colour. A name for all those gems which reflect different colours according to their different positions.

CHRO'MATE, a salt formed by the union of the chromic acid with a salifiable base.

CHROMAT'IC, music which proceeds by several consecutive semitones.

CHROMATICS, the science of colours, *chroma*, colour. That part of optics which explains the relations of light and colours.

CHROME. See CHROMIUM.

CHROME-IRON ORE, a native chromate of iron, or rather a mixture of the oxides of chromium and iron. Its chief use is in the manufacture of chromate of potash.

CHROM'IC ACID. A red or orange co-

loured powder, of a peculiar rough, metallic taste, is extracted from the red lead-ore of Siberia, by treating it with potash, and separating the alkali. This powder is soluble in water, and crystallises into longish prisms of a ruby red colour. This is chromic acid.

CHROM'MIUM, a metal thus named, from *χρωμα*, colour, because it is remarkable for giving colour to its combinations. Its principal ore is the red lead ore of Siberia, which is a chromate of lead. It may also be obtained from chrome-iron ore.

CHRO'NOGRAM, from *χρονος*, time, and *γραμματα*, a letter. An inscription in which a date is given in letters instead of figures.

CHRONOL'OGY, from *χρονος*, time, and *λογος*, discourse. The science of time; the method of computing it, by marking it off into portions, with appropriate names, and arranging the events and occurrences of history in conformable sequent order.

CHRONOM'ETER, from *χρονος*, time, and *μετρον*, measure. Any instrument that measures time exactly. Many machines for this purpose have been invented under the name of chronometers.

CHRYSA'IS. *Χρυσαλις*. The middle state in which all lepidopterous and most other insects remain for some time, between the caterpillar form and their appearance as perfect insects. See CATERPILLAR.

CHRYSAN'THEMUM, a genus of plants of many species, mostly perennials. *Syngenesia*—*Polygamia*. Name from *χρυσος*, gold, and *ανθιμος*, a flower. The sun-flower or marigold; great ox-eye daisy or maudlin-wort; golden lotus, &c., are species.

CHRY'SOBER'YL, from *χρυσος*, gold, and *βηρύλλιον*, a gem; a mineral; the cymophane of Haüy, and chrysopal of Delametherie. Colour, asparagus green; lustre, vitreous; fracture, conchoidal; semitransparent, scratches quartz. Sp. gr. 3.8. Found in Ceylon, in the Brazils, and Siberia.

CHRY'SOCH'ORIS, from *χρυσος*, gold, and *χρῖω*, to shed. A genus of insectivorous mammalia, whose mode of life is similar to that of the moles. Type the golden mole (*C. Asiaticus*), smaller than the European mole, and the only quadruped that presents any appearance of those splendid metallic tints which adorn so many birds, fishes, and insects. Its fur is green, changing to a copper or bronze.

CHRY'SOCO'MA, the *Golden-locks*, a genus of plants (exotic). *Syngenesia*—*Poly. æqualis*. Name from *χρυσος*, gold, and *αμανη*, hair, in allusion to its golden-hair

like appearance. The *Achillea millefolium* has also been called by this name.

CHRYSOGRAPHY, χρυσος, gold, and γραφω, I write. The art of writing in letters of gold.

CHRYSOOLITE, from χρυσος, gold, and λιθος, a stone; a mineral, the Peridot of Haüy, and Krisolith and Olivin of Werner. Chrysolite is of a green colour, inclined to yellow; its texture is foliate and fracture conchoidal. It causes double refraction, and loses its transparency when heated to 150° Fah., and becomes dark grey. The chrysolites of commerce come from Upper Egypt, the Brazils, Ceylon, and Bohemia. The stone consists of magnesia and silica, coloured with oxide of iron.

CHRYSOLOGY, χρυσος, gold, and λογος, discourse. A continental term applied to that part of political economy which relates to the production of wealth.

CHRYSOFRASE, from χρυσος, gold, and πράσιν, a leek. A precious stone of a leek-green colour. It is a variety of calcedony, and owes its colour to the presence of nickel and iron in small quantities. Found chiefly in Silesia.

CHUB, a river fish, a species of cyprinus, called also the *cheven*. Named from the size of its head.

CHUCK (for a turning-lathe), an appendage to fix any material for the purpose of turning it into any determinate form. The term therefore includes all those tools which serve to connect the material to be operated upon to the mandril of the lathe. Those which are capable only of communicating a motion round a determinate axis, such as they themselves receive, are called simple chucks. Those again which are of such a character that the axis of the work can be changed at pleasure, so as to throw the centre of motion to any point, and make the work revolve round any axis, form a large class of complicated chucks which are individualised by particular names, as eccentric chucks, oval chucks, segment, engine, geometric chuck, &c., according to the kind of work for which they are suited.

CHU'NAM, the name given in India to lime obtained by the calcination of shells.

CHYAZ'IC ACID, a name of hydrocyanic or prussic acid, formed of the initial letters of carbon, hydrogen, and azote.

CHYLE, from χυλος, juice; the milk-like liquor observed, some hours after eating, in the lacteal vessels of the mesentery, and in the thoracic duct. It is separated by digestion from the chyme, and is that fluid substance from which the blood is formed.

CHYLIFICATION, from chylus and πο to

become; the process carried on in the small intestines, and principally in the duodenum, by which the chyle is separated from the chyme.

CHYLOPOET'IC, concerned in the formation of chyle—χυλος and ποιω, to make.

CHYME, from χυμος, humour or juice; the indigested mass of food from which the chyle is prepared.

CHYMIFICATION, from chymus and πο, to make; the conversion of food into chyme.

CIBORIUM, χιβωριον. In architecture, an insulated erection, opening on each side with arches, and having a dome, of a cup form, carried by four columns. It also denotes the case which contains the Host.

CICA'DA, the frog-hopper, balm-cricket, or flea-locust. A genus of hemipterous insects of many species. They live on trees and shrubs, of which they suck the juices. Name from κιρκος or κιρκιδων. Plentiful in the south of Europe.

CICADA'RIZ, a family of hemipterous insects, of which the genus Cicada is the type.

CICAT'RICLE, Lat. cicatricula, from cicatrix; the germinating or fetal point in the embryo of a seed or yolk of an egg.

CIC'ELY, a popular name, common to all the plants of the genus *Scandix*, but especially applied to the *S. odorata*, or Great Chervil. The name is also given to a species of *Chærophyllum*.

CIC'ER, the vetch or chick-pea; a genus of one species. *Diadelphia—Decandria*. "Cicer nomen habet à forma, quæ orbicularis, ut plerumque in leguminibus." The *Cicerones* took their name from this pulse, as the *Pisones* did from the pisum or pea, and the *Lentuli* from the lens or lentil.

CICERO'NE (Ital.) Any individual who acts as a guide.

CICHO'RIMUM, the succory or endive; a genus of plants. *Syngenesia—Polyg. æqualis*. British type a perennial. Name, according to Pliny, is of Egyptian origin, written κιχορειον and κιχορειον.

CICHORY, the *cichorium intybus* or wild succory.

CICINDE'LA, the glow-worm; from *candela*, a candle. Order, *Coleoptera—Pentamera*; family, *Carnivora*, Cuv.

CICINDELE'TÆ, a tribe of carnivorous coleoptera, comprising the genus *Cicindela*, Lin., now divided into various subgenera, as *Cicindela*, *Martica*, *Mega-cephala*, &c.

CICIS'BEO (Ital.). Synonymous with *cavalier servente*, and applied to a class of persons in Italy who attend on married ladies with all the respect and devotion of lovers.

CICO'NIA, a genus of birds, the *Stork*, of which there are several species. Order, *Grallatoris*; family, *Cultrirostres*. Name of doubtful origin.

CICUTĀ, the *water-hemlock* and *cow-bane*; a genus. *Petandria*—*Digynia*. Name, the Latin word for hemlock, and also for a shepherd's pipe, made of the hollow stalks of hemlock.

CID, Arab., *seid*, *lord*. The name of an epic poem of the Spaniards, celebrating the exploits of their hero, Roderigo Diaz, Count of Bivar.

CID'ARIS, a family of echinites characterised by their hemispherical form, and named from *κιδάρος*, the cap of state worn by the ancient Persian kings, which they were supposed to resemble. From other characters, derived from their spines, they have obtained the names of sea-urchins, sea-hedgehogs, sea-thistles, &c., and those in a fossil state have obtained many fanciful names expressive of their supposed origin, as *ombria*, from *ὄμβρος*, heavy rain, from the notion that they fell in a heavy shower of rain; *brontia*, from *βροντή*, thunder, from an idea that they were thrown to the earth by thunder; *ceraunii lapides*, under the impression that they were generated by lightning; *cheloniotes*, from their resemblance to the shells of the tortoise; and *oca anguina*, from the notion that they were the eggs of serpents.

CIL'ERY, ornaments of foliage and drapery on the heads of architectural columns.

CIL'IA, Lat. plural of *cilium*, the hair of the eye-brows; the eye-lashes.—In botany, a species of pubescence which consists of hairs on the margin of a leaf or petal, giving it a fringed appearance.—In zoology, the hair-like organs of motion in the radiated animals. The cilia resemble very minute hairs, and are only visible with the microscope.

CIMA, *χυμα*. In architecture, a moulding which is generally the upper one of a cornice. It is called by workmen an *ogee* (OG), being an undulating ornament.

CIMBIA. In architecture, a list, string, fillet, or cincture.

CI'MEX, the generic name of the wall-louse or bug, from *χυμαι*, to inhabit. Order *Hemiptera*, family *Geocorisæ*, Cuv. This genus, of which our common *bed-bug* is a too familiar example, is now divided into upwards of forty subgenera.

CIMO'LIAN EARTH. Fullers' earth. It is **CIM'OLITE**. of a greyish white colour, and consists of alumina, siliceous oxide of iron, and water. It is named from Cimolus, an island in the Cretan sea.

CIN'AROCEPHAL'Æ, a natural family of plants, named from *κινάρα*, an artichoke, and *κεφαλή*, a head, in allusion to the shape of their inflorescence, as the thistle, burdock, blue-bottle, &c.

CINCHO'NA. 1. The Cinchona or Peruvian bark tree. *Pentandria*—*Monogynia*

—2. The pharmacopœial name of several kinds of Peruvian barks. The trees which afford these barks grow wild in the hilly parts of Peru: whence the name *Peruvian*. The name *Cinchona* is derived from the circumstance that, among the earliest cures effected by this medicine was, in 1638, that of the Spanish viceroy's lady, the Countess del Cinchon, at Lima, when it came to be distinguished as the *Cortex cinchonæ*, and *Pulvis comitissæ*. On the recovery of the Countess, she distributed a large quantity of the bark to the Jesuits, in whose hands it acquired great celebrity, and by them was introduced into Europe, whereby it acquired the name of *Cortex jesuiticus*, or Jesuit's bark. See **BARK**.

CINCH'ONINE, the salifiable base or alkali obtained from the *Cinchona condaminæ*, or gray Peruvian bark, as quinine is from the yellow bark (*Cinchona cordifolia*).

CINCINA'CEÆ, *Cinchona* the type; a natural order of shrubby or arborescent exogens.

CINC'TURE, Lat. *cinctura*. The circular concavity near the head or base of a column; from *cingo*, to surround. It is supposed to be in imitation of the girths or ferrules anciently used to strengthen wooden columns.

CIN'NABAR, the native red sulphuret of mercury, named from Arabic, *kennabar*. It is the most prolific ore of mercury, and occurs in veins, surrounded by a black clay, and associated with native quicksilver, amalgam with iron-ore, lead-glance, blende, copper-ore, and sometimes gold. That of Almaden, in Spain, is said to be the richest. The artificial red sulphuret of mercury, or factitious cinnabar, is called in commerce vermilion.

CIN'NAMON, *κινναμόν*. The bark of the cinnamon-tree (*Laurus cinnamomum*), a native of Ceylon, where it grows in great abundance; it is also found in Cochinchina. It is thin, light-yellow in colour, smooth, and shining; has an agreeable, warm, aromatic flavour, and a mild, sweetish taste. Cassia barks are often mixed with cinnamon: these are thick, brown in colour, and pungent to the taste.

CIN'NAMON-STONE, a hyacinth-red variety of the dodecahedral garnet, called also Essonite. The finest specimens are brought from Ceylon.

CINQUE PORTS, or **FIVE PORTS**. The seaport towns of Dover, Sandwich, Hastings, Hythe, and Romney; to which three others were afterwards added, viz. Winchelsea, Rye, and Seaford. These towns possess peculiar privileges, and are under the government of a lord-warden.

CIP'HER, from an Arabic word meaning empty: the arithmetical character 0

The name has also been given to an admixture of letters, as the initials of a name, engraved on a seal, plate, &c., so as to have an enigmatical appearance. These are plentiful on ancient tombs, gravestones, &c. It has also been used as the name of a disguised manner of writing, wherein such arbitrary characters are made use of as may be agreed on by two or more persons corresponding, to stand for letters or words, and which characters are supposed to be understood only by the persons agreeing to use them. This kind of writing has been extensively used in times of war, to conceal from the enemy the facts contained in any letters which they might intercept. This mode of writing gave rise to another art, that of *deciphering*, or reading letters written in *cipher*; and hence, also, the word *cipher* came to signify the key to unravel the characters of *cipher-writing*.

CIR'OLIN, an Italian marble, containing a slight admixture of quartz and oxide of iron. Its colour is green, with white zones. Name from Ital. *cipollina*, a shalot.

CIPRIN'DÆ, the carp family of fishes. Type, *Cyprindus*, Lin.; Order, *Malacopterygii abdominales*, Cuv.; Genera, *Cyprindus*, Lin.; *Cobitis*, Lin.; *Anableps*, Blum.

CIRCEA, the Enchanter's Nightshade, a genus of British perennial plants. *Dian-dria—Monogynia*. Name from *Circe*, an enchantress, supposed to have used it in her magical operations.

CIR'CLE, Lat. *circulus*, from *circus*. A geometrical figure contained under one line called the circumference; and is such, that all straight lines drawn from a certain point within the figure called the centre, to the circumference, are equal to one another. Thus, in the figure, $AB = AC = AD$. These are called *radii* of the circle, of which the line BD , passing through the centre, is the diameter.

The diameter of a circle is to its circumference nearly as 1 to 3, more nearly as 7 to 22, more nearly as 106 to 333, more nearly as 113 to 355, more nearly as 1702 to 5347, &c.; or, taking the diameter as 1, the circumference is

$$4 \times (1 - \frac{1}{8} + \frac{1}{3} - \frac{1}{7} + \frac{1}{9} - \frac{1}{11} + \frac{1}{13} - \&c.)$$

Circle of curvature; that circle the curvature of which is equal to that of any

curve at a certain point; called also the *circle of equi-curvature*.—*Circles of the sphere*; such circles as cut the mundane sphere, and have their circumference on its surface. They are either moveable or fixed. The first are those whose peripheries are in the moveable surface, and which therefore revolve with its diurnal motion, as the meridians, &c.; the latter have their peripheries in the moveable surface, and do not revolve, as the ecliptic, equator, and its parallels. The circles of the sphere are, besides, either great or little: a great circle divides it into two hemispheres, having the same centre and diameter with it as the horizon: a little or less circle divides the sphere into two unequal parts, having neither the same centre nor diameter with it as the parallels of latitude.—*Circles of Altitude*. See **ALMUCANTAR**.—*Circles of declination*; great circles intersecting each other in the poles of the world.—*Circles of excursion*; circles parallel to the ecliptic, and at such a distance from it (usually 10°) as that the excursions of the planets towards the poles of the ecliptic may be within them.—*Circle of illumination*; a circle passing through the centre of a planet perpendicular to a line drawn from the sun to the respective body. This is supposed to separate the illuminated part from the unilluminated part, which it does nearly.

—*Circles of latitude*; great circles, called also *secondaries of the ecliptic*, perpendicular to the plane of the ecliptic, passing through the poles thereof, and through every star and planet. They are so called because they serve to measure the latitude of the stars, such latitude being simply the arc of one of the circles intercepted between the star and the ecliptic.—*Circles of longitude*; several lesser circles parallel to the ecliptic, diminishing in proportion as they recede from it: on these arcs the longitude of the stars is reckoned.—*Circle of perpetual apparition*; one of the lesser circles parallel to the equator, described by any point of the sphere touching the northern point of the horizon, and carried about with the diurnal motion. All the stars within this circle never set.—*Circle of perpetual occultation*; a lesser circle parallel to the equator, and containing all those stars which never appear in our hemisphere. The stars situated between the circles of perpetual apparition and perpetual occultation, alternately rise and set at certain times.

CIRCUIT, from Lat. *circum*, round. The journey or progress which the judges take twice every year through the counties of England and Wales, to hold courts and administer justice. Thus England is divided into six circuits—the Home Circuit, Norfolk Circuit, Midland Circuit, Oxford

Circuit, Western Circuit, and Northern Circuit. In Wales there are two circuits—the North and South. In Scotland there are three—the Southern, Western, and Northern.

CIRCUIVY. In *law*, a longer course of proceeding than is necessary to recover the thing sued for.

CIR'GULAR, an advertising letter. A *circu-lar* is printed with a fly-leaf, a *bill* has no fly-leaf. When a circular is very small it is called a *card*.

CIRCULAR INSTRUMENTS. All instruments for measuring angles, in which the quadration extends round the whole circumference, from 0° to 360° .

CIRCULAR NUMBERS, numbers whose powers terminate in the roots. Thus, all the powers of 5 terminate in 5.

CIRCULAR PARTS. The name given by Lord Napier to a proposition invented by him, which gives all the relations of the parts of a right-angled spherical triangle.

CIRCULAR SAILING, the method of moving or sailing a ship upon a great circle of the globe.

CIRCULATE. In *arithmetic*, a circulating decimal is sometimes so called.

CIRCULATING DECIMALS, called also *recurring decimals*, are such as consist in a repetition of the same figures, as '656565, &c. When the circulation consists of the same figure repeated, the decimal is called a *simple circulate*, as '333, &c.; when the period of circulation consists of more than one figure, it is called a *compound circulate*, as '123123123, &c.

CIRCULA'TION (of the blood), the natural motion of the blood in the living animal, whereby it is alternately sent by the action of the heart through the arteries to all parts of the body, and returned to the heart through the veins.

CIRCUMFERENCE, an instrument used by surveyors in taking angles. It consists of a brass index and circle, all of a piece; on the circle is a compass, the meridian line of which answers to the middle of the breadth of the index. There are also two sights to screw on and slide up and down the index: also a spangle and socket screwed on the back part of the circle, to put the head of the staff in.

CIRCUMPO'LAR STARS, are those stars situated so near the north pole of the heavens as to revolve round it without setting.

CIRCUMSCRIBED FIGURE. In *geometry*, a figure drawn about another figure so as to touch it on every side.

CIRCUMSCRIBED HYPERBOLA, one of Newton's hyperbolas of the second order, which cuts its asymptotes, and contains the part cut off within itself.

CIRCUMSTANTIAL EVIDENCE. In *law*, that evidence which is obtained from circumstances which usually attend facts

of a particular nature, from which arises presumption.

CIRCUMVALLA'TION, from *circumcallo*, to wall round; the surrounding of trenches with a wall or rampart; also the rampart or fortification surrounding a besieged place.—This word denotes properly the wall or rampart thrown up, but as the rampart is formed by entrenching, and the trench makes a part of the fortification, the term is applied to both.

CIR'CUS. 1. In *antiquity*, a large oval building for the exhibition of popular games and shows: that of Maximus was nearly a mile in circumference.—2. In *modern times*, a circular inclosure for the exhibition of feats of horsemanship.

CIRRHO'ODA, the sixth class of Mollusca in the arrangement of Cuvier. Named from *cirrhus*, and *oûs*. The cirrhopods are almost always inclosed in multivalve shells, secreted from the outer surface of a fleshy, thin, enveloping mantle, and are attached to submarine bodies either by their base or by a fleshy tubular peduncle. The position of the animal in the shell, is such that the mouth is at the bottom, and the cirri near the orifice.

CIR'RHUS, Lat. *cirrus*, a tendril. Applied to describe the apices of bodies, which are terminated by a spiral appendage.

CIR'BUS, Lat. from *κίβη*, a horn. 1. In *botany*, a clasper or tendril: one of the fulcra or props of plants.—2. In *conchology*, a genus of fossil spiral shells of the chalk deposit.

CIS'SOID, in the *higher geometry*, a curve line of the second order, invented by Diocles, an ancient Greek geometrician, for the purpose of finding two continued mean proportionals between two other given lines; and named by him from *κίσσος*, ivy, and *εἶδος*, like.

CIST, *κίστη*, a chest. In *architecture*, a chest or basket.

CISTA'CEÆ, *Cistus* the type. A natural order of shrubby or herbaceous Exogens, inhabiting the South of Europe and North America.

CIST'VAEN, a stone receptacle often found in barrows, containing the bones of persons interred there. Some of them are not sepulchral.

CIS'TUS, *κίστος*. A genus of plants. *Polyandria*—*Monogynia*. Rock rose species numerous, mostly evergreens, shrubs: natives of warm climates.

CITA'TION, from *cito*, to cite. Citation in ecclesiastical courts is the same with summons in civil courts.

CITH'ERN, Lat. *cithara*, Gr. *κίθαρα*. An ancient musical instrument somewhat resembling the guitar. The precise form is not well known.

CITHAREXYLUM, a genus of plants. *Didymania*—*Angiospermia*. Fiddle-wood. There are five species, natives of the West Indies and warmer parts of America, where they grow to large trees. Name from *xylo*, a harp, or a fiddle, and *ξύλον*, wood: the wood being particularly adapted for stringed musical instruments.

CITRATE, a salt formed by the union of the citric acid with a salifiable base.

CITRIC ACID, the acid of lemons. *Citrus*, a lemon.

CITRON, an agreeable fruit, the produce of the *Citrus limonium*, extensively cultivated at Madeira. It is a native of Asia. It differs from the lemon in being less acid.

CITRUS. *Κίτρος*. A genus of plants. *Polyadelphia*—*Polyandria*. This genus comprises the orange, lemon, citron, bergamotte, lime, and other trees. Warm climates.

CITY, Lat. *civitas*. A borough or town corporate, which is or has been the seat of a bishop, or the capital of his see: it differs in no other respect from another borough.

CIVET, an unctuous perfume taken from the civet-cat. It is worth, when genuine, from 30s. to 40s. an ounce.

CIVET-CAT, or **CIVET**. This name is common to all the species of the genus *Viverra*, but especially applied to the *V. civetta*, Lin., an animal of an ash-colour, irregularly barred and spotted with black, and not unlike a cat, but more closely resembling the fox. It inhabits the hottest parts of Africa. From the civet, and zibet (the Indian species), the perfume called *civet* is obtained. The name *Civet* is Arabic, *zebet*.

CIVIC CROWN, a garland of oak leaves which was given to a Roman soldier who had saved the life of a citizen (*civicus*.)

CIVIL ARCHITECTURE, the architecture which is employed for the purposes of civil life, in distinction from military and naval architecture.

CIVIL LAW, the law of a state, city or country; appropriately the Roman law comprised in the Institutes, Code, and Digest of Justinian, and the Novel Constitutions.

CIVIL LIST, the officers of civil government; also the revenue appropriated to support civil government.

CIVILIAN, one learned in civil or Roman law; particularly a member of the "College of Doctors of Law exercent in the Ecclesiastical and Admiralty Courts" in England and Wales.

CLACK, from W. *clac*, noise; the instrument that strikes the hopper of a grist-mill for the purpose of shaking it and discharging the corn.

CLACK-VALVE, a valve much employed

in hydraulics, consisting of a circular piece of leather covering the bore of the tube in which it is fixed, and moving by a hinge, sometimes of metal, but generally of leather. Semicircular valves of this description are called *butterfly valves*.

CLAMP, in general something that binds. In *ship-building*, the name is given to thick planks in the inner part of a ship's side, used to sustain the ends of beams. Clamps consisting of bent plates of smooth iron are also used to strengthen masts and fasten the masts and bowsprits of small vessels; and similar irons are fore-locked to the trunnions of a cannon, to keep it fast to the carriage. *Clamp* is also the name used in some parts, as the vicinity of London, to denote a pile of bricks laid up for burning.

CLAN. The Clans are tribes consisting of many families bearing the same surname, which, according to tradition, descend from a common ancestor.

CLARE-OBSCURE, light and shade in painting.

CLARICHORD, from *clarus*, clear, and *chorda*, a string; a musical instrument in the form of a spinet; called also a *manichord*. It is furnished with about 50 keys and 70 strings, some of these being in unison. It is a great favourite in nunneries.

CLARION, from Fr. *clairon*, a wind instrument differing from the common trumpet in this, that its tube is narrower, and its tone more acute and shrill.

CLARIONET, dim. of *clarion* (q. v.).

CLARO-OBSCURO (*clarus* and *obscura*). In *painting*, the art of disposing advantageously the lights and shades of a piece. It also denotes a painting in two colours, as black and white.

CLASS, a term used to denote an assemblage of beings or things having some marked character in common. Classes are made up of orders. What the genus is to the species, or the order to the genera, the class is in respect to the orders. Every class comprehends part of the series of genera collected into several orders; every order is an assemblage of genera, every genus an assemblage of similar species, and every species is made up of homogeneous individuals.

CLASSIC. In the *fine arts*, such an arrangement of the subject that all the parts are suitable to the general design. In *literature*, signifies the highest and purest class of writers in any language.

CLAVATE, Lat. *clavatus*, club-shaped; applied to parts of plants.

CLAVARY, from *clavis*, a key; a scale of lines and spaces in music.

CLAVICHORD, from *clavis*, a key, and *chorda*, a musical instrument. See **CLARICHORD**.

CLAVICORNES, the fourth family of the pentamerous coleoptera. Name from

clava, a club, and *cornu*, a horn; club-horned, the antennæ being always thicker at the extremity, and often club-shaped.

CLAVUS (Lat.), a nail. An excrescence from the grains of rye. Also a parasitical fungus, termed *spermatidia clavus*. Also a severe pain in the forehead like the driving of a nail.

CLAW or **UNGUIS**, the narrow part at the base of a petal, which takes the place of the foot-stalk of a leaf.

CLAY, a name common to all unctuous tenacious earths. The common clays generally consist of about equal parts of alumina and silica, with various impurities. Pure clay is alumina (q.v.). *Potters' clay* consists of about equal parts of alumina and silica, with a small addition of lime. *Loam* is an impure potters' clay. Kaolin or porcelain clay is formed by the disintegration of the felspar of granite. Clays are often named according to their colours, which they generally owe to a slight admixture of some metallic oxide.

CLAYES, plu., from Fr. *clais*, a hurdle; a sort of fortification, consisting of wattles or hurdles made with stakes interwoven with osiers to cover lodgments.

CLAY'ING, the operation of puddling.

CLAY'SLATE, argillaceous schist; the argillite of Kirwan. It is an indurate clay common to the fossiliferous and metamorphic series. Usual colours, bluish-grey and greyish-black, of various shades. Constituents, silica about 50 per cent.; alumina 25; magnesia 10 or 12, with some metallic oxides, potash, sulphur, and carbon. It occurs in great beds, and is extensively quarried for roofing and other purposes.

CLAY'STONE, an earthy stone resembling indurated clay. It is a variety of prismatic felspar.

CLEAR. 1. To clear a ship at the Custom-House is to exhibit the documents required by law, give bonds to perform other acts requisite, and procure a commission to sail.—2. To clear the land is, in nautical language, to gain such a distance from shore as to have plenty of searoom.—3. To clear a ship for action is to remove all incumbrances and prepare for an engagement.

CLEAR'ANCE, a certificate that a ship has been cleared at the custom-house.

CLEAR'ING, among London bankers, a method adopted for exchanging the drafts of each other's houses. Thus at half-past 3 o'clock, a clerk from each banker attends at the clearing-house, where he brings all the drafts on the other bankers which have been paid into his house that day, and deposits them in their proper draws, (a draw being allotted to each banker); he then credits their accounts separately with the articles which they

have against him, as found in his draw. Balances are then struck from all the accounts, and the claims transferred from one to another, until they are so wound up and cancelled, that each clerk has only to settle with two or three others, and their balances are immediately paid.

CLEAT, from *κλαύειν*, a fastener; a piece of wood used in a ship to fasten ropes upon. Cleats are of different shapes; some have one arm, some two, or are simply hollow in the middle to receive a rope, and are called belaying-cleats, a deck-cleat, and a thumb-cleat.

CLEAV'AGE, a term applied to the mechanical division of crystals, by showing the direction in which their laminae can separate. It enables us to determine the faces of cleavage being constant, the mutual inclination of these laminae, and consequently the primitive crystalline form of the mineral.

CLECHE. In heraldry, a kind of cross, charged with another cross of the same figure, but of the colour of the field.

CLEDGE. In mining, the upper stratum of fullers' earth.

CLEF. In music, a character placed at the beginning of a stave to determine the degree of elevation occupied by that stave in the system, and to point out the names of all the notes contained in the line of the clef.

CLEFT-GRAFT, a graft made by cleaving the stock, and inserting the cion.

CLEMA'TIS, a genus of plants. *Polyandria—Polygynia*. Virgin's Bower. British type, Traveller's Joy (*C. vitalba*) Name from *κλημα*, a tendril

CLEPSY'DRA, from *κλεψύδρα* (from *κλειπτω*, to hide, and *ὕδωρ*, water). An instrument used by the ancients to measure time, by the dropping of water through a hole from one vessel to another; also a chemical vessel perforated in the same manner.

CLEV'Y, the draught-iron of a plough, &c.

CLEW. In nautical language, the lower corner of a square-sail, and the aftmost corner of a stay-sail.

CLEW-GARNETS, a sort of tackle of rope and pulley fastened to the clews of the main and fore-sails of a ship, to truss them up to the yard.

CLEW-LINES, a tackle similar to the clew-garnets, but applied to the smaller square-sails.

CLICKS, small pieces of iron falling into a notched wheel, attached to the wincher in cutters, &c., and thereby serving the office of pawls.

CLIENT, from *cliens*. Anciently, one who put himself under the protection of a man of distinction, who became his patron: at present, one who puts himself

to the mercy of a lawyer, who often becomes his tormentor.

CLIMAC'TERIC, from *κλιμαξ*, a gradation. A term applied to certain years of a person's life, which are supposed to mark a certain degree in the scale of his existence, and also to a particular disease observed in persons advanced in life, wherein a general decay of the system takes place without any assignable cause being observed.

CLINAN'THUS, from *κλινη*, a bed, and *ανθος*, a flower. The enlarged and flattened top of a common peduncle, which supports several sessile flowers.

CLINCH. In *nautical language*, the part of a cable, or the kind of knot and seizings fastening it to the ring of an anchor, &c.

CLINCH'ER, a cramp or piece of iron bent down to fasten anything.

CLINCH'ER-BUILT, made of clincher-work.

CLINCH'ER-WORK, the disposition of the planks; the side of any boat or vessel, when the lower edge of every plank overlays that next below it, like the slates on the roof of a house.

CLINCH'ING. 1. The operation of driving the point of a nail backward, when it has penetrated quite through a piece of wood.—2. The driving of a little oakum into the seams of a ship, to keep out the water; an imperfect kind of caulking.

CLIN'UM, used to denote the summit of a floral branch, of which the carpella are the termination.

CLINK'ERS, bricks impregnated with nitre, and more thoroughly burnt by being placed next to the fire in the kiln.

CLINK'STONE, phonolite, a felspathic rock of the trap family, named from its yielding a metallic sound when struck.

CLINOM'ETER, from *κλινω*, to lean, and *μετρον*, measure. An instrument for measuring the dip of mineral strata.

CLI'O, a genus of Mollusks, order Pteropoda. The *C. borealis*, Lin., is the chief food of the whale.

CLIT'ORIS, *κλιτορις*. A small glandiform body, above the nymphæ and before the opening of the urinary passage of females.

CLOACA, (Lat.) a common sewer. Used to designate the cavity formed by the extremity of the intestinal canal in birds, fish, reptiles, and the monotrematous animals.

CLOFF, that in which any goods are put for convenience of carriage; as the bags of pepper, hops, &c.

CLO'STER, *claustrum*. Literally an inclosed place. The principal part of a regular monastery, consisting of a square peristyle or piazza, between the church, the chapter-house, and the refectory, and over which is the dormitory.

CLOSE-HAULED, the trim of a ship's sails when she endeavours to make progress in the nearest direction possible towards that point of the compass from which the wind blows.

CLOSE-QUARTERS, strong barriers of wood, used in a ship for defence when the ship is boarded.

CLOS'ER. In *masonry*, the last stone in the horizontal length of a wall, which is smaller than the rest to fill up the row.

CLOSE-STRING, in dog-leg stairs, a staircase without an open newel.

CLOUTED or **CLOTTED CREAM**, produced on the surface of milk by setting a pan of new milk on a hot hearth.

CLOVE, a pungent aromatic spice, the fruit or rather calyces of the unopened flowers of the clove-tree. Cloves are shaped like a nail, whence their name, from Fr. *clou*, a nail. *Clove* is also the name given, 1. To 7lbs. of wool. 2. To 8lbs. of cheese or butter.

CLO'VER, **CLOVER-GRASS**, a name common to all the species (about 100) of the genus *Trifolium*. Dutch, *klaver*, a club, quasi *club-grass*.

CLOVE-TREE, the *Caryophyllus aromaticus*, a native of the Molucca Islands. It grows to the size of the Laurel.

CLUB-MOSS, a name common to all the species of the genus *Lycopodium*.

CLUMP. 1. A mass of trees or shrubs, or both, generally compact in its outline, and always small as compared with extensive plantations.—2. The compressed clay of coal strata.

CLUNCH, an indurate clay found dividing the coal-seams.

CLU'PEÆ (plural of *clupea*, a herring), the herring family of fishes. Type, genus *Clupea*.

CLYM'ENA, a genus of Articulata. Order *Abranchiata*, family *Abranchiata setigera*, Cuv. Name from *κλυμενος*, plain, their bodies having but few rings compared with the earth-worm.

CLY'PEATE, Lat. *clypeus*, shield-like. The same as scutate.

COADUNA'TÆ, a natural family of plants, which have a number of flowers clustered together (*coadunatus*) so as to resemble a single flower.

COAG'ULUM, Lat. the tenacious substance formed from a fluid by coagulation.

COAK, in the construction of wood framings, a small cylinder of hard wood, let into the ends of the pieces to be joined, to render the joining more secure. The several pieces forming the timbers of ships are at present *coaked* together: formerly they were *choked* together by triangular *chocks*, made fast by tree-nails, which sustained all the stress at the joint in whatever direction; and, therefore,

when the chock decayed, the joining was left without any support whatever. The mode of coaking is thus reckoned an improvement.

COAL, from *Sax. cole*. An important combustible mineral, divided by mineralogists into three great families: black coal, unflammable coal, and brown coal. These, again, are divided into many subordinate species. Coal is composed of charcoal, bitumen, and earthy matter, and its value, for the purposes of combustion, depends on the relative proportions of these constituents.

COAL-FIELDS, a district having its peculiar series of strata, unconnected with any other. Coal-fields are of limited extent, and are commonly arranged in basin-shaped cavities, the strata dipping to a common centre.

COAL-FORMATION, the carboniferous group of strata succeeding the grauwacke in the ascending series of Europe, and so called because the great mass of European coal is included among the rocks which compose it. It consists of indefinite alternations of shales and sandstones, coal-beds, ironstone layers, and layers of limestone.

COARCTATION, from *coarcto*, to straiten. Contraction of the diameter of a canal, &c.

COAT OF ARMS, a habit (kind of surcoat) worn by the ancient knights over their arms. This habit was diversified by bands and fillets of several colours, called *devices*, being composed of several pieces sewed together. The representation of these is still called a *coat of arms*.

COAT OF MAIL, a piece of armour in form of a shirt, consisting of a network of iron rings.

COAT-ARMOUR, a coat of arms.

COBALT, a metal of a reddish gray colour, with but little lustre; of a fibrous texture. Sp. gr. 86, melt. pt. 130° Wedgw. = 17977° Fah. It is with the oxides of this metal that glass and porcelain are coloured blue; and its muriate forms one of the most interesting sympathetic inks, the letters being invisible in the cold, but becoming blue when gently heated. (See *SMALT* and *ZAFFRE*.) Cobalt takes its name from an old German superstition, that the mines of that country were haunted by certain demons, called *kobolden*, and that those ores which appeared rich to the eye, but afforded nothing of value, were manufactured by those spirits, and were called *kobold*: the ores of the metal in question were supposed to be of this useless kind, and retained the name, now written *cobalt*.

COBWALLS, walls formed of mud mixed with straw.

COCCINEUS, a genus of insects. Order *Coleoptera*, family *Fungicolæ*. Species *cove-bug*, *idy-bug*, &c. Name dimin. of

coccus, a berry, in reference to the shape of some of the species.

COCCOON, the silken case which the larvæ of certain insects spin for themselves.

COCCULUS INDICUS, the Indian berry; the fruit of the *Menispermum cocculus*, a large tree of Malabar. It is narcotic and poisonous, and has been much employed in the adulteration of ale and beer. Its use in this way is prohibited under severe penalties.

COCCUS, *κoccus*. 1. In *botany*, a cell or capsule.—2. In *entomology*, a genus of hemipterous insects constituting the family *Gallinsecta*. The cochineal insect is the *C. cacti*, Lin., a native of Mexico, where it is domesticated, and reared with the greatest care on a species of opuntia.

COCCYX, the *coccygis os*, a bone forming a small appendage to the end of the sacrum, terminating in a point, resembling, it is said, the bill of a cuckoo (*κoccyzē*).

COCHINEAL, *Sp. cochinita*, an insect; the *Coccus cacti*, Lin., reared chiefly in Mexico on the *Cactus opuntia*, India fig or Nepal tree, and highly valued for the crimson dye it furnishes. It is imported in bags, and has the appearance of shrivelled rugose berries. Value 6s. to 10s. per lb.

COCHLEARIA, a genus of herbaceous plants. *Tetradynamia*—*Siliculosa*. Scurvy-grass; horseradish. Name from *cochleare*, a spoon, in reference to the form of its leaves.

COCKET, a certificate given by the officers of the custom-house to merchants, as a warrant that their goods have been duly entered. Fr. *cachet*, a seal.

COCKLE. 1. In *conchology*, a shell (*καχλος*) of the genus *cardium*.—2. In *botany*, the cornrose (*Sax. cocle*), a species of *agrostemma*: also applied to the darnel or lolium.—3. In *mineralogy*, a local name for shori, from *cockle*, the shell of that name.

COCKLE-OAST, that part of a hop-kiln where the fire is made.

COCK-PIT. In a *ship of war*, a place on the lower deck abaft the main capstan, where are partitions for the purser, surgeon, and his mates. Also the place where game-cocks fight their battles.

COCKROACH, a name common to all the insects of the genus *Blatta*.

COCK'S-COMB. In *botany*, a name applied, 1. To the species of the genus *Celosia*.—2. To a species of *Rhinanthus* or yellow-rattle.—3. To the *Hedysarum crista galli*.

COCK-WATER, among *miners*, a stream of water brought into a trough to wash away sand from ores.

CO'COA, the fruit of the *Theobroma cacao*, which is about the size of a kidney-bean and inclosed in a thin shell.

CO'COA NUT, the fruit of the *Cocos nucifera*. Within the nut is found a hollow kernel of a sweet and agreeable flavour, and within this a liquid like milk, which the Indians use.

CO'COA-NUT OIL, an orange-coloured oil of a strong but not disagreeable smell, obtained from the nuts of the *Cocos butyracea*, called also *palm-oil*. Large quantities of it are manufactured in Bengal.

CO'COA-NUT TREE, a name common to all the species of the genus *Cocos*, but especially applied to the *C. nucifera*, a native of the warm climates of both Indies.

COCOON, Fr. *cocoon*; the ovoid nest formed by the silk-worm (*Bombyx*), and consisting of the filaments comprising the silk. It serves as a defence against enemies and the changes of temperature.

COCOS, a genus of palmaceous plants. *Monæcia*—*Hexandria*. One species affords the cocoa-nut, and another the cocoa-nut oil, called likewise palm oil. Name contracted from Portu. *macoco*, or *macao*, a monkey, the three holes at the end of the cocoa-nutshell giving it some resemblance to a monkey's head. The name *cocos* is also given to petrifications resembling cocoa-nuts.

COD, Sax. *codd*; a fish, the *Gadus morrhua*, Lin., *Morrhua vulgaris*, Yarr. From two to three feet long; black, spotted with yellowish and brown: it inhabits the N. ocean.

CODA, It. *a tail*. In music, the passage at the end of a movement which follows a lengthened perfect cadence.

CODE, from *codex*, a board on which accounts were written; used to designate a digest of laws, especially that digest of the laws and constitutions of the Roman Emperors, made by order of Justinian, hence called the *Justinian Code*.

CODET'TA. In music, a short passage which connects one section with another.

CO'DEX (Lat.), a manuscript volume.

COEFFICIENTS. In algebra, numbers or letters prefixed to unknown quantities, to show how many times such quantities are repeated. The coefficient is a multiplier of the quantity to which it is prefixed.

CELI'ACA, in nosology, a class of diseases embracing those of the digestive organs.

CENAC'ULUM (Lat.), anciently, the supper-room of the Romans.

CENAT'IO, anciently, a refreshment room.

CENO'BIO, applied to that class of fruits which consists of two or more carpels separate at the apex and united at the base.

CO'NOBITE, *χῆρος*, and *βίος*, life; one living under a rule in a religious community.

COFFEA, a genus of arborescent plants. *Pentandria*—*Monogynia*. The coffee-tree—warm climates, especially Arabia.

COFFEE, COFFEE-BEANS, the berries of the coffee-tree (*Coffea arabica*), generally of an oval form, somewhat smaller than a horse-bean, and of a rough, close, and hard texture.

COFFEE-ROASTER, the iron utensil in which coffee is dried over the fire before being ground.

COFFEE-TREE, the *Coffea arabica*, a native of Upper Ethiopia and Arabia Felix. It rises about 15 feet, its trunk sending forth opposite branches in pairs, and producing its berries in clusters.

COFFER. 1. A chest.—2. A trough in which tin-ore is broken.—3. A recess or sinking between the modillions in the soffits of the cornices of the Greek and Roman orders of architecture.—4. A hollow lodgment across a dry moat, raised to repulse besiegers when they endeavour to pass the ditch.

COFFER-DAM, an inclosure formed by a double range of piles, &c., with clay between, for laying the foundations of piers and other works in water, to exclude the surrounding fluid and protect the work and workmen.

CORFIN, in farriery, the whole hoof of a horse's foot above the coronet.

CORFIN-BONE, a small spongy bone in the middle of a horse's hoof.

COO, the tooth of a wheel, by which that wheel acts upon another.

COGNATION, in civil law, natural relation between males and females, both descended from the same father.

COGNIZANCE, in law, an acknowledgment; as in fines, the acknowledgment of the cognizor or deorciant that the right is in the plaintiff or cognizee by gift or otherwise.

COGNOVIT ACTIO'NEM, in law, an acknowledgment by a defendant that a plaintiff's cause of action is just.

COG-WHEEL, a wheel having cogs or teeth.

COHESION, that species of attraction by which the particles of bodies are held together.

COHOBATION, a repeated distillation of the same liquid from the same materials.

CO'HORT, the tenth part of a Roman legion.

COIF, a sort of cap formerly worn by sergeants at law, &c.

COIN. 1. Money stamped: from Ital. *conio*, a die.—2. A block to support a body on an inclined plane: from *cuneus*, a wedge.—3. The angle made by two surfaces: from Fr. *coin*, a corner.

COIR, a species of yarn manufactured out of the husks of cocoa-nuts. It is extensively used in the East.

COLARIN. In architecture. See CINCATURE.

COLCHICUM, a genus of perennial plants. *Hexandria*—*Trigynia*. Meadow-saffron.

Named from Colchis, a country in Asia, where some of the species were plentiful.

COL'COTHRAR, the brown-red oxide of iron which remains after the distillation of the acid from sulphate of iron. It is used for polishing glass, &c.

COLEOPHYLLUM, *κολῆδος*, a sheath, and *φύλλον*, a leaf; applied to a monocotyledonous structure, the young leaves being evolved from within a sheath.

COLEORHIZA, denoting the sheath within which is inclosed the radicle of monocotyledonous plants.

COLEOPTERA, from *κολῆδος*, a sheath, and *πτερον*, a wing; an order of insects furnished with elytra or sheaths to their wings. The inferior wings are merely folded transversely and covered with others which form cases or covers for them. Of all insects the coleoptera are the best known and the most numerous. They have six legs and four wings, and experience a complete metamorphosis. The elytra are horizontal and crustaceous.

COLLAPSE, Lat. *collapsus*, a falling together. This term is used in medicine to denote an entire prostration of the vital powers, such as occurs in adynamic fever.

COLLAR. In *heraldry*, an ornament for the neck, worn by knights, as the collar of the order of the garter.

COLLAR-BEAM, a beam above the lower ends of the rafters of a roof.

COLLARINO. In *architecture*, an astragal. **COLLATING**, among *printers*, the examining the sheets of a book to ascertain that they are gathered correctly.

COLLATION. 1. In *canon law*, the presentation of a clergyman to a benefice by a bishop who has it in his gift.—2. In *common law*, comparison of a copy with its original. — 3. In *Scots law* the right which an heir has of sharing the property of the deceased equally with others of the same degree of kindred.—3. A repast between full meals.

COLLECTIVE NOUN. In *grammar*, a noun which, though itself in the singular number, denotes more than one, as *assembly*.

COLLECTA'NEA, } a selection of passages
COLLEC'TION, } made from various authors for purposes of instruction.

COLLECTORS. In *botany*, dense hairs covering the styles of some species of *Compositæ*, &c.

COL'LEGE, Lat. *collegium*, a collection; from *con* and *lego*, to send. This term means an assemblage or society of men invested with certain powers and rights, and performing certain duties, or engaged in some common pursuit, as the *College* of Physicians, the *College* of Heralds. Such colleges are usually established by the supreme power of the state. In Russia

the name *college* is given to the councils of state; and in Britain the term is used to designate an edifice appropriated to the use of students in the Universities.

COL'LET (French), a collar; a term used by jewellers to designate the horizontal plane or face at the bottom of brilliants; also the part of a ring in which the stone is set.

COLLIMA'TION, *collimo*, I aim at. The line of collimation in a telescope is the line of sight passing through the centre of the object-glass, and the intersection of the wires placed in its focus.

COLLIMA'TOR, floating. An instrument invented by Kater for finding the horizontal point.

COLO'BUS, Gr. *κολοβος*, mutilated; a genus of long-tailed quadrumanes or monkeys, so called because the fore-hands want a thumb.

COLOCA'SIA, the Pontic or Egyptian Bean (*Nymphaea nelumbo*), a perennial plant growing in marshy grounds in Egypt.

COLO'CYNTH, Lat. *colocynthis* (*κολοκυνθίς*, from *κολοκυνθα*, a gourd), the Coloquintida, Bitter Cucumber, or Bitter Apple of the shops, the produce of an annual plant (*Cucumis colocynthus*), which grows in Turkey, Nubia, India, and other places, much resembling the cucumber in herbage. When ripe, the fruit is peeled and dried, and in this state is sent to England. It is an exceedingly drastic cathartic. It is a round berry or pepo of the size and colour of a small orange.

COLOCYN'THINE, a brittle orange-coloured substance obtained from colocynth, and regarded as the active principle of the drug.

CO'LOM. *Κόλος*. 1. The largest of the intestines. It commences at the cæcum and terminates in the rectum.—2. A mark [:] denoting a pause greater than the semicolon, and less than the period.

COLONEL-LIEUTENANT, the commander of a regiment of guards of which the king, prince, or other person of eminence is colonel.

COLONELS. In *architecture*, the posts of a truss frame.

COLONNA'DE, from Ital. *colonna*, a column; a row of columns. The colonnade is termed, according to the number of columns which it contains, *tetrastyle*, *hexastyle*, *octastyle*, &c. When in front of a building they are termed *porticoes*; when surrounding a building, a *peristyle*, and when double or more, a *polystyle*.

COLOPHO'NITE, a variety of garnet of a brown or red colour, and resino-adamantine lustre; hence its name, from the resin *colophony*. Its constituents are silica and alumina, coloured with the oxides of iron and manganese.

COLOPH'ONT, the dark-coloured resin which remains in the retort after distilling rough turpentine without water, named thus from Colophon, a city of Ionia, whence it was first brought.

COLOQUIN'TIDA. See **COLOCYNTH**.

CO'LO'R (Latin), a property of bodies by which they separate the elementary rays of light, and absorb some and reflect others. Thus the colours of the spectrum are red, orange, yellow, green, blue, indigo, and violet; and any body which appears to possess any of these colours, has simply the property of absorbing all the rays of the spectrum except that one, which it reflects. The primary colours are red, yellow, and blue; all others may be produced by combinations of these.

COL'UBER (Latin), a serpent; a genus of venomous serpents with isolated fangs.

COLUM'BA NOA'CHI (*Noah's Dove*); one of the new constellations situated immediately below Lepus.

COLUM'BIC ACID, the peroxide of Columbium, evincing acid properties. It is a white powder.

COLUM'BIA, a bitter crystalline principle, obtained from Columbo root.

COLUMBIUM, from *Columbia*, America, a metal discovered by Mr. Hatchett in 1801, in a mineral brought from North America. It is also called *Tantalium*, from the mineral *tantalite* found in Sweden.

COLUMBO ROOT, the root of the *Cocculus palmatus*, which grows in the forests of Mozambique, where it is named *kalumb*; the Portuguese import it under the name of *Rais de Columba*. The root is perennial, and is used as an antiseptic and tonic.

COLUM'EL, Lat. *columella*, a column' or little pillar, as that which unites the partitions of the capsule of a plant, or that in the centre of most univalve shells.

COL'UMN, Lat. *columna*, a prop. In *architecture*, a round pillar, the parts of which are the *base*, on which it rests, its body called the *shaft*, and the head called the *capital*. The capital finishes with an *abacus*, and the base is supported on a *plinth*. The shaft is in general either *plain* or *fluted*, but *corolytic* columns have foliated shafts. Columns are moreover distinguished as to their form into *Tuscan*, *Doric*, *Ionic*, *Corinthian*, and *Composite*.

COLUM'NULA (Latin), a little column; the name of the filament which passes through the middle of the capsule of frondose mosses, to which the seeds are connected.

CO'LU'RE, from *kolos*, mutilated, and *σφα*, a tail; a name common to two great circles of the sphere, supposed to intersect each other at right angles in the poles of the world; one of them passing

through the solstitial, and the other through the equinoctial point of the ecliptic, thereby dividing the ecliptic into four equal parts. The points where these lines cut the ecliptic are called *cardinal points*. The colures take their name from a part being always below the horizon.

COLYM'BUS, a genus of birds of the *Palmpede* order, comprehending the *Divers*, *Grebes*, and *Guillemots*. Name from *κολυμβέω*, to swim.

COL'ZA, a variety of the cabbage plant, the *Brassica oleracea*, whose seeds afford by pressure an oil much used on the continent for burning in lamps and other purposes.

CO'MA. 1. In *medicine*, a morbid state resembling sound sleep, produced by compression of the brain and various other causes; from *κόμα*, sound sleep.—2. In *botany*, a comb or fascicle of leaves on the top of a stem or stipe, from *κομή*, hair.

CO'MA BEREN'ICES (*Berenice's hair*), an asterism situated north by *Canis venatici*, east by *Boötes*, south by *Leo* and *Virgo*, and west by *Leo* and *Ursa Major*, 43 stars.

COMBE. The term *combe* is usually applied to that unwatered portion of a valley, which forms its continuation beyond and above the most elevated spring that issues into it; at this point or spring-head the valley ends and the *combe* begins.

COMBINA'TION, from *com* and *binus*, two and two. 1. In *chemistry*, the intimate union resulting from the action of that species of attraction which we call affinity. See **AFFINITY**.—2. In *mathematics*, the variations which may be made in the arrangement of any given number of things in groups, are called *combinations*. Thus the combinations or different ways in which five articles may be arranged or combined are 120, and are found by multiplying together the terms 1, 2, 3, 4, 5=120.—3. In *law*, combination may take place for the performance of an unlawful act, and is punishable before such act is done.

COMBUS'TIBLE, a body which, in its rapid union with others, causes disengagement of light and heat. The simple combustibles are sulphur, phosphorus, carbon, hydrogen, all the metals, and boron.

COM'ET, from *coma*, hair; an opaque, spherical body like a planet, performing revolutions about the sun in an elliptical orbit, having the sun in one of the foci. In popular language comets are *tailed*, *bearded*, or *hairy*, these terms being taken from the appearance of the light which attends them. In their different positions with respect to the sun, the body appears to have a tail or train, a beard, or to be bounded by a fringe of light.

COMETA'RUM, a machine for exhibiting the revolution of a comet.

COMITIA. In *ancient history*, the assemblies of the Romⁿ people.

COMMA, from *κόμμη*, a segment; a mark in writing or printing, thus [,] denoting the shortest pause in reading; also the difference between a major and a minor semitone in music.

COMMANDER. In the *navy*, the next in rank above lieutenant, corresponding to major in the army.

COMMANDER-IN-CHIEF, the officer invested with the supreme command of all the land forces of the British empire.

COMMANDERY or **PRECEPTORY**. By the usages of some orders of knights, a district attached to a manor, under the control of a member of the order.

COMMEN'DAM, a benefice or living commended by the sovereign or head of the church to the cure of a clerk, till a proper pastor be provided. This may be temporary or perpetual.

COMMON'SURABLE QUANTITIES, in *geometry*, are such as have some common divisor, which yields quotients in whole numbers.

COMMERCE, from *commutatio mercium*; the exchange of one sort of produce or service for some other sort of produce or service.

COMMUNATION, from *con* and *minatio*, a threatening; an office in the liturgy, being a recital of God's threatenings, appointed to be read on Ash Wednesday or the first day of Lent.

COMMISSARY, from *commissarius*, a commission. In *ecclesiastical affairs*, a deputy of the bishop, in places of the diocese far distant from the see. In *military affairs*, (1). An officer who has the charge of furnishing provisions, &c., for an army; (2). An officer appointed to inspect the muster-rolls, usually called *General of the Musters*.

COMMISSION, from *commissio*; from *con* and *mitto* to send. In *law*, the warrant or letters patent by which one is authorized to exercise jurisdiction. In *military affairs*, the warrant or authority by which one holds a post in the army. In *commerce*, the order by which one traffics or negotiates for another; also the percentage given to agents and factors for transacting the business of others.

COMMISSION-MERCHANT, a merchant who transacts business as the agent of other men, in buying and selling, and receives a rate per cent. as his commission.

COMMISSURE, Lat. *commissura*, a joint or seam. Applied in *architecture* to the joint between two stones; and in *anatomy* to the corners of the lips where they meet together; also to certain parts of the brain, where its fibres cross and join one hemisphere to the other.

COMMIXTURE, Lat. *commixtura*, a compound mass. Applied in *Scots law* to the method of acquiring property by blending different substances belonging to different proprietors.

COMMODORE, from Ital. *comandatore*, a commander. An officer who commands a squadron destined on a particular enterprise: he bears the rank of brigadier-general in the army. Commodore is also used as a title of courtesy to the senior captain, when three or more ships of war are cruising in company. The leading ship of a fleet of merchantmen bears also the name of commodore.

COMMON, from Goth. *gamana*, fellowship. In *architecture*, a common centering is a centering without trusses, having a tie-beam at the bottom. Common joists are the beams in naked flooring, to which the joists are fixed. The common rafters of a roof are those to which the laths are attached.—In *botany*, a common bud is one which contains both flowers and leaves; a common peduncle, one which bears several flowers; a common perianth, one that incloses several fructifications; a common receptacle, one that connects several distinct fructifications.—In *law*, a common is an open ground equally used by many persons. A right of common is a privilege claimed by one or more persons, to use in some part or portion that which another man's lands, woods, waters, &c., produce, without having an absolute property in the same, as common of pasture, &c. Common law is the body of rules for administering justice within the kingdom, grounded upon the general customs or usages of the realm, and distinguished from the statute laws, as having been the law of the land before any acts of Parliament now extant were made.—Common pleas, pleas including all civil actions between subject and subject: for the deciding of these there is instituted the Court of Common Pleas, which is one of the Queen's Courts, now held in Westminster Hall, and consisting of a Chief and other three Justices: appeal lies to the Court of Queen's Bench.—Common recovery, a process for recovering an estate or barring entail.

COMMONS, in a general sense, the whole body of the people as distinguished from the nobility; in a particular sense, the knights and burgesses who represent the Commons in Parliament, and who are designated the *House of Commons*.

COMMON TIME. In *music*, the time which counts four crotchets or their equivalent in a bar.

COMMONTY, in *Scots law*, land belonging to two or more common proprietors.

COMMUNE, in *France*, one of the subordinate divisions of the country, introduced in the revolution of 1792.

COMMUTATION. In *astronomy*, the angle,

of commutation of a planet is measured by the difference between the sun's longitude and the geocentric longitude of the planet.

COMPAN'ION, the covering over a ladder or staircase in a ship.

COMPANY. 1. In *military affairs*, a subdivision of a regiment under the command of a captain.—2. In *commercial affairs*, a number of merchants associated together in one common interest and for some special purpose. When there are only a few individuals associated, the concern is called a *copartnery*, leaving the term *company* to be applied to large associations, as the East India Company.

COMPARATIVE ANATOMY, the anatomy of all organised bodies, animal or vegetable, compared with a view to illustrate the general principles of organisation. See ANATOMY.

COMPAR'ISON. 1. In *grammar*, the formation of an adjective in its several degrees, as *good, better, best*.—2. In *rhetoric*, a figure by which two things are considered with reference to a quality possessed by both, as "a hero is like a lion in *courage*."—The distinction between *comparison* and *similitude* is, that the former has reference to the *quantity*, and the latter to the *quality*. Comparison is between *more* and *less*; *similitude* is between *good* and *bad*.

COMPART'ITION, division into parts. Applied in *architecture* to the distribution of the ground plan of an edifice into rooms and passages.

COMPART'MENT, a separate part or division of a design, as a *compartiment ceiling*, a ceiling divided into panels; *compartiment tiles*, an arrangement of white and red tiles.—In *gardening*, compartments are assemblages of beds, plots, borders, walks, &c.—In *heraldry*, a *compartiment* is called a *partition*.

COMPASS, from *con* and *passus*, opening. An instrument used in surveying, constructed in the main like the mariner's compass, but the needle is not fitted into the card moving with it, but plays alone, the card being drawn upon the bottom of the box, and a circle divided into 360° on the limb.—The *mariner's compass* consists of a circular card or fly, on which are drawn 32 points of direction, called the *points* of the compass, and a small bar of steel magnetised, called the *magnetic needle*, and which (excepting the variation) always points to the north, and the box or framework which contains the card and needle. The card and needle are fastened to each other in such a manner, that the north pole of the magnet coincides with the northern point of direction marked on the card, and turn on the point of a pin fixed in the centre of the box.

COMPASSES, or *pair of compasses*, a mathematical instrument for describing circles, measuring figures, &c., consisting of two pointed legs made of iron, brass, or steel, and jointed at the top by a pivot on which they move. There are several sorts of compasses in use, as the *triangular compasses*, which resemble the common compasses, with the addition of a third leg, which has a motion every way, and which suits the instrument for laying down triangles on maps, &c.; the *cylindrical* and *spherical compasses*, which have four branches joined in a centre, two of which are circular and two flat: their use is to take the diameter of cylindrical and spherical bodies; the *German compasses* are common compasses with the legs bent; the *hair compasses* are adjusted with a fine screw in one of the legs, so as to take an extent with great exactness; the *proportional compasses* have the joint, not at the ends of the legs, but between the points terminating the legs: they are convenient for reducing designs, for whatever space is measured by one end, a proportionate space will be marked by the legs at the other end. The *elliptical compasses* are intended to be used in drawing ellipses, but are very inconvenient. *Spring compasses* are more commonly called *dividers* (q. v.) *Beam compasses* consist of a beam with a fixed point at one end and a moveable one at the other.

COMPASS-SAW, a saw with a broad edge and thin back to cut in a circular form.

COM'PASSING. In *carpentry*, bringing a piece of timber into the form of an arch.

COMPITA'LIA, Lat. *compitum*, a street. A Roman feast in honour of the Lares and Penates.

COM'PLEMENT, from *complementum*, a filling (*con* and *pleo*, to fill). In *astronomy*, the distance of a star from the zenith, otherwise called the co-latitude. In *mathematics*, the complement of an arc is what that arc wants of 90°, or of a quadrant; the complement of an angle is what that angle wants of being a right angle. The *arithmetical complement* of a logarithm is what that logarithm wants of 10,000,000, &c. *Complements of a parallelogram* are the two smaller parallelograms, formed by drawing two right lines parallel to the sides of the quarter, through a point in the diagonal. In *fortification*, the complement of the curtain is that part of the interior side which makes the demigorge.

COMFLU'VIUM, anciently an area in the centre of Roman houses, so constructed as to receive the water from the roof.

COMPOS'ING-STICK, an instrument used by compositors in setting types.

COMPOS'ITE, one of Linnæus's natural orders of plants, comprising those which have composite or compound flowers, as the sun-flower, dandelion, &c.

COMPOSITE, from *compositus*, compound. In *architecture*, the *composite arch* is the pointed or lancet arch; the *composite order* forms one of the five architectural orders, and is thus named from its being composed of the Ionic and Corinthian orders. In *arithmetic*, Composite numbers are such as can be measured by a number exceeding unity. Thus 12 is measured by 6, 4, 3, and 2.

COMPOSITION. In *grammar*, the joining of two words together or prefixing a particle to another word to modify its signification; thus *composition* is formed of *com*, from *con*, and *position* from *pono*, to place. In *logic*, composition is a method of reasoning by which we proceed from a general truth to particular ones. In *music*, composition is the art of adapting sounds according to the rules of the art, to songs, &c., also the piece of music so composed. In *painting*, composition denotes the choice and disposition of the figures of a picture. In *commerce*, the sum paid by an insolvent debtor to his creditors when the latter agree to take a part of the debt in lieu of the whole. In *chemistry*, the combination of different substances by affinity. In *printing*, the act of arranging the types into words, &c.

COMPOSITOR. In *printing*, one who sets types.

COMPOST, Lat. *composita*, a mixture; applied by agriculturists to a composition of various manuring substances.

COMPOSTELLA, St. JAMES OF, an ancient order of knighthood in Spain.

COMPOUND, from *con* and *pono*, to set; composed of two or more parts: thus a *compound word* consists of two or more words, as *ink-stand*. A *compound flower* consists of several florets inclosed in a common perianth. A *C. stem* is one which divides into branches. A *C. leaf* consists of several leaflets. A *C. spike* consists of several spikelets. A *C. umbel* has all its peduncles bearing umbelules at the top. A *C. fructification* consists of several confluent florets. *C. interest*. See **INTEREST**. *C. motion*. See **MOTION**. *C. ratio*. See **RATIO**. *C. quantity*. See **QUANTITY**. *C. affinity*. See **AFFINITY**.

COMPRESS. In *surgery*, soft linen, lint, or other soft substance folded together into a sort of pad, for the purpose of being placed over parts which require pressure.

COMPRESSOR. 1. In *anatomy*, a name given to those muscles which press together the parts on which they act.—2. In *surgery*, a name common to an instrument invented by M. Dupuytren for compressing the femoral artery, and another invented by Nuck, for compressing the urethra in cases of incontinence of urine.

COMPURGATION, from *con* and *purgo*, to purify, a species of wager at law, whereby

a man is cleared by the oath of others, who swear to their belief of his veracity. The defendant having made oath himself brings into court a certain number of his neighbours (usually eleven), called *purgators*, who avow on their oaths that they believe that he has affirmed the truth.

COMS, COOMS, COOMES, OR CHIVES. The points of the radicles of malted grain, which drop off during the process of turning. They are sold as malt dust, and are an excellent manure.

CONATUS (Latin) effort; applied to designate the tendency which a body has to pursue its course in the same line of direction.

CONCAMERATION, an arched chamber (*camera*, an arch), applied in conchology to designate those small chambers into which multilocular shells are divided by transverse septa.

CONCAVE, Lat. *concavus*, from *cavus*, a hollow; depressed in the middle, opposed to convex.

CONCAVO-CONCAVE, concave on both sides, as a concave lens.

CONCAVO-CONVEX, concave on the one side, and convex on the other, as a concavo-convex lens.

CONCAVITY, from *concave*, the internal surface of a hollow spherical or spheroidal body.

CONCEPTACLE, Lat. *conceptaculum*, a receptacle; the vessel which contains the reproductive corpuscles of cryptogamic plants. It is variously named in different tribes.

CONCERT, from *con* and *certo*, to strive, a musical performance in which any number of practical musicians unite in the exercise of their talent.

CONCERTANTE (It.), those parts of a musical composition which continue throughout the piece.

CONCERTO (Italian), a musical composition consisting of several parts to be performed in concert.

CONCERTI (It.), ingenious but misplaced thoughts or terms of expression.

CONCH, Lat. *concha*, a marine shell; applied to various objects from their shape.

CONCHÆ, plur. of *concha*, a shell; shells consisting of two or more pieces or valves, as bivalves and multivalves.

CONCHOID, from *κονχῆ*, a conch, and *ειδής*, like. The name of a geometrical curve invented by Nicomedes.

CONCHOIDAL, shell-like. Used to characterise the fracture of minerals, when marked by convex elevations and concave depressions, like the valves of conchæ.

CONCHOLOGY, from *κονχῆ*, a shell, and *λογία*, science. That branch of natural history which treats of testaceous animals, or animals having a testaceous

covering, whether they inhabit the land, the fresh water, or the ocean. Shell-fish are arranged by the characteristics of their shells.

CONCIA'TOR. In *glass-works*, the person who proportions the materials to be made into glass.

CON'CLAVE (Lat.), an inner room. The room in the Vatican where the cardinals meet to elect a pope: also the assembly itself.

CONCLU'SION. In *logic*, that proposition which is inferred from certain former propositions, termed the premises of the argument.

CONCO'CITION, from *concoquo*, to digest. Digestive; also that operation of nature upon morbid matter which renders it fit to be separated from the healthy fluids.

CON'CORD, from *con*, and *cor, cordis*, the heart. In *grammar*, the agreement of words according to their several inflexions, as adjectives with nouns, in gender, number, and case. In *law*, an agreement between the parties in a fine, made by leave of the court. In *music*, the union of two or more sounds, in such a manner as to render them agreeable.

CONCOR'DAT. In *canon law*, an agreement concerning some beneficiary matter, in particular when made between the pope and a prince.

CON'CRETE, Lat. *concretum*, a compound mass. A mass formed by the cohesion of heterogeneous materials. The concrete used by engineers and architects is a compact mass of pebbles, sand, and lime, worked together with water, to form the foundations of structures.

CON'CRETE NUMBERS. See APPLICATE NUMBERS.

CONCRE'TION, from *concreresco*, to grow together. 1. The growing together of parts which in a natural state are separate.—2. The process by which soft or fluid bodies become consistent, solid, or hard.—3. The mass formed by concretion; as a urinary concretion formed in the animal body.

CONCUS'SION, Lat. *concussio*, I shake. A term generally applied to injuries of the brain, from blows and falls.

CONDENSA'TION, causing a mass of matter to occupy less space by means of the closer approach of its particles. When this is accomplished by external force, it is called *compression*. The term is generally used with regard to air, gas, and vapours. The two former are condensed, and their elasticity increased by *compression*. The latter are condensed into liquids and solids by the abstraction of heat.

CONDEN'SER, a pneumatic engine, whereby an uncommon quantity of air is forced into a given space. It is a sort of syringe, which is worked upon the prin-

ciple of the force-pump, and performs an operation the reverse of the air-pump.

CON'DER, from *con*, and *duco*, to lead. 1. One who directs the helmsman of a ship how to steer.—2. One who stands upon an elevated part of the sea-coast, in the time of the herring-fishery, to point to the fishermen by signs the course of the shoals of fish.

CONDITION. In *law*, is a restraint annexed to a thing, so that by the non-performance the party shall receive loss, and by the performance, advantage.

CONDITIONAL PROPOSITION, in *logic*, is one which asserts the dependence of one categorical proposition on another.

CON'DOR, a species of vulture, the *F. gryphus*, Lin., the largest bird known. It is found on the most elevated mountains of the Andes, in South America. It is blackish, the wings ash-coloured; collar, silky and white, and the male, in addition to his superior caruncle, has another under the beak, like the cock.

CONDOTTIERI. In *Italian history*, a class of mercenary military adventurers in the 14th and 15th centuries.

CONDUCTOR, Lat. from *con*, and *duco*, to lead. 1. A body which has the property of transmitting heat or electricity; opposed to a *non-conductor*. Most natural bodies, but especially the metals, are conductors.

—2. A pointed metallic rod, affixed to buildings, ships, &c. to conduct lightning to the earth or water, and protect the edifice from its effects.—3. A surgical instrument to direct the knife in certain operations; sometimes called a *director*.

CON'DYLE, from *κονδυλος*, a knot. A process of a bone in the shape of a flattened eminence.

CON'DYLOID, from *κονδυλος*, a condyle, and *ειδος*, like. An apophysis of a bone.

CONDYLURA, a genus of carnivorous Mammalia, named from *κονδυλος*, a joint, and *ουρα*, a tail. The condylura resemble the mole, except that the tail is longer, and their nostrils are surrounded with little moveable cartilaginous points, which when they separate radiate like a star. The *Sorex cristatus*, Lin., or radiated mole of North America, belongs to this genus.

CONE, Fr. *cone*, from Lat. *conus*, from *κωνος*, that which shoots to a point. In *botany*, a conical fruit of several evergreen trees, especially of the pine-tribe. See STROBILUS. In *geometry*, a solid with a circular base, and tapering equally upwards till it terminates in a point. Were the base a right-lined figure, the solid would be called a *pyramid*; and in either case, all the lines drawn from the periphery, or bounding line of the base to the apex or top, are straight lines. When the axis is at right angles to the base, the

solid is called a *right cone*, otherwise it is an *oblique* or *scalene cone*. In *optics*, it includes all the rays which fall upon a given surface from a given point.

CONEPATE, CONEPATL, an American animal of the weasel kind, resembling the polecat in form and size, and in its fetid stench.

CONFED'ERACY, from *con* and *fœdus*, a league; a term used in law to denote a combination of two or more persons to commit an unlawful act.

CONFERENCE, a meeting of delegate members from both houses of parliament to discuss the provisions of a bill respecting which there may be a disagreement between them. Also a meeting of divines for ecclesiastical purposes.

CONFER'VA, Lat. from *confervec*, to knit together; a genus of plants. *Cryptogamia—Algæ*. The tribe of cryptogamic plants comprising the jointed algae or water weeds, are called *Confervæ*. These are chiefly fresh-water plants, but many are marine. They are composed of capillary jointed tubes, containing granules variously arranged; but the plants grow by the addition of one tube to the end of another, and multiply by means of the granules contained in the tubes.

CONFESSION, AURICULAR. In the Church of Rome a part of the sacrament of penance. It must be of every mortal sin, and made to a priest, who is solemnly obliged not to reveal it.

CONFESSION OF FAITH, a formula setting forth the opinions of a body.

CONFESSOR, one who has undergone persecution for Christianity only short of death.

CONFIRMA'TION, from *con* and *firmitas*, to make firm. In law, an assurance of title by the conveyance of an estate or right in esse from one man to another, by which a voidable estate is made sure or unavoidable. In church affairs, (1). The ratification of the election of a dignitary of the church by the sovereign; (2). The ceremony of laying on of hands in the admission of baptised persons to the enjoyment of Christian privileges.

CONFLUENT, flowing together (*confusus*), applied in physiology to eruptions, especially that of small-pox, and in botany, to leaves which run together at their base.

CONFORM'ABLE. In geology, a term used to express the parallelism of strata: thus, when several horizontal strata are deposited one upon another, they are said to be *conformable*, but when horizontal are placed over vertical strata, the strata are said to be *unconformable*.

CONFORM'IST. In church matters, one who conforms to, or complies with, the worship of the Established Church.

CON FU'RIA. In music, furiously; an Italian term.

CONGE' N'E'LIRE (French), the sovereign's license or permission to a dean and chapter to choose a bishop.

CONGE'NER, Lat. from *con* and *genus*, a thing of the same kind or nature: species of the same genus. Also applied in anatomy to muscles which concur in the same action.

CONGE'NITAL, from *con* and *genitus*, born, a term applied to that which pertains to an individual from his birth, as a congenital disease.

CON'GER, CON'GER EEL, a large species of eel (*Muræna Conger*, Lin., *Conger vulgaris*, Yarr.) found in the European seas, sometimes weighing 100 lbs. The name is Latin, from *congerios*, quod polypi cirros divoret? See *MURÆNA*.

CONGES'TION, from *congero*, to amass; a preternatural accumulation of blood, bile, or other fluids in their proper vessels. Diseases arising from this cause are called congestive diseases.

CON'GIUS. In modern latinity, a gallon. CON'GLOBATE, from *con* and *globus*, a ball; formed or gathered into a ball, as a conglobate flower.

CONGLOMERATE, from *con* and *glomus*, a clow. 1. In anatomy, applied to a gland which consists of a number of smaller glomerate glands, the excretory ducts of which all unite in one common duct.—2. In botany, applied to flowers which are closely, compacted together on a foot-stalk, to which they are irregularly, but closely connected: opposed to *diffused*.—3. In geology, conglomerate has the same meaning as breccia (Mantell), and pudding-stone (Lyell). According to Bakewell, "conglomerate consists of large fragments of stone, whether rounded or angular, imbedded in clay or sandstone."

CONGREGATIONAL'ISTS, BROWNISTS, or INDEPENDENTS, a sect of Protestant Dissenters who maintain that every congregation for religious worship is independent of every other.

CON'GRESS, Lat. *congressus*, from *congreddior*, to come together (*gradus*, a step.) 1. An assembly of envoys, commissioners, deputies, &c., particularly a meeting of the representatives of several courts, to concert measures of mutual concern.—2. An assembly of delegates of the several British colonies in America, which met in 1774 to resist the claims of Great Britain, and finally declared the colonies independent. The name has since been transferred to the assembly of deputies from the different states of the union.

CON'IC SECTIONS, a branch of mathematical science which treats of the properties of certain curves that are formed by the cutting of a cone in different directions. If a cone be cut by a plane pa-

rallel to the base, the section will be a circle; if cut by a plane passing through the vertex, the section will be a triangle; but both the circle and triangle belong to common geometry, and are therefore not treated of under the head of Conic Sections. There are, however, three other sections—the ellipsis, the parabola, and the hyperbola (q. v.).

CONIFERÆ, the cone-bearing tribe of dicotyledonous plants. It comprises the pines, firs, &c., which bear cones.

CONIROSTRES, a numerous family of passerine birds, distinguished by their strong conical beak; whence their name from *conus*, a cone, and *rostrum*, a beak. The bunting, bulfinches, crows, birds of Paradise, &c., belong to this family.

CONIUM, a genus of plants. *Pentandria—Digynia*. Hemlock. Greek name *κωνιον*, or *κωνιον*.

CONJOINT DEGREES. In *music*, two notes which follow each other immediately in the order of the scale.

CONJOINT TETRACHORDS. In *music*, two fourths where the same chord is the highest of the one and the lowest of the other.

CONJUGATE, Lat. *conjugatus*, yoked. Applied to a winged leaf with only one pair of leaflets.

CONJUGATE DIAMETER OR AXIS (of an ellipsis), the shortest of the two diameters or that which bisects the transverse axis. See **ELLIPSIS**.

CONJUNCTION, from *con* and *jugo*, to join, connection: thus, in *astronomy*, the meeting of two or more stars or planets in the same degree of the zodiac, which is either *true* or *apparent*, *heliocentric* or *geocentric*. When the bodies agree both in latitude and longitude, the conjunction is *true*; when they agree only in longitude, the conjunction is *apparent*. A *heliocentric conjunction* is that which would appear to an observer at the sun; a *geocentric conjunction* is that which appears to an observer at the earth, and is *superior* when the planet is seen on the same circle of latitude with the sun, but beyond him; and *inferior* when seen between the earth and the sun. *Grand conjunctions* are those wherein several of the planets are seen near together. In *grammar*, an indeclinable word or particle which joins words or sentences together, showing their mutual relation and dependence.

CONJUNCTIVA, one of the membranes or coats of the eye, the *C. tunica*.

CONJUNCTIVE MOOD, that modification of the verb which expresses the dependence of the event in conditions.

CONJUNATE, Lat. *connatus*, growing together. Applied to leaves which are united at their base.

CONNECTOR. In *chemistry*, a small tube

of caoutchouc for connecting together the ends of glass tubes in pneumatic experiments.

CONNIVENT, Lat. *connivens*, winking. Applied, 1. In *anatomy*, to the folds on the mucous surface of the small intestines.

—2. In *botany*, to petals of flowers, as those of the *Rumex*, and to the receptacle of the fig, which the fruit really is, being a fleshy connivent receptacle inclosing and hiding the florets.

CONNOISSEUR (French), one who is versed in a knowledge of the fine arts.

CONOHELIX, an intermediate genus of shells, between *cones* and *volutes*.

CONOID, from *κωνος*, a cone, and *υδωρ*, like; a solid generated by the revolution of a conic section about its axis. There being three conic sections, the ellipsis, parabola, and hyperbola, there are consequently three conoids, the *spheroid*, *paraboloid*, and *hyperboloid*.

CONSCIENCE, from *con* and *scio*, to know, is considered by some an original faculty, and called the *moral sense*; others question the propriety of considering conscience as a distinct faculty, and hold that it is to be regarded simply as a general principle of moral approbation or disapprobation, applied to one's own conduct and affections; alleging that our notions of right and wrong are not to be deduced from a single principle or faculty, but from various powers of the understanding.

CONSCIENCE, COURTS OF, are for the recovery of small debts.

CONSCRIPT, Lat. *conscribo*, a title of the Roman senators.

CONSCRIPTION, a compulsory enrolment for military or maritime service, taken from the population at large.

CONSIGNEE, a person to whom goods are consigned for sale or superintendence: the person who sends them is the consigner.

CONSIGNATION, } from *con*, and *signo*, to
CONSIGNMENT, } seal. 1. The act of consigning or sending goods to an agent.

—2. The goods consigned to a factor or agent.—3. The writing by which anything is consigned.

CONSISTORY, Lat. *consistorium*, a place of meeting. The place of justice in the spiritual court; also the court itself. The court of every diocesan bishop, held in their cathedral churches, for the trial of ecclesiastical causes arising within the diocese.

CONSOLIDATION, from *con*, and *solidus*, solid. In *parliament*, the annexing of one bill to another. In *law*, the uniting of the profit of land, &c. with the property. In *ecclesiastical affairs*, the combining of two or more benefices in one.

CONSONANCE. In *music*, the agreement of two sounds simultaneously produced.

CON'SONANT, from *con*, and *sono*, to sound. A letter so named because it is considered as sounded only in connection with a vowel. Consonants are better named *articulations*, as they are the names given to the several junctions of the organs of speech.

CON SORDI'NI, It. In *music*, a direction to play a passage on the piano with the dampers down, and on the violin with the mute on.

CONSPIR'ACT, from *conspiro*, to plot. A law-term for an agreement between two or more persons to indict, or procure to be indicted, an innocent person of felony. The persons so conspiring are called *conspirators*.

CON'STABLE. an officer whose duty it is to preserve the peace, and to arrest all public offenders who have committed the offence in his presence, or against whom he has the warrant of a justice of the peace. In England, there are *high constables*, chosen by the court leets of hundreds; *petty constables*, chosen by the juries of court leets; and *constables of London*, nominated in each precinct by the inhabitants. The office of Lord High Constable of England was so improperly used, that its suppression was found necessary in 1521. This officer took his title from his being *comes stabuli*, or count of the stables. He was the seventh officer of the crown.

CONSTANT QUANTITIES. In *algebra*, those quantities which remain constant, and whose values are considered as known, or which remain constantly the same; in contradistinction to those which are variable, and whose values are not known. Constant quantities are usually denoted by the first letters of the alphabet, as *a*, *b*, *c*, &c.; and variable ones by the last, as *x*, *y*, *z*, &c.

CONSTAT, a Latin word, meaning "it appears." Applied as the name of the certificate given by the clerk of the pipe, and auditors of the exchequer, to a person who intends to plead or move for a discharge of anything in that court. The effect of it is to show what appears upon the record, respecting the matter in question. The same name is also given to an exemplification under the Great Seal of the enrolment of any letters patent.

CONSTELL'A'TION, from *con*, and *stella*, a star. A cluster or assemblage of fixed stars, expressed and represented under the name and figure of some animal, or other emblem, which are convenient in describing the stars.

CONSTITUTION, from *con*, and *statuo*, to set. 1. The general condition of the body, as evinced by the peculiarities in the performance of its functions.—2. A system of fundamental principles for the government of rational and social beings;

the established form of government in a state, kingdom, or country.—3. A particular law made by a sovereign or other superior power.

CONSTRIC'TOR, from *constringo*, to bind together. A muscle which draws together any opening of the body.

CONSTRUC'TION, from *con*, and *struo*, to dispose, fabrication. In *mathematics*, the drawing of those lines of a figure which are necessary to make the demonstration of a proposition more plain. The *construction of equations* is the method of reducing equations to geometrical figures, in order to a geometrical demonstration. In *grammar*, the arrangement and connection of words in a sentence, according to established usages.

CONSUBSTANTIA'TION, the doctrine of Luther, that, in the sacrament of the Supper, the body and blood of Christ are transferred into the material of the bread and wine.

CON'SUL, a chief magistrate of the ancient Roman Republic, who took his title from *consulo*, to consult. The title is now given to an officer appointed by competent authority to reside in foreign countries, with the view of facilitating and extending the commerce carried on between the subjects of the country which appoints him, and those of the country or place in which he is to reside.

CONSULT'A'TION, WRIT OF. In *law*, a writ granted by the king's court, whereby a cause which had been removed into such court by prohibition out of the ecclesiastical court, is returned thither again.

CONSUMP'TION, from *consumo*, to waste away, slow decay. This term is applied in *medicine* to the disease technically called *Phthisis pulmonalis*, pulmonary consumption. See *PHTHISIS*.

CON'TACT, ANGLE OF. In *geometry*, the angle made by a curve line with its tangent.

CONTA'GION, from *con*, and *tango*, to touch. The communication of disease, 1, by contact; 2, by effluvia evolved from the body of the sick. See *INFECTION*. This term is also used by some writers generically to denote all atmospheric and morbid poisons; all the effluvia, miasmata, infections, and poisons that cause fevers, of whatever kind; and those poisons which uniformly excite the diseases which give birth to them, as syphilis, itch, &c.

CONTEM'PT, from *con*, and *temno*, to despise. Applied in law to express the offence of disobedience of the rules and orders of a court.

CONTENT, from *con*, and *teneo*, to hold. Used in the House of Lords to express assent to a bill or motion.—2. The quantity contained. Used in geometry to

express the area or quantity of matter or space included within certain limits.

CONTINENTAL SYSTEM, the celebrated plan of Napoleon for excluding the merchandise of England from all parts of the Continent.

CONTINUED PROPORTION, in *arithmetic*, is where the consequent of the first ratio is the same with the antecedent of the second, as A : B :: B : C.

CONTINUITY, LAW OF, may be thus stated: nothing passes from one state to another without passing through all the intermediate states.

CONTORTED. 1. In *botany*, &c., twisted. —2. In *architecture*, wreathed.

CONTRABAND, from *contra* and *ban* (q.v.). A term used in *commerce*, to designate, 1, a commodity prohibited to be exported or imported, bought or sold. —2. That class of commodities which neutrals are not allowed to carry during war to a belligerent power.

CONTRABASSO, the largest of the violin species, usually called the double-bass.

CONTRACTILITY, a property of the living fibre, by which it contracts on the application of a stimulus.

CONTRACTION, from *con*, and *traho*, to draw. The lessening of the dimensions of a body, by causing the parts to approximate more closely; the action arising from excited contractility.

CONTRA-DANCE, } Fr. *contredanse*; a
COUNTER-DANCE, } dance in which the
partners are arranged in opposite lines,
called vulgarly a *country dance*!

CONTRADICTORY PROPOSITIONS, in *logic*, are those which having the same terms differ in quantity and quality.

CONTRA-FISSURE, a counter or opposite fissure, applied in *surgery* to designate a fracture at some distance from the part whereon the blow was received.

CONTRA-HARMONIC PROPORTION, in *arithmetic*, is that relation of three terms wherein the difference of the first and second is to that of the second and third, as the third is to the first.

CONTRA-INDICATION, a counter or opposing indication, applied in *medicine* to designate a symptom which forbids the use of a remedy which might otherwise be employed.

CONTRALTO or **CONTRA-TENORE** (It.) In *music*, the part immediately below the treble, called also the counter-tenor.

CONTRARIES, in *logic*, are propositions which destroy each other, but of which the falsehood of the one does not establish the truth of the other.

CONTRAST. In *fine arts*, an opposition of lines and colours to each other, so that each increases the effect of the other.

CONTRA-TENOR. In *music*, a middle part between the tenor and treble; the *Counter*.

CONTRATE-WHEEL. In *watchwork* the

wheel next to the crown, the teeth and hoop of which lie *contrary* to those of the other wheels, whence its name.

CONTRAVALLATION, from *contra* and *vallo*, to fortify. A line formed to defend besiegers against the sallies of a garrison.

CONTRAYERVA-ROOT, the root of the *Dorstenia contrayerva*, a perennial plant of South America. The name is Sp. *contra*, against, and *yerba*, an herb, being used as an antidote *against* poisons.

CONSUMACY, from *contumacia*, stubbornness; a term of *law* for wilful contempt and disobedience of any lawful summons or order of court.

CONUS, a genus of mollusks, named from the conical shape of the shell. Class *Gasteropoda*; order *Pectinibranchiata*; family *Buccinoida*. The shells are highly prized; one, the *cedo nulli*, is valued at a hundred guineas. Found on rocky shores in tropical seas.

CONVALLARIA, a genus of plants. *Hexandria—Monogynia*. May lily. Lily of the valley. Solomon's Seal. Name from *convallis*, a valley, because some of the species abound chiefly in valleys.

CONVENTION, from *con* and *venio*, to come. 1. A treaty, contract, or agreement between two parties. —2. An extraordinary meeting of parliament or states of the realm held without writ of the sovereign. —3. A treaty between military commanders concerning terms for a cessation of hostilities.

CONVERGING LINES, those which tend to a common point.

CONVERGING RAYS, those which tend to a common focus.

CONVERGING SERIES, those whose terms continually diminish.

CONVERSE, in *mathematics*, commonly signifies the same as *reverse*, from *vector*, to be turned.

CONVERSION (of proportion), is when, of four proportionals, it is inferred that the first is to its excess above the second, as the third to its excess above the fourth.

—2. In *logic*, a proposition is said to be *converted* when the terms are so transposed that the subject is made the predicate, and *vice versa*.

CONVERSION (centre of). In *mechanics*, the centre of revolution. "If a stick be laid on stagnant water and drawn by a thread fastened to it, so that the thread makes always the same angle with it, the stick will be found to turn about a certain point, which point is called the *centre of conversion*."

CONVEXO-CONCAVE, convex on the one side and concave on the other. See *LENS*.

CONVEXO-CONVEX, convex on both sides. See *LENS*.

CONVEYANCE, from *con* and *veho*, to carry. The instrument or means of passing from one place or person to another.

thus an aqueduct is a *conveyance* for water; a deed of conveyance is an instrument of writing by which lands, &c., are conveyed or made over to another person. The term is also used in the sense of transference, assignment, &c.

CONVOCA'TION, from *con* and *voco*, to call; an assembly of the clergy of the Church of England by their representatives, to consult on ecclesiastical affairs. It is held during the session of parliament, and consists of an upper and lower house; but is now a mere form.

CONVOLVULACEÆ, a natural tribe of plants of which the genus *Convolvulus* is the type.

CONVOLVULUS, the *Bindweed*; a genus of plants. *Pentandria—Monogynia*. Name from *convolveo*, to roll up. Upwards of 100 species are enumerated, among which are the jalap, scammony, and turbit plants, the Spanish potato, &c.

COP'VOX. In *navigation*, a ship or ships of war, appointed to escort or protect the merchant ships. The word is sometimes applied to the protected ships, and sometimes to both the protecting and protected vessels. In the *military service*, it signifies a detachment of troops who guard supplies of provisions, ammunition, &c., on their way to the army.

COO'LER or REFRIGERA'TOR, an apparatus used by brewers and distillers for cooling worts.

COMBE. 1. A dry measure of 4 bushels.

—2. A term in geology. See COMBE.

CO-OR'DINATES, in the theory of curves, denote any absciss with its corresponding ordinate.

COOT, a name common to all the birds of Linnæus's genus *Fulica* (q. v.). The tree Coots form the genus *Fulica*, Brisson. These birds form the link between the grallatoris and palmipedes.

COPAI'BA, from *copal*, the American name for any odoriferous gum, and *iba* or *ica*, a tree, a yellow resinous juice of a bitterish biting taste, obtained from the *copaifera officinalis*, a tree which grows in the Brazils and New Spain.

CO'PAL. The substance called *gum copal* is imported from Guiana, and is the produce of the *Rhus copallinum*, from which it exudes spontaneously.

COPAR'CENARY, Lat. *con* and *particeps*. An estate is held in coparcenary, and the tenants are coparceners, when it descends from an ancestor to two or more persons.

COPERNICAN SYSTEM, a particular system of the sphere proposed by Pythagoras, and revived by Copernicus, in which the sun is supposed to be placed in the centre, and all the other bodies to revolve round it in a particular manner.

COP'FER, a well known metal named from the island of Cyprus, whence it was first brought. It is found in nature in the

metallic state, in the state of oxide, sulphuret (*vitreous ore of Brochant*), carbonate (*malachite*), hydrosilicate, sulphate (*blue vitriol*), phosphate, muriate, and arseniate. There are many varieties of these ores. Sp. gr. of copper 8.9, melting pt. 27° Wedgw. In tenacity it yields to iron, but surpasses gold, &c.

CO'FERAS, a name formerly synonymous with *vitriol*, and hence applied to blue, white, and green vitriol, but especially the green, a factitious sulphate of iron.

CO'FER-BOT'TOMED, having the bottom sheathed with copper: applied to ships, &c.

CO'FER-FAS-TENED, fastened with copper-bolts.

CO'FER-PLATE PRINT'ING, the process of taking impressions from copper-plates, which is done by means of a rolling press.

CO'ROLITE, from *corros*, excrement, and *lithos*, stone; the petrified faecal matter of carnivorous reptiles, found in all strata containing the remains of these animals.

CO'ULA (Lat.), a shackle. 1. In *logic*, the verb which connects two terms of a proposition, the subject and predicate, as "virtue is indispensable to happiness:" here is the copula.—2. In *anatomy*, a ligament.

CO'RX, in *printing*, is the subject-matter to be printed.

CO'RYHOLD, in *law*, is a species of *customary estate*, said to be held by copy of court roll; that is, by copy of the rolls of a manor made by the steward of a lord's court.

CO'RYEIGHT, the right which an author has in his own literary compositions.

CORA'CIS, from *corax*, a crow; a genus of birds—the *Rollus*. They belong to the Eastern Continent, and resemble the Jays in their habits, but their plumage is vivid. Order *Passerina*, family *Coriostres*.

COR'ACLE, a boat used by fishermen in Wales, made by covering a wicker frame with leather or oil-cloth.

COR'ACO-BRA'CHIAL, in *anatomy*, is applied to the muscle by which the arm is raised upwards and forwards, from its origin and insertion.

COR'ACORD, from *corax*, a crow, and *eidos*, like; shaped like the beak of a crow. Applied to the upper anterior process of the scapula from its form.

COR'AL (*corallium*), a general name for those stony envelopes formed by *coralliferi*, in certain seas, as the Red Sea, Persian Gulf, Coast of Sumatra, &c. It is a calcareous substance, has a shrub-like appearance, and is of various colours, as red, white, and black. Its value depends on its size, solidity, &c.: some is worth 10l. an ounce, while other descriptions do not bring 1s. per lb. The islands of the South

Seas are mostly composed of coral covered with earth, and many more are in process of being formed.

CORALLIFERI, an order of coral-bearing (*corallium* and *fero*) polypi. The coralliferi constitute that numerous suite of species which were long considered as marine plants, and of which the individuals are in fact united in great numbers, to constitute compound animals, mostly fixed like plants, either forming a stem or simple expansions, by means of a solid internal substance. Their volition and their nourishment are in common; whatever is eaten by one goes to the nutrition of the general body and all the other polypi.

CORAL'INA, a generic name given by Linnæus to certain bodies which exist in the ocean, resembling the corals or polypiers, both in substance and general form, but in which polypi have not yet been discovered. Some consider them as plants, but others regard them, and with more probability, as being inhabited by coral-liferous polypi.

COR'ALLINE. 1. The animal which secretes and inhabits coral.—2. The *corallina officinalis*, or *C. alba*, administered in medicine as an anthelmintic, and popularly known as sea-moss, white wormseed, &c.

COR'AL-RAG. In *geology*, a member of the middle division of oolite.

COR'AL-REEF, **CORAL-ISLAND**, a reef or island formed chiefly of coral (q. v.), but usually containing a large variety and amount of shells and other marine matters.

COR'AM NO'BIS (Lat.), before us: a law phrase.

CORBE, contracted from *corban*, an alms basket; a basket used in collieries.

COR'BEIL, from Fr. *corbeille*, a basket. In *architecture*, corbeils are sculptured baskets of flowers or fruit sometimes placed on the heads of caryatides.

COR'BELS. In *architecture*, a row of stones projecting from the wall to support the parapet in castellated and gothic edifices, instead of brackets or modillions. The term is also applied to a horizontal row of stones and timber in a wall or vault, to sustain the roof or floor; also to denote the vases of Corinthian capitals. *Corbel* is moreover frequently used in the same sense as *corbeil* (q. v.).

COR'BEL-TABLE. In *architecture*, a series of semicircular arches which cut one another in a wall, supported by timbers with their ends projecting out, and carved into heads, faces, lion's heads, &c.

CORCLE, Lat. *corculum*, a little heart (cor, a heart); that point of a seed from which the life and organisation of the future plant originate, called also the *embryo*, or germ.

CORD (Welsh). 1. A string or small rope.—2. A pile of firewood containing 128 cubic feet, originally measured with a cord or line. The cord is 4 feet high, 4 feet broad, and 8 feet long.

CORDEL'ERS, an order of friars so named from the knotted cord worn about their middle.

COR'DON. 1. In *architecture*, the edge of a stone at the outside of a building.

—2. In *fortification*, a row of stones made round on the outside, and set between the wall of the fortress which lies aslope, and the parapet which stands perpendicular.

CORDOVAN, a sort of leather made of goatskin at Cordova in Spain.

CORD'WAINER, Fr. *cordonnier*, a shoemaker, from *cordovan* (q. v.). Cordwainers is the title under which the shoemakers are incorporated.

CORIA'CEOUS, Lat. *coriaceus*, leathery, applied to leaves and pods that are thick and tough without being pulpy or succulent.

CORIAN'DER, a name applied to both species of the genus *Coriandrum*, but especially the *C. sativum*.

CORIAN'DRUM, a genus of annual plants. *Pentandria—Dignia*. The *C. sativum* is a native of Britain. Name *κοριανδρον*, from *κορις*, a bug, which the fresh plant resembles in smell.

CORIN'THIAN OR'DER. In *architecture*, the noblest, richest, and most delicate of the five orders, and so named because first erected at Corinth.

CORK, the outer bark (*cortex*) of a species of oak, the *Quercus suber*, a tree which grows abundantly in the southern provinces of France, Italy, Spain, Portugal, and Barbary.

CORK-JACKET, a jacket lined with thin layers of cork, used by persons learning to swim.

CORK-TREE, the *Quercus suber*, which closely resembles the *Quercus ilex*, or evergreen oak. It lives to a great age, and is periodically barked. See *CORK*.

COR'MORANT, a bird; the *pelicanus carbo*, Lin., and aquatic crow of Aristotle. Its size is that of a goose. It breeds among the rocks by the sea, and feeds on fish. The name is corrupted from *corvus marinus*, sea-raven. The French call it *cor-moran*, a corruption of *corbeau marin*, on account of its black colour. The Welsh call it *morvran*, sea-crow.

CORN'AGE, from *cornu*, a horn; an ancient tenure of lands which obliged the occupant to give notice of an invasion by blowing a horn.

CORN'BRUSH, a provincial name for a coarse, shelly limestone, which occurs abundantly in Wiltshire.

COR'NEA (Latin), the anterior transparent portion of the ball of the eye.

CORNER-TEETH (of a horse), the fore-teeth between the middling teeth and the tusks, two above and two below, on each side of the jaw. They shoot from the horse at $4\frac{1}{2}$ years old.

COR'NET. 1. A musical instrument closely resembling a trumpet, used in the army.—2. A commissioned officer in a troop of horse or dragoons.—3. *Cornet of a horse*. See CORONET.

COR'NET-A-PISTON, Fr., a brass wind musical instrument.

COR'NICE, from *κορυνη*, a summit; any moulded projection that crowns or finishes the part to which it is affixed, as the cornice of a room.

COR'NISH CHOUGH, a sort of crow of a fine blue or purple-black colour, with red beak and legs, reckoned the finest bird of its kind, and therefore borne in coats of arms.

CORN-SAL'AD. 1. A name common to the plants of the genus *Fidia*.—2. The *Valeriana locusta*.

CORNS, thickening of the cuticle of the toes, of a horny texture, arising from continued pressure.

CORNU AMMO'NIS, the fossil shells called Ammonites.

CORNUCO'PIA, horn of plenty (*cornu*, a horn, and *copia*, plenty), fabled to be the horn which Hercules broke from the head of Achelous, and which was filled by the nymphs with all manner of flowers, and made the emblem of abundance. It is sculptured in ornamental architecture. Plural, *cornucopie*.

CORNULA'RIA, a genus of *Tubularii* (q.v.), whose tubes are conical, and from each of which issues a polypus with eight dentated arms.

COR'NUS, the dog-wood. A genus of hardy plants. *Tetrandria*—*Monogynia*. The cornel-tree, cornelian cherry, &c., are species. Name given by Pliny to an undetermined species.

Co'ROA, a medicinal bark lately introduced into Europe from the East Indies. Plant unknown.

COR'ODY, } from Ital. *corredare*, to fur-
COR'ODY, }nish; a right of sustenance. The queen is entitled to a corody out of every bishopric; that is, to send one of her chaplains to be maintained by the bishop, or to have a pension allowed till the bishop promotes him to a benefice. This is fallen into disuse.

COROL'LA, from *corolla*, a little crown. That part of a flower which is within the calyx, and immediately surrounds the organs of fructification; each division is called a petal.

COR'OLLARY, from *corolla*, a little crown. A consequence drawn from a proposition already proved.

CORO'NA, Latin, a crown. Applied to designate objects supposed to resemble a crown, either in shape or position; as 1. In *architecture*, the brow of a cornice which projects over the bed mouldings.—2. In *meteorology*, a luminous circle surrounding the sun, moon, or planets.

CORO'NA DENT'IS, the exposed part of a tooth, projection beyond the gum.

CORONA'RIE, a natural order of plants, consisting of such as have beautiful flowers, thus forming a floral crown (*corona*).

COR'ONARY, from *corona* (q.v.). A term applied in anatomy to parts, because they surround others, or for some less obvious reason.

CORONA'TE PLANT'E, a natural class of plants, consisting of such as have the seed-bud crowned by the flower-cup.

COR'ONER, law Lat. for *coronator*. An ancient officer at common law, and so called because principally concerned with pleas of the crown. The principal part of a coroner's duty is now to inquire into the circumstances of the untimely death of any of the queen's subjects.

COR'ONET, from *corona*, a crown. 1. An inferior crown worn by noblemen.—2. The coronet or cornet of a horse, is the upper part of the hoof.—3. In *botany*, certain appendages of the corolla, which are arranged within it in a circle.

CORON'ULA, dim. of *corona*, a crown. The hem or border which surrounds the seeds of some flowers in the form of a crown.

COR'PORAL, the lowest officer of a company of infantry, next below a serjeant. The term is French, from the Celtic root *caput*, cape.

CORPORATION, from *corpus*, body. A body politic or corporate, formed and authorised by law to act as a single person.

COR'FOSANT, from Sp. *cuervo santo*, holy body. A name given by seamen to a luminous appearance often beheld in dark tempestuous nights, about the decks and rigging of a ship, but especially at the mast-head, yard-arms, &c.

CORPS, a French term pronounced *kore*, and applied to designate, 1. A body of troops forming a division (indefinite) of any army.—2. A projecting part of a wall, intended to form a ground for decoration. The root of the term is Lat., *corpus*, body.

COR'FUSCLE, } Lat. *corpusculum*, dim. of
COR'FUSCLE, } *corpus*, a body; a minute particle. Corpuscles are not necessarily the elementary principles of matter, but simply such minute particles, whether simple or compound, as compose aggregate bodies.

CORPUS'CULA VERIFOR'MIA, in *vegetable anatomy* are the strangulated ducts

found chiefly in the knots and contracted parts of stems.

CORPUSCULAR AC'TION, the action of corpuscles on each other, by which all chemical action takes place.

CORPUS JURIS, the collection of the authentic works containing the Roman law, as compiled under Justinian.

CORRESPONDENCE. In *fine arts*, the fitting of the parts of a design to one another.

CORRIDOR, from Ital. *corridore*. A long passage or gallery in a building, connected with various departments, and sometimes running round a quadrangle. In *fortification*, a covertway. See COVERTWAY.

CORROSIVE SUB'LIMATE, perchloride of mercury, highly poisonous.

CORRUGATE, Lat. *ruga*, wrinkle. In *zoology*, applied to the surface of an animal which rises and falls in parallel angles.

CORRUGATOR, Lat. from *corrugo*, to wrinkle. A muscle, the office of which is to wrinkle or corrugate the part it acts on.

CORRUPTION, from *con*, and *rupto*, to break. In *law*, the term is used in the sense of *taint*, the consequence of an act of attainder.

CORSELET (Fr.) 1. An ancient piece of armour to cover the body, worn by pikemen.—2. The trunk of insects.

CORTES, the Spanish name of the states of the kingdom, composed of nobility, clergy, and representatives of cities: from *corte*, a court. The Assembly of Cortes answers in some measure to the Parliament of Great Britain.

CORTICAL, Lat. *corticalis*, resembling bark. Applied in *anatomy* to the external portions of the brain and kidney.

CORTICIFERS, Lat. *cortex*, bark, and *fero*, I carry. Those polyps whose substance is spread over a central axis.

CORTICOSE, Lat. *corticosis*, like bark or rind. Applied, in *botany*, to hard woody pods.

CORTILE (Ital.), an open quadrangular or curved area in a dwelling-house, inclosed by the building itself.

CORTINA (Lat.), a kind of table; a term used in describing fungi, to denote that portion of the velum which adheres to the margin of the pileus in fragments.

CORUNDUM, a very hard genus of aluminous minerals, of which the species are dodecahedral corundum, e. g. spinel, octahedral corundum, e. g. automilite, rhombohedral corundum, e. g. sapphire, and prismatic corundum, e. g. chrysoberyl.

CORUS, a Jewish measure, answering to the omer = 75 galls. 5 pts. for liquids, and = 32 pks. 1 pt. for corn, &c.

CORVEE (Fr.) In *feudal law*, the obligation of the inhabitants of a district to do certain services to the king, as the

repair of roads, either gratuitously, or at a rate less than the value of the work done.

CORVET', Fr. *corvette*, Sp. *corveta*; a sloop of war.

CORVUS (Lat.), a raven. 1. In *ornithology*, a genus of passerine birds, comprising the raven, crow, rook, and jackdaw.—2. In *astronomy*, the crow, one of the old constellations lying south of Virgo, north of Hydra, east of Crater, and west of Hydra Continua.

CORYBAN'TES, in *Grecian mythology*, were the priests of Cybele.

CORTICEUM. In *ancient architecture*, an apartment in a gymnasium.

CORYD'ULINE, an alkaline substance obtained from the *corydalis bulbosa*.

CORYLUS, the hazel-nut tree: a genus of seven species. *Monæcia*—*Polyandria*. There is only one British species, the *C. avellana*. Name *κορυλος*, of unknown origin.

COR'YMBE, from *corymbus*, a cluster of berries, &c.; a species of inflorescence formed by many flowers, the partial flower-stalks of which are gradually longer, as they stand lower on the common stalk, so that all these flowers are nearly on a level.

COR'YPHA, a genus of palms. *Hexandria*—*Monogynia*. Fan-palm, Talipot-palm—Indies and New South Wales. Name from *κορυφη*, height, in allusion to the majestic height of some of the species.

CORYTHA'IX, a genus of birds. The *Touracos*—order *Scansoriae*. Named from the head being furnished with an erectile tuft. Plumage green, and quill of the feather crimson. Natives of the Cape of Good Hope.

COR'THUS, a genus of passerine birds: the Pine Grosbeak is a species. Name from *κορυξ*, a helmet.

CO-SECANT, the secant of the complement of any arc or angle.

COS'INAGE, from Fr. *cousinage*, kindred; a term used in law to designate a writ to recover possession of an estate in lands when a stranger has entered and abated, after the death of the tresail, or the grandfather's grandfather, or other collateral relation.

CO'SINE, the sine of the complement of any given arc or angle.

COS'MICAL, from *κοσμικος*, relating to the world; an astronomical term for one of the poetical risings of a star: thus a star is said to rise *cosmically* when it rises with the sun.

COS'MOLABE, from *κοσμος*, the world, and *λαμβάνω*, to take; an ancient instrument for measuring distances, either celestial or terrestrial, much the same as the astrolabe.

COSMOLOGY, from *kosmos*, the world, and *logos*, discourse; the science which treats of the general laws by which the physical world or universe is governed.

COSMORAMA, from *kosmos*, the world, and *orama*, view; an exhibition of views representing various parts of the world, the magnitude and apparent distances being increased by convex lenses.

Coss, a Hindoo measure variable in length, but usually about six-tenths of an English mile.

COSSACKS, inhabitants of those parts of the Russian Empire bordering on Siberia, Turkey, and Poland.

COSTATE, Lat. *costatus*, ribbed: applied to leaves of plants which have elevated lines extending from the base to the point. Also to animals when their surfaces have several broad elevated lines.

COSTUME. In *painting*, the dress suitable to the time in which the action is supposed to take place.

CO-TANGENT, the tangent of the complement of any arc or angle.

CO'TILLON, a French term meaning *petticoat*, used as the name of a brisk dance performed by eight persons together; also a tune which regulates the dance.

COTT'ER, Fr. *côté*, side. In *heraldry*, a diminutive of the bend, being one-half of the width of the bendlet.

COTT, from Sax. *cote*, a bed; a small bed. On board of ships, the cott is a particular sort of bed-frame, suspended from the beams of the ship for the officers to sleep in. It is made of canvas, sewed in the form of a chest, and extended by a square wooden frame with a canvas bottom.

COTTON, a species of vegetable wool, the produce of the *Gossypium herbaceum* or cotton shrub, of which there are many varieties. It is found growing naturally in all the tropical regions of Asia, Africa, and America. The cloth which is manufactured from this wool is also called cotton. The term *cotton* is taken from the Arabic name *khutôn*, written by the Italians *cotone*, whence Fr. *coton*, Dut. *katon*, and Eng. *cotton*.

COTTON-OIN, a machine for separating the seeds from the cotton.

COTTON-MILL, a building with machinery for carding, roving, and spinning cotton by water or steam-power.

COTTON-PLANT, all the species of the genus *Gossypium* produce cotton, and are therefore cotton-plants. The principal species are (1.) The *G. herbaceum* or herbaceous cotton-plant, with smooth leaves and yellow flowers, succeeded by roundish capsules full of seeds and cotton; (2.) The *G. religiosum* (and varieties) or shrub-cotton, the flower and fruit of which closely resemble the herbaceous

cotton, but the pod is egg-shaped. (3.) The *G. arboreum* or cotton-tree which grows on all the Indian mountains, and yields cotton of a coarse quality.

COT'TLE, } the socket of the hip-joint.
COT'YLE, } The term *κοτυλη*, is the name of an ancient measure.

COTYL'EDON (*κοτυληδων*, from *κοτυλη*, a cavity). 1. A seed lobe. The *cotyledons* are the parts of a seed which when germinating become *seminal leaves*, between which is seated the *embryo* or germ of the plant, called when expanded, the *plumula*. Some plants are *dicotyledonous*, others *acotyledonous*, and some *polycotyledonous*.—2. In *anatomy*, the same as *acetabulum* (q. v.).—3. The name of a genus of plants. *Decandria—Pentagynia*. Navel-wort. The exotic species are mostly permanent.

COTYLIFORM, applies to the general form of organs of a rotate figure with an erect limb.

COTYLOID CAVITY. In *anatomy*, the socket which receives the head of the thigh-bone, thus named from *κοτυλη*, the name of an ancient measure, and *ἰδος*, resemblance.

COUAC'GA, an animal of South Africa, the *Equus quaccha*, Lin., which more resembles the horse than the zebra. The name is expressive of its voice, which resembles the barking of a dog.

COUCH'ANT (French), lying down: applied in *heraldry* to a lion or other beast lying down with the head raised, which distinguishes the posture of *couchant* from that of *dormant* or sleeping.

COUCH'ING. 1. In *surgery*, a surgical operation, which consists in removing the opaque lens out of the axis of vision, by means of a needle adapted to the purpose.—2. In *agriculture*, clearing land from couch grass.

COUL'TER, from *cultus*, a knife; an iron instrument like a knife, fixed in the beam of a plough, and serving to cut the edge of each furrow.

COU'MARIN, a crystalline odoriferous principle extracted from the tonka bean, which is the seed of the *Coumarouna odorata*.

COUN'CIL, an assembly; applied to any body of men convened for consultation and advice in important affairs. Thus what is called the *Privy Council*, is a select council formed of the confidential advisers of the sovereign, and convened for the purpose of deliberating on affairs of state. A *Council of War* is an assembly of the principal officers, called in particular emergencies, to concert measures for their conduct.

COUNT. 1. In *law*, a particular charge in an indictment. Fr. *conte* and *compte*.—2. A foreign title of nobility equiva-

lent to that of earl in England. Fr. *Comte*, It. *Conte*, Sp. *Conde*. It is now merely a title of honour.

COUN'TER APPROACHES. In *fortification*, lines and trenches made by the besieged to attack the works of the besiegers or hinder their progress.

COUN'TER DRAIN, a channel dug parallel to a canal, &c., for the conveyance of the so-called water, by means of drains, into the lower grounds.

COUN'TERCHANGED. In *heraldry*, intermixed as the colours of the field and charge.

COUN'TERDRAWING, a method of copying a design or painting by drawing the outlines on some transparent medium placed over the picture or drawing. This outlined sketch is then transferred to the canvas or other material on which the copy is to be made.

COUN'TERFOIL, } that part of a tally
COUN'TERSTOCK, } struck in the Exchequer which is kept by an officer in that court, the other being delivered to the person who has lent the money on the account, and is called the *stock*.

COUN'TERFORT, a buttress, spur or pillar, serving to support a wall, &c., liable to bulge.

COUN'TERGAUGE. In *carpentry*, a method used to measure the joists by transferring the breadth of a mortise to the place where the tenon is to be, in order to make them fit each other.

COUN'TERGARD. In *fortification*, a work raised before the point of a bastion.

COUN'TERMARK, a mark frequently seen in ancient coins.

COUN'TERMINE. In *military affairs*, a well and gallery sunk and driven till it meets the enemy's mine, to prevent its effects.

COUN'TERMURE (*murus*, a wall), a wall raised behind another to supply its place when a breach is made.

COUN'TERPALED. In *heraldry*, is when the escutcheon is divided into 12 pales parted per fesse, the two colours being counterchanged, so that the upper and lower are of different colours.

COUN'TERPART, the corresponding part, or that which answers to another, as the two papers of a contract. In *music*, the bass is said to be the counterpart of the treble.

COUN'TER-PASSANT. In *heraldry*, is when two lions or other beasts are represented as going contrary ways.

COUN'TERPOINT. In *music*, is when the musical characters by which the notes in each part is signified, are placed in such a manner, each with respect to each, as to show how the parts answer one another; hence in composition counterpoint is the art of combining and modulating consonant sounds.

COUN'TERPROOF. In *rolling-press printing*, a print taken off from another fresh printed, which, by being passed fresh through the press, gives an inverted impression.

COUN'TER-ROLL. In *law*, a counterpart or copy of the rolls relating to appeals, inquests, &c.

COUN'TERSALIENT. In *heraldry*, is when two beasts are borne in the act of leaping from each other. The term is Fr. *contre* and *sauter*, to leap.

COUN'TERSCARPE. In *fortification*, the exterior talus or slope (*escarpe*) of the ditch, or the talus that supports the earth of the covert-way, with its parapet and glacis.

COUN'TERSIGN, the signature of a public officer to the charter of a king, prelate, &c., by way of certificate. In *military language*, see WATCHWORD.

COUN'TERSINK, to make a cavity in timber-work for the reception of a plate of iron or the head of a screw or bolt.

COUN'TER SWALLOW'S-TAIL. In *fortification*, an outwork in the form of a single tenaille, wider at the gorge toward the place than at the head toward the country.

COUN'TERTENOR. In *music*, high tenor; a term applied to the highest male voice.

COUN'TERTIME. In the *manège*, the resistance of a horse that interrupts his cadence and the measure of his *manège*, occasioned by a bad horseman or the bad temper of the horse.

COUNT-WHEEL, in the striking part of a clock, is that which moves round in 12 or 24 hours; called also *locking-wheel*.

COUNTY CORPORATE, a county invested with particular privileges by charter or royal grant.

COUNTY-COURT, a court whose jurisdiction is limited to a county, incident to the jurisdiction of a sheriff.

COUNTY-PALATINE, a county distinguished by particular privileges. So called a *palatio*, because the owner had originally royal powers. The Counties Palatine of England are Lancaster, Chester, and Durham, but the palatine powers are now abridged.

COUP-D'ŒIL, Fr. The first glance of the eye, with which it surveys anything at large.

COUP-DE-SOLEIL, Fr. stroke of the sun. A name given to any disorder suddenly produced by the violent scorching of the sun, especially on the head, as phrenitis, apoplexy, &c.

COUN'LE, Fr. 1. A band, as that with which dogs are tied together in pairs. — 2. A rafter. See COUPLES.

COUPLE-CLOSE. In *heraldry*, an ordinary so called from its inclosing the chevrons by couples.

COUPLED COLUMNS, columns arranged in pairs.

COUPLES. In *architecture*, rafters framed together in pairs, with a tie fixed above their feet.

COUPLING-BOX. An iron cylinder for connecting shafts of machinery.

COUPURE. In *fortification*, a passage cut through the glacis, in the re-entering angle of the covert-way, to facilitate the sallies of the besieged.

COURANT, Fr. running. Applied in *heraldry* to any animal borne in an escutcheon in a running attitude.

COURSE, Fr. from *Lat. curro*, to run. 1. In *navigation*, that point of the horizon or compass which a vessel steers on, or the angle which the rhomb-line makes with the meridian.—2. In *building*, a continued layer of bricks or stones.—3. Among *slaters*, a row of slates or tiles, arranged with their lower ends level.—4. In *architecture*, the course of the face of an arch is the arch-stones which have their joints radiating to the centre; the course of a plinth is its continuity in the face of the wall. A *bond course* is further inserted into the wall than those adjacent.

COURSE OF EXCHANGE. In *commerce*, the price or rate at which the currency of one country is exchanged for that of another, supposing the currencies of both to be of the precise weight and purity fixed by their respective mints.

COURSES. In a *ship*, the principal sails, as the main-sail, fore-sail, and mizen. Sometimes the name is given to the stay-sails of the lower masts; also to the main stay-sails of all brigs and schooners.

COURSING-JOINT, one between two courses of masonry.

COURT-BARON, a court held by every lord of a manor within the same; punishment is by amercement.

COURT-LEET, a court of record, held once a year in a particular hundred, lordship, or manor, before the steward of the leet.

COURT-MARTIAL, a court consisting of military or naval officers, for the trial of military or naval offenders.

COURT OF CONSCIENCE, a court for the determination of cases where the debt or damage is under 40s.

COURT-PLASTER, a plaister made by covering black silk with a mixture of balsam of benzoin and isinglass.

COUSINET, } the stone which is placed
CUSHION, } on the impost of a pier, to receive the first stone of the arch; also, the part of the front of an Ionic capital between the abacus and echinus.

COVE-BRACKETING. In *architecture*, is generally applied to that of the quadrantal cove.

COVERED AND FLAT CEILING, a ceiling in which the section is the quadrant of a circle, rising from the walls, and intersecting in a flat surface.

COVENANT. In *history*, the famous bond of association adopted by the Scottish Presbyterians, in 1638. In a *theological* sense, it is a promise made by God to man upon certain conditions. In *law*, it is an engagement under seal, to do or to omit a direct act; it is also a form of action, which lies where a party claims damages for breach of a covenant under seal.

COVENANTERS, the great body of the Scottish people, who at the era of the Reformation, in 1638, and several times afterwards, subscribed the National Covenant.

COVERTS. In *ornithology*, the feathers attached to the wings.

COVERTURE. In *law*, the state of a married woman, who is considered as under cover, or the power of her husband, and therefore called a *femme-covert*, or *feme-covert*.

COVERT-WAY. In *fortification*, a level space of about 20 ft. broad from the side of the ditch, surrounding half-moons, &c. It has usually a parapet, with palisades down the middle, and a foot-bank, and is sometimes called the *corridor*.

COVER-WAY, the recess left in brick-work for the reception of the roofing.

COVIN. In *law*, a collusive agreement between two or more to prejudice a third person. The term is from Norman *coryne*, a secret place of meeting.

COVERING, from *cove*, a term used in *architecture*, to denote the projection of the upper stories of houses over the lower. The coverings of a fireplace are the inclined vertical parts of the sides.

COW-POX. This name may be given to any pustulous disease affecting the cow, but it is especially applied to that which appears on the teats, in the form of vesicles of a blue livid colour: they contain the virus called *vaccine*. The same virus may be obtained from the heel of a horse, when affected by the disease called the *grease*.

COWQUAKES, the quaking grass; names common to all the species of the genus *Briza*.

COW'RY, a small shell brought from the Maldives, which passes current as coin in small payments in Hindostan, and throughout extensive districts in Africa.

COW'SLIP or **COW'S-LIP,** a species of *Primula* or primrose of several varieties. The American cowslip belongs to the genus *Dodecatheon*; the Jerusalem and mountain cowslip to the genus *Pulmonaria*.

C. P. S. stand for *Custos privati sigilli*, i. e. keeper of the privy seal.

CR. In *book-keeping*, an abbreviation of the word *creditor*.

CRAB, Sax. crabba. 1. In *natural history* (see *CANCER*).—2. In *astronomy* (see *CANCER*).—3. In *botany*, the wild apple-

tree, and also the fruit of that tree.—4. In *mechanics*, a machine with three claws, used to launch ships and heave them into the dock; also a wooden pillar somewhat resembling a small capstan, and used for the same purposes.

CRAE'S CLAWS. In the *materia medica*, the tips of the claws of the common crab (*Cancer pagurus*) ground. The powder is used as an absorbent.

CRAE'S EYES, concretions found in the stomach of the cray-fish (*Cancer astracus*, Lin.). They are round on one side and depressed on the other, and not unlike eyes.

CRAE YAMS, a name in the West Indies for a kind of ulcer on the soles of the feet, with callous lips so hard that they are cut with difficulty.

CRA'DLE, Sax. *cradel*, from *κεραδω*, to swing. 1. A moveable bed for rocking children and infirm persons to sleep.—2. A frame of timber placed under the bottom of a ship, to conduct her steadily and smoothly into the water in launching her.—3. The name is sometimes used by architects and engineers in the same sense as *coffer* (q. v.); and also to designate a centring of ribs and lattice for turning culverts.

CRA'DLING. In *architecture*, timberwork to support the lath and plaster of ceilings, or for supporting the entablature for a shop front, &c.

CRAO. In *geology*, a tertiary deposit of the older pliocene period, which has obtained this name from a provincial term signifying gravel. It is divided into two groups, the coralline or lower, and the red or upper crag.

CRAB, the corn-crake (*Rallus crex*, Lin.). Named from its cry, *crek, crek*. It has been called the *Quail-king*, because it arrives and departs with these birds, and leads a solitary life on the same grounds, from which arose the conjecture that it was their leader. It feeds on grain, worms, and insects.

CRAM. In *weaving*, a warp having more than two threads in each dent or split of the reed.

CRAMEE, the *colewort*: a genus of plants. *Tetradynamia—Siliculosa*. The sea-kale (*C. maritima*) grows wild on our shores, and is cultivated for our tables. Name *κεραμνη*, cabbage.

CRAME'RIA, a genus of plants. *Tetrandria—Monogynia*. Named in honour of two German botanists called Kramer. The tree which affords the root called *rhatany* is a Peruvian species of this genus.

CRAMP, Ger. Dut. Sw. *krampe*. 1. In *medicine* (see *SFARM*).—2. In *building*, a piece of iron or other metal bent at each end, and inserted into contiguous parts of

a building, arch, &c., to hold them together, and thus give additional strength to the structure.

CRAMP'YISH, the torpedo or electric eel.

CRAMPPOO'S, three hooked pieces of iron attached to the end of a rope or chain, for drawing up stones, timber, &c.

CRAN'BERRY, the red whortleberry, the fruit of *Vaccinium oxycoccus*, a moss plant indigenous in Britain, but not plentiful. Cranberries are chiefly imported from Russia and North America.

CRANE. 1. In *ornithology*, a name common to all the species of the genus *Grus*, Lin.—2. In *hydraulics*, a popular name for the syphon employed to draw off liquids.—3. In *mechanics*, a machine for raising and lowering great weights, which has been variously constructed according to purposes intended to be accomplished, and is consequently distinguished by various names, as the *cellar crane*, *portable stone crane*, &c. *Watt's* jib beam is perhaps the most advantageous in present use.

CRANE'S-BILL, a name common to all the plants of the genus *Geranium*.

CRAN'GON, a species of crab (*Cancer crangon*).

CRAN'GON, Gr. *κεραγγη*, a cray-fish; the name of the Macrourous crustaceans, including the common shrimp.

CRANIOLOGY, from *κεραυνον*, the skull, and *λογος*, discourse; the study of skulls, as exhibited in the diversity of their size, shape, and proportion of parts, of different races of mankind.

CRANIO'METER, from *κεραυνον*, a skull, and *μετρον*, measure; an instrument for measuring the cranial development of man and other animals.

CRANK, literally, a bend. Applied in *mechanics* as the name of a square piece projecting from a spindle, serving by its motion to raise and fall the pistons of a steam-engine, turn a wheel, &c.—*Crank* is also the name given to iron supports of a lantern and the iron made fast to the stock of a bell.—Among seamen, *crank* means liable to be upset, and is applied to a ship of a narrow build, or which has not sufficient ballast.

CRAP'AUDINE DOORS, doors which turn on pivots at the top and bottom.

CRAPE, Fr. *crêpe*, Ger. *krepp*. A transparent textile fabric, somewhat like gauze, made of raw silk, gummed and twisted at the mill. It is woven with any twel, and is either crisped (*crêpé*) or smooth. When dyed black it is worn by ladies as a mourning dress.

CRASS'AMENT, Lat. *crassamentum*, from *crassus*, thick; the glutinous coagulum of the blood.

CRASSATE'LA, a genus of Molluscs. Family *Mytilacea*, order *Acephala testacea*, Cuv. Name dim. of *crassus*, thick, the

valves of the shells becoming very thick by age.

CRATEGUS, a genus of permanent plants, of which the hawthorn and wild service-tree are species. *Icosandria*—*Digynia*. Name from *κράτος*, to be strong.

CRATEVA, a genus of plants. *Polyandria*—*Monogynia*. Name from *κράταος*, strong, in allusion to the strong alliaceous odour of the fruit of most of the species, which has acquired for it the name of *garlic pears*. The bark of the *C. tapia* is a bitter tonic much esteemed in India as a febrifuge.

CRAYON, from Fr. *craye*, chalk; a general name for all slender, soft, and friable cylinders variously coloured, for delineating figures upon paper, usually called chalk drawings. Red, green, brown, and other coloured crayons are made with fine pipe or china clay paste, intimately mixed with earthy or metallic pigments, then moulded and dried.—*Lithographic crayons* are made of lamp-black, shell-lac, hard tallow-soap, and white wax, fused together and cast in a mould of the required size.

CREAM OF TARTAR, bitartrate of potash, or the white tartar of commerce freed from its impurities.

CREANCE. In *falconry*, a fine small line fastened to a hawk's beak when she is first lured.

CREASOTE, from *κρέας*, flesh, and *σύνω*, to preserve; an oily, colourless, transparent liquid, of a penetrating odour, resembling that of smoked meat, and of a burning and exceedingly caustic taste: obtained most easily from tar. It takes its name from its antiseptic property.

CREDEN'DA. In *theology*, things to be believed: articles of faith; in distinction from *agenda* or practical duties.

CREDE'TIALS, LETTERS OF, the letter from one monarch to another, constituting the evidence of the validity of the title of a minister at a foreign court.

CRE'DIT. In *commerce*, the term used to express the trust or confidence placed by one individual in another, when he assigns him money or other property in loan, or without stipulating for its immediate payment. The party who lends is said to give credit, and the party who borrows to obtain credit.

CREEK, Sax. *crecca*. In *geography*, a shore or bank on which the water beats, running in a small channel from the sea. In the United States, *creek* is synonymous with *rivulet*.

CREEL. A fish-basket.

CREEPER. 1. In *botany*, creeping plants are called *creepers*.—2. In *ornithology*, a name common to all the species of the genus *Certhia*, Lin., from their habit of climbing trees like woodpeckers.

CREEPERS, an instrument of iron, with hooks or claws, for drawing up things from the bottom of a well, pit, &c., or for dredging the bottom of a river, &c., in search of something, as the body of a drowned person.

CREMO'NA, a general title for the violins made at Cremona in Italy, during the 17th and 18th century, chiefly by the Amati family.

CRE'NATE, Lat. *crenatus*, notched or scalloped. Applied to objects in natural history when the indentations on the borders, as of leaves, are rounded and not sufficiently deep to be called teeth.

CRENEL'LE, in *Gothic architecture*, the opening of an embattled parapet.

CREN'ULATE (dim. of *crenate*); indented round the margin with small notches.

CRE'OLEs, the descendants of whites born in Mexico, South America, and the West Indies, in whom the European blood has been immixed with that of other races.

CRE'FANCE, } A chop in one of a horse's
CRE'FANE, } hind legs, caused by the shoe of the other hind foot crossing and striking it. This sometimes degenerates into an ulcer.

CRE'PON, a fine stuff made either of fine wool, or of wool and silk, of which the warp is twisted much harder than the weft. The *crepons* of Naples consist altogether of silk.

CREPUSCULA'RIA, a family of Lepidopterous insects in the system of Cuvier, composing the genus *Sphinx* of Linnaeus; name from *crepusculum*, twilight, as "these lepidoptera appear only in the morning or evening."

CRESCEN'DO (Ital.). In *music*, when the volume of sound is increased from soft to loud, marked thus cresc.

CRESC'ENT, from *crescens*, growing. In *heraldry*, an honourable ordinary in the form of a new moon or crescent.

CRESCENT'IA, the *Calabash tree*: a genus. *Didymia*—*Angiospermia*. Name from *creasco*, in allusion to the rapid growth and large size of the nut or fruit. Natives of the West Indies and South America.

CRESS. A number of plants which have a more or less pungent flavour are called cresses. The garden and sciotic cresses are species of the genus *Lepidium*; the water and wild cresses belong to the genus *Sisymbrium*.

CREST, from Norm. *crest*, it rises. A term used in *armoury* to signify the top part of the helmet generally ornamented; and in *heraldry*, that part of the casque or helmet next the mantle.

CRETA'CEOUS GROUP. In *geology*, a group of strata comprising those from the chalk of Maestricht to the lower green sandstone inclusive. These strata are all marine.

CRETINISM, a peculiar endemic disease, common in Switzerland, and in some other mountainous districts. It makes a close approach to rickets in its general symptoms; but differs in the tendency to that peculiar enlargement of the thyroid gland called by the French *goutte*, and by us *Derbyshire-neck*, and in the mental imbecility which accompanies it from the first. The individuals so affected with this disease are called *cretins*.

CRIB-BITING, biting the manger or crib; a bad habit in horses, caused by disease in the teeth, or rough usage by the person who curryscombs them.

CRIBIFORM, Lat. *cribiformis*, sieve-like (*cribrum*, a sieve); applied to one of the bones of the cranium (the *ethmoid bone*), which is perforated like a sieve.

CRICETUS, a genus of Mammalia—the Hamsters. Order *Rodentia*. These animals have considerable resemblance to the rat in conformation, but are agreeably marked with grey, black, and white spots. The *C. vulgaris* is common in all the sandy regions which extend from the north of Germany to Siberia.

CRICOID, Lat. *cricoides*, ring-like (*κρίκος*, a ring, and *ῖδος*, like). Applied in *anatomy* to a ring-like cartilage of the larynx.

CRIMP. 1. An agent for coal-merchants and persons concerned in shipping.—2. An obsolete game at cards.—3. A person formerly employed to decoy others into the naval or military service.

CRINKLE, from D. *krinkel*, a bend. A hole in the bolt-rope of a sail, formed by intertwisting the division or strand of a rope alternately round itself and through the strand of the bolt-rope, till it becomes threefold, and assumes the shape of a ring. Its use is to receive the ends of the ropes by which the sail is drawn up to its yard, or to extend the leech by the bow-line brides. Iron *cringles* or *hanks* are open rings running on the stays, to which the heads of the stay-sails are made fast.

CRINO, from *crinis*, hair. 1. A genus of Entozoa, observed chiefly in horses and dogs.—2. A disease which, according to Ettmuller and others, has prevailed epidemically among children. It consists in the eruption of rigid black hairs from the skin of the back, arms, and legs, accompanied with febrile irritation and emaciation. Three or four crops arise during the first month of the child's life.

CRENOIDEA, from *κρίνος*, a lily, and *ῖδος*, like, lily-shaped zoophytes. A name given to the whole class of Encrinites and Pentacrinites, from their resemblance to the head of a lily. The fossil remains of this order have been long known by the name of stone-lilies or en-

crinites, and have lately been classed in a separate order, containing many genera, and placed by Cuvier after the asteria. The skeleton of the crinoidea is composed of numerous ossicula, the number of bones in one skeleton being computed at upwards of 30,000.

CRISTA, Lat. a crest. This name is given, 1. In *anatomy*, to several parts and processes of bone, supposed to resemble the comb of a cock, as the *crista ilii* and *crista galli* of the ethmoid bone.—2. In *surgery*, to certain excrescences supposed to resemble the comb of a cock.

CRISTATE, Lat. *cristatus*, crested. Applied to parts of plants, &c., having an appendage resembling a crest.

CRITHMUM, the samphire or sea-fennel. A genus of plants. *Pentandria—Dignia*. There are two species; the *C. maritimum*, a low perennial, grows on our coasts, and is used as a pickle. Name from *κρίνω*, to secrete, in allusion to some ascribed medicinal virtues of the plant.

CROCKET, from Fr. *croc*, a hook. The small buds or bunches of foliage used in Gothic architecture, to ornament spires, canopies, pinnacles, &c.; the larger bunches at the top are termed *finials*.

CROCODILE, Lat. *crocodilus*. An amphibious voracious animal of the order *Sauria*, Cuv. See *CROCODILUS*.

CROCODYLUS, a genus of reptiles of the order *Sauria*, Cuv., comprising 12 species; viz. one Gavia, three Alligators, and eight true Crocodiles. Name *κροκόδῆλος*, of uncertain origin. Crocodiles are large animals, having four feet, and a tail flattened on its sides, and covered, like the back of the animal, with very hard scales or plates. They are furnished with two rows of teeth, and there are three eyelids to their eyes. The vertebrae are so disposed as not to admit of sudden deviation from a straight course, in consequence of which it is not difficult to escape from them by pursuing a zigzag course, or by running from them. Their eggs are as large and hard as those of a goose. They inhabit fresh water.

CROCONIC ACID. During the distillation of potassium from a mixture of carbonate of potash and charcoal, a gray compound comes over, which forms a yellow solution with water. From this solution yellow crystals of croconate of potash are obtained, which afford by proper treatment yellow prismatic crystals of *croconic acid*; a compound, according to Gmelin, of carbon, oxygen, and hydrogen. The acid is decomposed by strong heat, and deposits pure charcoal. It takes its name from *croceus*, yellow (*croceus*, saffron).

CROCUS. 1. Saffron, a genus of plants. *Triandria—Monogynia*. The *C. sativus* is a native of Greece and Asia Minor, but

is extensively cultivated in England for medicinal purposes, and for the colouring matter of its flowers (*See SAFFRON*). The story of young *Crocus*, turned into this flower, may be seen in the fourth book of Ovid's *Metamorphoses*.—2. A name given by the older chemists to several preparations of metallic substances, from their yellow colour, as *C. martis*, calcined sulphate of iron; *C. metallorum* (metallic crocus), sulphuretted oxide of antimony; *C. veneris*, oxide of copper, formed by calcining the metal.

CROIS-SANTE CROIX (French), a crescent at each end.

CROMLECHS, rude erections of great antiquity, found in many parts of Britain. They consist of huge flat stones, raised upon other stones set upon end. By some they are regarded as tombs, by others it is imagined that they are Druidical altars, erected for sacrificial purposes.

CROP-OUT, a term used by miners to express the rising up at the surface of one or more strata; thus a stratum rising to the surface is said to *crop-out*.

CRORE. In commerce, 100 lacs of rupees.

CROSETTES, in architecture, the same as *ancones*.

CRO'SIER. 1. A bishop's crook or pastoral staff; a symbol of pastoral authority and care. It was originally a staff with a cross on the top in the form of a T.—2. In astronomy, four stars in the southern hemisphere in the form of a cross.

CRO'SLET. In heraldry, a little cross crossed at a small distance from the ends.

CROSS, from Lat. *cruz*, through Fr. *croix*; an instrument used in surveying for the purpose of raising perpendiculars. It consists merely of two pairs of sights set at right angles to each other, mounted on a staff of a convenient height for use. In heraldry, the most ancient and noble of all the honourable ordinaries, which contains one-fifth of the field, and is formed by the meeting of two perpendicular with two horizontal lines near the fess point, where they make four right angles.

CROSS-BANDED, a term applied to a veneer on a hand-rail, the grain of which crosses that of the rail.

CROSS-BAR-SHOT, a cannon-ball with an iron bar passing through it, and projecting a few inches on each side; used in naval actions for cutting the enemy's rigging.

CROSS-BEAM. In architecture, a large beam passing from wall to wall, and serving to hold the sides of a house together.

CROSSBILL. 1. In ornithology, a name common to all the species of the genus *Loxia*, Bris.; but especially applied to the *L. curvirostra*, Lin. The beak is compressed, and the two mandibles are

so strongly curved that their points cross each other, sometimes on the one side and sometimes on the other.—2. In chancery, an original bill by which the defendant prays relief against the plaintiff.

CROSS-BOW, a missile weapon formed by placing a bow athwart a stock of the form of a musket.

CROSS-CUT SAW, a saw managed by two men, one at each end.

CROSS-JACK (*Cro-jack*), a sail extended on the lower yard of the mizen-mast; seldom used.

CROSSES, STONE. In antiquities, preaching crosses are in general quadrangular or hexagonal, open on one or both sides, and raised on steps. Market crosses are well known. Crosses of memorial were raised on various occasions. Crosses served also as landmarks.

CROSSETTES, Fr., called also *ears, elbows, ancones, prothyrides*. In architecture, the returns on the corners of door-cases or window frames.

CROSS-HEAD. In mechanics, any cross-beam or bar is so called.

CROSS-PIECE, a rail of timber extending over the windlass of a ship, furnished with pins to which to fasten the rigging as occasion requires.

CROSS-STAFF, an instrument formerly used at sea to take the meridian altitude of the sun.

CROSS-TREES. In ships, pieces of timber supported by the cheeks and trestle-trees at the upper ends of the lower masts, to sustain the frame of the top, and on the top-masts to extend the top-gallant shrouds.

CROSS-VAULTING, a common name given to groins and cylindric vaults.

CRO'TALUS, the rattlesnake, a genus of serpents remarkable for the intensity of their venom, and the rattle which terminates the tail (whence the generic name from *κρόταλον*, a rattle). This rattle is formed by several scaly cornets, loosely fitted into each other, which move and produce the peculiar noise whenever they crawl or shake that part of the body. Four species are found in America.

CROTCH, Fr. *croc*, a hook. 1. A crooked timber placed on the keel in the fore and aft parts of a ship.—2. A piece of wood or iron opening on the top, and extending two horns or arms like a half-moon, for supporting a boom, a square topmast, yards, &c.

CROCHET, Fr. *crochet, croche*, from *croc*, a hook. 1. In printing, see BRACKETS.—2. In carpentry, see BRACKET.—3. In obstetrics, a curved instrument with a hook, used to extract the fetus in the operation of embryotomy.—4. In music, a note equal in time to half a minim, and the double of a quaver,  marked thus:—

CROTA'LUM, an ancient kind of castanet used by the Corybantes, or priests of Cybele.

CRO'TON. 1. The Greek name of the dog-tick.—2. The name of a genus of plants, mostly shrubs, inhabiting hot climates. Class *Monæcia*; order *Monodelphia*. The *C. cascariila* affords the cascarilla bark; the *C. tiglium* affords the parana wood and tiglia seeds, from which croton oil is obtained; the *C. tinctorium* produces the litmus or turnsol.

CROTO'NE, a fungus on trees produced by an insect like a tick (*αγορον*, the tick), and applied to small fungous excrescences on the periosteum.

CROTON'IC ACID, an acid obtained from croton oil.

CRO'TON OIL, a powerful purgative oil, obtained by expression from the tiglia seeds (seeds of the *Croton tiglium*), which is a native of Ceylon, Malabar, China, and the Moluccas.

CROUP. 1. *Fr. croupe*, the hindermost parts of a horse.—2. *Scot. croup or croup*; an affection of the throat accompanied by a hoarse and permanently laborious and suffocative breathing, a stridulous noise, a short and dry cough, and frequently, towards the close, an expectoration of concrete membranous sputum. Of this disease there are three varieties, the *acute*, the *chronic*, and the *spasmodic*. The first species is both common and fatal among children under 12 years of age, the second is rare, and the third is rather a nervous than an inflammatory disease.

CROUP'ADE. In the *manège*, a leap in which the horse throws up his croup and pulls up his hind legs, as if he drew them up to his belly.

CROUP'ER, a leathern strap attached to a saddle, and fitted to go under the tail of the horse to keep the saddle in its place.

CROW. 1. In *ornithology*, a name common to all the species of the genus *Corvus*, Linn., from the cry of these birds.—2. In *mechanics*, a bar of iron with a hook at one end and having the other pointed, used chiefly by masons and bricklayers for moving heavy weights.—3. The butcher's name for the mesentery or ruffle of a beast.

CROW-FOOT. 1. In *ships*, a complication of small cords spreading out from a long block; used to suspend the awnings, to keep the topsails from chafing against the tops.—2. In *botany*, a name common to all the species of the genus *Ranunculus*.—3. In *military affairs*, a caltrop.

CROWN. 1. A cap of state.—2. A silver coin worth 5s.—3. In *anatomy*, the vertex of the head.—4. In *architecture*, the upper part of a cornice, including the corona.—5. In *geometry*, a plane ring

included between two concentric perimeters.—6. In *astronomy* (See *CORONA*).—7. Among *jewellers*, the upper work of the rose-diamond.

CROWN-GLASS, the best sort of window glass.

CROWN'ING. 1. In *architecture*, the finishing of a member or any ornamental work.—2. Among *seamen*, the finishing of a knot or the interweaving of the strands.

CROWN-OFFICE, an office belonging to the Court of Queen's Bench, of which the Queen's coroner or attorney is commonly master, and in which the attorney-general and clerk exhibit informations for crimes and misdemeanours.

CROWN-POST, in *building*, a post which stands upright between two principal rafters.

CROWN-SCALE. In *farriery*, a cancerous sore formed round the corners of a horse's hoof.

CROWN-WHEEL. In a *watch*, the upper wheel, which by its motion drives the balance.

CROWN-WORK. In *fortification*, an outwork having a large gorge and two long sides terminating towards the field in two demi-bastions, intended to inclose a rising ground or cover an entrenchment.

CRUCIBLE, a chemical vessel indispensable in the various operations of fusion by heat. Crucibles are commonly made of fire-clay, so tempered and baked as to endure extreme heat without melting. To render them more refractory, the clay may be mixed with some finely ground cement of old crucibles, a portion of black-lead, and some coak. The black-lead crucibles are made of two parts of graphite, and one of fine clay, made into a paste with water; they bear a higher heat than the Hessian crucibles, which consist simply of clay and sand: these have a triangular shape. Crucibles are made of various other materials, as iron, platinum, &c.

CRUCIFERÆ, the name given to a large order of plants, from *cruz* and *fero*, because the petals, four in number, are so arranged as to resemble a cross. The radish, cabbage, stock, &c., are *cruciferous* or *cruciform plants*. They all belong to the Linnæan class *Tetradynamia*.

CRUCIFORM, Lat. *cruciformis*, cross-like. Applied to flowers, leaves, &c., which have the shape of a cross.

CRU'OR (Lat.), the red part of the blood, from *zuges*, cold, it being that which appears as coagulum as the blood cools.

CRUP'FER, a roll of leather attached to the saddle, passed under a horse's tail, to prevent the saddle from moving forward on the neck of the horse.

CRUSET, *Fr. creuset*; a goldsmith's crucible or melting pot.

CRUST. In *geology*, that portion of our

globe which is accessible to our examination. The greatest depth to which man has hitherto been able to extend his observations is from eight to ten miles, which has about the same relation to the magnitude of the earth that the thickness of the paper of a globe a foot in diameter has to the magnitude of that globe.

CRUSTA. In *gem sculpture*, a gem engraved for inlaying on a vase or other object.

CRUSTA'CEA, } A class of articulated

CRUSTA'CEANS. } animals, with articulated feet, respiring by means of branchiæ, protected in some by the borders of a shell (*crusta*), and external in others, but which are not inclosed in special cavities of the body, and which receive air from openings in the surface of the skin. Their circulation is double, and analogous to that of the Mollusca. They are apterous, furnished with compound eyes, and usually with four antennæ. They have mostly three pairs of jaws: the two superior ones are called *mandibles*; as many *foot-jaws*, the last four of which, in a great many instances, become true feet; and ten feet properly so called. Their envelope is usually solid, and more or less calcareous. The class is divided into two sections, the *Malacostraca* and the *Entomostraca*. The crabs, crawfish, perns, &c., belong to the first of these divisions; the Molucca crab, fish-louse, trilobites, &c., belong to the second.

CRUSTA'CEAN, } Covered with a shell;

CRUSTA'CEOUS. } shelly: C. animals are jointed, while the testaceous are covered by an uninterrupted shell.

CROSS. In *astronomy*, the *cross*: an asterism containing five stars, four of which are in the form of a cross, the most northerly and southerly are in a line with the south pole, and are therefore called the *pointers*.

CRYOPHORUS, from *κρύος*, cold, and *φορεω*, to bear; the frost-bearer: an instrument invented by Dr. Wollaston, to demonstrate the relation between evaporation at low temperatures and the production of cold. It consists essentially of two bulbs of glass, connected by a tube, as shown in the figure. The water is

boiled in one of the bulbs till the included air is expelled by the steam, through a small aperture in the tube at A, which is then hermetically sealed: when cool, the pressure of the included steam is reduced to that due to the tem-

perature of the surrounding atmosphere: if the empty ball be now surrounded with a freezing mixture, rapid evaporation takes place from the water in the distant ball, which is soon converted into ice, by the rapid abstraction of its heat of temperature.

CRYPT, from *κρυπτα*, to hide: a subterranean place, especially under a church, for the interment of the dead. Crypts were originally places where the primitive Christians performed their devotion, hence the term has been applied to underground chapels, as the crypt of St. Paul's.

CRYPTOGAMIA, the 24th and last class of the Linnæan system of plants, comprehending those in which the parts essential to fructification have not been sufficiently ascertained to admit of their being referred to other classes: hence the name from *κρύπτος*, concealed, and *γάμος*, marriage. It contains four orders, *Filices* (ferns), *Musci* (mosses), *Algæ* (sea-weeds), and *Fungi*.

CRYPTO PORTICUS. In *ancient architecture*, a concealed portico.

CRYSTAL, Lat. *crystallus*, Gr. *κρυσταλλος*, from *κρυος*, frost, and *στίλλω*, to set. 1.

In *chemistry* and *mineralogy*, an inorganic body which, by the operation of affinity, has assumed the form of a regular solid, terminated by a certain number of plane and smooth surfaces. Every body susceptible of crystallisation, crystallises in some *primitive form*, as the tetrahedron, cube, dodecahedron, octahedron, six-sided prism, and parallelopipeds. All *secondary forms* arise from the decrement of particles from the edges and angles of these primitive forms. The transparent crystals of quartz are termed *rock-crystal*, and those of carbonate of lime, found chiefly and of the finest quality in Iceland, are called *Iceland crystal*, but more commonly *I. spar*.—2. A species of glass more perfect in its composition and manufacture than the common glass.

CRYSTALLINE HUMOUR, } A solid body, — — — — — } of a lenticular

form, being part of the eye, situated behind the aqueous humour, opposite the pupil, and its posterior portion is received into a depression on the fore part of the vitreous humour. It is formed of two segments of spheres of unequal sizes; the anterior surface is the less convex.

CRYSTALLIZATION, a process in which crystallisable bodies tend to assume a regular form, when placed in circumstances favourable to that particular disposition of their molecules.

CUBE, Lat. *cubus*, Gr. *κύβος*, A regular solid body, consisting of six square and equal faces, with right, and therefore equal, angles. A die is a small cube. The third power of a quantity is also

called the *cube* of that quantity; a quantity multiplied twice by itself is said to be *cubed*. See CUBE ROOT.

CUBEBS, the fruit of the *Piper cubeba*, a climbing plant found only in Java. Cubebs resemble pepper-corns, but are somewhat longer. They have a hot, pungent, aromatic, slightly bitter taste; and a fragrant, agreeable odour.

CUBE NUMBERS are those whose roots are finite, or which are produced by the multiplication of three equal factors.

CUBE ROOT, one of the three factors of a cube number.

CUBIC EQUATIONS are those whose highest power consists of three dimensions, as $x^3 + ax^2 = b$.

CUBICULUM. Anciently, the tent provided to cover the emperors at the public shows.

CUBIT. 1. Lat. *cubitus*, that part of the arm which extends from the elbow to the wrist.—2. A measure of length. Dr. Arbuthnot states the English cubit at 1 ft. 6 in.; the Roman, at 1 ft. 5'406 in.; and the Hebrew, at 1 ft. 9'888 in.

CUBO-DODECAHEDRAL, presenting the two forms, a cube and a dodecahedron.

CUBO-OCTAHEDRAL, presenting a combination of the two forms, a cube and an octahedron.

CUCKOO, } A well-known bird of pas-
CUCKOW, } sage, which visits this country about the middle of April, and is thus popularly named from its note. Its generic name is *cuculus* (q. v.). It lives on insects, and is celebrated for the singular habit of laying its eggs in the nests of other insectivorous birds; and what is not less extraordinary, these latter, which are often a considerably smaller species, take as much care of the young cuckoo as of their own offspring, and that, too, when its introduction has been preceded, which often happens, by the destruction of their eggs.

CUCKOO-SPIT, } A white froth or

CUCKOO-SPITTLE, } spume, very common on plants in the spring, and which is vulgarly supposed to be the spittle of the cuckoo. It is ejected by a small insect in the first stage of its life. It subsequently becomes a hopping insect, and no longer emits froth.

CUCULLATE, Lat. *cucullatus*, hooded, cone-shaped. Applied to leaves when their edges meet in the lower, and expand toward the upper part.

CUCULUS, the cuckoo. A genus of *Scansoria*, Cuv. See CUCKOO.

CUCURBIT. 1. A chemical distilling vessel, so named from its resemblance to a gourd (*cucurbita*).—2. A cupping-glass.—3. In botany. See CUCURBITA.

CUCURBITA, a genus of plants. *Monœcia*—*Syngenesia*. Name \hat{a} *curvitate*, according to Scaliger, the first syllable being

doubled. The water-melon plant, or Sicilian citrul, and the common pompion, gourd or bottle-gourd, are species. W. climates.

CUCURBITULA, Lat. dim. of *cucurbita*, a gourd. A cupping-glass, thus named from its shape.

CUDBEAR', a purple or violet-coloured powder, used in dyeing violet, purple, and crimson. It is prepared from a species of lichen (*Lichen tartareus*), named popularly crustaceous moss, from its growing commonly on limestone rocks, in Scotland, North of England, Sweden, &c. It was first made an article of trade in this country by Dr. Cuthbert Gordon, from whom it derived its name. It is chiefly imported from Sweden, and sells in London for about 20*l.* per ton.

CUD'DY. 1. In ships, a cabin under the poop.—2. In ichthyology, the cole-fish.

CUE, from Fr. *queue*, the tail. 1. A long tapering stick, tipped with leather, used in playing billiards.—2. The notice given to an actor on the stage what and when to speak.

CUL-DE-FOUR. In architecture, a French term applied to a kind of low spherical vault.

CULDES, monkish priests remarkable for religious duties. They formerly occupied Scotland, Ireland, and Wales.

CULLET, the broken glass brought to the glass-house to be remelted.

CULM. 1. A Welch name of a species of coal of indifferent quality, used for burning lime.—2. From Lat. *culmus* (of *καλαμῶς*, a reed), the stem or straw of grasses, and plants nearly allied to them.

CULMINATE, from *culmen*, the highest point. To be vertical to or on the meridian; hence the *culminating point* is that point of a circle of the sphere that is on the meridian; and *culmination* is the term applied to the passage of a heavenly body over the meridian, or its greatest altitude during its diurnal revolution.

CULTER (Lat.), a knife or shear. In anatomy, the third lobe of the liver, from its shape.

CULTIVATOR, an instrument of the horse-hoe kind, principally used in working fallows.

CULTRIROS-TRES, a family of birds: order *Grallatoria*, Cuv. Name from *culter*, a knife, and *rostrum*, a beak, in allusion to their thick, long, and strong beak, which is generally trenchant and pointed. The cranes, herons, storks, and wood-pelicans, are examples.

CULVERIN, from *colubrinus*, serpent-like; a long slender piece of ordnance or artillery for carrying a ball to a great distance.

CULVERT, an arched drain for the conveyance of water under canals, roads, &c.

CUM'BRIAN SYSTEM. In *geology*, another name for the slate or grauwacke system, from its being most remarkably developed in Cumberland. It includes the Plynlimon and Snowdon rocks, and Bala limestone. The strata are of great but unknown thickness.

CUNETTE, CUVETTE (Fr.), a deep trench in the middle of a dry moat, to obstruct the enemy's approach to a fortified place.

CU'PEL, from *cupella*, a little cup. A shallow vessel like a cup, used in refining metals. It is made of phosphate of lime, which suffers the baser metals to pass through it, when exposed to a melting heat, and retains the pure metal. The process is called cupellation.

CUPELLATION, the purifying of gold, silver, palladium, and platinum, by an addition of lead, which at a due heat becomes vitrified, and promotes the vitrification and calcination of inferior metals in the mixture, so that they are carried off in the fusible glass which is formed.

CU'POLA (It.), a dome (*see* DOME). The word signifies also the founder's furnace for melting cast iron.

CUR'FING. In *surgery*, the application of *curcubitula* or cupping-glasses to the fleshy parts of the body, for the purpose of effusing the blood into the cellular tissue (as in *dry cupping*), or of actually extracting it after scarification. To apply the cupping-glass, all that is necessary is to heat the bottom of it slightly over a spirit-lamp: this rarefies the air within it, so that when applied and reduced to the ordinary temperature, a partial vacuum is formed into which the blood is determined.

CUR'FING-GLASS, a glass vessel like a cup, but more ample and round at the bottom part.

CUPRES'SUS, the *cypress-tree*: a genus. *Monoclea*—*Monadelphia*. So called (*απο του ξυτιν παριστοις τους ανεμους*), because it produces equal branches. There are seven species. *See* CYPRESS.

CURACOA, a liquor prepared in great perfection by the Dutch.

CU'RATE, Lat. *curator* (from *cura*, cure); a clergyman of the Church of England who is employed to perform divine service in the place of the incumbent parson or vicar.

CURA'TOR, Lat. from *cura*, cure; a trustee or person appointed, according to the forms of civil law, to manage the affairs of minors and persons incapable of managing their own concerns.

CURB, Fr. *courber*, to bend. 1. In the *manège*, a chain of iron made fast to the upper part of the branches of the bridle, and running over the beard of the horse. *Δαίον* (Fr. *courbe*, It. *corba*) a hard and callos swelling on the hind part of the hock

of a horse's leg.—2. In *bricklaying*, a noose of oak for brick steps, to prevent the bricks from being dislocated.

CURB-PLATE. In *architecture*, the wall plate of a circular or elliptically-ribbed dome; also the horizontal rib at top, and the circular frame of a well, the horizontal piles of timber at the junction of the upper and lower rafters of a curb-roof, and the plate of a skylight are thus denominated.

CURB-RAFTERS, the upper rafters on both sides of a curb-roof.

CURB-ROOF, a roof formed of four contiguous planes, each two having an external inclination: called also a *Mansard-roof*. It gives more space to the upper rooms of the house.

CURB-STONES, the stones placed at the edge of a pavement to hold the work together: written also *kurb*.

CURCU'MA, the *Turmeric*: an extensive genus of perennial plants. *Monandria—Monogynia*. Name from Arabic, *Kurkum*, a general name for all roots of a saffron colour.

CURETTE (Fr.), a surgical instrument, shaped like a little scoop, for taking away any opaque matter that may be left behind the pupil, after extracting the cataract from an eye.

CUR'FEW, Fr. *couvre-feu*, cover-fire; a signal given in cities taken in war, &c., to the inhabitants to put out their fires and retire to rest. The most celebrated curfew in England was that established by William the Conqueror, who appointed that, under severe penalties, at the ringing of a bell at eight o'clock, every one should put out his light and go to bed: hence still, a bell rung about that time of the evening is called a *curfew-bell*.

CU'RIA, anciently a court or senate-house.

CU'RIES, a subdivision of the Roman patrician tribes, each of which were divided into ten tribes.

CUR'LEW, Fr. *corlieu* or *courlis*, a bird belonging to the genus *Scolopax*, Lin., but formed by Cuvier into a separate genus, *Numenius*. It frequents the sea-shore.

CUR'RENT, a flowing; applied to fluids, as a stream or flux of water moving sometimes rapidly in any direction, and common in various parts of the ocean; e.g., the gulf stream is a remarkable current. The *setting of the current* is that point of the compass to which the water runs. and the *drift of the current* is the rate it runs per hour.

CURRIC'ULUM, Lat. from *curro*, to run; the complete course of studies of a university, school, &c.

CURRU'CA, a sub-genus of passerine birds, the most celebrated of which is the nightingale (*Motacilla luscinia*, Lin.). *See* MOTACILLA.

CUR'RYING, from *corium*, a hide, and *rado*, to scrape; the art of dressing skins after they are tanned, for the purposes of the shoemaker, coach and harness maker, &c., or of giving them the necessary lustre, colour, and pliancy.

CUR'SITOR, from *curso*, to run; a clerk of the Court of Chancery, whose business is to make out original writs. In the statute 18 Edw. III., the cursitors (24 in number) are called *clerks of course*.

CUR'SOR (Latin), a runner; a small sliding piece of brass in some mathematical instruments, as the piece of an equinoctial ring-dial, which slides to the day of the month; the point that slides along the beam-compass, &c.

CURSORIA, a family of insects, order *Orthoptera*, Cuv. The posterior legs as well as the others are solely adapted for running, whence the name, from *cursor*, a runner. The earwigs and cockroaches are examples.

CURSO'RIUS, a genus of birds, order *Grallatoris*; family *Pressirostres*. The legs are long, and adapted for running, whence the name, from *cursor*, a runner.

CUR'TAIN. In *military affairs*, that part of a rampart which lies between two bastions.

CUR'TANA, the sword of Edward the Confessor, having its edge blunted, as an emblem of mercy.

CURTSEY or **COURTESY** OF ENGLAND, is the right of a husband to hold his wife's lands after her death for his life.

CUR'TATE DISTANCE. In *astronomy*, the distance of a planet's place from the sun or earth, reduced to the ecliptic, or the interval between the sun and earth, and that point where a perpendicular let fall from the planet, meets with the ecliptic.

CUR'ULE MAGISTRATES, were those of the greatest dignity in the Roman empire, and were distinguished by the privilege of sitting upon ivory chairs (*sellæ curules*) in the exercise of their functions.

CUR'VATURE. In *geometry*, the bending by which a line becomes a curve of any particular form and properties.

CURVE, from *curvo*, to bend. A *curve* or *curved line* is that of which no portion, however small, is straight. A *crooked line* may be either a curved line or the junction of two or more straight lines drawn in different directions. The variety of curves are innumerable, i.e., they have different degrees of *curvature*, but those most frequently referred to, besides the circle, are the *ellipsis*, the *parabola*, the *hyperbola*, and the *cycloid*. A *curve of double curvature* is one in which all the parts are not situated in the same plane, and which can only be traced upon a curve surface.

CURVET', Fr. *courbette*; It. *corvetta*; Sp.

corveta; a particular leap of a horse, when he raises both his fore legs at once, equally advanced, and as his fore legs are descending he raises his hind legs, so that all his four legs are up at once.

CUSP, from *cuspis*, a point; a point or horn of the moon or other luminary. This term is also applied to the pendants in the gothic style of architecture; assembled they form trefoils, quatrefoils, &c.

CUSPIDATE, Lat. *cuspidatus*, sharp-pointed; applied to leaves, &c. which terminate in a spine.

CUS'TOMARY FREEHOLD. In *law*, is a superior kind of copyhold, the tenant holding, as it is expressed, by copy of court roll, but not at the will of the lord.

CUS'TOM-HOUSE, the house or office where commodities are entered for importation or exportation; where the duties, bounties, or drawbacks payable or receivable upon such importation or exportation are paid, and where ships are cleared out, &c.

CUSTOM. In *law*, long established usage, which constitutes the unwritten law, and long consent, which gives it authority.

CUS'TOMS. In *commerce*, duties charged upon commodities on their being imported into or exported out of a country.

CUS'TOS (Latin), a keeper, as, (1). *C. brevium*, the principal clerk of the Court of Common Pleas, who keeps all the writs made returnable in that court; (2). *C. rotulorum*, an officer who has the care of the rolls and records of the sessions of peace; also of the commission of the peace.

CUS'TOS MES'SIUM. In *astronomy*, an asterism named in honour of the astronomer Messier, and in allusion to his name it is called the *Guardian of the Harvests*, Rt. asc. 35° and Decl. 68° N.

CUT'ICLE, Lat. *cutis*, skin. In *anatomy*, the scarf-skin. In *botany*, the thin vesicular membrane that covers the external surface of vegetables.

CUT'TER. In *marine language*, a small vessel with one mast, and sloop-rigged, constructed for swift sailing; also a small boat attached to a ship of war: it has six oars.

CUT'TLEFISH, the *sepia* of Linnæus; more strictly the *sepia* of Lamarck. See *SEPIA*.

CUT'TY-STOOL. In *Scottish kirks*, a small gallery near the roof (more commonly a bench or chair), painted black, in which the offenders against chastity are obliged to sit during the performance of the service for three sabbaths, subjected to the rebukes of the minister.

CUT-WATER. Of a *ship*, the sharp part of the head under the beak or figure.

CY'ANATE, a salt formed by the union of the cyanic acid with a salifiable base.

CY'ANIC ACID, an acid obtained by *Sorullas*, in 1829, from perchloride of *cyana-*

gen, by the action of hot water, which converts that substance into hydrochloric acid and cyanic acid. By evaporation the hydrochloric acid is driven off, and the cyanic acid is deposited in white rhomboidal crystals. It is a compound of one atom of cyanogen and two of oxygen.

CYANIDE, } a combination formed by
CYANODIDE, } cyanogen and a great
variety of bases, and exceedingly analogous to the *chlorides*. The term *cyanuret* is less objectionable.

CYANITE, from *κυανος*, blue. 1. A mineral of a blue or bluish-green colour, which occurs regularly crystallised, and also massive and disseminated. Constituents, 64 alumina, 34 silica, with some lime and oxide of iron.—2. A salt formed by the union of the cyanous acid with a base, as the *cyanite of baryta*.

CYANOGEN, called also *prussine*; a colourless gaseous compound discovered in 1815 by Gay-Lussac, and termed *cyanogen* from *κυανος*, blue, and *γενναω*, to generate, in consequence of its being essential to the formation of *Prussian blue*. It is obtained from dry *cyanuret of mercury*.

CYANOMETER, Gr., from *κυανος*, blue, and *μετρον*, measure. An instrument contrived by Saussure for determining the deepness of the tint of the atmosphere.

CYANOUS ACID, an acid composed of one atom of cyanogen and one atom of oxygen. It is obtained only in solution, and is little known.

CYANURET, the same with *cyanide* (q. v.).

CYANURIC ACID, an acid that may be obtained from *urea*. It is composed of carbon, 6; nitrogen, 3; hydrogen, 3; and oxygen, 6; condensed into one volume.

CYCAS, the *sago-plant*; a genus of two species, found in India and Japan. *Dicaea*—*Polyandria* (see 8400). Named from the *κυκας* of Theophrastus, a palm which was said to grow in Ethiopia.

CYCLAMEN, the *Sow-bread*; a genus of perennial plants. *Pentandria*—*Monogynia*. Name from *κυκλος*, circular, either on account of the round form of the leaves or of the roots.

CYCLE, from *κυκλος*, a circle; a period of numbers which regularly proceed from first to last, and then return to the first in a perpetual circle, as, (1.) The *C. of the moon*, called also the Metonic cycle, from its inventor Meton, and the golden number; this is a period of 19 years, which being completed, the new and full moons return to the same days of the month; (2.) The *C. of the sun* is a period of 28 years, which being elapsed, the dominical or Sunday letters return to their former place and proceed in the same order as before, according to the Julian calendar; (3.) The *C. of Indiction*

is a period of 15 years, at the end of which the Roman emperors imposed an extraordinary tax to pay the soldiers who were obliged to serve in the army for that time and no longer.

CYCLIC CHORUS, those who performed the songs and dances of the dithyrambic odes at Athens.

CYCLIC POETS, a succession of epic poets who followed Homer.

CYCLOGRAPH, from *κυκλος*, a circle, and *γραφω*, to describe, an instrument for describing the arcs of circles.

CYCLOID, from *κυκλος*, a circle, and *ειδος*, form; a transcendental curve generated by the revolution of a circle along a straight line, called also a *trochoid*. If we conceive the circle *acbx* to roll along the line *AB*, the point *a* being first at *A*, and ending at the point *B*, this point *a* will describe or pass through the curved line *AaB*, which curve line is the *cycloid*.

Properties, the line *AB* = the cir. of the circle *acbx*, the arc *ac* = the right line *cd*; the portion of the cycloid *ad* = double the chord *ac*, and the area of the whole cycloidal space *ABa* = thrice that of the generating circle.

CYCLOPEAN, pertaining to the *Cyclops*; vast; as *C. buildings*, which are formed of huge blocks of stone piled upon each, and constituting walls without cement.

CYCLOPEDIA, more correctly *encyclopedia*; a work containing accounts of the principal subjects in one or all departments of learning, art, or science.

CYCLOPTERUS, a genus of fishes; order *Malacopterygii subbrachiati*; family *Discoboli*. Name from *κυκλος*, a circle, and *πτερον*, a fin; the genus being marked by the ventrals being suspended round the pelvis, forming an oval and concave disc, used by the fish as a sucker to attach itself to rocks. Species, the Lumpucker (*C. lumpus*, Lin.)

CYCLOSOTOMA, a genus of air-breathing gastropods or snails.

CYONUS (Latin), a swan; a constellation bounded on the north by *Draco*, east by *Lacerta* and *Pegasus*, south by *Vulpecula* et *Anser*, and west by *Lyra*. It contains 81 stars, the most brilliant of which is *Deneb*. There are several fables about the origin of this name.

CYLINDER, from *cylindrus* (*κυλινδρος*, from *κυλινδω*, to roll), a solid having a circular base, and which base may be considered as carried upwards in a straight line, and continuing the circle

in a parallel direction. It is a circular prism, as a cone is a circular pyramid. When the base is elliptical it is called a *cylindroid*. When the sides are perpendicular to the base it is a *right cylinder*, otherwise it is an *oblique* one.

CYLINDRIC, CYLINDRICAL, having the form of a cylinder, as, (1.) A *C. ceiling* (vulgarly called a *waggon-headed ceiling*) is a ceiling vaulted in the shape of a segment of a cylinder; (2.) A *C. dome*, is an oblong dome, of which there are two kinds, the surmounted and surbated.

CYLINDROID, from *cylinder* and *ειδος*, form; a solid which approaches to the form of a cylinder, differing from it in having the bases elliptical, but parallel and equal. See *CYLINDER*.

CYMA. In *botany*, a form of inflorescence consisting of a solitary flower, seated in the axilla of dichotomous ramifications, as in *Sambucus*.

CYMA, Lat. from *κυμα*, a sprout. 1. In *botany*, a cyme; a sort of inflorescence consisting of several flower-stalks, all springing from one centre, but each stalk is variously subdivided, in which respect the cyma differs essentially from an umbel.—2. In *architecture*, an undulating moulding which is generally the upper one of a cornice, when it is called *cymatium*. The *cyma recta* is composed of a concave and convex moulding, the former being uppermost; in the *cyma reversa*, the convex is uppermost.

CYMATIUM, Lat. from *κυματιον*, the upper moulding of a cornice composed usually of a *cyma*. See *CYMA*.

CYMBAL, Lat. *cymbalum*; musical instrument used by the ancients, hollow, and made of brass, somewhat like our kettle-drum. The name is now given to a mean instrument used by vagrants, made of steel wire in a triangular form, on which are passed five rings, which are shifted along the triangle by an iron rod; it is supported by a ring in the right hand.

CYNANCHUM, a genus of plants. *Pentandria—Digynia*. Name from *κυανωχην*, the quinsy. The leaves of an Egyptian species is used to adulterate senna, and another species yields the Montpellier scammony, and the third yields the Ipecacuanha of the Isle of France.

CYNARACEÆ. In *botany*, a division of the group *Compositæ*.

CYNIC, from *κυνιος*, canine, having the qualities of a surly dog. The *cynics* of old prided themselves upon their contempt of everything which others valued, except virtue.

CYNIC SPASM, a sort of convulsion in which the patient imitates the howling of a dog (*κυνν*, a dog).

CYNIRS, a genus of hymenopterous in-

sects. Name from *κνιψ*, a gnat, from *κνισιν*, to hurt. The punctures which these insects make in plants to deposit their eggs give rise to those excrescences called *galls*. Those most commonly known are the gall-nut (*Aleppo-gall*) found on oak-trees, and the *bedeguar*, found on rose-trees. The perfect insect is often found in the gall-nut.

CYNOCEPHALUS, the generic name of the dog-headed monkeys (*κυνν*, a dog, and *κεφαλη*, a head). They are generally large, ferocious, and dangerous animals, found mostly in Africa. The Guinea Baboon (*C. papia*, Desm.) is an example.

CYNOMORIUM, a genus of plants. *Monœcia—Monandria*. The only known species is the *Fungus melitensis*, a small plant which grows in Sicily and Malta, and which is used in medicine.

CYNOSURE, *κυνοσουρα*, the dog's tail; the tail of *Ursa minor*: the constellation near the north pole, consisting of seven stars, four of which are disposed like the four wheels of a chariot, and the three lengthwise like the beam: hence called the *chariot* and *Charles' wain*.

CYPERACEÆ, a tribe of plants answering to the English *sedges*. The genus *Cyperus* is the type.

CYPERUS, a genus of plants. *Triandria—Monogynia*. Name from *κυπαρις*, a little round vessel, which the roots are said to resemble. The rush-nut and galangale are examples.

CYPHER. See *CIPHER*.

CYPHONISM, *κυων*, an instrument of punishment. A species of punishment anciently practised, which consisted in besmearing the criminal with honey, and then exposing him to insects.

CYPRÆA, the *cowry*; a genus of mollusks. Class *Gastropoda*, order *Pectinibranchiata*, family *Buccinoida*, Cuv. Animal, a slug; shell, a beautiful univalve; found in tropical seas. Name from *cyprius*, the shell being used in some places as money. See *COWRY*.

CYPRESS, a name common to all the species of the genus *Cypressus*, but especially applied to the *C. sempervirens* and *C. thyoides*, forest-trees found in the South of Europe, and in some parts of Asia and America. It grows to a great size, and is much valued for its timber.

CYPRINUS, a genus of fishes. Order *Malcopterygii Abdominales*, family *Cyprinidæ*. Name from *κυπρινος*, from *κυπρις*. Venus, in allusion to the beauty of several of the species, of which the carp (of which there are several varieties), the bream, the gudgeon, the tench, the sucker, and the dace, are examples.

CYPRIS, *κυπρις*, a genus of microscopic

crustaceans, inhabiting the waters of lakes and marshes. Their shelly coverings are found exceedingly abundant in certain clay beds of the Wealden, in the Sussex marble, &c.

CYPSALA, κυψαλη, a bee-hive. In botany, one-seeded, one-celled, indehiscent fruit, with the integuments of the seed not cohering with the endocarp.

CYRENIANS. The philosophers of a school founded at Cyrene, in the north of Africa, by Aristippus, a disciple of Socrates.

CYST, Lat. *cystis* (κυστις), a bag. 1. The urinary bladder.—2. The membranous bag containing any morbid substance.

CYSTIC, Lat. *cysticus*, relating to the urinary or gall bladder, as the *cystic oxide*, a peculiar animal product supposed to be generated in the kidneys.

CYSTICER'CUS, from κυστις, a bladder, and κυρεος, a tall; the tailed bladder-worm: a genus of worms of the hydatid tribe. Five of the species are found in the human body.

CYSTIT'OME, from κυστις, a cyst, and τεμνω, to cut; a surgical instrument for opening the capsule of the crystalline lens.

CYSTOT'OMY, from κυστις, the bladder, and τεμνω, to cut; the operation of cutting into the bladder, and of opening incysted tumours.

CYTRINE, a bitter, nauseous, emetic, and poisonous principle, detected in the seeds of the *Cytisus laburnum*.

CYT'IBUS, the *Laburnum* or *Bean trefoil tree*: a genus of shrubs. *Diadelpbia—Decandria*. Name from κυτις, genus *Fru-ticis*. The pigeon pea-tree is the *C. cajan*.

CYZIC'ENUS. Anciently, a large hall decorated with sculpture.

CZAR, the title assumed by the Emperor of Russia. The word is Slavonic, and is nearly equivalent to *king*.

CZAR'INA, the title of the Empress of Russia.

D.

D, the fourth letter of the alphabet, as a numeral stands for 500; with a dash over it thus \overline{D} , it stands for 5,000. As a sign, it is one of the Dominical or Sunday letters; and in *music*, it is the nominal of the second note of the natural diatonic scale of C.

DAAL'DER, a Dutch silver coin, value 2s. 7d.

DAB, a name common to all the species of the genus *Pleuronectes*, but especially applied to the *P. limanda*, Linn., a fish, called also the *salt-water flounder* or *fluke*. It is a flat fish, found frequently on the sandy banks of the British coasts.

DA CAPO. In *music*, an Italian phrase signifying that the first part of the tune is to be repeated from the beginning (*from the head*).

DACE, a river fish, the *Cyprinus leuciscus*, Lin. It is longer and more slender than the roach.

DA'COITS, an East Indian word signifying gang-robbers.

DACTILOGLYPH, Gr. from δακτυλος, a ring, and γλυφω, I engrave; the inscription of the name of the artist on a gem.

DACTILIOGRAPHY (Gr.), the science of gem engraving.

DAC'TYL, Lat. *dactylus*, a poetical foot consisting of one long syllable and two short ones.

DAC'TYLIC, an epithet for verses which end with a dactyl instead of a spondee.

DACTYLIOTHE'CA, Lat. from δακτυλιοθηκη, a cabinet or case containing finger-rings, (δακτυλιος, a ring), engraved gems, and other jewellery.

DACTYLOPTERUS, a genus of acanthopterygious fishes, celebrated under the name of *flying-fishes*. Name from δακτυλος, a finger, and πτερον, a fin or wing: the peculiar construction of the subpectoral rays enables the fish to rise above the water and fly for a short distance.

DACTYLOLOG'Y, from δακτυλος, a finger, and λογος, discourse: finger-language (q. v.)

DAC'TYLOS, δακτυλος; the shortest measure among the Greeks, being the fourth part of a palm.

DA'DO (It.), a die; the square or cubiform part of the pedestal of a column.

DE'DALUS. In *fabled history*, the most ancient statuary, architect, and mechanist of Greece.

DEMONOMANIA, that species of melancholy in which the patient supposes himself to be under demoniacal influence.

DAFFY'S ELIXIR, compound tincture of senna, made with treacle instead of sugar-candy, and with the addition of aniseed and elecampane root.

DA'GON, one of the principal divinities of the ancient Phœnicians and Syrians, and especially of the Philistines. His image was represented upwards in the human shape, and downwards as a fish.

DAGUERRETYPE, a species of photogenic drawing, in which the impressions are taken by means of the camera obscura, on plates of silvered copper, invented by M. Daguerre.

The metallic plate is exposed, in a well-closed box, to the action of the vapour of iodine, by which means it becomes covered with an extremely thin layer of ioduretted silver. The plate thus prepared, is placed in the dark chamber of the camera obscura, in such

a position that the image of the object to be represented is perfectly clear and distinct upon it. In a short time the plate is withdrawn, and is now exposed at an angle of 45° to the action of the vapour of mercury, at 60° Reaumur, and finally plunged into a solution of hyposulphate of soda. The picture is now complete.

DAHLIA (so named from Dahl, a Swedish botanist), a genus of flowering perennials. *Syngenesia*—*Poly. superflua*. Natural order *Compositæ*. Mexico.

DAHLI'NE, the same as *Inuline*. The fecula obtained from elecampane, analogous in many respects to starch.

DAISY, day's-eye, a plant, the *Bellis perennis* of several varieties, thus named from its eye-like appearance, and expansion during the day. The blue daisy belongs to the genus *Globularia*, as does the globe daisy; and the ox-eye daisy to the genus *Chrysanthemum*.

DAKIR. In *English statutes*, ten hides, or the twentieth part of a last of hides.

DAL'BY'S CARMINATIVE, a nostrum too much used as a carminative for children. It consists of magnesia, oils of peppermint, nutmeg, and aniseed; tinctures of castor, assafoetida, and opium; and spirit of penny-royal, with peppermint-water *ad libitum*.

DALMA'TICA, a long white gown with sleeves, worn by deacons in the Roman Catholic church.

DAM, Dutch *dam*, Germ. *damm*, a pond. A water-tight mole, bank, or weir, erected across a river or stream, for the purpose of raising the level of the water by confining it, and which is employed for various purposes, as for irrigation, impelling water-wheels, &c.

DAM'AGE-FEASANT, in *law*. Is when one person's beasts get into another man's grounds, without license of the owner or occupier of the ground, and do damage by feeding or otherwise to the grass, corn, woods, &c., in which case the party injured may distrain or impound them.

DA'MAN, an animal resembling the rhinoceros in miniature. See *HYRAX*.

DAMAR, a kind of indurate pitch or turpentine, exuding spontaneously from various trees, indigenous to most of the Indian islands. Different trees produce different species of the resin. One is called *damar-batu* in Malay, and *damar-selo* in Javanese, which means hard or stony resin; another in common use is *damar-putch*, or white resin.

DAMASCUS BLADES, swords or scimitars, presenting upon their surface a variegated appearance of watering, as white, silvery, or black veins, in fine lines or fillets, fibrous, crossed, interlaced, or parallel. They are brought from the East, being

fabricated chiefly at Damascus, whence their name.

DAM'ASK, a silk stuff with a raised pattern, consisting of figures and flowers: originally from Damascus, whence the name.

DAMASKEE'NING, the art of ornamenting iron, steel, &c., by making incisions upon the surface of the article, and filling them up with gold or silver wire; chiefly used in enriching sword-blades, locks of pistols, &c. Originally practised at Damascus.

DAM'ASK-STEEL. A fine sort of steel from the Levant, used for swords and cutlass-blades, called more correctly *Damascus steel*. See *DAMASCUS BLADES*.

DAM'ASSIN, a sort of damask, with gold and silver flowers woven in the warp and woof.

DAME-WORT, or **DAME'S-VIOLET**, a plant of the genus *Hesperis*, called also queen's gillyflower or rocket. It is remarkable for its fragrance, and ladies are fond of having it in their apartments.

DA'MIANISTS. In *church history*, a sect who denied any distinction in the God-head.

DAM'FER. 1. A valve or sliding-plate in a furnace, to regulate the draught, and thus consequently the heat.—2. A part in a piano-forte, by which the vibration of a string is modified.

DAMPS. In *mining*, noxious exhalations, or rather gases, are so called from Germ. *dampf*, vapour.

There are two principal kinds of mine gases: the *choke-damp*, or carbonic acid; and the *fire-damp*, or carburetted hydrogen.

DANCETTE'. In *heraldry*, is when the outline of any bordure or ordinary is very largely indented.

DANDEL'ION (see *LEONTODON*), a name corrupted of *dent de lion*, or *dens leonis*, from the shape of the jagged leaves of the plant.

DANE'GELT, from *Dane*, and *gelt* or *geld*, money. An annual tax formerly levied on the English nation, for maintaining forces to oppose the Danes. It was made a national tax by Ethelred, and abolished by Stephen.

DA'NICK, an Arabian weight of eight grains.

DAN'NEBROG, an ancient Danish order of knighthood.

DA'OURITE, a mineral called also *rubellite*, and *siberite*, by Lermine. It is a variety of the red schorl of Siberia. Silica, alumina, with oxides of iron, and manganese.

DAPH'NE, the laurel or bay-tree. A genus. *Octandria*—*Monogynia*. The mezereon or widow-wall, and spurge-laurel, are British species. Name. *δαφνη*, from *δαν*, to burn, and *φωνη*, a noise, because

the leaves crepitate when burning. *Δαφν* is also the name of a nymph said to have been changed into the laurel.

ΔΑΦΝΕΦΗΘΡΑ. In *archæology*, a Bœotian festival in honour of Apollo, from *δαφν*, the laurel-tree, and *φεθω*, to offer, boughs of laurel being offered to the god.

ΔΑΨΤΙ. In *logic*, an arbitrary term expressing the first mood of the third figure of syllogisms, where the first two propositions are universal and affirmative and the last a particular affirmative.

ΔΑΨΙC, an old Persian gold coin, said to have been struck by Darius.

ΔΑΨΙΙ. In *logic*, an arbitrary term for one of the affirmative moods in the first figure of syllogisms.

ΔΑΨΗΛ. In *botany*, a name common to all the species of the genus *Lolium*. The rye-grass is a well-known species.

ΔΑΨΙS, excoriation; from *δισω*, to excoriate; the removal of the skin from the subjacent texture, also the morbid abrasion of the cuticle.

ΔΑΨΤOS, *Δαψτος*, from *δισω*, to excoriate; a texture approaching to muscle, under the skin of the scrotum, by which the skin of the scrotum is corrugated and relaxed.

DASH. In *music*, a mark thus ' , denoting that the notes over which it is placed are to be played in a short, distinct manner.

ΔΑΨΥΨΥS, an animal of the marsupial order nearly the size of a badger. The *Didelphis ursina*, Harr., or Ursine opossum, of Van Diemen's Land, is an example. Name from *δασυς* and *ουρα*, the tail, which is every where covered with long hairs, not being prehensile.

ΔΑΨΑ, plural of *datum*, given; a mathematical term for such things or quantities as are given or known, in order thereby to find other things that are unknown.

ΔΑΨΑΡΥ, an officer in the chancery of Rome, who affixes the *Datum Roma* to the Pope's bulls.

DATE-TREE, the *Phoenix dactylifera*, a species of palm common in North Africa and West Asia, growing sometimes to the height of 100 feet, and yielding a fruit which forms a principal article of food in those countries. The best dates are brought from Tunis and Persia.

ΔΑΨΗΛΙΤΗ, *ΔΑΨΗΛΙΤΗ*, a mineral, a borosilicate of lime, thus named from *δαβαλος*; turbid, because the crystals are not transparent. It is the *Dystom-spath* of Mohs.

ΔΑΨΙS. In *logic*, an arbitrary term for an affirmative mode of syllogisms in the third figure.

ΔΑΨΥΜ-LINE. In *surveying*, the base or horizontal line of a section (*datum*, given), from which all heights and depths

are calculated, and which is determined by the level, and bears reference to some fixed point in the line.

ΔΑΨΥΡΙΑ, *ΔΑΨΥΡΙΜΕ*, an alkaline substance obtained from the *Datura stramonium* or common thorn-apple.

ΔΑΨΥC, the carrot; a genus of umbelliferous plants. *Pentandria* — *Digynia*. Name *απο του δαυσιν*, from its relieving the colic, and discussing flatulencies.

ΔΑΨΥΡΙΝ, the title of the heir apparent to the crown of France before the revolution.

ΔΑΨΥΤ. In a ship, a short boom fitted to the fore-channel, to hoist the flukes of the anchor to the bow, which is called fishing the anchor.

DAY. In *astronomy*, an apparent day is the interval between two successive transits of the sun's centre over the same meridian, which interval is subject to continual variations, owing to the eccentricity of the earth's orbit and the obliquity of the ecliptic to the equator. A mean day is the interval that would be observed between two successive transits of the sun's centre over the same meridian, if the earth's orbit were circular, and the sun always in the equinoctial. The civil day begins at midnight, the astronomical day at noon.

DAY OF BAY. In *architecture*, one of the lights or compartments between mullion and mullion in the great windows of the pointed or gothic style of architecture.

DAY-COAL, a name given by miners to the upper stratum of coal.

DAY-FLY, the *ephemera*, Lin., an insect so called from the shortness of its life, which rarely exceeds a day.

DAY-RULE. In *law*, an order of court permitting a prisoner in the King's Bench prison, &c., to go for one day beyond the bounds of the prison.

DAY'S WORK. In *navigation*, the reckoning of a ship's course for 24 hours from noon till noon.

DAYS IN BANK, days of appearance in the Court of Common Bench.

DAYS OF GRACE. 1. In *law*, three days granted by the court beyond the time named in the writ, in which the person summoned may appear and answer.—

2. In *commercial affairs*, a customary number of days, in Britain three, for the payment of a bill of exchange after the same becomes due.

DAY-WRIT. See *DAY-RULE*.

D.D. (divinitatis doctor), doctor of divinity.

DEACON. 1. In the Church of England, the lowest of the three orders of clergy (deacons, priests, and bishops) in the Church of England. A deacon is not capable of an ecclesiastical promotion, yet he may be chaplain to a family, curate to a beneficed clergyman, or lecturer to a

parish church.—2. In *Scotland*, an overseer of the poor; also the master of an incorporate trade.

DEAD-BEAT. In *clock-work*, a scapement invented with a view to lessen the effect of the wheel-work on the motion of the pendulum.

DEAD-EYES (*Dead man's eyes*). In *nautical language*, a kind of blocks with many holes in them, whereby the shrouds are fastened to the chains.

DEAD-FLAT. In *naval architecture*, the midship section. See *BODY-PLAN*.

DEAD-LIGHTS. In *ships*, strong wooden ports made to suit the cabin-windows, in which they are fixed, to prevent the water from entering the ship in a storm.

DEAD-RECKONING. In *navigation*, the difference between the place of a ship by the log and astronomical observations, owing to currents, &c.

DEAD-RISING, the parts of a ship's floor throughout her length, where the floor timber is terminated in the lower futtock, called also the *Rising line*.

DEAD-WATER, the eddy-water immediately at the stern of a ship while under way.

DEAD-WOOD, a layer formed of blocks of timber laid on the keel of a ship, on which are placed the floor timbers.

DEAD-WORKS, the parts of a ship above the surface of the water when balanced for a voyage.

DEAF'ENING, sound-boarding; a method of preventing the passage of sound through wooden partitions. See *PUGGING*.

DEALS, or DEAL-BOARDS, a thin sort of fir planks, formed by sawing the trunk of a tree into longitudinal divisions of greater or less thickness. They are imported from Dantzic, and many other parts of the Baltic, and from North America. Those from Norway are the best. The Russian standard deal is 12 feet long, 11 inches wide, and $1\frac{1}{2}$ inches thick; the Christiana standard deal is 11 feet long, 9 inches wide, and $1\frac{1}{2}$ inches thick; at Dram the length is 10 feet, and the thickness $1\frac{1}{2}$ inches.

DEAN, a dignitary of the Church of England next to a bishop. The *Dean and chapter* form the bishop's council. The term is *Arm. dean*, from *Lat. decanus*, the leader of a file ten deep: the dean was originally set over ten canons or prebendaries. An officer in the universities also bears the title of *dean*.

DEATH-WATCH, a small insect of the beetle tribe, which inhabits old furniture, &c., penetrating it with many small holes, and which has the power of producing a noise like the ticking of a watch: this noise is the call which the male insect makes to his mate, and is interpreted by superstitious people into a presage of death to some individual of the family.

DEBA'CLE, a French term used by geologists to designate a violent rush of waters which, overcoming all opposing barriers, carries with it stones, rocks, &c., spreading them in all directions.

DEBEN'TURE, from *debeo*, to owe. In *law*, a writ or note drawn upon government. The debentures signed by the custom officers, and given to the exporter of goods on which a bounty or drawback is allowed, bearing that the exporter has complied with the required regulations, entitle the exporter to such bounty.—*Debentured goods* are those upon which the drawback has been paid.

DEC'ACHORD, DECACHOR'DON, from *δεκα*, ten, and *χορδή*, a string; a musical instrument of ten strings.

DEC'AGON, from *δεκα*, ten, and *γωνία*, an angle; a plain geometrical figure of ten sides and ten angles.

DEC'AGRAM, from *deca*, ten, and *gram*; a French weight of ten grammes, or $15\frac{1}{4}$ grains.

DECAGYN'IA, from *δεκα*, ten, and *γυνή*, a woman; an order of plants in the sexual system of the class *Decandria*, having ten pistils.

DECAHE'DRON, from *δεκα*, ten, and *ἑδρα*, a base; a geometrical figure or body having ten sides.

DECAL'ITER, from *deca* and *litre*; a French measure of capacity equal to ten litres.

DECAM'ERON, from *δεκα*, ten, and *ἡμέρα*, a day; a work containing the actions or conversations of ten days, as the *Decameron* of Boccaccio, which consists of 100 tales related in ten days.

DECAM'ETER, from *δεκα*, ten, and *μετρον*, measure; a French measure of length equal to ten metres.

DECAN'DRIA, from *δεκα*, ten, and *ανηρ*, a man; the name of a class, and also of an order of plants in the sexual system. Decandrian plants have ten stamens in the flower.

DECAPHYL'LOUS, from *δεκα*, ten, and *φυλλον*, a leaf; having ten leaves.

DECA'ODA, from *δεκα*, ten, and *πους*, a foot; an order of crustaceans, including the lobster, crab, crawfish, shrimp, &c.

DE'CARBONISATION OF CAST IRON. This process is resorted to, in order to convert cast iron into steel and malleable iron.

DECAS'TICK, from *δεκα*, ten, and *στιχος* a verse; a poem consisting of ten lines.

DEC'ASTYLE, from *δεκα*, ten, and *στολος*, a column; a building having ten columns in front.

DE'CASTYL'ABIC. Having ten syllables. DECEMLOC'ULAR, *Lat. decemlocularis*, ten-celled: applied to capsules.

DECEM'BER, from *decem*, ten; the last or

twelfth month of the modern year, but the tenth of the Roman year.

DECEM'VIRATE, Lat. *decemviratus*; the office or term of office of the decemvirs (*decemviri*) or ten magistrates of Rome: they had absolute authority for two years.

DECEM'NARY, Lat. *decennium*, from *decem*; a tithing consisting of ten freeholders and their families: ten decennaries constituted a hundred.

DECEPTIVE CADENCE. In *music*, a cadence in which the final close is avoided by varying the final chord.

DECIDUOUS, Lat. *deciduus*, falling as leaves do in autumn. A calyx is said to be *deciduous* when it falls or decays along with the flower-petals, and *permanent* when it remains after these are fallen. Applied also to the temporary parts of animals, as hair, horn, teeth, &c.

DE'CIGRAM, a French weight of one tenth of a grain.

DE'CIL, a position of two planets when they are distant from each other a tenth of the zodiac.

DECI'LITER, a French measure of capacity equal to one tenth of a liter.

DECIM'AL, from *decimus*, tenth, *decem*, ten, increasing or diminishing by ten; as *decimal arithmetic*, which proceeds on the scale of ten; or in which we count by periods of tens; *decimal fractions*, or more concisely *decimals*, are such fractions as have 10, 100, 1000, &c., for their denominators, but which, for the sake of brevity, are omitted in writing, and the numerator only is expressed with a point on the left of it, thus:

$$.2 = \frac{2}{10}, .02 = \frac{2}{100}, \&c.$$

and which has always as many figures as there are ciphers in the denominator.—A *decimal scale* is one divided into tenths, used by draftsmen to regulate the dimensions of their drawings. We also speak of the *decimal scale* of numbers, and the *decimal notation*, in contradistinction to the *duodecimal*, *binary*, and other scales of notation.

DECIM'ETER, a French measure of length equal to the tenth of a meter.

DECIMO-SEXTO (Lat.) A book is in *decimo-sexto* when a sheet is folded into 16 leaves.

DECK, Ger. *decken*, Sax. *thec-an*, to cover, from Lat. *tectum*, a roof; the floor of a ship. Small vessels have only one deck, large vessels have two, or three decks, as a *three-decker*; i. e. carrying two entire tiers of guns, or three such tiers.

DECKED. In *heraldry*, a term applied to birds when their feathers are trimmed at the edges with a small line of another colour.

DECLARA'TION, from *de* and *claro*, to make clear. 1. In *law*, that part of the process or pleadings in which a statement

is made of the plaintiff's complaint.—2. In *politics*, a proclamation intimating something of national importance.

DECLEN'SION, from *de* and *clino*, to lean; declination. This is the word commonly used in grammar to denote the change or inflexion of nouns and adjectives through their terminations.

DECLINA'TION, Lat. *declinatio*. In *astronomy*, the declination of a star, or any point in the heavens, is its shortest distance from the equator corresponding with *latitude* on a terrestrial globe.—In *navigation*, the declination of the needle or compass is its variation from the true meridian of any place to the east or west.—In *dialling*, the declination of a wall or plane is an arc of the horizon contained between the plane and the prime vertical circle, if reckoned from east or west, or between the meridian and the plane if reckoned from the north or south.—In *grammar*, see **DECLENSION**.

DECLINA'TOR, an instrument for determining the declination or inclination of reclining planes.

DECLIN'ATORY PLEA. In *law*, a plea before trial or conviction, intended to show that the party is not liable to the penalty of the law, or is specially exempted from the jurisdiction of the court.

DECLIN'ERS, or **DECLINING DIALS**, those which cut either the plane of the prime vertical circle or plane of the horizon obliquely.

DECLIN'ING, **DECLIN'ATE** (*obliquus descendens*), descending obliquely. Applied to stems, pericaps, &c. of plants, when bent like a bow with the arch downwards.

DECOLORA'TION, a term adopted from the French, signifying the deprivation of any substance of its colour. Thus indigo in solution is *decolorated* by charcoal.

DECOMPOS'ITE, a natural class of plants, consisting of such as have decomposite leaves.

DECOM'POSITE, } Lat. *decompositus*, doubly
DECOM'POUND, } compound. Applied to leaves of plants, when the primary leaf is so divided that each part forms a compound leaf; and to flowers which contain within a common calyx several smaller calyces.

DECOMPOSITION, from *de* and *compono*, to disunite. 1. The separation of the component parts or principles of any compound body. See **AFFINITY**.—2. In *mechanics*, the decomposition of forces is the resolving of one force into several others of which the resultant is equal to that force.—3. *Decomposition of light*, the separation of a beam of light into the different rays which exhibit the prismatic colours.

DECRE'E, Lat. *decretum*, a judicial decision, sentence, or determination; as a *decree* of the court of Chancery: an edict

or law made by a council for regulating any business within their jurisdiction, as the *decrees* of the ecclesiastical courts.

DECREET. In *Scotch law*, the decree of a court.

DECREMENT, Lat. *decrementum*, gradual decrease, the quantity lost by decreasing. In *mathematics*, the small parts by which a quantity decreases. In *crystallography*, when the additions do not cover the whole surface of a primary crystalline form, rows of molecules being omitted on the angles or edges of the superimposed laminae, such omission is called *decrement*, and gives rise to the secondary forms of crystals. *Decrement*, equal of life, is a phrase employed in the doctrine of annuities, signifying that of a given number of lives the periodical decrease conforms to certain data, and may therefore be made the subject of arithmetical calculation.

DECRESCENDO. In *music*, an Italian term, the opposite of *crescendo* (q. v.).

DECRETAL, a letter from the pope, determining some point or question in ecclesiastical polity. The *decretals* form the second part of the canon law.

DECUMBENT, Lat. *decumbens*, lying down, drooping. A term applied to flowers which incline to one side and downwards.

DECURRENT, Lat. *decurrens*, running down. Applied to leaves which run down the stem in a leafy border or wing, as in many thistles; and to leaf-stalks, as in *Pisum ochrus*.

DECURSIVE, Lat. *decursivus*, extending downwards. Applied to leaves of which the middle nerve only runs down the stem; also to a style, the base of which descends on one side of the ovary.

DECURSIVELY PINNATE, a term applied to leaves having their leaflets decurrent, or running along the petiole.

DECUSATE, Lat. *decussatus*, crossed after the manner of an X. Applied to leaves and spines which are in pairs, alternately crossing each other; and to striae intersecting each other at acute angles.

DEDALUS, from *Dædalus*, the Athenian, who invented sails or wings. Having a margin with various windings and turnings, of a beautiful texture. Applied to leaves of plants.

DEDMUS POTESTA'TEM. In *law*, a commission for the speeding of an act, appertaining to a judge or court.

DEED. In *law*, a written contract, signed, attested, sealed, and delivered.

DEEMSTER, a judge in the Isle of Man and in Jersey. The *deemsters* decide on life and property, and, with the advice of the keys, declare what is law on common emergencies.

DEEP SEA-LINE, a small line, with a plummet at the end of it, to sound with.

The plummet is hollow at the head, and has a quantity of tallow put into it to bring up gravel, shells, &c. from the bottom, to ascertain the nature of the ground.

DEEP-WAISTED, the distinguishing fabric of a ship's decks, when the quarter-deck and fore-castle are elevated from four to six feet above the level of the upper main-deck, so as to leave a vacant space called the *waist*, on the middle of the upper deck.

DEER, from Sax. *deor*, an untamed beast. A name common to all the species of the genus *Cervus*, Lin., but especially applied to the fallow-deer, common stag, reindeer, axis, and roebuck. The flesh is called *venison*, and is highly valued.

DE FACTO (Lat.), in deed or fact, in contradistinction to *de jure*, where a thing is only so in law or justice. A king *de facto* has possession of the crown, a king *de jure* has a right to it, but may never possess it.

DEFAULT. In *law*, non-appearance in court on the day assigned; also extended to omission of that which ought to have been done. The term is Fr. *default*, from *defaillir*, to fail.

DEFEASANCE (Norm.), from *defaire*, to undo, a rendering null. In *law*, a condition relating to a deed, which being performed, the deed is defeated and rendered void.

DEFECTIVE FIFTH. In *music*, an interval containing a semitone less than the perfect fifth.

DEFENDER OF THE FAITH, a title assumed by the sovereigns of England, bestowed originally on Henry VIII.

DEFERENT, Lat. *deferens*, carrying; a term employed in *ancient astronomy*, to denote a circle invented to account for the eccentricity, perigee, and apogee of the planets.

DEFICIENT NUMBERS, are such that the sum of their aliquot parts is less than the numbers themselves. Thus 8 is a deficient number, as the sum of its aliquot parts, 1, 2, 4, is only 7.

DEFLAGRATION, from *deflagro*, to burn; a rapid combustion, as that which takes place when sulphur or powdered charcoal is thrown into melted nitre.

DEFLAGRATOR, a galvanic instrument for producing intense light and heat.

DEFLORATE, Lat. *defloratus*, from *defloresco*, to shed the blossoms; a term applied to the anthers of flowers when they have shed their pollen, and to plants when their flowers are fallen.

DEFLUXION, Lat. *defluxio*, a flowing down; a term used by the humoral pathologists to express a descent of the humours from a superior to an inferior part.

DEFOLIATION, from *de* and *folium*, a leaf; the shedding of leaves, applied technically to the autumnal season.

DEFORCEMENT. 1. In *England*, the holding of lands or tenements to which another person has a right.—2. In *Scotland*, a resisting of an officer in the execution of law.

DEFTER-DAR (English), book-keeper. The Turkish title of the Chancellor of the Exchequer.

DEGRADATION, Fr., from *dégrader*. 1. The depriving a person of his dignity and degree: thus an officer is *degraded* when he is cashiered or deprived of his commission.—2. In *painting*, a lessening and obscuring of distant objects in a landscape, that they may appear as they would do to an eye placed at a distance.—3. In *geology*, the wearing away of rocks, strata, &c., by the action of water, &c.

DEGRADÉD. In *heraldry*, an epithet for a cross which has steps at each end.

DEGRÉ, from *gradus*, a step; Fr. *degré*. 1. In *geometry*, the 360th part of the circumference of a circle, denoted by a small ° near the top of the figure, thus, 25°. Each degree is divided into 60 minutes, and each minute into 60 seconds. (*See ANGLE*).—2. In *algebra*, a term applied to equations, to distinguish their order. Thus, if the highest exponent of the unknown quantity be 3, the equation is said to be of the *third degree*.—3. In *universities*, a title of honour conferred on students as a testimony of their proficiency in literature and science, giving them a kind of rank and entitling them to certain privileges, usually evinced by a diploma.—4. In *grammar* (*see COMPARISON*).—5. In *geography*, a *degree of latitude* is measured upon the meridian to the north or south. A *degree of longitude* is a degree of the equator, or of any of its parallel circles.—6. In *music*, the small intervals of which the concords are composed.

DEHISCENT, Lat. *dehiscens*, gaping; applied in *botany* to capsules which split and gape wide when ripe.

DEIPNOSOPHISTS, a sect of ancient philosophers celebrated for their learned conversations at meals, whence the name from *δειπνον*, a feast, and *σοφιστης*, a sophist.

DEIST, a person who believes in the existence of an eternal, infinite, independent, intelligent Being (*Deus*), and who, acknowledging all the obligations and duties of natural religion and the necessity of a general moral providence, denies revealed religion.

DEI JUDICIUM, judgment of God; the old Saxon trial by ordeal, thus named as being considered an appeal to God for the justice of a cause.

DE JURE (Lat.), of right. *See DE FACTO*.

DEL CREDERE, an Italian term used in commerce to express the guarantee given

by factors, who for an additional premium warrant the solvency of the parties to whom they sell goods upon credit.

DELE, Lat., imperative of *deleo*, blot out or erase.

DEL'EGATE (*see LEGATE*), a commissioner appointed by the sovereign to hear and determine appeals from the ecclesiastical courts. The *Court of Delegates* determine appeals in all ecclesiastical causes by the archbishops, and in places exempt; also when sentence is given in the Admiral's Court in suits civil and marine by order of the civil law.

DELEGATION. In law, from *de* and *lego*, to send; the assignment of a debt to another.

DELFT, DELFT, a coarse species of porcelain originally manufactured at Delft in Holland, hence called *Delft-ware*. It is now rarely used in this country.

DELICACY. In the *fine arts*, minute accuracy as opposed to strength or force.

DELIQUESCENCE, from *deliquesco*, to melt down; deliquation or a spontaneous assumption of the fluid state by certain saline substances when left exposed to the air, in consequence of the water which they attract from it.

DELIRIUM, Lat. from *de* and *liro*, to wander; the confusion of ideas which occurs in the progress of diseases from disturbed functions of the brain. It is either violent and frantic (*delirium ferox*), as in acute inflammation of the brain, or low and muttering (*typhomania*), as in low fever. *Delirium tremens* is an affection of the brain nearly peculiar to drunkards.

DELPHINE, DELPHINIA, the vegeto-alkaline principle of the plant *Staves-acre* (*Delphinium staphysagria*).

DELPHINE EDITION. } In *bibliography*,
DELPHINIAN EDITION. } the name given to those editions of the classics, printed during the reign of Louis XIV. for the use of the dauphin (in *usum delphini*). The Latin is arranged in the margin according to the modern idiom.

DELPHINIUM, the *Larkspur*, a genus of hardy plants. *Polyandria*—*Trigynia*. Named from *δελφιν*, the dolphin, the flower being thought to resemble a dolphin's head; above 30 species.

DELPHINUS, Δελφιν, the dolphin. 1. In *zoology*, a genus of cetaceous mammalia, which in the arrangement of Linnæus comprises the sub-genera *Delphinus* (dolphins properly so called), and *Phocaena* (porpoises), of Cuvier.—2. In *astronomy*, a constellation in the northern hemisphere, thus named from the poetical fable that the dolphin was translated to the celestial regions by Neptune.

DELTA, the Greek letter Δ. 1. In *anatomy*, the delphys has been so named from its shape.—2. In *geology*, an alluvial for-

mation at the mouth of a river usually approaching the form of a Δ . The delta of the Nile is an example.

DEL'TOID, from $\delta\epsilon\lambda\tau\alpha\varsigma$, the letter Δ , and $\acute{\alpha}\delta\omicron\varsigma$, form, delta-like, triangular. Applied, in *anatomy*, to a thick triangular muscle of the shoulder; and in *botany*, to trowel-shaped leaves, &c.

DELTOID'S. 1. In *botany*, plants having deltoid leaves.—2. In *entomology*, a tribe of lepidoptera, belonging to the genus *Phalena*, Lin., and forming the sub-genus *Herminia*, Lat. The wings and body form a sort of delta, marked by a re-entering angle on the posterior side.

DELU'BRUM, the most sacred part of ancient temples, where the images of the sundry gods were.

DEMAN'DANT. In *law*, the pursuer in real actions, in distinction from *plaintiff*.

DEMEN'TIA (Lat.), from *de*, and *mens*, the mind. A form of insanity, in which the powers of continued attention and reflection are lost: sometimes an accompaniment of old age.

DEMESNE. DEMAIN. In *law*, lands which are next or adjacent to the lord of the manor's mansion-house, and which he keeps in his own hands. The term appears to be from *maison*, house.

DEM'I-CA'DENCE. In *music*, an imperfect cadence, or one which falls on any other than the key-note.

DEM'I-CULVERI'N, a piece of ordnance. The least is $4\frac{1}{2}$ inches bore, 10 feet long, and carries a ball 9 lbs. in weight. The largest is $4\frac{1}{2}$ inches bore, 10 feet 4 inches in length, and carries a ball of 12 lbs. 11 oz.

DEM'I-DIS'TANCE. In *fortification*, the distance between the outward polygons and the flanks.

DEM'I-DI'TONE. In *music*, a minor third.

DEM'I-GORGE. In *fortification*, that part of the polygon which remains after the flank is raised, and goes from the curtain to the angle of the polygon. See *GORGE*.

DEM'I-JOHN, a glass vessel or bottle inclosed in wicker-work.

DEM'I-LUNE. In *fortification*, a half-moon, a defence usually attached exteriorly to the posters of a ravelin. It is now generally called *lunette* (q. v.).

DEM'I-METO'PE. In *architecture*, a half-metope found at the retiring or projecting angles of a Doric frieze.

DEM'I-QUA'VER, a note in music of half the length of a quaver.

DEM'I-RELIE'VO. In *sculpture*, a kind of relievo, wherein the figure rises from the plane, as if it had been cut in two, and only one half fixed to the plane.

DEM'I-SEM'I-QUA'VER, a note in music, equal in length to half a semi-quaver.

DEM'I-TINT. In *painting*, a tint representing the medium between light and shade.

DEM'I-UR'GUS, Gr., from $\delta\eta\mu\omicron\varsigma$, people, and $\epsilon\gamma\gamma\upsilon\varsigma$, work. An artificer employed in ordinary handicraft.

DEM'I-VILL, a half-vill, consisting of five freemen or frank pledges.

DEM'I-VOLT, one of the artificial motions of a horse, in which he raises his fore-legs in a particular manner.

DEMISE, Fr. *démis*, *démise*, from *démettre*, literally a laying down or removing. The death of a king or queen regnant, and the transfer of the royal authority to a successor, is termed the *demise of the crown*. In *law*, a transfer of an estate by lease or will is termed a *demise*; and where there are mutual leases made from one to another, of the same lands or something out of it, the conveyance is termed a *demise and re-demise*.

DEMOCRACY, from $\delta\eta\mu\omicron\varsigma$, people, and $\kappa\alpha\tau\alpha$, to govern, government by the people; one of the three forms of government; that in which the supreme power remains in the hands of the people.

DEM'O-GON'GON, $\delta\alpha\mu\omicron\gamma\omicron\varsigma$, a demon, $\gamma\omicron\gamma\omicron\varsigma$, terrible. A mysterious divinity of antiquity, who was an object rather of terror than of worship.

DEM'ON, $\delta\epsilon\mu\omicron\gamma\omicron\varsigma$, $\delta\alpha\mu\omicron\gamma\omicron\varsigma$. In *mythology*, demons were spirits or genii, who appeared to men either to do them service or hurt, and which were therefore objects of worship. The demons of the Platonists are those immaterial beings since called angels; those of the New Testament were the tormentors of men: hence, the word, in modern usage, has come to signify an evil spirit or genius, which has the power of influencing the conduct and fortunes of mankind.

DEM'ONIACS. In *church history*, a branch of the Anabaptists, who maintain that at the end of the world the devil ($\delta\alpha\mu\omicron\gamma\omicron\varsigma$) will be saved.

DEMONSTRA'TION, from *de*, and *monstro*, to show. In *logic*, a proof of a proposition, founded on axioms or definitions, or both, and called *a priori*, when the effect is proved from the cause, and *a posteriori*, when the cause is proved from the effect. In *war*, demonstrations are manœuvres practised for the purpose of misleading the enemy.

DEMONSTRA'TOR. In *anatomical schools*, one who assists the students in their practical lessons on anatomy.

DEMOS. In *ancient history*, a borough or ward.

DEMUR'AGE, from *demur*, to stop. In *commercial navigation*, an allowance made to the master or owners of a vessel by the freighter, for detaining her longer in the port than the period agreed upon for her sailing.

DEMUR'ER, from *demur*, to stop. In

law, a pause upon a point of difficulty in an action, and a resting of the decision of the cause upon that point. This abiding upon a point of law is called *demurring*.

DEMUR' (see DEMUR). 1. A half-fellow at Magdalen College, Oxford.—2. A particular size of paper, much used for printing books upon.—3. In *heraldry*, a charge borne in half.

DENARI' (see DENARIUS). A general name in *law* for any sort of *pecunia numerata*, or ready money.

DENARIUS, the Roman penny. A silver coin estimated by Dr. Arbuthnot to have been worth about seven pence three farthings. As a weight, the *denarius* was the seventh part of a Roman ounce.

DEN'DRACATE, from *δένδρον*, a tree, and *ἀχάτης*, agate; arborescent agate; agate containing delineations of parts of plants, as ferns, mosses, &c. Such pebbles are found abundantly on the shore from Bognor to Brighton, and are very beautiful when cut and polished.

DEN'DRITE, from *δένδρον*, a tree. Any mineral having impressions or delineations of trees, shrubs, &c., or which assumes a ramified appearance. The native silver of Potosi is also thus named from its resembling, when first extracted, small branches of trees.

DENDROI'D, from *δένδρον*, a tree, and *εἶδος*, likeness. A term applied in *natural history* to objects which have a ramified or tree-like appearance.

DENDROM'ETER, from *δένδρον*, a tree, and *μέτρον*, measure, an instrument adapted to the purposes of measuring trees. It consists of a semi-circle, divided into two quadrants, and graduated from the middle, and upon the diameter there hangs a plummet for fixing the instrument in a vertical position. Fitted to a theodolite, it may be applied to measuring the heights and distances of objects, accessible or inaccessible, whether situated in planes parallel or oblique to the plane in which the instrument is placed.

DENER. In *astronomy*, an Arabic term signifying tail. Used to denote several stars in the tails of some of the constellations, as *Deneb Adijem*, the tail of the Swan.

DENIER, an old French copper coin, of which 12 made a sol. There were two kinds, the *tournois* and the *parisis*.

DEN'ZEN, an alien born, who has obtained letters patent whereby he is constituted an English subject. The radix of the term is Welsh, *din*, *dinas*, a town, city, or fortress.

DENOMINATOR (of a fraction). In *arithmetic* and *algebra*, the number and letter below the line, showing the number of parts into which the integer is divided,

and consequently indicating the denomination of the fraction, or giving it name.

DENOU'EMENT (Fr.), from *dénouer*, to untie. The development of the plot or story in a novel or play, or any other department of literature.

DE NO'VO (Latin), anew, from the beginning.

DENS (Latin), a tooth, *quasi edens*, from *edo*, to eat. Many plants have this specific name from their fancied resemblance to the teeth of some animal, as *Dens leonis*, the Lion's tooth or Dandelion.

DENSE, DEN'SITY, Lat. *densus*, close; *densitas*, closeness. These terms are relative, and denote the comparative quantity of matter which is contained in the same space; they are directly opposed to *rare* and *rarity*. The specific gravities of bodies are presumed to be the measure of their densities. See **VOLUME**.

DENTA'GRA, from *dens*, a tooth, and *αἴμα*, a seizure.—1. The tooth-ache.—2. An instrument for drawing teeth.

DENTAL. By *naturalists*, the expression *dental formula* is used as the name of a notation, used to signify the number and kind of teeth of a mammiferous animal. Thus the genus *Felis* is characterised by—Incis. $\frac{3}{1}$; canin. $\frac{1}{1}$; præmol. $\frac{2}{1}$; mol. $\frac{2}{1}$; $\frac{2}{1}$ = 30. This signifies that they have six incisors in both the upper and the lower jaw; one canine tooth on each side of both jaws, two præmolares on each side of each jaw; two molares on each side of the upper, and one on each side of the lower jaw.

DENTA'LIIUM, the *tooth-shell*; a genus of marine tubicol shells; it is a tubulous arcuated cone open at both ends, and resembling the tusk of an elephant in miniature, whence the English and generic names *dentalis*, tooth-like.

DEN'TATE, Lat. *dentatus*, toothed. In *botany*, leaves, petals, roots, &c., are dentate when beset with horizontal projecting points, or rather distant teeth of their own substance.

DENTA'TO-SIN'UATE, having points like teeth with hollows about the edges.

DEN'TELS, DEN'TILS. In *architecture*, ornaments in a cornice in the form of indentations or teeth (*dentes*); this member is called a *denticule* or *denticulated band*.

DEN'TES, plural of *dens*, a tooth. *D. acute*, or *incisores*, the incisor teeth or four front teeth; *D. adulti*, the teeth of the second dentition; *D. bicuspidates*, the two first grinders on each side; *D. canini* or *cuspidati*, the canine teeth, two in each jaw on the sides of the incisores; *D. molares*, the grinders or double teeth; *D. sapientias*, the wisdom teeth; the two double teeth farthest back in the jaw.

DENTIC'ULATE, Lat. *denticulatus*, set

with little teeth, applied to various objects, from their appearance.

DENTICULE. In *architecture*. See DENTALS.

DENTIROS'TRES, a family of passerine birds characterised by having the beak emarginated on the sides of the point, whence the name from *dens* and *rostrum*, a beak. The shrikes, thrushes, tanagers, crown-birds and fly-catchers are examples.

DENU'DATION, Lat. *denu'datio*, a laying bare; applied, in *geology*, to those disappearances of upper strata in particular districts, by which lower strata are partially exposed to view.

DENU'DATUS, naked. In *botany*, applied to the polish of bodies, being the reverse of hairy, downy, &c.

DE'ODAND. In *law*, Lat. *deodandum*, a thing given or forfeited to God to appease his anger (that is forfeited to the king to be applied to pious purposes), when a person comes to a violent death without the fault of any reasonable creature. Thus if a cart run over a man and kill him it is forfeited as a *deodand*.

DEONTOL'OGY, *δεν*, due, and *λογος*, discourse. The science of duty.

DE-OXIDA'TION, } depriving a substance

DE-OXYDA'TION, } of the oxygen which it contains; reduction from the state of an oxide.

DEPARTITION, from *de* and *partior*, to divide; an old chemical name for the process of separating metals.

DEPARTURE. In *navigation*, from Fr. *départir*, to move from; the easting or westing of a ship in respect to the meridian it departed from; or it is the difference of longitude in miles, either east or west between the meridian which the ship is under, and that where the last reckoning or observation was made.

DEPHLEGMATION, from *de* and *phlegm* (q. v.); the process by which liquids are deprived of their watery particles: applied chiefly to spirituous liquids, and involving the alchemical notion of a particular principle called phlegm.

DEPHLOGISTICATED, from *de* and *phlogiston* (q. v.); a term formerly applied by chemists to bodies which were supposed to be deprived of *phlogiston* or the inflammable principle. Thus oxygen was called *dephlogisticated air*, and chlorine *dephlogisticated muriatic acid*.

DEPILATORY, from *de* and *pilus*, the hair; a name for any substance capable of removing hair from the human skin. Thus a pitch plaster which on being removed pulls the hairs along with it by the roots, is a mechanical depilatory, the chemical ones are composed either of caustic alkalies, sulphuret of baryta, or some arsenical preparation, and act by

destroying the roots of the hairs. They are very unsafe.

DEPLO'Y, from Fr. *de* and *ployer*, to fold i.e. to unfold. In *military tactics*, the expansion of a body of troops previously compacted in column, &c., so as to offer a large front.

DEPO'NENT, from *de* and *pono*, to place.

1. In *law*, one who answers interrogations under oath in Chancery.—2. In *grammar*, such verbs as have no active voice are called *deponents* or *deponent verbs*.

DEFORTA'TION, from *de* and *porto*, to carry; a sort of banishment among the Romans by which the individual exiled was sentenced to remain in some allotted place under pain of death.

DEPOSITION. 1. In *geology*, the subsidence from a fluid of the different strata which now form the crust of the earth.—2. In *surgery*, the depression of the lens in the operation of couching.

DEPRES'SION, from *deprimo*, to press down. The *depression of the sun* or of a *star* is its distance at any time below the horizon, measured by an arc of the vertical circle.—The *depression of the pole* is the phenomenon which appears to an observer as he travels or sails towards the equator, the pole appearing to sink as he recedes from it.—The *depression of an equation* is the reducing of such equation to a lower degree: thus a biquadratic may be depressed (in particular cases) to a cubic equation, and the cubic equation to a quadratic.

DEPRIVA'TION, from *de* and *privo*, to take away; an ecclesiastical censure by which a bishop or other dignitary is deprived of his spiritual dignity.

DEPUTY, from Fr. *député*; a person appointed to act for another. In *law*, a person who exercises an office in another's right. One or more deputies sent to transact business, either with a special commission and authority, or with general powers, constitute a *deputation*. The *Chamber of Deputies* is the lower of the two legislative chambers in France.

DER'BYSHIRE SPAR, a fluat of lime, named also *fluor spar*, and found in great beauty and abundance in Derbyshire.

DER'ELICTS, from *de* and *relinquo*, to leave; things forsaken, as, 1. Tracts of land left dry by the sea and fit for cultivation.—2. Goods relinquished by the owner. Vessels forsaken at sea are likewise called *derelict ships*.

DERMATOGRAPHY, } from *δερμα*, the
DERMOGRAPHY, } skin, and *γραφω*,
to describe; the anatomical description of the skin.

DERMATOID, } from *δερμα*, the skin,
DERMOID, } and *ειδος*, like; reserv-
ing skin.

DERMATOL'OGY, } from *δερμα*, the skin,
DERMOL'OGY, } and *λογος*, discourse;
a discourse or treatise on the skin.

DERMES'TES, a genus of coleopterous insects named popularly the *leather-eaters*, because they destroy furs, leather, &c., &c.; *dissectors* by De Geer, because they devour and reduce to skeletons the dead bodies of animals. Cuvier places the dermestes among the *clavicornes*.

DEROG'ATORY CLAUSE. In *wills*, a sentence or secret character, inserted by the testator, of which he reserves the knowledge to himself, with a condition that no will which he may hereafter make shall be valid, unless this clause be inserted word for word. This is done as a precaution to guard against later wills being extorted by violence or other improper means.

DER'ICK. In *navigation*, a tackle used at the outer quarter of the mizen-yard; also a prop or support to shears, &c.

DER'VISE, a Persian name given to all Mohammedan monks, though of various orders.

DESC'ANT. In *old music*, from Ital. *descanto*, Lat. *canto*, to sing; the art of composing music in several parts. *Plain descant* consists in the orderly disposition of con cords, and is the foundation of musical composition. *Figurative* or *florid descant* is that part of an air in which some discords are concerned. *Double descant* is when the parts are so contrived that the base may become the treble and the treble the base.

DESCEN'SION, from *de* and *scando*, to climb; a going downwards. Applied in *astronomy*: 1. *Right descension* is an arc of the equator which descends with the star or sign below the horizon in a right sphere.—2. *Oblique descension* is an arc of the equator which descends with a star or sign below the horizon in the oblique sphere. The difference between the right and oblique descension of any heavenly body is called the *descensional difference*.

DESCENT', Lat. *descensus*, the tendency of a body from a higher to a lower place. 1. In *mechanics*, the *descent of bodies* is their motion or tendency towards the centre of the earth either in a direct or in an oblique direction. The *line of swift-est descent* is that which a body falling by the action of gravity, describes, in the shortest time possible, from one given point to another; and this line is the arc of a cycloid when the one point is not perpendicularly over the other (see BRACHYSTOCHONE).—In *law*, *descent* is the title by which an individual on the death of his ancestor acquires his estate by right of representation as his heir at law.—In *heraldry*, *descent* expresses the position of an animal in the act of descending, as a

lion in *descent* with his heels upwards, as in the act of leaping down from an eminence.

DESCRIB'ENT. In *geometry*, from *de* and *scribo*, to write; the line or surface, from the motion of which a figure or body is supposed to be generated or described.

DESIG'ON, Fr. *dessein*, a plan or representation of anything by an outline or sketch. In *painting*, the *design* is the first idea of a large work drawn roughly and on a small scale, with the intention of being executed and finished in large.—In *textile manufactures*, design expresses the drawings which the workman copies by various contrivances into the fabric upon which he is employed.—In *architecture*, &c., the plan of an intended building projected according to the rules of art, with taste and judgment, is called a *design*: it includes plans, sections, and elevations.—In *music*, design means both the invention and execution of the subject in all its parts.

DESIG'NATOR. Anciently, a master of the ceremonies, whose duty it was to assign to each person his proper place in the theatres and at the other public spectacles.

DESMOL'OGY, from *δεσμος*, a ligament, and *λογος*, discourse; the anatomical description of the ligaments of the body.

DESPUMA'TION, from *de* and *spuma*, froth; the clarification of a liquid, or the separation of the spume, froth, or scum from it.

DESQUAMA'TION, from *de* and *squama*, a scale; the separation of scales from the skin or bones: in the case of the bones the word *exfoliation* is commonly used.

DESTEM'FER, Fr. *détrempe*. In *painting*, a preparation of opaque colour, ground up with size and water, used in scene-painting.

DESTRUCTIVE DISTILLATION, the distillation of organic products at a high temperature, whereby the elements enter into new combinations, as in distilling coal for the production of gas, and wood for the formation of vinegar.

DES'UETUDE, from *desuetudo*, to cease from any practice; discontinuance of any custom, law, &c. Words are lost, and laws are virtually abrogated, by *desuetude*.

DESUNT CÆ'TERA (Lat.), "the rest wanting;" put at the end of any chasm or deficiency in an imperfect or mutilated work.

DETACHED. In *painting*, is said of figures when they stand free and disengaged from each other.

DETACH'ED PIECES. In *fortification*, outworks at a distance from the body of a place, as *emilunes*, *ravellins*, &c.

DETA'ILE (of a plan), drawings or delineations for the use of workmen, otherwise called *working drawings*.—In the

fine arts, the parts of a work as distinguished from the whole mass.

DETE'NTS. In *clockwork*, from *detentus*, those stops which, by being lifted up or let down, lock or unlock the clock in striking.

DETE'NUE. In *law*, a writ or action that lies against a person who has had goods, &c., delivered to him to keep, and afterwards *detains* or refuses to give them up.

DETER'MINATE, Lat. *determinatus*, limited, fixed in value, as a *determinate* quantity, in algebra. In *botany*, *determinati ramosus*, abruptly branched, as when each branch, after terminating in flowers, produces a number of fresh shoots in a circular order from just below the origin of these flowers.—In *mathematics*, a *determinate problem* is one which has a limited number of answers.

DETER'MINING LINE. In *conic sections*, a line parallel to the plane of the base of the cone. In the hyperbola it falls within the base of the cone; it forms a tangent to the base in parabolic sections; it falls without in the ellipsis.

DETONATING POWDER, fulminating mercury, and silver, and other compounds, which suddenly explode when struck or heated.

DETONATING TUBE, a stout glass tube for the detonation of gaseous bodies.

DETRAC'TOR, Lat. from *detraho*, to draw a muscle, the office of which is to draw the part to which it is attached from some other part.

DETRIT'US (Lat.), the worn off or broken fragments and matters formed by the disintegration of mountains, &c.

Beneath the whole series of stratified rocks that appear on the surface of the globe, says Buckland, there probably exists a foundation of unstratified crystalline rocks, bearing an irregular surface; from the *detritus* of which the materials of stratified rocks have in a great measure been derived.

DEUTERO'NOMY, from *deuteros*, second, and *nomos*, law; the second book of the law, the name given in the Scriptures to the fifth book of Moses; equivalent to the *Mischna* of the Hebrews.

DEU'TERO-CANON'ICAL. In *theology*, a term applied to certain books of Scripture which were added to the canon after the rest were compiled: *deutero*, abbr. of *deuteros*, second.

DEUTEROP'ATHY, Lat. *deuteropathia* (*deuteros*, second, and *pathos*, suffering); a sympathetic affection where a second part suffers from consent with the part originally affected.

DEUTOX'IDE, from *deuteros*, second, and oxide (q. v.); literally, the second oxide, but usually employed to denote a compound containing two atoms or two prime

equivalents of oxygen to one or more of a metal. See **OXIDE**.

DEVELOP'MENT, Fr. *développement*, an unfolding; a term frequently employed by algebraists to denote the transformation of any fraction or other quantity into the form of a series. The *development* of a *spheric surface on a plane* is a method of drawing a portion of a sphere nearly spherical, by supposing it circumscribed by a polyhedron, the side of which is extended upon a plane.

DEVI'ATION. In *commercial navigation*, from *de* and *via*, the way; the voluntary departure of a ship, without necessity, from the voyage insured for. This discharges underwriters from their responsibility.

DEV'ICE, Fr. *devise*; a term used in *heraldry* and *painting* for any emblem contrived to represent a certain family, person, action, or quality, with a suitable motto applied figuratively.

DEVIL'S-DUNG, a vulgar name for *assa-fœtida*.

DEVIS'E. In *law*, the act whereby a person bequeaths his estate to another: the act of dividing real estate. The person who thus bequeaths is called the *devisor*, and the person in whose favour the bequeathment is made is called the *devisee*.

DEW, Sax. *deaw*. The vapour condensed upon the surface of the earth during the night in consequence of the radiation of caloric into a clear expanse of sky, which makes no return, so that the temperature of these bodies sinks below that of the air, from which they abstract a portion of that caloric which holds the atmospheric humidity in solution, and cause a part of it to be deposited.

DEWAN'. In *India*, the head officer of finance and revenue: always a Hindoo.

DEWAN'NY ADAW'LET. In *India*, a court (*adawlet*) for trying revenue and other civil causes, in distinction from the *Nizamut adawlet* (q. v.) See **DEWAN**.

DEW-POINT. The temperature at which dew begins to be deposited, varying with the humidity of the atmosphere.

DEX'TRAL. In *conchology*, all spiral shells are divided into *dextral* and *sinistral*: when the turn of the shell is on the right hand side (*dexter*), the mouth being downwards, it is termed *dextral*, when on the left (*sinister*), it is *sinistral* or reversed. The great majority of spiral shells are dextral, but individuals of the very same species are found reversed or sinistral.

DEX'TRINE, from *dexter*, the right hand; a matter of a gunny appearance, into which the interior substance of the molecules of starch is converted by diastase or acids. Thus named, from the circumstance that it turns the plane of polarization to the right hand more than another body. It is white, insipid, transparent in their plates, and without

DEX, the title of the supreme governor of Algiers, Tunis, and the other States of Barbary.

D. F., for *defensor fidei*, defender of the faith.

D. G., for *Dei gratia*, by the grace of God.

DIAETES, διαίτης. A morbid copiousness of urine, a disease of which there are two species, the *D. insipidus*, in which the urine has its usual taste, and the *D. mellitus* in which it contains a great quantity of sugar. Both species are attended with great thirst, voracious appetite, and emaciation.

DIACAUTIC, from διακαυω, to burn; applied to a double convex lens or burning glass. The *diacautic curve* is a species of the caustic curves formed by refraction.

DIACHYLON, διαχYLON. The name given by the Greeks to a plaister composed of the juices of herbs, from δια and χυλος, juice. In modern pharmacy two diachylon plaisters are known, the *simple* or *white diachylon* or lead-plaister, and the *yellow diachylon* or *diachylon with gum*, made by adding galbanum, turpentine, and frankincense, to simple diachylon.

DIACOUTICS, from δια and ακουω, to hear: the doctrine of refracted sounds, called also *diaphonics* (q. v.).

DIACRITIC MARKS, διακρίνω, to distinguish. Marks used to distinguish letters, between the forms of which much similarity exists.

DIADELPHIA, δις, twice, and αδελφς, a brotherhood; the name of a class in the sexual system of plants, embracing those the flowers of which are papilionaceous or hermaphrodite, and have the male organs united below (generally) into two sets of cylindrical filaments. The fruits are leguminous. The pea and bean are examples.

DI'ADEM, διαδημα, diadema. 1. The head-band anciently worn by kings as a badge of royalty.—2. The regal crown, hence figuratively supreme power.—3. In *heraldry*, a circlet enclosing the crown of a prince.—4. In *surgery*, a sort of bandage for the head in cases of relaxation of the sutures.

DIA'ESIS, from διαίω, to divide. 1. In *grammar*, the division of one syllable into two, usually denoted by two points over a letter, as in *avilā* for *avilw*.—2. In *surgery*, a solution of continuity, as an ulcer.

DIAGNOSIS, from διαγιγνωσκω, to know thoroughly; the art of distinguishing one disease from another by the symptoms presented, called also *diacrisis*.

DIAGNOSTIC, διαγνωστικός, characteristic; the *diagnostics* of a disease are the signs or symptoms by which it is recog-

nised and distinguished from others. These are of two kinds, the *adjunct* when the symptoms are common to several diseases, and the *pathognomic* when they attend only one disease, and serve to distinguish it from all others.

DIAGONAL, from δια, through, and γωνία, a corner: in an angular direction.

A right line, as AB drawn across an equilateral figure from one angle to another, is by some called the *diameter*, by others the *diametral*, but generally the *diagonal* of the figure.

DIA'GRAM, from διαγραφω, to delineate; a geometrical delineation for the purpose of demonstrating the properties of any figure, as a square, triangle, &c. The *διαγραμματα* of the Greeks was a sort of musical scale, a proportion of measures distinguished by certain notes.

DIA'GRAPH, δια and γραφω, to describe; an instrument recently invented in France, used in perspective.

DIAL, an instrument serving to measure time by the shadow of the sun, called therefore tautologically, a *sun-dial*. The word is formed from *dies*, day, because indicating the hour of the day. The ancients called it *scithericum*, from its doing it by the shadow. There are many kinds of dials, the diversity arising from the different situations of the plane, and from the different figures of the surfaces upon which they are described, as the *horizontal*, the *equinoctial*, *vertical*, *polar*, *direct*, *erect*, *declining*, *inclining*, *reclining*, &c., and there are several kinds called *universal*, because they serve for all latitudes. Descriptions of several of these will be found in Jones's *Instrumental Dialling*. The miner's compass is sometimes erroneously called a *dial* by the workmen.

DIA'LECT, from δια and λεγω, to speak; the form or idiom of a language peculiar to a province, a kingdom, or a state, as the Attic dialect spoken by the Athenians in contradistinction to the Ionic, Doric and Æolic dialects. Many languages which are regarded as distinct, are dialects of one common language locally accommodated to circumstances.

DIAL'ING GLOBE, an instrument of brass or wood, with a plane fitted to the horizon, and an index so contrived as to give a clear illustration of the scientific principles on which dials are constructed.

DIAL'ING LINES, } Graduated lines
DIAL'ING SCALES, } placed on rulers, the edges of quadrants and other instruments, for the construction of dials.

DIAL'ING-SPHERE, an instrument usually made of brass, with several semicircles sliding over each other on a moveable horizon, used to demonstrate the nature of spherical triangles, and to give the true idea of the methods of constructing dials on all sorts of planes.

DIAL'LAGE. In *mineralogy*, a dark-green variety of crystallised serpentine, thus named from *διαλλαγή*, difference, in allusion to the difference of lustre between its natural joints. Diallage is the *Verde di Corsica duro* of artists, by whom it is fashioned into ring-stones, snuff-boxes, &c. In the rock it is called *gabbro*; it ranks as a species of the genus *Schiller-spar*, is named *smaragdite* by Saussure, and *euphotide* by others.

DIAL'YSIS, *διαλυσις*, a loosening (*λυω*, to dissolve). 1. In *grammar*, a mark or character consisting of two points placed over one of two vowels to dissolve a diphthong, or to show that the two vowels are to be separated in pronunciation, as *aërial*.—2. In *rhetoric*, a figure of speech in which several words are placed together without the aid of a conjunction, as *veni, vidi, vici*.—3. In *medicine*, relaxation or weakness of the limbs.

DIAMETER, from *δια*, through, and *μετρον*, to measure; a line which passing through the centre of a circle or other curvilinear figure divides it or its respective ordinates into two equal parts. In *conic sections*, the line A B is called the *conjugate diameter*, and the line C D is

the *transverse diameter*. In *architecture*, the measure across the lowest part of the shaft of a column, which is usually divided into sixty parts, called minutes, and forms a scale for the measurement of the other parts of the order.

DIA'MOND, a condensed and usually crystallised form of carbon ranked as the most beautiful and valuable, as it is the hardest, of the precious stones, formerly called *adamant*. Colours white and grey, sometimes red, brown, yellow, green, and rarely blue and black. The white is the most valued; when transparent and pure it is said to be of the first *water*. When cut it exhibits a beautiful play of colours in the sun-beam. It has only been found as yet within the tropics (in some parts of India, in Borneo, and in Brazil), in diluvial gravel, and among conglomerate rocks called *cascalho*, in Brazil, on which it may be said Europe depends at present

for diamonds. The primitive form is the regular octahedron, but each triangular facet is sometimes replaced by six secondary triangles bounded by curved lines, so that the crystal becomes spheroidal with 48 facets. Its brilliancy depends on its property of reflecting all the light which falls on its posterior surface at an angle of incidence greater than $24^{\circ} 13'$ only. The natural edges of the crystal cut glass, artificial edges only scratch it. The weight and consequently the value of the diamond is estimated in *carats*; and the price of one diamond as compared with another of equal purity is as the square of the respective weights. The largest diamond known is that in the possession of the Queen of Portugal. It is uncut, and weighs 1680 carats, or 11 oz. 96 grs.; supposing therefore the table of rates to be applicable to this diamond, it is worth $1680^2 \times 2l. = 5,644,800l.$, but the highest price ever paid for a diamond was 150,000*l.* A *rough diamond* is one as it comes from the mines. A *brilliant diamond* is one which is cut into facets both at top and bottom. A *rose diamond* is one which is quite flat beneath, with its upper part cut into numerous facets, usually triangles. A *table diamond* is one cut with a large square face on top, encompassed by four lesser ones. *Diamond powder* is used for cutting, engraving and polishing hard stones. The *glazier's diamond*, used for cutting glass, is a small point of a natural crystal of the diamond, set in a socket of steel, lead, or silver. It is also of late used by engravers to draw lines which are to be deepened by aqua fortis (dilute nitric acid). The term *diamond* is used by heralds to express the black colour in the achievements of peerage, and the same name is given popularly to the figure otherwise called a *rhombus*.

DIAMOND-SHAPED. Leaves are so called when they approach in form to a square, or resemble the figure of the diamond as painted on cards.

DIA'NA. 1. The moon. A name formerly given to silver from its white shining appearance.—2. The goddess of hunting, twin sister of Apollo.

DIA'NA, TREE OF, a name given to the crystallised silver which is disengaged when mercury is put into a solution of nitrate of silver.

DIAN'DRIA, from *δισ*, twice, and *ανδρ*, a man. The second class of plants in the Linnæan sexual system, comprising such as have hermaphrodite flowers with two stamens.

DIAN'THUS, the pink. A genus of about 70 species, mostly hardy perennials. *Decandria—Digynia*. Name from *Διες*, Jove, and *αθος*, a flower, in allusion to the elegance and fragrance of the flower. The

sweet-william, clove-pink, carnation, and maiden-pink, are well-known species.

DIAPA'SON, **DIAPASE**, from *δια πασαν*, through all. A rule or scale whereby musical-instrument-makers adjust the pipes of organs, cut the holes of flutes, hautboys, &c., in due proportion for performing the tones, semitones, and concords with precision. Most writers on the theory of music use *diapason* to express the octave of the Greeks. Considered simply, it is but one harmonical interval; but considered diatonically, it contains seven degrees, the three greater tones, two lesser tones, and two greater semitones.

DIAPA'SON-DIAPENTE. In *music*, a compound consonance in a triple ratio, consisting of nine tones and one semitone: a twelfth.

DIAPA'SON-DIATES'SARON. In *music*, a compound concord, founded on the proportion of 8 to 3, consisting of eight tones and one semitone.

DIAPA'SON-DITONE. In *music*, a compound concord, the terms of which are as 5 to 2.

DIAPA'SON-SEM'DITONE. In *music*, a compound concord, the terms of which are as 12 to 5.

DIAPEN'TE, from *δια*, and *πεντε*, five, a fifth. In *music*, an interval making the second of the concords, and with the diatesaron an octave. In *pharmacy*, a composition of five ingredients.

DIAPER, a kind of cloth much used for table-linen, thus named from Ypres (cloth d'Ipre), in the Netherlands, where it was first manufactured. It is named by the French *toile fourrée*, and is ornamented with the most extensive figures of any kind of twisted cloth, except damask.

DIAPH'ONICS, the doctrine of refracted sound.

DIAPHORA, from *διαφερειν*, to differ. A rhetorical figure, in which a word, when repeated, is taken in a different sense from what it was at first understood.

DIAPHRAOM, *διαφραγμα*, the midriff. A muscle which divides the thorax from the abdomen. It takes its name from this position, *διαφρασσα*, to separate by a partition; hence *diaphragmatic*, pertaining to the diaphragm, as the *diaphragmatic* arteries, veins, &c. Hence also, *diaphragmitis*, inflammation of the diaphragm.

DIAPHORE'SIS, *διαφορησις*, doubt. The name given to a rhetorical figure, in which the speaker expresses his doubt or hesitation as to the manner in which he ought to proceed.

DIARRHE'A, from *διαρρην*, to flow. A purging, flux, or looseness, of which there are several species. It differs from *dysen-*

tery (q. v.), and is not contagious. *Diarrhetic*, purgative.

DIARTHRO'SIS, from *διαρθρον*, to articulate. A moveable collection of bones, of which anatomists enumerate five species: *enarthrosis*, *arthrodia*, *ginglymus*, *trochoides*, and *amphiarthrosis*. The term *diarthrodial* is applied to the cartilages covering the articular extremities of bones.

DI'ASCHISM, *διασχισμα*, a piece cut off. A term used in *music* to express the difference between the comma and enharmonic diesis, commonly called the *lesser comma*.

DIASAL'TIC, *διασταλτικός*, dilated, noble. Applied by the Greeks to certain intervals in *music*, as the major third, sixth, and seventh.

DIAS'TASE, from *διαστασις*, separation. A substance extracted by cold water from crushed malt, and precipitated from its solution by alcohol. It liquefies and saccharifies the paste of starch without absorption or disengagement of gas.

DI'ASTEM, *διαστημα*, an interval. Applied chiefly in *music*, but sometimes by physicians in the same sense as *diastasis* (q. v.). It is also used to express the interval between the rising and falling inflexions in reading and speaking.

DIAS'TOLE, *διαστολη*, dilatation. 1. In *medicine*, dilatation of the heart and arteries: opposed to *systole*.—2. In *grammar*, a figure of prosody, by which a syllable naturally short is made long.

DI'ASTYLE, from *δια* and *στυλος*, a pillar. An edifice of which the intercolumniation is equal to three mean diameters of the columns.

DIATES'SARON, from *δια*, and *τεσσαρα*, four. A musical concord, composed of a greater tone, a lesser tone, and one greater semitone. Its proportion is 4 to 3, hence called a *perfect fourth*. The name is also given to the four gospels when arranged harmonically; and to a medicine composed of four ingredients, gentian, aristolochia, laurel-berries, and honey.

DIATHEE'MAL, *δια*, and *θερμη*, warmth. Applied to substances, such as transparent rock-salt, which suffer heat to pass through them.

DIAT'HESES, *διαθεσις*, disposition. A natural predisposition to certain diseases, such as the scrofulous, rheumatic, cancerous, and calculous diatheses.

DIAT'ONI, *δια*, and *ωνος*, an extension. In *ancient architecture*, the angle stones of a wall.

DIATO'NIC, from *δια*, and *τονος*, sound. An epithet given to a musical scale or gamut, as it proceeds by tones and semitones. Thus we speak of a *diatonic* scale or series, a *diatonic* interval, *diatonic* har-

mony. It is applied to ordinary music, containing only the two greater and lesser tones, and the greater semitone.

DIAZEUX'IS, διαζευξις, division. The name given by the ancient musicians to the tone which separated two disjunct tetrachords. It was placed between the mesis and paramesis. This *diazeutic tone*, in our music, is from A to B.

DÍAZOM, διαζωμα, a zone. The term is used to designate the diaphragm which surrounds the cavity of the thorax. In *ancient architecture*, the landings which encircled the amphitheatre at different heights.

DÍCAST, δικαστής. An ancient officer in Greece, answering nearly to our jurymen. The radix is δικη, justice.

DICASTE'RÍUM, a hall of justice in Athens.

DÍCERAS, from *dis*, twice, and *κίρας*, a horn; a genus of fossil shells discovered in granular limestone, and thus named from possessing two prominent spiral umbones which resemble two twisted horns.

DICHOTÓMOS, Lat. *bichotomus*, bifurcate, forked; applied to stems and plants divided into two parts.

DICHOTÓMY, from *δichotomia*, a division.

1. A distribution by pairs.—2. That phase of the moon in which she appears bisected or shows only half her disc.

DIC'HROISM, *dis*, double, *χρωμα*, colour. A property of certain crystallised bodies of appearing under two distinct colours, according to the direction in which the light is transmitted through them.

DICH'ROITE, a mineral of the gem order, thus named from *dis*, and *χρoα*, colour, from its showing different shades of colour (usually blue) when viewed in different directions. It is called also *iolite*. It occurs in granite and gneiss. Its principal constituents are silica, alumina, magnesia, and oxides of manganese and iron.

DICOOC'EOS, Lat. *dicoceus*, two-seeded, *dis* and *κοκκος*, a berry; applied to a capsule which consists of two cohering grains or cells with one seed in each.

DICOTYL'EDON, from *dis* and *κωτυληδών*, a cotyledon; a plant which has two cotyledons, seminal leaves, or seed lobes, exemplified in the bean. The *dicotyledones* form the third great division of plants in Jussieu's natural method, and the term *dicotyledonous* is applied to all plants of this division. See **COTYLEDON**.

DICTAM'NUS, the *Dittany* or *Fraxinella*; a genus of perennial plants. *Decandria—Monogynia*. Name from *Dicte*, a mountain in Crete, where the red-flower fraxinella, the first known species, grows plentifully. The *fraxinella* of the shops is the root of the *D. albus* or bastard dittany, found in Germany.

DICTA ROB, the title given in ancient

Rome to a magistrate created in times of exigency, and invested with unlimited power. The ordinary duration of his office was six months, during which time all other magistracies ceased, the tribuneship alone excepted. Sylla and Caesar rendered the dictatorship perpetual and the name odious.

DIDACT'YLE, διδακτυλος, an animal having only two toes; hence *didactylous*, two-toed.

DIDECAHÉ'DRAL, from *di* and *decahedral*; having the form of a decahedral (ten-sided) prism with pentahedral (five-sided) summits. A crystal of this form may be called a *didecahedron*.

DIDODECAHÉ'DRAL, from *di* and *dodecahedral*; having the form of a dodecahedral (twelve-sided) prism with hexahedral (six-sided) summits: such a crystal is a *didodecahedron*.

DIDEL'PHIS, } A genus of mammalia:

DIDEL'PHYS, } order *Fera*, Lin., and *Marsupialia*, Cuv. Name from *dis* and *δελφς*, having two wombs, all the species possessing an external abdominal pouch (*marsupium*), in which the fœtus is placed after a very short uterine gestation, and where it remains suspended to the nipple by the mouth till sufficiently matured to come forth to the external air. This genus, formed by Linnæus, is now divided into the following genera: *Didelphis*, properly so called, including the *Chironectes*, Illiger, and the *Thylacinus* and *Phascogale*, Temminck (Ex. opossums of America and the dog-headed opossum of Van Diemen's Land); the *Dasyurus*, Geoffroy, the *Phalangista*, Cuvier, the *Hypsiprymnus*, Illiger, the *Macropus*, Shaw, or *Pal-maturus*, Illiger, the *Koala*, Cuvier, and the *Phascalomys*, Geoffroy. These genera form the order *Marsupialia* of Cuvier.

DÍ'DERON (Gr.) In *ancient architecture*, a brick one foot long and six inches broad.

DIDRACH'MA, an old Grecian silver coin of the fourth of an ounce.

DIDYNA'MIA, from *dis*, and *δυναμις*, power; the name of the 14th class of plants in the sexual system of Linnæus, having four stamens, two long and two short. The orders are *Gymnospermia* and *Angiospermia*, and the bugle, germander, mint, betony, balm, thyme, snapdragon and broom-rape, are generic examples. Epithet, *didynamic*.

DIE. 1. A stamp used in coining, striking medals: plural *dies*.—2. One of a pair of *dice*.—3. The cubical part of the pedestal of a column between its base and cornice.

DIES. 1. Plural of *die*, for coining.—2. Latin, plural of *dies*, a day, as *D. caniculares*, the dog-days. *D. non* (juridici), days on which no court is held; *D. datus*,

a day or time of respite given by the court to the defendant in a cause.

DIE'SIS, *διεσις*, division. In *music*, the division of a tone, less than a semitone: an interval consisting of an imperfect semitone.—In *books*, the mark †, called also a *double-dagger*, and used as a mark for reference.

DIE'T. 1. Lat. *diæta*; food regulated by medical rules.—2. Germ. *dyet*; the general assembly of the states of the German empire, and formerly of Poland.

DIEU ET MON DROIT (French), God and my right. The motto of the royal arms of England, first assumed by Richard I. William III. used the motto *je maintiendrai*; Elizabeth and Anne used *semper eadem*.

DIEU ET SON ACTE (French), a maxim in law, that the act of God shall not be a prejudice to any man.

DIF'ERENCE, from *dis*, away, and *fero*, to bear; variation in whole or in part. In *logic*, an essential attribute belonging to a species, that is not found in the genus. In *arithmetic*, the remainder, when one number has been subtracted from another. In *heraldry*, any addition to a coat of arms, serving to distinguish one family from another.

DIFFERENTIAL. In *mathematics*, an infinitely small quantity, so small as to be less than any assignable quantity: thus denominated, because frequently considered as the difference of two quantities, and as such is the foundation of the *differential calculus*.

DIFFERENTIAL CALCULUS, } the arithmetic method, } method of infinitely small differences of variable quantities, consisting in descending from whole quantities to their differentials, and comparing them together. It differs in its metaphysics from the *fluxional calculus*.

DIFFERENTIAL COEFFICIENT, in *analysis*, is the ratio of the differential of any function of a variable quantity to the differential of the variable.

DIFFERENTIAL THERMOMETER, an instrument for measuring very small differences of temperature.

DIFFRAC'TION. In *optics*, a species of inflexion, which the rays of light undergo in passing very near the extremities of an opaque body.

DIGAM'MA, the double gamma or F of the Greeks, with the sound of V.

DIGEST, Lat. *digesta*, a collection of the Roman laws, ranged and digested under their proper titles, by order of the Emperor Justinian; thus named the *Justinian Code*.

DIGESTER, a strong iron or copper vessel, with a cover adapted to screw on, with pieces of felt or paper interposed, and furnished with a safety-valve, which may be more or less loaded. The purpose

of this vessel is to prevent the loss of heat by evaporation, and thereby to render the action of water, &c. on solids digested in it more intense, by raising the fluids to higher temperatures than their common boiling points. Animal bones are dissolved with great facility along with water, in Papin's digester. The *autoclave* of the French cook is a modification of the digester.

DIGES'TION, from *digero*, to dissolve. In *chemistry*, the operation by which bodies intended to act slowly on each other are exposed for some time to a moderate heat. In *physiology*, the change which the food undergoes in the stomach in being converted into chyme.

DIG'IT, from *digitus*, a finger. In *arithmetic*, any integer under 10, thus called from arithmetic being first performed upon the fingers. In *astronomy*, the twelfth part of the diameter of the sun or moon: used to express the quantity of an eclipse.

DIG'ITALINE, a powerful poison, derived from the *digitalis purpurea*, or fox-glove. This substance is now known to consist of chlorophyll, resin, and a fatty matter.

DIGITA'LIS, the fox-glove. A genus of plants, mostly herbaceous, and either biennial or perennial. *Didynamia—Angiospermia*. Name from *digitale*, the finger of a glove, which the flower resembles. The leaves of the *D purpurea* are much used in medicine.

DIG'ITATE, } Lat. *digitatus*, fingered. **DIG'ITIFORM**, } Applied to leaves composed of two or more leaflets.

DIGITA'TION, from *digitus*, a finger. A term applied by anatomists to parts which are more or less finger-shaped; as when a muscle is said to arise by a number of fleshy *digitations*.

DIG'ITATO-PINNATE, Lat. *digitato-pinnatus*. Applied to digitate leaves, the leaflets of which are pinnate.

DIGITI'GRADA, the name given by Cuvier to the second tribe of Carnivora, from the circumstance of the animals comprised in it walking upon the ends of their toes (*digitus*, a finger or toe, and *grado*, to walk). The weasel and dog are examples.

DIGLYPH, *διγλωφες*. A double channelled tablet. See **GLYPH**, and **TRIGLYPH**.

DIGNITARY, an ecclesiastic who holds a *dignity* or benefice, which gives him some preeminence over mere priests and canons. Bishops, deans, arch-deacons, &c. are dignitaries.

DIGNITY, from Lat. *dignus*. Among *ecclesiastics*, office or preferment joined with jurisdiction. In *astrology*, some peculiar advantage which a planet has, from its position in the zodiac, or with respect to other planets.

DIGRES'SION, Lat. *digressi*, to diverge.

In *astronomy*, denotes the apparent distance of the inferior planets, Mercury and Venus, from the sun.

DIGYN'IA, from *dis*, and *γυνή*, a woman. The name of an order in several classes of the sexual system of plants, embracing those plants which, to the character of the class whatever it may be, add the circumstance of having two styles or pistils.

DIHEDRON, from *dis*, and *ἕδρα*, a face. A figure having two sides or surfaces; hence *dihedral*, two-sided.

DIHEXAH'EDRAL, from *di* and *hexahedral*. Having the form of a hexahedral prism, with trihedral summits.

DIKE, Sw. *dike*, Dutch *dyk*. Radically the same word as *ditch*. Engineers use this term in the same sense as *embankment*, with this difference, that a hydraulic embankment, and one impervious to water, is meant. Thus a considerable portion of Holland is preserved from the sea by *dikes*. Geologists and miners employ the name *dike* to a wall of mineral matter cutting through the strata in nearly a vertical position. Many of these dikes are fissures filled with clay, but the most notable are those of igneous matter, as whin. In Scotland a stone fence is called a *dike*.

DILAPIDATION, from *di*, and *lapis*, a stone. In *law*, this term is used to denote a voluntary wasting, or suffering to go to decay, any building in possession of an ecclesiastical incumbent. Dilapidation is *active* when the incumbent pulls down a building; *permissive* when he suffers the building to waste for want of repair. Dilapidation extends, not only to buildings, but also to woods or anything which happens to be church property.

DILATORY. 1. Lat. *dilatorium*, a surgical instrument for dilating any part. —2. Lat. *dilatorius*, intending to make delay, as in law, a *dilatory plea*, intended to delay trial.

DILIGENCE. In *Scottish law*, that process by which persons, lands, or effects are seized in execution, or in security for debt.

DILUVIUM, Lat. from *di*, and *luo*, to wash. Water-worn debris, consisting of loam, sand, gravel, &c. deposited by an inundation of water: such deposits are termed *diluvian* and *diluvial*. These terms were originally introduced into geology to distinguish the accumulation of debris consequent on the Noachian deluge. See **ALLUVIUM**.

DIME, (contracted from Fr. *denier*, tenth). A silver coin of the United States of America; value ten cents, or the tenth of a dollar.

DIMEN'SION, from *dimetior*, to measure; length, breadth, or thickness. A line has

one dimension, *length*; a surface has two dimensions, *length* and *breadth*; a solid has the three dimensions, *length*, *breadth*, and *thickness*. In *algebra*, the term *dimension* has reference to the highest power which enters into the composition of an equation or expression. Thus an equation is said to be of one, two, three, &c. dimensions, according as it involves the simple quantity, the square, cube, &c.

DIMINISHED INTERVALS. In *music*, one that is short of its quantity by a lesser semitone.

DIMINUENDO (It.). In *music*, where the volume of sound is to be lessened from loud to soft, marked thus $\text{—} \text{—} \text{—}$.

DIMINUTION, from *di*, and *minor*, less, a making less; opposed to *augmentation*. In *architecture*, a contraction of the upper part of a column; called also the *diminishing* of the column. In *law*, a plea by the plaintiff, in an appeal to a superior court, that part of the record is omitted in the inferior court. In *music*, the reply to a subject in notes of half the length of those of the subject itself.

DIMISSORY, Lat. *dimissorius*, sending away, dismissing to another jurisdiction. A *letter dimissory* is one given by a bishop to a candidate for holy orders, having a title in his diocese, directed to some other bishop, giving leave for the bearer to be ordained by him.

DIM'ITY, Sp. *dimite*. A species of cross-barred stuff, composed entirely of cotton, and similar in fabric to fustian.

DINOTHE'RIUM, an extinct genus of terrestrial mammalia, thus named from *dinos*, huge, and *therion*, a wild beast, in allusion to its huge size, the *dinotherium* being considered to have been the largest of all terrestrial animals. It holds an intermediate place between the tapir and the mastodon, as it is believed to have been a herbivorous aquatic animal, and supplies a link between the cetacea and pachydermata. There are two species at present recognised. The remains are found chiefly at Epplesheim, in Germany. The animal is referred to the miocene period.

DIOBO'LOX, *διοβολος*. An ancient weight of two oboli (a scruple).

DIOCESE, } from *διοικησις*, a jurisdiction
DIOCESS, } tion (radix *οικος*, a house).

An ecclesiastical division of a kingdom or state, subject to the authority of a bishop, hence called a *diocesan*. A diocese was originally a division of the Roman empire, called otherwise a *prefecture*.

DIOCTAHE'DRAL, from *di*, and *octahedral*, having the form of two octahedral pyramids joined base to base, without any intermediate column. Crystals of this form constitute the genus *diocetahedria*, and the figure is called a *diocetahedron*.

DIO'DON, the sun-fish. Placed by Cuvier in the family Gymnodontes, and thus named from *dis*, and *odon*, a tooth, in consequence of the jaws being undivided, and formed of one piece above, and another below. The skin is everywhere armed with spines, so that when the fish is inflated, and it has the power of swelling itself like a balloon, it bears a close resemblance in form to the burr of a chestnut-tree. A number of species inhabit the seas of hot climates.

DIOE'CIA, from *dis*, and *oikos*, a house. The name of a class of plants in the sexual system of Linnæus, embracing such as have barren or male flowers on one individual, and fertile or female ones on another of the same species. The poplar, aspen, and willow, are examples. The epithet for plants of this class is *diœcious*.

DIOME'DEA, the albatross. A genus of aquatic birds of gigantic size (See *ALBATROSS*). They inhabit the South Seas. Cuvier places them among the *Longipennes*. The name is that of certain birds of the Island of Diomedes, near Tarentum, which were said to receive the Greeks favourably, and to attack the barbarians.

DIOPHANTINE ANALYSIS. } In *algebra*,
 PROBLEMS. } certain problems relating to square and cube numbers, right-angled triangles, &c.; the properties of which were first discussed by Diophantes, in his "Arithmetic."

DIOPT'RICS, from *dia*, through, and *optomai*, to see. That branch of optics which treats of the laws of refraction, and of the effects which the refraction of light has on vision: called also *anaclastics*.

DIORA'MA, from *dia*, and *orama*, a view. This name is given to those buildings in which *dioramic paintings* are exhibited, and also to the art of making such paintings. Dioramic painting is a new art, and is a decided improvement upon the old panorama. It consists in uniting transparent painting to the usual opaque method, and causing the light to fall upon the picture both before and behind. To give life to the picture transparent blinds, suspended both above and behind, are put in motion by machinery, and now and again modify and intercept the rays of light, so as to fall at pleasure in graduated tints upon all parts of the scene in succession. By the same means, figures are made to appear where the spectators had just beheld empty seats, &c.; rocks to tumble from mountains; the dark thunder-cloud to overshadow the smiling valley; or the avalanche to hurl destruction among the peaceful inhabitants of the lowland village.

DIOSCORE'A, a genus of perennial plants. *Diœcia*—*Hexandria*. Named in honour of

Dioscorides. The esculent root called the *yam* is afforded by three species, the *alata*, *bulbifera*, and *sativa*. They are natives of both Indies, and the root is eaten promiscuously as the potato is with us. The taste is more luscious than the potato.

DIOS'MA, a genus of permanent plants of about 50 species. *Pentandria*—*Monogynia*. Name from *Διος*, Jove, and *οσμη*, a smell, on account of its divine smell. The smell, however, of some of this species is so far from being divine that a division called *Barosma* has been formed to include them. A bitter principle called *diosmine* has been extracted from the leaves of the *D. crenata*, the *Buchu* of the natives.

DIP, from Sax. *dippan*, to incline downwards. In *geology* and *mining*, the inclination of a stratum, or the angle which it forms with the horizon, is termed the *dip* or angle of inclination. Mining workmen also use the term *dip* for any interruption of a vein by a dike or fault, without regard to the literal meaning of the word. In *magnetism*, the depression of one of the poles of a magnet, and the consequent elevation of the other, is called the *dip* of the magnet or needle. An apparatus constructed to show the amount of this depression is called a *dipping-needle* (q.v.). For *dip* of the horizon, see *DEPRESSION*.

DIPETA'LOUS, from *dis*, and *πιταλον*, a petal; having two flower-leaves or petals.

DIPH'YOES, the name given by Cuvier to a genus of zoophytes. Class *Acatepha*; Order *Hydrostatica*; from *dis*, and *φυη*, nature. Two different animals being always found together, the one encased in a cavity of the other, but susceptible of being separated without destroying the life of either. They are gelatinous and diaphanous.

DIPHYL'LOUS, from *dis*, and *φυλλον*, a leaf; two-leaved; applied to the perianth of flowers when there are two calyces.

DIP'LOE, from *διπλω*, to double; the name given by anatomists to the cancellated substance between the two plates of the skull.

DIPLO'MA, *διπλωμα*. A writing which confers some privilege, and especially the instrument of licence given by colleges to clergymen to exercise the ministerial functions, and to physicians and surgeons to practise physic and surgery: thus named from *διπλωσ*, to double, because usually written on parchment and folded up.

DIPLOM'ACY, from *διπλωμα*, a folded letter (ancient meaning); the customs, privileges, and rules of ambassadors, envoys, and other representatives of princes and states at foreign courts. Ministers

at courts are hence termed a *diplomatic body*, and severally, *diplomatists*. At the Congress assembled at Vienna, 1814, it was arranged that the rank of diplomatic agents should be: 1. Ambassadors; 2. Envoys Extraordinary and Ministers Plenipotentiary; 3. Ministers resident; 4. Chargés d'Affaires; 5. Secretaries of Legation and Attachés.

DIPLOMATICS, the science of *diplomas* or ancient writings, literary and public documents, decrees, charters, and having for its object the deciphering of old writings, and the discussing of their authenticity, dates, &c.

DIPLOPY, Lat. *diptopia*, a disease of the eye in which the person sees an object double, from *διπλος*, double, and *οπτομαι*, to see; the *visus duplicatus*. The cause of the affection is not well known.

DIPLOZOOON, from *διπλος*, double, and *ζωον*, an animal; i.e. *double animal*, a very singular worm which infests the gills of the bream, having two distinct bodies united in the middle, resembling a St. Andrew's cross.

DIPPING (see **DIP**). Among *miners*, the interruption of a vein of ore. In *magnetism*, the depression of the pole of a magnet or magnetic needle is called its *dip*, and the amount is shown by the *dipping-*

needle. This needle, A B, is a flat magnet, through the centre of which a small axis passes at right angles. It moves freely in circular holes made in the horizontal bar, C D, which forms the diameter of a circle, graduated for the purpose of showing the angle which the needle makes with the horizon. At the equator the needle takes the horizontal position, from which position it deviates in proportion as it is approached towards either pole: this may be shown by using a large artificial magnet.

DIPTERA, an order of insects characterized by having two membranous, extended wings, whence the name from

δισ and *πτερον*, a wing. The epithet for this order is *dipterous* or *dipteral*.

DIPTERACEÆ, a natural order of arborescent exogens.

DIPTERON, from *διπτερος*, two-winged; the name given by the old architects to an edifice with a double row of columns, which formed porticoes called wings or aisles.

DIPTERYGIAN, *διπτερυξ*, two-finned; a family of fishes having only two fins.

DIPTYCH (Gr.), *twofold*, a tablet used by the Romans for the purpose of writing, and folded like a book of two leaves. When it consisted of several leaves it was called *polyptych*. The tablet was formed of wood or some metallic substance.

DIPUS, the generic name given by Gmelin to the *Jerboas* belonging to the rat-tribe. The *jerboa* is found from Barbary to the north of the Caspian Sea, is the size of a rat, lives in burrows, and becomes torpid during winter. *Dipus* means *two-footed*, and the common *jerboa* (*D. sagitta*) is often called the two-footed mouse (a name more or less applicable to all the species); from the great length of its hind-legs and the shortness of its fore-paws, its motions resemble those of a bird.

DIPYRE, a mineral of the zeolite family, thus named from *δισ* and *πυρ*, fire, because it melts and phosphorises at the same time before the blow-pipe. It is a silicate of alumina and lime.

DIRECT, from *directus*, straight. In *astronomy*, a planet moves *direct* when its motion is forward in the zodiac or in the direction of the signs (see *CONSEQUENTIA*): opposed of *retrograde*. In *music*, an interval is *direct* when it forms harmony on the fundamental sound which produces it; and a *direct* is a character placed at the end of a stave to direct the performer to the first note of the next stave. In *arithmetic*. See *PROPORTION* and *RATIO*. In *geometry*. See *RIGHT*. In *optics*. See *RAY*. A *direct dial* is one which points directly to one of the four cardinal points. A *direct tax* is one upon real estate and houses and lands.

DIRECTION. In *mechanics*, (1.) The *line of direction* is the line in which a body moves, or in which force is applied; (2.) The *angle of direction* is that included between the lines of direction of two conspiring forces; (3.) The *quantity of direction* has the same meaning as *momentum*.

DIRECTOR. 1. A person appointed to manage the affairs of a public company. — 2. A grooved instrument or probe for guiding the knife in some surgical operations. — 3. The name of a muscle.

DIRECTRIX. In *mathematics*, (1.) A line drawn perpendicular to the *axis* of

the curve, frequently referred to in demonstrating the properties of the conic

sections in planes. (2.) The line or plane along which another line or plane is supposed to move in the generation of a surface or solid, called also the *dirigent*.

DISABILITY. In *law*, a state which renders a person ineligible as a holder of certain legal benefits.

DISC, or DISK, Lat. *discus*. 1. The face of the sun or moon as either appears to a spectator on the earth.—2. The width of the aperture of a telescope.—3. In *botany*, the central florets of a compound flower; the whole surface of a leaf.—4. In *conchology*, the middle part of a valve, or that part which lies between the umbo and the margin; the convex centre of a valve or most prominent part, supposing it to lay with its inside undermost.

DISCHARGER. In *electricity*, an instrument for discharging a jar or battery. The handle is glass, and the other parts brass. The common forms are the

The single discharger is called also a *discharging rod*.

DISCIFORM, Lat. *disciformis*, resembling a disk or quoit in shape.

DISCLAIMER. In *law*, a plea containing an express denial.

DISCONTINUANCE. In *law*, an injury to real property, of which the rightful owner is kept out by a tenant whose entry at first was lawful, but who wrongfully retains the possession.

DISCORD. In *music*, an interval whose extremes do not coalesce: opposed to *concord*. The second, fourth, and seventh, with their octaves, are instances.

DISCOUNT, Fr. *discompte*, from *deor* *dis*, and *compte*. An allowance paid for the advance of money not due till a future period. It is of two kinds: discount of bills, and discount of goods. When a bill of exchange is presented to a banker for discount, he calculates the simple interest for the time which the bill has to run, and deducts it; this is called the *discount*. Again, a merchant who allows three months' credit, will deduct a certain rate per cent. for payment in hand; and this sum is called the *discount*, and sometimes the *rebate*.

DISCOVERY. In *law*, the act of revealing or disclosing any matter by a defendant in his answer to a bill in Chancery.

DISCRETE, Lat. *discretus*, separate or distinct. *D. proportion* is that in which the ratio between two or more pairs of numbers is the same, and still the proportion not continued: called also *disjunct proportion*. The proportion 3 : 6 : : 5 : 10 is an example. A *discrete quantity* is one which is not continued and joined. Such is a number whose parts being distinct units cannot be united into one continuance.

DISCRETIVE (see **DISCRETE**), disjunctive. A *discretive proposition* is one which expresses some distinction, opposition, or variety, by means of *but*, *though*, *yet*, &c.

DISCUS (Lat.), a quoit. A piece of iron, copper, or stone, of an oval form, five or six fingers broad, and about a foot long, hurled in the manner of a bowl by the help of a thong passing through a hole in the middle, and fastened to the person's hand who threw it.

DISDIAPASON. In *music*, two octaves, or a fifteenth.

DISINFECTING LIQUOR is a solution of chloride of soda, or of chloride of lime.

DISINTEGRATION, from *dis* and *integer*, separation of the *integrant* parts of a substance, as distinguished from decomposition, or the separation of constituent parts.

DISJUNCTIVE (see **DISJUNCT**). In *grammar*, a *disjunctive conjunction* is a word which *joins* sentences, but *disjoins* the sense, as *or*, *nor*, *but*, &c. In *logic*, a *disjunctive proposition* is one in which the parts are opposed to each other by means of disjunctives. A *disjunctive syllogism* is one in which the major proposition is disjunctive, as *the earth moves in a circle or an ellipse*; but it does not move in a circle, therefore it moves in an ellipse.

DISLOCATION, from *dis*, and *locus*, a place. In *surgery*, the displacement of the articular extremity of a bone: called also a *luxation*. In *geology*, the displacement

of parts of rocks, or portions of strata, from the situations which they originally occupied. M De Beaumont's theory of dislocations goes to show that those of the same geological age range in lines parallel to one and the same great circle of the sphere.

DISMEMBERED. In *heraldry*, birds, &c. are dismembered that have neither legs nor feet.

DISO'MUM. In *ancient sculpture*, a tomb made for the reception of two bodies.

DISPART'ING. In *gunnery*, setting a mark upon the muzzle-ring of a piece of ordnance, so that a sight taken from the top of the brass ring against the touch-hole may be parallel to the axis of the concave cylinder.

DISPENSATION. In *ecclesiastical affairs*, (1.) A system of principles or rites enjoined (*dispensed*) as the *Mosaic dispensation*, i.e. the Levitical law; the *gospel dispensation*, i.e. the scheme of human redemption by Jesus Christ. (2.) The granting of a license, or the license itself, to do what is forbidden by laws or canons, or to omit something therein enjoined, i.e. the dispensing with a law or canon. The pope has power to grant dispensations.

DISPER'MOUS, Lat. *dispermus*, two-seeded. Applied to fruits.

DISPER'SION, from *dispergo*, to scatter. In *optics*, the *dispersion of light* is the enlargement of a pencil or beam of light, which is produced by its passage from one medium to another. In *dioptries*, the *point of dispersion* is that from which the refracted rays begin to diverge, when their refraction renders them divergent.

DISPLUVIATUM (Lat.) A place in which the rain was carried away by two channels, in ancient buildings.

DISSECT, or **DISSECTED**, Lat. *dissectus*: applied to leaves of plants, which are divided into numerous irregular portions: synonymous with *incised* or *lacinated*.

DISSEI'SIN,) from *dis* and *seize*. In *law*,
DISSEI'ZIN,) an unlawful disseizing
(dispossessing) a person of his lands, tenements, &c.; a deprivation of actual seizin.

DISSENTER, one who dissents or separates from the service and worship of an established church. The Dissenters of England maintain that Christ alone is head of the church, and bow to no human authority in matters of religion. Dissent began in Queen Elizabeth's time.

DISSEI'MENT, Lat. *dissepimentum* a partition: applied by botanists to the partitions which divide a capsule into cells.

DIS'SIDENTS. A term applied to those dissenters from the established religion in Poland, who, under the old republic, were allowed the free exercise of their faith.

DISSEI'LENT, Lat. *disiliens*, bursting

suddenly asunder: applied to capsules, &c., of plants.

DISSIPATION, dispersion; from *dis* and (obsolete) *sipo*, to throw. In *optics*, the *circle of dissipation* is that circular space upon the retina which is taken up by one of the extreme pencils of rays issuing from any object: the radius of that circle is called the *radius of dissipation*.

DISTANCE. Accessible distances are such as may be measured by any lineal measure. Inaccessible distances are such as can only be measured by means of trigonometrical rules and formulae.—In *optics*, *apparent distance* is that at which we judge an object to be placed when seen afar off: it generally differs considerably from the *true distance*.—In *perspective*, the *line of distance* is a right line drawn from the eye to the principal point of the plane.—The *point of distance* is that point in the horizontal line which is at the same distance from the principal point as the eye is from the same.—The *distance of the eye* is a line drawn from the eye to the principal point.—In *horse-racing*, *distance* is a length of 240 yards from the winning-post: at this point is placed the *distance-post*. If any horse has not reached the distance-post before the first horse in that heat has reached the winning-post, such horse is said to be *distanced* and is disqualified for running again during that race.

DISTANT, Lat. *distans*: applied to petals, stems, &c., of plants, when they are directed away from each other.

DISTEM'PER (see *TEMPER*). 1. A term used in painting to signify the working up of colours with something else besides mere water or oil. Painting with water colours is called *limning*; with colours prepared with oil, it is simply *painting* or *painting in oil*; but a piece done with colours prepared with any glutinous or unctuous matter as size, white of eggs, &c., is done in *distemper*.—2. A disease of the dog, considered to be a catarrhal disorder.

DIS'THENE, a mineral, thus named by Haüy, from *dis* and *σθεος*, strength, on account of its double electric power: some of its crystals, under the same circumstances, being positively and others negatively electrified by friction. This is the *disthen-spath* of Mohs. See *CYANITE*.

DISTICHOUS, Lat. *distichus*, two-ranked, *dis* and *στιχος*, a row: applied to stems, leaves, &c., of plants, when they spread in two horizontal directions, as the branches of the *silver-fir*.

DISTILLATION, from *dis* and *stilla*, a drop; a chemical process which consists in the separation of the volatile principles of bodies, by subjecting them to heat in a vessel (alembic or retort), and condensing the volatile part in another vessel (a receiver). When a body is decom-

posed by a strong heat in one vessel, and the products collected in another, the process is called *destructive distillation*.

DISTINCTION, from *distingus*, to distinguish: a separation or disagreement in kind or qualities by which one thing is known from another; divided by logicians into three kinds, *real*, *modal*, and *rational*. The first is that between the modes of two substances; the second is that between several things, one of which may exist without the others, but not *vice versa*; the third is that between a thing and its essence, between essences and properties, &c.

DISTINCTION. In the schools, an expedient to evade an argument.

DISTOMA, from *dis* and *στομα*, a mouth; the name given by Retz to a genus of Entozoa of the Parenchymic order. The species are numerous. Several inhabit the hepatic vessels of sheep and other ruminant animals. The most celebrated is the liver fluke (*D. hepatica*).

DISTRAC'TILE. In *botany*, a connective which divides into two unequal portions, one of which supports a cell, and the other not.

DISTRIBUTION, from *dis* and *tribuo*, to divide. In *printing*, the taking down of a form, and the placing of the letters in their proper cells in the cases.—In *logic*, the distinguishing of a whole into its several parts.—In *architecture*, the disposing of the several parts of a building according to some plan.—*Distributive nouns* are words which serve to distribute things into several orders, as *each*, *every*, *either*, &c.

DISTRIN'GAS. In *law*, a writ commanding the sheriff or other officer that he distrain for taxes, &c., or for his appearance at a certain day.

DISTYLE, Lat. *distylus*; having two styles.

DITETRAHEDRIA, a genus of crystals in the form of tetrahedral prisms with dihedral summits. Epithet *ditetrahedral*.

DITHYRAM'BUS, from *διθύραμος*, one of the titles of Bacchus; a hymn in honour of Bacchus. Hence *dithyrambic*, a poem in wild enthusiastic strains.

DITONE, from *dis* and *τονος*, tone; a musical interval comprising two tones. The ratio is 4 : 5.

DITRIGLYPH. In *architecture*, the span between two triglyphs.

DITRIHEDRIA, a genus of crystals with six sided planes (*di* and *trihedria*), being formed of two trigonal pyramids joined base to base without an intermediate column. Epithet *ditrihedral*.

DIURE'SIS, *διουρησις*. The excretion of urine. Hence *diuretic* is applied to any medicine which is designed to augment the flow of urine from the kidneys.

DIUR'NA, a family of *Lepidoptera*, comprising the genus *Papilio* of Linnaeus, now divided into 28 sub-genera. These butterflies are thus named because they fly during the day.

DIUR'NÆ, a family of the Accipitrine order of birds, comprising the genera *Vultur* and *Falco*, of Linnaeus. They fly during the day, whence the name. Also a family of Lepidopterous insects.

DIURNAL, from *diurnus*, daily; the *diurnal arch* is the arch or number of degrees that the sun or other heavenly body describes between its rising and setting. The *diurnal motion* of a heavenly body is the number of degrees, &c. which it moves through in 24 hours.

DIVAN, an oriental word (Arabic, *divan*) signifying originally a register of names and accounts, and now used synonymously with our *board* and *exchequer*; a council assembled; a court of justice; a council chamber. It also signifies a kind of sofa.

DIVERG'ENT, diverging, from *divergo*, to incline from a point; tending to various parts from a point; thus *divergent rays* are those which, going from a point of the visible object, continually depart from each other in proportion as they are removed from the object, opposed to *convergent*. A concave lens renders rays divergent, and a convex one renders them convergent. In *mathematics*, series are said to be *divergent*, when the terms become always greater as the series is continued, and *convergent* when they continually become smaller. In *geology*, *divergent* is applied when branches form a right angle with the stem. In *botany*, when describing the venation of leaves.

DIVER'SION, from *diverto*, to divert. In *military tactics*, a movement towards an enemy's weak point to draw off his forces from operations in another quarter.

DIVIDEND (see *DIVISION*). (1.) The proportion of profits which the members of a society or public company receive at stated periods. (2.) The payment made to creditors out of a bankrupt's estate. (3.) The annual interest payable upon the national debt; the order by which stockholders receive their interest is called a *dividend warrant*, and the proportions of interest unreceived are termed *unclaimed dividends*. In *arithmetic*, any number to be divided is called a *dividend*, and the successive dividends in a process of "long division" are called *dividuals*; the dividing number is called the *divisor*.

DIVINA'TION, from *divino*, to foretell; the pretended art of foretelling future events. The Jews were fond of divination, magic, and the interpretation of dreams. The heathen philosophers believed in divination, and divided it into

two kinds, *natural* and *artificial*. The first was supposed to be effected by a kind of inspiration, the second by certain rites and observations, as sacrifices, flight of birds, lots, position of stars, &c.

DIVINE RIGHT OF KINGS, the absolute and unqualified claim of sovereigns on the obedience of the people.

DIVING-BELL, a mechanical contrivance by which persons may descend beneath the surface of the water, and remain for some time with little inconvenience. It somewhat resembles a barrel without a bottom, or a bell, as the name implies, and is usually about 5 feet in height and the same in width, in the clear. It is commonly formed of very thick cast iron, and in one piece, whereby it is perfectly air and water-tight. The weight of the metal causes the bell to sink readily, and its substance is in some measure proof against accidents. In the top an opening is disposed for the reception of a supply of air, and thick lenses are also fixed in the upper part to admit light. The divers in the bell are supplied with fresh air through an eduction tube, by means of a force-pump worked above. There are many forms of this apparatus, and some diving-bells are made to cover the head only. The general use of diving-bells is the recovery of property that has been sunk in wrecks, clearing obstructions from the bottoms of harbours, rivers, &c., and laying the foundations of piers and other water-works.

DIVING-BLADDER, a term used by Borelli for a machine which he contrived to answer the purposes of the diving-bell in great depths of water. It is nothing more than a diving-bell for the head only of the diver. The bladder, as it is called, is made of brass or copper, and about two feet in diameter. Within are pipes, by means of which a circulation of air is kept up.

DIVISIBILITY, that property of bodies by which they are separable into parts, and those parts into others. No limit is assigned to this subdivision, though it seems probable that at some term, however distant, the particles may lapse into single atoms incapable of further resolution.

DIVISION, from *divido*, to divide: the act of separating any entire bodies into parts. In *arithmetic*, one of the four fundamental rules by which we find how often one quantity is contained in another: it is called *simple division* when the dividend and divisor are abstract numbers, and *compound division*, when the dividend is concrete. The terms of a division are the *divisor*, the *dividend*, and the *quotient*. In *music*, the distinguishing of the octave into a number of less intervals, as quarters. The fourth and fifth divide the octave perfectly though differently; whereas

the fifth is below, and serves as a bass to the fourth, the division is *harmonical*; but when the fourth is below it is *arithmetical*. In *logic*, the explication of a complex idea by enumeration of simple ideas whereof it is composed, is called *division*; and the same name is given by rhetoricians to the arrangement of a discourse into heads. In the navy, a select number of ships in a fleet or squadron of men-of-war, is called a *division*, and is distinguished by a particular flag, pendant, or vane. A part of an army, usually two brigades, commanded by a major-general, is also termed a *division*; but the term is not definite.

DIVISION. In *arithmetic*, the number or quantity by which a dividend is divided. When the same number divides two or more numbers, without leaving any remainder, it is called a *common divisor*, and if it is the greatest of all such divisors it is called the greatest common divisor, or, more commonly, the *greatest common measure*.

DIVORCE, Lat. *divortium*, a legal separation of husband and wife either a *vinculo matrimonii*, which is a complete dissolution of the marriage bonds, or a *mensa et thoro* (from bed and board), whereby the parties are legally separated, but are not unmarried.

D.M., an abbreviation of *Doctor Medicinæ*, i.e. Doctor of Medicine.

DO. In *music*, a syllable used by the Italians instead of *ut*.

DOAB, a Persian word meaning *two waters*, and applied in geography (Indian) to any tract of country included between two rivers.

DOSHASH, the name given in India to a bilingual, or one who speaks two languages, now synonymous with *interpreter*.

ДОСѢТА, from *δοξασιν*, to seem, an ancient heretical sect who considered that Christ only acted and suffered in appearance.

ДОЦИМАСТЪ, *δοκιμαστής*. Trial by experiment. The art of assaying metals. The art by which the nature and proportions of an ore are determined. It is called sometimes the *docimastic art*.

ДОЦИМАΣΙΑ, Gr. *δοκιμασία*, from *δοκιμαζω*, to prove. A probation of the ancient Grecian magistrates and persons employed in public business at Athens, by which they were obliged to give an account of themselves and their past life before certain judges.

ДОКЪ. Said to be from *δεχομαι*, to receive, but obviously Teutonic *dock*, perhaps originally from *dekhen*, to cover or protect. In *navigation*, an artificial basin for the reception of ships. Docks are of two sorts, *wet* and *dry*. The first are for the reception of ships at all states of the

tide; *dry docks* are so called from their being left dry when the tide is out. There are also *graving or repairing docks*, for the repairing of vessels; *import docks* appropriated for ships unloading; and *export docks* for vessels going out. In America, the spaces between wharves are called *docks*.

DOCK'ET, a piece, from *dock*, to clip. 1. In *law*, a small piece of paper or parchment containing the heads of a writing; a brief in writing; also a subscription at the bottom of letters-patent by the clerk of the dockets; also an alphabetical list of the cases in a court. Attorneys keep *docket-books* in which they enter judgments. To *strike a docket*, is a cant phrase for making a man bankrupt by process of law.—2. In *commerce*, a direction tied to goods; a ticket.

DOCTOR, literally a teacher. One who has taken the highest degree in the faculties of divinity, law, or physic. D. of Divinity, abbr. D.D.; D. of Laws, abbr. LL.D.; D. of Medicine, M.D. The title is either conferred publicly with certain ceremonies, or by diploma.—2. In *calico printing*, a thin plate of steel used for scraping the colour or mordant off the copper-plates.

DOCTORS' COMMONS, the popular name for the courts and offices occupied by the "College of Doctors of Law exercent in the Ecclesiastical and Admiralty Courts."

DOCT'RNAIRES, a party of French politicians, supporters of a constitutional monarchy; the philosophical party.

DODEC'AGON, from *δωδεκα*, twelve, and *γωνια*, an angle. A geometrical figure of twelve sides and angles.

DODECAGY'NIA, from *δωδεκα*, twelve, and *γυνη*, a woman. An order of plants having twelve styles or pistils: the house-leek.

DODECAH'E'DRON, from *δωδεκα*, twelve, and *ιδεα*, a base. A regular solid contained under twelve equal and regular pentagons, or having twelve equal bases.

DODECAH'E'DRAL CORUN'DUM, a mineral. There are two varieties; the Ceylanite, and the Spinel Ruby. General name, *Spinel*.

DODECAH'E'DRAL GAR'NET, a species of garnet of which there are ten varieties; the Grossulaire, Pyrenaite, Colophonite, Precious Garnet, Topazolite, Melanite, Allochroite, Pyrope, Essonite, and Common Garnet.

DODECAN'DRIA, from *δωδεκα*, twelve, and *ανη*, a man. A class of plants in the sexual system, comprising such as have not less than twelve, nor more than nineteen stamens on each flower. Epithet *dodecandrian*.

DODECA'STYLE. In *architecture*, a build-

ing having twelve columns on front or flank.

DO'DRAMS (Lat.). A measure equal to about nine inches, being the space between the end of the thumb and the little finger when fully extended. It is about equal to the *palm*.

Dog. A sort of iron hook or bar, with a sharp fang at one end, so formed as to be easily driven into a piece of timber, to drag it, by means of a rope, out of the water or ship-board.

Dog'-DAYS, Lat. *dies caniculares*. The days between the 24th of July and the 24th of August; so called because the dog-star (*Sirius*), during this period, rises with the sun. To the influence of this star the great heat of these days was ascribed.

DOGE, formerly the title of the chief magistrate of the republics of Venice and Genoa.

DOG'-OER, a two-masted Dutch vessel, navigated in the German Ocean: principally employed in fishing on the Dogger Bank. It somewhat resembles a ketch.

Dog'-MATISTS, from *δογμα*, a doctrine. A sect of ancient physicians, of which Hippocrates was the first. They laid down definitions and divisions, and supposed principles from which they drew conclusions, which they applied to particular diseases: hence they were also called *logici*, or logicians, to distinguish them from the *empyrici* and *methodici*.

Dog'-STAR, *Sirius* (q. v.). A star of the first magnitude in the constellation *Canis major*.

Dog'-VANE. In *navigation*, a small, light vane, formed of a piece of packthread and some slices of cork, stuck full of feathers, placed on the windward side of the quarter-deck, or weather-gunwale, to assist in steering the ship in a wind.

Dog'-WATCH, among *seamen*, a watch of two hours.

DOIT, the old Scottish penny, twelve of which made a penny sterling.

DOLAB'IFORM, from *dolabra*, a hatchet, and *forma*. Hatchet-shaped. Applied to leaves cylindrical at the base, and having the upper part dilated, thick on one edge, and cutting on the other.

DOL'CE (It.). In *music*, a mark which means that the music is to be played softly and sweetly.

DOLICH'ORUS, a genus of dipterous insects, family *Tanytoma*. Found on walls, trunks of trees, &c., and often running on the surface of water. Name from *δολιχος*, long, and *πους*, a foot, the legs being very long and slender.

DOL'ICHOS, the cowhage, or cow-itch plant. A genus of numerous species. *Dialdelphia*—*Decandria*. Name from *δολιχος*, long, in reference to the length of its pods. Several species are used as food.

DOL'AR, a silver coin of Spain and the United States, value 100 cents. Said to be named from Dole, the town where it was first made. The dollar seems to have been originally a German coin, and in that country the name is still given to coins of different values.

DOLL'MAN, the name given to a long cassoock worn by the Turks.

DOL'O'MITE, a variety of magnesian limestone; thus named after M. Dolomieu, a French geologist. A white variety called *D. marble* was used by ancient sculptors in their finest works. The Germans call it *Zechstein*.

DOM. Lat. *dominus*, a lord. A title of the dignitaries of the Roman Catholic church, and of certain monastic orders.

DOMÉ, from *δομος*, from *δωω*, to build.

1. In *architecture*, an arched roof springing from a polygonal, circular, or elliptic plan; when the base is circular it is called a *cupola*.—2. In *chemistry*, the upper part of a reverberating furnace, resembling a hollow hemisphere.

DOMES'DAY, **DOOMSDAY-BOOK**, a book or record, made by order of William the Conqueror, of the lands of England. It consists of two volumes, a folio and a quarto, and remains in the Exchequer.

DOM'INA, *dame*, a title anciently given to women, who in their own right of inheritance, held a barony.

DOMIN'ICAL LETTERS, called also *Sunday letters*; the letters, A, B, C, D, E, F, G, used in almanacs, &c., to denote Sundays (*dominicus dies*), throughout the year.

DOMIN'ICANS, called also *Predicants* or *Preaching Friars*; an order of Monks founded by St. Dominic of Spain, in 1215. The object of their institution was to preach the gospel, convert heretics, defend the faith, and propagate Christianity. In France they were called *Jacobins* because their first convent was in the *Rue St. Jacques*.

DOMICILIARY, pertaining to a *domus* or private residence, as a *domiciliary visit*, which is a legal visit to a private house for the purpose of searching it.

DOM'IFYING, from *domus*, a house, and *facio*, to make; a term used in astrology, for the distribution of the heavens into twelve houses, in order to erect a theme or horoscope by means of the six great circles, called circles of position.

DOM'INANT, from *dominus*, a master; predominant. In *music*, of the three notes essential to the tone, the *dominant* is that which is a fifth from the tonic. A *dominant*, or sensible chord, is that which is practised on the dominant of the tone, and which introduces a perfect cadence.

DOMIN'ION, Lat. *dominium*, supreme authority. *Dominium plenum* is when the property is united with the posses-

sion; *dominium nudum*, when there is property without possession. *Directum dominium* is the right of dominion; *dominium utile* is the profit arising from it. The wife retains the *dominium directum* of her jointure, but the *dominium utile* passes to the husband.

DOM'INO. 1. A dress formerly worn by ecclesiastics in winter, serving to protect the face and head from the weather.—2. A masquerade-dress worn by gentlemen and ladies: it consists of a long silk mantle with cap and wide sleeves.

DOM'INOES, a game played with 28 pieces of ivory or bone variously dotted after the manner of dice; these are sometimes called *cards*, but commonly *dominoes*.

DOM'INUS (Latin), a master. 1. In *civil law*, one who possesses anything by right.—2. In *feudal law*, one who grants part of his estate in fee to be enjoyed by another.

DOM'O-REFARAN'DO, a writ which lies for a person against his neighbour, whose house he fears will fall to the damage of his own.

DON, the Spanish title for a gentleman, answering to *Dom* or *dominus*, lord.

DON'ATISTS, a sect of Christians in Africa, named from their founder Donatus.

DON'ATIVE, from *dono*, to give. In *canon law*, a benefice given by the patron to a priest without presentation to the ordinary, and without institution or induction. Among the *Romans* a *donativum* was a gift made by the soldiers, as *congratium* was one made by the people.

DON'ION, **DONGEON** (NOR. Fr. for *dungeon*), in *fortification*, a strong tower or redoubt of a fortress, into which the garrison may retreat, in case of necessity.

DOOKS, in *Scotland*, flat pieces of wood inserted in walls; called in England *wooden bricks*.

DOOR. Doors intended to present an even surface when closed are called *jib-doors*, or *flush-doors*. The three horizontal pieces mortised into the upright sides of the door, are called the *top*, the *bottom*, and the *lock-rails*, and if a fourth occur under the top-rail, it is called the *frieze-rail*; the side pieces are called *stiles*, and the two intermediate pieces are *meeting-stiles*; the intermediate pieces between the stiles are *munions*. The *door-frame* or *case* is the wooden frame enclosing a door.

DORA'DO (Span.), gilt, a southern constellation sometimes called the *Sword-fish*.

DOR'EKA, a genus of plants. *Petandria—Digynia*. Name from *δωρεκα*, a gift. A Persian species yields the gum ammoniac of the shops.

DOR'IC, from *Doris* in Greece; pertaining to Doris or the Dorians, as the *Doric dialect*. The *doric order* of architec-

ture is that peculiar shape of a column and its entablature originally formed in imitation of a wooden fabric, supported with fluted posts or the trunks of trees. In the most ancient specimens the distinguishing character is the absence of base. The order is characterised by strength and simplicity, and is appropriately used in the gates of cities and citadels, outside of churches, &c. The *doric mode* was the first of the musical modes of the ancients. Its character is severe, tempered with gravity and joy.

DORMANT, is applied, in *heraldry*, to an animal when in a sleeping posture; and in *commerce*, to a partner in a concern when he takes no share of the business.

DORMER, DORMANT-WINDOW. The attic stories of houses were in former times generally occupied by sleeping-rooms, and the windows opened on the inclined plane of the roof; on this account the rooms were called *dormitories*, and the application of *dormant* was applied to the windows of these apartments.

DORNOCH, a species of figured linen of a stout fabric; it takes its name from Dornoch, a town in Scotland, where it was first manufactured for table-cloths.

DORSAL, Lat. *dorsalis*, belonging to the back (*dorsum*); as *dorsal fins*, *dorsal nerves*, &c.

DORSIBRANCHIATA, from *dorsum* and *branchus*; an order of articulate animals: class *annulata*. The branchiæ resemble trees, tufts, laminae or tubercles, in which the vessels ramify and are placed on the middle of the body, the *dorsum*. They mostly inhabit mud or swim in the ocean.

DORSIFEROUS, from *dorsum* and *fero*, }
DORSIPAROUS, from *dorsum* and *pario*, }
Back-bearing: applied to plants which have nostems and bear their seeds on the back of their leaves. The fern is an example.

DORSUM (Lat.), the back. In *conchology*, the upper surface of the body of the shell, the aperture being downwards.—In *physical geography*, the ridge of a hill.

DORT, SYNOD OF. An assembly of Protestant divines convoked at Dort in 1618-19, by the states-general.

DORÉ, JOHN, corrupted from Fr. *jaune dorée*; a fish, the *zeus faber*.

DOSTREANS. A religious sect which sprung up in the first century of the Christian era.

DOSIL, from Fr. *dossier*, a bundle. In *surgery*, a pledget or piece of lint made into a cylindrical form.

DOTHINENTERITES, from *δοθιν*, a boil, and *εντερον*, an intestine; an enlargement of Peyer's and Brunner's glands, regarded by Bretonneau as the cause of those symptoms which constitute *typhus* and several other kinds of fevers.

DOUBLE-ACTING INCLINED PLANE. Upon *railways*, &c., an inclined plane worked by the gravity of the load conveyed: the loaded waggons descending being made to pull up the empty ones by means of a rope passing round a pulley or drawn at the top of the plane.

DOUBLE-BANKED, the situation of the oars of a boat when two opposite ones are managed by rowers seated on the same bench or thwart; the oars are also said to be *double-banked* when there are two men labouring upon each oar.

DOUBLE-BASS. See *CONTRABASSO*.

DOUBLE-CAST, a term used by farmers for that method of sowing which does not dispense the requisite quantity of seed at once, but requires to be gone over twice.

DOUBLE-OCTAVE. In *music*, an interval of two octaves; a fifteenth.

DOUBLE-PLEA. In *law*, a plea in which two matters are alleged to bar an action.

DOUBLE-QUARREL. In *ecclesiastical affairs*, a complaint of a clerk to the archbishop against an inferior ordinary for delay of justice.

DOUBLE-RAILED INCLINED PLANE. An inclined plane having a double line of rails upon it.

DOUBLÉ. Among *lapidaries*, a counterfeit stone composed of two pieces of crystal with a colour between them, so that it may have the appearance of a naturally coloured gem.

DOUBLING. 1. In the *military art*, putting two files or ranks of soldiers into one.—2. *Doubling upon* is a phrase used by naval tacticians for enclosing a part of the enemy's fleet so as to cannonade it from two sides.—3. *Doubling a Cape* is to sail round or pass beyond it.

DOUBLÓN (properly *doblon*), a Spanish and Portuguese coin, value two pistoles.

DOUCHE. In *baths*, a current of water directed to some particular part of the body.

DOUCNE (Fr.), a moulding concave above and convex below, serving as a cymatium to a delicate cornice.

DOVE-TAIL. In *carpentry*, a method of fastening boards together by letting one piece into another in the form of a dove's tail spread, or of a wedge reversed.

DOWAGER, properly a widow who enjoys a *dower*, but now generally confined as the title of the widows of princes and nobility, as the *Queen Dowager*.

DOWAL, a round *dowel*, or *coak*, is the piece of timber to which the felloes of a carriage wheel are united.

DOWN. 1. Germ. *dunen*: the fine feathers from the breasts of several birds, particularly those of the duck kind, and especially the eider-duck. This bird plucks it from its breast to line its nest: this taken from the nest is called *live down*.

and is most valued. Also, the fine feathery substance by which seeds of plants are conveyed to a distance by the wind, as in the cases of the dandelion and thistle.—2. Sax. *dun*, a hill. *Downs* are elevations of sand thrown up by the sea, and formed along its coasts, and serving as a barrier. The *Downs* is a famous roadstead on the coast of Kent.

DOWN'-HAUL. In a *ship*, a rope passing up along a stay through the cringles of the stay-sails or jib, and made fast to the upper corner of the sail, to pull it down when shortening sail. The *down-haul tackles* are a complication of tackles employed to pull down the main or foreyard in a tempest, in order to reef the sail.

DRAB'-LER. In *sloops* and *schooners*, an additional part of a sail sometimes laced to the bottom of a bonnet or square sail. It is the same to a bonnet as a bonnet is to a course.

DRABS. In *salt-works*, wooden boxes in which the salt is put when taken out of the pans.

DRACHM, DRACHMA, δραχμή. 1. An ancient Grecian coin value $\frac{7}{8}$ d.—2. The eighth part of an ounce: now contracted to *dram*.

DRA'CO, δράκων, a dragon. 1. A genus of Saurians belonging to the East Indies.—2. A constellation of the northern hemisphere, representing the monster which watched the garden of the Hesperides.—3. A luminous exhalation common in marshy and cold countries: called *D. volans*.

The term *δράκων* generally designated a large serpent. Lucian mentions *flying-dragons*, alluding no doubt to the pretended flying serpents treated of by Herodotus. Subsequently dragons are always represented as having wings.

DRACON'ULUS, a little dragon. (See *DRACO*). 1. In *botany*, a plant, the same as *Dracontium*.—2. A guinea-worm. The *dracunculi* are small worms which breed in the muscular parts of the arms and legs: common among the natives of Guinea.

DRAFTS, a game played on a chequered board like the chess-board: hence called a *draft-board*.

DRAQ, from Sax. dragan, to draw. 1. A machine for dredging docks, cleaning rivers, &c. See *DREDGER*.—2. An apparatus for retarding or stopping the rotation of one or more of the wheels of a wheeled carriage in descending hills, &c.

DRAQ'ACANTH, DRAGANT-GUM, a gum produced chiefly from the *astragalus verus*, or goat's horn, a plant common to the north of Persia: more commonly written *Tragacanth*.

DRAQ'-NET, a net to be drawn on the bottom of a pond or river to take fish.

DRAQ'OMAN, DROGMAN, an interpreter a term in general use in the Levant.

DRAQ'ON. In *zoology*, a genus of Saurian reptiles. See also *DRACO*.

DRAGON'-BEAM. In *architecture*, a horizontal piece of timber on which the rafters of a roof pitch.

DRAQ'ON'-FLY, a neuropterous insect of a light and graceful figure, beautiful and variegated colours, and large wings, resembling lustrous gauze. The name is common to all the species of the *Libellulæ*. See *LIBELLULA*.

DRAGONN'ADES (Fr.), the persecutions instituted by Louis XIV. and his successors against the French Protestants.

DRAQ'ON'S BLOOD (sanguis draconis); a vegetable balsam of a dark red colour, imported in small balls of the size of a pigeon's egg, but sometimes in rods and cakes, from India, Africa, and South America, as the produce of several trees: that in tears from the *Dracena draco*, that in sticks from the *Pterocarpus draco*, that in cakes from the fruit of the *Calamus draco*. The gum is now only used as an ingredient in varnishes and dentifrices.

DRAQ'ON'S-HEAD and DRAGON'S-TAIL, terms used in astronomy to denote the nodes of the moon and planets, or the two points in which the ecliptic is intersected by their orbits: more particularly applied to the moon's nodes. It is about these points that all eclipses happen. See *NODE*.

DRAQOONS. A species of cavalry trained to act either on foot or on horseback as emergency requires.

DRAIN'ING TILES, hollow tiles employed in the formation of drains, and often employed in embankments to carry off the water into the side drains.

DRA'PERY. In *sculpture and painting*, the representation of the clothing of human figures, also tapestry, curtains, &c.

DRAUGHT (see DRAFT). 1. In *mechanics*, the power or force required to put any machine in motion, as a coach, horse mill, &c.—2. The depth of water necessary to float a vessel.—3. In *masonry*, the chisel-dressing at the angles of stones, made to guide in levelling the several surfaces.—4. In *trade*, a small allowance on goods sold by weight, made by the wholesale merchant to the buyer, that the weight may hold when the goods are again weighed in retail: called also *cliff* or *clough*. The same name is given to an allowance made at the custom-house on excisable goods.

DRAUGHT'-COMPASSES, compasses with moveable points, used for drawing the finer lines in mechanical drawings, as plans, &c.

DRAUGHT'-HOOKS, large hooks of iron fixed on the cheeks of a gun-carriage for the convenience of drawing it backwards or forwards.

DRAW'BACK. In *commerce*, the remitting or paying back of duties previously paid on a commodity on its being exported.

DRAW'-BORE PIN, a joiner's tool, of a solid piece of steel tapered from the handle, and used to enlarge the pin-holes which are to secure a mortise.

DRAW'-BRIDGE, or LEAF-BRIDGE, a sort of bridge thrown across canals, &c., and so constructed as to be capable of being raised and let down at pleasure. They are now nearly superseded by swing or swivel bridges.

DRAW'-LINK. The draw-link for railway carriages is a contrivance for securing the several carriages of a train together.

DREDGE, a sort of drag for catching oysters in deep water.

DREDG'ER, called also a *ballast lighter*; a sort of open barge employed in removing sand, silt, or the like, from the beds of rivers, harbours, docks, &c. The materials are lifted by a sort of scooping apparatus, and thrown into the barge moored beside it, or to which it is often attached. Most *dredging machines* are now worked by means of steam-engines, the scoops being attached together, and in the manner of the piston-plates of a chain pump, so that a perpetual action is kept up.

DRESS'ING. 1. In *flax-mills*, the whole process of preparing the material for the spinner.—2. In *foundries*, the cleaning of the castings after being taken from the moulds.—3. In the *manège*, the cleaning and trimming of a horse.—4. In *husbandry*, manure laid on the surface.—5. In *architecture*, mouldings round doors, windows, and the like.—6. The term is applied to starch and other articles used in preparing or stiffening silk, linen, or other fabrics.

DRIFT. 1. In *navigation*, the angle which the line of a ship's motion makes with the nearest meridian, when she drives with her side to the wind and waves, and is not governed by the helm; also the distance which she drives on that line. The *drift* of a current is its angle and velocity.—2. In *mining*, &c., a square horizontal passage between the shifts or turns, or between shaft and shaft: called also *driftway* and *heading*.—3. The term *drift* is likewise applied to arches to express the impetus of the arch against the piers.

DRIFT-SAIL, a sail used under water, veered out right a-head, to keep the ship's head right upon the sea in a storm, and to hinder her driving too fast in a current.

DRILL. 1. In *mechanics*, a small steel instrument used for boring holes in hard substances when punches cannot be conveniently used: holes are *drilled* in ivory, iron, &c., and the process is called *drilling*.—2. In *husbandry*, when ground is

channelled by the plough by backing every two furrows upon each other, these channels are called *drills*, and the ground is said to be *drilled*. Potatoes are planted in drills, but the term *drilling* is generally applied to all methods of putting seeds into the ground in equi-distant rows. Hence an excellent machine of recent invention, adapted for sowing grain in drills or rows, is named the *drill-plough*, or *drilling-machine*.

DRIP. In *architecture*, that member of a cornice which projects beyond the other parts, with a form adapted to throw off the water by small portions, or *drop by drop*; called also the *Larmier*.

DRIP'ING EAVES, the terminating projections of inclined roofs of houses, to which there are no gutters for carrying away the water, which therefore falls into the street.

DRIV'ING. In *nautical language*, said of a ship when the anchor does not hold her fast, but allows her to be driven away by the tide or wind.—In *music*, driving notes are those which connect the last note of one bar with the first of the following bar, so as to make only one note of both.

DROITS OF ADMIRALTY, the perquisites resulting chiefly from the seizure of the property of an enemy at the commencement of a war, and attached to the office of lord-high-admiral.

DROM'EDARY, the Arabian camel (*camelus dromedarius*), distinguished from the Bactrian camel by having a single hump on the middle of its back. This name is from *dromaeus*, running, in allusion to the swiftness of the animal.

DRONE. 1. The male of the honey-bee, smaller than the queen-bee, and larger than the neuters or working-bees.—2. The largest tube of the bagpipe, which emits one continued deep note, as a bass to the air or tune played on the smaller pipes.

DROP. 1. A small spherical portion of any fluid. The spherical form is the result of corpuscular attraction.—2. A machine for lowering coals from the staiths of railways into vessels below.—3. The part of a scaffold on which the criminal stands to be executed, and which is suddenly *dropped* after the cord is adjusted.—4. In *architecture*, a conical ornament, hanging drop-like in the cornice of the Doric order, below the mutules, and on the architrave under the triglyphs: six *drops* under each.—5. Some liquid medicines are popularly called *drops*, because the dose is regulated by pouring a certain number of drops from the lip of the phial which contains it.—6. To *drop astern* is, in seamen's language, to slacken the speed of the vessel and let another pass her.

DROPSY, corrupted from *hydropsy*, from *ὑδωρ*, water, and *ψα*, the face; a preternatural collection of watery fluid in the cellular substances of the body. The disease has different names according to its situation. When diffused through the cellular membrane, it is *anasarca*; in the cavity of the cranium, it is *hydrocephalus*; in the chest, it is *hydrothorax*; in the abdomen, it is *ascites*; in the uterus, *hydrometra*; and in the scrotum, *hydrocele*.—2. In *botany*, a disease peculiar to succulent plants, arising from an excessive accumulation of water in the system.

DROSEREA, the Sun-dew, a genus of perennial plants. *Pentandria—Pentagynia*. Name from *δewos*, dew, because the leaves are beset with glands resembling dew-drops. There are three British species.

DROSOMETER, from *δewos*, dew, and *μετρον*, measure. An instrument contrived to measure the quantity of dew that gathers on a body which has been exposed to the open air during the night. It consists of a balance, one end of which is furnished with a receptacle for the dew, and the other end is loaded with a counterpoise protected from it.

DROVE. 1. In *husbandry*, a narrow channel or drain much used in the irrigation of land.—2. In *masonry*, an epithet referring to a description of tooling on the faces of hard stones. *Droved ashler* is the coarsest of hewn stone for building. *Drooved and stripped* applies to a series of grooves, an eighth of an inch deep, cut with a three-quarter chisel, leaving a droved space between each. This sort of hewing is common in Scotland.

DROGGET, a coarse but slight woollen fabric, used for covering carpets, and as an article of clothing by females of the poorer classes. The article manufactured under this name in Scotland has usually the warp of coarse flax, and is commonly striped blue and white.

DAUIDS, from Welch *derio*, an oak, and *gwyd*, knowledge. The priests and philosophers of the ancient Britons and other Celtic tribes. They sacrificed under the oak.

DRUM, *Ir. drumma*. 1. A martial instrument of music, consisting of a hollow wooden cylinder, with vellum stretched over the ends, to be beaten with sticks by a *drummer*.—2. In *mechanics*, a hollow cylinder or barrel fixed on an axle, round which ropes or bands are passed, for the purpose of communicating motion to other parts of the machine.—3. In *architecture*, the bell-formed part of the Corinthian and Composite capitals.—4. The *drum of the ear* is called technically the *tympanum* (q. v.).

DRUPE, *Lat. drupa*, a stone-fruit formed of a coriaceous seed-vessel, enclosed in a

nut: from *drupæ*, over-ripe olives. Fruits of this character are called *drupaceous*: the peach and apricot are examples.

DAUSE (German), a gland: the name given to a hollow space in veins of ore generally lined with crystals.

DREY. In *painting*, a term applied where the outline is too strongly marked, and the colours of the objects do not unite with those around them.—In *sculpture*, applied to a want of tenderness in the forms.

DRYING OIL. Linseed and other oils which have been heated with oxide of lead.

DRY-ROT, a term used to denote a rapid decay of timber by which the interior substance is converted into a dry powder, which issues from minute circular cavities, resembling the borings of worms. Many modes have from time to time been suggested for preventing this disease, but none have as yet proved completely successful.

DRY-STOVE. A glazed structure for containing the plants of dry arid climates.

DUALISM. Those systems of philosophy which refer all existence to *two* ultimate principles.

DUBBER, a leathern vessel, bottle, or jar, used in India to hold oil, ghee, &c. Dubbers are of all sizes, from a quart up to a barrel.

DUBBING-OUT. Used by plasterers to signify the bringing of an uneven surface to a plane by pieces of tile, slate, plaster, and the like.

DUCAL, from *duke*. The *ducal coronet* consists of a circlet of gold, with eight strawberry or parsley leaves of equal height about the rim.

DUCAT, from *duke*. A coin in several countries of Europe struck in the dominions of a duke.

DUCATOON, from *ducat*. A silver coin struck chiefly in Holland and Flanders.

DUCES TECUM (*bring with thee*). A writ commanding a person to appear on a certain day in the Court of Chancery, and to bring with him certain writings which the Court would view.

DUCHY COURT, a court of the Duchy Chamber of Lancaster, held at Westminster.

DUCTILIMETER, an instrument for comparing the degrees of ductility of different metals.

DUCTILITY, from *ductilis*, a property of some metals, as gold, silver, copper, iron, &c., in consequence of which they may be elongated or drawn into wire. It is to be distinguished from *malleability* and *laminability* (q. v.).

DUET, *Ital. duetto*, a piece of music composed in two parts; it may be vocal or instrumental.

DUGONGE. In *zoology*, the *halicore dugong*.

gong, called also *sea-cow*, *siren*, &c., inhabits the Indian ocean, and is often confounded by travellers with the *Manatus*. See *HALICORE* and *MANATUS*.

DUKE, from *dux*. In Great Britain *Duke* is the highest title of nobility inferior to *prince*, but in some countries of the continent a duke is a sovereign prince without the title of king. In Britain *duke* is a mere title, without giving any domain or jurisdiction over the place whence the title is derived. The consort of a duke has the title of *duchess*.

DULCIMER, Ital. *dolcimello*, from *dolce*, sweet; a musical instrument strung with 50 wires stretched over a bridge at each end, and played upon by striking the wires with little iron rods.

DUMOSSE, the 43d natural order of plants in the natural system of Linnæus. Name from *dumus*, a bush, because the plants are chiefly shrubs or low bushy trees. Ex. the elder.

DUMOSE, Lat. *dumosus*, bushy, applied to plants chiefly.

DUNE. In *geology*, a low hill or bank of drifted sand; the word is British, *dun*, an eminence.

DUNELM. In *church matters*, the signature of the Bishop of Durham, the Christian name being usually prefixed; it is a contraction of *Dunelmensis*.

DUNGING. In *calico printing*, the application of a bath of cow-dung diffused through hot water to cotton goods in a particular stage of the process.

DUNKERS, a Christian sect which arose in Pennsylvania, in 1724.

DUNNAGE. In *commercial navigation*, loose wood, as pieces of timber, boughs of trees, fagots, &c., laid in the bottom and against the sides of a ship's hold, either to raise the cargo when she is loaded with heavy goods, or to prevent the cargo from being damaged in the event of her becoming leaky.

DUNNING, a method of curing cod-fish so as to give them a particular colour (*dun*) and quality, practised at the isle of Shoals in New Hampshire, North America. The cod are split, slack-salted and piled for two or three months in a dark stove, covered for the greater part of the time with salt, hay, or eel-grass, and pressed with some weight. They are turned over, piled again in the same dark stove, in which they are allowed to remain for two or three months more, when they are fit for use.

DUODECIMALS, from *duodecim*, twelve; numbers proceeding in a proportion of twelves, in the same manner as decimals proceed in a proportion of tens. This notation is commonly employed by artificers in casting up the contents of their work, dimensions being commonly stated in feet, inches, and twelfths; and from

the manner of performing the operations the process is called *cross multiplication*.

DUODECIMO, Lat. from *duodecim*, twelve; having twelve leaves to a sheet; the name given to a book in which the sheets are each folded into twelve leaves, written 12mo.

DUODENARY ARITHMETIC, that in which the local value of the figures increases in a twelve-fold proportion (*duodeni*, twelve), instead of in a ten-fold proportion, as in the denary arithmetic. Thus in the duodenary scale 1111 expresses $12^3 + 12^2 + 12 + 1 = 1885$ in the denary or common scale.

DUODENUM, Lat. from *duodeni*, twelve; the name given by anatomists to the first portion of the small intestines, supposed anciently, when anatomy was restricted to the dissection of brutes, not to exceed the breadth of twelve fingers.

DUPION, a double cocoon formed by two or more silkworms.

DUPLE, Lat. *duplus*, double. *Duple ratio* is that of 2 to 1; *sub-duple ratio* is the reverse, or that of 1 to 2.

DUPLEX, Lat. from *duo* and *plico*, to fold; double or two-fold; applied to leaves, petals, &c. of plants.

DUPPLICATE, Lat. *duplicatus*, doubled; applied, 1. In *botany*, to flowers which have two rows of petals.—2. In *arithmetic*, both proportion or ratio of squares, thus the duplicate ratio of *a* to *b* is the ratio *aa* to *bb*, or of the square of *a* to the square of *b*.—3. A *duplicate* is a copy of some writing, deed, or account.

DURA MATER. In *anatomy*, the tough sero-fibrous membrane which invests the brain externally to the arachnoid membrane; thus named from being hard (*durus*) compared with the *pia mater* (q. v.). It is sometimes called the *dermatoid membrane*.

DURAMEN (Lat.) The fully formed central layers of the wood of exogenous trees, commonly known as *heart-wood*.

DURANTE. In *law*, during, as *durante bene placito*, during pleasure; *durante vita*, during life; *durante minore etate*, during minority.

DURATE. In *music*, a term applied to whatever offends the ear by its effect.

DURBAR, a Persian word used in India for a court, where a sovereign or viceroy gives audience.

DURESS (Norm. *duresse*, from *dur*, hard), literally, hardship. In *law*, duress is of two kinds, *duress of imprisonment*, which is illegal restraint of personal liberty; and *duress by menace or threat*, in which the person is threatened with personal violence unless he perform some deed, as signing of a bond.

DUTCH-DRUGS, a preparation of oil of turpentine, tincture of guaiac, nitric ether, and oils of amber and cloves. The balsam

of varpentine is also sold under this name.

DUTCH-GOLD, an alloy of 11 copper and 2 zinc rolled into sheets; hence frequently called *dutch-foil*. It is manufactured chiefly at the brass works of Hegermühl.

DUTCH SCHOOL. In painting; this school, generally speaking, is founded on a faithful representation of nature, without attention to selection or refinement.

DUTY, from *due*. 1. In commerce, any tax or excise.—2. Among engineers, the work which a machine actually does, measured by the weight raised and the space through which it is raised conjointly.

DUMVIRI, } Among the Romans,
DUMVIRATE. } magistrates, commissioners, and other public officers were collectively called *dumviri*; and as two were usually associated in the same function, the office or government of the two thus connected was termed a *dumvirate*.

D-VALVE, or **D SLIDE-VALVE**. In steam-engines, a valve employed for opening and shutting the communications with the steam cylinder, particularly in locomotive engines; named from its shape.

DWARF-TREES. These may be produced in three ways: by grafting on dwarf slow-growing stocks; by planting in pots of small size filled with poor soil; and by cutting off part of the tap and other roots.

DWARF-WALLS, those about courts, on which are iron rails; but low walls in general receive this name.

DYADIC ARITHMETIC, is that in which only two characters, 1 and 0, are used; more commonly called *binary arithmetic*.

Dyadic from *dyas*, two.

DYE. In architecture, any square body, as the trunk of a pedestal.

DYNAMETER, (*δυναμῖς*, power, *μετρεῖν*, to measure,) an instrument for determining the magnifying power of telescopes.

DYNAMICS, from *δυναμῖς*, power; the science of moving powers, or the action of forces not in equilibrium. As a branch of mechanics, it treats of bodies in motion.

DYNAMITE, a nitro-glycerine compound first prepared by Nobel by mixing nitro-glycerine with one third of its weight of porous or infusorial silica. Other Dynamites have since been prepared by substituting for silica, chalk and sawdust in varying proportions, or other substances, according to the explosive power required.

DYNAMOMETER (see **DYNAMETER**): a machine for estimating the amount of force required to draw carriages, boats, &c.

DYNASTY, *δυναστῆς*, a lord; a race or family of sovereigns in succession.

DYSENTERY, Lat. *dysenteria*, *δυσ*, bad, and *εντερα*, the bowels; bloody flux, a disease known by contagious fever, frequent griping stools, &c. It is epidemical.

DYSODILE, from *δυσωδὺς*, fetid; a mineral of a greenish colour found near Syracuse. It burns like coal, but gives out during combustion a most intolerable foetor.

DYSURIA, Lat. *dysuria*, *δυσ*, badly, and *ουρον*, urine; difficulty in discharging the urine.

DYTISCVS, a numerous genus of aquatic coleopterous insects, known popularly as *water-beetles*.

E.

E, the second vowel and the fifth letter of the English alphabet. As a numeral, it stands for 250.—In music, it denotes the tone *e-la-mi*.—In the calendar, it is the fifth of the dominical letters.—In charts, &c., it distinguishes the easterly points.

EA'GLE. 1. In ornithology (see **AQUILA**).

—2. In astronomy, a northern constellation having its right wing contiguous to the equinoctial.—3. A gold coin of the United States of America, value 10 dollars.—4. In architecture, the frontispiece or pediment of a Grecian temple.—5. In history, the symbol of royalty.—6. In heraldry, a bearing of frequent occurrence, particularly assumed by sovereigns as the emblem of empire.

EA'GLE-STONES, *ætites*; a variety of argillaceous iron ore of a nodular form, and varying in size from that of a walnut to that of a man's head, and containing a sort of loose kernel. It obtained this name from a supposition that the eagle carried them to her nest to facilitate the laying of her eggs.

EA'GLET. In heraldry, when there are several eagles on the same escutcheon they are termed *eaglets*.

EAR. 1. In anatomy, auris; the organ of hearing, consisting of the outer-ear or *concha*, at the bottom of which is the drum or *tympa-num*, like the skin of a drum, and beneath the drum is a cavity terminated by the *eustachian tube*.—2. In music, the internal sense by which we perceive and judge of harmony.—3. In husbandry, that part of certain plants (*gramineous*) which contains the flower and seed, as an *ear* of barley.

EARINGS. In ships, certain small ropes employed to fasten the upper corners of a sail to its respective yard.

EARL, a title borrowed from the Danes, *earlamb*, noble. An earl is next below a marquis and above a viscount. He had formerly the government of a *shire*, and was called a *shireman*. After the conquest, earls were for some time called *counts*, and from them shires have taken the name of *counties*, and their wives at the present time are titled *countesses*. The title is now totally unconnected with

territorial jurisdiction. The coronet has eight pyramidal points tipped with pearls, placed alternately with as many strawberry leaves, lower than the pearls.

EARL-MARSHAL (*of England*), the eighth great officer of state, who has the superintendence of military solemnities. The office is hereditary in the family of the Howards.

EAR'NEST, Scot. *earles*. In commercial law, a sum of money advanced by the buyer of goods, in order to bind the seller to the terms of the agreement. In Scotland servants are *earled* when they are engaged, and the common *earles-penny* is one shilling.

EARTH. 1. In astronomy, the planet we inhabit, the third in order from the sun, marked by the character \oplus .—2. In chemistry, the term *earth* was till recently employed to denote a simple elementary substance, which was neither inflammable nor metallic; but modern science has demonstrated that what were formerly termed primitive earths are metallic oxides. These are silica, alumina, lime, magnesia, zirconia, glucina, yttria, baryta, strontia, and thorina. Almost the whole crust of the globe is composed of the first three.—3. In agriculture, earths are distinguished from soils by their being without organised matter.

EARTH'QUAKE, a shock, concussion, or vibration of a tract or district of country, usually accompanied by subterranean noises, and spreading ruin widely around. They seem to owe their origin to the same class of agencies as volcanoes, or rather, it may be said, they are volcanic irruptions diffused. See **VOLCANO**.

EARTH-WORK. In engineering, a term applied to cuttings, embankments, &c.

EAR'-TRUMPET, an instrument used by persons partially deaf, to strengthen the sensation of sound, by conducting it through a funnel-shaped tube directly into the ear. The ear-trumpet is sometimes made large, to be put to the ear as occasion requires; but the more advantageous instrument of this sort is made to fit into the ear, and to lead the sound directly upon the tympanum.

EA'SET, the frame on which painters place their canvas. Hence, *easel-pieces* are those smaller pictures painted on the easel, as contradistinguished from large paintings on walls, &c.

EA'SEMENT. In law, any privilege which one man has of another without profit, as a way through his lands.

EASE OFF, **EASE AWAY**, in nautical language, is the order to slacken a rope gradually.

EASE THE SHIP, the command given to the steersman to put the helm close to the lee-side, or *hard-a-lee*.

EA'STERLING, a coin struck by Edward II., and supposed to have given rise to the term *sterling*, as applied to English money.

EAST INDIA COMPANY. A famous joint-stock association, originally established to carry on the trade between this country and the countries east of the Cape of Good Hope.

EA'ST, the sea term for a ship moving over the sea without jerking or straining.

EAU DE COLOGNE (French), a preparation to which numerous virtues have been ascribed by its venders. It is simply brandy highly aromatised.

EAU DE LUCE (French), a volatile liquid formed chiefly of ammonia, a little mastic macerated in alcohol, and a very little of the oils of lavender and amber.

EAU MEDICINALE (French), medicinal water. A vinous infusion of the flowers of colchicum, long celebrated for the cure of gout.

EAVES' LATH, BOARD, or CATCH, a thick feather-edged board at the eaves, to raise the bottom of the first course of slates above the sloping plane of the side of the roof, that the next course may be properly bedded.

E'PIONITES, a very ancient religious sect, who would not allow that Christ was any more than an inspired person, the son of Joseph and Mary.

EB'ONY-WOOD, brought chiefly from Madagascar, the Mauritius, and Ceylon. There are several species, but the best is the jet-black, and free from veins. It is the wood of the *Diospyros ebenus*, a small tree.

E'BORE-(ACENSIS). In church government, the signature of the Archbishop of York, the christian name being usually prefixed, and the part of the local word which precedes the brackets.

EBRAC'TEATE, Lat. *ebracteatus*, without a bractea, or floral leaf.

ECAD'DATE, from *e*, without, and *cauda*, a tail, without a tail. Applied to plants which have no tail or spur.

EC'BASIS, *ἐκβάσις*. In rhetoric, the figure of digression.

EC'BOLE, *ἐκβολή*. In rhetoric, a digression, in which the speaker introduces another person speaking his own words.

EC'CE HO'MO, behold the Man! A painting which represents Christ with the crown of thorns on his head. John xix. 5.

EC'CENTRIC, from *ex*, and *centrum*, centre; deviating from the centre: opposed to *concentric*. In geometry, the term *eccentric* is used substantively to denote two circles or spheres, which though contained in some measure within each other, have not the same centre. Thus an *eccentric* or *eccentric wheel* is in general

for working the valves of steam-engines. It consists of a wheel situated upon the main-shaft, but fixed out of its centre. It is fitted in a brass ring to

which shafts are attached; these are connected with the valve-lever, so that, as the eccentric turns round with the shaft, an alternate motion is communicated to the lever, and the valves thereby opened and closed. In astronomy, the *eccentric place of a planet* is its place as it would appear to a spectator at the sun, and which, when referred to the ecliptic, coincides with the heliocentric longitude. And the distance between the centre of the planet's orbit and focus is called the planet's eccentricity, a term used to denote the distance of either focus of an ellipse from the true centre.

ΕCCHΕΙΑ, from ἔχω, to sound. **SO-ECCHÆA**, numerous bell-shaped vases of bronze, &c., used in the construction of ancient theatres, to give additional power to the voices of the actors.

ΕCCLΗΣΙΑΣΤΙΚΑΙ ΚΟΡΤΕΣ. The *Archdeacon's*, the *Consistory*, the Court of *Archbishops*, the *Pecidiars*, the *Prerogative*, and the Court of *Delegates*.

ΕCCLΗΣΙΑ, ἐκκλησία. In ancient history, the great assembly of the Athenian people, at which every free citizen had a vote.

ΕCCHΙΝΟΥΟΟΧ, from ἐκκρίνω, to excrete, and λόγος, discourse, the doctrine of excretions.

ΕCCHÉLON (Fr.), from échelle, a ladder, a scale. A term used by military tacticians, to denote the position of an army, when the divisions of which it is composed march on parallel lines, but all differently advanced. The object is to bring one part into action, and reserve the others.

ΕCCHÉNEIS, a genus of fishes; order *Malacopterygii sub-brachiati*, and family *Discoboli*, Cuv. There are two species. The best known is the *Remora* (the *E. remora*, Lin.) which inhabits the Mediterranean. It is sometimes called the *Sucking-fish*, from its attaching itself firmly to bodies, as ships at sea, sharks, and other large fishes. From this it takes its generic name, ἔχω, to detain, and πῦρ, a ship, as it was supposed capable of stopping a ship on her course.

ΕCCHÍMYS, from ἔχis and μῦς, the *spring-rat*; a genus of mammalia of the rodentian order, considerably larger than the brown rat. The fur of some of the species is intermixed with flattened spines like sword blades. America.

ΕCCHÍNATE, Lat. *echinatus*, bristly; set with prickles, from *echinus*, a hedgehog.

ΕCCHÍNITES, fossil echini, abounding in the chalk formation. See **ΕCCHINUS**.

ΕCCHINODERMATA, echinoderms, a class of radiated animals, thus named from ἔχινος, a hedgehog, and δερμα, skin, as the skin is generally armed with points or moveable spines. The star-fish and sea-urchin are examples.

ΕCCHINORHYNCHUS, a numerous genus of intestinal worms composing the family *Acanthocephala* of Cuvier. Name from ἔχινος, a hedgehog, and ρυγχος, a proboscis. The *E. bicornis* only has been found in the human subject.

ΕCCHÍNUS, ἔχινος, the hedgehog. 1. The generic name of the sea-urchins: Class *Echinodermata*; order *Pedicellata*, Cuv. The body is invested by a shell or calcareous crust, composed of angular pieces, which join together exactly. The surface is armed with spines which move at the will of the animal. The animal feeds on shell-fish. The shells of echini are very abundant in ancient strata, principally those of chalk, where they are usually filled with silex. —2. In architecture, an ornament near the bottom of the Ionic, Corinthian, and Composite capitals. It is a convex moulding, generally ornamented with sphero-ids; the upper ends cut off; the upper part of the axis projecting and the lower receding. The echinus is only used in columns, in the entablature and capital.

ΕCCHÍUM, the *viper-bugloss*, a numerous genus of plants. *Pentandria—Monogynia*. Name from ἔχis, a viper; because it was supposed to heal the sting of a viper.

ΕCCHÍO, from ἤχος, sound; a sound reflected from some surface, and thence repeated to the ear. That a speaker may hear a distinct echo of his own voice, he must stand at least 63 feet from the reflecting surface. This is owing to the relation between the velocity with which sound travels and the readiness of the ear to distinguish sounds. Caverns, grottoes, mountains, and ruined buildings generally, reflect sound; and as every point against which the pulses of sound strike becomes the centre of a new series of pulses, and as sound describes equal distances in equal times, these frequently give more than a single echo of a sound. That at Woodstock, in Oxfordshire, repeats the same sound 50 times. Architects have exercised their ingenuity in the construction of vaults, arches, &c.,

for producing artificial echoes. These are usually ellipses and parabolas. Whispering galleries (q. v.), are constructed on similar principles. The ancients believed that Echo was a nymph of the woods, the daughter of Air and Tellus, who pined into a sound for love of Narcissus.

ECHOMETER, from *ηχος*, sound, and *μετρον*, to measure; a sort of scale or rule used by musicians to measure the duration of sounds, and to find their intervals and ratios.

ELECTICS, from *ελεγω*, to select; ancient Greek philosophers, who, without attaching themselves to any particular sect, selected from each whatever appeared to be most rational. They endeavoured to mould the doctrines of Pythagoras and Plato, and blend with them the theology of the Egyptians and the tenets of Zoroaster. They hoped to reconcile the Christians and Pagans to the same opinions!

ECLIPSES, *εκλειψις*, defect. An obscuration or occultation of the sun or moon by another heavenly body. An eclipse of the sun is caused by the interposition of the moon, which totally or partially obscures the sun's disc. Consequently all eclipses of the sun happen at the time of new moon. An eclipse of the moon is caused by the interposition of the earth between the sun and the moon; consequently all lunar eclipses happen at full moon. In a case of a *partial eclipse*, the dark part is called the *umbra*, and the light part is called the *penumbra*.

ECLIP TIC, from *εκλειπτικος*, *linea eclipctica*, the ecliptic line or line in which eclipses happen. This is a great circle of the sphere, supposed to be drawn through the middle of the zodiac, and making an angle with the equinoctial in the points of Aries and Libra of 23° 28', which is the sun's greatest declination. The points of intersection are called *equinoctial points*. An *ecliptic digit* is the twelfth part of the diameter of the moon. *Ecliptic limits* are the greatest distances at which the moon can be from her nodes, in order that an eclipse of the sun or moon may happen.

ECPHONESIS, from *εξ* and *φωνη*, voice; a figure of speech in which the orator gives utterance to the warmth of his feelings.

ECTPOME, } from *εκτιπω*, to fall down;

ECTROSIS, } a falling down of any part: applied to luxations, falling off of gangrenous parts, to hernia of the uterus, &c.

ECPHYROSIS, from *εξ* and *πυρ*, fire; igneous devastations of the world, which, according to the ancient Stoics, recur at certain distant intervals.

ECTASTY, *εκτασις* *ectasis*. A disease

which consists in a total suspension of sensibility and voluntary motion, and mostly of mental power; the muscles are rigid, the body erect and inflexible, the pulsation of the heart is felt, and the breathing not affected. It differs from catalepsy and trance in the inflexible and rigid state of the muscles, and the obvious continuance of the breathing and the heart's action.

ECTHYMA, *εχθυμα*. An eruption of phlyzacious pustules which are usually distinct, arising at a distance from each other, seldom numerous, unaccompanied by fever, and not contagious.

ECTYPE, from *εκτυπος*, a copy; a figure in relieve or embossed.

ECZEMA, *εχζεμα*, from *εχζω*, to boil. A cutaneous disease, characterised by an eruption of small vesicles on various parts of the skin, usually set close together.

ED'NA. In northern antiquity, a system of the ancient Icelandic, Runic, or Scandinavian mythology.

ED'DY, from Sax. *ed*, back, and *ea*, water; the water that by some interruption in its course runs contrary to the direction of the tide or current, and appears like the motion of a whirlpool.

EDEM'ATOSE, from *οιδω*, to swell; swelling with a serous humour: applied to tumours.

EDENTALS, } An order of Mammals, **EDENTA'TA**. } including those genera in which the dental apparatus is incomplete.

EDENTA'TA, from *edentatus*, without teeth; the sixth order of mammalia in Cuvier's arrangement, comprising quadrupeds without front teeth. The sloth is an example.

EDG'ING. In carpentry, reducing the edges of ribs or rafters that they may range together.

EDG'INGS. In gardening, the series of small but durable plants set round the edges or borders of flowerbeds. The best edging is the Dutch box, especially for walks.

EDGE-RAILWAY, a certain description of roadway, consisting of a succession of iron bars or girders, properly supported, upon which the peripheries of the carriage wheel revolve; a flange projecting one inch, being formed on the inner edge of the wheels, to prevent their getting off the lines.

ED'ILE, Lat. *edilis*; a Roman officer thus named *quod ædes sacras, et ædificia publica procuraret*. His duty was to see to the state of public roads, conduits, buildings, &c.

EDO'LIVUS, a genus of flycatchers, the species of which are numerous in the countries bordering the Indian Ocean. Order *Passerina*, family *Dentirostræ*.

EDUCATION PIPE. In *steam-engines*, the pipe through which the steam escapes after fulfilling its duty.

EDULCORATION, from *edulco*, to sweeten.

1. The freeing of any substance from saline matter by affusion of water.—
2. The sweetening of a medicine by addition of a saccharine substance or sugar.

EEL. In *ichthyology*, the popular name of all the species of the genus *Muræna*, Lin. The common eel is the *M. anguilla*. The Conger-eel (*M. conger*, Lin.), is found in all the seas of Europe. The electric eel or *cramp fish* is a species of *Gymnotus*.

EEL-POT, a sort of basket used for catching eels.

EEL-SPEAR, a forked instrument used for catching eels by stabbing them.

EFFECT', Lat. *effectus*, that which is produced by a cause; the consequence of a cause. In *physics*, it is an axiom that effects are proportional to their adequate causes.—In the *arts*, effect is taken as the sensation which a work of design produces or ought to produce upon the mind of the spectator: to produce a proper effect, therefore, the parts require to be harmoniously disposed or to be hugely great.—In *law*, the word is used in the plural *effects*, for the moveable goods of a person.

EFFECTION, from *effect*; the geometrical construction of a proposition. The term is also used in reference to problems, which, when they are deduced from, or founded upon, some general propositions, are called the *geometrical effections* of them.

EFFEN'DI, a Turkish word meaning *lord*. Applied to *civil* functionaries, in contradistinction to *aga* or military personages.

EFFLORESCENCE, from *effloresco*, to flower (*flos*, a flower). 1. In *botany*, the production of flowers.—2. In *chemistry*, the formation of a soft, white powdery substance in minute spicule on the surface of saline crystals. It takes place either by the abstraction of their water of crystallisation by the air, as in the case of carbonate of soda, or by the absorption of oxygen from the air, as in the case of alum-schist.—3. In *pathology*, any morbid redness of the skin, as in scarlatina.

EFFLUVIA, plural of *effluvium*, from *ef fluo*, to flow out; the particles which continually exhale from most if not all bodies in nature. The term is commonly restricted to such exhalations as are noxious or disagreeable to the senses. Thus we speak of the effluvia of putrefying matter, contagious effluvia, &c.

E. G., an abbreviation of *exempli gratia*, for example; for the sake of an instance.

EGG AND TONGUE. In *architecture*, or ornaments sculptured in the echinus and Ionic volutes.

EIDOGRAPH, from *eidos*, likeness, and

γραφω, to write; an instrument contrived for the purpose of copying drawings.

EIDOURA'NION, from *eidos*, likeness, and *ouranon*, heaven; a delineation of the heavens.

EISTEDD'ROD, Welsh *eistedd*, to sit; the assemblies of the Welsh bards.

EJECTMENT. In *law*, a mixed action by which a lessee when ousted may recover his term and damages; it is real as to the lands, but personal as to the damages.

ELÆAG'NUS, the Dutch *myrtle* or *oleaster*; a genus of trees. *Tetrandria—Monogynia*. Name from *ελαιον*, oil, and *αγρος* chaste. Warm and temperate climates.

ELÆOSAC'CHARINE, from *ελαιον*, oil, and *σακχαρον* sugar; containing oil and sugar.

ELÆOTE'RIMUM, *ελαιον*, oil; an apartment in ancient baths where the bathers anointed themselves.

ELA'IDIC ACID, the name given by Boudet to an acid obtained by the saponification of ealidine.

ELA'IDINE, a substance resembling stearine, obtained by the action of hyponitric acid upon olive, almond, and some other oils. The name is from *ελαια*, an olive.

E'LAINE, from *ελαιον*, oil; the oily principle of fats, which may be expelled by pressure, or by digesting the fat in boiling alcohol; upon cooling, the stearine precipitates, and the Elaine collects upon the surface of the supernatant liquor. It is called *oleine* by some chemists.

ELA'IODIC ACID, an acid obtained from Elaine.

E'LAIS, the oil palm-tree; a genus. *Diacia—Hexandria*. Name from *ελαιον*, oil. Hot climates.

ELA'O'LITE, from *ελαια*, an olive, and *λιθος*, stone; olive-stone; a sub-species of pyramidal felspar; colours dark-brown, inclined to green, and flesh red inclined to grey or brown. It is the *fettstein* (fat stone) of Werner.

ELASMO'THE'RIMUM, a fossil animal nearly allied to the rhinoceros: name from *ελαω*, to drive, and *θηριον*, a beast.

ELAS'TIC, elasticity, from *ελαστης*, (from *ελαω*), impulsor. A body is *elastic* which has the power of returning to the form from which it was made to deviate by some external force; and the force which it exerts in endeavouring to recover its posture is the measure of its *elasticity*. If two bodies when struck together rebound and remain unaltered in form, they are *elastic*; if their form be altered, they are *non-elastic*. If a body yield to compression, and return to its former bulk when the pressure is removed, it is *elastic*; if it be not compressed, or being so does not re-assume its

former bulk, it is *non-elastic*. Gases are therefore elastic, and liquids are non-elastic. All bodies belong to one or other of these divisions, yet there is perhaps no substance in nature perfectly elastic or completely non-elastic: all partake of these properties in a greater or less degree.

ELASTIC CURVE, the figure assumed by an elastic plate, one end of which is fixed horizontally in a vertical plane, and the other end loaded with a weight tending to bend the plate.

ELATER, the *skipper*, a genus of coleopterous insects of the serricorne family. Name *ελατηγ*, a leaper. The *E. noctilucus*, Lin., is the most celebrated species. It is rather more than an inch long; dusky brown; a convex yellow shining spot on each side of the thorax, in consequence of which it is used by the ladies as an ornament for the hair during the evening paseo, and the Indians fix it to their feet to light them in their nocturnal journeys. This species belongs to South America, but the elaterides have a wide geographical distribution.

ELATERITE, mineral caoutchouc, a brown, massive, elastic variety of bitumen: constituents, 52 carbon; 40 oxygen, and 8 hydrogen.

ELATERIUM, from *ελατηριον*, a name given by the Greeks to any drastic purgative, and to the juice of the wild cucumber in particular. At present, (1). The wild cucumber (*momordica elaterium*); (2). A peculiar substance deposited from the juice of the wild cucumber and dried; its active power as a cathartic is derived from a minute quantity of *elatin* which it contains; (3). The name of a genus of annual plants. *Monocæcia*—*Syngenesia*, South America.

ELATIN, the active principle of Elaterium (q. v.). It is contained in the proportion of 12 per cent.

ELBOW. 1. The outer angle made by bending the arm.—2. The name given to an abrupt turn in a river, frequently caused from the action of the current upon one of the banks, which thereby becomes washed away, when the silt is thrown to the other side, where it forms an *elbow*.—3. The *elbows of a window* are the two panelled flanks, one under each shutter.—4. *Elbow joints* are voussoirs of an arch which form part of a horizontal course.

ELCAJA, an Arabian tree, the fruit of which is emetic, and is employed in an ointment for the cure of the itch.

ELDER. 1. In ecclesiastical affairs, from *saldor*, the comp. of *eld*, now *old*: elders are officers, who with the ministers and deacons of Presbyterian churches compose the kirk session. In the first Christian churches the elders were persons

who enjoyed ecclesiastical functions. The word indeed comprehends apostles, pastors, presbyters, bishops or overseers; hence the ancient Christian councils were called *presbyteria* or councils of elders.—

2. In botany, from Sax. *ellarn*, Dan. *hyldetræ*, the popular name of the *Sambucus*, a genus of trees of seven species, and as many varieties. Temperate climates.

EL DORADO, the Spanish name of an imaginary country in South America, abounding in gold and precious stones.

ELEATIC, an epithet given to a sect of philosophers, from Elea, a town of Lucania, where most of its teachers were born.

ELECT', Lat. *electus* (from *eligere*, to choose); one chosen. The Calvinists denominate those whom they believe God to have predestinated to be saved, the *elect*. In matters of polity the word *elect* signifies chosen, but not inaugurated. Thus the Lord Mayor of London, before his predecessor's mayoralty is expired, is called the lord mayor *elect*.

ELECTION. In the Calvinistic theology the divine choice of objects for salvation is *election*. See **ELECT**. In arithmetic, the different ways of taking any number of quantities given is called *election*, but the term is rarely used.

ELECTIVE, depending on choice, as an *elective* monarchy. The term is used in chemistry thus: when a substance already combined with another is presented to a third for which it has a greater affinity, it separates from the former and enters into combination with the latter; this preference is called *elective attraction*, or more commonly *elective affinity*. It is upon this gradation of alternative force that the uniformity of chemical action depends, and by which decompositions are effected.

ELECTRIC, from *ηλεκτρον*, amber; a term used, (1). To denote whatever relates to electricity; (2). To denote a substance or body capable of exhibiting electricity by means of friction or otherwise, and resisting the passage of it from one body to another. Hence an *electric* is called a *non-conductor*, and an *electric per se*. Such are amber, glass, rosin, wax, shell-lac, sulphur, &c.

ELECTRICAL APPARATUS, the various instruments and machines necessary for the illustration of the laws of electric action.

ELECTRICAL BATTERY, a number of coated jars connected with each other, which being charged or electrified, are then exploded or discharged with an effect proportioned to the extent of the coated surface.

ELECTRICAL EEL, a species of gymnotus; it is five or six feet long, and com

municates such violent shocks that men and horses are struck down by them. This power is dependent upon the will of the animal, which gives it that direction it pleases, and renders it effective even at a distance. It is, however, dissipated by use, just as muscular power is. — *Cuvier*. The organ, which is the seat of this wonderful faculty in the electric eel, extends along the under side of the tail, occupying about half its thickness.

ELECTRICAL MACHINE, a part of electrical apparatus constructed for the purpose of collecting the electric fluid in quantity, so as to charge jars, &c., to exhibit its effects in a very sensible manner. It has been constructed of many forms, either for the sake of convenience, or to render it more efficient. The most common is that which consists of a glass cylinder fixed in such a manner that it may be turned by a winch; a cushion supported by a glass pillar, and having a piece of silk between it and the cylinder, and a metallic tube called the *prime conductor*, supported also by a glass pillar; this is the cylindrical machine. Another form is that represented below. It has a plate of glass instead of the cylinder.

ELECTRICAL RUBBER, a part of electrical apparatus consisting of black oiled silk, which serves to aid the friction in an electrical machine.

ELECTRIC FLUID, a term for that which produces electrical effects; the matter of electricity.

ELECTRIC CONDENSER, an instrument by which small quantities of electricity may be accumulated and rendered apparent; *B* is a brass plate supported by a glass stem. *A* is another brass plate of the same

size, capable of being placed as close to

it as possible without touching. It is supported by a brass stem which moves upon a joint, so that it is capable of assuming the position at *C*.

ELECTRIC JAR. See **LEYDEN JAR**.

ELECTRICITY (see **ELECTRIC**); the name of an unknown natural power which produces a vast variety of phenomena, the first of which were observed (by *Thales*, A.C. 600) in the mineral substance called *amber* by us, but *electron* by the Greeks. It was thence called *electric power*; and the laws, hypotheses, experiments, &c., by which the electrical phenomena are attempted to be explained and illustrated constitute *electricity*. If a glass tube be rubbed with a dry silk handkerchief, and then approached to bits of paper, cotton, feathers, &c., it will first attract these bodies, then repel them. After a while the excited body loses its influence, but it may be renewed for any number of times by friction. If we substitute a stick of sealing-wax for the glass tube, and rub it with a dry, warm flannel, it will, when approached to a feather, exhibit the same phenomena of attraction and repulsion, and in the same order; but if we present the excited wax to a feather which has received the repulsive property from the glass, or the excited glass to the light substance repelled by the wax, strong attraction will be manifested in both cases. From these phenomena is deduced the doctrine of two electricities,—the *vitreous* and *resinous* of the theory of *Du Fay*, or the *positive* and *negative* of the theory of *Dr. Franklin*. The same phenomena gave rise to the terms *electrical attraction* and *electrical repulsion*.

ELECTRIC KITE, a contrivance devised by *Dr. Franklin* to verify his hypothesis respecting the identity of electricity and lightning. It differs nothing in shape from a school-boy's kite, but is covered with silk or varnished paper, and armed with a wire. The string with which the kite is raised is hemp, with a piece of silk cord or ribbon next the hand. From a key suspended at the union of the twine and silk, when the kite is raised during a thunder-storm, a *Leyden jar* may be charged. The experiment is not perfectly free from danger.

ELECTRIC SPARK. If a body containing only its natural share of electricity be presented sufficiently near to a body

electrified *positively* or *negatively*, a quantity of electricity will force itself through the air from the latter to the former, appearing in the form of an intense *spark*, called the *electric spark*.

ELECTRIC TENSION or INTENSITY, that state of a body which is measured by an electrometer.

ELECTRO-CHEMISTRY, a department of science which treats of the agency of electricity and galvanism in effecting chemical changes.

ELECTRO-DYNAMICS, the phenomena of electricity in motion.

ELECTRODE, from ἤλεκτρον, electricity, and ὄδος, away; the point at which an electric current enters or quits the body through which it passes. The name is chiefly used in speaking of the plates of a galvanic battery, by which the current passes into and out of the liquid, and as being the doors by which the current enters and departs. These are further distinguished as the *zincode* and *platinode*.

ELECTRO-MAGNETISM, a branch of electrical science showing the joint effects of electricity, or galvanism, and magnetism; magnetism produced by electricity.

ELECTROLYSIS, } from ἤλεκτρον, elec-
ELECTROLYTE, } tricity, and λύω, to
loosen. The process of resolving a compound body into its elements by the voltaic current, has been named *electrolysis*, and substances which can be so decomposed, are called *electrolytes*.

ELECTROMETER, the *electricity-measurer*; an instrument for measuring the quantity or intensity of electricity, or the degree in which a body is electrified. The most common is the *quadrant electrometer*, shown in the figure. The index, composed of a straw terminated by a pith ball, moves from its centre of suspension as the charge increases, and measures the intensity upon the graduated semicircle.

ELECTROPHORUS, from ἤλεκτρον, and φέρω, to bear; an electric machine, consisting of two plates, one of which is a resinous electric, and the other a metallic plate. A second polished metal plate, of rather smaller diameter, is fitted with a glass handle, by which it can be lifted on or off the upper surface of the plate of resin. When the resin has been excited by gentle friction with dry fur or flannel, and the plate placed upon it by its handle, and immediately removed, it will be found feebly charged with resin-

ous electricity. If it be then replaced and uninsulated by a metallic rod, and again lifted by its insulating handle, it will

be found to give a strong spark of vitreous electricity. The process may be repeated an unlimited number of times with-

out additional excitation.

ELECTRO-PO'LAR, applied to conductors, one end of which is positive and the other negative.

ELECTROSCOPE, from ἤλεκτρον, electron, and σκοπέω, to view; an instrument for exhibiting the attractive and repulsive agency of electricity. This term is generally used synonymously with *electrometer*, but sometimes applied appropriately to Bennet's gold-leaf electrometer, shown in the figure with gold leaves apart. Coulomb's torsion-electrometer is an excellent electroscope.

ELEGANCE (Fr. and Eng.), from *elegancia*: "The beauty of propriety, not of greatness."—Johnson. In *literature*, the elegance of a composition consists in well-chosen words and phrases arranged in an appropriate and happy manner. This implies neatness, purity, and perspicuous arrangement of parts—a style calculated to please rather than excite admiration or strong feeling. It is now much out of fashion. Elegance of speaking includes propriety of diction and gracefulness of action. In *architecture* and *painting*, elegance consists in a nice distribution of the parts with a just regard to their proportions and appropriate embellishments. Similarly, the term may be applied in a loose way to many works both of nature and art, which please by their symmetry.

ELF'GIT. In *law*, a writ of execution by which a defendant's goods are appraised and delivered to the plaintiff, upon a recognition that he is able in his goods to satisfy his creditors.

ELE'MENT, Lat. *elementum*, a simple substance, or one which has not been decomposed. The ancients considered fire, air, earth, and water, to be of this nature; hence they are still called the *four elements*. Three of these elements, air, earth, and water, are however now well known to be compound bodies; but instead of the four classical elements, chemistry at present recognises 54, of which 41 are metallic. These are termed *elementary bodies*.

ELE'MENTARY. In *chemistry*, is synonymous with undecomposed.

ELEMENTS, plu. of *element* (q. v.). 1. In *chemistry*. See **ELEMENT**. The elements of a compound body are its constituent parts; these may be either *proximate* or *ultimate*.—2. In *astronomy*, certain quantities which require to be known in order to determine something else; thus the elements of the planets require to be known in order to determine the theory of their elliptic motion.—3. First principles, as the *elements of geometry*.—4. The bread and wine in the eucharist.

ELEMI, or **GUM-ELEMI**, a resin which exudes from incisions made in the bark of the *Amyris elemifera*, a tree which grows in South America and Brazil.

ELENCH, Lat. *elenchus*, a fallacious argument. A **sophism**.

EL'EPHANT, the largest terrestrial animal. See **ELEPHAS**.

ELEPHANT, WHITE. A Danish order of knighthood.

EL'EPHANT-BE'ETLE, a large species of *scarabeus* found in South America. It is covered by a hard black shell, is nearly four inches long, and has a proboscis an inch and a quarter in length.

ELEPHANTIASIS, a species of leprosy, named popularly *elephant-leg*, from the swellings and incrustations resembling those of the hide of an elephant. It is considered contagious.

EL'EPHAS, ελεφας, the elephant. Order *pachydermata*; family *proboscidiæ*. There are two species; the Indian elephant (*E. Indicus*, Cuv.), and the African elephant (*E. Africanus*, Cuv.). The first has an oblong head, the latter a round head. Elephants live in herds, and their food is strictly vegetable.

ELEUSIN'IAN MYSTERIES, anciently secret religious rites annually performed at Eleusis.

ELEVATION, Lat. *elevatio*, a raising (*levo*, to raise). 1. In *astronomy*, altitude, the height of a body above the horizon of any place.—2. In *gunnery*, &c. the angle which the axis of the gun makes with the horizon.—3. In *perspective*, the representation of the whole body, a geometrical projection drawn on a plane perpendicular to the horizon.

ELEVA'TOR. 1. In *anatomy*, a muscle which serves to raise a part to which it is attached, as the lip.—2. In *surgery*, an instrument for raising a depressed portion of bone, especially of the cranial bones.

ELF-ARROWS, flint-stones sharpened on both sides in the shape of arrow-heads, made use of in war by the ancient Britons, but vulgarly supposed to have been shot by *elves* or *fairies*.

EL'GIN MARBLES, certain ancient marbles brought from Greece by the Earl of Elgin, chiefly from the Parthenon at Athens, and deposited in the British Museum, having been purchased by govern-

ment for 35,000*l*. They are believed to be the work of Phidias. Among them are some of the finest specimens of ancient sculpture.

ELIMINATION, from *elimino*, to thrust out, denotes, in analysis, that process by which all the unknown quantities, except one, are exterminated out of an equation.

ELIQUATION, from *eliquo*, to melt. An operation by means of which a more fusible substance is separated from one less fusible, by applying a degree of heat sufficient to fuse all the former, and not the latter.

ELI'SOR, from Norm. *eliser*, to choose. In *law*, when the sheriff is not an indifferent party in a suit, or when he is concerned by interest or affinity, the *venire* is issued to the coroners: or if exception lies to these, it is issued to two persons of the county, named by the court and sworn. These are called *elisors*, and return the jury.

ELK, an animal of the cervine genus, the *Cervus alce*, Lin. Found in the northern regions of Europe, Asia, and America. In the latter country it is called *moose*, from the Indian name *musu*.

ELL, a measure of length. The English ell is 49 inches, the Scotch 37*½*, the French 54, and the Flemish 27.

EL'LIPSE, **ELLIP'SIS**, ελλειψις, defect.

1. In *geometry*, a figure generated from the section of a cone by a plane cutting both sides of the cone, but not parallel with the base: popularly called an

oval. The line CD is the *transverse diameter*, and the shorter line, AB, is the *conjugate diameter*. These lines are at right angles to each other, and both equally divided in the centre; they are, therefore, called the *greater* and *lesser axis*.—2. In *grammar*, a figure of syntax, by which one or more words are omitted, which the hearer or reader may supply.

ELLIP'SOID, an elliptical spheroid, being a solid generated by the revolution of an ellipse about either axis.

ELLIP'TIC, } something relating to an
ELLIP'TICAL, } ellipse. An *elliptical arc* is any part of the periphery of an ellipse. An *elliptic conoid* is synonymous with *spheroid*. An *elliptic dial* is one usually made to fold up for convenience of the pocket. An *elliptic spindle* is the solid generated by the revolution of any segment of an ellipse about its chord. *Elliptical Compasses*. See **COMPASS**.

ELLIPTIC'ITY, the difference between the greater and lesser semi-axis of an ellipse.

ELLIP'TOGRAPH, from ελλειψις, an ellipse.

sis, and *γραφα*, to describe. An instrument for drawing ellipses.

EL'MO'S FIRE, *St.*, an appearance caused by fiery meteors in the atmosphere, often seen playing about the masts and rigging of ships at sea. It is an electrical phenomenon.

ELONGA'TION, from *longus*. 1. In *astronomy*, the angle under which we see a planet from the sun when reduced to the ecliptic, or it is the angle formed by two lines proceeding from the earth's centre to the centres of the sun and planet when reduced to the ecliptic. The greatest elongation is the greatest distance which the planet recedes from the sun. It can only be used in speaking of the inferior planets Venus and Mercury.—2. In *surgery*, an imperfect luxation, where the ligaments are only lengthened, and the bone not put out of its socket; also the extension of a limb for the purpose of reducing a dislocation or fracture.

EL'UL, a Jewish month answering to part of August and September.

ELUTRIA'TION, from *elutrio*, to cleanse. The operation of pulverising a solid substance, diffusing it through a large body of water, allowing it to settle for a little till the larger and heavier particles subside, and then pouring off or decanting the supernatant liquor. The liquid run off will be found to contain an impalpable powder, which in repose will collect on the bottom, and may be taken out and dried. This is a method employed by chemists, &c., to separate substances of different specific gravities.

ELYDOR'IC, from *ελαιον*, oil, and *υδαρ*, water. A term applied to a mode of painting with a substance containing oil and water.

EL'YTRA, plural of *elytron*, the wing-sheath of an insect, from *ελυω*, to involve. The elytra are the crustaceous membranes which cover the true membranous wings of coleopterous insects.

EL'YTROID, from *ελυτρον*, a sheath, and *ειδος*, like; sheath-like.

EMAR'GINATE, *Lat. emarginatus*, nicked; applied, 1. In *botany*, to leaves terminating in a small notch at the summit.—2. In *conchology*, to shells which have no margin, but have the edges hollowed out.—3. In *mineralogy*, to crystals having all the edges of the primitive form truncated each by one face.

EMPALM'ING, a process in which balsams were employed to preserve human corpses from putrefaction. A body thus prepared is called a *mummy* (q. v.). Modern chemistry furnishes more simple means of preventing putrefaction than the Egyptian system of salting, spicing, smoking, and bitumening.

EMBAR'GO, an order issued by the government of a country to prevent the sailing of ships out or into port. The word is Spanish, *embargo*, from the same root as *embarrass*.

EMBAT'TLED. In *architecture*, indented with notches in the form of embrasures, and on the top of a wall, parapet, or other building. Heraldry expressed the embattled line or embrasure by the word *crenelles*; the military architect sometimes calls them *cannonieres*; and *meurtrières* when only big enough for muskets: and when the parapet is so low that cannon may be shot without embrasures, they are said to shoot *en barbe*.

EMBER, in *ember-days*, *ember-weeks*, is the Saxon *emb-ren* or *ymb-rýne*, a circle or revolution; from *ymb*, around, and *ren*, or *ryne*, course. *Ember-days* are the Wednesday, Friday, and Saturday after Quadragesima-Sunday, after Whit-Sunday, after Holyrood-day in September, and after St. Lucia's-day in December: they are therefore days returning at certain seasons. *Ember-weeks* are the weeks in which ember-days fall, and formerly, our ancestors used the words *ember-fast* and *ember-tide* or season.

EM'BLEM, from *εμβλημα*, properly inlaid or Mosaic work, from *εμβάλλω*, to insert; something inserted into the body of another. The term is now used to designate a painted or sculptured enigma, such as the image of Scævola holding his hand in the fire with these words: "*agere et pati fortiter Romanum est*"—to do and to suffer with fortitude is Roman.

EM'BLEMENTS, from *Norm. emblear*, from *emblear*, to sow, *blé*, corn; the produce of land sown or planted by a tenant for life or years, whose estate is determined suddenly after the land is sown and before harvest. The word comprehends the produce of all annual plants, but not of perennial plants.

EM'BOLUS, *εμβολος*; anything inserted and acting in another, as the piston of a pump.

EMBOS'SING, from *Fr. bosse*, a protuberance; the forming or fashioning of works in relieve, whether by raising, by carving, or by depression; wherein, according to the prominence of the figures, they are said to be in *alto*, *mezzo*, or *basso-relievo*. Wood, stone, and other inflexible substances are embossed by carving; silver-plate, &c., by the pressure of a hydrostatic press upon the patterns; paper, cloths, &c. by revolving cylinders on which the required patterns are engraved. Mr. Thos. Greig of Rose-Bank, near Bury, Lancashire, patented an invention in 1835 for both embossing and printing silk, cotton, &c., in one or more colours at one operation.

EMBRACERY. In *law*, an attempt to corrupt a jury.

EMBRASURE (Fr.), from *embraser*, to widen; an aperture in a parapet through which cannon are fired, called also an *embattlement*.—In *architecture*, the enlargement of the aperture of a door or window towards the inside of the wall.

EMBROIDERY, figured work wrought with silver or gold, or both, on silk, cloth, stuffs, or muslins. The art was till lately a handicraft practised by ladies of rank, on account of its elegance, but an ingenious machine, invented by M. Hulmann of Mulhausen, has brought it within the factory system. By this machine one female may attend to 140 needles doing the work of 20 hand sewers.

EMERALD, a gem of a beautiful green colour, called by the Latins *Smaragdus*, from *σμαραγδος*. Under this name are comprehended the prismatic emerald, the *euclass* of Werner and Haüy, and the rhombohedral emerald, which contains two varieties, the precious emerald, and beryl or common emerald. The constituents of the emerald are 65 alumina, 16 glucina, 13 oxide of chromium with some lime and iron.

EMERGENT, Lat. *emergens*, rising above the water; applied, 1. To a star at the moment it goes out of the sun's beams so as to become visible.—2. To the year or epoch from which any computation of time is made.

EMERTI (Lat.), the public functionaries of Rome who had retired from their country's service on half-pay.

EMERSION, from *emerge*. The term is chiefly used in astronomy, for the appearance of the sun and moon after they have undergone an eclipse. The *minutes* or *scruples* of *emersion*, as applied to a lunar eclipse, is the arc of the moon's orbit which she has passed through from the time she begins to emerge from the earth's shadow. The term *emersion* is also used for the re-appearance of a star which had been hid by the sun's rays. See **EMERGENT**.

EMERY, a mineral substance, a sub-species of corundum, used in powder for polishing hard bodies, as metals, glass, &c. It contains alumina (about 60 per cent.), silica, and iron. It is imported in large quantities from the Island of Naxos, in which it occurs abundantly at Cape *Emeri*.

EMETINE, a substance obtained from the *ipecacuanha* root, of whose emetic properties it is believed to be the sole cause. It forms transparent brownish-red scales. Half a grain is a dose.

EMINENCE, Lat. *eminentia*, elevation; an honorary title given to cardinals since the time of Urban VIII., previous to which they were styled *illustrissimi* and *reverendissimi*.

EMINENTIAL EQUATION, a name for a certain assumed equation, which involves itself in several particular equations.

EMIR, a title of dignity among the Turks, denoting a prince. The title was first borne by the Caliphs, but when they assumed the title of *Sultan*, that of *Emir* remained to their children. At length it was attributed to all who were deemed descendants of Mohammed by his daughter Fatimah.

EMISSORY, Lat. *emissorius*, from *emitto*, an epithet applied by physiologists to ducts which convey fluids out of the body, especially to certain veins.

EMOLLESCENCE, *emollescens*, softening, a term used in metallurgy for that degree of softening in a fusible body which alters its shape; the first and lowest degree of fusibility.

EMPALEMENT, from *in* and *palus*, a stake; a fencing. In *heraldry*, a conjunction of coats of arms, pale-wise. In *botany*, an old name for the calyx or flower-cup.

EMPHYMA, from *εμφυσω*, to inflate; a tumour originating below the integuments, and unaccompanied with inflammation; such as fleshy, bony, and other morbid growths.

EMPHYTEUSIS, *εμφυτεύσις*. In *law*, a contract by which property is given to be possessed for ever, or for a long term, on condition it shall be improved, and a small annual rent paid to the granter.

EMPLECTION, *εμπλέχω*, I entangle. In *architecture*, a method of constructing walls, in which the front stones were wrought fair and filled in with stones behind.

EMPROSTHOTONOS, *εμπροσθεν*, forwards, *τινω*, I draw; a spasmodic action of the muscles by which the body is drawn forwards.

EMPYEISIS, from *εμπύω*, to suppurate; the name given by Dr. Good to a genus of diseases characterised by phlegmonous pimples, which gradually fill with a purulent fluid; e.g., small-pox.

EMPHYREAL, from *εϋ* and *πυρ*, fire; formed of the element of fire. *Emphyreal air* is a name given by Scheele to oxygen gas.

EMPHYREUM. In *theology*, the highest heaven where the pure element of fire, *εμπυρος*, is supposed to subsist.

EMPHYREUMA, *εμπυρευμα* from *πυρ*; the peculiar and disagreeable smell produced by the burning of animal and vegetable oily matters in close vessels, or under such circumstances as prevent the accession of air to a considerable part of the mass, and occasion an imperfect combustion.

EMU. In *ornithology*, the *struthio casuarius* of New Holland.

EMUL'GENT, Lat. *emulgens*, milking; applied to the artery and vein which go from the aorta and vena cava to the kidneys, because the ancients supposed that they strained, or as it were milked the serum through the kidneys. The emulgent arteries supply the kidneys with blood.

EMUNCTORY, from *emungo*, to drain off. The emunctories are the excretory ducts of the body, and the cavities containing the fluids to be excreted. The skin and kidneys, are the common emunctories.

ENAL'LAGE, *εναλλαγή*, change; a grammatical figure by which some change is made in the common mode of speech, as when one case or mood is put for another.

ENAM'EL (Fr. *en email*). 1. The hard siliceous substance which covers the teeth.—2. In the arts, a coloured glass formed by combination of different metallic oxides, to which some fixed fusible salt is added, as borates, fluates, and phosphates. Enamels possess all the properties of glass except its transparency. They are used to counterfeit gems, and in enamel painting.

ENAM'EL-PAINTING is performed on plates of gold or copper. The plate is first covered with a coating of white enamel. The colours finely ground are mixed with oil of spike and laid on. The plate is then gently warmed, and afterwards made red-hot, to incorporate the colours of the picture with the enamel.

ENAN'THESIS, from *εν* and *ανθω*, floreō; efflorescence from internal affection; a rash. The term is opposed to *exanthesis*, an eruption on the skin, not connected with internal affection.

ENARTHRO'SIS, from *εν* and *αρθρον*, a joint; the ball and socket-joint; a species of diarthrosis in which the round head of one bone is received into a cavity of another, in such a manner as to admit of motion in every direction.

ENCEN'NIA, from *εγκαινια*, renewal; a festival among the Jews called the Feast of Dedication (of the Temple). The term has since been used for any commemorative festival.

ENCA'NTIS, from *εν* and *κανθος*, the angle of the eye; a disease of the lachrymal caruncle of the eye, appearing at first as a small, soft, red, but often livid excrecence, granulated like a mulberry. It often assumes a cancerous malignity, and emits an exceedingly acrid discharge.

ENCAR'FUS, Gr. from *εν*, and *καρπος*, fruit; the festoons on a frieze.

ENCAUSTIC, from *εν* and *καιω*, to burn; burning in; applied to a species of painting in wax liquefied by heat, whereby the colours acquire considerable hardness, brilliancy, and durability. The term has

also been applied to painting on porcelain, enamel-work, and to painting on glass; and in short to all species of painting where the colours are fixed by means of heat, and even to works in metals where gold and silver are inlaid, melted, or laid on by the application of heat.

ENCE'INTE (Fr. from *en* and *ceindre*), to gird. 1. The wall or rampart which surrounds a place, sometimes composed of bastions and curtains.—2. In law, a state of pregnancy.

ENCEPH'ALON, *εγκεφαλος*. The brain, **ENCEPH'ALOS**, *εν* and *κεφαλη*, the head, or contents of the cranium.

ENCHAS'ING, **CHAS'ING**, Fr. *enchasser*, to enchase; the art of enriching and beautifying any work in metal by some design or figure represented in low relief. Gold and silver plate are usually enchased. It is a species of embossing performed by punching out from the back, and clearing with gravers and like tools.

ENCHO'RIAL, from *εγχωριον*, a term applicable to whatever is characteristic of a country, but especially applied to the language, and used in ancient Egyptian inscriptions, as distinguished from hieroglyphics (the sacred language) and from the Greek. These are all found on the Rosetta stone of black basalt.

ENCHIRID'ION (Gr.), from *εν*, and *χειρ*, hand. A manual, a short and useful compilation.

EN'CLAVE, from *clavis*. A heraldic term denoting something let into another, especially when the piece so let in is a square.

ENCLIT'IC, from *εγκλιτικος*, inclined. Applied to particles or words so closely connected with others as to seem parts of them; as *que* in *virumque*. Such particles are also called *enclitics*.

EN'CRINITE, a fossil encrinurus. The encrinites form a genus of the order crinoides, known by the name of stone-lily. See **ENCINURUS**.

ENCRI'NITAL, containing encrinites, as the *encrinital marble* of Derbyshire, which consists chiefly of encrinites cemented together by carbonate of lime.

ENCRI'NUS, a genus of radiate animals or zoophytes. Class *Enchinodermata*, order *Pedicellata*, Cuv. Name from *εγκρινον*, a lily, in allusion to the form. There are only two living species known, but the fossil genera are exceedingly numerous.

ENCYST'ED, from *cyst*. A term applied to tumours when the matter is inclosed in a sac or cyst.

ENDEC'AGON, or **UNDEC'AGON**, *ενδεκα*, eleven, and *γωνια*, angle. A plane geometrical figure bounded by eleven sides.

ENDEM'IC, from *εν*, and *δημος*, people. Peculiar to a country. Applied to any

disease that affects many persons of the same country, proceeding from some cause peculiar to the country or region where it prevails. The term is often used substantively.

ENDOCARDITIS, from *ενδον*, within, and *καρδια*, the heart. Inflammation of the lining membrane of the heart.

ENDOCARP, from *ενδον*, within, and *καρπος*, fruit. The stone or shell of certain fruits, as the cherry. The outer skin is the *epicarp*, and the fleshy substance the *sarcocarp*.

ENDOGENOUS, from *ενδον*, within, and *γενναω*, to engender. An epithet for plants (endogens), the growth of whose stems takes place by addition from within. The ferns and equisetaceæ are endogenous plants; most others are *exogenous*, or increase from without. See *EXOGENS*.

ENDOPLEURA, *ενδον*, and *πλευρα*, side. In *botany*, the internal integuments of a seed.

ENDORRHIZÆ, *ενδον*, and *ριζα*, root. The embryo of monocotyledons.

ENDOSMOSIS, from *ενδον*, within, and *ωσμος*, impulsion. The passage of fluids through the membranes of organised bodies from the exterior to the interior. Some gases *endosmose*.

ENDOSPERMIUM, *ενδον*, and *σπερμα*, seed. The albumen of seeds.

ENFEOFFMENT, from *in* and *fief*. The deed whereby one is invested with the fee simple of an estate.

ENFILADE (Fr.), a line or straight passage (*en*, and *fil*, a thread). A term used in speaking of trenches, &c. which may be seen and scoured with shot all the length of a line. Hence trenches are usually dug in a zig-zag manner, that they may not be *enfiladed*, or shot along their whole length.

ENFILED. In *heraldry*, a term designating that a head or other charge is placed on the blade of a sword.

ENGAGED COLUMNS are those attached to, or built in, walls or piers, a portion being concealed.

ENGINEER, Fr. *ingenieur*. A person skilled in mathematics and mechanics, and whose business it is to form plans, and superintend the construction of works. If these are for offence and defence he is called a *military engineer*; if they are intended for industrial purposes, as public works, railways, canals, &c., he is called a *civil engineer*. The name is also used to designate one who constructs engines.

ENGISCOPES, an instrument, a kind of microscope.

ENGMORPHOSIS, from *εν*, and *μορφος*, a nail. A species of articulation which resembles a nail driven into wood, as a tooth in its socket.

ENGRAILMENT, the ring of dots round the edge of a model.

ENGRAVING, the art of producing upon plates of copper or other metal, by means of a steel instrument called a *graver*, representations, as letters, portraits, &c., without the use of aqua-fortis, and which, by means of ink and a rolling-press, are transferred to paper. Copper has hitherto been generally used for engraving upon, but for fine pieces, steel plates are used, and many "pictorial editions" are now got up with wood engravings. In complicate pieces, as landscapes, etching and dry-point engraving are usually combined, so that the picture is produced in a certain state by means of nitric acid, and finished with the graver.

ENGROSS, } In *law* (1.) To copy in a
ENGROSSING, } a large (*gross*) hand any deed or record, for preservation on paper or parchment. (2.) To buy up corn or other dead victuals with intent to sell them again, and thereby to make profit by enhancing the price. For a long time, most scarcities which occurred in the country were ascribed to the influence of engrossers and forestallers, and hence statutes were framed for the suppression of engrossing and forestalling. The first is still an indictable offence, punishable at common law by fine and imprisonment.

ENHARMONIC. In *music*, an epithet for such species of composition as proceed on very small intervals, or smaller intervals than the diatonic and chromatic. An enharmonic interval is the eighth of a tone.

ENNEAGON, from *εννεα*, nine, and *γωνια*, a corner. A figure of nine sides and nine angles.

ENNEAHE'DRIA, from *εννεα*, nine, and *εδρα*, a side. A genus of columnar double-pointed crystals, composed of a trigonal column, terminated at each end by a trigonal pyramid.

ENNEAN'DRIA, from *εννεα*, nine, and *ανης*, a man. A class of plants of the sexual system, containing such as have hermaphrodite flowers with nine stamina.

ENNEAPET'ALOUS, from *εννεα*, nine, and *πιταλον*, a petal. A corolla having nine petals.

ENNEAT'IC, } from *εννεα*, nine; every
ENNEATICAL, } ninth. *Enneatical days* are every ninth of a disease; *enneatic years* are every ninth of an individual's life.

ENROCKMENT, a term applied to the stone-filling upon breakwaters and the banks of rivers, underneath quays, &c. It consists of large stones thrown in at random, and of sufficient size to resist the action of the current.

ENROLMENT, the registering of a document in the rolls of chancery, or superior

courts of common law, or the records of quarter sessions.

ENS, } (part. pres. of *esse*, to be.) The
ENTITY, } old metaphysicians distinguished the *ens reale* and *ens positivum* from their *ens rationis*, which exists only in the imagination. The old chemists also had their *ens* to designate the essence or virtue of a substance.

EN'SATE, Lat. *ensatus*, shaped like a sword (*ensis*). See ENSIFORM.

ENSEMBLE (Fr.), a term used in the fine arts to denote the general effect of a whole work, without reference to the parts.

EN'SIFORM, Lat. *ensiformis*, sword-shaped (from *ensis* and *forma*); applied to leaves, &c.

ENTABLATURE, Fr. *entablement*, from Lat. *tabula*; that part of a column which includes the cornice, frieze, and architrave (q. v.).

ENTA'IL, from Fr. *entailer*, to cut. In *law*, an estate entail, abridged and limited by certain conditions, prescribed by the first donor, to descend in a particular line of heirs. *Estates-tail* are either *general* or *special*, and are always lesser estates than a fee simple. To *entail* is to settle the descent of lands so that no subsequent possessor can bequeath or alienate it.—2. In *Gothic architecture* the term *entail* is used to denote delicate carving.

ENTA'SIA, from *entasis*; a generic name for constrictive spasm, embracing trismus, tetanus, priapism, &c.

EN'TASIS, *εντασις*, from *εντιναι*, to strain; a name given to the slight curvature of the shafts of the ancient Grecian columns, particularly the Doric, which is exceedingly graceful.

ENTE. In *heraldry*, a term signifying grafted.

ENT'ELECHY, *εντελεχεια*, an Aristotelian word expressing an object in its complete existence, as opposed to potential existence.

EN'TERING 1. *Entering goods at the custom-house* is the lodging of a manifest of them, and gaining permission to land them.—2. *Entering ports* are ports cut on the middle gun-deck of three-decked vessels to serve as doors.—3. *Entering ropes*, three ropes hanging from the entering ports of a ship, on the right, left, and middle of the steps: called also *side ropes*.

ENTERITIS, from *εντερις*, an intestine; inflammation of the intestines.

ENTEROC'LE, from *εντερις*, an intestine, and *κληνη*, a tumour; an intestinal rupture or hernia.

ENTEROC'GRAPHY, from *εντερις*, an intestine, and *γραφω*, description; anatomical description of the intestines.

ENTEROL'OGY, from *εντερις*, an intestine,

and *λογος*, doctrine; that part of anatomy which treats of the intestines.

EN'THYME, *ενθυμημα*, from *εν* and *θυμος*, mind; a term in rhetoric for an argument consisting of only two propositions, an antecedent, and a consequent deduced from it; the major is not expressed, but supposed to be present to the mind.

ENTIRE, complete or undivided. In *botany*, applied to leaves when the margins are devoid of notches, serration, or incisions.—In *conchology*, applied to a shell, in opposition to *emarginate*.

ENTIRE'TY, } In *law*, the whole of a
ENTIERTE. } thing, in distinction from a moiety.

ENTOMOL'OGY, from *εντομα*, an insect, and *λογος*, discourse; that branch of zoology which treats of insects.

ENTOMOSTOM'ATA, the second family of Siphobranchiata, in the conchological system of De Blainville, including many genera, as *Buccinum*, *Dolium*, &c., all univalves.

ENTOMOS'TRACA, from *εντομα*, an insect, and *στραχων*, a shell; shelled insects, which, in the arrangement of Cuvier, form the second section of Crustacea. They are mostly microscopic, and all aquatic, generally inhabiting fresh water.

ENTOZ'OA, from *εντος*, within, and *ζωον*, an animal; intestinal worms. These form the second class of the *Radiata* in Cuvier's arrangement. The greater number inhabit the bodies of other animals.

EN'TREMETS (Fr.), small plates or dainties set between the principal dishes at table. The term is used in music for the inferior movements inserted in a composition between those of more importance.

EN'TREPAS (Fr.), a term used in the menage for the broken pace of a horse resembling an amble.

EN'TRESOL (Fr.) See MEZZANINE.

EN'TROCHI, } from *τροχος*, a wheel,
EN'TROCHITES, } wheel-stones; a name given to the broken stems of fossil encrinurites. These are well known under the name of St. Cuthbert's beads.

EN'TRY, Fr. *entrée*. 1. In *commerce*, the depositing of a ship's papers in the custom-house, and obtaining licence to land goods:—"The person entering any goods inwards, shall deliver to the collector or comptroller a bill of the entry of such goods, fairly written in words at length, expressing the name of the ship, the place whence the goods were brought, and the name of the person in whose name the goods are to be entered, and the quantity and description of the goods," &c.—this is a *bill of entry*.—2. In *law*, a writ directed to a sheriff, requiring him to command the tenant of land, that he render to the

demandant the premises in question, or appear in court on such a day and show reason why he has not done it, is termed a *veris of entry*.—3. Accounts are entered in account-books, and these account-books are kept either by *single or double entry*.

ENUMERATION. In *rhetoric*, that part of a peroration in which the orator recapitulates the principal points or heads of the discourse or argument.

ENUR'NER. In *heraldry*, an epithet for a bordure charged with wild beasts.

ENVELOPE, a wrapper, Fr. *enveloppe*; a term in fortification for a work of earth, sometimes in the form of a single parapet, and at others like a small rampart with a parapet, raised sometimes on the ditch, and sometimes beyond it, to cover weak places with single lines.

EN'VIRONNE. In *heraldry*, surround with other things.

ENVOY, Fr. *envoye*, from *envoyer*, to send; a person deputed by government to negotiate some affair with a foreign government. Envoys are inferior in rank to ambassadors, but are equally under the protection of the law of nations.

E'OCENE, from *ἠώς*, *aurora*, and *καινός*, *recent*; one of the four terms proposed by M. Deshayes and Mr. Lyell, to designate the marine formations of the tertiary series, founded on the proportions which their fossil shells bear to marine shells of existing species. These terms are *Eocene*, *Miocene*, *Older Pliocene*, and *Newer Pliocene*. The proportion of living species in the Eocene are less numerous than in any of the others, and indicates what may be regarded as the *dawn* or commencement of the existing state of animate creation.

E'PACT, from *ἐπακτος*, *adscititious*; the name given to the excess of the solar month above the lunar synodical month, and of the solar year above the lunar year of twelve synodical months. The lunar month is 29 days, 12 hours, 44 min., 3 sec., consequently the lunar year is 354 days (nearly), and the annual epact 11 days, to which one is added every year to 19 (the lunar cycle), when it becomes 30 or 0, as 30 is an embolismic month. The Gregorian epact for any year is the same as the Julian epact for the preceding year, the difference between the Gregorian and Julian years being equal simply to the difference between the solar and lunar year.

E'PAGOGON, from *ἐπάγω*, *induco*; a rhetorical figure whereby like things or arguments are compared, to prove universal propositions by particulars.

EPANADIPLO'SIS, *ἐπαναδιπλωσις*, *reduplication*; a rhetorical figure wherein a sentence begins and ends with the same word.

EPANALEP'SIS, *ἐπαναλεψις*, *resumption*;

a rhetorical figure wherein the same word is repeated in resuming the subject after a long parenthesis.

EPANAPH'ORON, from *ἐπαναφέρειν*, *refero*; a rhetorical figure which makes several clauses begin with the same word.

EPAN'ODOS, from *ἐπι* and *ὁδός*; a rhetorical figure wherein two things spoken of together are afterwards spoken of severally.

EPAUL'E. In *fortification* (Fr. *epaule*, a shoulder), the shoulder of a bastion; the angle of the face and flank, often called the *angle of the epaule*.

EPAUL'EMENT, from Fr. *epaule*, a shoulder. A term in *fortification* for a side-work made of gabions, fascines, or bags of earth. It also sometimes denotes a semibastion, and a square orillon to cover the cannon of the casemate.

E'PHA, } a Jewish dry measure, equal

E'PHAH, } to an imperial bushel, nearly.

EPHEBE'UM, *εφεβείον*, a youth. In *ancient architecture*, a building appropriated for the wrestling and exercises of youth prior to their entering the gymnasium.

EPH'ELIS, from *ἐπι*, and *ἥλιος*, the sun. A term denoting not only the freckles or little yellow spots which appear on persons of a fair skin, and the larger brown patches which likewise arise from exposure to the direct rays of the sun, but also those large dusky patches which are very similar in appearance, but occur on other parts of the surface which are constantly covered.

EPHEM'ERA (Lat.), from *ἐphemeros*, *daily*.

1. A fever of only one day's continuance.

—2. The *day-fly*, a genus of neuropterous insects of the subulicorne family. Epithet *ephemeral*. The ephemera take their name from their short term of life in their perfect state. They usually appear at sun-set, in fine weather, in summer and autumn, along the banks of rivers, lakes, &c., and sometimes in such innumerable hosts, that after their death the surface of the ground is thickly covered with their bodies; in certain districts, cart-loads of them are collected for manure. The continuance of their species is the only function which these animals have to fulfil, for they take no nourishment, and frequently die on the day of their metamorphosis, and even within a few hours of that event. If, however, we trace them back to that period in which they existed as larvæ, we find that their career extends from two to three years. In this state they live in water.

EPHEM'ERIS, an almanack, from *ἐphemeros*, *daily*. An account of, or tables calculated to show, the state of the heavens for every day of the year, i. e. the position of planets, &c. The *Nautical Almanack*, published by the Board of Longitude, is

the most authentic specimen of an *Astronomical Ephemeris*. The term is sometimes used in the plural, *Ephemerides*, for a collection of astronomical tables.—2. In *literature*, a collective name for all kinds of periodical literature.

EPHIALTA, the herb peony, said to cure night-mare (*ephaltes*).

EPHIALTES, *ἐφιάλης*, Night-mare.

EPHOD. In *Jewish antiquity*, a part of the sacerdotal habit. It was a sort of girdle, brought from behind the neck over the two shoulders, and hanging down before, was put across the stomach, then carried round the waist, it served as a girdle to the tunic.

EPHORI. In *Grecian antiquity*, magistrates (usually five) established in ancient Sparta to balance the regal power.

EPICARP, from *ἐπι*, and *καρπός*, fruit. The outer skin of some fruits. See ENDOCARP.

EPICENE, *ἐπικαινός*, common to both sexes. Applied to nouns of common gender.

EPICLINE, from *ἐπι*, and *κλίνη*, a bed. An epithet applied by Mirbel to a nectary, when it is placed on the receptacle of a flower.

EPICRAN'ITIS GR., *ἐπικρανῶν*, I finish. A term in *architecture* for the cyma of the cornice.

EPICURE'ANS, an ancient sect of philosophers, who followed the doctrines of Epicurus, a celebrated philosopher of Gargetum, in Attica, about 300 years before Christ.

EPICYCLE, from *ἐπι*, and *κύκλος*, a circle. A little circle whose centre is in the circumference of a greater circle; or a small orb, which, being fixed in the deferent of a planet, is carried along with its motion; and yet, with its own particular motion, carries the body of the planet fastened to it round about its proper centre. Epicycles were of particular use in the ancient astronomy.

EPICYCLOID, *ἐπικυκλίουδης*, a curve generated by the revolution of the periphery of a circle along the convex or concave part of another circle, thus differing from a cycloid (q. v.).

EPIDEM'IC, from *ἐπι*, and *δημος*, people. An epithet applied to those diseases which attack a multitude of persons at the same time and same place. The word is also used substantively for *epidemy*, an epidemic disease. Epidemics may arise from contagion or atmospheric causes.

EPIDEN'DRA, a natural family of plants, of which the genus *Epidendrum* is the type.

EPIDEN'DRUM, the *vanille*. A genus of perennial plants. *Gynandria—Monandria*. Name from *ἐπι*, and *δένδρον*, a tree, be-

cause the species grow parasitically on the trunks or branches of trees. Hot climates.

EPIDERM'IS, *ἐπιδερμῖς*, from *ἐπι* and *δερμα*, the true skin. The cuticle or scarf-skin of an animal or plant.

EPIDERM'OID, from *ἐπιδερμῖς* and *ειδός*, resembling the epidermis. The word should be written *epidermatoïd*.

EPIDID'YMUS, *ἐπιδιδυμῖς*, from *ἐπι* and *διδυμός*. A hard, vascular body, principally composed of minute elastic tubes (*tubuli seminiferi*), intricately convoluted, and placed at the outer and back part of the testis.

EPIDOTE, from *ἐπίδοσις*, addition. A mineral of a green colour, and crystallised structure, thus named from an enlargement of the base of the prism in one direction: named also *pistacite*, from its colour. Found in primary rocks throughout Europe. Comp. 37 silica, 27 alumina, 14 lime, 17 oxide of iron, and 1·6 oxide of manganese. There are many varieties.

EPIGÉ'OUS, *ἐπι*, upon, and *γη*, earth. In *botany*, applied to plants which grow close to the earth.

EPIGAST'RUM, *ἐπιγαστήριον*, from *ἐπι*, and *γαστήρ*, the belly. The upper part of the abdomen or belly, immediately over the stomach.

EPIGENE, from *ἐπι*, and *γίνομαι*, to produce. A term which, with pseudomorphous, is applied to forms of crystals not natural to the substances in which they are found.

EPIGEN'ESIS, *ἐπιγενεσις*, from *ἐπι*, and *γίνομαι*, to generate. A name given to that theory of generation which regards the fœtus as the joint production of matter furnished by both sexes.

EPIGLOT'TIS, *ἐπιγλωττίς*, from *ἐπι*, and *γλωττα*, the tongue. The cartilaginous valve at the root of the tongue, which falls on the glottis, or superior opening of the larynx. Its use is to close the glottis during the act of swallowing, and thereby prevent the passage of food into the trachea or windpipe.

EPIGRAPH, *ἐπιγραφή*, from *ἐπι*, and *γράφω*. An inscription on a monument explanatory of its use, its destination, or pointing out the time of its erection, &c.

EPIO'GNOUS, *ἐπι*, upon and *γυνή*, a female. In *botany*, any organ growing upon the summit of the ovary.

EPINOCTIDES, *ἐπινυκτίδης*, from *ἐπι*, and *νύξ*, night. A fugacious kind of nettlerash, which arises during the night, and disappears in the morning.

EPIPET'ALOUS, Lat. *epipetalus*. An epithet applied to stamina and glands which are attached to the corolla of a flower.

ΕΠΗΛΑΝΤ, *ἐπιφάνεια*, from *ἐπι*, and *φαίνω*, to appear. A church festival, celebrated on the twelfth day after Christmas, in commemoration of the Saviour's being manifested to the wise men of the East, by the appearance of a miraculous star.

ΕΠΙΡΗΘΑΣΜ, from *ἐπι*, upon, and *ρεῖν*, to be, a partition. The slender membrane which sometimes shuts the peristome of mosses.

ΕΠΙΦΥΤ'ΙΟΣΠΕΡΜΟΥΣ, from *ἐπι*, *φυλλον*, a leaf, and *σπέρμα*, seed. An epithet applied to plants which bear their seed on the back of the leaves. These plants are cryptogamic, and form a natural family, under the name of *epiphytyospermæ*.

ΕΠΙΦΥΛΛΟΥΣ, *ἐπι* and *φυλλον*, a leaf. In *botany*, something inserted upon a leaf.

ΕΠΙΦΥΣΙΣ, *ἐπιφύσις*, from *ἐπι*, upon, and *φύω*, to grow; a portion of bone growing upon another bone, but not forming a part of it, as is the case of *apophysis*.

ΕΠΙΦΥΣΙΣ, from *ἐπι* and *πλέω*, to fold; a figure of rhetoric in which the speaker endeavours to convince by a gentle kind of upbraiding.

ΕΠΙΠΛΩΣ, *ἐπιπλοκή*, implication; a figure of rhetoric by which one aggravation is added by due gradation to another.

ΕΠΙΠΛΩΣ, from *ἐπιπλοή*, the omentum, and *πλην*, a tumour; an omental hernia; a rupture produced by the protrusion of a portion of the omentum.

ΕΠΙΠΛΩΣ, appertaining to the *epiploon* or omentum, as the *epiploic arteries*, which are branches of the gastro-epiploic artery distributed to the omentum.

ΕΠΙΠΛΩΣ, *ἐπιπλοή*, from *ἐπιπλέω*, to sail over; the omentum, which sails as it were upon the intestines.

ΕΠΙΣΚΗΝΙΟΝ, *ἐπισκήνιον*, a place on the top of an ancient theatre where the machinery was kept.

ΕΠΙΣΚΟΠ'ΙΩΝ, an appellation given to those who adhere to the episcopal form of church government.

ΕΠΙΣΟΔ, *ἐπισώδη*, an incident, story, or action, introduced into a poem, and connected with, but separable from, the main action. The episode was originally something rehearsed between the parts of a chorus in ancient tragedy, to amuse the audience.

ΕΠΙΣΠΕΡΜ, *ἐπι* and *σπέρμα*, seed. In *botany*, the integuments of a seed.

ΕΠΙΣΤΑΤΗΣ, *ἐπιστάτης*, the title of the presidents of the two great Athenian councils, the Ecclesia and the Senate of the five hundred.

ΕΠΙΣΤΡΟΦΗ, *ἐπιστροφή*, from *ἐπι* and *στρέφω*, to turn; a figure in rhetoric wherein several successive sentences end

with the same affirmation: thus, "Are they Hebrews? So am I. Are they Israelites? So am I. Are they of the seed of Abraham? So am I," &c.

ΕΠΙΣΤΥΛ, from *ἐπι* and *στυλος*, a column; a term used by the ancient Greek architects for what is now called the *architrave* (q. v.).

ΕΠΙΣΤΑΣΙΣ, from *ἐπιστάνω*, to strain; the second division of an ancient dramatic poem; that in which the plot entered upon in the *protasis* was carried on and strained, or worked up, till it arrived at its height in the *catasiasis*. The term has also been used in medicine for the increase of the paroxysm of a fever, and in rhetoric for that part of an oration in which the speaker addresses himself most forcibly to the passions.

ΕΠΙΤΑΘ'ΙΔΕΣ, *ἐπι* and *τιθῆμι*, I place. In *architecture*, the crown of an entablature.

ΕΠΙΤΡΟΦΗ, *ἐπιτροπή*, from *ἐπι* and *τρέπω*, to turn; a figure in rhetoric whereby something is granted with a view to gain an advantage.

ΕΠΙΖΟΟΤ'ΙΟΝ, from *ἐπι*, upon, and *ζωόν*, an animal; an epithet for a disease which prevails among cattle in the same manner as an epidemic does among men.

ΕΠΙΖΟΟΤ'ΥΝ, an epizootic disease of which murrain is an instance.

ΕΠ'ΟΧΗ, { from *ἐποχή*, a stop; a chronological term for the point of time at which a new computation is begun and from which dates are numbered, such as the Creation, 4004 B.C.; the Deluge, 2348 B.C.; the taking of Troy, 1184 B.C.; the building of Rome, 753 B.C.; the Birth of Christ, the commencement of the Christian era; the Hegira, 622 A.D.

ΕΠ'ΟΔ, *ἐπώδη*, from *ἐπι* and *ὠδή*, an ode; the third or last part of the *ode* (q. v.). The term is now commonly used for any little verse which follows one or more great ones. Thus a pentameter after a hexameter is an epode.

ΕΠ'ΟΤΗ, *ἐποταί*, a name for those who were admitted to view the greater mysteries of the Greek theology.

ΕΠΡΟΥΒΕΤΤ'Ε (French), an instrument for ascertaining the relative strength of different kinds of gunpowder.

ΕΠ'ΟΣΜ ΣΑΛΤΣ, a popular name for sulphate of magnesia, formerly obtained by boiling down the mineral water found in the vicinity of Epsom, but now prepared from bittern and magnesian limestone.

ΕΠ'ΟΥΣΝΕΣ, officers among the Romans who had charge of the *epulum* or sacred banquets for Jupiter and the other gods.

Ε'ΥΑΒΛΗ. In *mechanics*, a term applied synonymously with *uniform*. Thus *equable motion* is motion neither accelerated nor retarded. Motion is also said

to be *equally* accelerated or retarded when it is increased or decreased by equal quantities in equal times.

EQUALITY, a term of relation between things equal in magnitude, quantity or quality. The sign now commonly used to express equality is = but some writers use \propto , and others χ .

E'QUANT, a circle in astronomy, for regulating and adjusting certain motions of the planetary bodies.

E'QUATED BODIES, or *Gunter's Scale*; two lines which relate to the comparison of the sphere and the regular bodies. They are seldom given on modern scales.

EQUA'TION, that disposition of quantities by which one set is made equal to another however differently expressed. Thus $2l. 16s. 6d. = 678d.$ is an equation, so is $y' + y = a + b + c - d$. Equations are said to be *literal* when the quantities are expressed by letters, and *numerical* when the co-efficients of the unknown quantities and the absolute terms are given in numbers. They are *simple*, when the unknown quantities enter only in the first degree; *quadratic*, when they enter in the second degree; *cubic*, when they enter in the third degree, &c. (See DEGREE.) In astronomy, the term *equation* is used to express the amount of correction to be added to or subtracted from the mean position of a heavenly body to obtain its true position; hence *equation of time* denotes the difference between mean and apparent time, or it is the quantity to be added to or subtracted from the mean time, to find the true astronomical time. The equation of time arises from two causes, the eccentricity of the earth's orbit, and the obliquity of the ecliptic. *Equation of payments* is an arithmetical process for finding the time to pay at once several debts due at sundry times, and bearing no interest till after the time of payment, so that no loss shall be sustained by either party.

EQUA'TOR, Lat. *equator*, the equalizer; a great circle of the sphere, equally distant from the two poles of the world, and dividing it into two hemispheres, the northern and southern. It is called the *equator*, because when the sun is in this circle the days and nights are of equal length in all parts of the world. For this reason the celestial equator is also called the *equinoctial* (q.v.), and when drawn on maps and globes, it is called the *equinoctial line*, or simply the *line*. From this circle, referred to the earth, are reckoned the degrees of latitude, both north and south. Epithet *equatorial*, as the *equatorial regions*.

EQUATO'RIAL, an astronomical instrument contrived for keeping an object in view for any length of time, notwithstanding the diurnal motion.

EVERY, } from Fr. *escurie* 1. A grand *E'QUERRY*, } stable.—2. An officer of the royal household under the master of horse. The *equerries* are five in number, and ride in the leading coach on grand occasions, and have a table provided for them.

E'QUES AURATUS, a knight bachelor called *auratus*; q.d., *gilt*, because anciently none but knights were allowed to beautify their habiliments of war with gold.

EQU'ESTRIAN, from *equus*, a term now chiefly used in the phrase *equestrian statue*, which is the representation of a person on horseback. The *equestrian games*, the *ludi equestres* of the Romans, were horse races of five kinds: the plain horse-race, the chariot-race, the decursory race about funeral piles, the *ludi sevirales*, and the *ludi neptunales*. The *equestrian order* was the second rank in Rome next to the senators.

EQUAN'GULAR, having equal angles, such as the square and all regular bodies. The term is also applied to two or more figures having equal angles.

EQUICRU'RAL, from *equus*, equal, and *crus*, a leg; having equal legs, but longer than the base: *isosceles*.

EQUIC'ULUS, } the *Horse's Head*; a
EQUUS MI'NOR, } constellation of the
EQU'ULEUS, } northern hemisphere, representing, according to the poets, the horse which Mercury gave to Castor, and which he named *Celeris*. From the imperfect representation of the animal in this constellation it has also been called *equi lectio*. Number of stars 10.

E'QUIDIFFERENT, having *equal differences*: applied in arithmetic to any series of quantities which proceed in arithmetical proportion, i.e. when the difference between the first and second, the second and third, the third and fourth, &c., terms is the same, as $1 + 3 + 5 + 7 + 9 + \&c.$, is an *equidifferent series*. The term is also applied to crystals when the faces of the prism and each of the summits are different, but form a series, as 6. 4. 2.

E'QUILAT'ERAL, from *equus*, equal, and *latus*, a side; equal-sided. A *bivalve* is said to be *equilateral* when a transverse line drawn through the apex of the umbo bisects the valve.—An *equilateral hyperbola* has the two axes equal to one another.

E'QUILIB'RUM (Lat.), *equipoise*; a term used in mechanics for an equality of forces acting in opposite directions, whereby the body acted upon remains at rest, or technically, in *equilibrio*. In *fine arts*, *equilibrium* means the just poise or balance of an object, so as to appear to stand firmly.

E'QUIMUL'TIPLES, products arising from the multiplication of two or more primitive quantities by the same number or

quantity. The 3 *a* and 3 *b* are equimultiples of *a* and *b*. See MULTIPLE.

EQUINOCTIAL, from *æquus* and EQUINOCTIAL LINE, } *nox*, night; the
THE LINE, } great circle of the
sphere under which the equator of the earth moves in its diurnal course, and to which, when the sun in his progress through the ecliptic comes, he makes equal days and nights all over the globe, as then he rises due east and sets due west. From this circle the declination of the heavenly bodies is counted (see EQUATOR and EQUINOX).—*Equinoctial colure* is that passing through the equinoctial points (see COLURE).—*Equinoctial dial*, one whose plane is parallel to the equator.—*Equinoctial points* are the two points wherein the equator and ecliptic intersect each other (see EQUINOX).—*Equinoctial gales*, storms which are observed generally to take place about the time when the sun crosses the equinoctial.

EQUINOX, from *æquus*, equal, and *nox*, night; the precise time at which the sun enters one of the equinoctial points (the first point of *Aries* or *Libra*), for then, moving exactly in the equinoctial circle, he makes our days and nights equal. The sun enters *Aries* about the 21st of March, which is the *vernal* or *spring equinox*, and *Libra* about the 23rd of September, which is the *autumnal equinox*. The word *Equinoxes* taken absolutely in common language, generally signifies the equinoctial gales, and the small observed retrograde motion of the equinoctial points is what is termed, in astronomical language, the *precession of the equinoxes*.

EQUIPAGE, from *equip*, the furniture of an army. *Camp equipage* includes tents and everything necessary for accommodation in camp. *Field equipage* consists of arms, artillery, waggons, tumbrils, &c. An army furnished with all its camp and field equipage is said to be *equipped* for service.

EQUERIA, equestrian games instituted by Romulus at Rome in honour of Mars.

EQUITANT, Lat. *equitans*, riding; applied to leaves which are disposed in two opposite rows, and clasp or ride upon each other by their compressed base.

EQUITES, plural of *eques*, a knight or horseman; the equestrian order among the Romans. The *equites* composed the Roman cavalry, and constituted the second order of nobility.

EQUITY (*quasi equalitas*), the impartial distribution of justice. Equity, in its true and general meaning, is the soul and spirit of all law; positive law is construed and rational law is made by it. In this equity is synonymous with justice. In English jurisprudence, equity is the law of reason, and a court of equity is one whose business it is to correct the opera-

tions of the literal text of the law, and supply its defects. Chancery is, or ought to be, such a court.

EQUIVALENTS. In chemistry, a term introduced by Dr. Wollaston to denote the primary proportions in which the various chemical bodies reciprocally combine, referred to a common standard, as oxygen or hydrogen, reckoned unity or 1'000. Dr. Dalton, who is justly considered the true author of the grand discovery of definite and multiple chemical ratios, calls these equivalent numbers *atomic weights*, when reduced to their lowest terms, oxygen or hydrogen being the radix of the scale. The following is—

A Table of all the Chemical Equivalents at present known, with their Symbols.

	Equivalents. Hydrogen = 1.	Equivalents. Oxygen = 1.	Symbols.
1. Aluminum . . .	10	1'25	Al.
2. Antimony . . .	65	8'125	Sb.
3. Arsenic . . .	38	4'75	As.
4. Barium . . .	69	8'625	Ba.
5. Bismuth . . .	72	9'	Bi.
6. Boron . . .	20	2'5	B.
7. Bromine . . .	78	9'75	Br.
8. Cadmium . . .	56	7'	Cd.
9. Calcium . . .	20	2'5	Ca.
10. Carbon . . .	6	0'75	C.
11. Cerium . . .	48	6'	Ce.
12. Chlorine . . .	36	4'5	Cl.
13. Chromium . . .	28	3'5	Cr.
14. Cobalt . . .	30	3'75	Co.
15. Columbium . . .	185	23'125	Ta.
16. Copper . . .	32	4'	Cu.
17. Fluorine . . .	18	2'28	F.
18. Glucium . . .	18	2'25	G.
19. Gold . . .	200	25'	Au.
20. Hydrogen . . .	1	0'125	H.
21. Iodine . . .	125	15'625	I.
22. Iridium . . .	96	12'	Ir.
23. Iron . . .	28	3'5	Fe.
24. Lead . . .	104	13'	Pb.
25. Lithium . . .	10	1'25	L.
26. Magnesium . . .	12	1'5	Mg.
27. Manganese . . .	28	3'5	Mn.
28. Mercury . . .	200	25'	Hg.
29. Molybdenum . . .	48	6'	Mo.
30. Nickel . . .	28	3'5	Ni.
31. Nitrogen . . .	14	1'75	N.
32. Osmium . . .	100	12'5	Os.
33. Oxygen . . .	8	1'	O.
34. Palladium . . .	54	6'75	Pd.
35. Phosphorus . . .	16	2'	P.
36. Platinum . . .	98	12'	Pl.
37. Potassium . . .	40	5'	K.
38. Rhodium . . .	45	5'625	R.
39. Selenium . . .	40	5'	Se.
40. Silicium . . .	8	1'	Si.
41. Silver . . .	110	13'75	Aq.
42. Sodium . . .	24	3'	Na.

	Equi- valents. Hydro- gen = 1.	Equi- valents. Oxygen = 1.	Symbols.
43. Strontium	44	5.5	Sr.
44. Sulphur	16	2'	S.
45. Tellurium	32	4'	Te.
46. Thorium	60	7.5	Th.
47. Tin	58	7.25	Sn.
48. Titanium	24	3'	Ti.
49. Tungsten	100	12.5	W.
50. Vanadium	68	8.5	V.
51. Uranium	217	27.12	U.
52. Yttrium	32	4'	Y.
53. Zinc	32	4'	Zn.
54. Zirconium	30	3.75	Zr.

The foregoing enumeration may again be very properly subdivided and classified according to their analogies, as the greater number of them fall under the character of metals. Some, therefore, have been called *metalloids*, as only in certain respects they resemble metals, but in others are greatly different; others, again, by entering into peculiar and distinct saline combinations, have been termed *halogens*, of which common salt is the type; while a third class have been designated *gazolytes*, having never been either liquefied or solidified, but when isolated always presenting themselves in the form of permanent gases. The following, therefore, is the classification adopted by Berzelius:

I.	II.	III.
<i>Metalloids.</i>	<i>Halogens.</i>	<i>Gazolytes.</i>
Sulphur.	Chlorine.	Oxygen.
Phosphorus.	Iodine.	Hydrogen.
Carbon.	Bromine.	Nitrogen.
Boron.	Fluorine.	

For the classification of metals, see METALS.

EQUIVALE. In *conchology* (from *æquus* and *valva*), a term applied to bivalves when the valves are found exactly alike as to their length, width, depth, &c.: opposed to *inequivalve*.

EQUULEUS, } In *astronomy*, the little
EQUICULUS, or } horse; one of Ptolemy's
EQUUS MINOR. } constellations. Also,
Equuleus signifies a species of rack used as an instrument of torture.

EQUUS, the horse; a genus of solipede quadrupeds: family *Pachydermata ordinaria*, Cuv., *E. caballus*, the horse, properly so called; *E. hemionus*, the dziggetai of Central Asia; *E. asinus*, the ass, a native of Central Asia also; *E. zebra*, the zebra of the South of Africa; *E. quaccha*, the quagga of South Africa; *E. montanus*, the onagga of Africa; *E. marinus*, Lin., the sea-horse or walrus.

ERA, Lat. *æra*; a particular reckoning of time, counting from some remarkable epoch. (The terms epoch and era are

frequently confounded, both in speaking and writing).

ER'ASED. In *heraldry*, an epithet for the head or limb of a creature violently torn from the body, so as to give it a jagged appearance.

ERAS'TIANS, the followers of Erastus, a German divine.

ER'ATO, *ἔως*, love. In *ancient mythology*, the muse who presided over love poetry.

EREC'TILE, from *erigo*, to set upright; a term applied to a tissue peculiar to some parts of the animal body, as the nipples, lips, iris, &c. It is formed of veins, arteries, and nervous filaments.

ERECT'OR. In *anatomy*, a muscle, the office of which is to erect or raise the part into which it is inserted.

ERETH'ISM, from *ερεθίζω*, to irritate, preternatural sensibility of the animal system.

ER'OOT, Fr. *ergote*, a spur. In *farriery*, a stalk like a piece of soft horn, situated behind and below the pastern joint.—In *agriculture*, a black curved morbid excrescence, like the spur of a fowl, found in the spike of the rye (*Secale cereale*, Lin.), especially in hot climates, when great heat suddenly succeeds to much moisture. The disease is caused by a small insect which penetrates the grain, feeds on its amylaceous part, and leaves its poison in the parenchyma. The excrescence is extensively used in medicine, under the name of the *ergot of rye*.

ER'ICA, the heath; a genus of permanent plants, of which Don enumerates 402 distinct species, besides varieties. *Ocandria—Monogynia*. There are two British species, the Cornish and common heath, or *ling*, of which however there are many varieties. Almost all the other species are greenhouse plants.

ERID'ANUS, } a constellation of the
THE RIVER PO. } southern hemisphere. This immense constellation is fabled to derive its name from Phæton's tumbling into the river Eridanus or Po. It contains 84 stars, of which Achernar is the most brilliant. Its course winds from Orion to Cetus, and thence to Phoenix.

ERINA'CEUS, the hedgehog; a well-known genus of insectivorous mammalia. One species is common in the woods and hedges of Europe. It eats fruit as well as insects. Its skin was formerly used to dress hemp.

ERION'ETER, from *ἔριος*, wool, and *μέτρον*, measure; an instrument for measuring the fibres of wool, &c.

ER'MINE. 1. In *zoology*, a species of weasel, the *Mustela candida*, Lin., abundant in all cold countries, especially Russia, Norway, and Lapland. In summer it is brown, and is then called the *stoat*, but in winter it is snowy white, and its

fur is then highly prized, and constitutes the *ermine* of commerce.—2. In *heraldry*, the word *ermine* denotes a white field or fur powdered and interspersed with black spots. It is supposed to represent the linings and doublings of mantles and robes.

EROD'D, Lat. *erodo*, I gnaw. In *zoology*, when an edge is irregularly jagged.

EROS'E, Lat. *erosus*, jagged; applied to leaves irregularly notched.

EROTOM'ANY, } from *eros*, love, and
EROTOMANIA, } *μανια*, mania; that species of insanity which is the effect of love, or which shows itself in erotic passion.

ERPETOLOGY. See HERPETOLOGY.

ER'RHINE, *εργιναι*, from *ερ* and *ειν*, the nose; a substance which excites sneezing when snuffed up the nose. Medicines of this sort are called *sternutatories*.

ER'RO'R. In *law*, signifies an error in pleading, or in the process, and the writ which is brought for a remedy thereof is called a *writ of error*.

ERSE, the name given to the language spoken by the Scotch Highlanders.

ERUP'TION, from *erumpo*, a violent bursting forth of contained matters, as the eruption of lava from a volcano. In *medical language*, an eruption is the sudden appearance of a disease on the skin, as an eruption of measles, small-pox, &c. The term applies both to the disease as developed on the skin, and to the act of its breaking out.

ERYSI'ELAS, *ερυσιτελας*, from *ερειν*, to draw, and *τελας*, adjoining. *Ignis sacer*; St. Anthony's Fire; the Rose; a particular form of inflammation which occurs chiefly in the skin. It takes the name erysipelas from its tendency to spread to the neighbouring parts.

ERYSIFELA'TOID, from *ερυσιτελας*, erysipelas, and *ειδος*, like; resembling erysipelas.

ER'YTHEM, } from *ερυθρος*, red; the
ER'YTHE'MA, } red-rush; a nearly continuous redness of some portion of the skin, attended with disorder of the constitution, but not contagious. This disease, usually symptomatic of debility, develops itself commonly in large red patches, which may be mistaken for erysipelas.

ERYTHRI'NA, the *Coral-tree*; a genus of plants mostly arborescent. *Diadelpia—Decandria*. Name from *ερυθρος*, red, in allusion to the beautiful scarlet blossoms of some of the species. Warm climates.

ESCALA'DE, from *scala*, a ladder; an attack made by troops on a place, made by scaling the walls of the fortifications, filling up the ditches with fascines, and entering by ladders.

ESCAL'OP, } the *scollop*; a bivalve
ESCAL'LOP, } whose shell is regularly indented.

ESCAPA'DE (Fr. naturalised). An impropriety of speech or behaviour of which the person is unconscious.

ESCAPE'MENT, a mechanical contrivance for transmitting the maintaining power of a clock or watch to the regulator, whether balance or pendulum, in order to restore the loss of motion, in every vibration arising from the friction of the acting parts and the resistance of the air.

ESCAR'E, } Fr. *escarpement*. 1. In

ESCAR'PMENT, } *fortification*, the exterior slope facing fortified works; the interior slope is the *counterscarp*.—2. The steep face of a high ridge of land.

ES'CHAR, *εσχαρα*, from *εσχαρειν*, to scab over; the crust or scab occasioned by the application of a caustic to a part of the animal body.

ES'CHARA. In *malacology*, the fifth order of zoophytes in Linnaeus' system. Each polypus is contained in a calcareous or horny shell, without any central axis.

ESCHAROT'IC, from *eschar*; a caustic application, or one which has the power of forming eschars when applied directly to the parts of an animal body, as nitrate of silver.

ESCHE'AT, from Fr. *echeoir*, from Norm. *escheir*, to happen; any possession which falls to a lord of fee within his manor, either by forfeiture, death of tenant, failure of heirs, or other contingency.

ESCROT'L. In *heraldry*, that exterior ornament of an escutcheon representing usually a slip of paper or parchment, on which the motto is inscribed.

ES'crow, Fr. *écrou*, scroll. In *law*, a deed delivered to a third party, to be the deed of the party making it, upon a future condition, when a certain thing is performed.

ES'CUADE, vulgarly *squad*; a military term for the third or fourth part of a company, so divided for mounting guard.

ES'CUAGE, from Norm. *escu*, a shield; service of the shield, called also *scutage*; Lat. *scutum*, a shield; a species of feudal tenure, by which the tenant was bound to follow his lord to war.

ESCU'LIC ACID, a peculiar acid found by Bussy in the bark of the horse-chestnut, *esculus*.

ESCUTCH'EON, from Norm. *escusson*, from *escu*, a shield. A shield on which the armorial insignia of a family are painted. It is in imitation of the shields anciently used in war.

ESOPH'AGUS *εσοφαγος*, from *ειν* and *φαγω*; the canal or passage leading from the pharynx to the stomach, and through which the food passes to the stomach written often *oesophagus*.

EXOTERIC, from *εξωτερος*, interior; an epithet applied to the private instructions and doctrines of Pythagoras; opposed to *exoteric* or public.

ESPARTO, the Spanish name of a species of rush, the *Stipa tenacissima*, Lin., described by Pliny under the name of *Sparta*. It is extensively used in the manufacture of cables, and various things of a fibrous nature, especially *alpergates*, a light sort of shoes worn by the Valencian peasantry.

ESPLANADE, Fr. from Lat. *planus*. The empty space between the glacis of a citadel and the first houses of the town; or the glacis of the counterscarp or covert-way towards the campaign.

ESPLEES. In *law*, the general products which lands yield, or the profit which is to be made of a thing.

ESQUIRE, from Fr. *escuyer*, and *scutifer*, and Lat. *armiger*, armour-bearer; the armour-bearer or attendant on a knight. The dignity is next below a knight.

ESSE'NES, a sect among the Jews in the time of our Saviour.

ES'HERA, from *eshera*, an Arabic word, literally meaning *papula*; a species of cutaneous eruption, distinguished by broad, shining, smooth, red spots; differing from the nettle-rash in being elevated.

ES'SOIN. In *law* (from Norm. *eson*, excuse), an excuse for a person summoned to appear and answer in a court, on account of sickness or other reasonable cause. In England the three first days of a term are called *essoin-days*, these being allowed for the appearance of suitors.

ES'SORANT. In *heraldry*, a term for a bird standing on the ground with its wings expanded, as if it had been wet, and was drying itself.

ESTABLISHMENT OF THE PORT. The interval between the time of high water at any given port, and the time of the moon's transit immediately preceding, when the moon is in syzygy.

ESTACA'DE (Fr.), a military term for a dike constructed with piles in the sea, a river, or morass, to oppose the entry of troops.

ESTAFFETTE, } a name given on the
ESTAFETTE, } continent of Europe to
a state messenger.

ESTATE. In *law* (from *status*), the interest which a man has in lands, tenements, &c. *Real estate* consists of lands or freeholds; *personal estate* consists in chattels or moveables.

ESTIVATION. In *botany* (from *estas*, summer), the disposition of the petals within the floral gem or bud. These are convolute, imbricate, concupinate, or valvate.

ESTOP'PEL, from Fr. *estouper*, to block up. In *law*, an impediment or bar of action arising from a man's own act or

deed, against which he is forbidden to plead.

ESTO'VERS. In *law* (from Norm. *estoffer*, to store), reasonable allowance out of lands or goods for the sustenance of a felon in prison, for a woman divorced, &c. The term is more commonly taken for the allowance of wood to tenants, called from the Saxon house-bote, plough-bote, fire-bote, cart-bote, &c.

ES'TRAPPADE, Fr. *strappado*. The defence of a restive horse, when he rises before, and yerks out his hind legs furiously.

ESTREAT'. In *law*, a copy, note, or an extract of some original record, especially that of fines.

ES'TREATÉ, Norm. *estrait*. A law term for the copy of an original writing.

ESTRE'FEMENT. In *law* (from Norm. *estreper*, to waste), the stripping of land by a tenant to the prejudice of the owner.

ESTRICH, } the fine soft down which
ESTRIDGE, } lies immediately under the
feathers of the ostrich (q. v.).

ETC., an abbreviation of *et cætera*, and so on, written also &c.

ETCH'ING, from Germ. *etzen*; a mode of engraving on copper, &c., the lines being corroded in with nitric acid, instead of being cut with a graver, and which for many purposes is superior to any point engraving. The name is also applied by the artist to the lines drawn through the *etching-earnish* upon the plate by the stylus, or *etching-needle*, which are afterwards to be deepened by aquafortis.

ETE'SIAN, from *ετησιος*, fixed, applied to certain periodical winds, answering to the monsoons of the East Indies. The etesian winds mentioned by the Greek and Roman writers, are the periodical winds of the Mediterranean.

ETHER, Lat. *æther*. 1. In *chemistry*, a volatile, inflammable liquid, prepared by the distillation of alcohol with an acid: the sulphuric ether is the best known.—2. The hypothetical subtle fluid or gas which fills space, and which is infinitely more rare than atmospheric air. From this we have the epithet *ethereal*, in ethereal regions, &c.; and the same term is applied in pharmacy to any highly rectified essential oil or spirit.

ETHIORS, a term applied by the old chemists to several preparations, because they are black (like the Ethiopian's skin). Thus: *E. martial*, the black oxide of iron; *E. mineral*, the black sulphuret of mercury; *E. per se*, the black oxide of mercury, formed by agitation, with access of air. The term is obsolete.

ETH'MOID, from *εθος*, a sieve, and *ειδος*, like; sieve-like: applied to a bone of the nose, because it is perforated like a sieve or sponge.

ETHNO'GRAPHY, *εθνος*, nation, and *γραφω*,

I describe; the science of the manners and customs of nations.

ΕΤΗΜΟΛΟΓΙΑ, from *εθνος*, a nation, and *λογος*, discourse; a treatise on the rise, decline, and fall of nations.

ΕΤΙΟΛΑΤΕ, Fr. *etioler*; to blanch by concealment from the light: hence *etiolation*, the operation of whitening by concealment from light, as the inner leaves of endive and lettuces when tied up, and celery when earthed.

ΕΤΙΚΕΤΤΕ (Fr.), a ticket; originally a little piece of paper, mark, or title, affixed to a bag or bundle, expressing its contents; subsequently an account of ceremonies; at present forms of ceremony. The word took its present meaning in the old custom of delivering tickets containing the orders of ceremony to be observed on public occasions.

ΕΤΡΥΠΑ, a crane and pulley, formerly used in France as an instrument of torture.

ΕΤΡΥΣΚΑΝ, having reference to the ancient inhabitants of Tuscany prior to the Romans.

ΕΤΥΜΟΛΟΓΙΑ, from *ετυμος*, true, and *λογος*, word; that branch of philology which treats of the origin and derivation of words. The term as used in grammar implies not only derivation, but also inflection of nouns and verbs.

ΕΤΥΜΟΝ, *ετυμον*, from *ετυμος*, true; a primitive word.

ΕΥΚΑΛΥΨΤΟΣ, a genus of trees. *Icosandria—Monogynia*. Name from *ευ* and *καλυπτω*, to hide, in allusion to the great size of the species, especially the brown gum-tree. New Holland.

ΕΥΧΛΟΡΙΝΕ, from *ευ*, very, and *χλωρος*, green; the protoxide of chlorine, thus named by Sir H. Davy from its vivid green colour.

ΕΥΧΛΟΡΙΤΕ, a mineral thus named, from *ευ*, very, and *χλωρος*, green, on account of its lively green colour. It is remarkable as containing water and copper.

ΕΥΧΟΛΟΓΙΑ, *ευχολογιον*, from *ευχη*, a prayer, and *λογος*, discourse; the formula or ritual of the Greek church, in which is prescribed the order of ceremonies, sacraments, and ordinances.

ΕΥΚΛΑΣΕ, the prismatic emerald, thus named from *ευ*, easily, and *κλαω*, to break, because easily broken, or rather divided into laminae. It has been confounded with the emerald on account of its green colour. It contains silica, alumina, glucina, and the oxides of iron and tin.

ΕΥΔΙΟΜΕΤΡΑ, from *ευδιος*, purity, and *μετρον*, measure; an instrument for ascertaining the quantity of oxygen contained in any given bulk of elastic fluid, origin-

ally applied in experiments upon atmospheric air. The oxygen is absorbed by nitrous gas, or spongy platinum, and the remainder measured, or a definite quantity of hydrogen is introduced into a tube containing a known portion of atmospheric air, and the mixture exploded by passing an electric spark through it. Ure's Explosive Eudiometer is perhaps the most convenient, and it is the cheapest.

ΕΥΔΙΟΜΕΤΡΑ, the operation of ascertaining the purity of air by means of an eudiometer (q. v.).

ΕΥΓΕΝΙΑ, an extensive genus of trees. *Icosandria—Monogynia*. Thus named by Micheli, in honour of Prince Eugene of Savoy. The clove-tree, the Malabar apple-tree, the Malay plum-tree, &c., are species. All the species are stove-plants.

ΕΥΗΑΡΜΟΝΙΚ, from *ευ*, well, and *harmonic*, producing harmony well, as the *euharmonic* organ.

ΕΥΝΙΨΕ, a genus of *Annulata*. Order *Dorsibranchiata*. The *E. gigantea*, Cuv., is the largest of the known annulata, being upwards of four feet. It is found in the sea of the Antilles.

ΕΥΠΑΤΟΡΙΟΝ, an extensive genus of plants, mostly perennials. *Syngenesia—Poly. aequalis*. Name *επαταριον*, the hemp agrimony (the only British species), from Mithridatus Eupator, who brought it into use as a counterpoison; but some derive the name *quasi pepatorium*, from *ηπαρ*, the liver, because the plant was said to cure diseases of the liver. Temperate climates.

ΕΥΠΑΤΡΙΔΕ, *επατριδαι*. In ancient history, the nobles of Attica.

ΕΥΦΡΕΜΙΣΜ, *ευφημισμος*, from *ευ*, well, and *φημι*, to speak; a rhetorical figure, in which a soft or agreeable word or expression is substituted for one which is offensive to delicate ears.

ΕΥΦΩΝΙΑ, *ευφωνια*, from *ευ*, and *φωνη*, voice; an easy and smooth enunciation of words. Euphony is sometimes obtained at the expense of grammatical accuracy, by omission and substitution of letters in words. The Greek language abounds with such euphonies.

ΕΥΦΟΡΒΙΑ, the *Spurge*; an extensive genus of plants. *Dodecandria—Digynia*. Named in honour of Euphorbius, physician to King Juba. Some species are shrubby, others are herbaceous, and many are succulent. All parts of the world.

ΕΥΦΟΡΒΙΑΨΕ, a natural tribe of plants of which the genus *Euphorbia* is the type.

ΕΥΦΟΡΒΙΟΝ, a gum-resin obtained from a perennial species of spurge, the *Euphorbia officinarum*. It is imported from Ethiopia, Libya, and Mauritania.

EUPHRA'SIA, the *Eyebright*; a genus of hardy annual plants. *Didymamia*—*Angiospermia*. The name is corrupted from *ευφροσυνη*, from *ευφρων*, joyful, because it exhilarates the spirits. Europe. Its English name is derived from its supposed efficacy in ophthalmic diseases.

EURIPUS, a space, in ancient architecture, which separated the seats of the circus from the arena.

EURITH'IMY. In *architecture*, &c. See **EURITHMY**.

EURITHMY, *ευριθμία*, from *ευ*, good, and *ριθμος*, harmony; that agreeable harmony between the breadth, length, and height of the rooms of a fabric, which suddenly, where it is, taketh every beholder, by the secret power of proportion. The word is used also, in painting and sculpture to imply ease, dignity, and elegance combined, and arising from just proportions in the composition.

EUROCLIDON, from *ευρος*, wind, and *κλυδων*, a wave; that tempestuous wind which drove ashore, on Malta, the ship in which Paul was sailing to Italy, Acts xxvii.

EUSTA'CHIAN. In *anatomy*, an epithet for the tube which forms a communication between the posterior nares and the ear, discovered by Eustachius.

EUSTA'TIANS, a sect of heretics of the fourth century.

EU'STILE, from *ευ*, beautiful, and *στυλος*, column; an intercolumniation of $2\frac{1}{2}$ diameters, which is one of the most beautiful arrangements that can be given to a row of columns.

EUTER'PE, *ευ* and *τερπω*, I delight. In *mythology*, the muse which presided over wind instruments.

EUTYCH'IANs, an ancient sect, who supposed the human nature of Christ to be merged in the divine.

EVAN'TES, priests of Bacchus.

EVAPORA'TION, from *e* and *vapour*; conversion of any liquid into vapour. As an artificial operation, it is usually performed by applying heat to the substance, but it differs from distillation in its object, which chiefly consists in preserving the more fixed matters, while the volatile parts are dissipated and lost. The vessels accordingly differ also; evaporation being commonly performed in shallow vessels, and distillation in apparatus nearly closed from the external air. Evaporation, as a natural process, is of vast importance in the economy of nature. When a liquid is exposed to a free atmosphere, vapour rises continually from it, and the liquid at length disappears; and as very considerable portions of the earth's surface are covered with water, vast quantities of it are perpetually being converted into vapour, which, being

lighter than atmospheric air, ascends, and afterwards, by partial condensation forms clouds, to be subsequently precipitated in rain, &c.

EVAPOROM'ETER, from *evaporo* and *μετρον*, a hygroscope (q. v.).

EVATES. Strabo divides the British and Gaulish philosophers into three sects, *Bards*, *Evates*, and *Druids*. The bards were the poets and musicians, the evates the priests and naturalists, and the Druids were moralists as well as naturalists.

EVECTION, from *eveho*, to carry away, a term in astronomy for one of the most considerable lunar irregularities caused by the action of the sun upon the moon.

E'VEN KEEL, a ship is said to be on an even keel when she draws the same abaft as forward.

EV'OLUTE, from *evolveo*, a particular species of curve first proposed by Huygens. Thus, if

a thread be wound round the curve ABC, fixing one end at C, and carrying the other round to A; and if this thread be now unwound, keeping it tight upon the convexity of the curve, its end

A will describe another curve, ADE, passing further and further from the former curve, ABC, as the thread unwinds, till it reaches the point C, where it is supposed to be fixed. If carried further to F, the arc EF will be part of a circle. The primary curve round which the thread was wound is the *evolute*, and the secondary curve formed by unwinding the thread is termed an *involute*. The term *evolvent* is by some used for *involute*, as being the curve evolved by the opening of the evolute.

EVOLU'TION, from *evolveo*. 1. In *military tactics*, the motion made by a body of men in changing their position or form of drawing up.—2. In *geometry*, the equable evolution of the periphery of a circle, or other curve, is such a gradual approach of the circumference to rectitude, as that all its parts do meet together, and equally evolve or unbend.—3. In *algebra*, &c., the extraction of roots, being thus opposed to *involution*.—4. In *natural history*, the theory of evolution supposes that the germs of all plants and animals were really all formed within the first of their respective kinds, and are not evolved by the process of generation: opposed to *Epigenesis*.

E'VOV.Æ. In *music*, the vowels used with the ending notes of the ecclesiastical tones.

EW'RY, from Sax. *hver*, an officer of the royal household, who has charge of the table-linen, &c.

EXACERBA'TION, from *exacerbo*, to irritate; a nosological term for any increase in the intensity of the symptoms of a disease recurring at intervals; synonymous with *paroxysm*.

EXA'ERESIS, from *εξαίρειν*, to remove; that branch of surgery which comprises all operations for the removal of whatever is injurious or superfluous to the body, as tumours, foreign bodies, &c.

EXALTA'DOS. In *Spanish history*, the name of the party attached to the liberal system of politics.

EXALTA'TION. In *astrology*, the dignity which a planet acquires in certain signs of the zodiac, which dignity was supposed to give it a peculiar influence.

EXAN'GY, } from *εξ* and *αγγιον*, a ves-

EXAN'GIA, } sel; a generic name for those diseases which consist in enlargement, breach, or other morbid perforation of a large blood-vessel without external opening, as *aneurism*, *varix*, and *cyania*.

EXAN'THEMA, } *εξανθημα*, from *εξανθισιν*,

EXANTHISMA, } to effloresce; a term in nosology for an eruption or rash which is accompanied with fever, and which has its regular periods of efflorescence and decline.

EXAN'THESIS, *εξανθησις*, from *εξανθισιν*, to effloresce; properly, the breaking out of an efflorescence on the skin, but applied also to the efflorescence itself.

EX'ARCH, from *αρχος*, a chief. 1. A prefect under the ancient Eastern emperors.—2. A legate of the Greek church.

EX CATHEDRA, a Latin phrase, applied to every decision pronounced by one in the exercise of his peculiar authority; a professor in his lecture-room, a judge from the bench.

EX'CELLENCY, Lat. *excellētia*, a title of honour, formerly given to kings and emperors, but now given to governors, ambassadors, &c., who are elevated by virtue of particular offices. It is in no case hereditary or transferable, but belongs to the office.

EXCEP'TION, from *ex* and *capio*, to take; a term in law implying a denial of what is alleged, and considered as valid by the other party, either in point of law or in pleading. It is a stay or stop to an action, and is either dilatory or peremptory.

EXCEP'TA (Latin), things picked out; selections.

EXCESS, *excessus*. In *mathematics*, the difference between two unequal numbers or quantities.

EXCHA'NGE. In *commerce*, a term generally used to designate that species of mercantile transactions by which the debts of individuals residing at a distance

from their creditors are cancelled without the transmission of money. For instance, A in London owes B of Hamburg a certain sum, and C of Hamburg owes D of London a like sum; A then, instead of remitting the sum due to B, buys a bill upon Hamburg, that is, he buys an order from D of London addressed to his debtor C of Hamburg, and having indorsed it, transmits it to B of Hamburg, who receives the money from C. Thus A of London pays D of ditto, and C of Hamburg pays B of ditto, and yet no money is remitted. Bills of this nature are called *bills of exchange*, and these are foreign when drawn by the merchants of one country upon another, and inland when drawn in one part of a country upon another part. The *par of exchange* is the equivalency of a certain amount of the currency of one country in the currency of another country, supposing the currencies of both to be precisely of the weight and purity fixed by their mints. The *course of exchange*, that is, the variations above and below *par*, depends on the same causes that regulate the price of commodities generally, the quantity in the market. Thus if Hamburg be proportionally little indebted to London, then are bills upon Hamburg scarce, and the London merchant, who wants them to remit to Hamburg, pays dearly for them, and complains that the exchange is *above par*; whereas the Hamburg merchant can procure bills upon London *below par*, because they are proportionally plentiful. In London, bills of exchange are bought and sold by brokers. These meet for the purpose of transacting business in the *exchange*. The arithmetical rule by which we find how much money of one place is equivalent to a given sum of another, according to a certain course of exchange, is called simply *exchange*; but that by which we calculate the exchanges of different places with a view to ascertain the most advantageous mode of liquidating a foreign debt, is called *arbitration of exchange*. This is *simple* when the exchanges of three places are considered, and *compound* when four or more are concerned.

EXCHEQ'UER, an ancient court of record, intended principally to collect and superintend the revenues and debts of the crown, and so called from *scaccarium*, denoting a chequered cloth which covers the table. It consists of two divisions: the receipt of the exchequer, which manages the revenue, and *judicial*, which is subdivided into a court of equity and a court of common law.

EXCHEQUER-BILLS are bills or tickets issued by the Exchequer, payable out of the produce of a particular tax, or generally out of the supplies granted for the year.

Excise, the name given to the taxes or duties levied on commodities consumed at home; distinct from *customs*, which are duties levied on imports and exports.

Excitability, from *excito*. The condition of living bodies, wherein they can be made to exhibit the functions and phenomena which distinguish them from inanimate matter.

Excœcatoria, a genus of trees. *Dicæia*—*Triandria*. Two species, of which the aloes-wood (*Agallocha*) is one. The heart of this tree is the tambac or galombac, so much valued in India.

Excommunication, an ecclesiastical penalty or censure, whereby such persons as are guilty of any notorious crime or offence are separated from the communion of the church.

Excretion, from *excerno*, to separate. The expulsion, by the various outlets of the body, of such matters as would prove injurious if they remained; also, the matters excreted.

Excretory, from *excerno*, to separate. A term in physiology, applied to those ducts which convey the secreted fluids from the glands, some of which have several excretory ducts.

Excurrent, a botanical term, descriptive of the ramification of a body whose axis continues always in the centre.

Exeat, an ecclesiastical term for the permission granted by a bishop to a priest to go out of his diocese.

Execution, from *ex* and *sequor*. In law, a judicial writ grounded on the judgment of the court whence it issues, and is supposed to be granted by the court at the request of the party at whose suit it is issued, to give him satisfaction on the judgment which he hath obtained. In *fine arts*, the mode of performing a work of art, and the dexterity with which it is accomplished.

Executive. In *politics*, that branch of the government which executes the functions of the state. The word is used in distinction from *legislative* and *judicial*.

Exedra. 1. A small conversation-room, equivalent to the modern *boudoir*.—2. A building separate from a church, but within the limits of the consecrated ground.

Exemplification (of *letters patent*), a duplicate of them, made from the enrolment thereof, and sealed with the great seal.

Exequatur (Lat.), an official recognition of a person in the character of consul, or commission agent, authorising him to exercise his powers in the country.

Exerour, from *ex* and *ergon*, work. A term used by medallists to denote the little space around and without the work or figures of a medal, for an inscription, device, date, &c.

Exfoliation, from *ex*, and *folium*, a leaf. A term, in *surgery*, for the scaling of a bone; the separation of a dead piece of bone from the living portion.

Exhaustions. In *geometry*, the method of exhaustions is a way of proving the equality of two magnitudes by a *reductio ad absurdum*, showing that if one be supposed greater or less than the other, there will arise a contradiction. It was of frequent use among the old mathematicians.

Exhedra, *εξ*, out of, and *εδρα*, a chair. In *ancient architecture*, a small room in public buildings for conversation.

Exheredation, from *ex*, and *heres*, an heir. A father's excluding a child from inheriting any part of his estate.

Exhibit from *ex* and *habeo*. In law, a term used where a writing, being produced in a chancery suit, the commissioner certifies on the back thereof, that the same was shown to the witness at the time of his examination, and by him sworn to: the paper so certified is called an *exhibit*.

Exhibition, from *exhibeo*, a benefaction settled for the benefit of students in a university.

Exigent, from *exigo*. In law, a writ which lies where the defendant cannot be found, nor any effects of his within the county, by which he may be attached or distrained in a personal action. The *exigent*, or *exigi facias*, requires the defendant to be proclaimed in five counties to render himself, and if he does not, he is then outlawed.

Ex Mero Motu, a phrase used in charters and letters-patent, to signify that they are granted by the sovereign of his own free will and motion, i. e. without petition.

Exode, *εξόδος*, the concluding part of a Greek drama.

Exodium, the end or denouement of the play, in Greek tragedy.

Exodus, *Εξόδος*, from *εξ*, and *όδος*, way. The second book of the Pentateuch, so called because it describes the journey of the Israelites from Egypt.

Ex-officio (Lat.), by virtue of office, and without especial authority. *Ex officio* informations may be filed by the attorney-general in virtue of his office, without applying to any court, and without giving the defendant notice.

Exogen, an exogenous plant, which adds to its wood by successive external additions.

Exogenous, from *εξω*, without, and *γενναι*, to grow. A term applied to plants which increase by additions to the outside of their wood, in contradistinction to *endogens* (q. v.).

Exophthalmy, } A species of ophthalmia
Exophthalmia } my, in which the bulb

of the eye protrudes to such a degree, that the eyelid cannot cover it.

EXOPHYLOUS, $\epsilon\chi$, and $\phi\upsilon\lambda\lambda\omicron\varsigma$, leaf. Applied to the young leaves of exogens.

EXOR'TILES, $\epsilon\chi$, and $\pi\tau\iota\lambda\omicron\varsigma$, feather. A term for dicotyledonous plants.

EX'OSMOSE, Gr. from $\epsilon\chi$, and $\sigma\mu\omicron\varsigma$, impulsion. The passage outward from within, of gases, &c., through porous membranes.

EXOSTO'SIS, from $\epsilon\chi$, and $\sigma\tau\iota\omicron\varsigma$, a bone. A term in surgery and botany for any osseous or knotty excrescence.

EXOTERIC, from $\epsilon\chi$ and $\tau\iota\gamma\iota\varsigma$, exterior. External, opposed to *esoteric*, internal. The exoteric doctrines of the ancient philosophers were openly professed and taught; the esoteric were secret, and taught only to a few.

EXPA'N'SION, from *expansum*. The increase of bulk which a body undergoes by the recession of its particles from one another, so that it occupies a greater space, while its weight remains the same. Expansion is one of the most general effects of heat, being common to all bodies whatever, whether solid, liquid, or gaseous.

EXPA'N'SIVE EN'GINE, a steam engine in which the expansive power of steam is taken advantage of and employed, instead of being dismissed at full power into the air or condenser. The steam is cut off before the end of the stroke, which is finished by the expansion of the steam which was let into the cylinder. There are also engines in which there are two steam cylinders employed, both connected to the same beam: in one the steam works at full force, and is afterwards discharged into the other, which is of a larger size, where it acts a second time by its expansive force.

EX-PAR'TE (Lat. for *partly*). A term used in the Court of Chancery, when a commission is taken out and executed by one side or party only, upon the other parties refusing or neglecting to join in the same.

EXPECT'ANT, looking for. An *expectant* estate is one which is suspended till the determination of some particular estate. Estates of this kind are *remainders* and *reversions*.

EXPECTA'TION, from *expecto*. 1. In the doctrine of chances, the value of any prospect or prize depending upon the happening of some uncertain event.—2. In the doctrine of life annuities, the particular number of years which a life of a given age has an equal chance of enjoying, or the term which a person of a given age may justly expect to live.

EXPERIMENT'AL PHILOSOPHY, those branches of science, the deductions of which are founded on experiment or trial,

as contrasted with the moral, mathematical, and reflective branches.

EXPERIMENTUM CRUCIS (Latin), a leading or decisive experiment.

EXPLORA'TION, from *exploro*. A term in medicine for the investigation of the physical signs of a disease, as opposed to the diagnosis derived from symptoms. Exploration is used chiefly in diseases of the thorax and abdomen.

EXPO'NENT, from *expono*. In algebra, the exponent or index of a power is the number which expresses the degree of power, or which shows how often a given power may be divided by its root before it becomes unity. Thus 2 is the exponent of x^2 , and 4 of $x^4 = xxxx$.

EXPONEN'TIAL, from *exponent*. In mathematics, exponential curves are such as partake both of the nature of algebraic and transcendental ones. They consist of a finite number of indeterminate terms, but cannot be algebraically constructed. The exponential theorem is an expansion of $a^x = 1 + Ax + \frac{A^2 x^2}{1 \cdot 2} + \frac{A^3 x^3}{1 \cdot 2 \cdot 3} + \dots$

where $A = 1 + \left\{ a - 1 - \frac{1}{2} (a - 1)^2 + \frac{1}{6} (a - 1)^3 \right.$
—&c. $\left. \right\} x + \&c.$

EX POST FACTO, a Latin phrase, used in law to denote something done after another thing that was committed before, and after the time it should have been done. An *ex post facto* law is one which operates upon a subject not liable to it at the time the law was made.

EXPRES'S OIL, an oil obtained by pressing it out of the substance containing it, as olive oil from the olive, almond oil from the almond, &c.

EXPRES'SION, from *expremo*. 1. A mechanical operation by which the juices of plants and various fixed oils are obtained.—2. The indication of the state of the feelings, passions, and sensations, presented by the countenance, attitude, and gesture.—3. That manner and tone of voice in singing which gives life and reality to ideas and sentiments; the modulation of voice suited to any particular subject.

EXERT'ED, Lat. *exsertus*, protruding; applied in botany in opposition to *enclosed*.

EXTIR'PULATE, from *ex* and *stipula*. A botanical term applied to plants destitute of stipules.

EXTEN'SION, from *extend*. A term in physics for that essential property of a body by which it occupies some part of space. Figure is the result of extension.

EXTEN'SOR. In anatomy, a muscle which serves to extend any part; the name is opposed to *flexor*.

EXTENT. In law, a writ of execution

or *extendi facias*, commanding a sheriff to value the lands of a debtor. Sometimes the term is taken as the act of the sheriff or other commissioner in making the valuation upon the writ.

EXTERMINATION. In *algebra*, surds, fractions, and unknown quantities, are *exterminated*, eradicated, or extirpated by the rules for reducing equations.

EXTINCTION, the trituration of Mercury with some other substance till the globules disappear, is sometimes called the *extinction* of the mercury, but the word *killing* is more commonly used.

EXTINGUISHMENT. In *law*, extinction; consolidation of an estate with another.

EXTIPULATE, Lat. *extipulatus*, without stipulae; applied to stems of plants.

EXTRACT, from *ex* and *traho*, to draw.

1. In *literature*, a piece selected from a book, &c.—2. In *law*, a copy or draught of a writing.—3. In *chemistry*, the soluble matter obtained from vegetables by decoction, reduced by careful evaporation of the menstruum to a pasty or solid consistence. Fourcroy made many researches upon vegetable extracts, and was led to the conclusion that they all had a common basis, which he called the *extractive* principle; but Chevreul and others have since proved that this pretended principle is a heterogeneous and very variable compound. The subject, however, still requires further examination.

EXTRACTION, from *extract*. In *arithmetic* and *algebra*, the extraction of roots is the operation of finding the root of a given number or quantity; also the rule by which the operation is performed.

EXTRA'DOS, the outside of an arch of a bridge, vault, &c., in contradistinction to *intrados*.

EXTRAFOLIA'CEOUS, Lat. *extrafoliaceus*, underneath the leaf; applied to stipulae which are below the footstalk, and external with respect to the leaf.

EXTRA'VAGANTS. In *ecclesiastical history*, certain decretal epistles which were published after the Clementines, and not at first arranged and digested with the other papal constitutions.

EXTRA'VAGAN'ZA. In *music*, the Italian word for any wild and incoherent composition. The term is used also for a species of irregular dramatic compositions, generally of the burlesque kind.

EXTREME, Lat. *extremus*, last. 1. In *logic*, the *extremes* of a syllogism are the predicate and subject.—2. In *mathematics*, the *extremes* of a proportion are the first and last terms.—3. In *music*, employed in describing those intervals in which the diatonic distances are increased or diminished by a chromatic semitone. 4. *Extreme unction*, is one of the seven sacraments of the Romish Church.

EXTREMITY, Lat. *extremitas*, the utmost point; the *extremities* of the body, in *painting* and *sculpture*, are the head, hands, and feet, but in *anatomy* the term is applied to the limbs, as distinguishing them from the head and trunk.

EXU'VIE, Lat. from *exuo*, to strip off. The cast off skins of those animals which change their skin by a natural process, as the sloughs of serpents. The term has also been extended to shells, &c., and in geological language to all animal remains found in a petrified state in the earth; fossils.

Ex Vo'to (Latin), a votive gift, such as a picture dedicated to a temple.

EYE, the organ of sight, from Sax. *æ* or *ey*, water, an island. The word has many trivial applications derived from the form, uses, &c. of the eye. Thus we speak of the *eye* of a peacock's feather, the *eye* of a needle, of *hooks* and *eyes* (the eyes being the catches for the hooks), and we apply the word *eye* in a very similar sense to certain loops in block and tackle apparatus. The *eyes* of a ship are the parts which are near the hawse-holes, particularly in the lower apartments. The *eyes* of a plant are the buds from which shoots proceed. The *eyes* of a potato, are those points at which the new sprouts issue, but the *eye* of an apple, &c., is the depression opposite the stalk; and the bud or shoot inserted into a tree by way of graft, is an *eye*. The *eye* of an anchor is the hole wherein the ring of the anchor is put into the shank. The *eye* of a block *stop* is the place by which it is fastened or suspended to any particular place upon the sails; and that part of a stay which is formed into a collar to go round the mast-head, is termed the *eye* of the stay. In *architecture*, any round window made in a pediment, an attic, the reins of a vault, &c., is called an *eye*; and an aperture at the top of a dome, usually covered by a lantern, is termed the *eye* of the dome. Similarly the centre of a volute is called the *eye*.

EYE-BOLT. In *ships*, a bar or bolt of iron with an eye in one end of it, formed to be driven into the deck or sides for the purpose of hooking tackle to.

EYE-STONE, a small calcareous stone used for taking substances from between the lid and ball of the eye.

EYE-TOOTH, the two upper cuspidati, thus called because the fangs extend up to near the orbit.

EYRE, Lat. *ites*, journey. In *law*, signifies the court of justices itinerant.

F.

F, the sixth letter of the alphabet, as a numeral denotes 40, and with a dash over it, thus, *F*, it stands for 40,000. In *music*

It stands for the bass-clef, and frequently for *forte*, as *f* does for *forte forte*. F is also the nominal of the fourth note in the natural diatonic scale of C. In *medical prescription*, F, or *f* stands for *flat* or *fiant*, let it, or them, be made.

FA. In *music*, one of the syllables invented by Guido Aretine to mark the fourth note of the modern scale, which rises thus, *ut, re, mi, fa*. It is either flat or sharp, the flat marked thus \flat , the sharp thus \sharp , and the natural thus, \natural , and called *biquadro*.

FA'BA, the bean. The Falisci, a people of Hetruria, called it *Naba*, whence Latin *faba*.

FABA'CIÆ, Faba the type; an extensive natural order of plants.

FA'BIAN, an epithet signifying that line of military tactics which declines the risking of a battle in the open field, but seeks every opportunity of harassing the enemy by counter-marches, ambuscades, &c., as was practised by Q. Fabius Maximus, a Roman general, opposed to Hannibal.

FAB'LIAUX. In *French literature*, the metrical tales of the Trouvères or early poets of the north of France.

FABRA'RUM A'QUA, the pharmaceutical name for *forge-water*, a mild chalybeate formed by quenching red-hot iron in water.

FAB'ULOUS AGE, that period in the history of every nation in which supernatural events are represented as having happened: sometimes called the *heroic age*.

FAGA'DE, a French term for *front*, used to denote the whole exterior side of a building that can be seen at one view.

FACE, the visage, Lat. *facies*, whence the epithet *facial*. The edge of a cutting instrument is vulgarly called the face; and when one side of an object is flat and the others not, the smooth or flat side is called the face. "Stones are *faced* in the opposite direction of their splitting grain." A cube has six faces, and a polyhedron has many faces. Small faces are *facets*.

FACE MOULD, the name given by workmen to the pattern for making the plank or board out of which ornamental hand-railings for stairs or other works are to be cut.

FA'CET, Fr. *facette*, the face. A little face or small plane, as the facets of a brilliant or rose diamond. The facets of a column are the flat projections between the flutings. Multiplying glasses have many facets.

FA'CIAL, appertaining to the face, as the *facial artery*, otherwise called the labial or angular artery. The *facial angle* is that contained between two lines, one drawn from the most prominent part of the forehead to the alveolar edge of the upper

jaw, opposite to the incisor teeth, and the other from the external auditory foramen to the same point.

FA'CIES HIPPOCRATICA, that state of the countenance which immediately precedes death; so called from particular attention being directed to it by Hippocrates in his prognostics.

FA'CING. In *hydraulic earth-work*, a layer of common materials or soil, laid over the lining or puddle, and upon the bottom and sloping sides of a canal, reservoir, &c.—In *carpentry*, facings are the wooden coverings of the sides of windows and door-places in the insides of rooms.—In *architecture*, that part of the work seen by a spectator, but usually a better sort of work which masks the inferior one internally.

FAC SIM'ILE (Lat.), an exact copy.

FAC'TION (Lat.), anciently, an appellation given to the different troops or companies of combatants in the games of the circus. At present the term *faction* is bandied about by the three great parties of the country, the Whigs, Tories, and Radicals, and applied to one another.

FAC'TOR, Lat. from *facio*. 1. In *commerce*, an agent employed by merchants at a distance (usually in some other country), to transact business on their account. He is usually paid a per centage on the goods he sells or buys, and if he acts under what is termed a *del credere* commission, i. e. if he guarantee the price of the goods sold on account of his principal, he receives an additional per centage, to indemnify him for his additional responsibility.—2. In *arithmetic*, the numbers employed in forming a product or *factum* are called *factors*. Thus 7 and 3 are the factors of 21.

FAC'TORAGE, the allowance, per centage, or *commission*, given to factors by the merchants, &c., who employ them. See FACTOR.

FAC'TORY, a place where factors meet to transact business for their employer. The English merchants have *factories* in China, Turkey, Portugal, Hamburg, Russia, &c. The word *factory* is now also used for a building or collection of buildings appropriated to the manufacture of goods; but in this sense it is a contraction of *manufactory*.

FAC'TUM (Lat.), something made. In *arithmetic*, a product.—In *law*, a man's own act.

FAC'ULÆ, Lat. dim. plu. of *fax*, a torch; bright spot generally: used to denote certain liquid spots on the sun's disc, brighter than the rest of the body.

FAC'ULTY, Lat. *facultas*, ability. 1. In *logic*, the power of the mind, imagination, reason, and memory.—2. In *physiology*, a power or ability to perform any action, natural, vital, or animal.—3. In *schools*, one of the departments of a *university*.

In most universities there are four faculties, viz., *arts*, including languages and philosophy, *theology*, *physic*, and *civil law*.

—4. The faculty of advocates is a body of lawyers, who plead in all actions before the Court of Session in Scotland, and their elective president is called the *Dean of Faculty*. Similarly there are faculties of physicians and surgeons, of civil-engineers, &c., some of which have peculiar privileges granted by charter, others are merely professional associations.

FÆCES, Lat. pl. of *fæx*; the alvine excretions. The fossil feces of certain fishes are called *coprolites*; the excrement of dogs and wolves, *album græcum*; of mice, *album nigrum*.

FA FEN'TO. In music, a feigned F, or a feint upon that note.

FA'GOTTO, the same as *BASSOON*, which see.

FA'GUS, the *beech-tree*; a genus of four species. *Monœcia*—*Polyandria*. Name from *φαγω*, to eat, its nut being one of the first fruits used by man. Britain, North America, &c.

FAH'LERZ, gray copper-ore, called also *panabase*, from the many oxides it contains.

FAH'UNITE, a name for automolite or octahedral corundum, found at Fahlun, in Sweden.

FA'YENCE, } A fine sort of pottery glazed
FA'YENCE, } and painted, named after
Faenza, in Italy.

FAINTING. See *SYNCOPE*.

FAINTS, the impure spirit which comes over first and last in the distillation of whiskey. The first sort is called *strong*, and the latter *weak* faints. This impure spirit is strongly impregnated with a fetid essential oil.

FAIRY, Fr. *fée*, a fay, or imaginary spirit, whence *feer*, to enchant, and *feerie*, a fairy-land. The native land of the fairy mythology is Arabia, whence it was brought to Europe by the Troubadours, but the radix of the word is doubtful. Fairies were much in favour at one time, but they are now consigned to nurseries and to mines. The fairy of the English miners answers to the *cobalt* of the German mines.

FAIRY RING, } A phenomenon fre-

FAIRY CIRCLE, } quently seen in lea
fields. There are two species: one consists of a round and apparently beaten path, with grass in the middle; the other is a circular patch, of which the grass appears destroyed. Both of these were formerly ascribed to the dances of the fairies (believed at present in some parts of the country). Some have supposed them to be the effect of lightning, but they are now generally believed to be produced by an unknown species of fungus which grows in a circle from the

centre outwards, destroying the grass as it extends.

FAKE'ER, } A name common in the East
FAKOR'. } Indies for a Mohammedan mendicant or devotee. The word in Arabic means a poor man, and in Ethiopia an interpreter.

FALCA'DE, from *falz*, a sickle. In the *menage*, a horse is said to make a *falcade* when he throws himself on his haunches, two or three times, as in very quick curves.

FAL'CATE, Lat. *falcatus*, sickle-shaped, from *falz*, a sickle. The moon is said to be *falcate* when it appears horned: hence also a figure formed by two curves bending the same way and meeting in a point at the apex, the base terminating in a straight line is called a *falcate*.

FAL'CO, a *falcon*. The genus *Falco*, Lin., is subdivided into two great sections. The first comprises the noble birds of prey, the *falcons*, properly so called. To this belongs the common falcon (*F. communis*, Gm.), and the gerfalcon (*Hierofalco*, Cuv.). The second section comprises the ignoble birds of prey, or those of the genus which cannot be employed in falconry. To this belongs the eagle (*Aquila*, Bris.), the goshawk (*Astur*, Bech.), the sparrowhawk (*Nisus*, Cuv.), the kite (*Mileus*, Bech.), the honey-buzzard (*Pernis*, Cuv.), the buzzard (*Buteo*, Bech.), the harriers (*Circus*, Bech.), and the snake-eater or secretary (*Serpentarius*, Cuv.). Order *Accipitres*, family *Diurnæ*. See *FALCON*.

FAL'CON, a bird of prey, the *Falco communis*, Gm., capable of being trained to sport, and which has given name to that kind of hunting in which birds of prey are used. It inhabits the whole of the northern regions, and builds in the most inaccessible cliffs. The female is generally one third larger than the male, which on this account is by sportsmen termed a *tarsel*, or *tercelet*, the name *falcon* being reserved to the female. The name *falcon* is also used to designate a particular size of ordnance. The bore is $5\frac{1}{2}$ inches, and the weight of the shot $2\frac{1}{2}$ lbs.

FAL'CONET, a little falcon. A piece of ordnance whose bore is $4\frac{1}{4}$ inches, and shot $1\frac{1}{2}$ lbs.

FAL'CONRY, the art of taking birds by means of falcons and other birds of prey (see *FALCON*). The sport is ancient, and was of such high repute in England, that some of the nobility hold their estates on condition of providing the sovereign with hawks.

FAL'DAGE, from Wel. *fald*, a fold. A privilege, which anciently several lords reserved to themselves, of setting up fells of sheep in any fields within their manors, the better to manure them.

FALL. 1. Descending from a higher to

a lower place by the force of gravity.—
 2. Descent of water, as the *falls* of Clyde.
 —3. Diminution, as the *fall* of prices.
 —4. Extent of descent, as the river has a *fall* of two feet per mile.—5. The loose end of a tackle.—6. A Scotch superficial measure, 1 fall = 36 ells.—7. A Scotch long measure, 1 fall = 223·2 imp. inches.—8. The loss of their first estate by our first parents, Adam and Eve.

FALLING-HOME Applied to the timbers or upper parts of the sides of a ship, when they curve inwards.

FALLING-SLUICE, a certain description of flood-gate, in connection with mill-dams, rivers, canals, &c., which are self-acting, or contrived to fall down of itself in the event of a flood, whereby the water-way is enlarged.

FALLOPIAN. In *anatomy*, an epithet applied to two tubes, canals, or ducts, of a tortuous figure, arising from the womb, and joined to the fundus, one on each side. Their use in the process of conception was first pointed out by Gabriel Fallopius, an Italian anatomist of the sixteenth century. The term *fallopian* is also sometimes applied to Poupart's ligament.

FALSE, Lat. *falsus*, not true. Applicable to subjects physical and moral. In *music*, those chords which do not contain the intervals appertaining to them in their perfect state are termed *false*, and the same term is applied to those intonations of the voice which do not truly express the intended intervals, and, indeed, to all ill-adjusted combinations. A false cadence is one wherein the bass rises a tone or semitone, instead of rising a fourth, or falling a fifth. In *law*, the epithet is applied to something illegal, as *false-imprisonment*. A *false flower* is one which does not seem to produce fruit. A *false gem* is a counterfeit one, a paste. A *false roof* is the part of a house between the roof and the covering. There are also *false alarms*, *false attacks*, *false weights*, *false coin*, *false foundations*, &c. *False fire* is a species of blue signal fire.

FALSE KEEL. The timber added to the main keel of a ship, both to serve as a defence, and also, by deepening the vertical surface, to give the ship a better hold of the wind.

FALSETTO. In *music*, an Italian term for a feigned voice, an octave above its natural pitch.

FALUN, a provincial name given to some shelly strata in the neighbourhood of the Loire, and which resemble in their lithological characters what we term *crag*.

FAMILIAR SPIRITS, demons supposed to be perpetually within call, and at the service of their masters.

FAMILY. In *natural history*, a collection of a number of genera, which are nearly

allied to each other by characters derived from their organisation: the term is sometimes loosely applied. In *mathematics*, a *family of curves* is a congeries of several kinds of curves, all of which are defined by the same equation, but in a different manner, according to their different orders.

FAN, Sax. *fann*, Fr. *can*, Lat. *cannus*. 1. A well-known hand ornament used by ladies.—2. An apparatus for winnowing grain: it consists of a series of boards, arranged edgewise round an axle, which is made to revolve with the necessary velocity; called in Scotland *fanners*.

FANAL'. In *architecture*, a French name for a pharos or light-house, or, more particularly, the lantern placed in it.

FANDAN'GO, an old Spanish dance, which proceeds gradually from a slow and uniform to the most lively motion. It is seldom danced except at the theatre.

FANFARE, a French name for a short-warlike piece of music, composed for trumpets, kettle drums, &c.

FAN'NER. In *mechanics*, a contrivance of vanes or flat discs, revolving about a centre, for the purpose of creating a draught by producing a current of air. Used in windows, &c. to ventilate apartments.

FANTA'SIA. In *music*, an Italian name for an instrumental composition, supposed to be struck off in the heat of imagination, and in which the composer is allowed to give free scope to his ideas, unconfin'd by the rules of science. The *fantasia* differs from the *capriccio* in this, that when it is finished it no longer exists.

FANTOCCHI'NI It., *fantoccio*, puppet. Dramatic representations, in which puppets are substituted in the scene for human performers.

FAR'CIN, } In *farriery*, a disease of
FAR'CY, } horses, which appears to be a peculiar inflammatory affection of the absorbent vessels below the skin. It is of the nature of scabies or mange.

FAR'NA, Lat., from *far*, corn. Meal or flour of any species of corn, or starchy root, as potato, arrow-root, &c. The *farina fecundans* of botanists is the fecundating dust or pollen contained in the anthers of plants. *Farina fossilis* is a name for mineral agarie.

FAR'NOSE. In *entomology*, having the surface covered with dust resembling flour (*farina*), which the slightest touch removes. Most of the Lepidoptera are *farinosæ*.

FAR'RIERY, from *ferrarius*, of *ferrum*, iron. Originally the art of shoeing horses. In the modern acceptance of the term, it includes the whole veterinary art, as it relates to the management of horses, cows, &c., and their diseases.

F.A.S., an abbreviation of *Fraternitatis*.

Antiquariorum Socius, Fellow of the Antiquarian Society.

FASCES (Lat.), bundles of rods and axes carried before the Roman consuls, as a badge of their office.

FASCETS. In *glass-making*, the irons thrust into the mouths of bottles to convey them to the annealing tower.

FASCIA (Lat.), a band or fillet. In *architecture*, a broad fillet or band, particularly used in architraves and pedestals. In *anatomy*, a tendinous expansion of a muscle, inclosing others like a band, binding them to their places. In *astronomy*, the belts seen on the discs of the superior planets, Mars, Jupiter, and Saturn, are called *fasciæ*.

FASCICLE, } Lat. *fasciculus*, from *fascis*,
FASCICULE, } a bundle, a little bundle.

A term in *botany* for a manner of flowering, in which there are several flowers on little stalks, variously inserted and subdivided, *e. g.* sweet-william.

FASCICULAR, Lat. *fascicularis*, bundled. Applied to roots which are sessile at their base, and consist of bundles of finger-like processes, &c.

FASCICULATE, Lat. *fasciculatus*, bundled or clustered. Applied to nerves, stems of plants, leaves, and flowers.

FASCINATION, from *fascino*. A species of witchcraft or enchantment by the influence of the eye. The notion of an *evil eye*, not yet entirely forgotten among the ignorant, is a vestige of this superstition.

FASCINES, bundles, from *fascis*, a bundle. The term is used, in *fortification*, for those bundles of rods, bound at both ends and in the middle, used for raising batteries, filling ditches, strengthening ramparts, making parapets, &c.

FASHION-PIECES. In *ships*, the hindermost timbers, which terminate the breadth, and form the shape of the stern.

FAS'TI, the Roman calendar, wherein were expressed the several days of the year, with their feasts, games, and other ceremonies.

FASTIGIATE, Lat. *fastigiatus*, flat-topped. Applied to umbelliferous flowers, &c.

FASTIGIUM, the Latin name for the Greek *Zetos*, the apex, summit, or ridge of a house or pediment.

FAT, the oily concrete substance deposited in the cells of the adipose or cellular membrane of animal bodies. The fats differ in different animals, but they are all chiefly composed of stearine, margarine, and olefine, with a little colouring and odorous matter. The fat of the goat yields hircine, that of the dolphin phocaine, and butter yields butyrene. They saponify with alkalies, and generate the stearic, margarine, and oleic acids.

FA'TA MORGA'NA, the fairy Morgana. A singular optical deception which frequently occurs in the Straits of Messina,

between Sicily and the coast of Calabria, and sometimes, though rarely, on other coasts. It consists in the objects ashore being delineated on the surface of the sea in magnificent and fantastic fashions, and is the effect of atmospheric refraction.

FA'TALIST. In *ethics*, one who maintains that all things happen by invincible necessity or *fate*. This doctrine constitutes *fatalism*.

FA'THER. An *adoptive father* is he who adopts the children of another. A *natural father* is the father of illegitimate children. A *putative father* is a reputed or supposed father. *Fathers of the Church* were the early christian writers, whose works have thrown light upon the primitive history of Christianity.

FA'THERLASH'ER, a fish, the *Cottus bubilus*, Cuv. Called in Scotland the Lucky Proach. It is at once recognised by its well-armed head, and long spines.

FATH'OM, Sax. *faethem*. A measure of length, equal to six feet, employed in marine and mining operations, in measuring vertical distances.

FAUCES, plural of *faux*. 1. In *anatomy*, the gorge or opening of the pharynx.—2. In *botany*, see **FAUX**.

FAULT. In *mining*, &c., a break of strata, with displacement, which interrupt the miner's operations, and put him at *fault*, by an apparently abrupt termination of the vein or bed. Faults consist of fissures, which often traverse the strata for miles, and are generally accompanied by depression on one side of the line, and elevation on the other. They are numerous in coalfields.

FAU'NA, Lat. *fauni*. The animals peculiar to a country constitute its *fauna*, as the plants constitute its *flora*.

FAUNS, Lat. *fauni*. Rural deities among the Romans, inhabiting the woods and forests, represented with horns, sharp-pointed ears, and bodies like goats. They are also termed *sylvans*, or *sylvan deities*.

FAUSSEBRATE. In *fortification*, a small mound of earth, four fathoms wide, erected on the level round the foot of the rampart.

FAUX, plural *faucés*, a mouth. In *botany*, the opening of the tube of a monopetalous plant. In *conchology*, the first chamber of a shell, seen by looking in by the aperture.

FAUX JOUR (French), false light. Used in the *fine arts*, to signify that a picture is placed so that the light falls upon it from a different side from that which the painter has represented it in the painting.

FA'VUSE, Lat. *favosus*, honeycomb-like. 1. Applied to some cutaneous diseases.

—2. To parts of plants.
FA'VUS (Lat.), a honeycomb. The name given to a pustule larger than the anchor-flatter, and not acuminated.

F. D. abbreviation of *Fidei Defensor*, Defender of the Faith: a title conferred by the Pope on Henry VIII., for writing a book against Luther.

FEALTY, *Fr. feal*, trusty, from Lat. *fidelis*. A term, in *feudal law*, for the oath taken by the tenant, to be true to the lord of whom he held his land, and to defend him against his enemies. This obligation was called his *fidelity* or *fealty*. The tenant was called a *liege* man, the land a *liege* fee, and the superior a *liege* lord.

FEASTS,) In *church rituals*, are anniversaryes of joy and thanksgiving, on stated days, in commemoration of some great event. They are called *immoveable*, when they occur always on the same day of the year, as Christmas-day; and *moveable*, when they depend on astronomical calculations, and do not return on the same days of the year, as Easter, which fixes all the others.

FEATHER-EDGED, a term referring to any wrought substance, in which the work is considerably reduced in thickness towards the edge.

FEATHERY, plumose. Applied to plants furnished with lateral hairs.

FEBRIFUGE, Lat. *febrifugus*, from *febris*, fever, and *fugo*, to drive away; a medicine which alleviates or removes fever.

FEBRUARY, Lat. *Februarius*. In the old Roman calendar this was the last month of the year, until the decemvir ordered that it should rank as the second. It takes its name from *februa*, a festival held in behalf of the manes of the deceased, and this from *febris*, to purify by sacrifice. It means, therefore, the month of purification. In common years it has 28 days; in leap years, 29.

FECIALES, a college of priests, instituted at Rome by Numa. They were the arbitrators in all matters of war and peace, and the guardians of the public faith. Hence our epithet *fecial*.

FECIT, a Latin word inscribed by artists on their works, to indicate the designer.

FECULA, Lat. *fecula*. Any substance derived by spontaneous subsidence from a liquid. The term is now commonly applied to the pulverulent matter extracted from vegetables by grinding them in water, and allowing the fluid to settle; the *fecula* subsides. Starch is an example.

FEDERAL, from *fedus*. Relating to a league or international contract. A *federal government* is one formed by the union of several sovereign states, each surrendering a portion of its power to the central authority.

FEE, primarily, a loan of land. An estate in trust, granted by a prince or lord, to be held by the grantee on condition of personal service, or other condition, and if the grantee failed to perform the con-

ditions, the land reverted to the lord or donor, called the *land-lord* or *lord-lord*, the lord of the loan. A *fee*, then, is any land or tenement held of a superior on certain conditions. It is synonymous with *feif* and *feud*. All the land in England, except the crown lands, is of this kind. *Fees* are absolute or limited: an *absolute fee*, or *fee-simple*, is land which a man holds to himself and his heirs for ever, who are called tenants in fee-simple. Hence, in modern times, the term *fee* or *fee-simple* denotes an estate of inheritance; and in America, where lands are not generally held of a superior, a *fee* or *fee-simple* is an estate in which the owner has the whole property, without any condition annexed to the tenure. A *limited fee* is an estate limited or clogged with certain conditions: as a *qualified*, or *base fee*, which ceases with the existence of certain conditions: and a *conditional fee*, which is limited to particular heirs.

FEEDER, a carriage or catch drain: a small canal, cut, or channel, by which a stream or supply of water is conveyed for the use of a canal, &c.

FEED-PIPE of a STEAM-ENGINE, the pipe employed for conveying the water to the boiler.

FEED-PUMP, the force-pump employed in supplying the boilers of steam-engines with water.

FEELERS, a name for the horns or antennæ of insects, usually two in number, but sometimes four.

FEE TAIL, a conditional fee. See **FEE**.

FELIS, a cat. A genus of carnivorous mammalia of the digitigrade tribe, the essential character of which consists in having four teeth, the intermediate ones equal, grinders three on each side, the tongue beset with bristles backwards, and the claws retractile. At the head of the genus stands the lion (*F. leo*, Lin.), next the tiger (*F. tigris*, Buff.), the jaguar (*F. onca*, Lin.), the panther (*F. pardus*, Lin.), the leopard (*F. leopardus*, Lin.), the cougar or puma (*F. discolor*, Lin.), the lynxes (see **LYNX**), and the domestic cat (*F. catus*, Lin.). Epithet *feline*.

FELLOES or **FELLIES**. In *mechanics*, the covered pieces of wood forming the circumference of a carriage-wheel, into which the spokes are inserted.

FÉLO-DE-SE. In *law*, one who commits felony by suicide, or being of the years of discretion and in his right senses, wilfully destroys his own life.

FEL'ON. 1. In *law*, a person who commits felony.—2. In *surgery*, a whitene arising between the periosteum and the bone.

FEL'ONY. In *law*, any crime which incurs the forfeiture of lands or goods, except treason, which is a crime *sui generis*. As all crimes punishable by death are

felonies, the true import of the word is in a measure lost, or at least so mixed up with the idea of *hanging*, that both law and usage now conspire to limit the term of *felony* to capital crimes.

FEL'SPAR. In *mineralogy*, one of the three ingredients of granite: quartz, and mica, being the others. Next to quartz it forms the chief ingredient of many rocks. It is nearly opaque, harder than glass, and of a lamellar structure. Prof. Jameson divides it into five species: 1. Rhombohedral felspar or Nepheline; 2. Prismatic felspar, comprehending common felspar, ice-spar, adularia, clinkstone, amazon stone, porcelain earth, &c.; 3. Tetarto-prismatic felspar or albite; 4. Polychromatic or Labrador felspar, a beautiful mineral first discovered on the coast of Labrador, as a constituent of syenite; 5. Pyramidal felspar, comprehending scapolite, weilonite, parathine, wernerite, dipyre, and eolalite. The constituents are silica, 66, alumina, 18, potash, 12, lime, 3, and some oxide of iron, but the proportions vary in the species and varieties. The name is altered from the German, *feldspath*, from *feld*, a field, and *spath* or *spar*, a shining substance. Epithet, *felspathic*.

FELT, a fabric of hair, wool, &c., interlaced and pressed into a firm texture.

FELUC'CA, Sp. *feluca*, a little vessel with 6 oars and lateen sails, used in the Mediterranean. It is capable of going either stern or stern foremost.

FEMALE-FLOWER, a flower which is furnished with pistils and not with stamens.

FEMALE-SCREW, a screw, the spiral thread of which is cut in the cavity of the cylinder.

FEMME, **FEMME** (French), a woman. A *feme-covert* is a married woman who is under covert of her husband, and cannot sue or be sued. A *feme-sole*, an unmarried woman. A *feme-sole merchant*, a woman who carries on trade alone without her husband.

FEMUR, the thigh; also the *os femoris* or bone of the thigh. In *architecture*, the interstitial between the channels in the triglyph of the Doric order. These *femora* are sometimes called the legs of the triglyph.

FEN'DERS. 1. Timbers placed in front of a quay-wall or other work, to protect it from injury by vessels, &c.; these are also called *fender piles*.—2. Pieces of old rope, &c., made up into bundles and hung over the sides of vessels to protect them from contact with others, with the sides of docks, &c.

FEN'D OFF, to push off a boat or any heavy body, to break the shock or avoid contact.

FENESTRA (Latin), a window; the name given by anatomists to two foramina in

the ear, the one oval and the other round; the first situated between the cavity of the tympan and the vestibule, and the other leading from the tympan to the cochlea of the ear.

FENESTRATE, Lat. *fenestra*, window. In *entomology*, the naked hyaline transparent spots on the wings of butterflies.

FEOD, low Latin, *feodum*. A feudal law term for the right which the vassal had in the land, to use the same, and take the profits thereof, rendering unto the lord the proper fees.

FEOD'AL. In law, held of another. See **FEOD**.

FEOD'MENT, law Lat. *feoffamentum*. The grant of a fee or corporeal hereditament: a grant in fee-simple.

FERRÉ. In *zoology*, the third class of mammalia in the arrangement of Linnaeus, distinguished by having six sharpish fore-teeth in the upper jaw, and tusks solitary. They are nearly all beasts of prey. Epithet *ferine*.

FERRÉ NATU'RE. In law, beasts and birds that are wild, as foxes, wild ducks, &c.

FERR'LIA, a festival observed among the Romans on the 21st of February, in honour of the manes of deceased relations.

FER DE FOURCHETTE. In *heraldry*, a cross having at each end a forked iron, like that formerly used by soldiers to rest their muskets upon.

FERENTA'RIA, a sort of light armed soldiers in the Roman army.

FERIA, a holiday, as the *feriæ* of the Romish breviary. The *feriæ* of the Romans answered in some measure to the sabbaths of the Jews, but the name was also given to holidays in general.

FERIO. In *logic*, a mode in the first figure, of syllogisms consisting of a universal negative, a particular affirmative, and a particular negative.

FER'ISON. In *logic*, a mode in the third figure of syllogisms, closely allied to the *ferio* of the first figure.

FER'MENT, yeast or barm, *quasi ferri-mentum*, from *ferveo*, to be hot. This is the scum which collects on beer &c., while fermenting. It has the property of exciting fermentation in various other substances in which water is present, and seems to be the result of a chemical alteration which vegetable albumen and gluten undergo, with contact of air amidst a fermenting mass.

FERMENTATION, from *ferment*. The reaction which takes place among the proximate principles of some vegetable substances, (as sugar, starch, gluten, &c.), when under the influence of water, air, and warmth, so that their ultimate principles (carbon, oxygen, and hydrogen,) combine in new proportions, and form new compounds. Of this process there are

five species: (1.) The *saccharine* fermentation, in which starch and gum are changed into sugar; (2.) The *vinous* fermentation, in which sugar is converted into alcohol; (3.) The *mucilaginous* fermentation, in which sugar is converted into slime; (4.) The *acetous* fermentation, in which alcohol and other substances are converted into vinegar; (5.) The *putrid* fermentation, or putrefaction, which produces ammonia.

FER'RET. 1. An African animal of the weasel tribe (*see* *MUSTELA*) used to hunt rabbits, rats, &c., as it is slender and can enter their holes.—2. In *glass making*, the iron used to make the rings at the mouths of bottles.

FERRI-CAL'CITE, a species of calcareous earth combined with iron (*ferrum*).

FERRO-CHY'AZIC ACID, an acid obtained by adding to a solution of ferro-cyanide of baryta just enough of sulphuric acid to precipitate the baryta, and thus named from *ferrum* and *chyzic acid* (q. v.). It is of a yellow colour, and is decomposed by a gentle heat or strong light, when hydrocyanic acid is formed, and a white hydrocyanide of iron is precipitated, which becomes blue by exposure.

FERRO-CY'ANATE, a salt formed by the union of the ferro-cyanic acid with a base: more correctly, *ferro-cyanide*.

FERRO-CY'ANIC ACID, } The *ferruretted*
FERRO-PRUS'SIC ACID, } *chyzic acid* of
Mr. Porrett. A lemon-coloured compound of cyanogen, protoxide of iron, and water.

FERRO-CY'ANIDE, } A compound of the
FERRO-CYAN'OXIDE, } protocyanide of
FERRO-PRUS'SIATE, } iron with a cyanide of potassium, sodium, barium, &c. The double cyanide of iron and potassium is the important salt called *prussiate of potash*, or technically *ferrocyanodide of potassium*. Prussian blue is a *ferrocyanodide of iron*.

FER'RY, Ger. and Sax. *fahren*, to pass over. In *law*, a grant to have a boat to carry men and horses across a river, and to levy a reasonable toll.

FES'FO, an arbitrary name for one of the modes of the fourth figure of syllogisms.

FES'CENNINE VERSES (so called, from *Fescennia*, in Etruria, where they originated), were pieces of poetry recited by the youths at rustic festivals. They consisted principally of railery and playful abuse.

FESSE. In *heraldry*, one of the honourable ordinaries, which occupies the third part of the middle of the field. The term is Lat. *fascia*, a band. Any charge within the breadth of the fesse is borne *en fesse*; the centre of the escutcheon is the *fesse point*; anything borne in a rank across the middle of the shield is borne *in fesse* or *fesse-ways*; a parting across the middle of

the shield, from side to side, through the fesse point, is *partie per fesse*, &c.

FES'TINO. An arbitrary term in logic for a mood of syllogisms in the second figure: the first proposition is a universal negative, the second a particular affirmative, and the third a particular negative.

FESTO'ON, Fr. *feston*; a term in architecture for an ornament of carved wood, in the form of a wreath, or garland of flowers or leaves twisted together.

FESTU'CA, the stalk or shoot of an herbaceous plant; also the *Fescue-grass*: a genus of herbaceous and mostly perennial plants. *Triandria—Digynia*. There are 28 species, 15 of which are British.

FET'ICHISM, } The worship of idols
FET'ICISM, } among the negroes of Africa. *Fetich* is their name for an idol, or more generally *fetich* is the name which they give to any object of worship. Every family has a *fetich* to watch, reward, and punish the members of the household as they deserve.

FET'LOCK, *feet and lock*. A tuft of hair that grows behind the pastern joint of horses.

FETTERED. In *zoology*, applied to the feet of animals when they are stretched backwards and appear unfit for walking.

FEU, Lat. *feodum*, *fief*. In *Scotch law*, is used in contradistinction to *ward-holding*, or military tenure, to signify that the vassal makes a return in grain or money, in lieu of military service. The *feu-contract* is that which regulates the giving out of lands, the rent paid being called *feu-duty*.

FEUD. 1. Sax. *fœhw*, a quarrel between families or parties of a state: originally applied to a combination of kindred to avenge the murder of a kinsman on the offender and his race.—2. From Norm. *fei*, faith, and *had*, state; a *fief*, fee, or right to lands or hereditaments held in trust or on the terms of performing certain conditions. *See* *FEE* and *FEOD*.

FEU'DAL SYSTEM. A form of government anciently subsisting in Europe, and which forms the basis of our modern forms and customs. It was this:—When the Goths, Vandals, Franks, Huns, and Lombards overran Europe, on the declension of the Roman empire in the fifth century, they made it a principle that all conquered land should be divided among the chief officers. These again divided their shares among the officers of a second rank, who divided in like manner to the third rank, &c. These stipends of land were called *fiefs*, *feods*, or *feuds*, and the condition of tenure was that the tenants in *fief* should serve the owner of the fee-simple, at home and abroad, in all wars and military expeditions. To this they bound themselves by an oath of *fidelity*, so that a reciprocal tie linked the highest chief with

the humblest of his followers, who could not only enjoy but dispose of their territory as they pleased, the possessor being, by his occupancy, bound for military service, as was his predecessor. According to the Doomsday-book, England was divided by William the Conqueror into 60,215 military fiefs, some of which he kept to himself, and divided the rest among his Norman followers, on condition of their appearing in the field when he should raise his standard of war. See FEE.

FEE'DATORY. In *law*, one who holds in chief, but by some conditional tenure.

FEE'DUTY. In *Scots law*, the annual duty which a vassal, by the tenor of his right, becomes bound to pay to his superior: hence the tenure of *feu-holding*.

FEVER, a general name for diseases in which the temperature of the surface of the body is preternaturally high, and the pulse quick: it is sometimes continued and sometimes intermittent. There are many species, but typhus is most feared.

FIARS, pron. *fears*; the price of grain, as fixed, in the counties of Scotland, by the respective sheriffs and a jury.

FÍAT, a Latin word meaning "let it be done." In *law*, a short order or warrant signed by a judge for making out and allowing certain processes.—In *medicine* (see F).—In *bankruptcy*, a commission sued out by creditors, when a trader fails.

FÍBRIL, Lat. *fibrilla*, dim. of *fíbra*; a small fibre: applied to the little roots of plants which are given off.

FÍBRINE, a solid, white, flexible, slightly elastic, insipid, and inodorous substance, denser than water, but containing 4-5ths of its weight of it; it constitutes the principal part of animal muscle: it exists in the chyle, the blood, and may be regarded as the most abundant constituent of animal bodies. It may be obtained pure by agitating newly drawn blood with a bundle of twigs, and washing in cold water the long reddish filaments which adhere to them: the fibrine is thus washed from the colouring matter of the blood, and may be freed from any adhering grease by digestion in alcohol.

FÍCULA (Lat.), a clasp or brace; a long bone of the leg, so named on account of its connecting and giving firmness to the other parts. It is situated on the outside of the tibia, and its lower end forms the lower ankle.

FÍCTION. In *law*, a supposition that a thing is true, without inquiring whether it is or not, so that it may have the effect of truth, as far as is consistent with equity.

FÍCTOR (Lat.), a potter or modeller who fabricates images, &c., with terra cotta, clay, and similar substances.

FÍCUS, the *fig-tree*; a genus of many species. *Polygamia*—*Triæcia*. Warm climates.

FÍDD. In *navigation* (1.) a pin tapering and sharp at one end, used to splice ropes; (2.) the pin in the heel of the top-mast.

FÍD'EI COMMIS'SUM. In *Roman law*, a species of testamentary disposition, recognised by the Roman law, by which a testator charged his heir to deliver over to a specified person the whole or part of the goods which he inherited.

FÍDE JUS'SOR. In *law*, one who engages to pay the debt of another in case of failure: called in England a *guarantor*.

FÍF. See FEUDAL SYSTEM.

FÍELD. In *heraldry*, the whole surface of the shield: the ground on which the colour, bearings, metals, &c., are represented.—In *agriculture*, a portion of land inclosed by a fence. The *field of view* in a telescope or microscope, is the space within which the objects are visible when the instrument is adjusted.

FÍELD'BOOK. In *surveying*, the book in which the angles, distances, stations, &c., are set down.

FÍELD'COLOURS, small flags, carried along with the quartermaster-general, in marking out the ground for the squadrons and battalions.

FÍELD'MARSHAL, the highest military officer in England.

FÍELD'OFFICER, a military officer above the rank of a captain, as a major or colonel.

FÍELD'PIECES, small cannons, from 3 to 12 pounders, carried along with an army.

FÍELD'STAFF, a weapon, carried by the gunners, about the length of a halbert, with a spear at the end, and having on each side ears screwed on, like the cock of a matchlock, into which bombardiers screw lighted matches when they are upon command; the field-staff is then said to be armed.

FÍELD'WORKS, in *fortification*, are those thrown up by an army in besieging a fortress, or, by the besieged, to defend the place; or by an army, to strengthen a position.

FÍERI FÁ'CÍAS, a judicial writ for him who has recovered in an action of debt or damages, to the sheriff, commanding him to levy the same.

FÍFTEENTH, an ancient tribute or tax laid upon cities, boroughs, &c. through all England, and so termed because it amounted to a fifteenth part of what each city or town had been valued at; or it was a fifteenth of every man's personal estate. In *music*, an interval of two octaves; also a stop on an organ, a double octave above the diapason.

FÍFTH. In *music*, a distance comprising four diatonic intervals, i. e. three tones and a half.

FÍFTH-MON'ARCHY-MEN, a fanatical sect, who formed a principal support of Cromwell during the protectorate.

FIFTH SHARP. In *music*, an interval comprising eight semitones.

FIGS, the fruit of the fig-tree, *Ficus carica*, a native of Asia, but now naturalised in the milder countries of Europe, Turkey, Greece, Spain, Italy, &c.

FIG'URAL OR FIG'URATE NUMBERS, are such as do or may represent some geometrical figure, in relation to which they are always considered as *triangular numbers*, *pentagonal numbers*, &c.

FIG'URATE. In *music*, that counterpoint wherein there is a mixture of discords with concords is called *figurate*; and a descant is *figurate* when the discords are less concerned than the concords.

FIG'URE, Lat. *figura*, from *figo*, to set; the form of anything as expressed by the terminal lines; form or shape. In *geometry*, there are rectilinear, curvilinear, and mixed figures, just as the extremities are bounded by straight lines, curved lines, or both. A *rhetorical figure* is a combination of words deflected from their ordinary meaning, to express a passion, or an idea, with more force and beauty than by the ordinary way. In a painting, the *figures* are the animals, more particularly the human personages, represented in it. An *astrological figure* is a description of the disposition of the heavens at a certain hour, when the places of the planets and other stars are marked in a *figure* of twelve triangles or houses. The *arithmetical figures* are the nine digits and cipher. In *optics*, the *apparent figure* is the figure under which an object presents itself to our view.

FIG'URE-HEAD, the figure, statue, or bust on the projecting part of a ship's head.

FIG'URE-STONE, agalmatolite, a variety of talc-mica, of many colours. The best is brought from China, where it is extensively used for carvings, toys, &c.

FIL'ACER, Lat. *filicarius*. An officer in the Common Pleas, so called from his filing the writs on which he makes out processes.

FIL'BERT, the fruit of the hazel. See *CORYLUS*.

FILE. In *mechanics*, an instrument of forged steel, having teeth made by furrowing the surface with a chisel; used for cutting and abrading metals, ivory, wood, &c. When the teeth are a series of sharp edges, raised by the flat chisel, and appearing in parallel furrows, the tool is said to be *single-cut*; but when these teeth are crossed by a second series of similar teeth, the file is *double-cut*. When the teeth are made by a sharp-pointed tool, in the form of a triangular pyramid, the file is called a *rasp*.

FIL'ICES (Lat. pl. of *Alix*), ferns. The first of *Cryptogamia*; the first tribe of *acotyledonous plants*. They bear their

flowers and fruit on the back of the leaf or stalk, which is called *frons*.

FIL'IFORM, from *filum*, a thread, and *forma*, form; thread-like. Applied, in *botany*, (1.) To peduncles when very fine. (2.) To the tube of monopetalous flowers, when of a thread-like form. (3.) To aments.

FILL, the sea term for bracing a yard which had been laid aback, so that the wind may act on the after side of the sail.

FILL'AGREE, } from *filum*, a thread, and

FILL'AGRANE, } *granum*, grain. A term in the arts for a sort of enrichment on gold and silver, wrought delicately in the manner of little threads or grains, or both intermixed. The fillagree-work of Sumatra has been most esteemed, but it has of late been cheaply imitated with coloured and gilt paper.

FIL'LET. 1. In *architecture*, &c. a little member that appears in ornaments and mouldings, otherwise called a *listel*.—2. In *heraldry*, a bordure or orle, one-third part of the breadth of the common bordure.—3. In the *manège*, the loins of a horse are called the *fillets*.

FIL'TEEG, a dress reaching only to the knees, worn by the Highlanders of Scotland.

FILLING-IN-PIECES are short pieces of timber, affixed to hips of roofs, groins, and other frame-work.

FILM, a thin skin or pellicle. In *botany*, the thin skin which divides the seeds in pods.

FIL'OSE, Lat. *filum*. In *geology*, when a part ends in a thread-like process.

FIL'TER, Fr. *filtrer*. A strainer through which any liquor is passed, to separate the gross particles, and render it limpid. The root of the term is *felt*, this substance being formerly used for straining liquors.

FIL'TERING-BASINS, stones, &c. for filtering water, are either natural or artificial. Insoluble, porous material, of any sort, serves the purpose.

FIL'TER-PAPER, a sort of thick bibulous paper, without size, used for filtering liquids.

FIM'BRIA, a fringe. Applied, in *anatomy*, to any fringe-like body; and in *botany*, to dentated rings of the operculum of mosses. Epithet *fimbriate*, fringed.

FINAL CAUSE. In *ethics*, the end for which anything is done. It is the first object in the intention of a person who does a thing, and the last in the execution.

FINA'LE. 1. The last note of a musical composition.—2. The last piece of an opera, &c.

FINANCE', primarily, revenue arising from *fin*es. The term is now used in the plural, *finances*, for the revenue accruing to the public treasury. The word is Norman.

FINCH, a bird. The word is generally

used in composition, as goldfinch, chaffinch, &c. See FRINGILLA.

FINE. In law, a pecuniary punishment; a sum of money paid as compensation for an offence; a mulct. The term seems to be the Lat. *finis*, and the application of it to pecuniary compensation seems to have proceeded from its feudal use in the transfer of lands, in which a *final* agreement between a lord and his vassal. It was made the basis of the word finance.

FINE ARTS, Fr. *fin*, whence *finesse*. Those arts which depend chiefly on mental labour and the imagination, combined with manual dexterity: called also *polite arts*. Poetry, music, painting, and sculpture are fine arts.

FINE OF LANDS. In law, a species of conveyance or record, for the settling or securing lands and tenements, now abolished.

FINERS (of gold and silver) are those who separate those metals from their coarser ores.

FINERY. In metallurgy, the name of a furnace at which cast iron is converted into malleable iron.

FINE STUFF. In architecture, plaster used in common ceilings or walls, for the reception of paper or colour; composed of finely-sifted lime, mixed with hair and fine sand. *Coarse stuff* is a mixture of lime and hair, used in the first coat.

FINIAL. In Gothic architecture, the figure of a lily, trefoil, endive, acorn, or the like, made to terminate canopies, pinnacles, high-pointed pediments, and other parts of buildings.

FINFOOTED, } Palmipedous. having feet
FINTOED. } with membranes between the toes connecting, them with each other.

FINGER-BOARD, the board at the neck of a violin, guitar, &c., where the fingers act on the strings.

FINGERING. In music, the manner of touching an instrument, so as to give passages with articulation, accent, and expression. It is on dexterity of fingering that graceful execution depends.

FINISH. In the fine arts, the last touching up of any object, so as to complete it.

FINISHING-COAT. In architecture, the best coat of stucco, when three coats are used.

FINITE. In mathematics, an epithet for a series, line, &c., which is limited in extent, duration, &c., in distinction from infinite.

FINTO (Italian), a feint. A term in music. See FA FINTO.

FIR, FIR-TREE, a name common to all the species of the genus *Pinus*. The Scotch fir (*P. sylvestris*), Spruce fir (*P. sylvestris* and *abies*), and Larch (*P. larix*), are well known species.

FIR-IN-BOND, a name given to lintels, bond-timbers, wall-plates, and indeed all timbers built in walls.

FIRE, the evolution of light and heat which attends combustion. Fire was for a long time regarded as a constituent of bodies, which required only a concurrence of favourable circumstances for its development; hence the ancients regarded it as one of their four elements. No theory respecting fire is as yet fully established, though many have been proposed.

FIRE, GREEK; this fire was employed in the wars between the Christians and Saracens in the middle ages; naphtha was its principal ingredient.

FIRE-ARMS. Under this name is comprised all sorts of guns, fowling-pieces, blunderbusses, and pistols. All gun-barrels are to be proved in a public proof-house, under a penalty of 20*l*.

FIRE-ARROW, an iron or steel dart armed with combustible matter, used by privateers and pirates, to set fire to the sails of ships.

FIRE-BALLS. 1. In meteorology, globular masses of luminous matter, occasionally seen moving through the atmosphere. — 2. In military operations, masses of combustible matter to be thrown from mortars or howitzers upon the enemy's works, houses, &c.

FIRE-BARRELS, hollow cylinders filled with reeds and fire-brand composition; as sulphur, pitch, tallow, &c., used in fire-ships to convey the flame to the shrouds.

FIRE-BLAST. In agriculture, sometimes applied to plants suffering from the mildew fungi, or from minute insects; also used when the delicate parts of plants are too suddenly exposed to a brilliant sun, whereby they are shrivelled up.

FIRE-BOTE. In old customs, fire-wood allowed to tenants out of the landlord's grounds.

FIRE-ENGINE, the name generally given to a machine by which water is thrown upon fires in order to extinguish them.

FIRE-ESCAPE, a machine for removing persons from upper stories of houses when on fire. There are many sorts, but all partake of the nature of ladder work.

FIRE-FLAIRE, a fish. The sting ray or common trygon (*Trygon Pastinaca*, Yarr. Cuv.; *Raja Pastinaca*, Penn. Jen. Don.)

FIRE-FLIES, a name common to two species of American flies which emit a beautiful phosphorescent light. See LAMPYRIS.

FIRE-SHIP, a vessel filled with combustible materials and fitted with grappling-irons, which, with the advantage of a favourable wind, hook on to the enemy's ships and set them on fire.

FIRE-STONE, an old name for pyrites. The fire-stone of the geologists is an arse-

naceo-argillaceous deposit, of a greyish-green colour, composed of marl and grains of silicate of iron. In some places it is in the state of sand, in others it forms a stone sufficiently hard for building.

FIRE-WORKS. This name comprises squibs, rockets, serpents, &c., all of which are declared to be a common nuisance by 9 & 10 Will. III., and the makers or sellers of the same are liable to a fine of 5*l.*, and any one casting or firing a squib, &c., is subject to a penalty of 1*l.*

FIRING. In *farriery*, cautery; the application to the skin of a hot iron, called a *firing-iron*.

FIR'KIN, an old measure of capacity containing the fourth of the barrel.

FIR'LOT, a Scotch measure of capacity. The barley firlo contains 31 standard pints; the wheat firlo, 2211 cubic inches.

FIR'MAMENT, Latin *firmamentum*, from *firmus*; a term which has been used with great latitude as well by astronomers as by poets. Some old astronomers regarded the orb of the fixed stars as the firmament, but in scripture and common language it is used for the middle regions or expanse, appearing like an immense concave hemisphere. Many have considered the firmament a fluid matter, but those who first used the term must have considered it a solid. In *astrology*, the firmament is the eighth heaven.

FIRMAN', Ar. *firmāun*: an order, mandate, permit, passport, &c., in India.

FIRST COAT. In *architecture*, the laying the plaster on the laths, or the rendering on brick when only two coats are used. When three coats are used, it is called respectively *pricking up* and *roughing in*.

FIRST FRUITS. In *church government*, the *primitia*; the profits of every spiritual living for one year, given anciently to the pope and afterwards to the sovereign.

FISC, Lat. *fiscus*, a basket; the treasury of a prince, state, &c., or that to which all things due to the public do fall.

FISCAL (*see* *Fisc*). 1. Revenue.—2. An officer who has charge of the fisc.—3. In *Scotland*, a public officer appointed to prosecute in petty criminal cases.

FISH. 1. (*See* *ICHTHOLOGY*).—2. A machine to hoist and draw up the flukes of a ship's anchor.—3. A long piece of timber concave on the one side and convex on the other, used to strengthen masts, &c., when sprung or damaged.

FISHED-BEAM, a beam belying on the underside.

FISHERY, a place where fish are caught plentifully, as *salmon* among the lochs of Scotland, *herrings* among the Hebrides, *pichards* on the coast of Cornwall, *cod* on the banks of Newfoundland, and *whales* on the coasts of Greenland.

FISH GIG, an instrument used to strike fish at sea. It is similar to an *eel-spear*.

FISH-ROOM, a space between the afterhold and spirit-room of a ship.

FIS'SILITY, from *fissus*; that property of some bodies, as minerals, which renders them divisible in the direction of the grain or natural joints. Bodies of this nature are called *fissile*.

FIS'S'PARA, Lat. *findo*, I divide, and *pario*, I engender; applied to those animals which propagate by spontaneous fission, or the detachment of a portion of the body, having an inherent power of growth.

FIS'SIPED, from *fissus* and *pes*; an animal whose toes are not connected by a membrane.

FISSINOS'TRES, from *fissus* and *rostrum*; a family of passerine birds of which the beak is short, broad, slightly hooked, unemarginated, and with an extended commissure, so that the opening of the mouth is very large. The family comprises the swallows and goat-suckers.

FIS'SUS, cleft, cloven; applied to leaves and pods which are divided into segments.

FIS'TIC-NUT, the pistachio-nut, the fruit of a large tree, the *Pistacia vera*. It resembles a filbert.

FIS'TULA (Latin), a pipe. A wind instrument originally a reed (a whistle). In *surgery*, a long and sinuous ulcer that has a narrow opening, and is callous within.

FISTULA'NA, a genus of molluscs: order *Acephala testacea*; family *Inclusa*. Brought recently only from the Indian Ocean; but form a fossil throughout Europe. The tube resembles a bottle.

FISTULA'RIA, a genus of Acanthopterygious fishes, the name of which is derived in particular from the tube (*fistula*) common to the whole family of *fistulariæ*.

FISTULAR'IDÆ, a family of Acanthopterygious fishes, characterised by a long *fistula* or tube in the fore-part of the cranium.

FIS'TULIFORM, from *fistula* and *forma*. In round hollow columns.

FIVE POINTS. The principal points of controversy between the Calvinists and Arminians, brought to a decision by the Synod of Dort. They were predestination, satisfaction, regeneration, grace, and final perseverance.

FIXED AIR, the old name for carbonic acid, because found *fixed* in limestone.

FIXED ALKALIES. Potash and soda, in contradistinction to ammonia, the *volatile alkali*.

FIXED BODY, a body which bears a high heat without evaporation or volatilisation.

FIXED ENGINE. On *railways*, a stationary engine.

FIXED OILS, oils not readily volatilised; in distinction from *volatile* and *essential oils*.

FIXED SIGNS. An arbitrary denomination which some astronomers have given to the signs Taurus, Leo, Scorpio, and Aquarius, the seasons being considered most fixed when the sun is in these signs.

FIXED STARS, are those which constantly maintain the same relative position with regard to each other, in contradistinction to planet and comets, which are constantly changing their positions.

FIXITY, the property by which bodies resist the action of heat, so as not to rise in vapour.

FIXTURES. In law, a term generally applied to all articles of a personal nature affixed to land.

FLABEL'LIFORM, Lat. *flabelliformis*, fan-shaped. Applied to plants.

FLAG. 1. In botany, several aquatic plants, which have long sword-like leaves, are called flags (see ACORNs and IRIS).—

2. In naval and military affairs, a general name for colours, standards, banners, ensigns, &c. The first flag in Great Britain is the royal standard; the second is the "anchor of hope," the third is the union-flag.

FLAGEL'LANTS, a fanatical sect who arose in Italy, A.D. 1260, who maintained that flagellation was of equal virtue with baptism and the sacrament. They accordingly walked in procession with bare shoulders, and lashed themselves till the blood flowed down their bodies.

FLAGEL'LUM, Lat. dim. of *flagrum*, a whip; a small whip. A runner or twig which runs out long and slender, as that of the strawberry.

FLAG'OLET (Fr.), a wooden musical wind instrument, played with a mouth-piece, and furnished with holes and keys for fingering.

FLAG-OFFICERS, those who command the several squadrons of a fleet, as admirals, vice-admirals, and rear-admirals.

FLAG-SHIP, a ship commanded by a flag-officer, who has a right to carry a flag, in contradistinction to the secondary ships under his command.

FLAKE-WHITE, properly a subnitrate of bismuth (pearl-white), but the name is frequently given to pure white lead.

FLA'KY, Sw. *flake*, a layer. Having scales or laminae.

FLAME, Fr. and Germ. *flamme*, Lat. *flamma*, the combustion of a mixture of an inflammable gas, as hydrogen with air, naturally ascending in a stream from burning bodies, being specifically lighter than common air.

FLA'MEN (Lat.), a priest among the Romans. There were three so called: the *Flamen Dialis*, consecrated to Jupiter; the *Flamen Martialis*, sacred to Mars, and the *Flamen Quirinalis*, who superintended the rites of Quirinus or Romulus.

FLAMINGO corrup. from Sp. and Port.

flamenco, from *flamma*, flame. *Phanicopterus ruber*, Lin., found in all parts of the eastern continent below 40°; and an American species, the *Phanicopterus ruber* of Temminck. They take their name from the purple-red of the back, and rose-coloured wings. They feed on shell-fish.

FLANCHÉ, } A projecting piece, forming
FLANGE. } part of an iron girder or framework. The flanges of castings are commonly placed flat against one another, and holes are drilled through each, for the passage of bolts to secure them together.

FLANK. 1. In military tactics, a term synonymous with the *side*, as distinguished from the *front* or *rear* of an army.—2. In fortification, that part of a bastion which reaches from the curtain to the face: it is a line drawn from the extremity of the face towards the inside of the works.—

3. In architecture, the last side of a pavilion, by which it is joined to the main building. The *flank-walls* of a bridge, &c., are the wing or return walls.

FLASHE, a description of sluice upon navigable rivers, erected for the purpose of raising the water over shoals, &c., while vessels are passing.

FLASHINGS. In architecture, pieces of lead or other metal, let into the joints of a wall, so as to lap over the gutters or other conduit pieces, and prevent the splashing of rain injuring the interior works.

FLAT. In music, a character *b*, of which the effect is to lower the note to which it is affixed a semitone minor.—In architecture, that part in the covering of a house, of lead or other metal, which is laid horizontal; also synonymous with *storey*, in speaking of the number of floors or storeys of a house.

FLAT'TEN A SAIL, to extend it fore and aft, whereby its effect is lateral only.

FLAT'TING. In gilding, the giving of the work a light touch in places not furnished with size, in which there is sometimes a very little vermilion.—2. In house-painting, the mode of finishing without leaving a gloss on the surface, by using a greater proportion of turpentine and unboiled oil.

FLA'VOUS, Lat. *flavus*, yellow. Of a yellow colour.

FLAX, Sax. *flæx*. The inner bark or bast of the *Linum usitatissimum*, which is spun into yarn for weaving linen webs; also the plant which produces it. The New Zealand flax (from the *Phormium tenax*), is said to exceed that cultivated in Europe in strength and whiteness of fibre.

FLÆM (Wel. *flæm*). In farriery, an in-

strument used for bleeding horses and

cows. The cutting edge *a* is placed upon a vein, and driven in with a small wooden mallet.

FLEECE, ORDER OF THE GOLDEN, one of the most distinguished among European orders of knighthood.

FLECHE. In *fortification*, a simple redan, usually constructed at the foot of a glacis.

FLEET, Sax. *flota, fliet*. A squadron of ships, more particularly ships of war. Also, a sea term used for shortening or taking up anything, after it has been stretched out.

FLE'ISH SCHOOL. In *painting*, the works of this school are distinguished by the most perfect knowledge of chiaro-scuro, high finishing, an admirable union of colours, and by a flowing, luxurious penoil.

FLESH-BRUSH, a brush for rubbing the surface of the body, to excite the cutaneous circulation.

FLEUR-DE-LIS, } In *heraldry*, a bear-

FLEUR-DE-LEUCE. } ing representing the lily, called the queen of flowers. The arms of France are the fleur-de-lis or, in a field of azure.

FLEXIB'LITY, Lat. *flecto*, I bend. That property of bodies, in virtue of which, when a sufficient force is applied to them, they change their form and are bent: opposed to *stiffness* and to *brittleness*.

FLEX'OR. In *anatomy*, a name common to those muscles, the office of which is to bend the joints: the *flexors* are the antagonists of the *extensors*.

FLEX'UOUS, Lat. *flezuosus*, full of turnings: applied to stems of plants, &c., which form angles alternately from right to left, or are *zigzag*.

FLEX'URA. In *mammology*, the joint between the antibrachium and carpus, usually called the fore-knee in the horse, corresponding to the wrist in man.

FLEX'URE, Lat. *flezura*, a bending. A term used to signify that a curve is both concave and convex with respect to a given right line. The point of bending is called the point of *flexure*.

FLINT, Sax. *flint*. Siliceous earth nearly pure. (Silic. 98, lime 0.5, alumina 0.25, oxide of iron 0.25, water 1). It occurs plentifully in the upper chalk, dispersed in parallel beds, but as yet no plausible theory has been advanced for its presence. — *Flint glass* or crystal is a species of glass, in the manufacture of which flint was formerly employed.

FLIN'TY SLATE. This differs from the common slate in containing more siliceous earth. When it ceases to have the slaty fracture it becomes hornstone, or the petrosilex of the French mineralogists.

FLOAT. 1. A raft. — 2. The water-gauge of a steam-boiler. This is usually a piece of whinstone partially suspended and partly floating upon the surface of

the water. Its use is to regulate the supply of water in the boiler, by operating upon the valve at the top of the feed-pipe.

FLOAT-BOARDS, the boards fixed to undershoot water wheels, to receive the impulse of the falling stream, and to paddle-wheels, being the means whereby they act.

FLOATED LATH AND PLAISTER. In *architecture*, plastering of three coats, of which the first is termed pricking up (*see* FIRST COAT); the second floating or floated work, and the last *fine stuff*.

FLOAT'ING. Among *plasterers*, the spreading of stucco or plaster on the surface of walls, called also *rendering* and *setting*, by means of a straight edge, called a float.

FLOAT'ING BRIDGE. The *military* floating bridge is a sort of double bridge, the upper one projecting beyond the lower one, and capable of being moved forward by pulleys; used for transferring troops across moats. The *civil* floating bridge is a description of steam vessel, employed for ferrying passengers and goods across rivers, &c. It is a flat-bottomed vessel, with drawbridges at each end, by which carriages may be run on board by the horses. The leaves are slightly raised during the passage, and the bridge is guided by chains laid across the bottom of the river, and secured at each end by counterbalancing weights.

FLOAT'ING CLOUGH, a moveable machine for scouring out channels or inlets. It is constructed of timber, and upon being floated to the required spot is sunk, and the flaps connected with it, and which have scrapers attached, are then let down upon the banks. The force of the tide pushes it along, when it clears away all obstructions in its course. The re-action of the tide brings it back again.

FLOAT'ING COLLIM'ATOR, } An instru-
FLOAT'ING INTERSECTOR. } ment intended to supply the place of a level or plumb-line, in making astronomical observations aboard of ships. It consists of a rectangular box containing mercury, on which a mass of cast-iron is floated, and furnished with a small telescope having cross-wires.

FLOAT'ING LIGHT, a hollow vessel of tinned-iron plate, made in the form of a boat, with a reflector and lantern, which is lighted, and the apparatus lowered to the rescue of any one happening to fall overboard during the night.

FLOAT'ING SCUDS. In *architecture*, strips of plaster arranged and nicely adjusted for guiding the floating rule. *See* FLOATED WORK.

FLOAT'ING MEADOWS, meadow lands, the surface of which is flat, adjoining a river or other source of water, with which they can be flooded at pleasure.

FLOATSTONE, a name common to the

white and grey porous varieties of rhombohedral quartz, which, in consequence of their porosity, float on the surface of water.

FLOCCI. In *botany*, the woolly filaments found mixed with the sporules of many *Gastromyci*. Applied also to the external filaments of *Byssaceæ*.

FLOCCILATION, from *floccus*; picking of the bed-clothes. A symptom of great danger in acute diseases.

FLOCCUS. In *mammology*, the tuft of long faccid hairs which terminate the tail.

FLOETZ, Germ. *flöts*. A name given by Werner to certain rocks, because they are flat, horizontal, and parallel to each other. The floetz formations lie immediately over the transition rocks, and contain fossils. The term is not now technical.

FLOOD-GATE or SLUICE. A gate or sluice that may be opened or shut for the admission or exclusion of water: used in rivers, canals, docks, and reservoirs.

FLOOD-MARK. The mark which the sea makes on the shore at high tide: the high-water mark.

FLOOKING. In *mining*, a shifting of a lode by a cross vein.

FLOOR, folded or folding. In *architecture*, one in which the floor-boards are so laid that their joints do not appear continuous throughout the length of the floor, but in bays or folds of three, four, or more boards each. *Straight-joint floor*, on the contrary, has its seams continuous throughout.

FLOOR-CLOTH. A useful substitute for carpet, consisting of canvas saturated with seven coats of oil, and painted with a great variety of patterns.

FLOOR-TIMBERS (of a ship), are those timbers placed immediately across the keel, and upon which the bottom of the ship is framed.

FLORA, Lat. from *flos*, a flower. The plants peculiar to a country constitute its *flora*, as the animals do its *fauna*.

FLORALIA, a festival observed by the Romans, in honour of *Flora*, the goddess of flowers.

FLORID, Lat. *floridus*, from *floreo*, to flower, embellished with flowers. The *florid Gothic* is an elaborate kind of Gothic architecture, filled with points, ramifications, mullions, &c. The term *florid* is also applied to a composition, either literary or musical, when too much embellished with figures and flowers of the literary and musical sorts.

FLOREN, a coin originally made in Florence. The name is given to different coins of gold or silver, and of different values in different countries. It is also used as a money of account.

FLOSCULAR, } Lat. *flosculus*, having
FLOSCULOUS, } little florets. A *floscu-*
FLOSCULOUS, } lous flower is one com-

posed of florets, with funnel-shaped petals, as in burdock, thistle, and artichoke. Linnaeus applies the word *tubulose*.

FLOSCULE, Lat. *flosculus*, a floret. One of the flowers of a compound or floscular flower.

FLOS FERRI (Lat.), flower of iron. A mineral substance, coralloidal arragonite, which occurs in little cylinders, sometimes branched like coral. It has a silky lustre, fibrous structure, and is often very white. It takes its name from being often found in cavities of veins of sparry iron ore, but contains no iron.

FLOSS, Lat. *flos*, a flower. 1. A downy substance, found in the husks of certain plants.—2. A fluid glass floating upon the iron of a puddling furnace, resulting from the vitrification of the oxides and earths which are present.

FLOSS SILK, the unravelled silk broken off in the filature of the cocoons. It is carded like cotton or wool, and spun into a soft coarse yarn or thread, for making bands, shawls, socks, &c.

FLOTSAM. In *law*, a term for goods lost by shipwreck, but which are floating in the sea. See *JETSAM* and *LAGAN*.

FLOURISH. In *music*, a prelude played with bold and irregular notes, without attention to rule.

FLOWER, Lat. *flos*, *floris*. The flower comprehends all the organs of a plant which are preparatory and necessary to the impregnation and perfection of the fruit and seed. These organs are the calyx, corolla, nectary, stamen, and pistil; but the essential parts are the anther and stigma, which are sufficient to form a flower, either together, in hermaphrodite flowers, or separate, in male and female flowers.

FLOWERS, an appellation given by the old chemists to substances obtained in a minutely crystalline form by sublimation. Thus there were flowers of benzoïn, of sulphur, &c.

F. L. S., abbreviation of *Fraternitatis Linnæana Socius*, Fellow of the Linnæan Society.

FLUCAN, a name chiefly used by the Cornish miners for a fault or dam.

FLUENT. In *fluxions*, the flowing quantity, or that which is continually increasing or decreasing.

FLUID, Lat. *fluidus*, from *fluo*, to flow. A term applied, 1. *adjectively*, to express that state of matter in which its particles are freely moveable in all directions with respect to each other, as opposed to the *solid* state, in which the particles more firmly cohere, and require more or less force to separate them.—2. *substantively*, to designate a body in the *fluid* state. Fluids are divided into *liquids*, the particles of which, though moveable on each

other and easily separated, are held together by a feeble cohesion; and *elastic fluids, gases, or æriform fluids*, between the particles of which there is a certain degree of repulsion, and which, when unconfined, tend to diffuse themselves through space. The property of fluid bodies, by which they yield to any force impressed, is called *fluidity*.

FLUKE, from Germ. *pfug*, a plough. 1. The broad part of an anchor, which takes hold of the ground.—2. A fish, the plaice.

FLUOBORIC ACID, a gaseous acid obtained by heating in a retort 12 sulphuric acid with a mixture of 1 fused boracic acid and 2 fluor spar.

FLUORIC ACID. The substance described by Gay-Lussac, Margraff, and others, under this name, is now considered a compound of hydrogen and fluorine, and hence is called *hydrofluoric acid* (q. v.).

FLUORIDE, a compound of fluorine and a metal, as *fluor spar*, which is a fluoride of calcium.

FLUORINE, an elementary body, which has not hitherto been obtained in sufficient quantity, in an insulated state, for examination. It forms the basis of hydrofluoric acid, and exists in nature as a component of a few minerals, of which *fluor spar* is the most common.

FLUOR SPAR, a native fluoride of calcium, thus named from *fluo*, to flow, because used as a flux for metals. The coloured specimens are popularly known under the name of *Derbyshire spar*. It crystallises in the cubic system, with regular octahedral and tetrahedral cleavages. Sp. gr. 3.198.

FLUOSILICIC ACID, a binary compound of silicon and fluorine. It is a colourless gas; 100 cubic inches weigh 112 grs.

FLUSH. 1. A term in a game at cards, where they are all of a suit.—2. A joiner's term to denote the continuity of two or more parts to the same surface.

FLUSH AND BEAD. See **BEAD AND FLUSH**.

FLUSH DECK, a deck without a half-deck or fore-castle.

FLUSTRA, the sea-mat. A genus of zoophytes resembling the millepores, the cells being inhabited by polypl. The flustre are observable in patches of white calcareous matter on every sea-weed and shell, appearing like delicate lace, and when taken fresh from the water present the appearance of fine net-work.

FLUTE. 1. A musical wind instrument, consisting of a tube about eighteen inches in length, furnished with lateral holes at the side, for the purpose of fingering. This is the English flute; but the German flute is formed of several joints or pieces screwed into each other, with holes, and several keys, to modify the tones to the various sharps and flats. In this sense the term is from *fio*, *fatus*, to blow.—2.

In *architecture*, see **FLUTINGS**.—3. In *navigation*, a small vessel or boat with flat ribs, to carry provisions for fleets or squadrons. In this sense the term is a different orthography of *float* or *floa*, Germ. *flote*.

FLUTED, grooved, channelled, furrowed.

FLUTINGS, } In *architecture*, longitudinal cavities or channels cut in the shaft of a column or pilaster. Fluting is employed chiefly in the Ionic order, sometimes in the Composite and Corinthian, rarely in the Doric and Tuscan. Fluted columns are sometimes termed *reeded*.

FLUX, Lat. *fluxus*, a flowing. Any flow or issue of matter. In *nosology*, a general name for diarrhoea, dysentery, and cholera. In *chemistry*, a name for any admixture to promote the fusion of earths or metallic ores by heat. *White flux* is the residuum of the deflagration of two parts nitre, and one part cream of tartar: it is a carbonate of potash. *Black flux* is obtained by deflagrating equal parts of nitre and tartar.

FLUX'ION, Lat. *fluxio*, a flowing. A term used by the old chemists synonymously with *fusion*. In *mathematics*, the term *fluxion* denotes the *fluents*, or flowing quantities, increase or decrease; and *fluxions* denotes that branch of analysis wherein magnitudes of every kind are supposed to be generated by motion; a line by the motion of a point, a surface by the motion of a line, and a solid by the motion of a surface. The increments are also sometimes called *fluxions*, but more commonly *fluents*.

FLY OR FLY-WHEEL. In *mechanics*, a heavy wheel employed for equalising the motion and increasing the effect of machines, revolving upon an axle, after the same principle as a counterbalancing weight. The general object is to conduct the motion over the dead points, or those parts where the crank has least effect, as in stationary steam engines.—The *fly* of the *mariner's compass* is that part on which the 32 points are described.

FLY-BOAT. 1. A large flat-bottomed Dutch-built vessel: burden from 400 to 600 tons: named also *flight*.—2. A long narrow boat used on canals, called otherwise a *swift-boat*.

FLY'ERS. In *architecture*, stairs that do not wind, but go straight forward, the steps being all parallel.

FLYING-BUTTRESS. In *Gothic architecture*, a buttress built as an arch, springing from a solid mass of masonry, and abutting against the springing of another arch. Its office is to act as a counterpoise against the vaulting of the nave.

FLYING-FISH, the *Exocoetus volitans*, Lin., which is able by the vibration of its large pectoral fins to rise above the water when pursued, and to maintain itself in the air for a few seconds.

FLYING-PINION, that part of a clock having a fly or fan, by which it beats the air, and thereby checks the velocity of the descent of the weight in the striking department.

FLY-ORCHIS, a plant, the *orchis mucifera*, supposed to bear some resemblance to a fly.

FOCILE. In *anatomy*, the ulna and the radius have been denominated by the barbarous appellations of *foeile majus* and *minus*; the tibia and fibula have also been so called.

FOCUS, Lat. *focus*, a fireplace or hearth. A point in which light, and consequently heat, is concentrated. In *optics*, the focus is a point where several rays are collected together in consequence of reflection or refraction. The focus of a glass is the point of convergence where the rays cross the axis after their refraction by the glass. The focus of a parabola is a point in the axis within the figure, and distant from the vertex by a fourth part of the parameter or latus rectum. The foci of an ellipse are two points, one towards each end of the longer axis, whence two right lines being drawn to any point in the circumference, shall be together equal to that of the longer axis. The focus of a hyperbola is a point in the principal axis (within the opposite hyperbola), from which, if any two lines are drawn, meeting in the curve of either of the opposite hyperbolas, the difference of these lines will be equal to the shortest transverse diameter.

FODDER or **FOTHER**. 1. The name of a weight by which lead and some other metals are sold: it varies from 20 to 23 cwts. in different parts of the kingdom.—2. A name for dry food for cattle, horses, and sheep, as hay, straw, &c.; newly cut grass, &c., go by the name of *green fodder*; straw and dry hay go by the name of *dry fodder*.

FOG, Ital. *sfogo*, an exhalation. A dense watery vapour, exhaled from the earth, rivers, lakes, &c., floating in the atmosphere, usually close on the surface of the earth. It appears to differ from *mist*, which is the condensed moisture of the atmosphere forming rain in very small drops.

FOG-BANK, an appearance, in hazy weather, which frequently resembles land at a distance, but which vanishes as you approach it.

FOIL. 1. Fr. *feuille*, a leaf of metal, as *tin foil*. Among jewellers, a thin leaf of metal, as gold, silver, tin, &c., placed under bits of glass cut like gems, to give them the appearance of particular stones. The same artifice is employed to improve the appearance of inferior gems.—2. Wel. *fuyil*, an elastic piece of steel, or a small sword, without a point, or with a button or piece of cork on the point, used in fencing for exercise.

FOLD. In *agriculture*, a temporary enclosure for keeping cattle or other animals together.—In *painting*, the lapping of one piece of drapery over another.

FO'LIAGE. In *architecture*, a group of leaves of plants, so arranged as to form an appropriate ornament, as in friezes, panels, and the Corinthian order.

FO'LIATE, the name of a curve, whose equation is $x^2 + y^2 = axy$, having some resemblance to a leaf.

FO'LIO. 1. In *account books*, a page, or rather both the right and left-hand pages, these being expressed by the same figure.

—2. A *folio* book is one in which the leaves are formed by once doubling a sheet of paper, the sheet making thereby two leaves.

FO'LIOLÉ, Lat. *foliolium*, from *folium*, a leaf. A leaflet or little leaf.

FOLK'LAND, copyhold land, or land held by the commonalty at the will of the lord.

FOL'KMOTE, Sax. *folcgemote*, conventus populi. A term used before the Norman conquest, to denote the annual assembly of the people, answering in some measure to the modern parliament.

FOLKSTONE MARL, a stiff marl, better known by the provincial term *Galt*.

FOL'ICLE, Lat. *folliculus*, a little bag. In *anatomy*, a simple gland.—In *botany*, a one-valved pericarp or seed-vessel.

FO'MALHAUT. In *astronomy*, a star of the first magnitude, in the constellation Aquarius.

FO'MES (Lat.), fuel. A term in medical language for any porous substance capable of absorbing and retaining contagious effluvia. Wool and woollen cloth are among the most active *fomites*.

FONT or **FOUNT**, a complete assortment of printing types of one size, including a due proportion of all the letters of the alphabet, large and small, points, accents, and whatever else is necessary for printing with letter.

FONTANEL', Fr. *fontanelle*. An interstice in the infant cranium, between the frontal and parietal bones, is commonly called the *mould*, and scientifically the *anterior fontanel*; and a lesser vacancy, between the occipital and parietal bones, is termed the *posterior fontanel*. These interstices are subsequently filled up with osseous deposit.

FOOLS, FEAST OF. A festival anciently celebrated in every church and monastery in France, on New-Year's-Day, in which every absurdity and indecency was practised. It was equivalent to the Saturnalia of the Romans.

FOOT, the lower extremity of the leg. Animals are distinguished with respect to the number of their feet, as *bipeds*, *quadrupeds*, and *multipeds*.—*Foot* is also the name of a measure of length consisting of 12 inches, supposed to have been taken

the length of a man's foot. A *square* is the same measure both in length and breadth; a *cubic foot* is the same measure in all the three dimensions, length, breadth, and thickness. In *poetry*, a *foot* is a certain number of syllables constituting part of a verse, as an iambus, dactyl or spondee. In *military language*, soldiers who serve on foot are called *foot* or infantry, as distinguished from cavalry.

FOOTING-BEAM, a name given to the tie-beam of a roof in some parts of the country.

FOOTING (of a wall); a projecting course of stone or brick, at the base of a wall or building, intended to give greater stability and support.

FOOTING DORMANT. In *carpentry*, a name for the tie-beam of a roof.

FOOT-FACE, a flat part in a stair or hand-railing, between the first step and the landing place.

FOOTSTALK. In *botany*, a partial stem supporting a leaf: a petiole.

FOOTWALING (of a ship), the ceiling or planking lining the inside of the ship below.

FORA'MEN (Lat.), a little opening, from *foro*, to pierce. A name in anatomy for various perforations in several parts of the body. In *botany*, the opening that exists in the integuments of every ovulum.

FORCE. In *mechanics*, is that which causes or tends to cause a change in the state of a body as to motion or rest. This is sometimes termed *active force*, in contradistinction to what merely *resists* or *retards* the motion of another, but is itself apparently *inactive*. The degree of resistance to any motion is measured by the *active force* required to overcome that resistance, and hence writers on mechanics make use of the terms *resisting forces* and *retarding forces*.

FORCE-PUMP or **FORCING-PUMP**, a pump differing from the *lifting* or *sucking pump* in having its piston solid or without a valve, and also in having a side-pipe through which the water is forced, instead of rising in a perpendicular direction, as in the others. See **PUMP**.

FORCER. 1. The solid piston of a force-pump. — 2. A force-pump.

FORCIBLE ENTRY and **DETAINER**. In *law*, an offence committed by violently taking possession of lands and tenements with force, and without legal authority.

FORCING. In *horticulture*, a method of producing fruits, &c., before their mature time or season.

FORE, a nautical term for near the stem, as "fore and aft," i.e. from stem to stern.

FORECASTLE, a short deck in the fore-part of a ship above the upper deck, usually terminated in ships of war with a breast-work.

FORE-CLOSE. In *law*, to exclude or bar the equity of redemption on mortgages, and thereby to cut off the power of the mortgager to redeem the mortgaged property.

FO'RE-FOOT, a piece of timber at the fore extremity of the keel.

FOREHAND. In the *manège*, the part of a horse which is before the rider.

FOREMAST, the mast of a ship or other vessel which is placed in the fore-castle, and carries the foresail and foretop-sail yards.

FORE'SHORE, that sloping part of a shore comprehended between the high and low-water marks.

FORESHORT'ENING. In *painting*, the art of conveying to the mind the impression of the entire length of an object when it is represented as viewed in an oblique or receding position, in which case the actual vision of it is in line on the receding side.

FORE-STAFF, a rude instrument formerly used at sea for taking altitudes.

FORESTAL'LING, the buying or contracting for any cattle, provision, or merchandise on the way to market, or dissuading persons from buying their goods there, or persuading them to raise the price, or spreading any false rumour with intent to enhance the value of an article.

FORESTAY. In a ship's rigging, a large strong rope reaching from the foremast head towards the bowsprit end, to support the mast.

FORETACKLE (of a ship). The tackle on the foremast.

FORETOP (of a ship). The platform erected at the head of the foremast.

FORETOP-MAST, the mast erected at the head of the foremast, and at the head of which stands the *foretop-gallant-mast*.

FORFEITURE, Lat. *forisfactura*, expulsion. The punishment of an illegal act, according to which the owner of property is deprived of all interest therein, and the property delivered to the injured party by way of recompense.

FORGE (Eng. and Fr.). The name either of the furnace where wrought iron is hammered and fashioned with the aid of heat, or the great work-shop where iron is made malleable. The former is a *smith's forge*, the latter a *shingling mill*.

FORGET-ME-NOT, a small herbaceous plant, the *Myosotis palustris*, which bears

a beautiful blue flower, the emblem of fidelity in matters of love. It holds a conspicuous place in bouquets.

FORLORN-HOPE. In *military affairs*, a detachment of men (volunteers) appointed to lead in an assault, or to perform any service attended with imminent peril, thus named from the small hope they have of surviving.

FORM. 1. In *physiology*, the essential and distinguishing modification of the matter of which a body is composed. This is *essential form*.—2. In *general physics*, the exterior appearance or surface of a body, or the disposition of its parts as to length, breadth, and thickness.—3. In *printing*, pages or columns of type properly arranged, enclosed and locked in an iron frame called a *chase*, ready to be put to press; there are two forms for each sheet.—4. In *ethics*, the manner of being or doing a thing according to certain rules, thus we have a *form* of government.—5. In *law*, the rules requisite to be observed in legal proceedings are called forms.

FOR'MA PAUPERIS. In *law*, when a person has just cause of a suit, and swears that he is not worth five pounds sterling, he is allowed to plead in *formâ pauperis*, i.e., without paying any fee, counsel and attorneys being assigned to him.

FORMATIONS. In *geology*, regular alterations of strata over each other. The term is designed to convey the idea, that the strata, composing the earth's crust, have been formed at different and distant periods; hence those strata, supposed to have been formed during one geological period, constitute a *formation*. Thus the strata of shale, sand-stone, and iron-stone, which accompany coal-beds, are called the *coal formation*.

FORMEDON. In *law*, a writ of right which lies for him who has right to lands or tenements by virtue of an entail.

FORMICA, the *ant*. An extensive genus of hymenopterous insects of the heterogynous family.

FORMIC ACID, a peculiar acid, thus named from its having been first found in the red ant (*formica rufa*). It is now formed artificially by distilling a mixture of 10 tartaric acid, 14 black oxide of manganese, and 15 concentrate sulphuric acid, with 20 or 30 of water: the colourless liquid which comes over is formic acid. It consists of 2 vols. carb. oxide, and 1 vol. vapour of water.

FORMULA, Lat. dim. of *forma*. A prescribed form.—1. In *theology*, a profession of faith.—2. In *pharmacy*, a prescription for the preparation of medicines.—3. In *algebra*, a theorem or general rule.—4. *Chemical formulæ* are symbols representing the different substances, simple and compound.

FORNIX (Latin), an arch or vault. The *fornix of the brain* is the part beneath the corpus callosum. It is so called, from its somewhat resembling the arches of ancient vaults. The *fornix of a shell* is the excavated part under the umbo.

FOR'TE. In *music*, an Italian term, being a direction to sing with strength of voice.

FORTE PIANO. In *music*, an Italian compound, signifying the art of enforcing or enfeebling sounds in imitative melody, as is done in speech, which it imitates.

FORTIFICATION, from *fort*. That species of architecture called military, used for defence against the attack of an enemy, showing how to fortify a place with ramparts, parapets, moats, and other bulwarks.

FORTISSIMO, the Italian superlative of *forte* (q. v.), implying "very loud."

FOR'TET or **FOR'TIN**, a scone or small fort.

FOR'UM. In *Roman antiquity*, any public place, as a market, court of law, or place where causes were judicially tried, and orations delivered to the people.

Foss, } Lat. *fossa*. A ditch, applied in
Fosse, } fortification to the moat lying between the scarp and counterscarp, and in anatomy to any little furrow or sinus.

Fos'sa (Lat.). In *geology*, depressions on the external surface. *Fossa ovalis*, a depression in the right auricle of the heart.

Fos'sil, Lat. *fossilis*, from *fodio*, to dig; dug out of the earth. The term is now commonly used substantively to express the remains of animal or vegetable substances found buried in the strata of the earth's crust.

Fos'sil-Co'pal, Highgate resin; a resinous substance found in perforating the bed of blue clay at Highgate, near London. It appears to be a true vegetable resin.

Fosso'RES (*diggers*). A family of hymenopterous insects armed with a sting, and in which the individuals of both sexes are furnished with wings and live solitarily; and in which the legs are adapted for walking, and in some for digging. They compose the genus *Sphex*, Lin.

Fosso'RIAL, Lat. *fodio*, to dig. In *zoology*, animals which dig their retreats and seek their food in the earth.

FOTH'ER. 1. A weight of lead, &c., containing 8 pigs (see *FODDER*).—2. Among seamen, to *fother* is to endeavour to stop a leak in the bottom of a vessel while afloat, by letting down a sail by the corners, and putting chopped yarn, oakum, wool, &c., between it and the ship's sides, in order that these substances may be sucked into the cracks, and the leak stopped. This is *fothering*.

FOU'GADE, a French term for a little mine under some work or fortification, to destroy it by explosion.

FOU'GASS, Lat. *focata*. In *fortification*, a small mine six or eight feet under ground.

FOUND. In *architecture*, the trench or excavation made to receive the foundation stones of a wall.

FOUN'DER. In *farriery*, a painful species of lameness occasioned by inflammation within the horse's hoof; hence called also *foot-founder*.

FOUN'DRY, the place or works where founding of metals is carried on.

FOUN'TAIN, from *font*. Properly a spring or stream of water rising up through the superficial strata of the earth. The word accords in sense with *well*, but that term is now restricted to an artificial pit dug to receive and contain water either by drainage of the surface, or from the interior strata. There are also *artificial fountains* of various forms, but all acting on the principle of a pressure either from a head of water or arising from the elasticity of the air. When fountains are formed by the pressure of a head of water, or any other fluid of the same kind, with the fountain or jet, then will this spout up nearly to the same height as that head, allowing a little for the resistance of the air, with that of the adjutage or tube, &c., in the fluid rushing through; but when the fountain is produced by any other force than the pressure of a column of the same fluid as itself, it will rise nearly to the altitude of the fluid, whose pressure is equal to the given force that produces the fountain.

FOURTEENTH. In *music*, the octave or replicate of the seventh; a distance comprehending thirteen diatonic intervals.

FOURTH. In *music*, a distance comprehending three diatonic intervals, or two tones and a half.

FOUR-WAY COCK, } a description of
FOUR-WAY VALVE, } valve much used in
steam-engines for passing the steam to the cylinder. A is the communication with

the steam-pipe, B the passage to the upper end of the cylinder, C to the lower end, and D the passage to the condenser. By turning the centre a quarter of a revolution the action is reversed, and the

steam, instead of entering by the cylinder at the upper end, will enter at the lower end through C.

FOX, a name common to several species of the genus *Canis*, Lin. The common fox, found from Sweden to Egypt, is the *C. vulpes*, Lin.; the tri-coloured fox of America is the *C. cinereo-argenteus*, Schreb.; the little fox of the prairies of North America is the *C. velox*, Harl.; the silver and black fox of North America is the *C. argentatus*, Cuv. The African foxes are the *Megalotis* of Illiger. These are remarkable for the size of their ears. Fox is also applied to a particular kind of strand made of rope-yarn.

FOXTAIL WEDGING. In *carpentry*, a peculiar mode of mortising, in which the end of the tenon is notched beyond the mortise, and is split, and a wedge inserted, which being driven forcibly in, enlarges the tenon, and renders the joint firm and immovable.

FRACTION, from *frango*, to break. A part of a whole: appropriately, a part of an integer, as $\frac{3}{4}$. Here the figure below the line, called the *denominator*, shows the number of parts into which the integer is divided, and the figure above the line, called the *numerator*, shows the number of these parts taken. Fractions are called *vulgar* or common when the denominator is written, and *decimal*, when the denominator is 10, or a multiple thereof, and not expressed (see *DECIMAL*). A fraction is moreover called *simple* when it is expressed by a single numerator and denominator, as $\frac{3}{4}$, and *compound* when two fractions are connected by the word *of*, as $\frac{3}{4}$ of $\frac{1}{2}$. When the numerator is less than the denominator, the fraction is *proper*, but it is said to be *improper* when the numerator is the greater of the two terms. Thus $\frac{3}{4}$ is a proper fraction; but $\frac{5}{4}$ is an improper one.

FRACTURE, Lat. *fractura*. A breach in any body, especially when caused by violence. *Surgeons* call the disruption of a bone a *fracture*, and term it *simple* when the bone only is divided, and *compound* when the bone is broken with laceration of the integuments. *Mineralogists* understand by *fracture* the manner in which a mineral breaks, and by which its texture is displayed. They, therefore, speak of compact, fibrous, foliated, striated, conchoidal, &c., fractures. Fracture is one of the specific characters of minerals.

FRENUM (Latin), a bridle. A name given by anatomists to several ligaments, from their office in retaining and curbing the motions of the parts they are fitted to.

FRAGMENTARY, composed of fragments; applied to rocks.

FRAISE or **FRIEZE**. In *fortification*, a kind of palisade or stake, placed horizontally in the exterior face of such ramp-

parts as have only half revetments, for the purpose of preventing the assailants from ascending.

FRAMBESA, Lat. *frambesia*, from Fr. *framboise*, a raspberry. The yaws, a disease endemic to the Antilles and some parts of Africa. It appears with excrescences like mulberries growing out of the skin, which discharge an ichorous fluid.

FRAME. In *carpentry*, &c., a name given to the woodwork of windows enclosing glass, and the outward work of doors or window shutters enclosing panels, to the timber work supporting floors, roofs, ceilings; to the intersecting pieces of timber forming partitions, &c. In *ship-building*, the frames consist of pairs of timbers, composed of pieces of different lengths, joining the floor timbers and carried upwards, those frames whose planes are perpendicular to the keel, are called *square frames*; at the head and stern these frames are inclined towards the extremities, and are called *cant frames*. The divisions of the ship in which are the square and cant frames are called the *square* and *cant bodies*.

FRANC, an ancient coin of France. The value of the gold franc was something more than that of the gold crown, and the silver franc was one third of its value. The present franc is a silver coin, worth 9'69 pence sterling, or 9½d. nearly.

FRANCHISE, from Fr. *franc*, free. A particular privilege or right granted by a sovereign to an individual, or number of individuals. A franchise is any particular political privilege, giving a power to do something, and may be vested either in bodies politic, in borough towns, or in individuals, as the electoral franchise.

FRANCISCANS, a name of the Greyfriars. A religious order of St. Francis, by whom they were founded, about A.D. 1200.

FRAN'GIBLE, from *frango*, to break. A term relating to the degree of force necessary to separate one part of a body from another by percussion: applied to minerals.

FRANK ALRU. In *law*, an absolute right to real estate. In Lower Canada, and also in Guernsey and Jersey, acknowledging no superior, and consequently not a *tenure*.

FRANK-ALMOIGNE, free alms (Norm. *almoignes*, alms). A tenure by which a religious corporation holds lands to them and their successors for ever, on condition of praying for the soul of the deceased.

FRANK-CHASE, a liberty of *free chase*, or of keeping royal game therein, protected even from the owner of the land himself, and with liberty of hunting them thereon.

FRANK-FEE, in *law*, is the same as holding lands, &c. in *fee-simple*.

FRANK-FERM, anciently signified lands

changed in the nature of the fee by feoffment, and out of the knight's service for other certain yearly services.

FRANK-FOLD, is where the lord has the liberty of folding his tenant's sheep within his manor.

FRANKFORT BLACK, a substance procured by calcining vine-branches and other refuse lees of the vinegar-vats of Germany, previously well washed.

FRANK-FREE, } Germ. *bürge*, pledge.
FRANK-PLEDGE, } An ancient usage of
FREEBOURG. } two kinds. 1. That by

which every lord was made responsible for the appearance of his own men or dependants, when accused before justice.

—2. Public frank-pledge is of obscure origin. The inferior class of freemen were enrolled in bodies called *tythings*, under the superintendence of a *tything-man*: the *tything* thus organised was bound for the appearance of any one of its members.

FRANK'INCENSE, a name common to two resinous juices. 1. That called *thus*, obtained from the *pinus abies*, or spruce-fir. 2. That obtained from the *juniperus lycia*, a species of juniper-tree common in Turkey and the East Indies. This last is more commonly called *frankincense*. It is used as a perfume.

FRANK'ING, a term used by the makers of window sashes, and applied to the mode of forming the joint, where the cross-pieces of the frame intersect each other.

FRANKS. A general appellation, conferred by the Turks and other Asiatics on the inhabitants of Europe.

FRATRAGE, from *frater*, a brother. In *law*, (1.) A partition among co-heirs coming to the same inheritance. (2.) The part of an inheritance which comes to the youngest brothers.

FRAXINUS, the ash-tree. A genus of about forty species. *Polygamia*—*Dicecia*. Name from *frago*, on account, as some say, of the noise which its seeds make when the tree is shaken by the wind. Temperate climates.

FREE-BENCH. In *law*, a widow's dower in a copyhold estate.

FREEBOOTERS, Germ. *freibuters*. A set of adventurers of all nations, who displayed great courage in executing the most difficult plundering enterprises. The term is applied to any one who regards the universe as his property, and appropriates, either furtively or forcibly, the possessions of others.

FREE-CHASE. See **FRANK-CHASE**.

FREE'HOLD, lands or tenements held in fee-simple, fee-tail, or for life. *Freehold* in *deed* is real possession. *Freehold* in *law* is the right of a person to lands, &c., but does not imply possession. The term *freehold* is sometimes taken in opposition to *villanage*.

FREE'MAN. In *old law*, one free from ser-

virtue, as distinguished from villain or bondsman. The name is now used to designate one who enjoys the freedom of a city or borough town.

FREEMASONRY. A well-known institution, the origin of which has given rise to much needless speculation.

FREETHINKER. A term applied to those who reject the ordinary modes of thinking in matters of religion.

FREEZING MIXTURE, a mixture which, by absorption of heat in liquefying, produces great cold, as a mixture of snow and salt, which in the proportion of two snow, and one salt, sinks the thermometer to 5°.

FRENCH CHALK, talc in a completely indurated form. It is a magnesian mineral, much employed to remove greasy stains.

FRENCH-HORN, a musical wind instrument, made of copper, and possessing a range of three octaves. It is bent two or three times round, and becomes gradually wider towards the end, which in some horns is ten inches over.

FRES'CO (Italian), shade, coolness. *Painting in fresco* is done by drawing with colours diluted with water, on a wall newly plastered, with the plaster of which they are so incorporated, as to perish only with the stucco itself. It is called *in fresco*, by the Italians, because it is frequently done on walls, alcoves, &c. in the open air, or because of the coolness or duskiness of the colours.

FRET. 1. In music, the stop of an instrument, which regulates the vibration of the strings, e.g. the short piece of wire fixed on the finger-board of a guitar.—2. In heraldry, a bearing composed of bars crossed and interlaced.—3. In architecture, a kind of ornamental work, formed by rectangular channelled work, used on flat members.

FRICTION, from *frico*, to rub. A general name for the attrition of bodies. The term is applied, in mechanics, to denote the resistance offered by the rubbing of the parts of a machine or engine against each other, upon the application of the force necessary to put the same into action. By reason of friction, a great part of the effective power of machinery is lost, and the several parts worn, and rendered defective. It arises from roughness, or imperfection of the opposing surfaces, the interposition of dust, moisture, &c. between them; from the conjoint action of gravity and cohesion, &c. It is modified by the amount of rubbing surfaces in contact.

FRICTION ROLLER, a description of wheel much used in connection with inclined planes and fixed engines, to receive the rope, and thereby to reduce the friction. See SHEAVE.

FRIENDLY SOCIETIES. Voluntary asso-

ciations of subscribers, for the purpose of forming a fund for the assistance of members in sickness, or on other occasions of distress.

FRIEZE, Fr. from *friser*, to curl. Properly the nap on woollen cloth; hence a kind of coarse woollen cloth or stuff with a nap on one side. The term *frieze* is applied in architecture to denote a large flat member of the entablature, comprised between the architrave and the cornice, supposed to have originated from the projecting ends of the transverse beams, resting on and fixed to the architrave.

FRIEZE-PAN'EL, the upper panel of a door of six panels.

FRIEZE RAIL, the rail next to the top rail of a door of six panels.

FRI'GA OR FREYA. See ODIN.

FRI'GATE, Fr. *frégate*, Span. and Port. *fragata*. A ship of war larger than a sloop or brig, and less than a ship of the line, usually having two decks, and carrying from 30 to 44 guns.

FRI'GATE BIRDS. They constitute the genus *Tachypetes*, Vieillot. They differ from the cormorants in their forked tail and short feet, the membranes of which are deeply emarginated. The species is well known, the *Pelicanus aquilas*, Lin. Its wings when expanded measure from 10 to 12 feet.

FRIGATE-BUILT, having a quarterdeck and fore-castle raised above the main deck.

FRIGATO'ON, a Venetian vessel with a square stern, without a foremast, having only a main and mizenmast.

FRIGID ZONES. In geography, the two zones comprehended between the poles and the polar circles. They are the north frigid zone at the north pole, and the south frigid zone at the south pole.

FRIGIDA'RIUM, Lat. *frigidus*, cold. In ancient architecture, the apartment in which the cold bath stood.

FRINGE (of mosses), a simple or double row of separate or connected teeth, which border the orifice of the capsule in almost all the genera of mosses, and are originally covered by the lid and veil.

FRINGIL'LA, a finch. A genus of passerine birds. Family *Conirostres*. This genus according to Linnæus comprises the weavers (*Ploceus*), the sparrows (*Pyrgita*), the finches (*Fringilla*), the goldfinches (*Carduelis*), the linnets (*Linaria*), the whidhans (*Vidua*), the grosbeaks (*Coccothraustes*), the bullfinches (*Pyrrhula*), and the *Pitylus*, according to the arrangement of Cuvier.

FRIIT, } The materials of glass after
FRIIT. } undergoing calcination, but before fusion.

FRIIT OR FIRTH, an arm of the sea, the opening of a river into the sea, Lat. *fretum*, a narrow passable channel.

FRITHOILD. In *archæology*, a guildhall, also a company or fraternity.

FRITHOKEN. In *law*, a liberty of having frankpledge or surety of defence.

FROG. 1. In *zoology* (see *RANA* and *HYLA*).—2. In *farricry*, the hard frog-like protuberance in the middle of the lower part of a horse's hoof, pointed towards the forepart, and expanded towards the heel like a wedge.

FROND. Lat. *frons*, the leaf or bough of a tree; now applied by botanists to the cryptogamic plants only, to signify that the stem, root, and leaf, are all in one, as in the ferns, fuci, &c.

FRONDESCENCE, from *frondesco*. A term in botany for the precise time of the year and month in which a plant flowers.

FRONTATE, from *frons*, *dis*. Arepithet for leaves which continually become broader, and at last perhaps terminate in a right line: opposed to *cusped*.

FRONTIS, Os, the *frontal bone*, or bone forming the forehead.

FRONTISPIECE. 1. In *architecture*, the ornamental front of a building.—2. An ornamental engraving fronting the title-page of a book.

FRONTON. In *architecture*, a French term used to denote an ornament over a door or pediment.

F. R. S., an abbrev. of *Fraternitatis Regiæ Socius*, Fellow of the Royal Society.

FRUSTUM. In *geometry*, a Latin word for a part of a regular solid next the base, left by cutting off the top or segment by a plane parallel to the base, as the frustum of a cone, of a pyramid, of a conoid, &c. The frustum of a sphere is any part comprised between two parallel sections.

FUCHSIA, a genus of arborescent plants. *Octandria—Monogynia*. Warm climates, as Chili and Mexico.

FUCUS, the name of an extensive genus of cryptogamic plants. Order *Alga*. The gulph weed, red dulce, sea girdle, and hangers, daber locks, corsican worm-weed, sea lentil, dulce or dills, sea oak or sea wrack, &c., are all species, as indeed are most of those plants called sea-weed, some of which are eaten raw, as a salad, others are used medicinally, some afford soda, others contain iodine, and one species when burned affords the vegetable Æthiops of the shops. Name *fucus*, from *φύκος*, means simply a sea-weed, but the term was also applied by the Romans to certain dyes, &c.

FUEÑOS. The term by which in Spain the peculiar privileges of certain provinces are distinguished.

FUGA, } In *music*, a movement in
FUGUE, } which the leading part or first treble is followed by the second, the second treble by the tenor, the tenor by the bass, in close succession.

FUGLEMAN or **FLUGELMAN**, Germ. *Flügel*, wing. An officer who takes his place in front of a regiment, as a guide to the soldiers in the movement of the drill.

FULCRA, Lat. plu. of *fulcrum*, a prop; props or supports. A term used by Linnæus to denote not only those organs of vegetation properly called *props*, but also various appendages to the herbage, none of which are universal or essential, and no plant is furnished with them all. The greater fulcra are the roots, trunk, and branches; the lesser are the petioles, tendrils, suckers and runners. The *fulcra* of a flower are the peduncle, scape and receptacle.

FULCRUM (Lat.), a support; a term in mechanics for the prop which supports a lever.

FULGORITE, Lat. *fulguritus*, anything struck by lightning. A term used to designate a mineral with marks of fusion, supposed to be from the action of lightning.

FULGURATION, from *fulgeo*, to shine. A term used by assayers to denote the sudden brightening of the melted gold or silver in the cupel, when the last film of vitreous lead and copper leaves their surface.

FULICA. 1. The *lantern-carriers* or *fire-flies*, a genus of hemipterous insects.—2. The *coots*, a genus of birds. Order *Grallatoria*, family *Macrodytiis*, Cuv. The genus according to Linnæus comprehends the *Gallinula*, Briss. and Lath., the *Porphyrio*, Briss., and the *Fulica*, Briss., which comprises the true coots, of which there is only one species in Europe, the *F. atra*, Germ., found wherever there is a pond.

FULLER'S EARTH. A clay of a greenish and somewhat spotted colour, very soft, and feels unctuous to the touch. Thus named from its being used by fullers to take the grease out of cloth before applying soap. It contains 63 silex, 25 alumina, and 12 water.

FULLING, the business of scouring, cleansing, and pressing woollen cloths, &c., to render them closer and stronger; called also *milling*, because these cloths are in point of fact scour'd by a water-mill.

FULMINATES, *fulminating powders*. There are several species, such as fulminating gold, silver, mercury, &c., but the only kind at all interesting is the fulminate of mercury, now extensively used as priming to the caps of percussion locks.

FULMINIC ACID, the explosive constituent of the fulminates. It has exactly the same constitution as cyanic acid, yet the compounds of the latter do not detonate and afford in their decomposition by an oxygen acid, ammonia with carbonic acid: while those of the former afford

ammonia and prussic acid. All attempts to insulate the fulminic acid have hitherto proved ineffectual.

FUMING. The *fuming liquor of Boyle* is hydro-sulphuret of ammonia; that of *Cadet* is chloride of arsenic: and, that of *Libavius* is bichloride of tin.

FUNCTION. In *mathematics*, a quantity is said to be a function of another quantity, when its value depends on that quantity and known quantities only. In *physiology*, a function is any action by which vital phenomena are produced, as the action of the heart, the digestion of aliment, or the sense of touch.

FUNDAMENTAL BASS. In *music*, the lowest note or root of a chord.

FUNDS, stock or capital, lat. fundus, foundation. The term is taken in the sense of a sum of money appropriated as the foundation of some undertaking with a view to profit, and by means of which expenses and credit are supported. The money lent to government and known experimentally as the *National debt*, is collectively called *funds*, as constituting the stock of that debtor, as being a public funded debt due by government: hence called the *public funds*; and the *funds* are said to rise or fall when a given amount of that debt sells for more or less in the market. The *sinking fund* is a sum of money appropriated to the purchase of the public stocks by government, with a view to pay off the National debt.

FUNGI, Lat.-pl. of *fungus*; mushrooms, toadstools, &c.; an order of the class *Cryptogamia*.

FUNGUS (Latin), a mushroom. In *surgery*, any morbid excrescence of a softer texture than that which is natural to the part where it grows.

FUNICULAR MACHINE, Lat. funis, rope. In *mechanics*, if a body fixed to two or more ropes is sustained by powers which act by means of those ropes, the whole system is termed the funicular machine.

FUNNEL, Lat. infundibulum. In *architecture*, the upper part of a chimney.

FUNNEL-SHAPED. In *botany*, applied to the general form of a calyx or other part.

FUR, the short, fine soft hair of certain animals, growing thick on the skin and distinguished from *hair*, which is longer and coarser. In *commerce*, the skins of animals with fur are called *furs*, the inner side being converted into a soft leather by a peculiar process called *peltry*.

FURCATE, Lat. furcatus, forked, or fork-like: applied to parts of plants.

FURLING, in *nautical language*, the wrapping up and binding of any sail close to the yard.

FURLONG, a measure of length, the eighth part of a mile, or forty poles.

FURNACE, Lat. fornax, a vessel or building (according to size) for the pur-

pose of containing combustible and fusible matters, whether of coal, wood or metal; and so constructed that great heat may be produced and concentrated. Furnaces are as various in their construction as are the forms of operation to which they are subservient, but they may all be reduced to three sorts, *evaporating furnaces*, for the reduction of substances to vapour by means of heat; *reverberatory furnaces*, where the flame is prevented from rising; and *forge furnaces*, in which the current of air is determined by bellows.

FURNITURE. In *printing*, the materials used to extend pages of type to their proper length, and to set them at a just distance from each other when imposed, so as to print off properly on the sheet. In *architecture* (Fr. *fournir*, to furnish), the brass-work of locks, doors, shutters, &c.

FURRO, the ferret, a species of *mustela* or weasel.

FURRING, Fr. fourrer, to thrust in. The small slips nailed to joists, &c., to bring their surfaces to one plane, and thus to render the braiding nailed upon them regular.

FUSAR'OLE, } In *architecture*, a small
FUSUR'OLE, } member in the form of a collar, with somewhat long beads under the echinus or quarter-round, of pillars of the Doric, Ionic and Composite orders.

FUSEE, (Fr. from Lat. fusus, a spindle).
1. In *clockwork*, the conical part round which is wound the chain or cord of a watch or clock, thus constructed to equalize the power of the main-spring.—2. In *gunnery*, the tube fixed into a bomb or grenade-shell. It is usually a wooden pipe filled with combustible matter to fire the contents of the shell.—3. A description of small neat musket was till recently called a *fusée*, but the word *fusil* is now adopted.

FUSIBLE METAL, a compound of 8 parts of bismuth, 5 parts of lead, and 3 parts of tin. It melts at 212° F. *Rose's fusible metal* is 2 parts bismuth, 1 of tin, and 1 of zinc. It melts at 200° F.

FUSIFORM, Lat. fusiformis, spindle-shaped. Applied to parts of plants, as roots, &c.

FUSIL. 1. A description of musket. See *FUSEE*, No. 3.—2. In *heraldry*, is a bearing of a rhomboidal figure.

FUSILLIERS, are now termed *light infantry*. They were formerly armed with *fusils*, but their muskets are not now different from those of other soldiers.

FUST, FUT. In *architecture*, the shaft of a column; also the trunk of a pilaster.

FUSTIAN, Fr. Futaine, a description of cotton stuff ribbed on one side. In *criticism*, applied to compositions possessing a forced elevation of style or in exaggerated use of metaphor.

FUSTIC, Ger. *fustick*. The wood of a species of mulberry (*morus tinctoria*), a large tree which grows in most parts of South America, West Indies, &c. It is the old *fustic* of the English dyer, as the *rhus colinus*, a small European shrub, is their young *fustic*. This last is also called *fustic* and *zante*.

FUTROCKS. In *ship-building*, a term corrupted from *foot-hooks*, meaning the lower timbers raised over the keel that hold the ship together.

FUTROCK PLATES. Flat iron bars, connecting the lower dead-eye of the top-mast rigging at one end, with the futtock shroud at the other.

FUTROCK-SHROUDS, *foot-hook shrouds*. The small shrouds in a ship's rigging, passing from the mainmast, foremast, and mizenmast shrouds, to those of the top-masts.

G.

G, the seventh letter of the English alphabet, as a numeral, formerly denoted 400, and with a dash over it, 40,000; as a mark in music, it designates the treble cleff; and from its being placed at the head, or marking the first second in Guido's scale, the whole scale took the name of *gamut*.

GABEL, Fr. *Gabelle*. A term which when formerly mentioned absolutely signified a French tax on salt, but afterwards it came to signify any impost or duty. In old records it means rent, custom, or duty due to the lord.

GA'BIONS. In *fortification*, wicker baskets which are filled with earth to form temporary defences, &c.

GA'BLE, Scot. *Garal*. The upright triangular end of a house from the cornice or eaves to the top of the house.

GAD. Among *miners*, a small punch of iron with a wooden handle, used to break up ore.

GAFF. In *ships*, a sort of boom or spar, used to extend the upper edge of the mizzen.

GAGE (Fr. and Eng.), a name given to a variety of instruments used to measure the degree of rarefaction in the receiver of an air-pump; quantity of rain which falls in a given time; force of steam in a steam-boiler, height of tides, force of wind, &c. &c. In *plastering*, the word signifies the quantity of Paris plaster used with the common plaster to accelerate its setting. In *architecture*, it is applied to the length of a tile or slate below the lap.

GA'LLARDE (It.), a lively dance peculiar to Italy.

GAIN. In *carpentry*, the bevelled shoulder of a binding joist.

GALAC'TIN, a vegetable substance obtained from the sap of the *galacto-dendron utile*, or cow-tree of South America, where it is used as a substitute for cream.

GALAC'TILE, milk-stone; *γαλα*, milk, and *λίθος*, stone. A mineral which resembles steatite; but which when triturated in water gives a milk-like solution.

GALACTOM'ETER, from *γαλα*, milk, and *μετρον*, measure. An instrument for ascertaining the quality of milk by the quantity of cream it produces. It is merely a long graduated glass tube standing upon a sole. The hydrometer is, however, the most convenient galactometer. See **MILK**.

GALACTOPH'ORUS, the milk-bearer; *γαλα*, milk, and *ορεω*, to bear. An instrument used to facilitate lactation when the nipple is not sufficiently developed.

GALA'GO, the name given by Geoffroy to a sub-genus of the Lemur tribe of mammalia. The species are all from Africa. Their regimen is insectivorous and their habits nocturnal.

GALAN'GAL. In *botany*, the smaller galangal is the *Maranta galanga*. The English galangal is the *Cyperus longus*. The greater galangal is the *Kæmpferia galanga*. —2 In *pharmacy*, the roots of the greater and smaller galangal, brought from China and the East Indies.

GAL'AXY. In *astronomy*, the milky-way; *γαλα*, milk; the *via lactea*, of the Latins. A long luminous tract forming nearly a great circle of the celestial sphere, inclined to the ecliptic at an angle of 60°. The ancients had many singular ideas as to the cause of this phenomenon, but the telescope proves that it is caused by a vast assemblage of stars, too distant to be distinguished by the naked eye.

GAL'BANUM, Heb. *Chalbanah*. A gum-resin which exudes from incisions made in the stem of the *Bubon galbanum*, an umbelliferous plant which grows abundantly in Africa and some parts of Asia.

GAL'BULA, the *Jacamars*, a genus of birds. Order *Scansoria*, Cuv. These birds are closely allied to the king-fishers. They live solitarily in wet forests, feed on insects, and build on low branches.

GAL'EA, a helmet, from *γαλη*, a cat, because helmets were originally made of cats' skins! Applied to, 1. In *botany*, the upper arched lip of a ringent and peronate corol. —2. In *anatomy*, the amnion. —3. In *surgery*, a bandage for the head. —4. In *pathology*, headache extending all over the head. —5. In *geology*, a genus of echini found fossil; they are distinguished by a large base from which the shell rises in a vaulted, helmet-like form.

GALEAS, Fr. *galeasse*. A description of heavy, low-built vessel worked with both sails and oars.

GALE'NA, from γαλειν, to shine. A native sulphuret of lead, called also *lead-glance*. Its colour is bluish-grey; it occurs regularly crystallised, frequently in cubes and cubo-octahedrons.

GALENA-PSEUDO, *false galena*. A dark-coloured variety of sulphuret of zinc.

GA'LENISTS. In *ecclesiastical history*, a sub-division of the sect of Waterlandians in the 17th century. In *medicine*, the followers of Galen.

GALEOPITH'EUS, a genus of Cheiropteros mammalia: order *Carnaria*, Cuv. One species only is well ascertained, the *Flying Lemur* of the Molucca islands, Straits of Sunda, &c.

GALERU'CA, a genus of Coleopterous insects: family *Cyclica*. This genus is divided by Cuvier into two sections; those which have the power of leaping he places in the section *Anisopoda*, and those which are destitute of this power, form the section *Isopoda*.

GAL'IPOT, a name of a white, semi-solid, resinous substance, found on fir-trees, especially the maritime pine. It incrusts the wounds of fir-trees during winter.

GALLIUM, an extensive genus of small plants. *Tetrandria—Monogynia*. Name from γαλα, milk; because one species, the *G. verum*, or cheese-rennet, has the property of coagulating milk. There are 12 British species besides the cheese-rennet; and all the exotic species inhabit temperate climates.

GALL. 1. In *physiology*, see **BILE** and **OX-GALL**.—2. In the *Chemical arts*. See **GALL-NUTS** and **GLASS-GALL**.

GALL'ATES, salts formed by the combination of gallic acid with salifiable bases. The principal is the gallate of iron, which constitutes the basis of black dye, ink, &c.

GALL-BLADDER, an oblong membranous receptacle, situated under the liver. Its use is to retain the bile or gall.

GALL'LEON, a description of man-of-war ship formerly used by the Spaniards and Portuguese. More recently the name was used to designate those large vessels employed by the Spaniards in their commerce with South America. The galleons were usually four deckers.

GALL'ERY, *Fr. galerie*. 1. In *architecture*, a long narrow room commonly in the wings of a building, and used as an ambulatory. Palladio gives the proper length of a gallery at from eight to ten times its breadth. In modern palaces and mansions, the gallery, like the portico of the ancients, is appropriated to the reception of pictures and sculptures. The name gallery is also given to long porticoes with ranges of columns on one side.—2. In *fortification*, a covered walk across a ditch in a besieged town, made of strong planks and covered with earth. It was

formerly used for carrying a mine to the foot of a rampart.—3. In *mining*, a narrow passage or branch of the mine, carried on underground to a work designed to be blown up.—4. In a *ship*, a balcony projecting from the stern of a ship of war or of a large merchantman. At the stern, it is called the *stern-gallery*, at the quarters, the *quarter-gallery*.

GALL'LEY. 1. A low flat-built vessel with one deck, and navigated with sails and oars: used in the Mediterranean.—2. An open boat used on the Thames by custom-house officers, &c.—3. The cock-room or kitchen of a ship of war; answering to the caboose of a merchantman.—4. An oblong reverberatory furnace, with a row of retorts whose necks protrude through lateral openings.—5. In *printing*, a frame into which the compositor empties his stick as often as it is filled.—6. *Galley-slave*, a person condemned to work at the oar on board of a galley, being chained to the deck. In France, the *galleys* resemble the *hulks* of Great Britain.

GALL-FLY, the insect which punctures the oak-leaves, and occasions the gall-nuts. See **CYNIPS**.

GALL'IC ACID, a peculiar acid obtained from gall-nuts and other astringent vegetable substances: it is well known as an ingredient of black dye and ink.

GALL'ICISM. In *grammar*, this word denotes a mode of speech or phrase in English formed after the French idiom.

GALLINA'CEÆ, an order of birds in the arrangement of Cuvier. Name from *gallina*, a hen, *gallus*, a cock; the hoccoes, peacocks, turkeys, guinea-fowls, pheasants, &c., being species.

GALLI'NÆ, an order of birds, which in the arrangement of Linnaeus answers to the *Gallinaceæ* of Cuvier.

GALL'LIOT, a Dutch vessel, carrying a main and mizen-mast, and a large gaff-main-sail. It is a sort of brigantine.

GALLI'POLI OIL, an inferior description of olive oil, imported from the sea-port so named, in the province of Otranto, Italy.

GALLIUM, a new elementary metal resembling zinc, giving a bright violet ray in the spectrum, discovered by M. Lecocq in 1875 in a blende from the Mine of Pierrefitte, France.

GALL'NUTS or **GALLS**, excrescences found upon the leaves and leaf-stalks of a species of oak, the *Quercus infectoria*, which grows in the Levant. Others of inferior quality are found upon the *Quercus cerris*, common in the South of Europe, and the common oak, the *Q. robur*. They are produced by the puncture of the female of the gall-fly *Cynips gallæ tinctoria*, made in order to deposit her eggs, round which the juice of the tree exudes and dries in concentric portions. When the insect gets fully formed, it eats through the nut and flies off. Besides a yel-

low extractive matter, galls contain tannin or tannic acid, and gallic acid. Those from Aleppo are the best.

GAL'LON, a measure of capacity, both for liquid and dry articles, containing 4 quarts or 8 pints. The imperial gallon is the standard measure of capacity, and should contain 10 lbs. avoird. of distilled water, weighed in air at 62° Fah., the barometer being at 30 inches. It is therefore equal to 277.274 cubic inches. The old English wine gallon contained 231 cubic inches, and the ale gallon 282 cubic inches. The gallon of dry measure contained 268.8 cubic inches.

GALLO'ON, a narrow kind of lace used to edge or border cloths: formerly made of gold, silver, or silk.

GALLOP'A'DE. In the *manège*, a sort of curvetting gallop. It is the name also of a sprightly kind of dance.

GAL'LOPER. In *artillery*, a carriage which bears a gun of a pound and a half ball.

GAL'LOWS BITS (of a ship), a frame of timber, forming a support for the spare topmasts, yards, and booms.

GALL'STONE, a name common to all calcareous concretions found in the gall-bladder.

GALT or **GAULT**, a provincial name for a stiff marl, varying in colour from a light grey to a dark blue: sometimes called the Folkstone marl. It is a member of the cretaceous group of strata, and is rich in fossils.

GALVAN'IC TROUGH, } An apparatus em-
GALVAN'IC BATTERY, } ployed in accu-
mulating galvanism. It consists of
a number of pairs of metallic plates, usually
sited into a trough made to contain the
exciting fluid. There are two wires sol-

dered to the extreme plates, one of which is copper and the other zinc, called the *poles* of the battery. Sometimes several single troughs are connected together, when a very powerful apparatus is required.

GAL'VANISED IRON, a fantastic name lately given in France to iron tinned by a peculiar patent process, whereby it is rendered less liable to be acted upon by moisture.

GAL'VANISM, a modern and highly interesting branch of science, thus named after Prof. Galvani, of Bologna, who first called attention to some of its phenomena. Making some electrical experiments, while near the machine were some

frogs that had been flayed, he observed that the limbs became convulsed every time a spark was drawn from the apparatus. He ascribed these movements to an electric fluid or power innate in the living frame, or capable of being evolved by it, and which he denominated *animal electricity*. The power of the electric eel furnished plausible analogies. But Volta advanced some powerful arguments against the hypothesis of Galvani, and showed that the muscular commotions, and many other phenomena afterwards noticed, were ascribed to arrangements not previously thought of by the scientific world. He found that when two pieces of different metals were placed in contact with different parts of an animal, and were brought into connexion by means of a metallic arc, convulsions ensued every time, and that this effect was strongest, when the metals were silver and zinc. This gave the idea of the *pile battery*, and to which the epithets *galvanic* and *voltic* are indifferently applied: and indeed so decided were the experiments and reasonings of Volta, that the name of the science itself was nearly being changed from *galvanism* to *volticism*. The name current electricity is now sometimes used, on the hypothesis that galvanism is electricity developed by chemical affinity!

GALVANOM'ETER, an apparatus contrived to measure the force of a galvanic current. It consists usually of a magnetic needle freely supported upon a point, within the

rectangle of a copper wire, placed in connexion with the poles of a galvanic circuit by the mercury cups at the extremities: the needle is deflected from the magnetic meridian, and forms an angle with it, proportioned to the strength of the current. Dr Ritchie's torsion galvanometer is much more delicate than this, but the principle is the same.

GAMBO'GE, a concrete vegetable juice, or gum-resin, which exudes from several trees, but especially the *Garcinia Cambogiodes*, a forest tree which grows upon the banks of the river Kamboja in Siam. It is used extensively as a yellow pigment, and also in medicine in doses from 2 to 6 grains.

GAM'ELION, the eighth month of the Athenian year, containing 29 days, and answering to the latter part of our January and beginning of February.

GAMMONING. Among *seamen*, seven or eight turns of a rope, passing over the bowsprit and through a large hole in the stem or knee of the head alternately, and serving to bind the inner quarter and bowsprit close down to the ship's stern, in order the better to enable it to support the stays of the foremast.

GAM'UT or **GAMM-UT**, the table or scale of musical notes laid down by Guido, named thus from the Greek Γ , *gamma*, which marked the note at the top of the scale, and the monosyllable *ut*.

GANG. In *nautical language*, a select number of a ship's crew appointed on some particular service.

GANG-BOARD, a plank or board with a number of cleats or steps nailed to it for the convenience of stepping into or out of boats, &c., at shore.

GANG-LADDER, a name used in canal-making, &c., for the same purpose as a horse-block.

GANG'LION, γαγγλιον, a knot. In *physiology*, a knot-like enlargement in the course of a nerve.—In *surgery*, an encysted tumour formed in the sheath of a tendon, and containing a fluid resembling white of egg.

GANGUE, Germ. *gang*, a vein. The mineral substance which either incloses or usually accompanies any metallic ore in the vein. It is otherwise called the matrix of the ore.

GANG'-WAY, a temporary stair of planks with cleats nailed upon them. The *gang-way* of a ship is, (1.) The part of the side by which passengers enter and depart. (2.) A narrow passage in the hold of a laden ship, left vacant to enter by to inspect the cargo, to examine leaks, &c. &c.

GANT'LET, } Fr. *gantelet*, from *gant*, a **GAUNT'LET**, } glove. A large iron glove with fingers formed of small plates, formerly worn by cavaliers armed at all points. To *throw the gantlet* means to challenge; and to *take up the gantlet* means acceptance of the challenge.

GANT'LOPE, } Teut. *gang*, a passage, **GAUNT'LOPE**, } *loopen*, to run. A sort of punishment, sometimes inflicted upon soldiers and seamen, for some crime which renders the individual particularly obnoxious to the men. It is executed thus: the men are arranged in two rows, face to face, each armed with a switch or piece of twisted and knotted cord called a *knittle*; between the rows the offender, stripped to the waist, is compelled to pass a certain number of times, every man giving him a stroke as he passes. This is called *running the gantlet*, the word *gantlet* being put for *gantlope*.

GARBOARD-STREAK, the first streak or range of planks laid upon a ship's bot-

tom next the keel, throughout the whole length of the floor.

GARCIN'IA, a genus of trees. *Dodecandria—Monogynia*. Named in honour of Dr. Garcin. The Mangosteen-tree of Java and the Molucca islands is a species. Its fruit is reckoned the most delicious and salubrious of oriental fruits. It is about the size of the orange, but fleshy and almost transparent. It is also a species of this genus which yields the tree gamboge.

GAR'DANT or **GUARDANT**. In *heraldry*, applied to a beast when represented full-faced, or looking at the spectator. *Regardant*, looking backward.

GAR'LAND. In *ships*, a sort of net used by sailors instead of a locker or cupboard; also a collar of rope wound about the head of a mainmast to keep the shrouds from galling.

GAR'LIC. In *botany*, a name common to the species of *Allium*, but especially applied to the *A. sativum*, much employed for culinary and medicinal purposes.

GAR'NET. 1. A mineral genus of eleven species, all crystals more or less regular in their forms. The precious garnet, or garnet properly so called, occurs in dodecahedrons, in mica-slates, among the primary rocks in various parts of the world. It is of a beautiful red colour, like the seed of the *pomegranate*: whence the name. This appears to have been the carbuncle of the ancients. Common garnets sometimes possess all the forms of the precious garnet, except that brown and green are the usual colours. The garnet consists of silica, 40; alumina, 20; oxide of iron, 38; oxide of manganese, 2.—2. In *ships*, a description of tackle fixed to the mainstay, and used to hoist in and out cargo.

GAR'NISH. In *law books*, to give notice, to warn. The term is Norm., *garnisher*, to summon.

GAR'NISHEE. In *law*, one in whose hands money or property is attached, so called because he is served with a *garnishment* or warning not to pay the money, but to appear and answer to the plaintiff creditor's suit.

GAR'NISHMENT. In *law*, warning given to a person for his appearance, &c.

GARROTT', the; a mode of capital punishment by strangling, practised in Spain.

GAR'TER. The highest order of knighthood in these realms, called the Most Noble Order of the Garter. It was instituted by Edward III. The knights are 32 in number, and rank in personal dignity after the peerage. The *Garter king at arms* is the chief of the three kings at arms.

GAS, Sax. *gast*, Ger. *geist*, Dut. *geest*, air or spirit. A name adopted in modern chemistry to denote a permanent aeri-

form fluids, except common air, which is composed of two *gases*. Gas retains its elasticity at all temperatures, and in this it is distinguished from *vapour*. See *ELASTIC FLUIDS*.

GAS-BURNERS, are either simple beaks perforated with a small hole (*common jet*), or a circle with a series of holes (*argand*), or two holes drilled obliquely to make the flame-cross (*swallow-tail*), or with a slit constituting a sheet of flame (*bat's-wing*.)

GAS-HOLDER, } a vessel for containing

GASOMETER, } and preserving gas. The gas-holder of the chemist assumes various forms. That used at gas-works is a large reservoir (sometimes so large as to contain 60,000 cubic feet of gas), made of iron-plate, suspended in water, and counterbalanced by weights, and is mostly provided with some contrivance for measuring the quantity of gas it contains.

GAS-KET, a plaited cord fastened to the sail-yard of a ship, and used to furl or tie the sail to the yard.

GASTEROPODA, } a class of molluses,

GASTEROPODS, } named from *γαστήρ*, the belly, and *πους*, a foot, because they have a foot or organ of locomotion, situated on the abdominal surface. Cuvier enumerates nine orders of Gasteropods, some of which are entirely naked, as, for example, the slug; others have an interior shell; but most of them are furnished with one that is large enough to receive and shelter them.

GASTRIC, appertaining to the *gaster* or stomach, as the *gastric juice*, a fluid secreted by the stomach; it is the principal agent in the process of digestion. It is, when healthy, of a saltish taste, inodorous, and limpid like water. The food is changed by it into a uniform soft paste.

GASTROCNEMIUS, *γαστήρ* and *καίνα*, to gape. The calf of the leg.

GASTROCOLIC, from *gaster* and *colon*. An epithet for the great omentum, because it passes from the gaster or stomach to the arch of the colon.

GASTRO-ENTERITIS, from *γαστήρ*, the stomach, and *εἰς*, the intestine. Inflammation of the stomach and intestines.

GASTROMANCY, Gr., from *γαστήρ*, and *μαντία*, prophecy. Divination by means of words emitted from the belly.

GASTROTOMY, from *γαστήρ*, the belly, and *τομή*, to cut. The operation of cutting into the abdomen of the living subject.

GAS-WATER, water through which the common illuminating gas has passed; it contains hydro-sulphuret and hydro-bisulphuret of lime.

GAUGE-COCKS, two cocks, usually connected with steam-boilers, for the purpose

of ascertaining the height of the water. The pipe from the one reaches a little beyond the water-line, and that from the

other stands as much above it. On opening the cocks, if the water be at the proper height, water should flow out at A, and steam at B; should steam issue at both, the

water is too low, and if both give water, the boiler contains too much water.

GAUGE-OF-WAY. On railways, the width in the clear between the top flanges of the rails.

GAUGE-POINT. In *gauging*, the diameter of a cylinder of one inch of height, and of which the content is equal to a unit of a given measure.

GAUGING. The measuring of the capacities of vessels, chiefly casks, vats, and the like; and determining the amount of liquid contained in them.

GAUGING-ROD, or **DIAGONAL-ROD**, an instrument used in gauging.

GAUT, a term used in India to denote a passage or road through a chain of hills, from the coast to the upland country.

GAUZE, a very thin transparent textile manufacture, sometimes woven with silk, and sometimes only of thread, either plain or figured. A fabric of fine wire, for sieves and safety-lamps, is called *wire-gauze*.

GAVELET, an ancient and special *cessavit* in Kent, in England, where the custom of gavel-kind continues, by which the tenant, if he withdraws his rent and services due to his lord, forfeits his lands and tenements.

GA'VEL-KIND, a tenure, in England, by which land descends from the father to all his sons in equal portions, and the land of a brother, dying without issue, descends equally to his brothers. This species of tenure prevailed in England before the Norman conquest, perhaps generally, but particularly in Kent, where it still exists.

GA'VIAL, a subdivision of the genus *Crocodylus*. Teeth of fossil gavials have been found in the Tilgate strata.

GAVOT, Fr. *gavotte*. A sort of dance, the air of which has two brisk and lively strains in common time.

GAY-LUS'SITE, a white mineral, of a vitreous fracture, crystallised in oblique rhomboidal prisms. Named in honour of Gay-Lussac. It is a hydrated soda-carbonate of lime, in atomic proportions.

GAZEL, Fr. *gazelle*, from the Arabic. An animal of the antelope genus, found in Africa and India. It is peculiarly remarkable for the beauty and brilliancy of its eyes.

GAZETTE, a kind of official newspaper. The term *gazetta* is said to have been the name of a Venetian coin, in value somewhat less than the English halfpenny, the first price of a newspaper. The first gazette in England was published at Oxford, in 1665. On the removal of the Court to London, the title was changed to *London Gazette*. It is now the official newspaper, and published on Tuesdays and Fridays.

GA'ZONS. In *fortification*, sods or pieces of fresh earth, covered with grass, about a foot long, and half as broad, cut in the form of a wedge, to line the parapet. The term *gazon* is French for sod.

GEA'RING, from Sax. *gearwian*, to prepare. In *mechanics*, a series of toothed wheels for conducting motions in machinery generally. There are two sorts in common use: *spur-gear*, and *bevelled-gear*. The former consists of teeth arranged round either the concave or convex surface of the rim of a wheel, in the direction of radii from the centre: in the bevelled gear, the teeth are placed upon the exterior periphery of a conical wheel, and gradually diminish in the direction of the apex of the cone.

GECKO, the name given by Daudin to the *Ascalabotes* of Cuvier. The geckos are saurians, but are flattened, and are not so long and graceful as the true saurians. They are disseminated throughout the warm portions of both continents, and are everywhere objects of hatred. *Gecko* is the name given to a species in India, in imitation of its cry, just as another is termed *Tockail* at Siam, and a third *Geitje* at the Cape; *αγκαλαότης*, is the Greek name of the Geckottes.

GECKOT'IDA or **GECKOTII**, a family of reptiles, composed of nocturnal lizards, which are so similar that they may be left in one genus, the *Gecko*. The Geckottes are now, however, divided according to the arrangement of the toes into *Platydactyli*, *Hemidactyli*, *Thecadactyli* and *Ptyodactyli*.

GEHEN'NA, a scriptural term signifying hell.

GEL'ATINE, Lat. *gelatina*, gelly or jelly. An animal product, soluble in water, but not in alcohol; capable of assuming a well-known elastic or tremulous consistence on cooling, and liquifiable again by raising its temperature. In this it is distinguished from albumen. It may be extracted from most parts of animals by boiling, and it is found in some vegetables, as ripe currants and other berries, mixed with an acid. Glue and isinglass, freed from all impurities, are examples.

GEL'DER-ROZE, a name common to two plants, the one a species of *Viburnum*, and the other a species of *Spiræa*.

GEM, Lat. *gemma*, a bud. This is the

common name for all precious stones; sought after as objects of decoration. They form the chief part of the Crown jewels of kings, not only for their beauty, but because they are scarce, and therefore comprise great value in little bulk! The diamond, ruby, sapphire, emerald, topaz, hyacinth, and chrysoberyl, are reckoned first class gems; crystalline quartz, amethyst, blood-stone, lapis lazuli, jasper, agate, sardonyx, &c., belong to the second class. The superior varieties of precious stones are termed *oriental* by jewellers, and the inferior *occidental*. Imitations are called *artificial gems* or *pastes*. These consist simply of glass coloured by metallic oxides, capable of producing the colour of the true gem. Fashion makes the difference of value.

GEM'ARA, the second part of the Talmud or commentary on the Jewish laws.

GEM-ENGRAVING is called *Lithoglyphics*.

GEM'INI, Lat. pl. of *geminus*, double. Twins. This is the name of the third sign of the zodiac, representing Castor and Pollux, and marked II. The sun enters Gemini on the 21st of May.

GEM'MA, the Latin word for *Gem*; used in botany to designate a bud on the stem of a plant. Buds are various in their forms, but, in general, consist of scales closely enveloping each other and enfolding the embryo plant or branch. Shrubs in general, and trees of hot climates, have no gemmæ.

GEMMA'CEOUS, Lat. *gemmaeus*, from *gemma*, a bud. A term applied by botanists to a flower-stalk which grows out of a leaf-bud, as is seen in the *Berberis vulgaris*.

GEMMIF'EROUS, from *gemma*, a bud or shoot, and *pario*, to bring forth. An epithet applied to plants and animals which can be propagated by shoots. The water polypi are mostly gemmiparous.

GEM'OTE. In old law, the curiæ centuriæ or court of the hundred.

GENDAR'MES or **GENS D'ARMES**, an appellation given in France to a select body of troops destined to watch over the interior public safety. This body was broken up at the Revolution, and the name was transferred to a band employed in the protection of the streets.

GENDER, Fr. *genre*, from Lat. *genus*. In grammar, a difference in words to express distinction of sex. Words expressing males are said to be of the *masculine gender*; those expressing females, of the *feminine gender*, and in some languages, as English, words expressing things having no sex are said to be of the *neuter gender*.

GENEALOG'ICAL TREE, the genealogy or lineage of a family drawn out under the form of a tree, with its roots, stem, and branches.

GENERAL. In *military affairs*, (1.) The rank of *general* is of several degrees, as *major-general*, *lieutenant-general*, and *general*, according to seniority, when promotions are made; and the commander-in-chief of an army is called, by way of eminence, *the general*; (2.) The term *general* is also used for a particular beat of the drum: it is the first which gives notice for the infantry to be in readiness to march.

GENERAL ISSUE. In *law*, that plea which denies at once the whole declaration or indictment, without offering any special matter by which to evade it. This is the ordinary plea in criminal cases.

GENERALIZATION. In *logic*, the act of comprehending under a common name several objects agreeing in some abstract point.

GENERANT, a term used by mathematicians for that which is generated, or supposed to be generated, by the motion of a point, line, or surface. See **FLUXIONS**.

GENERATING LINE or FIGURE. In *mathematics*, that line or figure, by the motion of which another figure or solid is supposed to be described or generated. See **FLUXIONS**.

GENERATION. In *mathematics*, denotes the formation or description of any geometrical figure or magnitude, by the motion of another magnitude or quantity of a dimension one degree less. See **GENERANT and GENERATING**.

GENERATOR. In *music*, the principal sound or sounds by which others are produced. Thus the lowest C for the treble of the piano-forte, besides its octave, strikes an attentive ear with its twelfth above, or G in alt., and with its seventeenth above, or E in alt. Hence C is called their *generator*, the G and E its products or harmonies.

GENERIC, appertaining to a genus. The *generic names* of animals and plants are followed by other names usually denoting some peculiar quality or circumstance; these appended names are called *specific*.

GENESIS. *Genesis*, generation. 1. In *scripture*, the name given to the first book of Moses, containing the history of the creation, &c. In the original Hebrew it has no title.—2. In *mathematics*, the formation of a line, plane, or solid, by the flux of a point, line, or surface, called the *describent*.

GENETIA, the *Genets*. A sub-genus of *Canarian mammalia*. The common genet is found from the south of France to the Cape of Good Hope. Its skin forms an important article of trade. The name *genet* is also used to designate a small-sized Spanish horse.

GENEVA, a corruption of Fr. *genièvre*, a

juniper berry. **Glin**: a spirit obtained by distillation from grain, rectified, with the addition of juniper berries. The best is made in Holland, and may be bought in bond for 2s. 3d. to 2s. 6d. the imperial gallon, upon which there is a duty of 22s. 6d.!

GENICULATE, Lat. *geniculatus*, knee-jointed: applied to culms bent like the knee, and to peduncles bent at the joints.

GENII, a race of beings created from fire, between man and angels, and having a body, which they can metamorphose at pleasure.

GENISTA, the *Broom*. A genus of permanent plants. *Diadelphis*—*Decandria*. Name from *genu*, the knee, in allusion to the angular inflections of its twigs. There are about 45 species, four of which are common in Britain.

GENITIVE, Lat. *genitivus*. An epithet in grammar for a case in the declension of nouns, expressing primarily the thing from which something also proceeds. The genitive case is the second of the Latin and Greek nouns, and answers to the possessive of the English.

GENS. In *ancient history*, a subdivision of the Roman people next to the curia or tribe.

GEN'TIAN. In *pharmacy*, the roots of the *Gentiana lutea*, a perennial plant common on the Alps and Pyrenees, named also *felwort*. Named from *Gentius*, king of Illyria, who first used it.

GEN'TIANINE, an alkaline principle discovered in gentian (root of *G. lutea*), and supposed to be the active part of the root.

GEN'TILE, Lat. *gens*, nation. A general term applied by the Jews and Christians to all heathen nations.

GEN'TLEMAN. In *law*, any man above the rank of a yeoman, or more strictly a man who without a title bears a coat of arms.

GENTLEMEN PENSIONERS. In *England*, a band of forty gentlemen, named esquires, whose office is to attend the king to and from the chapel royal.

GENTOO', a word employed by Europeans in the East Indies to designate the language and people of that country. It is a corruption of the Portuguese word *gentio*, which signifies *gentile* in the scriptural sense, but is not known to the natives.

GENUS, (Lat.) from *gignere*, a family, race or stock. 1. In *logic*, a universal which is predicated of many things as the material or common part of their essence.

—2. In *natural history*, a subdivision of any class or order of natural beings, whether of the animal, vegetable, or mineral kingdoms, all agreeing in certain common characters: a collection of species. See **CLASS**. In *music*, any scale of music.

GEOCENTRIC, from *gē*, the earth, and

κεντρον, a centre: applied in astronomy to an orbit having the earth for its centre; having the same centre as the earth. The *geocentric latitude of a planet* is its distance from the ecliptic as seen from the earth; and its *geocentric place* is that wherein it appears to us from the earth. See HELIOCENTRIC.

GEODE, from *γῶδης*, earthy. A roundish piece of mineral matter, sometimes only an incrustation, generally more or less hollow; usually lined with crystals, but in some cases loose earthy matter. The geodes found in the green sandstone, near Sidmouth, are composed of opaque chert on the outside, and contain within mammillated concretions of beautiful chalcedony, and occasionally perfect though minute crystals of quartz.

GEODESY, from *γῆα*, the earth, and *δαιω*, to divide. That part of geometry which relates to the mensuration of surfaces.

GEODINOSY, from *γη*, the earth, and *γινωσις*, knowledge. A knowledge of the structure of the earth. Some have argued that this term ought to be substituted for the more common term *geology* (q. v.).

GEODRAPHY, from *γη*, the earth, and *γραφη*, description. The science which describes the surface of the earth, its kingdoms, states, and empires, rivers, &c. That branch which describes the natural divisions and physical characteristics of countries, is called *physical geography*; that which describes the political boundaries of kingdoms and their subdivisions, the social and political state of the people, the nature of their government, laws, and institutions, is called *political geography*.

GEOL'OGY, from *γη*, the earth, and *λογος*, discourse. That branch of natural history which investigates the disposition of the materials composing the earth's crust, the relative situation of the different orders of rocks, and their connexion with each other, the changes they are undergoing and have undergone, and examines into the relations which existed between organised beings whose remains are buried in the earth, and the physical circumstances under which they lived, and finally, which explains, or endeavours to explain, the proximate causes which have operated the various changes in the organic and inorganic kingdoms of nature.

GEOMANCY, *γη*, earth, *μαντια*, prophecy. Divination by points or circles made on the earth.

GEOM'ETER, a tribe of Lepidoptera, comprising those of the nocturnal family, in which the body is unusually slender, and the proboscis small and membranous. Their peculiar mode of progression has caused them to be styled *geometra* or mea-

surers. When about to advance they first cing with their anterior or squamous feet, then elevate their body so as to form a ring, in order to approximate the posterior extremity to the anterior, or that which is fixed; they then cing with the last feet, disengage the first, and move the body forwards, when they recommence the same operation.

GEOMETRICAL, something relating to geometry. *Geometrical construction* is the representation of a proposition by geometrical lines.—*Geometrical curves* are such as may have their relations expressed by a finite algebraic equation.—*Geometrical locus* is the line traced by a point, which varies its position according to a given law.—*Geometrical progression* is when the terms increase or decrease by equal ratios; or it is a series of quantities which are continually proportional, every successive term resulting from that which immediately precedes it by a constant multiplier. Thus 2, 4, 8, 16, 32, 64, &c., is a geometrical progression in which the ratio is 2; and 16, 8, 4, 2, 1, $\frac{1}{2}$, $\frac{1}{4}$, &c., is one in which the ratio is $\frac{1}{2}$.

GEOMETRY, from *γη*, the earth, and *μετρον*, measure. Originally and properly the art of measuring the earth, that is, portions of its surface; but according to the present acceptance of the term, it may be defined the science of extension or of magnitudes considered simply, generally, and abstractly. It is called *elementary* when it treats of the properties and proportions of right lines and right lined figures. It is *theoretical* when its object is the demonstration of certain geometrical propositions; and *practical* when it relates to the performance of certain geometrical operations, such as the construction of figures.

GEORAMA, from *γη*, the earth, and *οραμα*, view; an apparatus which exhibits a very complete view of the earth. It is a hollow sphere, say 40 feet diameter, formed by 36 bars of iron representing the parallels and meridians, and covered with cloth of a bluish colour to represent water. The mountains, forests, &c., are painted on paper and pasted on this cover. It is a Parisian invention.

GEORG'IVM SIDUS. In astronomy (see URANUS).

GEOSAU'RUS, a fossil saurine of the oolite and lias formations.

GERANIA'CEE, geranium, or the crane's-bill, is the type. A natural order of herbaceous or shrubby Exogens.

GER'FALCON. In ornithology, the *Falco candicans*, Lin., a species most highly prized by falconers.

GERM OF GERMEN, the rudiment of the young fruit and seed of vegetables, found at the bottom of the pistil, also the swol-

len base of the pistil which contains the germ, and becomes the seed-vessel.

GERMAN SCHOOL. In painting, this school set a particular value on high finish, rather than on good arrangement, their colouring is better than their drawing, but their draperies are usually in bad taste.

GERMAN SILVER, or *white copper*. An alloy of nickel, zinc, and copper, and sometimes lead.

GERMINATION, from *germino*, to sprout. The vital development of a seed when it first begins to grow.

GEROCOMIA, } from *γῆρας*, old age, and
GEROCOMY, } *καμεῖν*, to care for. That department of hygiene which relates to the proper regime and treatment of old age.

GERUND, Lat. *gerundium*. A kind of verbal noun, in Latin, which governs cases like a verb.

GERUSIA, *γερουσία*, assembly of elders. In ancient history, the Senate of Sparta.

GEYSER, the name given to certain boiling springs or fountains in Iceland. The water of the geyser holds a considerable quantity of silex in solution; it is thrown up in jets, and at the same time subterranean noises are heard like the firing of distant cannon, and the earth is slightly shaken. After playing for some time like an artificial fountain, throwing the water sometimes to the height of 100 feet, giving off clouds of vapour, there issues forth from the pipe a column of steam with amazing force and a thundering noise, which terminates the eruption. These intermittent hot springs occur in the south-western division of Iceland, where nearly a hundred of them are said to break out within a circle of two miles.

GHAUT, properly a pass through a mountain, but in the East Indies used to denote any extensive chain of hills.

GHEE, Sanscrit, *ghi*. A liquid butter made in the East Indies, chiefly from the milk of buffaloes. It is sold by measure.

GHIBELLINES. In Italian history, a party which maintained the supremacy of the German Emperors over the Italian States.

GHOST, HOLY, ORDER OF, the principal military order of France.

GIALLOLINO, Naples yellow. A porous heavy mineral substance, of an earthy nature, and a pale yellow colour. It is used for painting in oil.

GIAOUR (Turk.), a dog. An epithet conferred by the Turks on Christians.

GIBBET or JIB. The slant beam of a crane on which the weight is supported, and on the end of which the chain pulley is fixed.

GIBBOTS, } Lat. *gibbus*, bulged; swelled:
GIBBOS, } applied, 1. In astronomy, to

the enlightened part of the moon in her passage from full to new, when the illuminated part appears convex.—2. In botany, to leaves, petals, &c., when irregularly swelled on one side or both.—3. To inequalities on the body, as a hunch on the back.

GIBBOUSITY, from *gibbose*, crookedness.

GIBBS. In mechanics, the pieces of iron employed to clasp together the pieces of wood or iron of a framing which is to be keyed, previous to inserting the keys. See KEY.

GIFT. In law, a conveyance which passes either land or goods.

GIO MACHINES, rotatory drums mounted with thistles or wire teeth for teasing cloth.

GIO'A or JIG (It.) In music, an air for dancing in triple time.

GILL. 1. The respiratory organ of fishes, from Scot. *gil* or *gul*, a fissure. The gills are technically styled *branchia* (q. v.).—2. A measure of capacity equal to the fourth part of a pint, from low Lat. *gilla*,

gillo, or *gello*, a drinking-glass.—3. A pair of wheels and a frame on which timber is conveyed (*local*).—4. The plant ground-ivy.

GIMBAL, the brass ring by which a sea-compass is suspended in its box.

GIMBLET or GIMLET, an instrument used by carpenters, &c., for boring small holes. To *gimblet the anchor* is a nautical phrase, signifying to turn over the anchor by the stock, a motion resembling the turning of a gimblet in boring. The word *gimblet* is probably from the northern word *gwiðer*, a serpent.

GIMP, silk twist, interlaced with a metallic wire.

GIN. 1. A distilled spirit: name contracted from *Geneva* (q. v.).—2. A name common to many machines: contracted from *engine*. The pile engine is sometimes called a *gin*; there are also *gins* for raising weights, drawing water, and separating the seeds from cotton: this last is commonly called a *cotton-gin*. There was also an old engine of torture called a *gin*.

GIN'GER, the roots of a plant, the *Zingiber officinale*, a native of the East Indies and China, but long since transferred to the West Indies. The best roots, deprived of their radicles and sordes, and dried in the sun, are called *white ginger*; the inferior roots scalded in boiling water before being dried, are termed *black ginger*.

GIN'GER-BEER, is made by fermenting ginger, cream of tartar, and sugar, with yeast.

GIN'GINO. In mining, the lining of a shaft with stones or bricks for its support; called also *steining* or *staining*, from Sax. *stan*, a stone.

GIN'OLYMOID, from *γινγλυμός*, a hinge,

and *hinges*, like; resembling a hinge. Applied to that species of hinge-like joint which admits of flexion and extension.

GIN'OLYMUS, from *γινγλυμός*, a hinge. Articulation admitting flexion and extension.

GIN'NING, the operation by which the filaments of cotton are separated from the seeds by means of an apparatus called a cotton-gin.

GIN'SENG, the root of a small plant (*Panax quinquefolium*), common in China and several parts of North America. It is highly valued in China for its medicinal virtues, but is little used in Europe.

GIRAF'FE, the specific name of the camelopard (*C. girafa*, F. Cuv.), found in the deserts of Africa. See CAMELOPARDALIS.

GIRASOL' or GIRASOLE, a mineral of a milk-white colour, named from *gyro*, to turn, and *sol*, the sun, in allusion to a remarkable property of reflecting a red colour when turned towards the sun or any bright light. It is a variety of opal. The finest specimens resemble translucent jelly.

GIRD'ER, the name given to both timber and iron beams, when resting upon walls or piers at each end, and employed for the purpose of supporting a superstructure, or any superincumbent weight, as a floor, wall, or the roadway of a bridge, &c. When a girder is employed to carry the superincumbent part of an external wall, it is styled a *bresummer* (brestssummer).

GIR'DLE. In *architecture*, the circular band of a column. Also, a band of leather or other material, used in girding up the loins.

GIROU'DE, a republican party in the time of the French Revolution, termed Girondists, from the department whence the representatives were sent to the legislative assembly.

GIRT-LINE, a rope to lift the rigging to the mast-head in rigging a ship.

GIVEN. In *mathematics*, a term synonymous with *known*. If a magnitude is known, it is called a *given* magnitude, quantity, &c.

GLA'BROUS, Lat. *glaber*, smooth. Applied to parts of plants, and opposed to hirsute, hairy, or pubescent.

GLA'CIER, Fr. from *glace*, ice. A field or immense mass of ice formed in deep but elevated valleys, or on the sides of the Alps and other mountains. The ice of glaciers is not transparent, being composed for the most part of snow, which, previous to freezing, had been imperfectly dissolved. They are little affected by the heat of summer, and are so numerous in Tyrol, Switzerland, Piedmont, and Savoy, as to form collectively a superficial extent of about 1500 square miles.

GLACIS (Fr.), a sloping bank. Used in fortification for the mass of earth which serves as a parapet to the covered way, sloping easily towards the champaign or field.

GLA'DIATE, from *gladius*, a sword; sword-shaped. Applied to parts of plants, &c.

GLADIA'TOR, from *gladius*, a sword; a sword-player; a prize-fighter. The gladiators of Rome were at first prisoners of war, slaves, or condemned criminals, who were made to fight in the arena for the entertainment of the people; but afterwards fought in the arena either for hire or from choice.

GLANCE, Ger. *glanz*, splendour. A word attached to the name of certain minerals which have a metallic or pseudo-metallic lustre, as glance-coal, lead-glance, antimony-glance, &c.

GLAND, Lat. *glans*, a nut. 1. In *anatomy*, an organ composed of blood-vessels, nerves, and absorbents, and destined for the secretion or alteration of some particular fluid; according to the nature of which, glands are mucous, sebaceous, lymphatic, salivary, or lachrymal.—2. In *botany*, a small transparent vesicle, discharging a fluid, and situated on various parts of plants, as the stalk, calyx, leaves, &c.—3. In *mechanics* (see COLLAR).

GLAN'DERS, from *gland*. A disease of horses, evinced by the running of corrupt, slimy matter from the nose.

GLAN'DULAR } Lat. *glandulosus*. Having
GLAN'DULOUS, } the appearance, structure, or function of a gland. Applied also to leaves of plants having little glandiform elevations.

GLASS is formed by the fusion of siliceous and alkaline matter. The glasses may be thus chemically distributed: (1.) *Soluble glass*, silicate of potash or soda. (2.) *Crown glass*, silicate of potash and lime. (3.) *Common window glass*, silicate of soda and lime. (4.) *Bottle glass*, silicate of soda, lime, alumina, and iron. (5.) *Flint glass*, silicate of potash and lead.

GLASS-BLOWER. Glass while hot being perfectly ductile and plastic, it is blown into shapes by the breath of the workman (hence called a *glass-blower*), through an iron tube about three feet long, assisted by a very few trifling tools.

GLASS-GALL, the neutral salt skimmed off the surface of melted crown glass: called also *sandiver*.

GLASS PAINTING. The method of staining glass in such a way as to represent all the subjects of which the art is capable.

GLASS'-WORT, the *Salsola kali*, a plant which affords soda used in the manufacture of glass. The name is equally applicable to other species of the *Salsola*.

GLA'UBER-SALTS, *Glauber's salt*. An old name for *sulphate of soda*, from the discoverer.

GLAUC'OMA, } from *γλαυκος*, glaucous.
GLAUC'OSIS, } A disease of the eye, in which the vitreous humour becomes opaque, and of a blue or sea-green colour. This name has also been given to cataract.

GLAU'CIOUS, Lat. *glaucus*, of a gray bluish green colour: applied to leaves, &c., of plants, which are covered with a fine sea-green mealiness that easily rubs off, as is seen on the back of the cabbage leaf.

GLAZE. In *potteries*, the vitreous incrustation on the surface of earthen-ware.

GLEBE, Lat. *gleba*, a clod. 1. The land belonging to a parish church.—2. A species of earth in which is contained some mineral ore.

GLEE. In *music*, a short composition sung in parts: originally used for convivial purposes.

GLEE-MAN, an itinerant minstrel was so called by the Saxons.

GLENE, *γληνη*. 1. The cavity or socket of the eye.—2. The cavity of a bone which receives another bone into it.

GLIA'DINE, from *γλια*, glue. The name given by Taddey, an Italian chemist, to one of the constituents of gluten (q. v.).

GLIM'MER, Germ. *glimmern*, to gleam. A general name given sometimes to micaceous minerals.

GLI'RES, plural of *glis*, a dormouse. The fourth order of mammalia in the Linnean system, including such animals as have two fore teeth, a cutting one in each jaw, no tusks, and feet with claws; comprehending guinea pigs, rabbits, hares, squirrels, mice, beavers, &c.

GLOBE, a body whose surface is every where equidistant from the centre. This is the name usually given to an artificial sphere of metal, paper, or other matter, on whose convex surface is drawn a map of the earth or heavens with their several circles. That on which the parts of the earth are delineated is called a *terrestrial globe*; and that having the constellations, &c., marked on its surface is called a *celestial globe*.

GLOB'OSE, Lat. *globosus*, round; applied to roots which are round, and give off radicles in every direction.

GLOB'ULAR CHART. A delineation of the terrestrial surface, or any part of it, on a plane, according to globular projection.

GLO'BUS HYSTER'ICUS. The air ascending in the œsophagus, and prevented by spasm from reaching the mouth, is so called because it mostly attends hysteria, and gives the sensation of a ball ascending in the throat. It is a very common annoyance to persons of a nervous temperament.

GLO'MER. In *anatomy*, a conglomerate gland. Lat. *glom*, a clue of thread.

GLO'MERATE, Lat. *glomeratus*. Gathered into a mass of a globular form.

GLO'MERIS, a myriapod, resembling a wood-louse, thus named because when alarmed, it rolls itself up into a spherical ball.

GLO'MERULE, Lat. *glomerulus*. A term in *botany*, for a small tuft, mostly in the axilla of the peduncle.

GLO'RY, Lat. *gloria*. In *painting*, a circle, plain or radiated, surrounding the heads of saints, &c., especially of our Saviour.

GLOS'SO-PHARYN'GEAL NERVES, the ninth pair of nerves, arising from the processes of the cerebellum, and terminating, by numerous branches, in the muscles of the tongue and pharynx.

GLOTTIS, from *γλωττα*, the tongue. The superior opening of the larynx at the bottom of the tongue.

GLOW-WORM, a name common in some measure to several species of Lampyridæ, but especially applied to the female of the *Lampyris noctiluca*, Lin., which emits a very vivid phosphorescent light. The luminous matter occupies the inferior part of the last two or three annuli, which differ in colour from the rest, and are usually yellowish or whitish.

GLUC'INA, } from *γλυκυσ*, sweet. One
GLUC'INE, } of the primitive earths, first discovered by Vauquelin, in the beryl and emerald, and thus named because it forms sweetish salts with the acids.

GLUE, Fr. *glu*, inspissated animal gluten. A tenacious viscid matter, which is much employed as a cement for wood, &c. It is made from parings of hides, and other offals, by boiling them in water to a jelly.

GLUMA'CEOUS, glumose.

GLUME, Lat. *gluma*, husk. The peculiar calyx of grasses and grass-like plants of a chaffy nature, formed of little concave leaflets called *valves*.

GLU'TEN, Lat., from *gelo*, to congeal. The most nutritious part of wheaten flour. It exists also in most other kinds of grain, but in smaller quantity; it resembles animal more than vegetable substances, as it contains nitrogen, besides carbon, oxygen and hydrogen. It is a stiff and tenacious solid, possessing ductility and elasticity, so that it can be spread into a thin membranous sheet. It is readily procured by making wheaten flour into a paste, and removing the starch and saccharine matter, by washing it with water. It may be resolved, by means of alcohol, into two principles, *gliadine* and *zymone*; some name a third, *mucine*.

GLU'TEUS, from *γλουτος*, the name of some muscles, arteries, &c. of the buttocks.

GLU'TON. In *zoology*, a name common to all the species of the genus *Gulo*, Storr., but especially applied to the *Ursus gulo*,

Lin., an animal about the size of a badger, which inhabits the coldest regions of the north. It is both ferocious and voracious.

GLYCERINE, from *γλυκός*, sweet, the sweet principle of oils. It is a transparent liquid, without colour or smell; of a syrupy consistence, and very sweet to the taste. Sp. gr. 1.27.

GLYC'ONIAN, } A kind of verse in Greek
GLYC'ONIC, } and Latin poetry, consisting of three feet, a spondee, a choriamb, and a pyrrhic.

GLYCYR'RHIZA, the Liquorice. A genus of perennial plants. *Diadelphia—Decandria*. Name from *γλυκός*, sweet, and *ρίζα*, root. Temperate climates.

GLYCYR'RHIZINE, the saccharine juice of the Liquorice.

GLYPH, from *γλυφω*. A term in *sculpture* and *architecture* for any canal or cavity. See **DIGLYPH** and **TRIGLYPH**.

GLYP'TIC (*γλυφω*), in *sculpture*, denotes the art of carving on stone.

GLYP'TODON, from *γλυφω*, I carve, and *ὄδους*, a tooth. An extinct gigantic race of quadrupeds, of the family of armadillos.

GLYR'TOTHECA, from *γλυφω*, and *θήκη*, a deposit. A place for the preservation of sculptured works.

GNAPHA'LUM, the Everlasting, or Cudweed. An extensive genus of plants. *Syngenesia—Polysperflua*. Name from *γναφαλον*, soft down or wool, in allusion to its downy surface. The Cotton-weed, Goldilocks, &c. are species. All warm and temperate parts of the world.

GNATHID'IA, from *γναθος*, a jaw. In *ornithology*, the lateral parts of the lower jaw, united to the posterior cranium, and meeting in an angle in front.

GNESIS, the name given by the German mineralogists to a schistose, primary rock, fundamentally the same as granite, but abounding in mica, to which it owes its slaty structure. It belongs to the metamorphic group, and is the most metalliferous of all the rocks. See **GRANITE**.

GNÓ'KE, *γνῶμη*. An imaginary being, supposed by the cabalists to inhabit the interior parts of the earth, and to whose care mines, quarries, &c. were committed.

GNÓMIC POETS, *γνῶμη*, sentence. Greek poets, whose works consist of short precepts and reflections.

GNÓMON, *γνῶμων*, an index. 1. The style of a dial.—2. A style erected perpendicular to the horizon, to find the sun's altitude by.—3. The index of the hour-circle of a globe.—4. A geometrical figure, formed by the two complements with either of the parallelograms about the diameter.

GNOMONIC PROJECTION. The representation of a hemisphere on a plane, touch-

ing it at the vertex, the eye being at the centre of the sphere.

GNOS'TICS, from *γνῶστικος*, knowledge. A name given to an old sect of Christians, from their pretensions to be more enlightened than others.

GNU, a species of antelope, common in Southern Africa. It is a lively and capricious animal.

GOS'BING. In *mining*, the refuse of the coal in coal-mines.

GOD'BOLD'S BALSAM, a nostrum consisting chiefly of simple oxymel.

GOD'FREY'S CORDIAL, a quack medicine made by infusing sassafras, seeds of caraway, coriander, and anise in water, and adding treacle and tincture of opium.

GOD'FREY'S SMELLING SALTS are prepared by re-subliming carbonate of ammonia with potash and some strong alcohol.

GODOW'N, a name used in the East Indies for a warehouse. It is a corruption of the Malay word *jadong*.

GODROO'N (French), a kind of inverted fluting or beading.

GOGGLES, a clumsy mechanical contrivance for the cure of squinting. The goggles are two cylindrical tubes, with thin plates of ivory, or the like, placed on the ends, perforated for the transmission of light.

GOG AND MAGOG. The names of two warriors mentioned in Scripture. Applied also to the pagan nations: also, the name of the huge warlike figures that adorn the Guildhall of London.

GOLD, the heaviest metal except platinum, sp. gr. 19.3. It is found in beds of quartz, sandstone, &c., and also in the beds of many rivers, particularly in Peru, in minute and irregular grains, which are known by the name of *gold-dust*. It is soluble in aqua regia and chlorinewater. Alloyed with one-twelfth of copper it forms *mint-gold* (gold of coins), and with one-fourth of copper it forms *jeweller's-gold*. In malleability, pure gold surpasses all other metals.

GOLD'BEATERS. In *entomology*, coleopterous insects remarkable for their beautiful golden green and cupreous colours. They form the genus *Cetonia* of Fabricius.

GOLD'BEATERS' SKIN, the intestine rectum of an ox, which goldbeaters place between the leaves of the metal while they beat it, whereby the membrane is rendered very thin, and made fit to be applied to cuts and small wounds.

GOLDEN NUMBER. In *chronology*, a number showing what year of the metonic or lunar cycle any year is. It is the remainder arising from the division of the number of the given year increased by 1. When it happens that 0 remains, then 19 is the golden number.

GOLDEN RULE. In *arithmetic*, a name for proportion, or the rule of three.

GOLDFISH, an elegant fish, the *Cyprinus auratus*, of the size of a pilchard, and thus named from its golden colour. It is a native of China, but is now kept throughout Europe in ponds, glass globes, and other vessels, by way of ornament.

GOLDLEAF, or **LEAFGOLD**, gold beaten into a thin film or leaf, varying in thickness and fineness, according to the purposes for which it is intended. The metal is first beaten on a block of marble, with hammers of polished iron, to the thinness of paper; it is then cut into pieces of about an inch square, placed between skins, and beaten thinner; divided again into squares, and again beaten until it has acquired the necessary degree of thinness. The finished leaves are put up into books made of single leaves of soft paper, rubbed over with a little chalk, to prevent adhesion, when it is ready for the gilder.

GOLD THREAD, or **SPUN GOLD**, is a flattened silver gilt wire, wrapped or laid over a thread of yellow silk, by twisting with a wheel and iron bobbins.

GOLF. A game with a ball and clubs, almost peculiar to Scotland.

GOLI'AH, the name given by Lambert to a genus of coleopterous insects remarkable for their size and beauty. Some of the species inhabit Africa and the East Indies, and others the tropical parts of America.

GOM'ARITES. In *ecclesiastical history*, the Calvinistic divines of the Church of Holland, in the 17th century: so called after Gomar of Leyden.

GOMPH'OSIS, γομφωσις, from γομφος, a nail. A species of immoveable connection of bones, in which one is fixed into another, like a nail in a board; e.g. the teeth in the alveoli of the jaws.

GOMU'TI, a species of palm, *Borassus gomutus*, growing in the Indian islands: called also *ejoo*. It is remarkable for a product which it yields resembling black horse hair, found at the insertion of the branches into the trunk, in a matted form. It is manufactured into cordage.

GONDOLA, a large barge, curiously ornamented, and navigated on the Venetian canals. It is usually rowed by two men, hence called *gondoliers*.

GON'FALON, } In *heraldry*, the banner
GON'FALON. } of the Roman Catholic Church, carried in the pope's army.

GONG-OONG, the *tam-tam* of the Chinese, a kind of cymbal made of a copper alloy (four copper and one tin).

GONIOMETER, from γωνία, an angle, and μέτρον, measure. An instrument to measure angles, especially of crystals. The simplest goniometer consists of a graduated brass semicircle A.A., and a pair of

proportional compasses B.B.B.B., moveable on the centre, and capable of being lengthened or shortened. The faces of the crystal are embraced by the exterior legs of the compasses, and the value of

the angle comprised between them may be read off upon the semicircle by the knife edge of the leg B.C.B. Dr. Wollaston's reflecting goniometer is, however, much more accurate and elegant than this, but is much more complex.

GOOGINGS, } certain clamps of iron
GOODINGS, } bolted on the stern-post of a ship, whereon to hang the rudder.

GOOSEBERRIES, the fruit of the gooseberry-bush (q. v.).

GOOSEBERRY-BUSH, a name common to the *Ribes grossularia*, which produces the rough gooseberry; and the *Ribes Uva-crispa*, which produces the smooth gooseberry.

GOOSE-NECK. In a ship, a piece of iron fixed on one end of the tiller, in which the laniard of the whip-staff or wheel-rope comes, for steering the ship; also an iron hook on the inner end of a boom.

GOOSE-WINGS (of a sail), the clues or lower corners of the main or fore-sail, when the middle part is furled. A sail set on a boom on the lee side of a ship is also called a *goosewing*.

GOR'DIAN KNOT. In *history*, was a knot made by Gordius, king of Phrygia, in the harness of his chariot, so intricate as to baffle every effort to untie it.

GOR'DIUS, the hair-worm. A genus of annelides of the abbranchian order. The body resembles a thread; and the hair-tail worm (*G. aquaticus*, Lin.), found in stagnant marshes, &c., is several inches in length, and almost as fine as a hair.

GORE. 1. In *heraldry*, an abatement consisting of two arched lines, meeting in

an acute angle in the middle of the fess point: it denotes a coward.—2. A piece of cloth or the like approaching to a triangle, but having the oblique angles rounded off, and forming or intended to form a part.

GOREM (Fr.), the throat. In *architecture*, another name for the moulding

termed *cyma-recta*.—In *fortification*, the entrance of a bastion, ravelin, or other outwork.

GORGED. In *heraldry*, bearing of a crown, coronet, &c., about the *gorge* or neck.

GORGET, Fr. *gorgette*, from *gorge*. 1. A piece of armour for defending the throat or neck.—2. An instrument, or rather two instruments, used in the operation of lithotomy: the *cutting gorget* is a sort of knife, and the *blunt gorget* is merely a sort of large directory for guiding the forceps in the operation.

GORGONE'IA (Gr.). In *architecture*, carvings of masks imitating the Gorgon's head.

GOROO'NIA, a genus of coralliferous polypi, characterised by having its axis enveloped by a bark so penetrated by calcareous granules as to dry upon the axis, and retain its colours, which are often very vivid and beautiful. The species live upon living animalcules.

GOS'SAMER, from *gossypium*. A fine filmy substance, like cobwebs, floating in the air in calm weather, especially in autumn. It is frequently seen on furze, and is supposed to be formed by a species of spider.

GOSSE'YUM, the Cotton-plant; a genus of seven, or according to Willdenow, ten, species. *Monadelphica*—*Polyandria*. Name *gossypium* is the Latin word for cotton, the root of which is the oriental name *gootin*. Some of the species, as the American, are herbaceous, others are shrubby; and one is called a tree, but it hardly deserves the name, except that it grows upon a single stem. It is a native of India, China, Egypt, and the western coast of Africa. See **COTTON**.

GOthic. In *architecture*, this term is used to denote the pointed style, supposed to have been invented by the Goths. Some, however, refer the origin of this style to India and Persia; and certainly there are instances of the occurrence of pointed arches in very ancient Mahomedan structures. The pointed arch was introduced into England towards the close of the reign of Henry I., but the introduction of the Gothic style as a whole was very gradual; and accordingly instances are found where pointed arches are mixed in the same building with those of the Saxon and Norman. The true commencement of the English Gothic is referred to the reign of Richard I.

GOUGE (Fr.), a round hollow chisel, used to cut holes, channels, or grooves, in wood or stone.

GOU'LARD'S CERATE, the compound cerate of lead.

GOU'LARD'S EXTRACT, a saturated solution of acetate of lead.

GOUT, Fr. *goutte*. A disease characterised by pain in the joints, especially of the

feet and hands, and, more particularly still, of the great toe.

GOUTY CONCRETIONS, called also *chalk-stones* from their appearance, are composed of uric acid combined with ammonia.

GOWLAND'S LOTION, an extract of bitter almonds, with admixture of corrosive sublimate, sugar, and alcohol.

GOVERNMENT. In *politics*, (1.) The body of the laws of a state, whether monarchical, aristocratical, or democratic. (2.) The body of men who conduct the executive in any country.

GOVERNOR. In *mechanics*, a contrivance connected with some machines for regulating their motion. It consists of an

upright spindle, set in motion by the machine. The two balls, suspended by rods, partake of the motion, and fly out by means of the centrifugal force, in proportion as the motion is rapid. In consequence of this the upper portion of the contrivance is elevated or depressed by every change in the speed of the engine; and in the steam-engine this motion is transferred to the throttle-valve by means of a lever, and thus regulates the supply of steam to the cylinders. Thus, if the engine is going too fast, the governor shuts the throttle-valve in part, and if too slow, it falls down and allows more steam to pass.

GOVERNOR-GENERAL OF INDIA. He exercises some of the most important rights of sovereignty, as declaring war, making peace, framing treaties, and to a certain extent, making laws.

GRACE. 1. In *music*, consists in giving due place to the decorative additions, and that easy, smooth, and natural expression of the passages which best conveys the beauties of the composition.—2. In the *fine arts*, equality arising from elegance of form and attitude combined.—3. At *meals*, the saying of a *grace* is a Jewish practice, and was sanctioned also by Jesus Christ.—4. *Days of grace*. In *commerce*,

are certain days allowed by merchants to the time set for the presentation of a bill.

GRACES, Lat. *gratiae*. In *mythology*, the three sister goddesses, Euphrosyne, Aglaia, and Thalia; attendants on Venus.—In *music*, ornamental notes attached to the principal ones, as appoggiaturas.

GRADATION, Lat. *gradus*, a step. In *painting*, the blending of tints.—In *music*, a diatonic succession of chords.

GRADATORY, Lat. *gradus*. In *mammalogy*, applied to the extremities of a quadruped which are equal, or nearly so, and adapted for progression on land.—In *ornithology*, the *pedes gradarii* are those in which the whole tibia is covered with feathers.

GRADIENT, a term indicative of the proportional ascent or descent of the several planes upon a railway. Thus an inclined plane 4 miles long, with a total fall of 36 feet, is described as having a gradient of 9 feet per mile. The term is also used to designate an inclined plane having a small inclination.

GRADUATE, as scholar who has taken his degrees in a university.

GRADUATED. In *ornithology*, when the quill feathers of the tail regularly increase in length.

GRADUATION. In *astronomy*, the division of circular arcs into degrees, minutes, &c.

GRADUATOR. 1. An instrument for dividing any line, right or curved, into equal parts.—2. An apparatus invented in Germany for quickening the acid fermentation in the process of vinegar making. It is an oak tub about 6 feet high, and 3 feet wide at bottom, and furnished with a perforated inner cover, through which the vinous liquor descends in drops into the interior, which is filled with chips of beechwood, over which the liquor becomes diffused before it finally descends to the bottom to be run off. By this means a vastly large surface of the liquor is exposed to the action of the atmosphere, and the process of vinegar making much facilitated.

GRAFTING. In *horticulture*, the process of inserting a shoot or scion of one tree into the bark of another, called the *stock*, so as to make it yield fruit of the same nature with that of the tree from which the *graft* was taken. By this means different kinds of fruits, pears, apples, &c., are multiplied.

GRAIN, Lat. *granum*. A term denoting,

1. All seeds of grasses, but especially restricted to corn, as wheat, rye, barley, oats, &c.—2. A weight, the 24th part of a pennyweight troy.—3. The term *grain* is used in describing the grain-like appearance of the surface of solids, as stones, metals, &c., and also the fibrous texture of wood, &c. Hence *close-grained*, *cross-grained*, &c.—4. *Grains* is a name for the husks of malt after brewing, or of any grain after distillation.—5. *Grains of Paradise* (the amomum grana Paradisi), a species of Mellagatta pepper, imported from the coast of Guinea.

GRAINER, the lixivium obtained by infusing pigeon's dung in water, used for giving flexibility to skins in the process of tanning.

GRALLATORUM, } The waders. An order
GRALLÆ, Lin. } of aquatic birds, known by the nudity of the lower parts of the legs, and most generally by the height of their tarsi; two circumstances which enable them to enter the water to a certain depth without wetting their feathers, to wade through it, and seize fish by means of their neck and bill, the length of which is usually proportioned to that of their legs. The ostrich, cassowary, bustard, heron, stork, wood-pelican, spoonbill, water-hen, and jacana are examples. Epithet *grallæ*.

GRAMEN, the Latin word for grass. The *gramina* form the fourth order in Linnaeus's system, and comprehend nearly a twentieth of the vegetable kingdom.

GRAMINIVOROUS, from *gramen* and *voro*, to devour. An epithet applied to animals which subsist wholly on vegetable food, to distinguish them from *carnivorous* animals, which subsist on flesh.

GRAMMAR, γραμματικὴ τέχνη, from *γραμμα*, a letter. A system of general principles and particular rules for speaking or writing a language. Also a book, containing these principles and rules.

GRAMMARIANS, a term used by the classic ancients, to distinguish those who were learned in any art or faculty.

GRAMME, a French weight, equal to 15.444 grains troy.

GRAMPUS, Fr. *grampoise*, a contraction of *grand-poisson*, a fish. The *Delphinus orca*, Lin., which grows to the length of 25 feet, and is remarkable for its voracity.

GRAND, Fr. In *fine arts*, applied to the highest degree of majesty and dignity in a work of art.

GRANDEZ, Span. *grande*. The highest title of Spanish nobility.

GRAND JURY. In *law*, the jury which finds bills of indictment against offenders. These, when a *true bill* is found, are afterwards tried before a *petty jury*.

GRAND SEIGNOR. The title of the Turkish sultan.

GRANGE, Lat. *granium*. In *law*, a farm having the necessary barns, stables, and other house accommodation.

GRAN'ITE, Fr. *granit* or *granite*. A primary rock, composed of felspar, quartz, and mica, each crystallised and cohering, but without any base or cement. Thus named from its granular appearance. The colours of the felspar are white, red, grey, and green. The quartz is light grey, and the mica dark. Granite is a plutonic or igneous rock, and forms the basis of the stratified rocks.

GRAN'ITEL, } In *mineralogy*, a name
GRAN'ITELL, } given by Kirwan to a binary aggregate of any two of the following minerals: felspar, mica, shorl, quartz, garnet, steatite, hornblende, jade.

GRANIT'IC, composed of grains or crystals united without cement, as in granite and some sandstones. A *granitic aggregate* is a granular compound, consisting of two, three, or four simple minerals, among which only one of the essential ingredients of granite is present.

GRAN'ITINE, a granitic aggregate of three mineral constituents, one or more of which differ from those which compose granite.

GRAN'ITITE, } Prismatic garnet, the
GRN'ITITE, } staurotide of Haüy. A reddish-brown mineral, occurring in primitive rocks. Its form and infusibility distinguish it from the garnet.

GRANIV'OROUS. Animals which feed on grain.

GRANT. In *law*, a gift in writing, of such a thing as cannot be passed orally. The person to whom the grant is made is called the *grantee*, and he by whom it is made is the *grantor*.

GRAN'ULAR. In *mineralogy*, an epithet for minerals composed of crystalline grains, irregularly but intimately joined together without any agglutinating cement, as in granite and granular limestone.

GRAN'ULATED. 1. Having a structure resembling grains.—2. Formed into small grains, as *granulated tin*.—3. Beaded; having small roundish elevations placed in rows. Applied to roots of plants.

GRANULA'TION. 1. In *chemistry*, &c. the method of dividing metallic substances into grains or small particles, to facilitate their combination with other substances, &c. Thus tin, &c. is *granulated* by dropping it, while in a melted state, into water: hence called also *dropped tin*.—2. In *surgery*, the little grain-like fleshy bodies which form on the surfaces of ulcers and suppurating wounds, and serve both for filling up cavities, and bringing nearer together and uniting their sides, are called granulations.

GRAPE'SHOT, a quantity of small shot confined in a bag, forming a sort of

cylinder, whose diameter is equal to that of the ball adapted to the piece of ordnance from which the bag is to be fired.

GRAPH'IC GRANITE, a variety of granite composed of felspar and quartz, so arranged as to produce an imperfect laminar structure. When cut at right angles to the alternations of the constituent minerals, broken lines, like Hebrew characters, present themselves: whence its name, from *γραφω*, to write.

GRAPH'ITE, from *γραφω*, to write. A substance better known by the names of black lead and plumbago. It is a carburet of iron (carbon 92, iron 8,) of a steel-gray colour, or nearly iron-black. Sp. gr. about 2.

GRAPHOM'ETER, from *γραφω*, to describe, and *μετρον*, measure. A mathematical instrument called also a *semi-circle*. Its use is to observe any angle, whose vertex is at the centre of the instrument in any plane, and to find how many degrees it contains.

GRAP'NEL, } a small anchor, fitted with
GRAP'LING, } four or five flukes or claws, used to hold boats or small vessels. A grappling-iron used to seize and hold one vessel to another in an engagement, and particularly requisite in fire-ships, is called a *fire-grappling*.

GRAU'WACKE, } The name given to a
GRAY'WACKE, } group of rocks forming
GREY'WACKE, } the lowest members of the secondary strata, from Germ. *grau*, grey, and *wacke* (q.v.). Grauwacke is a coarse slaty rock, containing granular fragments of other rocks. When these are very minute, the grauwacke passes into common slate; when they are numerous, and somewhat larger, it becomes sandstone or gritstone; when they are large, and rounded, it may be called ancient conglomerate: old redstone is a grauwacke coloured by accidental admixture of oxide of iron. The grauwacke system of rocks is highly metalliferous.

GRA'VEL, Fr. *gravelle*, *gravier*. 1. In *geology*, &c. a mass of small water-worn stones, larger than particles of sand, but often intermixed with them.—2. In *medicine*, small calculous concretions found in the kidneys and bladder.

GRA'VER, or BURIN, a tool used in engraving.

GRAVIM'ETER, a name given by Guyton to an instrument for measuring specific gravities. He adopts this name in preference to hydrometer and areometer, because these terms are grounded upon the supposition that the liquid is always the thing weighed.

GRAVING. In *nautical language*, see BREAMING and DOCK.

GRAVITA'TION. The name given in *physics* to the action which one body exercises on another by the power of gravity. See ATTRACTION.

GRAVITY. A term used in *physics* to denote the cause by which all bodies move towards each other, unless prevented by some other force; and which operates directly as the mass, and inversely as the square of the distance. Weight is the measure of gravity. *Specific gravity* of a body is the ratio of its weight to that of an equal volume of water assumed as a standard.

GRAZIOSO (It.), in *music*, signifies elegantly and gracefully.

GREASE. In *farriery*, an inflammation and swelling of the heels of a horse, with secretion of an oily matter.

GREAVE, Fr. *grève*. A piece of armour defending the shins.

GREAVES, } The sediment of melted
GRAVES, } tallow.

GREEK FIRE, a formidable combustible composition, employed by the Constantinopolitan Greeks of the middle ages against the Mahometans. Its composition was kept a secret, and is not now certainly known, but it is supposed to have been a compound of asphaltum, sulphur, and nitre.

GREEK CHURCH. It comprises the great bulk of the Christian population of Russia, Greece, Moldavia, and Wallachia, all acknowledging the patriarch of Constantinople as their head.

GREEK ORDERS. In *architecture*, these are the Doric, Ionic, and Corinthian, in contradistinction to the two Latin orders, the Tuscan and Composite.

GREEN-CLOTH, a court of justice, held in the counting-house of the Queen's household, composed of the lord steward and the officers under him. It has jurisdiction of the court-royal, which extends every way 200 yards from the gate of the palace. It takes its name from the green cloth spread over the board at which it is held.

GREEN-EARTH, a variety of talc of a pleasant green colour, which occurs in vesicular cavities in amygdaloid, in England and Scotland. It is the mountain green of artists in water colours, and when ground with oil, is employed as a paint.

GREEN PAINTS or PIGMENTS. These are prepared by admixture of blues and yellows. *Brunswick green* is a mixture of carbonate of copper with chalk, lime, &c. *Frise green* is an ammonio-sulphate of copper. *Mittisgreen* is an arseniate of copper. *Mountain green* is a hydrated carbonate of copper. *Sap green* is the inspissated juice of buckthorn berries. *Scheele's green* is arsenite of copper. *Verona green* is a variety of green earth.

GREEN ROOM. In *theatres*, the actors' retiring room, so called from being painted or decorated in green.

GREEN VITRIOL, crystallised sulphate of iron: the crystals of which are green.

GREGO'RIAN TELESCOPE, the first and

most common form of reflecting telescope, invented by Professor James Gregory.

GREGO'RIAN YEAR, the Julian year corrected by the abatement of three bissextiles every 400 years, as allowance for the 11 minutes which the Julian year exceeds the solar year. This reformation was effected by Pope Gregory XIII., A.D. 1582, when 10 days were taken out of October to make the equinox fall on the 21st of March, as it did at the time of the general Council of Nice, A.D. 325. The Gregorian year still requires correction to the extent of 80 minutes every 400 years.

GRENA'DE. In *war*, a small bomb or shell of metal about 2½ inches diameter, filled with fine powder, and furnished with a fusee, which being lighted, the shell is thrown by the hand among the enemy: hence called most commonly *hand-grenade*, hence *grenadier*.

GREY-WEATHERS. In *geology*, large boulders of siliceous sandstone, found in various localities.

GRIFFIN, } Lat. *gryps*, *gryphus*. An
GRIFFON, } imaginary animal, said to have been generated between an eagle and a lion. It is represented on ancient medals with four legs, wings, and a beak, and is still borne in coat-armour.

GRILLAGE, a term applied to the sleepers and cross-beams supporting a platform, upon which some erections are carried up, as piers, in marshy soils, whereby an equal bearing is given to the foundation.

GRIPE. In *nautical language*, 1. The piece of timber called otherwise the *fore-foot*, faced against the lower piece of the stern from the foremost end of the keel, and joining with the knee of the head: used to defend the lower part from injury.—2. The compass of a ship's stern under water.—3. To *gripe* is to run to windward.—4. *Gripes* are an assemblage of dead-eyes, ropes, and hooks, fastened to ringbolts in the deck to secure the boats.

GRIT or GRITSTONE, a coarse siliceous sandstone, sometimes called mill-stone grit, from the circumstance of some quarries of it being worked for mill-stones. It affords also good building stones.

GROAT, a silver coin struck in the reign of Edward III., and so named from its being four times greater than the silver penny, the only silver coin previously in use. The term means money in amount equal to 4d.

GROATS, decorticated oats.

GROG, some spirituous liquor, as rum or whisky, diluted with water.

GROIN. 1. In *architecture* (see *GROINED ARCH*).—2. In *engineering*, a framework, usually of wood, constructed across a beach between high and low water-mark, for the purpose of retaining the shingle already accumulated, or to obtain more from the sea.

GROINED ARCH, an arch formed by the intersection of two semi-cylinders or arches: the point of juncture is called a *groin*. It is the most stable of all the arches.

GROINED CEILING, a ceiling formed of three or more curved surfaces, so that every two may form a groin, and all the groins terminating at one extremity in a common point.

GROMMET, a ring or small wreath formed by laying a strand of a rope three or four times round, used to fasten the upper edge of a sail to its stay.

GROUNINGENISTS. In *ecclesiastical history*, a subdivision of Anabaptists.

GROOVE. In *architecture*, a sunken rectangular channel.

GROS, a French weight of 59·07 troy grains.

GROSS. 1. The number of 12 dozen.—2. *Gross-weight* is the whole weight of goods, with the packing bags, boxes, &c., for which allowance of tare and tret is made.—3. In *gross* is a law term, signifying absolute or independent. Thus an *advocaton in gross* is one separate from the manor.

GROSSBEAK, a bird, the *Loxia enucleator*, Lin. (see *CORYTHUS*), which closely resembles the crossbill in its habits. It is found in the north of both continents, and takes its name from its peculiar beak. In North America it is called popularly the Virginia nightingale.

GROSULARE, an asparagus-green variety of dodecahedral garnet found in Siberia, embedded in a pale greenish claystone along with Vesuvian.

Grotto, Fr. *grotte*; an artificial cavern or cave. The term is sometimes also used for a natural cave of small size.

GROUND. 1. In *painting*, the surface upon which the figures and other objects are represented, and which retains the original colour.—2. In *etching*, the composition spread upon the surface of the plate to be etched, to prevent the acid from attacking any parts except where the ground is opened by the etching-needle.

GROUND-JOINTS. In *carpentry*, joints supporting the floor immediately above the ground.

Grounds, a name given by joiners to narrow pieces of wood built into the foundations of walls, at the subbases of rooms, to secure architraves and support the walls over apertures.

GROUND-SILL, the lowest horizontal timber of a wall.

GROUND TACKLE. In *nautical language*, a general name for all ropes and furniture belonging to anchors.

GROUPE. 1. In *painting and sculpture*, is an assemblage of figures of men, beasts, fruits, or the like, which have some ap-

parent relation to each other.—2. In *music*, one of the diminutions of long notes, which in working form a sort of group, knot, or bush.

GROUPED COLUMNS, are when three, four, or more columns are put together on the same pedestal: when two are placed together, they are *coupled*.

GROU'PING. In *painting and sculpture*, the art of composing or combining the objects of a picture or piece of sculpture.

GROUT, a mortar used in brick and stone work, called also *grouting*. It is composed of quick lime and fine sand, and is employed so thin as to be poured into the upper beds and internal joints of the work.

GROWING. In *nautical language*, implies the direction of the cable from the ship towards the anchors.

GRUINAL'ES, from *grus*, a crane. A natural order of plants, of which the geranium or crane's-bill is the type.

GRUS, the crane. A genus of birds. Order *Grallatoria*: family *Cultrirostres*. The cranes are distinguished from the herons and storks by their straight but slightly cleft beak. The trumpeters of South America and the crowned cranes of Africa belong to the genus.

GRYLLO-TALPA, the mole-cricket (*Gryllus vulgaris*, Lin.), separated from the genus *Gryllus*, Lin., by Latreille. This insect is very well known to gardeners, &c., for the mischief it effects upon the roots of plants.

GRYL'LUS. The name given by Linnaeus to an extensive genus of saltatorian orthoptera, comprising the various insects commonly termed grasshoppers, crickets, katy-dids, &c., but now variously subdivided.

GUAI'AC, a resin which exudes from the trunk of the *Guaiacum officinale*, a tree common in the West India islands and the warmer parts of America.

GUAI'ACUM, a genus of trees of two species. *Decandria—Monogynia*. Name from Span. *Guayaco*, which is formed from the Indian *Hoazacum*. This genus affords the resinous substance called *guaiac*, and the wood called *lignum vite*. Jamaica, Hayti, New Spain, &c.

GUAI'NO, a substance found upon the coasts of Peru, in the islands of Chinceni, &c., forming deposits of 50 or 60 feet thick, and of considerable extent. It appears to be accumulations of the excrements of innumerable flocks of birds, especially herons, and is found an excellent manure for Indian corn, &c.

GUAR'DANT. In *heraldry*, having the face turned towards the spectator.

GUAR'DIAN. In *law*, one appointed by will or otherwise to take charge of the estate and education of a minor, or other person not of sufficient discretion to manage his own concerns, and who is called

the *ward*. In *ecclesiastics*, *guardian of spiritualities*.—The trustee of the spiritual administration of a see during a vacancy. *Guardian of the temporalities*, the trustee of the goods and profits of the same.

GUD'GEON. 1. In *mechanics*, the extremity of a horizontal shaft or axle when it turns in a collar.—2. In *ichthyology*, a small fish.—3. *Gudgeons* in a *ship*, are the eyes driven into the stern-post to hang the rudder on.

GUMBRES, infidels. The sectaries of the Persian religion who worship fire.

GUELPH, order of. An Hanoverian order of knighthood.

GUELFS and **GHIS'ELLINES**. In *Italian history*, two political parties in the middle ages, whose feuds long distracted Italy.

GUERRILLA, Span. *little war*. The plan of harassing the French armies by the constant attacks of independent bands.

GUIDE. In *music*, the leading part in a canon or fugue.

GUILD, Sax. *geld*, *gield*, *gild* or *gyld*. A society or company associated for some purpose, particularly for carrying on commerce. The *merchant-guilds* of our Saxon ancestors answer to our modern corporations. They were licensed by the king and governed by their own laws.

GUILD-HALL, the great court of judicature in London.

GUILLOCHE (Fr). In *architecture*, an ornament composed of continuous curved fillets.

GUILLOTIN', a machine for beheading, introduced into France during the Revolution. It is similar to the *maiden*, formerly used in Scotland, and the *mannara*, used in Italy for beheading criminals of noble birth. It was proposed (not invented) by Guillotin to the French Convention, as being a less barbarous mode of decapitation than the axe previously used: hence the name.

GUIN'EA, an English gold coin first struck in the reign of Charles II., and current till lately for 1*l*. 1*s*. It took its name from being made of the gold brought from Guinea on the coast of Africa.

GUIN'EA-WORM, the *Filaria medinensis*, Gm., which is very common in hot countries, and often insinuates itself under the skin of man, causing intense pain. It is often of great length, but is seldom thicker than the barrel of a pigeon's quill.

GUITAR', Span. *guitarra*. A musical stringed instrument larger than a violin, and played with the fingers.

GULES. In *heraldry*, a corruption of the French word *gueules*, which in this sense means red. It is marked in engraving by vertical straight lines.

GULLIES, a term sometimes applied to iron tram-plates or rails.

GU'LO. In *zoology*, the generic name of the *gluttons*, placed by Linnæus among the bears. The ferrets of South America and the Wolverine of North America are placed along with the common glutton (*Uroo gulo*, Lin.) by Cuvier, as are also the grison and taira.

GUM, Lat. *gummi*. The muckage of vegetables, usually transparent when dry, tasteless and adhesive; soluble in water, and insoluble in alcohol and oil; coagulates by the action of weak acids, and in watery solution capable of acid fermentation. The common gums are those of the plum, the peach, and cherry trees. *Gum-arabic* flows from the acacia of Egypt, Arabia, &c. *Gum-senegal* is a variety of gum-arabic. *Gum-tragacanth* or *adragant* is produced by a species of *as-tragalus* common in oriental countries. The name *gum* was formerly applied indifferently to all concrete vegetable juices, hence the names gum-copal, gum-sandarach, and other gums designated generally by the name of gum-resins. Caoutchouc also has been named *gum-elastic* and *elastic gum*.

GUM'-RESIN, a vegetable juice consisting of gum and resin combined. Gum-resins rarely flow spontaneously from plants, but are mostly extracted by incision. They are mostly opaque and brittle, and partly soluble in water, and partly in alcohol. The principal gum-resins are aloe, gum-ammoniac, assafoetida, bdellium, euphorbium, galbanum, gamboge, guaiac, myrrh, olibanum, opoponax, sarcocolla, scammony, and styrax.

GUN'-BOAT, a boat or small vessel fitted to carry one or two guns at the bow.

GUN'-METAL, an alloy of copper and tin.

GUN'NER, the first of the three warrant officers in a king's ship. He has charge of the ordnance and ammunition.

GUN'NERY, a military art denoting the management of guns and mortars.

GUN'NY, Bengalese, *guni*. A strong coarse sackcloth made in Bengal from the fibre of two species of plants. Also a weight: of cinnamon, 84 lbs.; of saltpetre, 140 lbs.

GUNPOWDER, is a mixture of nitre, sulphur, and charcoal.

GUNPOWDER-PLOT. The celebrated conspiracy of certain disappointed Roman Catholics to blow up king James I. and parliament by gunpowder, detected on the 4th Nov. 1605.

GUN'-ROOM, an apartment in a ship occupied by the gunner, &c. as a mess-room.

GUNTER'S CHAIN, the chain in common use for measuring land, so called from E. Gunter, its inventor. The length is 66 feet, divided into 100 links of 7·92 inches each, so that 1000 square chains make an acre.

GUN'TER'S LINE, a logarithmic line,

usually graduated upon scales, sectors, &c., also called the *line of numbers*, and *line of lines*.

GUNTER'S QUADRANT, an instrument used to find the hour of the day, the sun's azimuth, &c. It is a sort of stereographic projection on the plane of the equinoctial, the eye being supposed one of the poles, so that the tropic, ecliptic, and horizon, form the arcs of circles.

GUNTER'S SCALE, a large plane scale having various lines upon it, both logarithmic and natural, relating to trigonometry, navigation, &c. It is chiefly used by seamen, and called by them *the Gunter*.

GUN'WALE, the uppermost wale of a ship, or that piece of timber which reaches on either side of the ship from the half-deck to the fore-castle, being the uppermost bevel which finishes the upper works of the hull.

GUR'RY, a native fortification in India, generally consisting of a wall flanked with towers.

GUS'TO GRAN'DO. In *painting*, an Italian phrase equivalent to the *beau ideal* of the French, and the *great style* of the English.

GUT'TA (Lat.), a drop. The *gutta rosea* is a red or pimples face. The *gutta serena* is a disease of the eyes, otherwise called Amaurosis (q. v.). The drops of a Doric frieze are called *gutta*.

GUTTER-LEDGER, a cross bar laid along the middle of a large hatchway, to support the covers.

GUY, Sp. *guia*, a guide. A rope used to keep a heavy body steady while hoisting or lowering.

GY'RING. In *navigation*, the shifting of a boom-sail from one side of the mast to the other.

GYMNASIUM, *γυμνασιον*, from *γυμνος*, naked. A name first given by the Spartans to the public building where the young men exercised themselves, naked, in running, leaping, wrestling, throwing the discus, &c. Gymnasia were afterwards very common in Greece, and were imitated and improved at Rome. Since that time athletic exercise has assumed the form of a science, under the name of *gymnastics*. The *gymnasiarch* was the officer who provided the oil and other necessities for the gymnasium.

GYMNETRUS, a genus of fish of the Tenioid family. The Arctic ocean produces two species, called in Norway the *king of the herrings*, one of which, about 10 feet long, being usually found preceding or accompanying shoals of that fish.

GYMNOCAR'PI, from *γυμνος*, and *καρπος*. Fungi of fleshy texture, bearing their seeds in an open receptacle.

GYMNODONTES, a family of fishes: order *Plectognathi*. Name from *γυμνος*, naked, and *ὀδους*, a tooth, the jaws, instead of

teeth, being furnished with an ivory substance internally divided into laminae, whose *ensemble* resembles the beak of the parrot, and which in fact consists of two teeth united. The Diodon, Triodon, and Tetraodon are genera.

GYMNOSOPHIST, from *γυμνος*, naked, and *σοφιστης*, a philosopher; a naked philosopher. The gymnosophists are a class of Indian devotees, thus denominated from their going barefooted and with little clothing. They affect to place the chief happiness of man in a contempt of the pleasures of sense.

GYMNOSPER'MIA, from *γυμνος*, naked, and *σπέρμα*, seed. An order of plants of the class *Didynamia*, embracing such as have added to the didynamical character four naked seeds.

GYMNOTUS, the *electrical eel* (q. v.). A genus of anguilliform fish. The name *gymnotus* is a contraction of *gymnonotus* (bare-back), applied by Artidi to these fishes.

GYNÆCIUM (Gr.). In *ancient architecture*, the portion of a Grecian house set apart for the female part of the family.

GYNÆOC'RACRY, *γυνή*, and *κρατία*, to govern. A state in which women are allowed to govern.

GYNAN'DRIA, from *γυνή*, a female, and *ανδρ*, a male. The name of the 20th class of plants in the sexual system of Linnæus, comprehending those which produce hermaphrodite flowers, the stamina of which grow upon the pistil so that the male and female organs are united, and do not stand apart as in other hermaphrodite flowers. Epithet *gynandrian*.

GY'NOPHERE, *γυνή*, and *φέρω*, to bear. In *botany*, the stalk upon which some ovaria are seated.

GYPSIES, corrupted from "Egyptians." A nation of vagrants, whose principal occupations are fortune-telling and thievery.

GYPSINUM METALLUM, the lapis specularis, used by the ancients for windows, as glass is in modern times.

GYPSUM, from *γυψος*, lime. A native sulphate of lime, from which plaster of Paris is obtained by calcination and slaking with water. It contains 21 per cent. of water. See ALABASTER, SELENITE, and ANHYDRITE.

GYRI, *γυγος*, circle. In *mammalogy*, the annular series of scales in the tails of certain quadrupeds.

GYRINUS, the *whirler* or *water-flea*. A genus of coleopterous insects belonging to the hydrocantharous tribe. Name from *γυγωω*, to turn round, which characterises the motion of the insect on the surface of the water.

GYROCAR'PUS, a genus of plants which

produce a winged fruit, which when thrown into the air, whirls round 'in a peculiar manner: whence the name from *γυγος*, to turn round, and *καρπος*, fruit.

GYROGONITE, from *γυγος*, curvus, and *γενος*, genus. Fossil seed-vessels of the *Chara hispida*, found in fresh-water deposits, and at one time regarded as microscopic shells.

GYROMANCY, divination by drawing a circle and walking round it.

H.

H, the eighth letter of the English alphabet, formerly stood as a numeral for 200, and with a dash over it for 200,000.—In *music*, *h* is the seventh degree in the diatonic scale and the twelfth in the chromatic.

HAAM, a measure. See AAM.

HAARKIES (Ger.), capillary pyrites in very delicate acicular crystals.

HA'BEAS CORPUS (Lat.), "have the body." A writ of various uses, and of different importance; but the most celebrated is the *habeas corpus ad subjiciendum*, which a man who is, or supposes himself to be, aggrieved by unjust imprisonment, may have out of the Queen's Bench, directed to the person detaining him, and commanding him to produce the prisoner, and bring the prosecution to open trial, instead of prolonging his imprisonment. This writ is founded upon common law, and not only protects the citizen from unlawful imprisonment at the suggestion of the civil officers of the crown, but also against groundless arrests at the suit of individuals. It is secured by many statutes, particularly that of 31 Charles II., which is by distinction called the *Habeas Corpus Act*.

HABERE FA'CIAS POSSESSIONEM. In law, a writ, which lies where one has recovered a term of years, in action of ejectment, to put him into possession.—*Habere facias seisinam*, a writ to give seisin of a freehold estate recovered by ejectment or other action.

HABERGEON, Ger. *hals*, the neck, and *bergen*, to defend. An ancient piece of defensive armour, descending from the neck to the middle, and formed of little iron rings or meshes linked together.

HABITAT, contr. of *habitation*. A term used by naturalists to denote the natural abode or locality of an animal, or the nature of the situation in which a plant grows.

HACK'ING. In *building*, an objectionable mode practised by workmen when stones of a proper size are scarce, of completing a course of a wall. It consists of dividing the course into two, and building with stones of half size.

HACK'LE, an instrument for combing flax or hemp, to separate the broken parts of stalks from the fibre.

HADZ. In *mining*, the dip or deviation from the vertical, of any mineral vein; also the steep descent of a shaft.

HADJ (Arab.), the Mahomedan pilgrimage to Mecca and Medina; whence *Hadji*, a pilgrim, and *Hedjaz*, the holy land.

HÆM'ATITES, from *αἷμα*, blood. A species of iron ore, called bloodstone from its colour, or perhaps from its being used as a medicine in cases of hæmorrhages, fluxes, &c.

HÆMATOC'LE, from *αἷμα*, blood, and *κληη*, a tumour. A swelling of the scrotum or spermatic cord, proceeding from or caused by blood.

HÆMATOID, from *αἷμα*, blood, and *ειδος*, like. An epithet of a peculiar form of malignant tumour.

HÆMATOLOG'Y, from *αἷμα*, blood, and *λογος*, discourse. The doctrine of the blood.

HÆMATOSINE, from *αἷμα*, blood. The colouring matter of the blood.

HÆMATOX'YLINE, the colouring principle of logwood (*hamatoxylon*).

HÆMATOX'Y'LOX, } the logwood-tree. A
HÆMATOX'Y'LUM, } genus. *Decandria—*
Monogynia. Name from *αἷμα*, blood, and *ξύλον*, wood, on account of its red colour. One species, South America.

HÆMO'PTOE, } from *αἷμα*, blood, and
HÆMO'PTYSIS, } *πτυνω*, to spit. A spit-
ting of blood with cough.

HÆM'ORRHOGE, from *αἷμα*, blood, and *εἶσσω*, to break out. A flux of blood by rupture of some vessel.

HÆM'ORRHOIDS, from *αἷμα*, blood, and *εἶω*, to flow. A peculiar disease, the bloody piles.

HERESIMA'CHÆ, from *αἵρεσις*, and *μαχομαι*, I fight. Persons who have written against heresy.

HAGIOG'RAPHA, from *ἅγιος*, holy, and *γραφω*, to write; sacred writings. The Jews divided the books of the scriptures into three parts: (1.) The *Law*, contained in the five books of Moses; (2.) The *Prophets*, or *Nevim*; (3.) The *Cetuvim* or *writings*, by way of eminence, and called by the Greeks *Hagiographa*, now adopted into the English. This class comprehends the Psalms, Proverbs, &c.

HAIL, } Sax. *hagel*. Irregular
HAILSTONES, } masses of frozen vapour more concentrated than snow, descending from the atmosphere like frozen rain. Hail is supposed to be formed in the higher regions, where the cold is greatest, but become larger in descending through

the humid layers of the air, whose vapour is suddenly condensed by the contact of a frozen body, and clusters round the spherules, forming masses often of very large size and weight.

HAIDIN'GERITE, a mineral sulphuret of antimony, iron, and zinc.

HAIR PENCILS, are small brushes used in painting. The name is restricted to those made of the fine hairs of the miner, marten, badger, polecat, &c., and mounted in quills or white iron tubes.

HAIR'BREADTH, a measure of length; the forty-eighth part of an inch.

HAKE, a fish. The *Merlucius vulgaris*, Cuv., Yarr., or *Gadus merlucius*, Penn., very common on the west coast of England, and in the Bay of Galway.

HAL'BERD, a military weapon. It is a

HAL'BERT, a sort of spear with a cross piece of steel having a cutting edge at one extremity, and a sharp bent point at the other, with a shaft about 6 feet long, formerly carried by sergeants of foot and artillery.

HAL'CYON DAYS. A name anciently given to the seven days that precede and follow the winter solstice, when the weather was very calm. The expression now signifies days of peace and tranquillity.

HALF-BREADTH PLAN. In *naval architecture*, the horizontal or floor plane of a ship. The base is the section made by the horizontal surface of the water and the outside surface of the ship, called the *upper or load-water line*.

HALF-MARK, a noble, or 6s 8d.

HALF-MOON. In *fortification*, an outwork having two faces, and a gorge in the form of a half-moon.

HALF-PIKE. Among *seamen*, the board-ing-pike, thus named from its shortness.

HALF-TIDE DOCK, a basin connecting two or more docks, and communicating with the entrance basin.

HALIBUT, a fish; the *Hippoglossus vulgaris*, Cuv. Yarr., a native of the south seas, where specimens weighing 500 lbs. have been taken. It is frequently met with on the east coast of Scotland, and, in July and August, specimens are caught in the Forth of 18 inches long, and are sold under the name of halibut turbot, and often under the name of turbot.

HALICORE, the maid of the sea, called also siren, sea-cow, &c. A genus of herbivorous cetacea of one species, the *H. dugong*, Ill. It inhabits the Indian Ocean.

HALI'OTIS, the sea-ear. A genus of univalve sea-shell inhabited by a limax. Name from *ἄλς*, the sea, and *οὐρ*, an ear. (order, *Scutibranchiata*), on account of its shape being flat, having a small spire and a large aperture. Fossil specimens are rare.

HALITHE'A, a genus of Articulata: order *Dorsibranchiata*; separated from the genus *Aphrodita*, Lin., by M. Savigny. A

species found on the coasts of France, the *A. aculeata*, Lin., is, in respect of colours, one of the most splendid of all animals.

HALL, Sax. *heal*. In *architecture*, a large room for the transaction of public business; the entrance of a dwelling-house; an unendowed college. Also, among dissenters in Scotland, the annual courses of lectures for the instruction of students in divinity.

HALL'LIARDS, from *hale* or *haul*, and *yards*. Ropes or tackle usually employed in hoisting and lowering sails on their respective masts.

HALLUCINA'TION, from *hallucinator*, to err. A depraved imagination amounting to a disease.

HALO, (Lat.) from *ἅλως*, a circle. A circle appearing about the body of the sun, moon, or other heavenly body, called also *corona* or *crown*. Halos are caused by vapour in the air.

HALOGENE, from *ἅλς*, sea-salt, and *γενναίω*, to generate. A term employed by Berzelius to denote substances which form saline compounds with metals; it comprehends chlorine, bromine, iodine, fluorine and cyanogen.

HA'LOID, from *ἅλς*, sea-salt, and *είδος*, like. A compound of a saline nature, consisting of a metal and a halogenous body. The *haloids* or *haloid-salts* comprehend the whole series of metallic chlorides, iodides, bromides, fluorides, and cyanurets, which are all analogous in constitution to sea-salt (*chloride of sodium*).

HALTERES, *ἅλτηρες*. The poisers or balancers of insects, so named from their supposed use in adjusting the centre of gravity when the insect is flying. Halteres are only found in dipterous insects; they are cylindrical filaments, two in number, one on each side of the thorax, answering to the second pair of wings in insects which have four wings.

HAMADRY'ADES, certain fabulous deities of antiquity, feigned to live and die with the trees to which they were attached; hence the name from *ἄμειν*, together, and *δένος*, a tree.

HAMLET, Sax. *ham*, a small village. In *law*, a portion of a village or parish.

HAMMER BEAM, a beam in a gothic roof, not extending to the opposite side.

HAM'MOCK, a sailor's bed.

HA'MOSE, } Lat. *hamosus*, hooked: ap-

HA'MOUS, } plied to seeds, &c., of plants.

HAM'ULE, Lat. *hamulus*, a little hook: applied in anatomy to any hook-like process.

HAN'APER, Norm. *hanap*, a hamper. An office in Chancery, under the direction of a master, whose clerk receives the fees due to the crown for charters, patents, commissions, and writs. The hanaper was used in ancient days by the king.

of England for holding and carrying with them their money, as they travelled from place to place. It was a kind of basket or *fuscus*, and hence came to be considered the king's treasury.

HANCIES. In *architecture*, the ends of elliptical arches, which are arcs of smaller circles than the scheme or middle part of the arch.

HAND, a measure of four inches, used in taking the height of horses.

HAND/BREADTH, a measure of three inches; a palm.

HAND/CUFFS, an instrument for preventing a malefactor from using his hands. It consists of iron rings for the wrists, with a connecting chain, or simply a short iron bar.

HAN'DLING. In *painting*, management of the pencil by touch.

HAND/SPIKE, a wooden bar used by the hand as a lever for various purposes, as in raising weights, turning a windlass, &c.

HANG'ING-STILE (of a door), that on which the hinges are fixed.

HANK. In *spinning*, two or more skeins of yarn, silk, or cotton, tied together.

HANKS, wooden rings fixed upon the stays to confine the staysails thereto at different distances.

HANSEATIC LEAGUE, from *hansa*, an old gothic word signifying a society or an association. An association of the principal cities of the north of Germany for the mutual safety and the better carrying on of their traffic from one kingdom to another. The cities of the League were called *Hanse Towns*, a name not yet forgotten, though the league is.

HARD, a term used to signify a ford or passable place in a river or fen, consisting of a hard bottom of gravel.

HARD-A-LEE, an order on ship-board to put the helm close to the lee side of the ship, to tack her head to the wind.

HARD-A-PORT, an order on board a ship to put the helm close to the larboard side.

HARD-A-STARBOARD, an order on board a ship to put the helm close to the starboard side of a ship.

HARD-A-WEATHER, an order on board a ship to put the helm close to the weather or windward side of a ship.

HARD'NESS. In *physics*, that quality of bodies by which they resist the action of external force, tending to alter the relative positions of their particles. The relative hardness of bodies (as minerals), is measured by the power they possess of cutting or scratching other substances.

HARD'WARE, a term which includes every kind of goods manufactured from metals, comprising iron, steel, brass, and copper articles of all descriptions.

HARD WATERS, such as hold earthy

salts in solution, which decompose common soap, and form with it insoluble earthy soaps.

HARE'-LIP, a peculiar malformation of the lip, consisting in a longitudinal fissure like the upper lip of a hare. Children are frequently born with this malformation.

HA'REM, Arabic, *hârama*, to seclude. The seraglio or place where oriental princes, &c., confine their women.

HA'RICOT, Fr. from *agazos*. A kind of ragout of meat and roots.

HA'R'IOT,) In *law*; a due belonging to a
HER'IOT.) lord at the death of his tenant, consisting of the best beast, &c., in his possession at the time of his demise.

HA'R'LEQUIN (Fr.), a buffoon dressed in party-coloured clothes, and forming the principal character in the English pantomime. The character was originally introduced into Italian comedy.

HARMA'T'AN, a prevailing and peculiarly dry wind, on the coast of Africa, between Cape Verd and Cape Lopez. It blows from the interior, and is particularly destructive of vegetation, but is not pestilential.

HARMON'ICA, a musical instrument, in which the sounds are produced from glasses blown as nearly as possible in the form of hemispheres, but all of different diameters.

HARMON'ICAL. In *mathematics* (see **MEAN** and **PROPORTION**).

HARMON'ICS. 1. The science of musical sounds.—2. All the derivative sounds, which, on the principle of resonance, accompany every single sound and render it perceptible, are termed *harmonics*. The shorter vibrations produce acute sounds, and are called *acute harmonics*; the low sounds which accompany every perfect consonance of two sounds are termed *grave harmonics*. In this manner all the aliquot parts of a string produce harmony.

HA'R'MONITES, a sect of enthusiasts, founded by Rapp in Wurtemberg, about 1780, who were forced afterwards to emigrate to America.

HA'R'MONY, Lat. *harmonia*, from *agomiva*, from *agw*, to adapt. 1. In *music*, the agreeable result or union of several sounds heard at the same time.—*Natural harmony* consists of the harmonic triad or common chord.—*Artificial harmony* is a mixture of concords and discords.—*Figured harmony* is when one or more of the parts move during the continuance of a chord, through certain notes which do not form any of the constituent parts of that chord.—*Perfect harmony* implies the use of untempered concords only. *Tempered harmony* is when the notes are varied by temperament.—2. In designs, plans, paintings, &c., *harmony* denotes a just and agreeable relation among the parts in their distribution and proportions.

HARMO'STES (Gr.). In *ancient history*, a Spartan magistrate appointed to superintend a conquered state.

HARMUS, ἄρμος. In *ancient architecture*, a tile for covering a joint made by other tiles.

HARP, Sax. *harpa*. A musical instrument of the stringed kind, of a triangular form, held upright when played, and touched with the fingers.

HAR'PA, a genus of Gasteropods: order *Pectinibranchiata*, family *Buccinoida*, Cuv. This beautiful genus of shells is named from the regular longitudinal ribs, which mark the external surface in some measure like a harp. The species are marine, and are found both fossil and recent.

HAR'PIES, certain rapacious and filthy animals of the bird kind, mentioned by the ancient poets. The *ἄρπια* were three in number, the Aello, Ocypte, and Celeno, sent by Juno to plunder the table of Phineus.

HARP'INGS. In *ships*, the foreparts of the wales which encompass the bow, and are fastened to the stem. Their use is to strengthen the ship where she sustains the greatest stress in plunging into the sea. The *cat-harpings* are the ropes which serve to brace the shrouds of the lower masts behind their respective masts.

HARPO'ON or **HARPING-IRON**, an iron instrument formed at one end like a barbed arrow, and having a rope attached to the other, for the purpose of spearing whales.

HARP'SICHO'RD, a musical stringed instrument, consisting of a case framed of mahogany or the like, and having a sounding-board over which the wires are distended, supported by four bridges. It is played by the fingers, by means of keys disposed in front, and having on their inclosed extremities little upright oblong slips of wood called *jacks*, furnished with crowquill plectrums, which rise when the key is pressed and strike the wires.

HAR'RIER. 1. In *ornithology* (see *Circus*). —2. A small hound with a nice sense of smell, used in hunting hares.

HAR'ROW, an instrument of agriculture formed of pieces of timber crossing each other, and set with iron teeth. It is dragged over ploughed land to break it, and cover seed when sown.

HART'S HORN, an old name for liquid ammonia, because formerly obtained by distilling the horns of male deer: called also *spirit of hartshorn*.

HARVEST MOON, a remarkable phenomenon relating to the rising of the moon in the harvest season. It consists in her rising for several nights in succession immediately after sunset, with little perceptible difference as to time, and is owing to the oblique ascension of the signs (Pisces

and Aries), through which the moon is then passing.

HAS'TATE, Lat. *hastatus*, spear or halbert-shaped. Applied to a triangular leaf hollowed out at the base and sides, but with spreading lobes.

HASTA'TI (Lat.). A division of the Roman infantry, which was armed with spears.

HATCH, from Sax. *hæca*, a railing, gate, &c. The frame of cross-bars laid over the opening of a ship's deck is termed a *hatch* or *hatch-bars*. The same name is also given to the opening in a ship's deck, or the passage from one deck to another, but this is more properly the *hatchway*. Cornish miners call the openings to mines *hatches*, and the same name is given to flood or lock-gates on rivers and canals.

HATCH'EL, a machine for dressing flax. See *HACKLE*.

HATCH'ETINE, a variety of bitumen, known also as mineral adipocere, found in the iron ore of Merthyr Tydfil in South Wales. Colour yellowish white, texture flaky, hardness of soft tallow.

HATCH'MENT, corrupted from *achievement*. An armorial escutcheon placed over a door, &c., at a funeral.

HATCH'WAY, the name given to the passage from one deck of a ship to another, through the *hatches*. The name is generally applied to the passage through any trap or falling door.

HAT'EMISTS, an ecclesiastical sect in Holland: so denominated after Van Hattem, a minister of Zealand.

HAU'BERK, It. *usbergo*. A piece of armour of the 12th century.

HAUT'BOY, Fr. *hautbois*, from *haut*, high, and *bois*, wood. A wind instrument somewhat resembling a flute, but widening towards the bottom, and sounded through a reed. It is the natural treble to the bassoon.

HAÜYNE, dodecahedral zeolite or lapis lazuli, named thus after Haüy.

HAWKE. Among *plasterers*, the board with a handle on its underside, used by the workmen to hold the plaster.

HAWSE. In *nautical language*, denotes the situation of the cables before the ship's stern, when she is moored with two anchors from the starboard and larboard bows. The ship is said to have a *foul hawse* when the cables cross each other. Disengaging the cables is *clearing hawse*. Veering out a little cable to expose a new surface to the friction in the hawse-hole, is termed *freshening hawse*. *Athwart hawse* implies across the bows of a vessel at anchor.

HAW'SER, a large rope or small cable.

HAY'BOLE, for *hedge-bote*. An allowance of wood, &c., to a tenant for repairing fences.

HAY'WARD, Fr. *haie*, hedge. An officer

formerly appointed to take care of the cattle of a manor, and preserve the hedges from them.

HEAD. The *head of a ship* is an ornamental figure, erected on a continuation of the stem, and is emblematic of the ship's name. A *head of water* is a regular height of water intended for the supply of mills, fountains, and the like.

HEADBOROUGH. Sax. *borg*, pledge. The chief of the ten pledges in frank-pledge.

HEADERS. In *building*, stones extending over the thickness of a wall, or bricks laid lengthways across the thickness.

HEADING. 1. In *mining*, &c. See **DRIFT**. — 2. In *building*, a course consisting of headers or stones, bricks or the like, laid lengthways across the thickness of the wall, called *heading-courses*.

HEADING-STONE. See **KEYSTONE**.

HEADLAND. In *geography*, nearly synonymous with cape or promontory. In *agriculture*, a border at the sides of a field, to afford space for turning the plough.

HEADWAY, a name for the clear height of an arch, &c.

HEADWORK, a name for ornaments on the keystones of arches.

HEADS, the harness for guiding the warp threads in a loom; more commonly *heddles*.

HEART, Germ. *herz*. The human heart is a hollow muscular organ, of a coniform shape; the broad part is the *base*, the smaller end is the *apex*.

HEART-BOUND. In *building*, is where two stones forming the breadth of the wall, have one stone of the same breadth placed over them.

HEART WHEEL, a mechanical contrivance, common in cotton mills, for converting a circular motion into an alternate rectilinear motion.

HEART WOOD. In *botany*, duramen, the central part of the trunk of a tree.

HEAT, as a sensation, is the effect produced on the sentient organs of animals by the passage of caloric; as a cause of sensation, it is regarded as a subtle fluid contained in greater or less degree in all bodies (see **CALORIC**). Heat is *latent* when combined with matter so as not to be perceptible and *sensible*, or *free* when it is evolved and perceptible.

HEATH'ER, a name in Scotland for heath.

HEAVE. In *navigation*, to employ a force to move great weights; as to *heave up* the anchor by the capstan; to *heave down* the ship, or pull her over on one side to get at a leak; to *heave taught*, or turn the capstan till the rope becomes tight; to *heave to* or bring the ship's head to the wind.

HEAV'EN, the expanse which appears to surround the earth like an immense vault, and in which the sun, moon, and stars are seen, and thence called *heavenly*

bodies. The ancient astronomers enumerated as many heavens as they observed motions. Thus each planet had its heaven, and an eighth heaven was laid out for the fixed stars.

HEAVY SPAR, a name for sulphate of baryta or baro-selenite, of which there are several varieties, as compact and fibrous heavy spar; straight and curved lamellar heavy spar; earthy, hepatic and prismatic heavy spar. It takes its name from its high specific gravity, which ranges from 4.3 to 4.5. It occurs in veins plentifully throughout Europe.

HECATOM'ETEDON, from *ἑκατον*, a hundred, and *πους*, a foot. A temple of a hundred feet in height.

HECATOM'STYLON, from *ἑκατον*, a hundred, and *στυλος*, a column. A temple having a hundred columns. The name was chiefly applied to a celebrated gallery at Rome.

HECK'LE, an instrument for dissevering the filaments of flax. See **HACKLE**.

HECTARE, a French land measure containing a hundred *ares*: whence the name.

HECTIC, Lat. *hecticus*, habitual, from *ἡς*, habit. The term is used to denote a slow continual fever, marked by preternatural, though remitting heat, often symptomatic of phthisis. Hectic fever is one of the many diseases which the art of medicine has hitherto laboured in vain to strike at by a direct mode of cure. The real cause of it is commonly involved in impenetrable obscurity.

HECTOGRAM, a French weight equal to 100 grams.

HECTOLITRE, a French measure of capacity for liquids, equal to 100 litres.

HECTOM'ETRE, a French measure equal to 100 metres.

HED'ERA, the ivy. A genus of permanent plants. *Pentandria* — *Monogynia*. Name from *hæreo* to stick, on account of its adhering to walls, &c. Three species. Europe.

HEDERA'CEÆ, a natural order of plants, consisting of the ivy (*hedera*), and a few allied genera.

HEDGE-HOG. 1. In *zoology*. See **ERINACEUS**. — 2. The name given to a machine for removing mud, silt, &c., from rivers and streams. It consists of a roller with spikes on its circumference, and being dragged along acts upon the bottom.

HEDYS'ARUM, a very extensive genus of papilionaceous plants. *Diadelphia* — *Decandria*. Name from *ἡδύς*, sweet. The manna plant (*H. alkadi*) being a species. All parts of the world. The cock's-head is the only British type.

HEEL (of a rafter), the end or foot which rests upon the wall-plate. Also the aft end of a ship's keel. To *heel over*, to incline to one side.

HEGIRA, Arab. from *hajara*, to flee. The epoch or account of time used by Mohammedans, who begin from the day that Mahomed escaped from Mecca, 16th July, A.D. 622. The years of the hegira are lunar ones of 354 days: to reduce them, therefore, to our calendar, we must multiply the year of the hegira by 354, divide the product by 365·25, and add 622; the result is the Julian year.

HEIGHT (of an arch) is measured by a line drawn from the middle of the chord or span line to the intrados.

HEIGHTEN. In *painting*, to make prominent by means of touches of light on brilliant colours.

HEIR, Norm. *heir*, from Lat. *hæres*. The person who succeeds another by descent in lands, tenements, and hereditaments. An *heir-apparent* is one who, on the death of his ancestor, is heir-at-law. An *heir-presumptive* is he who, if his ancestor should die immediately, would, under present circumstances, be heir, but whose right may be defeated by some nearer heir being born.

HEIR-LOOMS. In *law*, such personal chattels as descend by special custom to the heir along with the inheritance of his ancestors. They are generally such as can be taken away without dismembering the freehold, as household furniture, &c.

HELMETS, the *jumping-rat* (*ilos* and *μυς*), called more commonly the *jumping hare*; a genus Rodentia, of one species (*H. caffer*, F. Cuv.), an animal resembling a hare in size and colour, but having a long tail, and inhabiting deep burrows. Cape Good Hope.

HELICAL, from *ήλιος*, the sun. An epithet applied to stars to express their emerging out of, or their immersing into, the lustre of the sun's rays. Thus a star or planet is said to rise heliacally when, after it has been in conjunction with the sun, and consequently invisible, it gets to such a distance from him as to be seen in the morning before the sun's rising. A star sets heliacally when it goes down in the sun's rays, and is thus invisible.

HELICAL, spiral; from *ήλιξ*, a wreath. Appertaining to the helix of the ear.

HELIA (Gr.). In *ancient history*, the chief of the ten courts, among which the 6000 Athenian jurymen were distributed.

HELICOID, *ήλιξ*, a spiral. In *geometry*, a curve line generated by supposing the axis of a parabola bent into the circumference of a circle, and that the curve is bent correspondingly, every point in it preserving its ordinate distance from the bent axis. The *bent curve* thus formed is a helicoid.

HELIOCAM'INUS, *ήλιος*, sun, and *καμινος* furnace. In *ancient architecture*, an arched apartment heated by the sun.

HELIOCENTRIC, from *ήλιος*, the sun, and *κέντρον*, the centre, relating to the centre of the sun. The *heliocentric place of a planet* is the place of the ecliptic in which the planet would appear to a spectator at the centre of the sun. The *heliocentric latitude of a planet* is the inclination of a line drawn, between the centre of the sun and the centre of a planet, to the plane of the ecliptic.

HELIOMETER, from *ήλιος*, the sun, and *μετρον*, measure. An instrument called also an *astrometer*, invented by Bouguer, for measuring, with great accuracy, the diameter of the sun, moon, and planets. It is merely a sort of telescope, furnished with two object-glasses of equal focal distance, placed so that the same eye-glass serves for both: hence two images of an object are formed in the focus of the eye-glass, the distance of which depending upon that of the two object-glasses from one another, may be measured, by means of a micrometer, with the utmost accuracy.

HELIOSCOPE, from *ήλιος*, the sun, and *σκοπιω*, to view. A sort of telescope fitted for viewing the sun without pain or injury to the eyes; as when made with coloured glasses.

HELIOSTAT, from *ήλιος*, the sun, and *στατος*, settled. An instrument for directing the sunbeam steadily to one spot.

HELIOOTROPE, from *ήλιος*, the sun, and *τροπω*, to turn. 1. The name of an old instrument or machine for showing when the sun arrived at the tropics.—2. A name of a sub-species of rhomboidal quartz; of a deep-green colour, variegated with blood-red and yellowish spots: hence called *blood-stone*.—3. A plant, the turnsole.

HELIOOTROP'ISM, the turnsole. A genus of plants, *Pentandria—Monogynia*. Name from *ήλιος*, the sun, and *τροπω*, to turn, because its leaves constantly present themselves to the sun. Temperate and warm climates.

HELISPHERICAL, spiral; from *ήλιξ*, and *sphere*. The *heliispherical line* is the rhomb line in navigation, so called, because on the globe it winds round the pole spirally, always approaching it, but never terminating in it.

HELIX, a spiral line; from *ήλιξ*, a wreath. Something that is spiral, as the little volute under the flowers of the Corinthian capital. The name is applied in *anatomy* to the whole extent of the auricle or external border of the ear; and in *conchology*, to the snail-shell inhabited by a limax.

HELLEBORUS, the hellebore. A genus of hardy perennial plants. *Polyandria—Polygynia*. Name *ήλλιβορος*, from *ήλιος*,

to kill, and *βορρα*, food, because it is poisonous. The Christmas-rose and Bear's-foot are species; the last, called also stinking hellebore, is indigenous in Britain.

HELLENIC. Applied to the common Greek dialect that prevailed after the time of Alexander.

HELLENISTIC, *Ἑλληνιστής*, a Grecian Jew. The Hellenistic language was the Greek spoken by the Jews who lived in Egypt, and other countries where the Greek language prevailed.

HELM, Sax. *helma*. The instrument by which a ship is steered, consisting of a rudder, a tiller, and, in large vessels, a wheel.

HELMET, a piece of defensive armour for the head, a morion. The modern helmet is worn by horsemen, to defend the head against the broadsword.

HELMINTHOLOGY, from *ἕλμινς*, a worm, and *λογος*, a discourse. That branch of zoology which treats of worms.

HELMSMAN, the man who steers. A good helmsman keeps the ship to her course by timely corrections when required; a bad helmsman keeps her perpetually yawing from side to side.

HELLO'IS, an eversion of the eyelids, from *ἑλῶ*, to turn.

HELOTS, *ἑλωται*. In ancient history, the slaves of the Spartans.

HELVER. In mining, the handle of a tool.

HEM. In architecture, the spiral projecting part of the Ionic capital.

HEM'ACRYMES (Gr.), from *αἷμα*, blood, and *κρυμος*, cold. Animals with cold blood.

HEM'ATHERMS, from *αἷμα*, and *θερμη*, heat. Animals with warm blood.

HEMERALO'PIA, from *ἡμερα*, the day, and *οφ*, the eye. A defect in the sight, which consists in being able to see in broad daylight, but not in the evening, arising from a torpid state of the retina.

HEM'EROBAPTISTS, *ἡμερα*, day, *βαπτίζω*, to baptise. An ancient sect among the Jews, who washed themselves every day.

HEMEROCAL'IS, the day-lily. A genus of perennial plants. *Hexandria—Monogynia*. Name from *ἡμερα*, a day, and *καλος*, beautiful, because the flowers open in the day, and shut at night. Temperate climates.

HEMICRA'NIA, from *ἡμισυς*, half, and *κρανιον*, the head. A pain which affects one side of the head only.

HEM'ICICLE, a half-cycle, from *ἡμης*, half, and *κυκλος*, a circle. See SEMICIRCLE.

HEMIO'AMOUS, from *ἡμισυς*, and *γαμος*, marriage. A term employed in botany,

when of two florets on the same spikelet one is neuter, and the other unisexual.

HEMI'LYTRA, *ἡμισυς*, half, and *ελυτρος*, sheath. The superior wings of tetrapterous insects.

HEMIOLOGO'AMOUS, from *ἡμισυς*, ὅλος, entire, and *γαμος*. When, in grasses, one of two florets is neuter, and the other hermaphrodite.

HEMIOPIX, from *ἡμισυς*, half, and *οπτομαι*, to see. A defect of vision, wherein a person sees only half an object.

HEMIPLEGY, from *ἡμισυς*, half, and *πλησσω*, to strike. A species of paralysis, in which only one side of the body is affected.

HEMIPTERA, } from *ἡμισυς*, half, and
HEMIPTERS, } *πτειρον*, a wing. An order of insects comprising the Geocorisæ and Hydrocorisæ, and so named because their wing-covers are half membranaceous, and half coriaceous. The cockroach, locust, lantern-fly, and grasshopper are examples.

HEM'ISPHERE, from *ἡμισυς*, half, and *σφαيرιον*, a sphere. The half of a sphere or globe, when it is supposed to be cut through its centre, in the plane of one of its great circles. Thus the equator divides the earth into the northern and southern hemispheres; and the equinoctial line divides the celestial sphere in a similar manner. The horizon also divides the earth into two parts, the upper and lower hemispheres.

HEM'ITONE. *ἡμιτονος*. A half-tone, now called a semitone.

HEM'TROPE, from *ἡμισυς*, half, and *τρεπω*, to turn, half-turned. A hemitrope crystal has one segment turned through half the circumference of a circle.

HEMT. 1. In manufactures, the fibrous rind of the *Cannabis sativa*, which is spun into yarn, for making ropes, canvass, &c. It is stronger, and coarser in the fibre than flax.—2. In botany, see CANNABIS and EUPATORIUM.

HENDECA'GON, from *ἑνδεκα*, eleven, and *γωνια*, a corner. A figure having eleven equal sides and as many equal angles.

HEN'DECASYLL'LABIC, a verse of eleven syllables.

HENRIC'ANS, the followers of an Italian monk, named Henry, who preached zealously against the corruptions of the Romish Church.

HE'PAR, *ἥπαρ*, the liver. This term was used by the old chemists to denote a compound of sulphur with a metal, which had a liver-brown colour. Thus the sulphuret of potassium was termed liver of sulphur.

HE'PATALGY, from *ἥπαρ*, the liver, and *αλγος*, pain. Pain in the liver.

HEPAT'IC, from *ἥπαρ*, belonging to the liver. Applied to designate the liver colour, and also as an anatomical epithet for parts connected with the liver. Sulphuretted hydrogen gas has also been termed *hepatic air*, from its being given off when some sulphurets are thrown into water.

HEPATISA'TION, from *ἥπαρ*, the liver, the conversion of any texture into a substance resembling liver. The term is generally applied to the lungs.

HEPATITE, from *ἥπαρ*, fetid heavy spar. A variety of sulphate of barytes, which when rubbed emits a sulphurous smell, resembling that of sulphuretted hydrogen (*hepatic air*).

HEPATITIS, from *ἥπαρ*. An inflammation of the liver.

HEPTA CAPSULAR, from *ἑπτα*, seven, and *capsula*, a cell; seven-celled. A term in botany.

HEPTACHORD, from *ἑπτα*, seven and *chord*; a system of seven sounds. The term is applied in ancient poetry to verses sung or played on seven chords, or different notes, as on the harp when it had but seven strings. The harp also has been called a heptachord by poets.

HEPTAGON, from *ἑπτα*, seven, and *γωνία*, an angle. A figure having seven equal sides, and as many equal angles.

HEPTAGONAL NUMBERS, polygonal numbers, wherein the difference of the terms of the corresponding arithmetical progression is five.

HEPTAHEXAHEDRAL, from *ἑπτα*, seven, and *hexahedron*. Presenting seven ranges of faces, one above another, each range consisting of six faces.

HEPTANDRIA, from *ἑπτα*, seven, and *ἄνδρ*, a man. A class of plants characterised in the sexual system of Linnæus by hermaphrodite flowers, with seven distinct stamens.

HEPTARCHY, from *ἑπτα*, seven, and *αρχή*, rule. A sevenfold government; also a country divided into seven governments, as the *Saxon Heptarchy*, which comprehended the whole of England when subject to seven independent princes. These kingdoms were Kent, the South Saxons (Sussex), West Saxons, East Saxons (Essex), the East Angles, Mercia and Northumberland.

HERACLONITES, an early sect of heretics who rejected all the ancient prophecies, and regarded themselves as superior to the Apostles: so called from Heracleon.

HERALD, Ger. *herold*. An officer at arms, whose business it is to denounce war, to proclaim peace, or be otherwise employed by the sovereign in martial messages or other business. The heralds, six in number, are the judges and examiners of coats of arms, and the pre-

servers of genealogies, and they marshal all solemnities and ceremonies at coronations, royal marriages, installations, funeral processions, &c. Their names are Richmond, Lancaster, Chester, Windsor, Somerset and York, and they are all equal in degree, and have precedence only according to the seniority of their creation.

HERALDRY, the art, practice, or science of recording genealogies, blazoning and explaining in proper terms all that belongs to arms; of marshalling or disposing with regularity divers arms on an escutcheon or field. It also teaches whatever relates to the marshalling of solemn processions, and other public ceremonies at coronations, installation of knights, creations of peers, nuptials, christenings of princes, funerals, &c.

HERB, Lat. *herba*. That sort of plant which rises with stalks and leaves from the root, and bears its fruit only once, and then with its root wholly perishes. There are two kinds: *annuals* which perish the same year, and *biennials* which have their leaves the first year, and their flowers and fruits the second, and then die away. Perennial plants which have a new stem springing up every year, are also termed *herbaceous*, and indeed the term is extended to that part of any plant which arises from the root, and is terminated by the fructification.

HERBACEOUS, Lat. *herbaceus*. An epithet for all plants which have succulent stems and die down to the root every year. See **HERB**.

HERBÆ, *herbs*. The fourth tribe into which Linnæus divides the vegetable kingdom.

HERBARIUM, an *herbary*. A collection of dried specimens of plants: *hortus siccus*, or dry garden.

HERCULES. 1. A fabulous hero of antiquity, the son of Amphitryon and Alcmena, whose exploits are celebrated by the poets.—2. The name of a constellation of the northern hemisphere, known also by the names of *Cerberus* and the *Apple Branch*. It contains 113 stars, of which the most brilliant is *Ras Algothi*, of the third magnitude.—3. The name of a stamping-machine used in the dockyards, similar to the pile engine.

HEREDITAMENTS. In *law*, such things as are immoveable, and which a man may leave to his heirs by way of inheritance, or which not being otherwise devised, naturally descend.

HEREDITARY. 1. In *law*, an appellation given to whatever belongs to a family by right of succession.—2. Diseases which are propagated from parents to their offspring, as scrofula, gout, mania, &c., are termed *hereditary diseases*, as belonging to the family.

HERESY, Lat. *hæresis*. An opinion of

private men, different from that of the orthodox church. In primitive usage the term meant merely *sect* or *party*, and was used as we now do *denomination* or *persuasion*, without implying reproach.

HERETOGE, } the name given by our
HERETOCH, } Saxon ancestors to a military commander, elected by the people in folk-mote. The root is *togen*, to lead.

HER'IOR, from Sax. *here*, army, and *gear*, tribute. In *law*, a fine paid to the lord of the fee at the death of his tenant, originally consisting of military furniture, as horses, arms, &c., but latterly of goods and chattels.

HER'ISON, } Fr. for hedgehog, from
HER'ISSON, } *herisser*, to bristle. A beam revolving on a pivot, and armed with projecting spikes, fixed before a gate or passage to prevent the entrance of suspected or improper persons.

HER'ITABLE RIGHTS. In *Scottish law*, rights to land, and property connected with land, which pass to the heir.

HERMAPH'RODITE, from *Ἑρμης*, Mercury, and *Ἀφροδιτη*, Venus. 1. A term loosely applied to a *lusus nature*, partaking of the nature of both sexes.—2. Hermaphrodite plants are such as have both stamens and pistils on the same flower.

HERMENEUTICS, from *ἑρμηνεύς*, an interpreter, from *Ἑρμης*, Mercury. The art of expounding an author's words. The term is chiefly used with reference to theological subjects.

HERMET'IC, appertaining to chemistry, of which Hermes Trismegistus is the reputed inventor. The *hermetic philosophy* pretends to explain all the phenomena of nature from the three chemical principles, salt, sulphur, and mercury; and the *hermetic medicine* explained the causes of diseases, and the operations of medicine on the system of an alkali and acid.—*Hermetic seal*. This term denotes the perfect stoppage of the orifice of a glass vessel or tube while in a state of fusion. Thus thermometers, &c., are hermetically sealed; and the process is often necessary in chemical operations.

HER'MITS, or ER'EMITES, from *ἡγέμενος*, desert. Persons who secluded themselves for devotional purposes in desert places.

HERMODACTYL. A root much celebrated among the ancients for the cure of gout; supposed to have been that of a species of colchicum, and to take its name from the river *Hermus*, upon whose banks it grows, and *δακτύλος*, a date, which it resembles.

HER'NIA (Lat.), from *ἕρως*, a branch, a rupture. Surgeons understand by the term *hernia*, a tumour formed by the protrusion of some of the viscera of the abdomen out of that cavity into a sort of sac, composed of a portion of peritoneum,

which is pushed before them; but there are cases which will not be comprehended in this definition, either because the parts are not protruded, or have no hernial sac.

HERNIA'RIA, the rupture-wort. A genus of perennial plants. *Pentandria—Dignia*. Name from *hernia*, which it is supposed to cure. Britain, &c.

HER'PES, *ἕρπης*, from *ἔρπω*, to creep. Tetter, a cutaneous disease, characterised by tendency to spread or creep in assemblages of little vesicles, itching very much, from one part to another. There are several species, as shingles, ringworm, &c. Epithet *herpetic*.

HERPETOL'OGY, from *ἑρπίς*, a reptile, and *λογος*, discourse. That branch of natural history which treats of reptiles, their habits, structure, &c.

HER'RING. In *ichthyology*, the *Clupea harengus*, Lin. Named thus from Sax. *here*, or *hure*, an army, because always found in vast shoals.

HER'RNHUT, Ger. *herr*, lord, *hut*, protection. An establishment in Upper Lusatia, comprising 120 houses (1841) and 1500 inhabitants, founded by a few Moravians in 1722.

HER'SCHEL. In *astronomy*, a name frequently given to the planet Uranus, discovered by Sir William Herschel, in 1781.

HERSE, Fr. *herse*. In *fortification*, a harrow or portcullis, fastened to a moulinet, and suspended by a cord, and rendered formidable to assailants by projecting iron spikes. It is let down to guard the passage of the gateway on an enemy's approach.

HER'THA. In *German mythology*, the chief divinity of the ancient German and Scandinavian nations.

HE'SPER, Lat. *Hesperus*, the evening star. An appellation given to Venus when it follows or sets after the sun.

HE'SPER'IDEÆ. The name given by Linnaeus to a natural order of plants, mostly having rigid evergreen leaves, and odorous and polyandrous flowers, as the myrtle and clove, which may be supposed the types of such plants as grew in the fabled gardens of the Hesperides.

HE'SPERID'IUM. In *botany*, a many-celled, few-seeded, superior, indehiscent fruit, covered by a spongy rind.

HE'SCHASTS, fanatics who lived in the fifteenth century, upon Mount Athos.

HETÆ'RIA, *ἑταῖρος*, a companion. Applied by classic writers to signify an association of any kind.

HETEROCEPH'ALOUS (Gr.), various headed, i. e. when, in the same individual, the heads of some flowers are male, and others female.

HET'EROCHRO'MOUS, variously coloured. When, in a flower-head, the colours of the florets are different.

HETEROCLĪTAL, from *ἑτερος*, different, and *κλίσις*, to incline, reversed. Applied to shells whose spires turn in a contrary direction to the usual way: sinistral.

HETEROCLITE, from *ἑτερος*, different, and *κλίσις*, inclined, something anomalous. The term is used by grammarians, &c. to designate words which deviate from the ordinary forms of inflection, particularly nouns which are irregular in declension.

HETERODOX, from *ἑτερος*, different, and *δόξα*, opinion, different from the established opinion. Not orthodox, but contrary to the faith and doctrines of the Established Church.

HETEROGAMOUS (Gr.), unequally married. In *grasses*, when the arrangement of the sexes is different in different spikelets from the same root. In *composite plants*, when the florets are of different sexes in the head.

HETEROGENEOUS, from *ἑτερος*, different, and *γενος*, kind. Dissimilar in nature, not homogeneous. Thus, *heterogeneous nouns* have different genders in the singular and plural: *heterogeneous words* are such as have different radical signs, &c.

HETEROGYNA, from *ἑτερος*, different, and *γυνή*, a female. The name of a family of hymenopterous insects, comprising those of which the females differ from the males, the one sex being winged, and the other apterous, or of which the males and females are winged, and the neuters apterous, &c. See *FORMICA*.

HETEROMEROUS (Gr.), unequal legged, i.e. when one leg has a different structure from another.

HETEROPTHY, from *ἑτερος*, different, and *παθος*, affection. That mode of treating diseases, in which a morbid state of a part is removed by inducing a different morbid state.

HETEROPODA, from *ἑτερος*, different, and *πους*, a foot. An order of Mollusca, distinguished by their foot, which, instead of forming a horizontal disc, is compressed into a vertical muscular lamina, which they use as a fin. Forskahl comprises them all in his genus *Pterotrachea*.

HETEROSCH, } from *ἑτερος*, different, **HETEROSCIANS**, } and *σκία*, shadow. A geographical designation for those inhabitants of the earth whose shadows at noon project always the same way with regard to themselves, or always contrary ways with respect to each other. Such are all who live within the tropics and the polar circles. The shadows of those who live north of the tropic of Cancer fall northward; those of the inhabitants south of the tropic of Capricorn fall southward: whereas the shadows of those who dwell

between the tropics, fall sometimes to the north and sometimes to the south.

HETEROTROPAL, Gr. from *ἑτερος*, different, and *τροπή*, I turn. When the former embryo of a seed lies across the latter, neither pointing to its base nor apex.

HET'ACHORD, from *ἑξ*, six, and *χορδή*, a chord. 1. A term, in *ancient music*, for an imperfect chord, or a sixth.—2. Also an instrument of six chords.

HEXAE'DRON, } from *ἑξ*, six, and *ἕδρα*, **HEXAHEDRON**, } a base. A solid figure of six equal sides: a cube.

HEX'AGON, from *ἑξ*, six, and *γωνία*, an angle. A geometrical figure of six equal sides, and as many equal angles.

HEXAGYNIA, from *ἑξ*, six, and *γυνή*, a female. An order of plants in the sexual system of Linnæus, having six pistils.

HEXAMETER, from *ἑξ*, six, and *μέτρον*, measure. A poetic verse having six feet.

HEXANDRIA, from *ἑξ*, six, and *ανδρς*, a male. A class of plants in the Linnæan sexual system, having hermaphrodite flowers furnished with six stamens of equal length.

HEXANGULAR, six-angled. Having six equal angles.

HEX'APED, } from *ἑξ*, six, and *πους*, a **HEX'APOD**, } foot. An animal with six feet.

HEXAPETALOUS, Lat. *hexapetalus*, six-petalled. A corolla consisting of six petals.

HEXAPHYLLOUS, Lat. *hexaphyllus*, six-leaved.

HEX'APLA, *ἑξ*, six, and *ἄπλω*, I open. The combination of six versions of the Old Testament, by Origen.

HEX'ASTYLE, from *ἑξ*, six, and *στυλος*, a column. A building with six columns in front.

HIATELA, a genus of Mollusca, family *Inclusa*, order *Acephala testacea*, Cuv. The name is a diminutive of *hiatus*, an aperture; the shell having an aperture near the middle of its edges, to allow the passage of the foot. The species are found in sand, among zoophytes, &c.

HIATUS (Latin), an aperture, chasm, or gap. Applied to verses where one word ends with a vowel, and the next word begins with one, and thereby occasions the mouth to be more opened, and the sound to be harsh. The term is also used in speaking of MSS., to denote their defects, or parts which have been defaced.

HIBERNACLE, Lat. *hibernacula*, winter-quarters. The bulb or bud of a plant, in which the embryo is inclosed by a scaly covering, and protected from injury during the winter, is called the *hibernacle* of the plant. The term is also used to designate the winter-lodge of a wild animal.

HICCUP or **HICCOTON**, a spasmodic affection of the stomach, œsophagus, and muscles subservient to deglutition; singultus.

HIDAT'GO, a Spanish nobleman of the lower class.

HIDE. 1. In *old law*, a certain portion of land. The quantity is not exactly known. Some suppose it to have been as much as could be tilled by one plough; others as much as was necessary to support a family; others again make the hide 60, and some as much as 100 acres.

—2. The skin of an animal, either raw or dressed; generally applied to the undressed skins of the larger domestic animals.

HIDEBOUND, a disease common to animals and vegetables. Cattle are hidebound when the skin becomes dried, and adheres firmly to the subjacent tissue, and trees are hidebound when the bark becomes so tight as to impede the growth.

HIERA-PIC'RA, holy-bitter; *isgos*, holy, and *πικρος*, bitter. A pharmaceutical powder, containing socotorine aloes and white canella.

HIERARCHY, from *isgos*, holy, and *αρχη*, ruler. Holy government, rank, or subordination among holy beings. The term is chiefly used to designate the government established in a national church, determining the rank, offices, &c., of the clergy.

HIEROFAL'CO, the generic name of the *gerfalcon* (*Falco candicans*, Lin.). A bird belonging to the accipitrine order and diurnal family. It is one fourth larger than the common falcon, and is the most highly esteemed by falconers (see **FALCO**.) Name from *isgos*, sacred, and *falco*, which originated in the superstitious notions of the Egyptians respecting certain birds of prey. The English name *gerfalcon* is a corruption of *hierofalco*.

HIEROGLYPH'ICS, from *isgos*, sacred, and *γλυφω*, to carve. 1. Mystical characters or symbols in use among the ancient Egyptians, both in their writings and inscriptions, as signs of sacred and supernatural things. The hieroglyphics were figures of animals, parts of the human body, mechanical instruments, &c., which contained a meaning known only to the initiated.—2. Pictures intended to express historical facts.

HIEROGRAM'MATIC, from *isgos*, sacred, and *γραμμα*, a letter. An epithet for that species of writing practised by the priesthood, particularly of ancient Egypt.

HIEROMN'OM, from *isgos*, sacred, and *μνημων*, memory. A magistrate in ancient Greece who presided over the sacred rites and solemnities.

HIERO'NYMITES or **JERO'NYMITES**, a reli-

gious order in Spain, named after its patron, St. Jerome.

HIEROPHAN'TES, *ιεροφαντης*. Priests whose duty it was to teach the mysteries and duties of religion.

HIEROPH'YLAΞ, *ιεροφυλαξ*. An officer in the Greek Church, who was guardian or keeper of the holy utensils, vestments, &c. The hierophylax answers to our vestry-keeper.

HIGH CHURCH. Applied to the opinions of parties who seek to exalt the ecclesiastical power.

HIGH PRESSURE. See **STEAM** and **STEAM ENGINE**.

HIGH PRIEST, the head of the Jewish priesthood. Moses conferred this dignity on his brother Aaron, in whose family it descended without interruption.

HILARY TERM, the term of Courts, &c., which begins on 23rd January.

HILUM (Latin). The eye of a seed; the pile, point, or scar by which the seed is attached to its seed-vessel.

HIMAN'TOPUS, a sub-genus of birds. Order *Grallatoria*; family *Longirostres*; genus *Scolopax*, Lin. Name from *μας*, a string, and *πους*, a foot, in allusion to the extreme length and tenuity of the legs.

HIN, a Hebrew measure of capacity, equal to one gallon, two pints, English measure.

HINGE. The *hinges* of a door or gate are the iron or brass ligaments on which it turns. The *hinge* of a shell is the point by which bivalve shells are united. It is formed by the teeth of the one valve inserting themselves between those of the other, or by the teeth of one valve fitting into the cavities or sockets of the opposite valve. It is on the peculiar construction of the hinge that the generic character of bivalve shells is mainly founded, in connection with the general form of the shell.

HIP. 1. The articulation of the thigh with the pelvis.—2. The ripe fruit of the dog-rose tree (*Rosa canina*).—3. A piece of timber at the corner of a roof. Hips are much longer than rafters in consequence of their slanting position, and have commonly five planes. Workmen call them *corners*, or *principal rafters*, or *sleepers*, but sleepers are distinguished as lying in the valleys, and join at top with the hips. See **HIP-ROOF**.

HIP-MOULDs, a term in carpentry for the back of the hip or corner of a roof also for the pattern by which the hip on a roof is set out.

HIP-ROOF. When a roof of a building is formed by equally inclined planes, rising from each side, it is called a *hipped-roof*, and the ridges rising from the angles of the walls are called *hips*, whereas if the ridge runs out straight with the face

of the end walls, it is described as a *gable-end*.

HIPPOCEN'TAUR, a fabulous monster of antiquity supposed to be half man and half horse, from *ἵππος*, a horse, and centaur (q.v.).

HIPPOCRAS, Fr. *quasi*, wine of *Hippocrates*. An aromatic wine, formerly in high repute in England as a cordial drink.

HIPPOCRATES SLEEVE, a sort of bag made by uniting the opposite corners of a square piece of flannel, used for straining syrups and decoctions.

HIPPOCRATIC FACE. Pale, sunken, and contracted features, considered a bad symptom in diseases.

HIPPOCRE'NE, *ἵππος*, and *κρήνη*, fountain. A celebrated fountain at the foot of Mount Helicon.

HIPPODROME, from *ἵππος*, a horse, and *δρόμος*, a course. A list or course among the ancients wherein chariot and horse races were performed, and horses exercised.

HIPPOGRIF, from *ἵππος*, a horse, and *griffin*. A fabulous animal half horse and half griffin. The winged horse imagined by Ariosto.

HIPPOMANE, the manchineel tree. A genus of one species. *Monacia*—*Monadelphica*. Name *hippomane*, from *ἵππος*, a horse, and *μανία*, madness. A love potion; because the tree yields a white milky juice which appears to have some of the qualities of the ancient philter. West Indies.

HIPPOPOT'AMUS, the river-horse; from *ἵππος*, a horse, and *ποταμός*, a river. A genus of mammalia of the Pachydermatous order. There is only one species, the *H. amphibius*, an animal with a massive and naked body, very short legs, enormous head, terminated by a large inflated muzzle, small tail, ears, and eyes. It is now confined to the rivers of the middle and south of Africa, lives upon roots, &c., and exhibits much ferocity and stupidity. Fossil remains of the hippopotamus are found plentifully in many parts of Europe in alluvial deposits.

HIPPOTHERICUM, an extinct animal allied to the horse: whence the name from *ἵππος*, a horse, and *θηρίον*, a wild beast. The remains belong to the Miocene period.

HIPPURITES, a genus of fossil bivalve shells of a conical shape. Specimens have been found in the chalk.

HIP'US, Lat. from *ἵππος*, a horse. An affection of the eyes, whereby the eyes continually dilate and contract, as is usual with those who ride on horseback. It arises from a spasmodic affection of the iris.

HIR'CINE, from *hircus*. The name given by Chevreul to a liquid fatty substance

which is mixed with the oleine of mutton suet. It is soluble in alcohol, and yields hircic acid by saponification.

HIR'SUTE, Lat. *hirsutus*, bristly. In zoology, when long stiffish hairs upon an animal are thickly set.

HIRUN'DO, a genus of passerine birds, the swallows: family *Fissirostres*. The genus comprehends the swifts and martins of English authors.

HISPID, Lat. *hispidus*, bristly. Applied to stems, seeds, &c., of plants, and surfaces of animals.

HIS'TER, a genus of pentamerous coleoptera: family *Clavicornes*. This genus is now divided into *hister proper*, *hololepta*, *abreus*, &c. The species feed on cadaverous matters, and decomposing vegetable substances, as old mushrooms, &c.

HISTERIDES, a tribe of pentamerous coleoptera, comprehending the genus *hister*, Lin.

HIS'TORY, from *ἵστορεω*, to inquire. A narrative of facts and events, particularly such as respect nations: distinct from *annals*. The term *history* is also used to signify a description of things, as well as an account of facts. Thus, *natural history* comprehends a description of the works of nature, especially animals, vegetables, and minerals. Zoology is the *history* of animals, botany of plants, and mineralogy of minerals.

HISTRION'IC, relating to the drama, from *histrio*, an actor, strictly a comedian, especially in pantomime.

HITCH. Among *seamen*, a knot or noose in a rope, for fastening it to a ring or other object: distinguished according to the sort of knot, by the names *half-hitch*, *rolling-hitch*, *clove hitch*, &c.

HITHE, a Saxon word for a port or small harbour where goods are shipped or landed: Queenhithe, on the Thames, for example.

HIVE, the box, chest, or other habitation of a swarm of bees; also the swarm of bees inhabiting a hive. Bees are also said to *hive* or *cast* when they send off their young colonies.

HIVES, a popular name of that variety of varicella, in which the vesicles are very large and globular.

H. M. S., an abbreviation for His or Her Majesty's ship or service.

HOARD'ING, the name given to the wooden boarding inclosing any building operations.

HO'ARY, a whiteness on the surface, arising from a covering of thick spread short hairs.

HOCK, from *Hockheim*, in Germany, a light Rhenish wine: called sometimes *hockamore*.

HOD, Fr. *hotte*. A small box at the end of a long staff, for carrying bricks and mortar in.

Hoe, Ger. *haue*. A gardener's implement for cutting up weeds and loosening the earth about the roots of plants. It is in shape like an addice, the head being a plate of iron with an eye to receive a handle, which forms an acute angle with the plate. Operations with this and similar instruments are termed *hoeing*.

Hoo. 1. In *zoology* (see *Svs*).—2. Among *seamen*, a sort of scrubbing broom for scraping a ship's bottom under water.—3. In *England*, a castrated sheep of a year old.

Hog'ging. In *ship-building*, the convex appearance, like the back of a hog, sometimes assumed by ships after being launched, by the dropping of the two extremities, on account of their being less water-borne than the middle. Hogging when of great amount is a serious fault, as the timbers of the vessel are thereby proportionally strained. Formerly, a three-decker drooped at once, on being launched, 9 inches at each end, and this increased with her length of service. At present such a ship is calculated to droop only 3½ inches, and this, when the timbers are once set, suffers very little increase.

Hogs'head, a measure of capacity containing 52½ imperial gallons. A hogshead is ½ a pipe.

Hoke Day, the Tuesday after Easter week, celebrated annually in commemoration of the expulsion of the Danes.

Holcus, the *Indian Millet*: a genus of gramineous plants. *Polygamia—Monœcia*. Temperate climates.

Hold (of a ship), the whole interior cavity between the floor and the lower deck.

Holera'cea, *pot herbs*. The twelfth natural order in Linnæus' system, comprehending trees, shrubs, perennial and annual herbs, as rhubarb, beet, &c.

Hol'ing. In *architecture*, piercing the plates to receive the nails. In *mining*, undermining coal-beds.

Holland, a fine sort of linen, so named from its having been first manufactured in Holland.

Hol'low Quoin (in lock-gates), the recess made in the walls of locks at each end to receive the gates, which are properly hollowed out to receive the quoin posts.

Holm (Sax.), an island or marshy place surrounded by water.

Hol'ocaust, ἅλως, the whole, and καίω, I burn. The burnt-offering of Scripture; an ancient sacrifice where the whole of the body of the victim was consumed.

Holocent'rum, the name given, by *Artedi*, to a beautiful genus of acantho-

pterygious fishes of the percid family. The species are found in the hot parts of both oceans.

Hol'ograph, from ὅλος, all, and γραφω, to write. Something wholly written by the person who signs it.

Holo'meter, from ὅλος, all, and μετρον, measure. A mathematical instrument, serving universally for taking all measures both terrestrial and celestial.

Holothu'ria, the *sea-slug* or *sea-cucumber*: a genus of Radiata. Class Echinodermata, order Pedicellata, Cav. The species have an oblong coriaceous body, open at each end, and complicated tentacula, susceptible of being retracted.

Holt, Ger. *holz*, wood. The termination of many names of places in England, being near a wood.

Holy All'ance. In *politics*, an alliance formed after the fall of Napoleon by the European sovereigns, "in accordance with the precepts of the gospel of Jesus Christ, and for the happiness and religious welfare of all subjects" (!) It was virtually an alliance for the better securing crowned heads against the encroachments of their subjects, and for mutual support, should their stability be threatened by any outburst of popular opinion.

Hol'y-wood Day, a festival observed by Roman Catholics, in commemoration of the exaltation of the Saviour's cross.

Hol'y Stone, a stone used to scour the deck of a ship by hand, with the addition of sand.

Hol'y Thursday, a festival in commemoration of Christ's ascension, observed ten days before Whitsuntide.

Hol'y Week, the week before Easter, in which the passion of the Saviour is commemorated.

Homœop'athy, from ὁμοιος, similar, and παθος, feeling. A particular mode of curing diseases. See *HOMŒOPATHY*.

Hom'age, from homo, a man. The oath of submission and loyalty, which the tenant under the feudal system used to take to his superior, when first admitted to the land which he held of him in fee.

HOM'BERG'S PHOSPHORUS, ignited chloride of calcium, which has the property of shining in the dark, a fact first noticed by Homberg.

HOM'BERG'S PYROPHORUS, alum calcined with an equal weight of brown sugar or flour. It is spontaneously inflammable.

HOM'BERG'S SALT, boracic acid, first obtained in a separate state by Homberg.

HOME. In *naval language*, applied to anything in its place; as the sheets of the sails, and the charge of a gun.

HOM'icide, from homo, a man, and cædo, to kill; the killing of one man or human being by another. Homicide is *justifiable* when it proceeds from unavoidable neces-

city, without an intention to kill, and without negligence; *excusable* when it proceeds from misadventure, or in self-defence; *felonious* when it proceeds from malice, or is done in the prosecution of some unlawful act. Killing premeditated is murder, and suicide is felonious homicide. Homicide comprehends murder and manslaughter.

HOMILETIC, pertaining to familiar discourse, from *ὁμιλητικός*, conversable. *Homiletic theology* is that branch of practical theology which teaches the manner of adopting discourses to the capacities of hearers, and the best methods of instructing congregations: called also *pastoral theology*.

HOMILY, from *ὁμιλία*, familiar discourse. A familiar discourse on some subject of religion, such as an instructor would deliver to his pupils.

HOMINE REPLEGANDO. In law, a writ to bail a man out of prison.

HOMO, man. A genus of Mammalia, order *Bimana*. One species, but three very distinct varieties: the *Caucasian*, or white; the *Mongolian*, or yellow; and the *Ethiopian*, or negro.

ΗΟΜΟΧΡΟΜΟΥΣ, *ὁμοιου*, together, and *χρωμα*, colour. When the florets in the same flower-head are of the same colour.

ΗΟΜΟΓΡΑΦΗ, from *ὁμοιος*, similar, and *γραφω*, affection. A new medical doctrine, promulgated some years since by Dr. Samuel Hahnemann, of Leipsig. It proceeds on the principle that two diseased actions cannot go on simultaneously in the same part, and if a medicine be administered to a person labouring under that disease which the medicine has a natural tendency to produce, the effect will be to resolve the disease. The medicine is, however, administered in *infinitesimal doses*, as the millionth or quadrillionth part of a grain!

ΗΟΜΟΓΑΜΟΥΣ, *ὁμοιου*, like, and *γαμος*, marriage. In *grasses* when all the florets of the spikelets of an individual are hermaphrodite. In *composite plants*, when all the florets of a flower-head are hermaphrodite.

ΗΟΜΟΓΕΝΕΑ, an order of infusorial animals, thus named from there being no appearance of viscera, or other complication in the body, frequently not even the appearance of a mouth.

ΗΟΜΟΝΥΜΣ, *ὁμοιου*, and *ονομα*, name. Words of the same sound, but of different signification.

ΗΟΜΟΡΗΘΟΝΟΥΣ, *ὁμοιου*, and *φωνη*, tone. In music, of the same pitch.

ΗΟΜΟΡΗΟΝΗ, *ὁμοιου*, and *φωνω*, I speak. Words of the same sound but differently spelt.

HONE, HONESTONE, whet-stone. A va-

riety of talcy slate, named *novaculæ* by Kirwan.

HONESTY. In botany, see LUNARIA.

HON'EX, Sax. *hunig*. The sweet viscid liquor elaborated by bees from the sweet juices of the nectars of flowers, and deposited by them in the cells of their combs.

HON'EX-COMB. 1. The waxen cells in which bees deposit their honey, &c.—2. Among *founders*, a flaw in a casting, the metal appearing porous or spongy.

HON'EX-DEW, a saccharine substance found on the leaves of some trees, and said to be deposited by a species of aphid, called the *vine-fretter*.

HON'EX-GUIDE. In ornithology, the *Cucullus indicator*, Lin., found in Africa, and celebrated on account of its conducting persons to hives of wild honey.

HONG. The Chinese name for the large factories at Canton, where each nation has a separate *hong*: hence the term of *Hong merchants*.

HONORARIUM, Lat. *honor*, honour. Nearly synonymous with *fee*. Applied to the fees of professors and professional gentlemen.

HONOURABLE, a title of quality attributed to the younger children of earls, to persons enjoying places of trust and honour, and collectively to the House of Commons and the East India Company.

HOOD. In ships, 1. A low wooden porch over the ladder which leads to the steerage of a merchant-ship.—2. The upper part of a galley-chimney, which being in the shape of the letter S reversed, is trimmed or turned round according to the various directions of the wind, that the smoke may always fly to leeward.—3. A short semicylindrical frame of wood, serving to cover the upper wheel of a chain-pump.—4. The same with WHOOD (q.v.).

HOOK. 1. In husbandry, a sickle.—2. In nautical language, a crooked piece of iron, of which there are several kinds, of different shapes and sizes, as boat-hooks, breast-hooks, can-hooks, cat-hooks, &c. Foot-hooks are termed *futtocks* (q.v.). *Loof-hooks* is the name given to a tackle with two hooks, one to hitch into a cringle of a fore or main-sail in the bolt-rope, and the other to hitch into a strap which is spliced to the chess-tree. Their use is to pull down the sail, and succour the tackle of a large sail.

HOOK AND BUTT. The scarfing or laying of two ends of planks over each other.

HOOK-PINS, bolts made with a shoulder at one end, and used by carpenters in framing.

HOP. 1. In botany, see HUMULUS.—2. The floral leaf of the *Humulus lupulus*, a climbing perennial plant, said to have been introduced into England from the Netherlands, in the sixteenth century. Its fruit is a sort of cone, composed of *nemi-*

braneous scales, each of which envelopes a single seed. These cones are the objects for which the plant is cultivated, and their principal use is to communicate to beer its strengthening quality, to prevent it from turning sour, and to impart to it an agreeable aromatic bitter.

HOP'LITES, ὀπλίτης. The heavy-armed infantry of Grecian antiquity.

HOP-OAST, a particular kind of kiln for drying hops.

HOP'PER. 1. A basket wherein seed-corn is carried at the time of sowing.—2. The wooden trough in a mill into which the corn is put to be ground.

HOP'PLE, a mode of fettering the legs of animals turned out to graze.

HOR'ARY, Lat. *horarius*. Relating to an hour. The *horary circle of a globe* is a small brazen circle, fixed upon the brazen meridian, divided into 24 hours, having an index moveable round the axis of the globe, and used to show the *hour* or time of day in other countries. The *horary lines or circles of a dial* are those lines and circles which mark the hours upon it. The *horary motion of the earth* is the arc described by it in the space of an hour: it is 15° on an average.

HORDE. A name applied to those migratory nations who subsist by rapine and plunder.

HOR'DEINE. The name given by Proust to the peculiar starchy matter of barley (*hordeum*).

HORDEOLUM, Lat. dim. of *hordeum*, barley. A little tumour on the eyelids, resembling a barley-corn; vernacularly a *stye*.

HORE'HOUD. In *botany*, see **MARRUBIUM**.

HORI'ZON, ὁρίζων, from ὁρίζω, to bound. In *geography*, the line which terminates the view when extended to the surface of the earth, dividing the globe into two hemispheres. It is *sensible* and *rational*; the sensible, visible, or apparent horizon is a lesser circle of the sphere, which divides the visible part of the sphere from the invisible. The rational, true, real, or astronomical horizon is a great circle, whose plane passes through the centre of the earth, and whose poles are the zenith and nadir. These horizons would coincide if the eye could take in the whole hemisphere.

HORIZON'TAL, parallel to the horizon. Thus, a *horizontal dial* is one drawn upon a plane parallel to the horizon, and a *horizontal line and plane* are terms in perspective for a line and plane parallel to the horizon, and passing through the eye. The *horizontal range of a piece of ordnance* is the distance at which the ball falls on a horizontal plane, whatever be the angle of elevation of the piece. The *horizontal speculum* is a well-polished metal speculum of

three or four inches diameter, inclosed within a brass ring, and so fitted that the centre of gravity of the whole shall fall near the point on which it turns.

HORN. 1. In *natural history*, the hard pointed bodies growing on the heads of some graminivorous animals, serving either for defence or ornament, are termed *horns*; and the same name is used vernacularly for the antennæ of insects.—2. In *chemistry*, the substance composing the horns of graminivorous animals, consisting of coagulated albumen, with a little gelatine and phosphate of lime: it is extensively used in the arts.—3. In *music*, a wind-instrument, originally made of horn, but now of brass.—4. In *botany*, a spur. See **CALCAR**.

HORN'BLLENDE, a mineral. The amphibole of Hady, of a green, or blackish green colour, produced by the oxides of chromium and iron. It enters largely into the composition of several of the trap rocks. It is sometimes found regularly crystallised, but more commonly the crystallization is confused, and it appears in masses composed of laminae, acicular crystals, and fibres variously aggregated. It occurs under many forms. Thus carinthine, actinolite, tremolite, calamite, amianthus, &c. are varieties; but hornblende itself is a sub-species of straight-edged augite.

HORN'BLLENDE SCHIST, a metamorphic rock, composed principally of hornblende, with a variable portion of felspar, and sometimes grains of quartz. It appears to be merely clay altered by heat and pressure.

HORN'ED OWL. The common owl, or *Strix otus*, Lin. is thus named from its having two tufts of feathers on the forehead, which it can erect at pleasure.

HORN'ET, a large species of wasp, the *Vespa crabro*, Lin.; common in Europe.

HORN'ING, LETTENS OF. In *Scottish law*, a species of process against a debtor.

HORN'PIPE. 1. A Welsh instrument of music, consisting of a wooden pipe with horns at the ends—one to collect the wind from the mouth, the other to carry off the sounds.—2. An air or tune of triple time, with six crotchets in a bar.—3. An animated dance.

HORN SIL'VER, a native chloride of silver crystallised in the cubic system, and sectile like horn. It is rare in European mines, but common in the mines of Peru and Mexico.

HORN'STONE, a variety of rhomboidal quartz. It is called *Chert* in Derbyshire, where it abounds. It is valuable for forming the grinding-blocks of flint-mills in the pottery manufacture. The name *hornstone* is often confounded with *hornblende*.

HOROS'GRAPHY, from ὥρα, an hour, and

ὥρα, I write. The art of constructing dials.

HORO'METRY, *ὥρα* and *μέτρον*, measure. The art of measuring hours.

HOROPTER, from *ὥρα* and *ὀπταίαι*. In optics, a right line drawn through the point where the two optic axes meet, parallel to that which joins the two pupils.

HOROSCOPE, from *ὥρα* and *σκοπία*. In astrology, a scheme or figure of the twelve houses or signs of the zodiac, in which is marked the disposition of the heavens at a given time.—2. The degree of the ascendant or star which rises above the eastern horizon at any time when a prediction is to be made.

HORSE. 1. In zoology, the *Equus caballus*, Lin.—2. In navigation, a rope reaching from the middle of a yard to its extremity, on which the sailors stand when they are loosing or reefing the sails; also a thick rope fixed fore or aft a mast, for the purpose of hoisting some yard.

HORSE-POWER, the power or force which a horse generally exerts. It is compounded of his weight and muscular strength, and decreases with his speed. It is generally reckoned in mechanical calculations, equal to 33,000 lbs. raised 1 foot high per minute; and if continued throughout the day of 8 hours, amounts to 150 lbs. conveyed a distance of 20 miles, at a speed of 2½ miles per hour.

HORSE' RUN. In earthwork, a contrivance for drawing up loaded wheelbarrows from the bottom of deep cuttings for railways, docks, &c., by the assistance of a horse, which walks to and fro instead of round as in the horse-gin.

HORSE'SHOE. In fortification, a work of a round or oval form.

HORTUS SIC'CUS, *dry garden*. A collection of dried plants kept in paper or books.

HOSAN'NA. In the Jewish rituals, a term signifying *Save now*. Hosanna became latterly the name of a prayer, rehearsed on the several days of the feast of tabernacles, and in which the word was often repeated.

HOSE. 1. A term synonymous with stockings.—2. The name of the leathern pipe used with fire-engines, for conveying the water.—3. The leathern pipe used in ships for conveying water from the main decks into the casks.—4. The hollow part of a spade, or other tool of a similar kind, which receives the end of the shaft or handle.

HOS'PITAL GAN'GRENE, a peculiar form of gangrene which sometimes prevails in hospitals.

HOSPITAL'ERS, an order of religious knights, known now by the title of Knights of Malta. They took the name of *Hospitaliers* from their baidling an

hospital, at Jerusalem, for the reception of pilgrims.

HOSPITIUM, a Latin word for an inn: used, in old law books, for an Inn of Court, and sometimes for a monastery, or common inn for the accommodation of travellers.

HOS'PODAR, a title borne by the princes of Walachia and Moldavia, who receive their investitures from the Grand Seignior.

HOST, from *hostia*, a victim. The name given, in the Romish rituals, to the elements of the Eucharist, or rather to the consecrated wafer.

HOT'BED. A bed of earth with horse-dung or other manure, and covered with glass, for raising early plants, or such as will not thrive in cold soil.

HOTCH'POT. In law, a mixing of land given in marriage with lands in fee falling by descent.

HOT'FLUE, an apartment heated by stoves or steam-pipes, in which padded or printed calicoes are dried hard.

HOT'HOUSE. A building heated by flues, for rearing exotic plants, which require a warm atmosphere and soil.

HOT'WALL. A wall for the growth of fruit-trees, built with flues for being heated in severe weather.

HOUND. In zoology, the *Canis venaticus*, Lin. The hound, the pointer, and the terrier differ between themselves only in size and the proportions of the limbs. The greyhound is longer and more lank.

HOUNDS. In nautical language, the projecting parts of the head of a ship.

HOU'RI, a nymph of Mahommed's paradise.

HOUSE, Sax. *hus*. In astrology, the situation of a planet in the heavens, also the twelfth part of the zodiac.

HOUSE'BOYE. In law, a sufficient allowance of wood to repair the houses of the tenant and supply fuel.

HOUSE'BREAKING. The breaking into a house by daylight with intent to commit a felony: the same by night is *burglary*.

HOUSE'LINE, or HOU'S'ING. Among seamen, a small line formed of thin strands, smaller than ropeyarn, used for seizings, &c.

HOU'S'ING. In the *manège*, a piece of cloth fastened to the hinder part of a saddle, and covering the horse's croup: called also *boot-housing*. Also a cloth laid over a saddle.—2. The same as *house-line* (q. v.).—3. In architecture, the space taken out of one solid to admit of the insertion of another.

HOW'ITZER, Germ. *haubitze*. A kind of mortar or short gun, mounted on a field-carriage, and used for throwing shells, &c. It differs from a mortar in having the trunnions in the middle.

HOW'KER. A two-masted Dutch vessel: also a fishing-boat, with one mast, used on the coast of Ireland.

Hov, a small vessel usually rigged as a sloop, and employed for conveying passengers and goods from place to place on the sea-coast, or to or from a ship in a road or bay.

Hu'tert, **ORDER OF ST.** The highest Bavarian order of knighthood, instituted in 1444.

HUE AND CRY. In *law*, the common process of pursuing a felon.

HUER, or **HOER**, the Icelandic name of certain fountains of boiling water in Iceland, otherwise called *Geyzers*.

HU'GUENOTS. A name formerly given to the Protestants in France. The name is supposed to be a corruption of the German word *Eidgenossen*, which means *sworn-fellows*.

HU'SSIERS. Civil officers in France, whose attendance is necessary in every judicial tribunal, from that of a justice of the peace to the Court of Cassation.

HU'FSTON (Ger.). In *music*, the secondary note of a shake.

HULK, Dut. *hulk*; the body of a ship. The word is applied only to the body of an old ship, which is laid by as unfit for use. The old vessels employed in raising sand, ballast, &c., in the river Thames, and wherein a certain class of convicts are kept at hard labour, are by way of eminence styled *the hulks*.

HULL. 1. The outer covering of a nut, grain, &c.—2. The body of a ship, exclusive of her masts, yards, and rigging. *Hull down* expresses that the hull of a ship is concealed by the convexity of the sea.

HULOTHE'ISM, from ὕλη, matter, and θεος, God. The doctrine that matter is God, or that there is no God but matter and the universe.

HUMANITIES. In *Scotch colleges*, the *literæ humaniores*, or grammar, rhetoric, and belles lettres, including the study of the ancient classics, in distinction from philosophy and science. The student in humanities is called a *humanist*.

HUM'OLDITE, a rare mineral which occurs in small and nearly colourless crystals, irregularly aggregated, and which seems to contain the same elements as datolite. Named in honour of Humboldt.

HU'MERUS, Lat. from ὤμης. In *anatomy*, (1.) The arm from the shoulder to the forearm. (2.) The shoulder.

HUM'OCK, an eminence of land resembling a smooth rounded cone, as seen from the deck of a vessel at sea.

HU'MOR, Lat. from *humus*, the ground, whence moisture arises. A general name for any fluid of the body except the blood.

HU'MORAL PATHOLOGIST, that pathology which attributes all diseases to disordered states of the fluids or humours, without taking solids into consideration.

HU'MOURS (of the eye). The *aqueous humour* is the transparent fluid occupying the space between the crystalline lens and cornea, both before and behind the pupil. The *crystalline humour* or *lens* is a small transparent solid body, occupying a middle position in the eye between the aqueous and vitreous humours. It is the principal instrument in refracting the rays of light, so as to form an image on the retina. The *vitreous humour* is a fluid contained in the minute cells of a transparent membrane, occupying the greater part of the cavity of the eye, and all the space between the crystalline and retina.

HU'MULIN, the narcotic principle of the hop (*humulus*).

HU'MULUS, the *hop*; a genus of perennial climbing plants. *Diacia*—*Pentandria*. Named from *humus*, the ground. One species (*H. lupulus*) cultivated in Britain. See *HOP*.

HUN'DRED, a division or part of a county in England, supposed to have originally contained 100 families, 100 able men for the king's wars, or 100 manors; but as the word means literally a *circuit*, it is probable that Alfred's divisions had no reference to number.

HUNGARIAN MACHINE, a hydraulic engine on the principle of Hero's fountain, so called from its having been first employed in draining a mine at Chemnitz, in Hungary. The action is produced by the condensation of a confined portion of air, produced by the descent of a high column of water contained in a pipe, and therefore acts with a force proportionate to the weight of such column. It is a machine highly deserving of attention.

HUN'GARY WATER, water distilled from tops of rosemary flowers with some spirit of wine. Thus named from its having been first prepared for a queen of Hungary.

HUR'DLE. 1. A crate of osiers, twigs, or sticks of various forms.—2. In *fortification*, twigs interwoven close together, sustained by long stakes, and usually covered with earth.—3. In *husbandry*, a frame of split timber or hazel rods wattled together, used for gates, sheep-folds, &c.

HUR'DY-GURDY, a musical instrument, the *lyra mendicorum* of Kircher, called also the *vielle* (q. v.).

HURR'ICANE, Span. *huracan*. A violent storm, generally accompanied by lightning, and distinguished by the violence of the wind, and the sudden changes in direction to which it is subject.

HURST, Sax. a *wood*. The termination of the names of some places in England.

HURT'ICKLE, the *centaurea cyanus*, thus named because it is troublesome to cut down, and sometimes notches the sickle.

HUS'BANDRY, the business of a farmer, comprehending agriculture, the raising

and managing of cattle and other domestic animals, the management of the dairy, and whatever the land produces. This term has the same root as *husband*, viz., Sax. *husbonda*, from *hus*, a house, and *buend*, a cultivator or inhabitant.

HUSK. In *botany*, the glume or that part out of which a flower grows. The husks of corn and grasses are formed of valves, and embrace the seed. The husks of small grains constitute *chaff*.

HUSSAR, a mounted soldier. The term is of Hungarian origin, from *husz*, twenty, and *ar*, pay, every twenty houses being obliged by order of Matthias I. (1458), to furnish and support one horseman.

HUS'SITES, the adherents of John Huss, the Bohemian reformer.

HUS'TINGS, from Sax. *hustinge*, the house of trials. A court held in the guildhalls of several English cities, by the principal officers of their respective corporations.—The platform erected in the open air to accommodate the speakers, &c., at public meetings, especially political meetings.

HUTCH, a name at some coal works for a box in which the coal is drawn up out of the pit, also the quantity of coal which such box can contain. Six *hutches* make a *cart* (about 14 cwt.).

HUTTONIAN THEORY. In *geology*, the Plutonic theory, first advanced by Dr. Hutton.

HYACINTH (see **HYACINTHUS**). 1. A gem much prized by jewellers. It is a subspecies of pyramidal zircon, of a deep gold or amber colour. Its constituents are zirconia 70, silica 25, and oxide of iron 0.5. It occurs embedded in gneiss and syenite, in basalt and lava.—2. In *botany* (see **HYACINTHUS**).

HYACINTHINE. 1. As an *adjective*, of the colour of hyacinth.—2. As a *substantive*, the name of a mineral which usually occurs in rectangular eight-sided prisms. It is brownish, transparent, and causes double refraction.

HYACINTHUS, the *hyacinth*: a genus of perennial plants. *Hexandria—Monogynia*. Named *ἵακινθος*, from the friend of Apollo, who was turned, according to the poets, into this flower. The Hare-bell (*H. non-scriptus*), the only British type of this genus, is by some placed in the genus *Scilla*.

HYADES, from *ἵαδης*, a watery constellation. In *astronomy*, the seven stars in the bull's head, the principal of which is *Aldebaran*.—In *mythology*, the daughter of Atlas and Pleione.

HYÆNA, a genus of ferocious nocturnal animals, somewhat allied to the dog. Order *Carnaria*, family *Carnicora*, division *Digitigrada*. There are three species, the grey, the brown, and spotted hyænas. They are found from India to Abyssinia,

and Senegal. Name *ἵαινα*, was anciently applied to any cunning animal.

HYBERBO'REANS, *ὑπερβόρειοι*, beyond, and *βορρæας*, north wind. The name given by the ancients to the unknown inhabitants of most of the northern regions of the globe.

HYBERNAC'ULUM, (Lat.), a wintering place. A term in *botany* for that part of a plant which protects the embryo herb from external injury. It is an organic body, which sprouts from the surface of different parts of a plant, inclosing the rudiments of the new shoot, and which is capable of evolving a new individual perfectly similar to the parent.

HYB'ODONT, from *ὑβος*, and *dens*. A sub-family of sharks (fossil), according to the arrangement of M. Agassiz. They seem to have begun with the coal formation, and to have ceased at the beginning of the chalk formation.

HYB'ODUS, a genus of fossil fishes peculiar to the oolitic formations.

HYB'RID, from *ὑβρις*, an injury; mongrel: applied to the offspring both of animals and plants when of different species. Neither hybrid animals nor plants propagate their species.

HYDAR'THUS, from *ὑδωρ*, water, and *αρθρον*, a joint. The disease called venacularly *white swelling*, which systematic writers usually distinguish into two kinds, *rheumatic* and *scrofulous*.

HYDATIDS. 1. A genus of Entozoon, of the Tænioid family. Name from *ὑδωρ*, water; being characterised by their being formed of a membrane containing a water-like fluid. They form the genus *Cysticercus*, Rud.—2. Little transparent vesicles of a water-like fluid, found especially in dropsical patients.

HYD'NUM, the truffle or tuber. A genus of plants. *Cryptogamia—Fungi*. Some species of the genus of mushrooms are eaten on the continent, but many are poisonous. The hedgehog mushroom and paulet, are examples.

HY'DREA, from *ὑδωρ*, water. 1. A fabulous monster with many heads, said to have infested the lake of Lerna, and was killed by Hercules.—2. The *female snake* or *water-serpent*, an immense constellation of the southern hemisphere, extending for about 100°, from the west to east, beneath the Crab, the Lion, and the Virgin: it represents the water-serpent killed by Hercules.—3. The *fresh-water polypus*, a genus of gelatinous polypi which may be regarded as an animated stomach, provided with tentacula for catching its food. Their most wonderful property is that of being constantly reproduced by the indefinite excision of their parts, so that they can be multi-

plied at will by division. Their natural increase is by shoots.

HYDRAN'GEA, a genus of arborescent and shrubby plants. *Decandria—Digynia*. Name from ὑδωρ, water, and αγγος, a vessel. Temperate climates. Some of the species are cultivated in our gardens, as the Chinese guelder-rose, &c.

HY'DRANT, from ὑδραῖνα, to irrigate. A pipe with the necessary valves, &c., by which water is raised and discharged from the main conduit of an aqueduct.

HYDRAROY'RIA, ὑδαρ, and αργυρος, silver. An eruptive disorder occasioned by the use of mercury.

HYDRAR'GYRUM, ὑδραργυρος, from ὑδωρ, water, and αργυρος, silver. Mercury or quicksilver.

HY'DRATE, from ὑδωρ, water. A compound not crystallised, in which water is chemically combined with some other substance in atomic proportion, as in slaked lime, which in chemical language is a *hydrate of lime*, or lime *hydrated*, that is, combined with water. The water solidified in the process of crystalline bodies, is termed *water of crystallization*.

HYDRAU'LIC, from ὑδωρ, water, and αὐλος, a pipe. Relating to the conveyance of water through pipes.

HYDRAU'LICON, the water organ. An ancient musical instrument, acted upon by water. Its construction is now uncertain.

HYDRAU'LICS, the science which relates to the motion of non-elastic fluids, as water, and the construction of all kinds of instruments and machines by which the force of such fluids is applied to practical purposes. See **HYDRODYNAMICS**.

HY'DRIODATE, a compound of the hydriodic acid with a salifiable base.

HYDRIOD'IC ACID, an acid formed by the combination of hydrogen with iodine in equal volumes. It occurs in the gaseous state, but combines readily with water, like the hydrochloric acid.

HYDROBROM'IC ACID, an acid composed of equal volumes of hydrogen and bromine.

HYDROCAR'BON, a combination of hydrogen with carbon; e.g., etherine.

HY'DRO-CAR'BURETS, compounds of carbon and hydrogen, all of which are highly combustible.

HYDROCEPH'ALUS, Lat. from ὑδωρ, water, and κεφαλή, the head. Dropsy of the brain or head; a disease of which there are two sorts, the acute and chronic. The first is particularly fatal among children from two to seven years of age; in its first stage it is simply inflammation of the brain. The second is often a congenital disease, and is connected with cachexy and debility; it is always dangerous.

HYDROCHLO'RATE, a salt formed by the

hydrochloric acid with a base. According to some chemists, hydrochlorates exist only when water is present; when the water is withdrawn the salt passes to a *chloride*. Thus, crystallised culinary salt is a chloride of sodium, but in solution it is a hydrochlorate of soda.

HYDROCHLO'RIC ACID, an acid formed by equal volumes of hydrogen and chlorine: muriatic acid, or spirit of salt, or marine acid. When pure it occurs in the gaseous state, but combines readily with water; its solution is extensively employed in the arts.

HYDROCHLO'RIDE, a compound of hydrogen, chlorine, and carbon, in atomic proportions.

HYDROCY'ANATE, a salt formed by the union of the hydrocyanic acid with a salifiable base.

HYDROCYA'NIC ACID, an acid consisting of equal volumes of hydrogen and cyanogen. It is called also *prussic acid*, because it was first obtained from Prussian blue. It is a transparent colourless liquid at ordinary temperatures, but is very volatile. Diluted with 8½ times its weight of water, it forms *medicinal prussic acid*. It is a deadly poison. One drop of the pure acid introduced into the fauces of the strongest dog produces death after one or two convulsive respirations.

HYDRODYN'A'MICS, from ὑδωρ, water, and δυναμις, force. The branch of natural philosophy which treats of the mechanical effects of non-elastic fluids, whether at rest or in motion. It comprehends both *hydrostatics* and *hydraulics*, (q. v.).

HY'DRO-FER'RO-CY'ANIC ACID, an acid obtained in solution from the ferrocyanite of potash by the action of sulphuric acid on a solution of that salt. Its colour is lemon-yellow; and by the action of strong light or a gentle heat it is decomposed, and hydrocyanic acid and white prussiate of iron are formed.

HY'DRO-FLU'ATES, salts formed by the hydrofluoric acid with bases, called *fluates* by some, and *fluorides* by other chemists.

HYDROFLU'RIC ACID. When fluor-spar (*fluoride of calcium*) is distilled with twice its weight of sulphuric acid, a highly volatile and corrosive liquid, which is *hydrofluoric acid*, is obtained. Its constitution is as yet imperfectly understood, as its basis *fluorine* (q. v.), has not yet been obtained in an insulated form. Analogy, however, leads to the inference that it is a compound of equal volumes of hydrogen and fluorine. It acts powerfully on glass, and must therefore be prepared and kept in silver or lead vessels, on which it does not act. Diluted with about six times its weight of water, it is employed for etching on glass.

HY'DRO-FLUOSIL'ICATES, salts formed by the hydro-fluosilicic acid with bases.

HY'DRO-FLUOSILIC'IC ACID, a compound acid consisting of, 1, hydrofluoric acid, and 2, fluosilicic acid (in simple mixture, according to Berzelius.)

HY'DROGEN, from ὑδρω, water, and γινωσκω, to produce. An inflammable, colourless, and æriform fluid, the lightest of all known substances, and the basis of water (q. v.). It is plentifully distributed in nature. It is one of the ingredients of bitumens, oils, fats, alcohol, and in fact of all animal and vegetable bodies. It is speedily fatal to animal life when taken into the lungs; it does not support combustion, but uniting with oxygen much light and heat are evolved. Being the lightest ponderable substance known, it is usually assumed as unity in describing the sp. gr. of gases.

HY'DROGENATED, combined with hydrogen.

HY'DROGRAPHY, from ὑδρω, water, and γραφω, to describe. Description of the watery part of the terraqueous globe, as seas, lakes, &c. It gives an account of tides, soundings, bays, gulfs, creeks, sands, shoals, &c.; the distances and bearings of objects from one another, and whatever is remarkable, either at sea or on the coast. It also comprehends the construction of maps and charts for the use of navigators, &c.

HYDROG'URETS, compounds of hydrogen with a simple inflammable body, as carbon, phosphorus, or sulphur, or with metals; e. g., carburetted hydrogen is a hydroguret of carbon,

HY'DROMANCY, ὑδρω, and μαντεια, prophecy. Among the ancients a method of divination by water.

HYDROM'ETER, from ὑδρω, water, and μετροω, measure. An instrument in common use for finding the specific gravity of non-elastic fluids. It consists of a hollow ball of glass or metal with a weight below it, and a slender stem above, divided into a certain number of degrees by marks. In pure water it is adjusted to float at a particular mark, but when immersed in a lighter or heavier liquid it floats higher or sinks lower. Sometimes the instrument is adjusted to different fluids by moveable weights, while the graduations of the scale are made to express

the specific gravities by the degree to which it sinks. The figure represents Silk's hydrometer, where A is a brass ball loaded with a weight B, and surmounted by a slender stem D, graduated into eleven equal parts. It is provided with eight weights C, in which a slit is cut so as to admit the slender part of the stem B into the hole in the centre. The use of these weights is to adjust the instrument to fluids heavier than water, and in which it would not otherwise sink to the level of the lowest division on the stem D. This is the instrument ordered by Act of Parliament for collecting the revenue on ardent spirits.

HY'DRO-OX'IDE, a hydrated oxide.

HYDROFERSULPHU'RIC ACID, or BISULPHURET OF HYDROGEN. A compound of 2 of sulphur, and 1 of hydrogen.

HYDROPH'ANE, from ὑδρω, water, and φανω, to show. A variety of opal, which is opaque when dry, but by immersion in water becomes transparent.

HYDROPH'ILUS, a genus of aquatic insects, ὑδρω and φιλος. The hydrophilii, form the first tribe of the palpicorne family of pentamerous coleoptera in Cuvier's arrangement, but in the arrangement of Linnaeus they form a division of his genus *Dytiscus*. They are variously subdivided.

HYDROPHO'BIA, from ὑδρω, water, and φοβω, to fear. Canine madness, which is always accompanied with a preternatural dread of water. Pathologists usually regard the disease as the consequence of a morbid poison, introduced into the system by the bite of a rabid animal.

HYDROPHTHAL'MIA, from ὑδρω, water, and οφθαλμος, the eye. A morbid enlargement of the eye, arising from a preternatural increase of the vitreous or aqueous humours. The same name is also given to a mere œdematous swelling of the eyelid.

HYDROPH'YTE, water-plants, ὑδρω, water, and φυτον, a plant. The number of hydrophytes is very considerable, and their situations are more various than could have been anticipated. Some are covered and uncovered daily by the tide; others live in abysses of the ocean, at the extraordinary depth of 1000 feet; and although, in such situations, there must reign darkness more profound than night, many of these vegetables are highly coloured.

HYDROFNEUMAT'IC TROUGH. A name which has been given to the apparatus more commonly called the *pneumatic trough*.

HY'DROPS, dropsy, ὑδρωψ, from ὑδρω, water. A preternatural hydropoid collection in the cellular substance, or different cavities of the body. Anasarca, hydrocephalus, hydrothorax, ascites, hydro-

metra, and hydrocele are some of the species of the disease.

HYDROSCOPE, from *ὕδωρ*, water, and *σκοπεῖν*, to view. A kind of water-clock anciently in use. Time was marked by the rise of water, which was allowed to flow slowly into a graduated tube.

HYDROSELE'NIC ACID, seleniuretted hydrogen. A highly deleterious gas, readily prepared by treating seleniuret of potassium with liquid hydrochloric acid.

HYDROSTATICA. In *natural history*, an order of *Acalepha*, characterised by having buoyant air-vessels, by which they suspend themselves in their liquid element.

HYDROSTATIC BALANCE. A delicate balance employed in finding specific gravities.

HYDROSTATIC BELLows. An apparatus for illustrating the upward pressure of fluids, and the hydrostatic paradox. It consists of two circular boards connected by leather, to rise and fall like the common bellows, but without valves, and having a pipe three or four feet long, communicating with the interior through the lower board. Water being poured into this tube, the upper board of the bellows is raised with a force equal to the difference between its area and the area of the tube. This is the property applied by Mr. Bramah in the construction of his hydraulic press.

HYDROSTATIC INDEX. An apparatus for demonstrating the truth of Pascal's hydrostatic paradox.

HYDROSTATIC PARADOX. The principle, in hydrostatics, that a portion of fluid, however small, may be made to counterpoise a portion of fluid, however great. Thus, if to a wide vessel A, a small tube B, be attached, communicating with the vessel, and if water be poured into either of them, it will stand at the same height in both; consequently there is an equilibrium between; and this holds, whatever the shape and size of the vessels may be. This illustrates the principle, that the pressure of fluids is as their height, without any regard to their quantity.

HYDROSTATIC PRESS. See **BRAMAH'S PRESS**.

HYDROSTATICS, from *ὕδωρ*, water, and *στατικός*, static. That branch of hydrodynamics which treats of the weight, pressure, and equilibrium of non-elastic fluids at rest. It comprehends the doctrine of flotation, methods of finding specific gravities, &c.

HYDROSULPHATES. Compounds of hydrosulphuric acid.

HYDROSULPHURETS. Chemical compounds of bases with sulphuretted hydrogen.

HYDROSULPHURIC ACID. The name given by Gay Lussac to a solution of sulphuretted hydrogen in water. It has also been called *hydrotheionic acid*, from *θεῖον*, sulphur.

HYDRO-SULPHUROUS ACID. When three vols. of sulphuretted hydrogen gas, and two of sulphurous acid gas are mixed together, over mercury, they are condensed into a solid orange-yellow body, to which Dr. Thomson has applied the name of *hydro-sulphurous acid*.

HYDROTHORAX, from *ὕδωρ*, water, and *θώραξ*, the chest, dropsy of the chest.

HYDROXANTHIC ACID. An acid discovered by Zeise, of Copenhagen, and since considered as an oxy-acid, and described under the name of *xanthic acid* (q. v.). It is the *carbo-sulphuric acid* of some chemists, being a compound of two volumes of bisulphuret of carbon, and one volume of sulphuric ether.

HYDROURE, a hydrate.

HYDRURET, a compound of hydrogen with a metal. See **HYDROURET**.

HYGIENISM, the science of health, *ὕγιαινα*, health. The right application of medical science to the preservation or restoration of health. The term has been extensively abused.

HYGROMETER, from *ὕγρος*, moisture, and *μετρεῖν*, measure. An instrument for determining the quantity of vapour in the atmosphere. Various instruments have been contrived for this purpose, some of them founded upon the property which certain substances have of imbibing vapours, and having their dimensions thereby altered; others on the principle that the moisture of the atmosphere will deposit itself in dew-drops upon the surface of a colder body in contact with it. It is upon this principle that Daniel's hygrometer is constructed. This consists of two small glass bulbs, connected together by a glass tube, bent at right angles, as shown in the figure. A very delicate thermometer is inclosed in one bulb, which also contains some ether, and the other bulb is covered with a piece of fine muslin. When an observation is to be made, the covered bulb is moistened with ether, which by evaporation produces intense cold, and thereby condenses the etherous vapour within. Evaporation from the further bulb is consequently promoted, and the temperature of its exterior surface falls: a slight ring of dew, coinciding with the surface of the liquid within, forms on the glass. The thermometer within is to be observed during the operation, and the temperature indicated by it at the instant when the dew appears on (or disappears

from) the glass, is called the *dew-point*, and will be found several degrees below

the temperature indicated by the thermometer in the stem of the instrument. The dew-point being found, the hygrometric state of the atmosphere is known.

HYGROMETRIC, applied to substances which readily become moist and dry with the changes in the atmosphere.

HYLOZOISM, ὕλη, matter, and ζῶν, life. In philosophy, the doctrine that matter lives.

HYMENÆA, the locust-tree: a genus. *Decandria—Monogynia*. Name from *Hymen*. Southern parts of America and the West Indies. The *H. courbaril* affords the resin called *gum animé*.

HYMENOPHYLLUM, the marriage-leaf: a genus of perennial ferns. Britain and West Indies.

HYMENOPTERA, from ὕμην, a membrane, and πτερος, a wing; membrane-winged. An order of insects characterised by having four membranous and naked wings, of which the superior are the largest. The mouth is composed of mandibles, maxillæ, and two lips: the abdomen of the females is terminated by an ovipositor or sting: the wasp and bee are examples.

HYOSCIAMINE, a new crystalline vegetable principle obtained from henbane, (*Hyoscyamus niger*). It is alkaline, and highly poisonous. It is the *hyosciamia* of M. Brandes.

HYOSCYAMUS, the Henbane: a genus of herbaceous plants. *Pentandria—Monogynia*. Name from ὕς, a hog, and κυάμος, a bean. The *H. niger* or black henbane is common in Britain: it is highly poisonous, but also highly useful in medicine.

HYPERTRAL, from ὑπερ, above, and

αἶθρ, the air; open above. Applied to certain ancient temples which had ten columns on each façade, were surrounded by double porticoes, and had cellæ entirely exposed to the air, having no roof.

HYPAL'AGE, ὑπαλλαγή, change. A grammatical figure consisting of a mutual change of cases. Thus Virgil writes *dare classibus aurores*, for *dare classes aurores*. See **HYPERBATON**.

HYPANTHODIUM, a form of inflorescence when the receptacle is fleshy, but not inclosed in an involucre.

HYPER, ὑπερ, over and above. A term used in composition to denote some excess.

HYPERBATON, ὑπερβατον, transposition. a grammatical figure which consists in the inversion of the proper order of words and sentences. The species are the anastrophe, the hypallage, the synchysis, the tmesis, the parenthesis, and the true hyperbaton, which consists in a long retention of the verb which completes the sentence.

HYPERBOLA, from ὑπερβολή, an excess. A section of a cone made by a plane, so that the plane makes a greater angle with the base of the cone than that formed by the base and side of the cone, and if the plane be produced so as to cut the opposite cone, another hyperbola will be formed, which is called the opposite hyperbola to the former.

HYPERBOLE, ὑπερβολή, excess. A rhetorical figure which expresses more than the truth, or which represents things much greater or smaller, better or worse, than they really are.

"He was so gaunt, the case of a flagolet was a mansion for him."—*Shakspeare*.

HYPERBOLIC CYLINDROID, a solid generated by the revolution of a hyperbola about its conjugate axis.

HYPERBOLIC CONOID, a conoid formed by the revolution of a hyperbola about its axis.

HYPERBOLOID, from *hyperbola*, and ἕδος, like. A hyperbolic conoid.

HYPERBOREAN, from ὑπερ, beyond, and βορέας, the north; most northern. The ancients applied this epithet to all people and places to the north of the Scythians, and which they considered to enjoy a delightful climate, being beyond the domain of Boreas, or the north wind! They were, however, the Laplanders, the Samoides, and the Russians about the White Sea.

HYPERCATALECTIC, from ὑπερ, beyond, and καταλήξις, termination. An epithet for a verse which has one or more syllables beyond the regular measure. When it contains only one syllable in excess, it is usually called a *hypermeter*.

HYPER'ICUM, the *St. John's-wort*: a very extensive genus of plants. *Polyadelphia*—*Polyandria*. Name from *ὑπερ*, over, and *ικον*, a spectre, because it was believed to have the power of driving away evil spirits. About 60 species, of which 11 are indigenous in Britain.

HYPEROCHE, *Gr. pre-eminence*. In music, an interval of nearly one comma and a half.

HYPERSTHENE, } from *ὑπερ*, above, and

HYPERSTENE, } *σθινος*, strength. Prismatical or Labrador schiller-spar: a mineral of a greenish black colour, but nearly copper-red on the cleavage. It consists of silica 54·25, magnesia 14, alumina 2·25, lime 1·5, oxide of iron 24·5, water 1. It is often cut for brooch-stones, &c., and has then a beautiful copper-red colour.

HYPERTHYRUM, *ὑπερ*, and *θυρα*, a door. In architecture, the lintel of a doorway.

HYPERTROPHY, from *ὑπερ*, above, and *τροφη*, nutrition. A morbid increase in any organ, without change in the nature of its substances.

HY'PHEN, *ὑφεν*, under one. A note of conjunction between compound words, as in *five-leaved*.

HY'PO, *ὑπο*, under. A Greek prefix, opposed to *hyper*.

HYPOBOLE, from *ὑπο*, under, and *βαλλω*, to throw. A rhetorical figure in which several things are enumerated which seem in favour of the opposite argument, and each of them is refuted in order.

HYPOCAUSTUM, *ὑπο*, and *καίω*, I burn. In ancient architecture, a vaulted chamber containing apparatus for heating apartments by means of earthen tubes.

HYPOCHON'DRIA, from *ὑπο*, under, and *χονδρος*, a cartilage. The spaces in the abdomen immediately under the false ribs on each side of the epigastrium; in the one is the liver, and in the other the spleen.

HYPOCHON'DRIASIS, } Vapours or low-

HYPOCHON'DRIACISM, } ness of spirits, often accompanied by weariness of life, misanthropy, or spleen. The corporeal symptoms are commonly flatulency in the stomach and bowels, acrid eructations, costiveness, copious discharge of pale urine, spasmodic pains in the head, and other parts of the body, giddiness, palpitations, general sleeplessness, dimness of sight, languor, &c.

HYPOGE'OUS, *ὑπο*, and *γη*, earth. In botany, applied to all the parts of plants beneath the surface of the ground.

HYPOGASTRIUM, Lat. from *ὑπο*, under, and *γαστήρ*, the stomach. The lower anterior region of the abdomen, from a little below the umbilicus to the pubes: called the *hypogastric region*.

HYPOGE'NE, from *ὑπο*, under, and *γενομαι* to produce; nether-formed. Applied to rocks which have assumed their forms and structure at a depth from the surface.

HYPOGY'NUS, *ὑπο*, and *γυνη*, a female. In botany, applied to anything growing from below the base of the ovary.

HYPONITROUS ACID. An acid containing one volume of oxygen less than the nitrous acid. It is a greenish liquid, formed by subjecting a mixture of 2 vols. of nitrogen and 3 of oxygen to intense cold. It combines with bases, and forms hyponitrites.

HYPOPHOSPHORIC ACID, a liquid mixture of 2 phosphoric acid with 1 phosphorous acid. Dulong gave it the name of *phosphatic acid*.

HYPOPHOSPHORUS ACID, an acid which is probably a compound of 4 atoms phosphorus, and 3 atoms oxygen. It is obtained in solution.

HYPOSCENIUM, *ὑπο*, and *σκηνη*, a scene. In ancient architecture, the front wall of a theatre, facing the orchestra from the stage.

HYPOSTASIS, Lat. for *ὑποστασις* (from *ὑπο*, under, and *ιστημι*, to stand); properly subsistence or substance: hence used by divines in the sense of *person* or *being*. Thus the Holy Trinity consists of three *hypostases* or persons.

HYPOSULPHURIC ACID, an acid procured in solution by passing sulphurous acid gas through black oxide of manganese suspended in water. It consists of 2 vols. of sulphur, and 5 vols. oxygen.

HYPOSULPHUROUS ACID, an acid which has not yet been insulated. It is regarded as a compound of equal volumes of sulphur and oxygen.

HYPOTHE'CA, *ὑποθήκη*, a pledge. A term in civil law for the obligation whereby the effects of a debtor are made over to his creditor, to secure the debt.

HYPOTHECA'TION, from *hypothecca*. The pledging of a ship or goods for the repayment of money borrowed to carry on a voyage: otherwise called *bottomry*.

HYPO'THENSE, *ὑπο* and *τείνω*, I stretch. In geometry, the longest side of a right-angled triangle, or the side opposite the right angle.

HYPOTRACHE'LIUM, *ὑπο* and *τραχηλος*, neck. In architecture, that part of the shaft immediately below the neck of the capital of a column.

HYPOTYPO'SIS, *ὑπο* and *τυπος*, type. In rhetoric, an animated description of a scene or event, in language enriched with rhetorical figures.

HYPSIPRYM'NUS, the kangaroo-rat or potoroo of New Holland. A genus of Marsupialia, named from *ὑψιπρυμνος*, raised behind, in allusion to the great length of

the hind legs compared with the fore-ones. There is but one species known; size of a small rabbit and of a mouse grey.

HYRAX, a genus of Pachydermous mammalia; the damans, long placed among the Rodentia on account of their small size. They are rhinoceroses in miniature, the horn excepted.

HYSON, a species of green tea, of which there are three varieties, *hyson*, *young hyson*, and *hyson skin*. These, with *imperial*, constitute the second and third spring crops of the tea plant.

HYSTERIA, } from *ύστερα*, the womb.

HYSTERICIS, } A disease of women, characterised by spasmodic affections of the nervous system, and which was formerly supposed to proceed from the womb.

HYSTERON PROTERON, *ύστερον*, last, *πρωτον*, first. A rhetorical figure, in which that word which should follow is put first; vulgarly, the cart before the horse.

HYSTERO'OMY, from *ύστερα*, the womb, and *τομή*, to cut. The Cæsarian operation.

HYSTRICIASIS, from *ύστρεγγε*, a porcupine. A singular disease of the hairs, in which they stand erect like porcupines' quills.

HYSTRIX, *ύστρεγγε*, a porcupine. A genus of mammiferous animals. Order *Rodentia*. The porcupines are readily known by the stiff and sharp spines or quills with which they are armed, like the hedgehog. They live in burrows, and have many of the habits of the rabbit. To their grunting voice, and thick truncated muzzle, they are indebted for being compared to the pig, and for their corresponding French appellation, *porc-épie* (whence *porcupine*). The true or common porcupine (*H. cristata*, Lin.) inhabits the south of Europe, and is also found in Barbary. From this are separated the *Atherurus*, Cuv., the *Eretrion*, F. Cuv., and the *Syntheres*, F. Cuv.

I.

I, the ninth letter and the third vowel of the English alphabet. As a numeral it stands for one, whether alone or combined with other numeral letters. Placed before V or X it subtracts itself, and the numerals denote one less than the V or the X, but when it is placed after V or X, it denotes the addition of a unit.

IAMBIC (Eng.), for Fr. *iambique*, } A poem.
IAMBUS (Lat.), for Gr. *ιαμβος*. } etical foot consisting of two syllables, the first short and the last long, as *adore*. Hence verses composed of short and long syllables alternately are termed *iambics*.

IBEX, a species of goat which inhabits the most elevated situations of the eastern continent. The *Capra ibex* Lin

IBIS, a genus of grallaceous birds of the longirostrine family, found only in warm climates. The sacred ibis (*I. religiosa*, Cuv.) was reared in the temples of ancient Egypt, with a degree of respect bordering on adoration, for some reason not well known. It is found throughout Africa. The red ibis inhabits the hot parts of America, and is remarkable for its bright red colour.

IC. In *chemistry*, a particle used as a termination of the names of those acids which contain, in combination, the highest known quantity of the acidifying principle. It is used also when there is only one known acid combination of the elements, as carbonic acid. See **ACID**.

ICE, a solid, transparent, brittle body formed by the congelation of a fluid by abstraction of its heat of fluidity. The term is applied only to water and analogous fluids when frozen, and which are liquid at all temperatures above 32° F.

ICEBERG, from *ice*, and *Ger. berg*, a hill. A large mass or hill of ice floating upon the sea. Icebergs are common in the polar seas, and are often of enormous size, sometimes 300 or 400 feet above water, and consequently 2400 or 3200 feet below water (the relative specific gravities of the ice and water being such that every foot of ice above the surface of the water corresponds to eight feet below.) When floating ice is extended beyond the reach of sight it is called *field-ice*; when smaller, but still of very large dimensions, it is called a *floe*; when a floe is broken up, its fragments form a *pack* when they keep closely together; but *drift-ice* if they are scattered. A portion of ice above the common level forms a *hummock*; a detached and lofty mass is an *iceberg*.

ICEBLINK, a name given by seamen to a bright appearance in the horizon, occasioned by the light being reflected by fields of ice obliquely into the atmosphere, and seen before the ice itself is visible.

ICEBOAT, a boat employed on canals, &c., to break the ice in frosty weather; it is usually heavy laden and protected by iron bows and keel. The improved ice-boat breaks the ice upwards instead of downwards, as in those of the common construction. The ice-boat is called a *boar* or *bore* in Scotland, perhaps in allusion to its mode of action.

ICEHOUSE, a subterranean apartment for the preservation of ice during summer. The ice should be closely packed, and surrounded with substances of low conducting power, as straw, wool, &c.

ICELAND-MOSS, a species of liver-wort, the *Cetaria Islandica*.

ICE'LAND SPAR, calcareous spar in its purest form. It is used to exhibit the optical phenomenon of double refraction. See **CALCAREOUS SPAR**.

ICE PLANT, the *Mesembryanthemum crystallinum*, a plant remarkable for the little icy and pellucid vesicles which cover its surface.

ICH DIEN, Germ. for *I serve*. The motto of the Prince of Wales. It was first used by John, King of Bohemia, slain at the battle of Cressy, when it was adopted by Edward the Black Prince, as a mark of subjection to his father Edward III.

ICHNEU'MON. 1. In zoology, the *mangouste* of Egypt, an animal larger than our cat, and slender as a marten. It takes its name (*ιχνημεων*, from *ιχνημι*, to follow) from its hunting for the eggs of the crocodile. It is domesticated and kept for destroying rats and mice. The Europeans at Cairo call it *Pharaoh's rat*; the natives *nenis*. See **MANGOUSTE**.—2. In entomology, a genus of hymenopterous insects of the family *Pupicora*, Cuv., thus named from the circumstance of its preying upon the posterity of the Lepidoptera under the form of caterpillars, just as the quadruped so named destroys the crocodile, by breaking its eggs. There are 1200 species.

ICHNOG'RAPHY, from *ιχνης*, a footstep, and *γραφω*, to describe. 1. In perspective, the view of anything cut off by a plane, parallel to the horizon just at the base of the object.—2. In architecture, the plan of a building exhibited by a transverse section.—3. The term is sometimes used to designate a description of ancient works of art, as statuary, paintings, &c.

ΙCΗTHYOL'OGY, from *ιχθυς*, a fish, and *λογος*, discourse. That branch of zoology which treats of the structure, classification, and habitudes of fishes.

ΙCΗTHYOSAUR'US, from *ιχθυς*, a fish, and *σαυρος*, a lizard, the *fish-lizard*. An extinct genus of marine-lizard or reptile, approaching to the characters of a fish in its organization. Several species have been ascertained, some of which are of enormous size.

ΙCΗTHY'OSIS, the fish-skin disease, from *ιχθυς*, a fish. It is characterised by a thickened, hard, rough, and in some cases almost horny texture of the integuments of the body, with some tendency to scalliness, like the skin of a fish.

ΙCΗN'OCLASTS, image-breakers, from *εικων*, an image, and *κλαστης*, a breaker. A name which Catholics give to those who reject the use of images in their religious worship.

ΙCΗN'OG'RAPHY, from *εικων*, an image, and *γραφω*, to describe. The description of ancient statues, busts, paintings in fresco, mosaic work, &c.

ΙCΗSAH'DRON, from *εικοσι*, twenty, and *δρεα*, a basis. A regular solid, consisting

of twenty triangular pyramids, which have their heights and bases equal, and whose vertices therefore meet in the centre of the circumscribing sphere.

ΙCOSA'NDRIA, from *εικοσι*, twenty, and *ανδρ*, a man. The twelfth class of plants in Linnæus's sexual system, consisting of such as have hermaphrodite flowers, furnished with twenty or more stamens inserted into the calyx. Epithet *icosandrian*.

ΙDΕ. In chemistry, a termination for certain compounds which are not acid; as oxides, chlorides, bromides, and iodides.

ΙDΕ'Α, Lat. for *idea*, from *ιδω*, to see. In popular language, idea signifies the same thing as conception, apprehension, notion. To have an idea of anything is to conceive it. In philosophical use, it does not signify that act of the mind which we call thought or conception, but some object of thought.—*Reid*. Whatever the mind perceives in itself, or is the immediate object of perception, thought, or understanding, that I call an idea.—*Locke*. The word *idea*, as used by Pindar, Aristophanes, and St. Matthew, represented "the visual abstraction of a distant object, when we see the whole without distinguishing its parts." Plato adopted it as a technical term, and as an antithesis to *ιδωαλα*, or sensuous images, and transient and perishable emblems or mental words of ideas. Des Cartes introduced into his philosophy the fanciful hypothesis of material ideas, or certain configurations of the brain, which were so many moulds to the influxes of the external world. Mr. Locke adopted the term, but extended its signification to whatever is the immediate object of the mind's attention or consciousness. Mr. Hume, distinguishing those representations which are accompanied with a sense of a present object from those reproduced by the mind itself, designated the former by *impressions*, and confined the word *idea* to the latter.—*S. T. Coleridge*.

ΙDΕ'AL. An imaginary model of perfection, considering ideas as images or forms in the mind. Thus we speak of the *ideal* of beauty, the *ideal* of virtue, &c.

ΙDΕ'ALISM. That system or theory that makes everything to consist in ideas, and denies the existence of material bodies.—*Walsh*. *Materialism* is a circumference without a centre; *idealism* is a centre without a circumference.—*Guesses at Truth*.

ΙDΕN'TITY, PERSONAL. The sameness of the conscious subject, *I*, throughout all the various states of which it is the subject.

ΙDΕOGRAP'HIC CHARACTERS, from *ιδεα*, and *γραφω*, I write. In philology, characters which express figures or notions.

EOLOGY, from *idea*, an idea, and *logos*, discourse. The doctrine of ideas.

IDES, Lat. pl. of *idus*. Eight days of each month in the Roman calendar, the first day of which fell on the 13th of January, February, April, June, August, September, November, and December; and on the 15th of March, May, July, and October.

IDIOLECTIC, electric *per se*, from *idios*, and *λεκτρικος*.

IDIOPATHIC, from *idios*, peculiar, and *παθος*, affection. An epithet applied to diseases which are primary, and not consecutive upon any other disease. The term is opposed to *symptomatic* and *sympathetic*.

IDIOSYNCRACY, from *idios*, peculiar, *συν*, with, and *κρασις*, a temperament. A peculiarity of constitution, in which a person is affected by certain agents, which produce no effect on the generality of persons.

IDYOT. In *law*, one born without understanding, or who has lost it by disease, so as to have no lucid intervals; the lunatic is one who has lucid intervals.

IDYOTICON. A dictionary of words in one dialect, or of one tract of a country.

IDOCRASE, a mineral. The vesuvian of Werner, found in lava, and formerly mistaken for the hyacinth. Named from *idea*, form, and *κρασις*, mixture, in allusion to its occurring both in a massive and crystallised form. Its primitive form is a four-sided prism, with square bases.

I. E., a contraction of *id est*, that is to say.

IGNEOUS ROCKS. Rocks produced by the action of fire; *igneus*, fiery.

IGNESCENT, Lat. *ignescens*. Giving out sparks of fire when struck with steel, &c. Flint is an *ignescens* mineral.

IGNIS FATUUS, a meteor of light which appears in the night over marshy grounds, occasioned by the liberation and ascent of phosphuretted hydrogen gas. It is popularly known as *Will-o'-the-Wisp*, and *Jack-o'-Lantern*.

IGNITION, from *ignis*, fire. A body heated to redness is said to be in a *state of ignition*. Gold, silver, copper, iron, and platinum may be *ignited* without melting; but lead, tin, bismuth, zinc, and antimony melt before they become ignited.

IGNOBLE. Those birds of prey which cannot be easily employed in falconry are termed *ignobles*: they are much more numerous than the *nobles*. The Eagles, Goshawks, Sparrowhawks, and Kites are *ignobles*; the Common Falcon and Goshawk are *nobles*.

IGNORAMUS. In *law*, a Latin word signifying *we do not know*, and used by the grand jury, as the term of indorsation,

when they *ignore*, or throw out a bill of indictment for want of sufficient evidence.

IGUAN'IDA, a family of Saurians, possessing the general form, long tail, and free and unequal toes of the Lacertians; their eye, ear, &c. are all similar, but their tongue is fleshy, thick, and non-extensible, and only emarginated at the tip. They are divided into two sections, the *Agamians* and the *Iguanians proper*. In the first, there are no palatine teeth; in the second, there are teeth in the palate.

IGUAN'ODON, an extinct fossil, herbivorous reptile, of great size (70 feet or so in length), discovered in the strata of the Tilgate Forest, by Dr. Mantell, and thus named from *iguana*, and *ὄδους*, a tooth, on account of the resemblance of its teeth to those of the iguana.

ILEUM, Lat. from *εἰλω*, to turn about. The last portion of the small intestines, thus named from its convolutions.

I'LEX, the holly. A genus of evergreen shrubby trees. *Tetrandria—Tetragynia*. There are fourteen species enumerated by Don, of which the *I. aquifolium* is the British type. Ten or eleven varieties of this species are, however, established.

I'LIA. In *anatomy*, the small intestines; also that part of the abdomen in which they are inclosed.

I'LIAC, an epithet for parts connected with, or situated near, the ilia. The *iliac region* is that part of the abdomen between the ribs and the loins.

I'LIAC PASSION, a disease consisting of severe griping pains and vomiting, accompanied by spasm of the muscles of the abdomen. Thus named from the ileum being regarded as its seat.

ILLATIVE CONVERSION. In *logic*, that in which the truth of the converse follows from the truth of the given proposition.

ILLU'MINATI. 1. Among early Christians, persons who had received baptism. —2. Certain associations of men in modern Europe, who combined to overthrow the existing religious institutions, and to substitute for them the law of reason. —3. Graduates are styled *illuminati* of their particular universities.

ILLU'MINATING. The art of illustrating and adorning books and manuscripts with miniature painting. This was anciently a profession, practised by *illuminators*: the writers of the books first finished their part, and the illuminators filled up the blanks left with appropriate *illuminations*, often with great skill and taste, and always with excellent colours.

IM'AGE, Lat. *imago*. 1. In *optics*, the figure of any object made by rays of light proceeding from the several points of it.

—2. In *rhetoric*, a lively description of anything in discourse. —3. In *religion*, a

representation of some object of religious worship or veneration.

IMAG'INARY. In *algebra*, a term applied, in common with *impossible*, to certain expressions which arise in various algebraical and trigonometrical operations, to which no value either rational or irrational can be assigned; yet being substituted in the equations whence they are deduced, are found to answer the conditions of the question. Thus, $\sqrt{-2}$ is an imaginary quantity, as its value cannot be assigned, there being no quantity the square of which is -2 .

IMAGINA'TION, from *image*. A power or faculty of the mind, by which it conceives and forms ideas of things communicated to it by the organs of sense. "The business of conception is to present us with an exact transcript of what we have felt or perceived. But we have also a power of modifying our conceptions, by combining the parts of different ones, so as to form new wholes of our own creation. I shall employ the word *imagination* to express this power. I apprehend this to be the proper sense of the word, if imagination be the power which gives birth to the productions of the poet and painter."—*Stewart*.

I'MAM, or I'MAN. A minister of the Mohammedan Church, answering to a parish priest with us; but the term is nearly synonymous with our word *prelate*.

IM'BRICATE, Lat. *imbricatus*, tiled. Arranged like tiles on a house: applied to leaves.

IMERO'GLIO (Ital.), a confounding or mixing together.

IM'ITATIVE. In *music*, a term applicable to music which is composed in imitation of the effects of some of the operations of nature, art, or human passion.

IMMEMO'RIAL, from *in* and *memor*; beyond memory. In a *legal* sense, a thing is said to be of time immemorial that was before the time of king Edward II.

IMMER'SION, from *in* and *mergo*. A term in *astronomy* for the disappearance of a planet, comet, &c., in consequence of their near approach to conjunction with the sun. Immersion also denotes the beginning of an eclipse, or occultation, when the body begins to disappear in the shadow of the obscuring body.

IMMOLA'TION, from *mola*, a salt cake. A ceremony in Roman sacrifices, which consisted in throwing upon the head of the victim some corn and frankincense, together with the *mola* (or salt cake) and wine.

IM'PACT, Lat. *impactus*. A term, in *mechanics*, for the simple act of one body upon another to put it in motion. The point where the body acts is termed the *point of impact*.

IMPA'GES (Lat.). In *architecture*, the rails of a door.

IMPALE'MENT, from *in* and *palis*, a stake. 1. An enclosure by palisades.—2. The barbarous mode of torture used by the Turks, as a punishment for Christians who say anything against the law of the Prophet, who intrigue with Mohammedan women, enter a mosque, &c.: it consisting in driving a stake vertically through the body, and leaving the victim to perish in lingering torment.—3. Conjunction of two coats of arms *pale-ways*, as is the case with those of a husband and wife.

IMPANA'TION. In *theology*, the substantial of the body and blood of Christ with the elements of the Eucharist, without a change in their nature.

IMPAN'NELING. In *law*, the writing down of the names of a jury, summoned by the sheriff, on a piece of parchment called a *panel*.

IMPA'R'LANCE. In *law*, license to a defendant granted, on motion, to have delay of trial to consider of his answer to the plaintiff's action. Hence also the continuation of a cause till another day is termed an *impairance*. The root of the term is Norm. *emparier*, to hold mutual converse; and the origin of the license of *impairance* was to allow the litigants time to discuss their cause of action together, and to settle it amicably if possible.

IMPA'TIENS, the *Balsam*. A genus of annual plants (*Pentandria—Monogynia*): thus named because the seed vessels burst instantly, on contact with any extraneous body, as if impatient of the touch. The Touch-me-not (*Yellow Balsam*) is the only British type.

IMPEACH'MENT. In *law*, an accusation or charge brought against a public officer for maladministration in his office: from Fr. *empêcher*, to stop or hinder. It is the right of the House of Commons to impeach, and the right of the House of Lords to determine impeachments.

IMPE'DIMENTS. In *law*, such hindrances as prevent a person from suing for his rights. Non-age, idiocy, imprisonment, &c., are impediments.

IMPENETRABILITY. In *physics*, that property of matter which prevents two bodies from being in the same space at the same time: a truth derived from experiment.

IMPEN'NATES, Lat. *in* and *penna*, a wing. Swimming birds having short wings, as the penguin.

IMPER'FECT, not perfect, deficient. Applied: 1. In *grammar*, to a tense which expresses time indefinitely.—2. In *botany*, to flowers wanting anthers or pistils, or both.—3. In *music*, to incomplete chords and intervals.

IMPERIAL (Fr.). In *architecture*, a species of pointed dome.

IMPETRA'TION, from *impetro*. A term in law for the obtaining of anything by request or prayer. In old statutes, it signifies the pre-obtaining of benefices, from the Court of Rome, which belonged to the King or other lay-patron of the realm.

IM'PETUS. In mechanics, the force with which one body in motion strikes another; also the force with which any body moves towards any point.

IMPLICATION, Lat. *implico*, I involve. In law, an inference necessarily arising from something declared.

IMPLUVIUM (Lat.). In ancient architecture, the outer part of the court of a house, exposed to the weather.

IMPOSE, from *impono*. 1. In printing, to impose a form, is to put it on the imposing-stone, fit on the chase, and thus prepare it for the press.—2. Legislators impose taxes, duties, and other burdens on the country, many of which are vexatious, and yield no return to the revenue.

IMPOSITION OF HANDS, Lat. *impono*, I place upon. In ecclesiastics, the sign and seal of Confirmation and Ordination to the Ministry and to Deaconship.

IMPOSSIBLE. In algebra, the same as imaginary (q.v.).

IM'POST. 1. A duty imposed on goods imported.—2. The layer of stone which crowns a door-post, pier, or the like, and which generally projects and is ornamented with mouldings.

IMPREGNA'TION. 1. The act of fecundating: applied to plants and animals.—2. In pharmacy, the communication of the virtues of some particular substance to a medicine, whether by mixture, coction, or digestion.

IMPRESS'ING, } is a compulsory and
IMPRESS'MENT, } iniquitous mode of obtaining seamen for the Navy. All seafaring men are liable to be impressed, unless specially protected by custom or statute.

IMPRES'SION. 1. A copy obtained in some plastic substance. Thus we take impressions of medajs in wax; and impressions of organic bodies are abundant in the strata of the earth's crust.—2. An edition of a book, print, or the like, is called an impression, the mechanical part only being considered.

IMPRIMA'TUR (Lat.), let it be printed. The term applied to the privilege, which in some countries must be granted by a functionary, of printing and publishing a book.

IM'PRINT, Fr. *imprimer*. The names of the place where, and by whom, and the time when a book is published, always placed at the bottom of the title-page. See COLOPHON.

IMPRO'PER FRACTION. In arithmetic, a fraction whose numerator is equal to or greater than the denominator.

IMPROPRIA'TION, from *in* and *proprius*. The putting of an ecclesiastical benefice into the hands of a layman, thence called an *impropriator*; also, the benefice so impropriated.

IMPROVISATO'RI (Ital.), persons who compose and recite verses extemporaneously. Improvisatori are common in Italy and Spain; and although their verses are generally within the range of mediocrity, the readiness with which they are produced never fails to excite astonishment in people of less flexible intellect and colder fancy.

IM'PULSE, from *impulsus*. Communicated force; the effect of one body impinging against another.

INARCH'ING. In gardening, a method of grafting, usually called grafting by approach.

INAUGURA'TION, Lat. *inaugurare*, to take omens. Synonymous with the consecration of a prelate, or the coronation of a king. It means also an introduction to any office with certain ceremonies.

IN AUTRE DROIT, (Fr., for "in another's right"), is where executors or administrators sue for debt or duty, &c., of the testator or intestate.

IN'CA, the title given by the natives of Peru to their kings and princes of the blood, before the conquest of that country by the Spaniards.

INCANTA'TION, Lat. *in* and *canto*, I sing. A form of words combined with certain ceremonies and mixtures of heterogeneous substances, anciently used for superstitious purposes.

INCARNA'TION, from *in* and *caro*. A term in surgery for the healing up of wounds, and filling the part with new flesh.—In theology, the union of the God-head with the manhood in Jesus Christ.

INCEP'TIVE, Lat. *inceptivus*, from *incipio*. An epithet in grammar for verbs which express a proceeding by degrees in an action; also in mathematics for moments, which, though of no magnitude themselves, are yet capable of producing such. Thus a point is *inceptive* of a line, and a line is *inceptive* of a surface.

INCERTUM OPUS. In ancient architecture, a species of walling composed of stones built in without any regularity of appearance.

INCH, Sax. *ince*. 1. A lineal measure, the 12th part of a foot, and equal to three barleycorns.—2. Used as a prefix to certain small Scottish islands, as Inch-Keith, being derived from the Gaelic *inis*, an island.

IN'CIDENCE, Lat. *incidens*, from *incido*. The direction in which one body falls on or strikes on another. The angle which the direction of the falling or moving body makes with the plane struck, is called the *angle of incidence*, and is equal

to the angle of reflection. Thus $ACE = BCF$ and $ECG = FCG$. Here also GC is the axis, EC the line, and C the point,

of incidence; sometimes termed the incident axis, line, or point.

INCISOR, Lat. from *incido*, to cut; a cutting tooth. The four front teeth of both jaws are called *incisors*.

INCLINATION, from *in* and *clino*, to lean. A term employed by mathematicians to denote the mutual approach, tendency, or leaning of two lines, planes or surfaces, towards each other, so as to make an angle at the point of their contact of greater or less magnitude. The angle of inclination is otherwise called the angle of incidence (see **INCIDENCE**). The inclination of the earth's axis is the angle which it makes with the plane of the ecliptic. The inclination of a planet is the angle comprehended between the ecliptic and the plane of the planet in its orbit. For inclination of magnetic needle (see **DIPPING NEEDLE**).

INCLINED PLANE. In mechanics, a plane which forms with a horizontal plane some

angle less than a right angle. It is one of the simple mechanical powers, and its proportion is—Power : Weight :: Height of plane : Length of plane, or, $P : W :: H : L$.

Whence $P = \frac{HW}{L}$ and $W = \frac{PL}{H}$.

INCLINERS, a name for inclined or inclining dials, or such as are drawn on planes not perpendicular to the horizon.

INCLUSA, a family of Mollusca: order *Acephala Testacea*. The mantle is open at the anterior extremity, or near the middle only, for the passage of the foot, and extended from the other end into a double tube which projects from the shell. Nearly all of them live buried in sand, stones, ooze, or wood.

INCLUSI or **RECLUSI**, Lat. *shut up*. A class of religious persons who lived in cells, under the obligation of not leaving them except in cases of extreme necessity.

INCOMBUSTIBLE, not combustible. Applied in chemistry to bodies neither capable of supporting combustion nor of un-

dergoing combustion. Only one such substance is at present known, namely, *nitrogen*. Cotton and linen fabrics are said to be *incombustible* when they are rendered incapable of taking fire, or of burning with flame, by being imbued with some preparation, as alum, sal-ammoniac, &c.; and incombustible cloth and paper have been manufactured from the fibrous mineral called *amianthus*.

INCOMMENSURABLE, not commensurable.

I. lines are such as have no common measure. Thus the diagonal and side of a square are incommensurable, being to each other as $\sqrt{2}$ to 1.—*I. numbers* are such as are prime to each other, or have no integral common measure greater than 1.

INCOMPATIBLES. In chemistry, such substances as cannot exist together in solution without mutual decomposition.

INCOMPLETE, Lat. *incompletus*, not complete. Applied to flowers which want either the cup or blossom.

INCREMENT, Lat. *incrementum*, increase. Used in fluxions to designate the finite increase of a variable quantity. Dr. Brook Taylor, to whom we are indebted for the Doctrine of Increments or Finite Differences, denoted his increments by a dot under the variable quantity: thus the increment of x was denoted by \dot{x} ; others have employed an accent, thus x' or x . M. Nicole employed another letter, as π ; but Euler who seems to have given a permanent form to this branch of analysis, employs the character Δ ; thus Δx = increment of x .—In rhetoric, a species of climax rising from the lowest to the highest.

INCUSTATION (Fr.). In architecture and sculpture, work fixed with cement into notches made to receive it.

INCUNABULA, Lat. *cradle*. A term applied to books printed before the year 1500.

INCUS, Lat. *anvil*. The largest bone of the tympanum of the ear, thus named from its shape.

INDECLINABLE, not declinable. Applied to words (nouns), not varied by terminations.

INDEFEATIBLE. In law, that cannot be defeated.

INDEFINITE. In logic, an indefinite proposition is one which has for its subject a common term, without any indication whether it is distributed or not.—In botany, when stamens are above twenty in number, or in other cases when their number cannot be readily counted.

INDEHISCENT, Lat. *in* and *dehisco*, to gape. Applied to a fruit, of which the pericarpium continues closed when the fruit is ripe.

INDENTURE, a writing containing a contract, as of apprenticeship. **Inden-**

tures were formerly duplicates laid together and indented, so that the two papers or parchments corresponded to each other. But the indenting is now rarely done, though the writings or counterparts retain the name of *indentures*.

INDEPENDENTS, a sect of Protestant dissenters, who maintain that every congregation of Christians is a complete Church, subject to no superior authority, and competent to perform every act of government in ecclesiastical affairs.

INDETERMINATE, not determined. An *indeterminate quantity* is one whose value is not determined. An *indeterminate problem* is one which admits of many solutions, and that branch of algebra which investigates the nature and properties of such problems, constitutes *indeterminate analysis*.—In *botany*, when a stem is never terminated by a flower, or any other organic cause of stopping its growth.

INDEX, a pointer. 1. In *anatomy*, the forefinger.—2. In *algebra*, the same as *exponent* (q. v.).—3. In *literature*, an alphabetical table of the contents of a book.—4. In *music*, a direct.—5. The *index of a globe* is the little style or gnomon fitted on the north pole, which, by turning with the globe, serves to point to certain divisions of the hour circle.

INDEX EXPURGATORICA, a catalogue, published annually at Rome, of works which the Church of Rome condemns as heretical.

INDEX OF REFRACTION. In *optics*, is the constant ratio which exists between the sines of the angles of incidence and refraction.

INDIAN INK, a substance composed of lampblack and glue, and used for water colour.

INDIAN OAK, the Teak-wood (*Tectona grandis*), an East Indian tree.

INDIAN RED, a variety of ochre. It is a fine purple earth of compact texture and great specific gravity.

INDIAN RUBBER, a name for *caoutchouc* (q. v.), because used for rubbing out pencil marks, &c. The *Indian rubber tree* is the *Ficus elastica*, a tree common in the East Indies.

INDIAN WHEAT, the Zea mayz, or Indian corn. See MAIZE.

INDICATOR, from *index*. An extensor muscle of the forefinger. In *ornithology*, a genus of birds of the cuckoo tribe.

INDICATIVE, from *indico*. The name in grammar for the first mood of a verb by which we simply affirm, deny, or indicate something.

INDICA'VIT (Lat.), *he has shown*. In *law*, a species of the writ of prohibition.

INDICTION, from *indico*. A term in chronology for a cycle of fifteen years, instituted by Constantine the Great, originally a period of taxation. The origin is thus

stated:—Constantine having reduced the time which the Romans were obliged to serve in the army to fifteen years, imposed a tax or tribute at the end of that term to pay the troops discharged. The practice introduced the keeping of accounts by this period; and ultimately the Council of Nice ordained that accounts of years should no longer be kept by olympiads but by indictions, and fixed A.D. 313 as the commencement. At the reformation of the calendar, the year 1582 was reckoned the 10th year of the indiction, and as 1582 divided by 15, gives a remainder 7, which is 3 less than the indiction, the same must hold in all subsequent years. Hence to find the indiction for any year, divide the date by 15, and the remainder increased by 3 is the indiction. Thus for the year 1842 we have $\frac{1842}{15} = 122\frac{12}{15}$; therefore $12 + 3 = 15$ is the indiction.

INDICTMENT, from *indico*. A written accusation or formal charge of a crime or misdemeanor, preferred by a grand jury, under oath to a court; also the paper or parchment containing the charge.

INDIGO, the drug which yields the beautiful blue dye known also by the name of *indigo*. It is obtained by maceration in water of certain tropical plants; but the indigo of commerce is almost entirely obtained from leguminous plants of the genus *Indigofera*: that cultivated in India being the *I. tinctoria*, and that in America, the *I. anil*. Some species of the *Isatis*, *Nerium*, and *Polygonum*, also afford indigo in small quantity.

INDIGOR'ERA, indigo-bearing plants. An extensive genus. *Diadelphia*—*Decandria*. Many of the species are cultivated for the manufacture of indigo.

INDIGOGEN, reduced or deoxidised indigo. It is a white substance soluble in alcohol and alkalis, but not in water or acids.

INDIGOM'ETRY, the method of finding the colouring power of indigo. This is effected by finding the amount of chlorine necessary to discolour a given quantity of the indigo.

INDIVID'UAL. In *fine arts*, what is proper or peculiar to a single object.

INDIVISIBLES. In *geometry*, those small elements or principles into which any body or figure may be resolved. According to the method of indivisibles, a line is said to consist of contiguous points, a surface of contiguous lines, and a solid of contiguous surfaces, all of which are regarded as indivisible elements.

INDORSE' from *in* and *dorsum*, the back. To write on the back of a deed or other written instrument; hence also to assign by writing an order on the back of a note or bill. He who writes the *indorsement*

is the *indorser*, and in cases of promissory notes, &c., makes himself liable to pay the full amount of the note to the *indorsee*, or person to whom the note is indorsed.

INDUCEMENT. In *law*, a statement of facts alleged by way of introduction to other material facts.

INDUCTION, from *induco*. 1. The introduction of a person into office by the usual forms and ceremonies, chiefly applied to the introduction of clergymen to benefices, &c.—2. In *logic*, the drawing of a general inference from a number of facts; opposed to *deduction* wherein the inference is drawn from a single fact. Hence that kind of philosophical reasoning which ascends from particular facts to general principles, and illustrates those principles by particular applications, is termed *inductive reasoning*, and the science founded upon it constitutes *inductive philosophy*.

INDULGENCE. In the *Romish church*, remission of the punishment due to sins, granted by the pope or church, and supposed to save the sinner from purgatory. The theory of indulgences is this: all the good works of the saints, over and above those which were necessary for their own salvation, are deposited, together with the infinite merits of Jesus Christ, in one inexhaustible treasury, the keys of which were as a matter of course intrusted to St. Peter and his successors the popes, who may open it at pleasure, and by transferring a portion of this superabundant merit to any particular person for a sum of money, may convey to him either the pardon of his own sins or release from the pains of purgatory for any one in whom he is interested. We owe the scheme to Pope Urban II., who issued letters of indulgence to such as went in person upon the glorious enterprize of conquering the Holy Land.

INDUSIUM, Lat. *indus*. A cup surrounding the stigma of Goodeniaceae and other plants. Also the membrane covering the thecae in dorsiferous ferns.

INEQUALITY. In *astronomy*, any deviation of a planet from its mean motion.

INEQUILAT'ERAL, } Not equilateral.
INEQUILAT'ERAL, } Having unequal sides. Applied to geometrical figures, &c.

INEQU'IVALVE, } Not equivular.

INEQUIV'ULAR, } Having unequal valves. Applied to bivalve shells where one valve is more convex than the other.

INERM'OUS, Lat. *inermis*. unarmed. Opposed to *spinous* in describing leaves.

INERTIA, Lat. from *iners*. The passive property of bodies, by which they persist in a state of rest or motion, and receive motion in proportion to the force impressed on them, and resist as much as they are resisted; called also in the language of philosophy, *vis inertia*.

INESCUTC'H'EON. In *heraldry*, a small escutcheon borne within a shield.

IN ESSE (Latin), in actual being or existing. Distinguished from *in posse*, which denotes that a thing *may be*, a law phrase.

INFAMY. In *law*, the loss of character. The term comprehends all degrees of public disgrace by which a person is rendered incapable of being a witness or juror.

INFANT. In *law*, a person under the age of 21 years.

INFAN'TA, } A title in Spain and Portugal
INFAN'TE, } for all princes and princesses

of the blood royal, except the eldest when heir apparent to the crown. The dignity of the title consists in styling them *the children*, by way of eminence. In other parts of Europe, the eldest son and daughter have also been so titled by way of eminence over the other children.

INFANTRY, the whole body of foot-soldiers of an army. The name originated from one of the Spanish *infantas*, who, finding that the Moors had defeated the army under the king, her father, assembled a body of foot soldiers, with which she totally routed the enemy. In memory of this, and to distinguish the foot soldiers, who were not before much esteemed, they received the name of *infanteria*, whence *infantry*.

INFECTION, from *inficio*; the communication of the poison of disease to a healthy body. The words *contagion* and *infection* are frequently confounded. The first is properly the virus or effluvia generated in a diseased body, and capable of producing the specific disease in a healthy body, by contact or otherwise. *Infection*, on the other hand, is anything that taints or corrupts; hence it includes *contagion*, and any other noxious matter which excites disease in a healthy body.

INF'E'RIOR. In *botany*, when the calyx is distinct from the ovarium.

INFERNAL MACHINE, a name which has been given to a clumsy apparatus for the purposes of assassination. The most memorable is that constructed by Fieschi, of a number of gun barrels arranged in a frame, so as to be fired off at once. It was used on the 28th of July, 1835, against Louis Philippe and his suite, while reviewing the national guards. The king and his sons escaped, but sixteen of his suite were killed, and many wounded. Fieschi, who was immediately apprehended and subsequently executed, was himself wounded by the bursting of some of the barrels.

INFILTRA'TION, from *filter*. The diffusion of fluids through the interstices or pores of a body.

INFINITE, Lat. *infinitus*, without limits. Applied to quantities which are greater or less than any assignable quantities. The term is also used in the sense of *indefinite*.

to denote a line or quantity to which no certain limits can be prescribed.

INFINITESIMAL, an *infinitely small quantity*, or one which is so small as to be incomparable with any finite quantity whatever.

INFLAMMABLE. *I. air* is an old name for hydrogen gas; and *heavy inflammable air*, for carburetted hydrogen gas.

INFLAMMATION, from *inflamma*. 1. The act of inflaming.—2. A state of a part of an animal body in which the blood is obstructed, so as to accumulate in greater quantity into that particular part, causing there a higher degree of colour and heat than usual. A vast number of diseases resolve themselves into cases of local inflammation, either external or internal, and which often arise in the human body from causes wholly unknown. The most common excitants are cold, morbid poison, mechanical and chemical irritants, acrimony of the blood and humours, contagion and metastasis.

INFLATED, Lat. *inflatus*, distended with air. In *botany*, applied to parts of plants which are distended like a blown bladder.

INFLECTED, Lat. *inflexus*, bent inwards. In *botany*, applied to leaves, petals, &c.

INFLECTION, from *inflecto*, a bending inwards. In *grammar*, the variation or change which a word undergoes in its termination to express case, number, gender, tense, &c.—In *optics*, inflection has the same meaning as *diffraction*, *deflection*, viz., a property of light by which, when it comes within a certain distance of any body, it is either bent from or towards it. It is, therefore, a kind of imperfect reflection or refraction.—In the *higher geometry*, that point where a curve begins to bend a contrary way, is called the *point of inflection*.

Thus a curve line ADC is partly concave and partly convex towards a right line AB, or towards a fixed point D, which divides the concave from the convex part, and is consequently at the beginning of the one and the end of the other; this point D is then the point of inflection, as long as the curve continued towards D keeps its course, but at the point C, the curve begins to reflect back again towards the line of its origin: this point is therefore called the *point of retrogression*.

INFLORESCENCE, Lat. *inflorentia*, from *in-floresco*, to flower. A botanical term introduced by Linnaeus to denote the

manner in which flowers are situated upon a plant: denominated by preceding writers *modus florendi*, or manner of flowering. It is *pedunculate* when furnished with a stalk, *sessile* when adhering to the plant without a flower-stalk, *cauline* when on the stem, *raméal* when on a branch, *terminal* when on the apex of a stem or branch, *axillary* in the axilla, *foliar* on the surface of a leaf, *radical* on the root, and *latitant* when concealed in a fleshy receptacle. It has also many names, as whorl, raceme, spike, corymb, fascicle, tuft, umbel, cyme, panicle, bunch, &c.

INFLUENZA, an Italian word for *influence*. Used to denote epidemic catarrh, which in old times was supposed to be produced by a peculiar influence of the stars.

IN FO'RO CONSCIEN'TIÆ (Lat.), in the court of the conscience.

IN FOR'MA PAU'PERIS. In *law* (see *FORMA PAUPERIS*).

INFOR'MES STEL'LE (Lat.), unformed stars. Those stars which have not yet been reduced into constellations: otherwise called *sporades*.

INFRA LAPSA'RIANS, a general name for those predestinarians who think the decrees of God, in regard to the salvation and damnation of mankind, were formed in consequence of Adam's fall.

INFRA SCAP'ULAR, subscapular; situated beneath the scapula.

INFRA SPIN'ATE, situated beneath the spine. Applied to a muscle of the humerus situated below the spine of the scapula.

INFUSION, from *infundo*, the name given in pharmacy to any preparation made by pouring water of any temperature on such substances as have a loose texture, as thin bark, wood in shavings or small pieces, leaves, flowers, &c., and suffering it to stand for a certain time. The term *infusion* is applied both to the liquor and process of preparing it.

INFUSORIA. *Infusory animals*, a class of the animal kingdom, comprehending those animalcules which are found in infusions of organic substances. They are divided into two orders, the *Rotifera* and *Homogenea*.

IN'GOT, Fr. *lingot*. A mass of uncoined gold or silver cast in a mould.

INGRAFT'ING. In *gardening* (see *GRAFTING*).

IN'GRESS. In *astronomy*, a term applied to the entrance of the moon into the earth's shadow in eclipses, and to the sun's entrance into a sign, especially Aries.

INGRES'SU. In *law*, a writ of entry: termed also *præcipe quod reddat*.

INGRES'SUS. In *law*, a duty paid by the heir to the lord of the fee on entering upon lands.

INHER'ITANCE, from *hæres*, an heir. A perpetual right in lands invested in a person and his heirs.

INHIBITION. In *law*, prohibition: a writ to forbid a judge from further proceedings in a cause depending before him. In *Scots law*, a writ of diligence obtained by a creditor against his debtor, prohibiting him from selling or contracting debts upon his estate to the creditor's prejudice.

IN'S, an Irish word denoting an island; as Iniskilling, &c.

INITIATIVE, Lat. *initium*, a beginning. In *politics*, that branch of the legislature which has the right to propose measures. Thus, in England, all bills for taxing the subject, must originate with the Commons; some private bills, by custom, have the initiative with the Lords; and one, viz., that for a general pardon, begins, in the first instance, with the Crown.

INJECTION, from *in* and *jacio*. 1. A medicated liquor, to be thrown into a natural or preternatural cavity of the body, by means of a syringe.—2. A liquid thrown into the vessels of the dead body, to display them more distinctly.—3. The cold water thrown into the condenser of a steam-engine, to condense the steam, is called *injection-water*, and those steam-engines in which the steam is condensed in this way are called *injection-engines*. Most condensing engines at present in use are of this kind.

INJUNCTION, from *injungo*, a command. In *law*, a prohibitory writ, restraining some act that appears against equity: mostly issued by Chancery.

INK, any liquor or pigment used for writing and printing on paper, &c. There are various sorts; as (1.) *Indian or China ink*, composed of lamp-black and size. (2.) *Printer's ink*, composed of burned linseed oil and lampblack (or some coloured pigment, if a coloured ink be wanted). (3.) *Common writing ink* is (partly) a gallate of iron, formed by adding an infusion or decoction of gall-nuts to sulphate of iron in solution. (4.) *Red ink* is made by infusing Brazil-wood in weak vinegar for some days. (5.) *Gold and silver inks* are made by grinding gold or silver leaf with white honey till they be reduced to the finest possible division. (6.) *Sympathetic ink*. The best is hydrochlorate of cobalt.

INK-BAG, a bladder-shaped sac found in some species of cephalopods, containing a black and viscid fluid, resembling ink, by ejecting which, in cases of danger from enemies, they are able to render the surrounding water opaque, and thus to conceal themselves. Examples of this contrivance may be seen in the *Sessia vulgaris*, and *Loligo* of our seas.

INK'LE, a sort of broad linen tape, principally manufactured at Manchester.

INLAYING, the operation of ornamenting work with thin pieces of differently coloured material, by inserting them into a prepared ground. Articles of cabinet

work are often inlaid, and mosaic work is altogether a process of inlaying.

IN LIM'INE (Latin), at the threshold; before anything is said or done.

IN'N, Sax. *inn*. 1. A house of entertainment for travellers. — 2. A college of municipal or common law professors and students; formerly the town-house of a nobleman, bishop, or other distinguished personage, in which he resided when he attended the court. *Inns of Court*. There are four principal colleges of this name; viz., the *Inner Temple* and *Middle Temple*, anciently the habitation of the Knights Templars; *Gray's Inn*, anciently the manor-house of baron Gray, in the reign of Edward III.; and *Lincoln's Inn*, originally the dwelling-house of Henry Lacy, earl of Lincoln. The *Inns of Chancery* are eight. (1.) *Barnard's Inn*, which once belonged to Dr. Mackworth, dean of Lincoln, and in the possession of one Lionel Barnard. (2.) *Clement's Inn*, once a messuage belonging to the parish of St. Clement Danes. (3.) *Clifford's Inn*, the dwelling-house of the Cliffords, earls of Cumberland. (4.) *Furnival's Inn*, once the mansion-house of Sir Richard Furnival. (5.) *Lyon's Inn*, once a private house known by the name of the Black Lion. (6.) *New Inn*, once the dwelling-house of Sir J. Tyncaulx. (7.) *Staples' Inn*, which formerly belonged to the merchants of the Staple. (8.) *Thavie's Inn*, anciently the dwelling-house of John Thavy, armourer of London. These are subordinate to the inns of court, from which alone students can be called to the bar.

IN'NATE IDE'AS. In *metaphysics*, ideas or principles supposed to exist in the mind from the first moment of its existence, and to be developed along with it. Locke has taken much pains to refute this doctrine of innate ideas.

INNOMINATUM, Os, a large irregular bone, situated at the side of the pelvis of the adult. It is so called, as being formed of three bones to which names are given in the young subject, but which growing together, form one complete bone, to which none of the names are applicable, and which is therefore left innominate or nameless.

INNUE'NDU, Lat. from *innuo*, to nod. An oblique hint, or distant reference. The term is used in declarations and law-pleadings, to ascertain or point out the precise person when otherwise left doubtful.

INOCULATION, from *inoculo*, to bud, from *oculus*, an eye. 1. In *surgery*, the practice of transplanting the small-pox, by infusion of the matter, from ripened pustules, into the veins of an uninfected person, with a view to producing a milder case of the disease than when taken naturally. After the discovery of the preventive

power of the cowpox, smallpox inoculation gradually fell into disuse, and it is now felony for any medical practitioner to perform the operation.—2. In *gardening*, see **BUDDING**.

INORDINATE, Lat. *inordinatus*, irregular. E.g. *inordinate proportion* is where there are three magnitudes in one rank, and three others proportional to them in another, and they are compared in a different order. Thus, suppose the numbers are 2, 3, 9, and 8, 24, 36, and they are compared, 2 : 3 :: 24 : 36; and 3 : 9 :: 8 : 24; then, rejecting the mean terms, we have 2 : 9 :: 8 : 36.

INORGANIC, not organic. *Inorganic bodies* are such as have no organs of vitality, as the various minerals, and the chemical examination of these is called *inorganic chemistry*.

INOSULATION, from *in* and *osculum*, a little mouth. Anastomosis, or the union of the extremities of the vessels of organic bodies.

IN PROPRIA PERSONA (Latin). In one's own person or character.

INQUEST, from *in* and *quæro*, to seek. Judicial inquiry. An inquest of office is an inquiry made by the queen's officer, his sheriff, coroner, or escheator, concerning matters which entitle the Crown to possession of lands, tenements, &c. It is made by a jury of no determinate number.

INQUIRY. A writ of inquiry is one issued to the sheriff, to summon a jury, to inquire what damages are due to a plaintiff in an action upon a case, where judgment goes by default.

INQUISITION, from *inquiro*. 1. An official examination; an inquest.—2. A court established in some Catholic countries, for the examination and punishment of heretics. This court was established in the twelfth century, by Father Dominic, who was charged by Pope Innocent III. with orders to incite the Catholic princes and people to extirpate heretics.

INROLMENT, } In law, the registering,

INROLLMENT. } recording, or entering upon the rolls of Chancery, Queen's Bench, Common Pleas, or Exchequer, or by the Clerk of the Peace in the Records of the Quarter Sessions, any lawful act, as a deed of bargain and sale of lands, &c.

INSANITY, Lat. *insanitas*, from *in* and *sanus*, sound; derangement of intellect. The word is applicable to any degree of mental derangement, from slight delirium, to distraction, or madness; it is, however, rarely used to express the temporary delirium occasioned by fever or accident.
